quite insignificant mosques (iv. 263 sqq., where 19 masdjīd are mentioned). In the xiith
century the emir Kaḥībdū built 18 large mosques and
many smaller ones and his interest in the furtherance of learning was specially displayed in his
buildings at the Azhar mosque, which had developed to the expense of the specialist madāris (al-Djabairi,
Mercoiates Biographiques, iii. 230 sqq.; Sulaimān Raṣal, Kanz al-Djauhar fi Ta‘rikh al-Azhar, p. 74 sq); for the similar situation in Mecca
cf. above.

The connection between mausoleum and
mosque was also found with the madrasa. The tomb of the founder was placed in Nūr al-
Din’s madrasa in Damascus (Ibn Djabair, p. 284, 4
and during the Manūlik period it was the
regular custom for the founder of a madrasa to be
buried under a kūbba in it.

Monasteries.

A close connection arose between the monastery and the madrasa. As already mentioned, it was
quite a common thing for devout men to live
permanently in the mosque e.g. in the minaret or
somewhere else on the roof or in subsidiary buildings
or in a cell in the mosque. Such a cell which
can be used for teaching or for meditation is called
ṣawīya, lit. corner (Ibn Djabair, p. 240, 245, 266; Makrizi iv. 20; cf. Greek vousa; see Dossy, Sup-
plement, s. v.). Pious ascetics however had retained
from the older religion the custom of living in
special monasteries e.g. in Djawlan in the fourth
century (B. G. A., i. 185); Muslim historians trace
these back to the time of the Companions (Makrizi,
iv. 272 sq). In the fourth century ascetics and
Sufis, especially the Karrāmīya (s. v.) or Kirrāmīya
(cf. Mea, Renaissance, p. 273), had quite a number of monasteries (khānas, khanān, sing. khānas) in Farghāna. Marw al-Kūḏj, Samarḵand,
Djurān, Tabaristān etc. (B. G. A., iii. 325, 365;
I in Jerusalem and in Egypt also the Kirrāmīya had
their monasteries in which they held ḥāhb (ibid., p. 179, 182, 202).

The distinction between khānas and ribāt
(plur. rubāt) is one of origin rather than fact.
Ribāt was simply a dwelling for men who waged the
ḍjihād on the frontier but the word was also used
by the Sufis who waged a spiritual ḡāns (cf. Maḥrzī, iv. 292 sqq.). There was a ribāt in
the Maghrib in the fourth century in the place of
Salā (B. G. A., ii. 56). When Ibn Mārūf says that they had only two rubāt of the eastern kind
(in Sāf and Salā, Hespéris, v. 36, 71), it is doubtful
whether he means an establishment of Sūfis or of
ghāfīs. In the xiiith century there were several military rubāt on the river Niger, from
which the Almoravids originated. From the xvth century onwards many were built in Morocco against the Spaniards and Portuguese. *Ma'āris* is the usual word for *riḥāṭ* (see Bel, *J. A.*, ser. 11, ix, 1917, p. 325, No. 1). In the east in the fourth century, ribūt are frequently mentioned, which probably had a military character (*J. G. A.*, ii. 303, 354, 415). The original distinction between *khanākah* and ribūt is never quite forgotten; as late as the beginning of the eight century we find ribūt used of a barracks (Ma'ārizi, *v*. 276). Ibn Baṭūṭa says that the word *khanākah* had not reached the west; here the old Arabic term *sāmera* was used (Ibn Baṭūṭa, i. 71; *khanākah* however in Ibn Marrūf, *Hatari*, v. 35 sq.). Usually we find the three terms used without any definite distinction being made between them (*sawama* also seems to be used in the *Kfīs* of a Muslim monastery, see Tornberg, *Annales*, p. 143; cf. p. 18); for all three names are applied to Sufi monasteries, which also take in strangers, i.e. are used as hospices.

Ibn Baṭūṭa mentions many monasteries in the *Tūr* and *Persia*. Beside the tomb of Al-Rifa'i, not far from Waṣṣāf was a ribūt, which he calls *rīwaḵ*, where "thousand of poor men", i.e. Sufis, lived (ii. 4). In Al-Lār especially, he found a vast number of monasteries; the saffārīn there built 460 *sawāma* and spent 1/3 of his revenues on them and the madāris (ii. 31).

For *Syrīa*, Ibn Dūbair testifies to the flourishing monasteries which were in many a regular palaces and places where scholars lived. His time, he says, the names *khanākah* and ribūt are used indiscriminately (p. 243, 271, 284); the word *khanākah* sounded strange to him as a westerner, as to Ibn Baṭūṭa (p. 284). Nevertheless al-Nu'aimi distinguishes the three terms and mentions 29 khanwānīk, 23 ribūt and 26 zawāyā. The oldest *khanākah* mentioned by him (Dawairī) was founded for a learned man who died in 401 (Sauvare, in *J. A.*, ser. 9, v. 269, 377, 389 sqq.).

It was similar in Egypt. The first *khanākah* was built by Ṣalah al-Dīn in 560 in Cairo (al-Sāliḥiya, originally called Dur Sa'd al-Sa'dād: Ma'ārizi, *v*. 273), the next in the seventh century by Baibars al-Bundukdārī, who also founded new monasteries in Syria (ibid., p. 282, 298). Of *khwānūth*, al-Ma'āriti mentions 22 (Ibn Du'ūmok only one), of the sixth century: one, seventh: one, eighth: 18, ninth: one. Of ribūt 12 (Ibn Du'ūmok 8), of the seventh century: 9, of the eighth: one, besides 5 on al-Karāfī. Of zawāyā 26 (Ibn Du'ūmok 9): these were mainly outside the town and were obviously quite small, often being simply the house, later the tomb of some devout man. The oldest dated from the sixth century. In Jerusalem also Ṣalah al-Dīn built a *khanākah* (v. Berchem, *Corpus*, ii. p. 87 sqq.). Among the khanwānīk, zawāyā and ribūt in this city the last named seem to have been specially intended as hostels for pilgrims (ibid., p. 197 sqq.; see also Sauvare, *Jérus. et Liban*, index). In Mecca 50 ribūt are mentioned; the oldest dated from 400 (Charon, *Mekka*, i. 108—115). At places of pilgrimage, the monasteries played an important part as hostels but even in other places they also gave accommodation to strangers. Ibn Baṭūṭa on his travels usually stayed in them (he calls them *sawara*) but he also lodged in madāris, which were also used as hospices (cf. Quatremère, *Hist. Sait. Mani.*, v. 35; note). Some of these institutions were convents for single women (Ma'ārizi, *iv*. 293 sqq.).

The main object of monasteries, however, was to afford Sūfis a home and place for their devotional exercises. In the *khanākah* of Baibars founded in 766, 400 Sūfis were maintained (Ma'ārizi, *v*. 276 *infra*) and in the *khanākah* Sīrāqūs 100 (ibid., p. 285). They were given lodging, food, clothing and money; there were often baths attached to them. The building was arranged for *dīkīr* exercises, and also for *salāt* so that it was a kind of mosque. Ibn Dūbair mentions a ribūt on the summit of Abū Kūba in which there was a mosque (p. 108). A ribūt may be actually called a masdjid (Ma'ārizi, *v*. 289; cf. *khanākah* and masdjid, * infra*). Sometimes the term masdjid al-ribūt: Ibn `Arabshī, *Vita Timuri*, ed. Manger, iii. 880). The monastery founded by Ṣalah al-Dīn was actually given a minaret in 780 (maf'dama) and it is recorded that people used to wear sandals to walk in the *zāhū* (Ma'ārizi, *v*. 275 *infra*). Sometimes only the occupants of the monastery are admitted to the *salāt* (ibid., p. 277: Kha'nākah al-Baibars). There was therefore an imām on the staff of the khanākah (ibid., p. 287). Like other sanctuaries the monasteries sometimes preserved relics; the Ribūt al-Āthār, for example, preserved a piece of iron and wood which had belonged to the Prophet (ibid., p. 295). We sometimes find a khanākah built close to a large mosque like the khanākah of Ašūrābād beside the Āthār Mosque (ibid., p. 292; cf. p. 289: Kha'nūth). For the founder built a masdjid for the Friday *salāt* beside the monastery (Sitāyka, ibid., p. 285). The occupants of the sūlahiya Kha'nākah took a prominent part in the Friday service in the mosque of Ḥikum (ibid., p. 274). At a later date, we find the monasteries themselves arranged for the Friday *salāt*. This was the case with the Ribūt al-Afram, which in 663 was given a minbar for the Friday and festival *khūṭba* (ibid., p. 297) and al-Mu'ayyad made a house, that had begun before he came to the throne, into a *dāmīn wa-khanākah* (ibid., p. 134 *infra*) just as *rīwaḵ* a *dāmīn* could be built with living-rooms for Sūfis, e.g. the *dāmīn* al-Ībā'ī (beginning of the xth century, like the preceding, ibid., p. 140 *infra*) and in the xth century, the *dāmīn* Shāhī (before the building of his khanākah, ibid., p. 113) Baibars al-Bundukdārī was buried in his khanākah and the monasteries had as a rule tombs, either of the founder, or of devout men who had lived in them.

The development of the monastery is therefore quite analogous to that of the madāra: the one institution merges into the other, because learning and manifestation of piety are inseparable in Islam. Learning was also cultivated in the monasteries; at the present day, we find students living in a monastery and attending lectures in a madrasa. Some scholars lectured on Ḥadīth in their rooms in a monastery (ibid., p. 294, 295, 305) but instruction was also arranged for in some monasteries just as in the madāras. `Abd al-Ṭālib (d. 629 = 1231) lectured in a ribūt in Baghdād on ṣūrā, ḥāṣib, etc. (Ibn Abī Usā'ibā, ii. 203) and a Ribūt al-Kha'nāmah is mentioned here, which had a library (Ibn al-Kifi, ed. Lippert, p. 269). There are other references to libraries in monasteries (see for Marw: Vākūt, iv. 509). In Kha'nākah Shāhī founded in 756, an extensive course of lectures, Fīk according to all four Madhāhib, Ḥadīth and
Ikri' (Maqārī, iv. 283) was given. In the Ribāt al-Ahtār in the eighth century, instruction was given in Şāfi'ī Fīkh (ibíd., p. 296) and in the Djamī' al-Fakhrib built in 821, arrangements were made for students as well as for Şūifs (ibíd., p. 136); the Ḥāfiz madrasa al-Djamāliyya (730) was also a khānākhā (ibíd., p. 238 supra); they had a common director.

In the eighth and ninth century this combination of the two institutions became quite frequent, for example in the Nizānīya in Cairo in the year 757 (v. Berchem, Corpus, i. 242 sqq.), in the mausoleums of Dārābī 835 (ibíd., p. 365 sqq.; cf. Ibn lyan, ii. 21, 22, 41), of al-Maqqari in Cairo 865—866 (ibíd., p. 431 sqq.) and of Kā'f Bār 879 (ibíd., p. 431 sqq.). The same institution thus came to be given different names (cf. ibíd., p. 172 sqq.) and al-Suyutī deals with the khānākhā under the madrasa. In the east, Ibn Batūtā found the same relationship, for example in Shirāz and in Kerbelā (li. 78 sqq., 88, 99) and this is what he means when he says the Persians call the zāwia madrasa (li. 30, 32). In the west, he lauds his own sovereign, who had built a splendid zāwia in Fās (li. 84); here also learning and Sufism were associated (see the quotation in Dozy, Supplément, s.v. zāwija) and the zāwia still plays an important part in North Africa (see Dupont and Coppolani, Les Confréries Religieuses Musulmanes, Algiers 1897; EI-Hachachi, Voyages aux Pays des Sarrasins, transl. Scraes and Lassram, Paris 1912). Cf. on the monasteries: v. Berchem, C.T.A., i. 163 sqq., 174 sq. c. Hospitals.

We commonly find, e.g. in Ibn Dujab and al-Makrīzī, the hospital, bimaristan, māristān, nūriyān, mentioned in close connection with the madrasa, probably because it was administered by learned men and as a rule also contained a medical school. Al-Walîd is said to have been the first in Islam to build a hospital in the year 866 (Makrīzī, iv. 258 sqq.; B.G.A., v. 106). In Cairo in 259 or 261 (i.e. before the mosque) Ibn Tulūn built a hospital for the poor. At the same time he installed a dispensary behind the mosque and a physician used to sit there to be consulted every Friday. According to al-Makrīzī, his māristān (called in Ibn Dujab 59, p. 90 the "upper") was then in Egypt; this probably means the first free public hospital; it is improbable that this Hellenistic institution did not already exist in Egypt (Makrīzī, iv. 38, 39, 258; Hāni, ii. 130). Al-Makrīzī (iv. 259 sqq.) mentions in addition to this hospital in Cairo the Māristān Kāfūr (in 346, perhaps identical with that called the "lower" by Ibn Dujab 59, p. 90; al-Maqāhīrī 232—247), al-Mansūrī (682), al-Mu‘ayyadī (821). To these must be added the two which Sa‘īj ibn Dujab maintained in Mīr and Kāḥira (Ibn Dujab, p. 51, 52. c. Ibn al-Khalīkan, Cairo 1302, u. 402 sq.). In Damascus Ibn Dujab found two hospitals, one of them the Bimaristan al-Dîn al-Nūri (p. 283, 284; cf. Ibn al-Khalīkan, ii. 403). He also mentioned one in Nayriz (p. 240), in Hātra 2, 247, in Halm 1, 2 (p. 253), in Halm 3 (p. 257); in Baghdad he refers to a number without particularising them but we know of hospitals here from the third century and in 304 Sinān b. Thābit was director of the hospitals of Baghdad; he was responsible for the foundation of three more (Ibn al-Kifīf, ed. Lippert, p. 193; cf. Kifīr al-Wusūr, ed. Amedroz, p. 21 and on the whole question: Mez, Renaissance, p. 326 sqq.). There was a hospital attached to the great Mustansirīya madrasa (Le Strange, Baghdad, p. 268).

As regards the teaching of medicine, Ibn Abu Usībīsī shows (i. 103 sqq.) that it was continued without interruption in Islam: for example, he mentions 'Abd al-Malik b. Abījar, who was in charge of the medical school in Alexandria, and after the conquest adopted Islam. At a later date, the chief medical schools were in Antakya and Harrān, among other places (i. 116 infra). For a long period most of the physicians were Christians (cf. also B. G. A., iii. 183). Teaching was usually given in connection with the hospitals. The students arrived on him whom he trained (kharrāq) and they assisted him (e.g. the Georgios, summoned from Gundāshāpur to Bâghdâd by Mansūr: Ibn Abu Usībīsī, i. 124). Kâla’tān had a lecture-room installed in his hospital, the Mansūrī, where the râlis al-ta‘żībah lectured on medical science (Makrīzī, iv. 260); instruction was also given in the great al-Bimaristan al-Nuri in Damascus (Ibn Abu Usībīsī, ii. 192). Lectures on medicine (tibb) were sometimes also given in the mosques but in this case it was for the most part a theoretical science closely connected with philosophy. Ibn al-Hajīmah (d. c. 430) lectured on tibb in the reign of al-‘Uthīm (ibíd., p. 90) and when Lâdīn restored the mosque of Ibn Tulūn he also endowed lecture-ships on this subject (Makrīzī, iv. 47; which shows that tibb should be read in Quatremère, Hist. Sall. Maml., i. 47). Tibb could also be studied in a madrasa; for example, al-Dūkî, who died in 641, lectured on it in the 'Alîshāwîya in Damascus (Ibn Abu Usībīsī, ii. 171). At the same time there were special mādārîs al-tibb; thus in the seventh century three were built in Damascus (J.A., ser. 9, iv. 497—499; Fleischer, Kf. Schr., iii. 329). The teachers in them could also be physicians at the hospitals (Ibn Abu Usībīsī, ii. 266).

d. Children's Schools.

These were older than Islamic science, since at the very beginning of Islam, reading and writing were taught in Arabia. In Medina the teachers were often Jews (see Bâlāḏūrī, p. 473 infra; cf. the name rabbānî for the teacher: Sîra, lii. 73; v. 48, 49; Bâhârī, 'Iln, lâb 10; Yâkîbî, ed. Houtsma, ii. 243); but ability to write was not so common here as in Mecca (cf. on the question Noldeke—Schwally, Gesch. d. Qorān, i. 15 sq.; Goldzīher, Med. Stud., i. 110 sq.). After the battle of Badr, several captured Mecceans were released to teach writing in Medina (Kâmil, ed. Wright, p. 171; cf. Goldzīher, op. cit., p. 111; Sprenger, Leben Med., iv. 131). After the capture of Kaḥiṣāyîsî, the prisoners were settled in al-Djurf and some were employed in the school (kuttāb) (Bâlâḏūrī, p. 142). Another contemporary of Omar’s, Dujab b. Hayaj, who was later an official and governor, was a teacher (mādārîn kuttāb) in a school in Tâif (Ibn Ḥadījar, Iqāb, Cairo 1323, i. 235). Muḍawwīya, who had acted as the Prophet’s amanuensis took a great interest in the education of the young. They learned reading, writing, counting, swimming and a little of the Kūrān and the necessary observances of religion. Famous men like al-Jadylībalī and the poets Kūmait and Trɪrɪnā n are said to have been schoolmasters (Jamāms, Mâṣhîria, p. 329 sqq., 360 sqq.). The main subject taught was adab, so that the schools of the children were called mādārîs al-adab (Aghâni, xvii., 2d Cairo ed., p. 101), and the teacher was called
often said to be "to teach them the Kur'an." In the Magribi also, the children only learned the Kur'an, i.e. to recite it, while in Andalus they also learned reading and writing (bíthb), poems and a little grammar. In Ifriqiya they learned, besides the Kur'an, some Hadith and a little of other sciences (Ibn Khaïdân, Maqdûda, p. 447 sq.; fayêt, vi. 32).

The children's school is called maktab (e.g. Yâkût, Udalbâ', iv. 272; Makrîzî, iv. 41. 201) or kuttab (Buçhârî, Dîyâr, bâb 27; Dâlûhîn, p. 142; Makrîzî, iv. 197, 240): those founded for poor children kuttab sulub or maktab sulub (cf. e.g. Makrîzî, iv. 53, 117, 199, 201). The word sulub characterises the school as a public benevolent institution; cf. the expression: "she made a maktab li 'izâbah" (ibid. p. 223; of Kâ'lânî's hospital, ibid.; p. 260; s. also Dâsy, Supplement, s. v.; Quatremère, Hist. Sult. Maml. sf., 229 note and B. G. A., iv. 211, 258). — Cf. on elementary education: Gokzlïer, Art. Education, in Hastings, Encycl. of Rel. and Ethics; Mec, Renaissance, p. 177 sq.; Lane, Manners and Customs; Snouck Hurgronje, Mekb., ii. 144 sqq.

5. Libraries.

In Mecca, as well as in Medina, there were large collections of books in the mosques (Ibn Dîjabar, p. 89, 193; on modern conditions in Medina, see Ghanûn, Rihla, p. 254 sqq.). The Dîmîfi Zaitûna in Tunis had a large library (Rec. Soc. Arch. Constantiine, 1894, p. 287). The Niqûmiya in Baghûdâd had a library of which al-îsârâtînî (I. 488) was librarian (Wustenfeld, Shî'tî, in. 314). The Mustânîrya was better supplied in this respect than any other madraa (Chron. Mekb., iii. 174). In Mâr Wîr there were in the sixth century to public endowed libraries in the mosques and madâris, two of them in the chief mosque, one of the latter containing about 12,000 volumes (Yâkût, iv. 599). Among the madhâris in Cairo, the Fâjilîya was particularly well endowed in this respect; it contained 100,000 volumes (Mârâkhî, iv. 197): these were acquired by al-kâdi al-Fâjîlî from the Fâjîmîd Academy (Shîhâb al-Dîn Abû Shâmâ, K. al-Râshûfâtînî, Cairo 1297, i. 200, 268; Makrîzî, ii. 253 sqq.) and in Kâlânî's hospital there were according to Ibn Tâghribîrî (lit., 482), 100,000 volumes from the same library. These libraries were often broken up and portions put in other madâris. During the famine of 694, the students of the Fâjîlîya sold the valuable books for a loaf a volume (Makrîzî, iv. 197; cf. also p. 252). In Syria, Avâl Mînîr (v. Berchem, Corpus, i/vi, 108 sqq.). Ibn Dîjabar says that in these eastern countries, the Kûrân was only taught orally (by tâlîf) while writing was practised with poems etc., out of respect for the Kûrân (Rihla, p. 272). This did not hold generally however. At a later date (sixth century) we are told that a pipe was led from a school in the Azhar Mosque to the tomb of the founder so that his grave could be watered by the water in which the slates, on which sentences from the Kûrân had been written, were washed (Sulâhân Rasîd, Kam al-Dînawar fi Tabîh al-Azhâr, Cairo 1320, p. 73). As a rule the school was placed close to the mosque and beside a drinking fountain. During the Mamlûk period, nearly every founder of a madrasa built in connection with it a similar institution for orphans and poor children, who received free instruction and sometimes also maintenance in it (see Makrîzî, s. v. madâris, passim). The object of such schools beside the mosque of Ibn Tûlûn is thus defined by Lâdîn as "to teach the orphans of the Muslims to recite the Book of God, the Exalted and also for other works pleasing to God and the various kinds of piety" (Makrîzî, iv. 41). Elsewhere it is
Masjid

'Alī still means Ḥadīth but, with the development of the systems of law and theology, these were also taught in the mosques. In the mosque of al-Mansūr in Bayra, al-ʿAshʿārī heard al-Dhumānī expound the Muʿāzīla kalām (Wustenfeld, Schafh., p. 131); closely connected with this was methodology (al-Maṣūba ṭara ʿal-Nuṣṣ, cf. Yākūṭ, Cdādā, vi. 353). But many different subjects could also be taught. Al-Khākhī al-Maghdūd, who taught in Mānṣūr’s Dīmān in Baghdad, lectured on his history of Baghdad (Yākūṭ, Cdādā, i. 246 sq.). Philosophy proper however disappeared from the mosques. In Spain, we are told, fīlāf and ṭajūf were only cultivated in secret, as those who studied them were branded as philosophers, un-Islamic (Maḳāṭī, ed. Dīvy, i. 136). The madāris were mainly established to teach the established systems of fiqh and originally each school was intended to represent only one madhab. Where the four madhāhīb are represented in one school, one can talk of four madāris, e.g. al-Madāris al-Ṣadīḥya (Maḳāṭī, iv. 209, 282; also al-Madiṣūnu, which was divided by the street, p. 209; cf. v. Bchem, C.I.A., i. 104 note 1). The custom, often occurring before Niẓām al-Mulk’s time of founding a Dār al-Ḥadīth was also continued after him. Al-Maḳāṭī mentions two of them in Cairo: al-Kamilīya, founded in 622 by al-Malik al-Kāmil (iv. 211 sq.) and al-Khāṣībiya, founded in 785 (ibid., p. 201). The former was restored in 1166 again as a Ḥadīth school (v. Bchem, C.I.A., i., No. 61). Before al-Malik al-Kāmil, Nār al-Dīn (d. 599) had founded the Niẓāmīya in Damascus as a Dār al-Ḥadīth (Maḳāṭī, iv. 211; cf. J. Ali, ser. iii. 262); when al-Maḳāṭī says this was built first on the earth he must be corrected. In Damascus many similar schools were built. 16 are mentioned, and 3 of which are not in the madāris. The ordinary madāras however included other subjects beside the study of ḥadīth alone. Special mention is made of al-Dīn al-Ṣadīḥya, Maḳāṭī, (iv. 205). In the Niẓāmīya in Baghdad and in other madāris in the cast. philosophical studies were professed (cf. Yākūṭ, Cdādā, vi. 409; v. 423 sq. and iv. 253, but it must be an anachronism when Sunnūm b. ʿAbd Allāh is said to have taught philosophy in 403 in the Niẓāmīya in Baghdad). In 604 (1207) al-Malik al-Muʿāẓim built beside the šākhra mosque a Madrasa al-Muṣīra, exclusively for Arabic linguistic studies (Sauvage, Hist. fr. et ii. br., p. 86, 140) and schools for special subjects were not rare (cf. Subki, Muʾfī, ed. Mīḥmūn, p. 153). In addition to those in Maḳāṭī, there are frequent references to šīrā (often al-ṣayf al-adḥāt), ḥadīth, ṭarīf and māzā (devotional exercises: cf. thecon Quatremeré, Hist. Sult. Maml., ii. ii. 47). Al-Subki mentions, in addition to the special Ḥadīth schools, also Madāris al-Tasfīr and Madāris al-Ḥadīth (Maṭī al-Nāf, ed. Mīḥmūn, p. 153).

In the Muḥālida (qaṣī, 6, No. 4 sqq.), Ibn Khāblām gives a survey of the divisions of Islamic studies. They are divided into al-ḥadīth ṭahīṣiya and nāḥīya. The former are based on observation by the sense and deduction and are therefore also called fasaṭāfura or ṭukkīza, the latter are dependent on revelation by the “legitimate determiner” (al-Waṣī al-Shaṭīr), are therefore based on special communication. The ṭalīm nāḥīya therefore comprises all branches of knowledge which owe their existence to Islam, namely Kūran, i.e. tasfi and the seven ṣuṣūf (No. 5), Ḥadīth with the sciences auxiliary to it, including al-muṣuṣ wa l-ṣuṣūf, muṣalat al-Ḥadīth (No. 6), al-ṣaṣī with special emphasis on al-ṣūṣ, the law of inheritance (No. 7–8), waṣī al-Ḥadīth with the principles of law including methods of deduction on the differences between the madhāhib (No. 9), al-kalām, theology, which is nāḥīya in as much as it is really a further development of imām which comes under the head of religious duties, but is ʿaṣlīya in its nature since it is entirely based on abstract proofs (No. 10), al-tuṣawwur, something like practical theology. (No. 11), ṭuṣī ḥadīth, interpretations of visions (No. 12).

Linguistic sciences come next to the study of Kūran and Ḥadīth (cf. No. 4, 37 beginning), which are divided into 4 parts: al-maṣāa, al-taṣawwur, al-bayān, al-ṣaṣī (No. 57), and in the last named category comes the whole study of Arabic literature.

The ʿaṣlīya ʿaṣlīya are variously classified, usually into 7 main sections (No. 13) and are al-ṣuṣīya, logic, which is the foundation of all others (No. 17), al-arṣuṣiyya, arithmetic, including ʿaṣīhā etc. (No. 14), al-ḥankaṣa, geometry (No. 15), al-haṣa, astronomy (No. 16), al-ṣuṣīya, the theory of tones and their definition by number etc. (see No. 13); then there is al-taṣawwur, the theory of bodies at rest and in motion, — heavenly, human, animal, plant and mineral; among its subdivisions, special mention is made of al-ṣaṣī, medicine, and al-ṣaṣī, agriculture (No. 18–26; cf. No. 29). The seventh main head is šīr, al-ṣaṣī, metaphysics (No. 21). Magic, talismans, mysterious properties of numbers etc. also form branches of Muslim learning (No. 22 sqq.).

As above remarked, medicine was not only taught in special schools but also in the mosques; about 600 A.H., ʿAbd al-Laṭf lectured in the Aṣḥar Mosque but it is not quite clear whether his instruction in ḥadīth was also given there (Ibn Abī Usāibī, ii. 207) and in any case the “philosophical sciences” in particular were cultivated in the mosques. Another division which still prevails, developed, that into principal sciences, those having a definite aim (maṣūba) and instrumental sciences (ṭaṣī or waṣī). To the former belong kalām, al-akhlāṣ al-ʿanṣārīya (ethics, practically the same as tuṣawwur), ḥadīth, waṣī al-ṣaṣī, Ḥadīth, the latter comprise linguistics, (ṣaṣī, ṭaṣsam, ṭayyib, ṭaṣī) and in addition metrics and prosody (ṣaṣī, ṭaṣīyya), logic (waṣī) including the theory of proof (ṣaṣī al-ḥadīth), probably the same as the older muḥālida and muṣalat, mathematics (ḥaṣf and ḥaṣf), muṣalat al-Ḥadīth (cf. Muṣāfā Baim, Risāla, Cairo 1902, p. 20; Snouck Hurgonje, Mekkā, ii. 200 sqq.). These are hard and fast lines drawn. When in 1162 Ahmad Pāša came to Cairo as governor, no ḥadīth in the Aṣḥar could give answers to simple questions on mathematics and astronomy, because they only knew as much arithmetic as sufficed to deal with questions raised by the law of inheritance; a very few studied these subjects privately. The Pasha pointed out that astronomy was necessary for the study of religious duties, to settle the times and seasons (al-Duḥarfī, Mīr divorce, Biography, ii. 110 sqq.); cf. also A. Spranger, Die Schulfächer und die Schelastik der Muslimen, Z.D.M.G. xxiii., 1878, p. 1–20).
The method of teaching was by lectures which had to be learned by heart afterwards (tafiq). The first task was to learn the Qur'an by heart and then acquire as many traditions as possible. The ḥadīth was repeated three times so that the student could remember it (Bukhari, *Ithn*, p. 30). Lecturing soon became dictation (imālā), when the student wrote down what was said, except in the case of the Qur'an (approved: Bukhari, *Ithn*, bāh 34, 36). The method was the same for linguistic or literary subjects as for ḥadīth, Tafsīr, etc. The philologists not only used to dictate their grammatical works, as for example Ibn Duraid (Wüstenfeld, Schäfer, p. 127) or Amr b. 'Abd al-Wāliyād (J. 344) who dictated from memory 30,000 folios on tughra (Vāqūt, *pread.†*, vii. 26) but also the text of the poets, like al-Jabari, who lectured on al-Tirmidhī in the Mosque of Amr in 256 (ibid., vi. 432). Abū Bakr b. al-Anbārī (d. 327 or 328), who dictated in one part of the mosque and his father in another, knew by heart 300,000 sharāhibīd for the Qur'an and 120 commentaries on verses of the Qur'an with their iṣnāds (ibid., vii. 73). Dictation was specially important in the case of ḥadīth, as the exact establishment of the text was the first necessity. It is therefore always said "he dictated ḥadīth" (Hasan al-Mukhādira, ii. 130; Wüstenfeld, Schäfer, p. 210, 224, 248, 257, 287 etc.; Ibn Ḥalibūbughā, *Tabakht al-Hanafiya*, ed. Flügel, p. 51; Yāqūt, *Cf*., i. 426). The position of a teacher is therefore maghilib al-imālā (ibid., ii. 243; vii. 74), and his famulus among the students is al-mustamīl (cf. ibid., vii. 282; vii. 74). Problems of fikr were also dictated (so Abū Yūsuf, Ibn Ḥalibūbughā, ed. Flügel, N°. 249).

Instruction frequently began immediately after the salāt and the students performed the salāt along with the teacher. The class (darūr) began with the recitation of the Qur'an by a ḥāfiz, with blessings on the Prophet, and other religious formulae (Madkhal, i. 56; cf. Mez, Renaissance des Islams, p. 172 sq.). At the present day, the teacher as a rule simply pronounces the basma himself. Dictation alone was not everywhere the custom. In time, there came to be so many copies of the chief texts that the students were able to get copies for themselves. The text was in this case read aloud, and the teacher gave his emendations and comments on the text (Vāqūt, *Cf*., i. 255). It was only natural that the dictation of texts was first abandoned in philosophy; it is said to have been dropped as early as the fourth (tenth) century (Mez, Renaissance, p. 171 with a reference to Subkī, *Tabakht al-Shāfi`īya*, iii. 259; Suyūtī, *Mushir*, i. 30). This does not mean that dictation was completely abandoned for the teacher still made his pupils write down his comments; for example Muhammad b. 'Abd al-Rahmān (d. 584) dictated a commentary on Ḥaṭirī (Vāqūt, *Cf*., vii. 29), and the method of having a text read aloud, while the lecturer explained any remarkable phrases was used as early as by the teacher of Ḥadīth, Ibn Kāsān (d. 2999; ibid., vi. 258). At the present day, either the teacher or his famulus reads the text to be expounded from printed copy.

Cooperation between teachers and taught by questioning one another has always been an important feature of method. Ibn Khaldūn laments that so few teachers in his time understood the correct methods of teaching (jarr al-ta'em). They put difficult questions at once to the pupil instead of which the tahlīn must be arranged systematically, so that it is always combined with exposition and it is a fundamental principle that the pupil should not mix the different subjects. In Spain and North Africa in particular in his time, the instruction was not particularly good, and they laid too much stress on learning by heart (iṣfīf). (Mukaddimah, p. 342, 443 sq. 445 = fasc. 6, N°. 29, 30; cf. Subkī, *Mīd` al-Nam`, ed. Muhamm., p. 151 sq.). Mechanical learning by heart is recognised for the Qur'an. It is therefore regularly said "he dictated and expounded" (e.g. Wüstenfeld, Schäfer, p. 220, 326). When the above mentioned Ibn Kāsān expounded ḥadīth, he also asked his hearers about their meaning (Yāqūt, *Cf*., vi. 282). Vice versa, the class was at liberty to catechise the teacher. Al-Shāhī used to sit in his great hālka in Mecca and say: "Ask me what you want and I will then give you information on the Qur'an and sunna!" (ibid., vi. 391; cf. F. G. A., iii. 379). The teacher was sometimes overwhelmed with questions (Vāqūt, *Cf*., v. 272). Ibn Dūhair saw written questions being handed to a teacher in the Ni`āmīya in Baghda (p. 219 sq.). Both practices are still in vogue and even in large classes the student may interrupt with questions. Ibn al-Ḥādījī condemns irregular interruptions of the lecture (Madkhal, i. 57).

7. The Teachers.

The name for a teacher is muṣarrīs (also used in the pre-Muḥammadan period: Ibn Abī Uṣāfa, i. 104); usūdh is a kind of honorary title (see Vāqūt, *Cf*., i. 413, 209; i. 271; v. 353, 354, 438, 448) and is still in use and applied also to students. There were a very large number of teachers in the great mosques. In the madrasa at first only one was appointed, for example in the Ni`āmīya in Baghda (see above), in the first of those founded by Šāhāl al-Dīn in Cairo (al-Nāsira: Makrīzī, i. 193) and in many others. A madrasa frequently took its name from a distinguished teacher (e.g. the Gharawīya in Cairo: Makrīzī, iv. 235; the Shāfirīya, originally the Xīnīrīya: ibid., p. 193; M. Ibn Rashīd; ibid., p. 195; cf. Masdjid al-Kiṣā in Baghda). In the large madrasā, however, several teachers were appointed; Šāhāl al-Dīn appointed 4 lectures to the Khānīya in Cairo (ibid., p. 195 sq.); in this case a definite number (20) of students was allotted to each teacher (cf. Chron. Mekk., i. 105 sq.).

It is easily understood that the conditions in the older mosques, where every one could come and go, were freer than in the madāris, which were built for particular teachers and students. There was certainly no official recognition of the teachers in the earliest period. After textbook had come into use, the certificate of qualification was the iṣfīf, and so it has remained to modern times. Any one who had studied with a teacher could get permission from him to teach from the book, which he had copied out and studied from his dictation: the teacher wrote this permission (iṣfīf) in the book (e.g. Vāqūt, *Cf*., i. 253; ii. 272). A teacher could also give an iṣfīf a`wāma, which permitted the individual concerned to teach from all his works (Ibn Bāṭtūta, i. 251). In Damascus, Ibn Bāṭtūta was given quite a number of these 'diplomas' (i. 251–253). It was the usual thing for a travelling scholar to collect numerous iṣfīf.
thus 'Abd al-Latif had certificates of this kind from teachers in Baghdad, Khorasan, Egypt and Syria (Ibn al-'Itrā‘, ii. 202). As late as about 1700 we find al-Naṣirī acquiring ḏa‘a‘a‘ in his travels (Z.O., M.G., xi. 690). There were special formulae for the ḏa‘a‘ for Māturida‘ and ṣafā‘a‘ (al-Ṭalḥi‘a, fahhāl, al-ʿASh‘i‘, xiv. 322 sq.). Some scholars only gave occasional lectures. 'Abd al-Wāḥīd (d. 944) lectured on Ḥadīth every Friday in the Naṣimiyya (Wustenfeld, Schafī‘, p. 287) and originally this was the case in the Azhar Mosque (see above).

The caliph al-Kādir, in his earlier days, used to lecture every Friday in a mosque in Baghdad (ibid., p. 233) Some scholars only dealt with a very limited subject; thus one was appointed to the Naṣimiyya to lecture on Bukhārī's Šahih because he had attended lectures on this from a celebrated teacher (ibid., p. 288). There were however many learned men who devoted themselves mainly to teaching and taught several subjects. Thus al-Shafi‘ī began his ġāhā‘ immediately after the ṣalā‘ al-dā‘ah and taught students of the Kūrān, as Sunday the students of Ḥadīth came to him and heard his comments; later in the day he lectured on method (muḥākara wa tā‘aqar); at the ġaiša‘ the ahl al-ṭa‘ā‘ā‘ came to him and he lectured on ʿa‘dād, mákṣū‘a and šurā‘. He went off at midday (Yākūt, ḍabā‘, vi. 383). About 300 A.H. we find Ibn Kaṣān lecturing for the best part of the day on a number of subjects in somewhat the same order (ibid., p. 282); others lectured from early morning till late in the evening (ibid., vii. 176; Ibn Ṭabī‘a‘, ii. 207 supra) and pious teachers even spent the night in the mosque in prayer (Wustenfeld, Schafī‘, p. 258). Sometimes a young teacher began by dictating ḥadīth and later received a post with a wider scope in a mosque (ibid., p. 239).

The distinction between teacher and taught was not absolute; any one could have an ḏa‘a‘a‘ in one subject, while he was still a student in others and even men of ripe scholarship attended the lectures of notable teachers. This led students to travel from one seat of learning to another, just as they used to travel in early days, to collect hadiths (Bukhārī, ibn. p. 7, 19, 26). All the biographies of learned men give examples of this; the old Hellenistic custom was thus continued (cf. J. W. H. Walden, The Universities of Ancient Greece, New York 1910) and royal courts still played the same part; at them learned guests received donations, which enabled them to appear as teachers in the mosques (e.g. Ibn Ṭaṭṭa‘a‘, ii. 75 sqq.; Ibn Khallikān, Kifā‘ al-ṭa‘ā‘, al-Bā‘a‘, 1284. 452; Ibn Ṭā‘ā‘a‘, ii. 205; cf. Mommsen, Romische Gesch. ii. 59). Distinguished scholars were of course much visited by lovers of learning; of one of the latter, it is said ḥa‘itha‘ ḥa‘itha‘ or ḥa‘itha‘ ḥa‘itha‘ ‘they used to travel to him’ (Yākūt, ḍabā‘, vii. 174; Ḥasan al-Maḥsū‘a‘, l. 207; cf. p. 141). 4–600 ṛi‘a‘a‘ had gathered a teacher in the Maghrīb in the time of Ibn al-Hādhīj (Maṭbally, ii. 5). Sometimes a scholar attended another's class to try him with questions (see e.g. for al-Bukhārī: Ibnunow-Fischer, Christen-Handbuch, p. 103) and disputations often took place in which the pupils used to support their teacher very vigorously. If the stranger was recognised, the teacher might receive him with marks of honour (al-ʿAkhbā‘ at al-Kuṣai‘: Yākūt, ḍabā‘, iv. 243 sqq.). As in the Christian universities of Europe, public disputations were held in the mosques, in which considerable feeling might be displayed, e.g. in the disputations in the Raṣā‘a‘ mosque in Baghdad between Ibn Suraijī (d. 536 = 918) and the son of Dāwūd al-Zāhirī in which the former was victorious (Wustenfeld, Schafī‘, p. 110 sqq.). The teachers of the Naṣimiyya also used to hold disputations (ibid., p. 309). Celebrated teachers were not only visited by other scholars. When (about 300) Ibn Kāṣān was lecturing, about 100 horses etc. used to stand outside the mosque because prominent men were listening to him (Yākūt, ḍabā‘, vi. 282). The teachers made up the class of “the turban-wearers” (mawlā‘āmam, mawlā‘āmam, ṭa‘ā‘ā‘a‘ al-ṣī‘ā‘a‘, al-ṭa‘ā‘ā‘a‘ al-ṣī‘ā‘a‘; see Makrizi, ii. 246; Quartemere, Hist. Sult. Mar., i. 244 sqq.; ii. 266; Dozy, Supplément, ii. 169); in eastern Andalus, they did not wear the ḍabā‘a‘, but this was exceptional (Makrizi, i. 137). The Kādi‘ Abū Yūsuf (d. 82) is said to have settled the dress worn by learned men (Ibn Kathīrūbuahū, ed. Flugel, N. 249).

In spite of all this flexibility a certain stability developed in the teaching staff of the mosques. This was connected with the question of pay. It was for long in dispute whether it was permitted to accept payment for giving instruction. In the collections of Ḥadīth, the practice is both supported and condemned and it is said that the teacher may accept money, but not demand it, and avaricious teachers are strongly condemned. There are continual references to people who gave lectures without payment (Bukhārī, ḏa‘a‘a‘, bab 16; Abū Dāwūd, ḍabā‘, bab 26; Ibn Māda‘a‘, ṭa‘ā‘ā‘a‘, bab 8; cf. Goldziher, Dab. Stud., ii. 181 sqq.; Art. Education, N. 3–4 in Hasings, Encyc. of Rel. and Ethics; Lammens, Muskrat, i. 360 sqq.; F.A., 1901, p. 143; Wustenfeld, Schafī‘, p. 295; Mez, Renaissance, p. 176). The custom of the older Jewish scholars of exercising a handicraft was not common among the Muslims but was found occasionally. Among men of learning we find shoe-makers, locksmiths, sandal-makers (Wustenfeld, ii. 227, 231, 267; cf. also Mez, Renaissance des Islam, p. 179). It was the rule however for the teacher to be paid for his work. This might be quite a personal donation from a prince or other rich man, for example al-Ṭabarī was given a sum of money when he taught in the Mosque of al-Amr (Yākūt, ḍabā‘, vi. 428; cf. the remarks above on wandering scholars); it was as a rule however a regular salary which was paid out of endowment, so that the position was a regular professorial chair (see under G); this was especially the case in the madrasas. The salaries of the teachers (mawlā‘ām, also ḍabā‘ā‘, sg. ḍabā‘ā‘; see Dozy, Supplément, s. v.) varied considerably, according to the endowment. The lecturer in the Suṣyūfīya received 11 dinars a month (Makrizi, iv. 196) but in another of Salāh al-Dīn’s schools, the Sahlīya or Naṣīrīya, the pay was much higher; the principal teacher received 40 dinars (of 12 2 dirhams) a month and 10 dinars as principal, along with 60 ṣī‘a‘ of bread and two beasts of burden, to bring water from the Nile (ibid., p. 251). In the Djamāl al-Dīn madrasa, each teacher got 300 dirhams a month (ibid., p. 253). The teachers also received donations in kind on special occasions; in the other Naṣīrīya school they received sugar and meat every month at the festivals (ibid., p. 222),
in the Ḥidżāyiya on Ḩd al-litr different kinds of bread and biscuit (ba'k and ḥunāhunāk), at the feast of sacrifice meat and in Ṭa’īdān food was prepared for them (p. 223). According to al-Makrīzī, learned men might have 50 dinār a month and in addition to allowances in kind (ii. 364). On ceremonial occasions, they often were given special marks of distinction, such as gifts in money and robes of honour.

The men of learning were organised in a gild. How the organisation worked in detail is not known. At the end of the third century they found the institution of the riṣāla established in Egypt. While Yazid b. Ḥālib (d. 125) is called faṣīk Miṣr wa-shaykhūkā and saiyidunā wa-ālimunā and Usayd b. Ḍa‘far (d. 135) faṣīk Zamānī (Ḥusn, i. 131), it is said of a series of scholars beginning with Abū al-Khaṭām b. al-Ḳāsim (d. 191), Ṣaḥīḥ b. Abī Ḍa‘fār (d. 204), Abī Ḍa‘fār b. Abī al-Ḥakam (d. 214 or 215) that they had riṣāla-s in Egypt (Ḥusn, i. 135 sq.) which seems to mean that they belonged to an organisation. The position is also called riyāṣat al-fālām, as, for example, with reference to Vānuus (d. 264) (ibid., i. 136). When the madhhab arose, each school had its own rūt in the organisation. The formulae for this was intahat iṭla‘i ‘rīṣāla fi madḥḥab ṭalqā; e.g. of Ibn al-Mawāz (d. 251), and others (Ḥusn, i. 136; Ibn Ṭaghrībidrī, ii. 116). For the Ṣaḥīḥs e. g. Ḥusnain, died 406 (Ibn Ṭaghrībidrī, ii. 121 sq.; cf. Ḥusn, i. 196; Ibn Djugair, p. 219, 220); for the Ḥanafīs e. g. al-Ḳarkhī, died 340 (Ibn Kultubba, ii. 115; cf. No. 11, 13; Ibn Ṭaghrībidrī, ii. 116); for the Hanbalis al-Barbāhārī (d. 329) (Ibn Maskawāwī, i, Cairo 1905, p. 266). Besides rūt we find other names like Imam al-Ḥanafīya bi-Ṭaghrībidrī or bi-Kultubba or Shāfi‘i ʿAḥsān bi-ḥanīfat al-Nāḥir (Ibn Kultubba, No. 67, 96, 196; cf. Shāfi‘i al-Ḥanafīya: Ibn Ṭaghrībidrī, ii. 116). There is also evidence of the Ṣafīya within the special subjects, e. g. Shāfi‘i al-Kurūba bi-Mīṣr (Ḥusn, i. 230), Ṣafīyat al-Ḥadīṣ bi-Mīṣr (ibid., i. 163; Ṣafīyat), Ṣafīyat al-Ṭaqāwā (Quatremère, Hist. Sull. Maml., ii. 27), Ṣafīyat al-Iṣra‘ wa-l-I‘lāma in Alexandria (Ḥusn, i. 210). The physicians of a district had their Ra‘ī al-Ṭahāba (Maṭrīzī, iv. 237; Ibn Abī Usāfi‘a, ii. 86, 247); a Ẓafīr was appointed in 624 (1285) chief of the physicians (Quatremère, ep. cit., ii. 81). There was also a Ra‘ī al-Ṭahāba (Maṭrīzī, iv. 224). Ṣafīyat al-Ḥall is found as a title of honour for a scholar, e. g. in the viih, viihth century (Ḥusn, i. 143; 205; Quatremère, ep. cit., ii. 68, note; ii. 270, 280: Ibn Taimiya), and sometimes also for earlier (Mez, Renaissance, p. 179), while Ṣafīyyat al-Shaykhī means the most distinguished leader of the Sufis (Maṭrīzī, iv. 285).

It is not clear what real importance the organisation of teachers had in the earlier period. In different districts there was a principal director of the organisations, a ra‘ī al-Ṭulāmā, in Medina (Ibn Djugair, p. 200, 3), in Baghdād (ibid., p. 220, 22), in Cairo and Upper Egypt (Ḥusn, i. 141, 143; 191), also called ra‘ī al-rūṣā (Ibn Abī Usāfi‘a, i. 204; Yāḥūt, Usāfi‘a, i. 248). Every madhhab had its ra‘ī for the district (Ḥusn, i. 148, 21; Yāḥūt, iv. 512). The chief ra‘īs could interfere in the activities, for example, on the teachers of Ḥadīth (Yāḥūt, Usāfi‘a, loc. cit.). He is probably identical with the ẓafīr al-Ṭulāmā, without whose permission the caliph would not admit a teacher to the Mosque of al-Mansūr in 451 (ibid., i. 246 sq.). This shows that the head of the gild of learned men even then could exact influence on the appointment of new teachers. Whether appointments were made after an examination we do not know. The right of lecturing was in any case limited in this way in practice, but a systematic set of regulations hardly existed. Abū al-litr al-Ṭalūfi lectured in the Masjid al-Ḥadījīa Lu‘lu‘, being paid by the Ẓāfīr al-Ṭalūfi and afterwards in the Azhar, paid out of the Baḥl al-Mal (Ibn Abī Usāfi‘a, ii. 205, 207); but what his relation to the gild of teachers was is not known. In later times the chief of the learned men in Iraq and Mesopotamia had great influence, because he decided who should be admitted into the gild of teachers and also controlled salaries (see G 29).

The teacher had his particular place in the mosque, often beside a pillar: this was his madhhab, which was inherited by his successors. al-Husayn was hāliyat ʿI’t-Sa‘īdī fi ṣafīyat al-Ṭulāmā (Ḥusn al-Muḥādara, i. 135; cf. 181 infra, 182; Maṭrīzī, iv. 5; Yāḥūt, Usāfi‘a, iv. 135; Wustenfeld, Schāfi‘i, p. 239). The outward appearance of the class did not alter through the centuries. His hearers sit in a circle (ṣafīya: the listeners ṣafīyat al-Ṭalūfi: Maṭrīzī, iv. 49, 17 sq.; cf. on the word (Quatremère, Hist. Sull. Maml., ii, ii. 197 sqq.) on the ground before the lecturer. The teacher sits on a carpet (ṣafīyat al-Ṭalūfi, i. 254) or skin (ṣafīyat). This was described as a symbol of his dignity in his ṣafīya (al-‘Ummī, Tūrī, p. 134). It is quite irregular for any one to teach standing (Yāḥūt, Usāfi‘a, v. 424, 8; for the other view see Bukhārī, ’Ibn, bāb 45). On the other hand, we often find in large audiences that the teacher has a raised seat (for the older period see Ibn Battūta, i. 212). Ibn al-Halīḍījī condemns this because the teacher must not raise himself out of the circle of his hearers; he even wants to reject the use of the skin and carpet as effeminate (Mudīḥkal, i. 96 sq.). It was not the custom for teachers, to live in the mosque. Of course a teacher, like any other pious individual, could stay in the mosque and even have a room there; al-Qazwīnī for example lived in the mosque of the ʿUmayyads, where Ibn Djugair saw his room and Ibn Ṣa‘īd mentions a teacher, al-Kermānī, who lived on the roof of the Azhar Mosque (i. 92; cf. also Ibn Abī Usāfi‘a, i. 204). But these were exceptions; al-Ṭalūfi built a dwellinghouse for the teacher in the Azhar near the mosque (Maṭrīzī, iv. 49). The earlier madāris founded by Nizām al-Mulk had often lodgings for the teacher, especially a. the teacher sometimes made his lodging his classroom and this is also found later. Thus al-K genders, who died in 543 (1149) lived in the Bāḥākhāya (Wustenfeld, Schāfi‘i, p. 307) and in the Ṣabā‘iyya the head of the college had his home within the buildings (Ibn Djugair, p. 45). Shams al-Dīn (d. 637) lived in Damascus in the Ādīliyya where he taught fikh (Ibn Abī Usāfi‘a, ii. 171; cf. also p. 260). This must also have been the case in other madāris. But in any
somewhat modernised, was still given. The education in the madrasas is linked up with the new universities in Calcutta and elsewhere (Calcutta University: Commission, 1917–1919, Report, Calcutta 1919, p. 143–187; Yuli, 60–70). In 1922 there were already 14 universities of which five were founded after 1919 (Oriente Moderno, ii., 1923, p. 60; on earlier discussions on the foundation of a university see R. M. M., xxi. 1912, p. 268 sqq.). The older universities, founded on the model of that of London, are those of Calcutta 1857, Madras and Bombay 1857, Lahore 1882, Al-Rahaba 1887 (R. M. M., vi. 43; on Chiefs' Colleges, ibid., p. 1–51; ix. 44–51). The essential feature of the reforms is the new method of instruction, the systematic organisation of the courses, which are concluded by examinations, and the creation of a qualified body of competent teachers.

Inspired by the same spirit, if not so thorough, were the reforms which were carried through at the capital of Islamic studies, the Azhar in Cairo without the assistance of a European power. In 1872 an examination for those beginning teaching was instituted and the ordinance expanded by new regulations in 1885, 1888 and 1895. The principal could however appoint teachers without examination. The students had to be registered so that unworthy persons should not share the stipends. On June 4, 1895, a council of five members was appointed to prepare reforms. They dealt with the finance and organisation. In 1896 the mosque-schools in Tanjia, Damietta, and Dussik and in 1903 those of Alexandria were put under the Azhar. On July 1, 1896 (supplemented in 1897 and 1899), examinations for students were arranged; history, geography and mathematics were introduced as voluntary subjects and it was forbidden to read glosses and super-commentaries in the first four years. The driving power in the council was one of its members, Muhammed 'Abduh, but he retired in 1905. The Khedive 'Abbas II 'Ilmi in 1908 and in 1911, after several commissions had been working at the subject, promulgated a new law which is still (1928) practically in force. The administration of the Azhar Mosque and the institutions connected with it (particularly other mosques and the Kadi School) were reorganised. The organisation is based on the old organisation of the staff with the principal as head of the 'ulama and the heads of the madrasahs as members of the committee of management. New subjects were instituted, such as al-khudi in combination with the tirra, history, especially Muslim, geography, natural history, chemistry, mathematics, drawing, hygiene, education. Instruction is given in three divisions, each of which is estimated to cover 5 to 7 years. To obtain admission a student must be 10–17 years of age, be able to read and write and know the Kur'an by heart (by the law of 1911 he was allowed to learn half of it in his first six months in the Mosque, but this was abolished in 1921). Each year ends with the examination in the month of April; the final examination of the first section enables the successful candidate to teach in elementary schools, that of the second to obtain an appointment in certain offices or in imam or kulfis in the mosques; by the examination, the candidate obtains the highest degree of 'alam, and can become a teacher in the Azhar, or judge or council in the Shari'a courts. By new laws of 1921, 1923 and 1924, the examinations were reformed and the relationship to the Kadi School, Dîr al-'Ulîm and other educational institutions reorganised so that in the Azhar, a kism al-takhassus for Fikih, Tafsîr, Hadith, Tawhid, Mantiq, Waqf, Bayan, Akhbâr, Islamic history and practical courses in teaching and court practice were instituted. When by the law of Aug. 26, 1927, a university was founded with faculties of arts, law, scienc, and medicine (cf. Oriente Moderno, v., 1925, p. 110 sqq., 434–436; vii., 1927, p. 672 sqq.), the question of education in the mosque again came up and a new commission on Nov. 27, 1927 was charged to consider new proposals (for the reforms of Egyptian institutions see P. Arminjon, L'enseignement, la doctrine et la vie dans les universités musulmane d'Égypte, 1907; Mustafa Baimar, Risâla, 1902; Sultanin Rašid al-Lazîyât, Dîvawhar fi Turîkh al-Azhar, 1320, p. 147 sqq.; Akhî Mustaţfî Isârat al-Azhar, Cairo 1323, anonymous, but by 'Abd al-Karim Salâm, cf. M. Alâud-dîn, xxv., 1924, p. 703; Commission de la Réforme de l'Université d'El Asqar, Projet de Réforme présenté par Muh. Pacha Sâli, Cairo 1911, and the official regulations; C. Joh. Pedersen, al-Azhar, Copenhagen 1922, p. 65 sqq.; A. Sekaly, in Revue des Études Islamiques, i., 1927, p. 95 sqq., 465 sqq.; ii., 1928, p. 47 sqq. etc.; Oriente Moderno, v., 1925, p. 113 sq.; viii., 1927, p. 634). In Morocco the ruler in 1844 introduced European subjects into the Madrasa in Fas Jdirad (whence its name Madrasat al-Muhandisîn); these innovations did not become permanent but in 1916 the madaris in Fas and Rabat were reformed (Bell, in F.A., ser. ii., 1925, 1, 152; Péretie, in Arch. Maroc, xviii., 1912, p. 257 sqq.; see for Tunis: R. M. M., iii. 385).

Since the World War, throughout the world of Islam, particularly in Turkey, very far reaching reforms in education have been introduced the results of which cannot yet be surveyed.

...G. The Administration of the Mosque.

I. Finances.

The earliest mosques were built by the rulers of the various communities and the members of the community did all the work necessary in connection with the primitive mosques. The later mosques as a rule were erected by rulers, emirs, high officials or other rich men in their private capacity and maintained by them. The erection of the mosque of Ibn Tulun cost its builder 120,000 dinars, the Mosque of Mu'ayyad 110,000 (Makrizi, iv. 32, 137, 138). The upkeep of the mosque was provided for by estates made over as endowments (waqf, butûb) (cf. elsewhere besides the Fikh-books: J. Kremskii, Das Waqfrecht, Z.D.M. G., xiv., 1891, 1, 511–576; E. Mercier, Le code du hokoum ou onqâf selon la législation musulmane, 1899). In the third century we thus hear of houses which belonged to the mosques and were let by them (Papyrus Erzerhög Rainer, Führer, No. 773, 837 and Ibn Tulun handed over a large number of houses as an endowment for his mosque and hospital (Makrizi, iv. 83). This custom was taken over from the Christians by the Muslims (see Becker, in Id., ii. 404). According to Makrizi, estates were not given as waqf endowments until Muhammed Abâ Bakr al-Madâghâri (read thus) bequeathed Birkat al-Habash and Suyâf as endowments (about 300 a. h.); this was however cancelled by the Fatimids again (ibid.). Al-Íçitik made large endowments not only for his own,
but also for mosques previously in existence, such as the Azhar, al-Fākimī, Dār al-İmam and Dāmī al-Maṣṣ and Dāmī Kāshīda; the endowments consisted of dwelling-houses, shops, mills, kata'irīya and ḥawīrat, and the document (ibid., p. 50 sq.) specifies how and for what purposes the revenues are distributed. Baths were also given as endowments for mosques (ibid., p. 76 for 529; cf. 81 of the year 543). Sahāl al-Din granted lands to his madārīs: in 566, for example, a kata'irīya to the Kānīyā and a qā'a in al-Fayyūm and the teachers received wheat from al-Fayyūm and in the same year he endowed the Nāṣirīya with goldsmiths' shops and a village (ibid., p. 193 sq.; cf. another document: p. 196 sq.). During the Mamlūk period also, estates were given as endowments (for documents of this period see van Berchem, C. L. A., i., No. 247, 252, 528; Moberg, in M.O., xii., 1918, p. 1 sqq.; F. A., ser. 9, iii. 264–266; ser. 11, x. 158 sqq., 222 sqq.; xi. 195 sqq., 250 sqq., 363 sqq.). They were often a considerable distance apart: the mosques in Egypt often had estates in Syria (v. Berchem, C. L. A., i., No. 247; Makrizī, vi. 107, 137). Not only were mosques built and endowed but already existing ones were given new rooms for teachers, minbars, stipends for Kūrsān reciters, teachers, etc. There were often special endowments for the salaries of the imām and the mu'ādhānīs, for the support of visitors, for blankets, food etc. (see Ibn Dhubair, p. 277 with reference to the Mosque of the Umayyads). The endowments and the purpose for which they might be used was precisely laid down in the grant and the document attested in the court of justice by the kādi and the witnesses (cf. Maḳṣūrī, iv. 50, 196 infra). The text was also often inscribed on the wall of the mosque (cf. ibid., p. 76; the above mentioned inscriptions amongst others. Documents from Taškent see K. M. M., xiii., 1911, p. 278 sqq.). Certain conditions might be laid down, e.g. in a madrasa that no Persian should be appointed there (Maḳṣūrī, iv. 202 infra) or that the teacher could not be dismissed or some such condition (v. Berchem, C. L. A., i., No. 201), that no rooms could enter (F. A., ser. 9, iii. 389), that no Christian Jew or Ḥanīfī could enter the building (ibid., p. 25), Endowments were often made with stipulations for the family of the founder or other purposes. Those mosques could also be burdened with expenses is evident from a inscription in Edfū of the year 797 (1395) (v. Berchem, C. L. A., No. 539). If a mosque was founded without sufficient endowment, it decayed (e.g. Maḳṣūrī, iv. 115, 201, 203) or the stipends were reduced (ibid., p. 251), but in the larger mosques as a rule the rulers provided new endowments. According to al-Māwardī, there were also special "Sūṭān-mosques" which were directly under the patronage of the caliph and their officials paid from the Bait al-Mal (al-Aşıkam al-Sulṭānīya, ed. Enger, p. 172 supra, 175 supra).

Just as the Bait al-Mal of the state was kept in the mosque, so was the mosque's own property kept in it; e.g. the kanz or kīḍān al-Ḳaḥ'ū, which is mentioned in Omar's time and may be presumed to have existed under his predecessors (Baṣbūrī, p. 42 supra; C. M., i. 307; ii. 14). The Bait Māl al-Dāmūs in Damascus was in a kūba in the saḥn (B. G. A., iii. 157; Ibn Dhubair, p. 267; Ibn Barqīt, i. 201; cf. for Medina: Wustenfeld, Medina, p. 86). Rich men also had their private treasure-chambers in the mosque (see E 2) as used to be the case with the Temple (see Schurck, Gesch. d. jud. Vökele, i, 1907, p. 322–328; F. Cumont, Feuilles de Doura-Europæa, 1926, p. 405 sqg.).

2. Administration.

As Imām of the Muslim community, the caliph had the mosques under his charge. This was also the case with the sulṭān, governor or other ruler who represented the caliph in every respect. The administration of the mosques could however not be directly controlled by the usual government offices. By its endowment the mosque became an object sui generis and was withdrawn from the usual state or private purposes. Their particular association with religion gave the kādi special influence and on the other hand the will of the testator continued to prevail. These three factors decided the administration of the mosque but the relation between them was not always clear.

a. Administration of the separate mosques.

The mosque was usually in charge of a nāẓîr or wāli who looked after its affairs. The founder was often himself the nāẓîr or he chose another and after his death, his descendants took charge or whoever was appointed by him in the foundation charter. In the older period the former was the rule and is said to have applied especially in the case of chief mosques, if we may believe Nāṣîr Khāṣrāw, according to whom al-Fākimī paid the al-Dīn al-Maṣṣ al-Dīn al-Fākimī paid the endowment to the Amr b. al-Ḳaḥ'ū 50,000 dinārs for the mustaṣ'ir or the minaret and similarly to the descendants of 'Amr b. al-Ḳaḥ'ū 100,000 dinārs for the mosque and 5,000 for the minaret and similarly to the descendants of Amr b. al-Ḳaḥ'ū the Mosque of 'Amr (Sefir-Xama, ed. Scheler, p. 39 and 146, 49 and 148). In 578 we read of an administrator (muṣṭaṣ'ir) of the mosque in Jerusalem (Maḳṣūrī, iv. 11). In the case of mosques and madrasās founded during the Mamlūk period, it is often expressly mentioned that the administration is to remain in the hands of the descendants of the founder: e.g. in the case of a mosque founded by Bahbars (Maḳṣūrī, iv. 89), in the Dāmī Maṣḍ during the Mamlūk period, it is always the kādi al-ṭir (Maḳṣūrī, iv. 256) in the Khanāk of Bahbars the kīḍān al-ṭir (Maḳṣūrī, iv. 256), the Khanāk of Bahbars the kīḍān... (v. Berchem, C. L. A., i., No. 225) but it was more frequently a kādi: for example in the mosque of Bahbars just mentioned, the Ḥanāfī kādi was to take charge after the descendants (Maḳṣūrī, iv. 89) in the Aḵbūghawiya, the Shāfī kādi was appointed but his descendants were expressly excluded (ibid., p. 225). In the Mosque of the Umayyads during the Mamlūk period, the Shāfiʿī chief kādi was as a rule the nāẓîr (Kalkashandī, ed. Berchem, C. L. A., iv. 191) and in the Nāṣir mosque in Cairo (ibid., xi. 262–264). In this city we find during the Mamlūk period that emirs and kādis alternately acted as nāẓîrs in the large mosques (e.g. the Mosque of Ibn Tulun: ...
MADJID

Maktiz, iv. 42). Cases are also found however in which descendents of the founder unsuccessfully claimed the office of nazar (Maktiz, iv. 218, 255). This was the result of the increasing power of the kaid (see below). In the majority of cases, the kaid was often also the headmaster; the two offices were hereditary (ibid., p. 204: the Zahiyya al-Bahsiy, p. 238 supra: the Damaabia). In Tustar a descendant of Sahil as nazar and teacher conducted a madrassa with the help of four slaves (Ibn Battuta, u. 25 sq.).

The Nayar managed the finances and other business of the mosque. Sometimes he had a fixed salary (in Babars’ Khannah 500 dirhams a month: v. Berchem, C. I. A., i. No. 252: in the Dulaamya in Damascus in 847 only 60 dirhams a month; F.A., ser. 9, ii. 204), but the revenues of the mosque were often applied to his personal use. His control of the funds of the mosque was however often limited by the central commission for endowments (see below). The nazar might also see to any necessary improvements. He appointed the staf and he fixed their pay (e.g. Maktiz, iv. 41). He could also interfere in questions not arising out of the business of administration; for example the inn Sawdah, the nazar of the Azhar in 818 erected about 750 poor people from the mosque. He was however thrown into prison for this by the Sultan (ibid., p. 54). Generally speaking the nazar’s powers were considerable. In 784 a nazar in the Azhar decided that the property of a muhajir, who had died without heirs, should be distributed among the other students (ibid., p. 54). In Mecca, according to Kindi al-Din, the Nayar al-Habbar was in charge of the great festival of the masdul of the Prophet (120 Rabi’ I) and distributed robes of honour in the mosque on that occasion (C. M., iii. 439). In the Azhar, no nazar was appointed after about 1100 but a learned man was appointed Shakk al-Adhar, principal and administrator of the mosque (Sulmaan al-Qad al-Muwaqqat, Ka‘d al-Jawzat fi Tawiz al-Adhar, p. 123 f.) Conditions are similar in Mecca (Mouss Huguenin, M. A., ii. 233 sqq., 252 sqq.).

As we have seen, kaidis were often nazirs of mosques. This was especially the case in the mudaris, where the kaidis were often teachers (cf. Maktiz, iv. 200, 219, 222, 225, etc.); the kaidis were particularly anxious to get the principal offices in the large schools (cf. Khakah, ii. 235). Their influence was however further increased by the fact that, if a teacher qualified by the terms of the founder’s will no longer existed, the kaidi of the madrasah in question stepped into his place of j. P. M. G., xiv. 1897, p. 552. By this rule, which often gave rise to quarrels between the different kaidis (e.g. Maktiz, iv 218 the Zahiyya, a kaid could accumulate a large number of offices and thus the endowments (v. d.i. m. 364) sometimes their management was so ruthless, that the schools were declined (e.g. the Zahiyya and the Damaabia. Maktiz, iv. 204 sq. 345). They also exercised influence through the committee of management of the mosque.

Centralisation in the Management of the Mosques.

The large mosques occupied a special position in the Muslim empire, because the caliph had to interest himself particularly in them; especially those of Mecca and Medina where the rulers and their governors built extensions and executed renovations (cf. C. M., i. 145: iii. 83 sqq.). During the ‘Abbasid period, the kaidi occasionally played a certain part in this connection; for example Mahdi (189-190) presented the kaidi with the necessary money to extend and repair the Meccan mosque (C. M., i. 313: ii. 43). In 263, al-Muwafaq ordered the governor of Mecca to undertake repairs, at the Ka‘ba (ibid., ii. 200 sqq.). In 271 the governor and the kaidi of Mecca cooperated to get money from al-Muwafaq for repairs and they saw the work through (ibid., iii. 136 sqq.). In 281, the kaidi of Mecca wrote to the vizier of al-Mut‘addid about the Dar al-Nadwa and backed up his request by sending a deputation of the staff there (raduna). The caliph then ordered the vizier to arrange the matter through the kaidi of Baghdad and a man was sent to Mecca to take charge of the work (C. M., iii. 144 sqq.).

The importance of the kaidi was based primarily on his special knowledge in the field of theology. A zealous kaidi like al-Hariri b. Muhammed bin Ishaq (237-245) forbid the Meccan mosque to recite the Kur‘an melodiously; he also had the masjihf in the mosque of Amr inspected and appointed an amim to take charge of them (Kindi, Velat, p. 469). After the building of the Tullimid mosque, a commission was appointed under the kaidi al-Ku‘dai to settle the kibla of the mosque (Maktiz, iv 21 sq.), but at a quite early date they also obtained a say in the management of the funds. The first kaidi to lay his hands on the kibla was Tawba b. Namir al-Ishaqim. While hitherto every endowment had been administered by itself by the children of the testator or some one appointed by him, in 118 Tawba brought about the centralisation of all endowments and a single person, who was named, was created for the purpose (Kindi, Velat, p. 346). How this system of centralisation worked is not clear at first, but it was carried through under the Fatimids.

Al-Mu‘izz created a special dawla abu‘bikhi and made the chief kaidi head of it as well as of the dawla’i sun‘ al-masjihid (Maktiz, iv. 83 and 75; cf. Kindi, Velat, p. 585, 587, 589, according to whom al-Aziz specially appointed the chief kaidi of the two dawlas), and a special baiat al-mal was instituted for it in 363; a yearly revenue of 150,000 dirhams was guaranteed; anything left over went to form a capital fund. All payments were made through this office after being certified by the administration of the mosques (Maktiz, iv. 83 sqq.). The mosques were thus administered by the kaidis, directly under the caliph. The dawla al-adhar was Tawba‘a in Baghdad (Mar, Khazin, p. 72) perhaps served similar purposes.

Al-Ha‘im reformed the administration of the mosques. In 403 he had an investigation made and when it proved that 800 (or 830) had no income (zawi‘), he made provision for them by a payment of 9,220 dirhams monthly from the Bait al-Mal; he also made 405 new endowments (of estates) for the officials of the mosque (Makr, iv. 84, 264). Under the Fatimids, the kaidis used to inspect all the mosques and masjihid in and around Cairo at the end of Ramadan and compare them with their inventories (ibid., p. 84). The viziers of the Fatimids, who also had the title kaidi did much for the mosques (Djawawar, Yakhb b. Kifis, Badr al-Ijami; cf. v. Berchem, C. I. A., i. No. 11, 576, p. 631).
Under the Aiyubids, conditions were the same as under the Fatimids. The dawān al-ahābā was under the kādis (Makrizi, iv, 84). Shāh al-Dīn gave a great deal to the mosques, especially the madaris (cf. above): 20,000 dirhams a day is a figure given (ibid., p. 117). When Ibn Dīnawar says that the sultan paid the salaries of the officials of the mosques and schools of Alexandria, Cairo and Damascus (p. 43, 52, 275), he must really mean the dawān already mentioned.

The same conditions continued for a time under the Mamluks. In the time of Barbars, for example, the chief kādi Tāj al-Dīn was nāṣr al-ahābā. He caused the Mosque of 'Amr to be renovated and when the funds from the endowments were exhausted, the sultan helped him from the Bait al-Māl (Makrizi, iv, 14); after conferring with experts, the chief kādi forbade a water-supply brought by Sīlah al-Dīn into the mosque (ibid., p. 14; Suyuti, Husn al-Muhādara, ii, 132). In 657 the chief kādi Taqī al-Dīn complained to Khalāl that the 'Amr and Azhar mosques were falling into ruin, while the ahābā were much reduced. The sultan would not however permit their restoration but entrusted the repairs of the mosques to certain emirs, one to each (Makrizi, iv, 15). This principle was several times applied in later times and the emirs frequently gained influence at the expense of the kādis. Thus after the earthquake of 707 (1103) (cf. thereon Qutemere, Hist. Sult. Maml., ii, n. 214 sqq.), the mosques were allotted to emirs, who had to see that they were re-built (Makrizi, iv, 15, 53). From the middle of the seventh century, we often find emirs as administrators of the chief mosques. The kādis had however obtained so much authority that he was conceded “a general supervision of all matters affecting the endowments of his madżhab” (al-Umarī, Tārīkh bi 'l-Mujādalah al-Sharī'ī, p. 117; cf. Z. D. M. G., xlv, p. 559): according to this theory the kādi could intervene to stop abuses. In Syria in 660 (1262) Ibn Khalīkān became kādi over the whole area between al-Arīṣ and the Euphrates and superintendent of wakfs, mosques, madrasas etc. (Qutemere, Hist. Sult. Maml., iv, 170).

Sūlān Barbars reformed these endowments and restored the office of nāṣr al-ahābā or nāṣr al-ahābā al-malāwī or n. dīghāt al-bābī 'Kalīkānī, sīhāt, amr al-Mustālihī, ed. Rawāsī, p. 109). According to al-Makrizi, the endowments were distributed among the Mamlūks in three departments (dīghāt): 1. dīghāt al-ahābā, managed by an emir, the Dawādār: this looked after the land of the mosques, in 740 in all 130,000 faldān; 2. dīghāt al-ahābā al-ḥabībī bi-Dir wa 'l-Khānā, which administered dwelling-houses; it was managed by the Shāfī kādi 'l-Khānā, with the title Nāṣr al-ahābā. This department came to an end in the time of al-Malik al-Nāṣir Farajī because an emir supported by the opinion of the Ḥanāfī chief kādi, spent a great deal and misused the funds; 3. dīghāt al-ahābā al-lābū, comprised all the endowments which still had particular nāṣrs, either descendants of the testator or official of the Sūlān and the kādi. The emirs seized their lands and Bārīkā, before he became Sūlān, sought in vain to remedy the evil by appointing a commiss-ion. The endowments in general disappeared somewhat later because the ruling emirs seized them (Makrizi, iv, 83-86). In modern times, as a rule, endow-

ments in Muslim lands have been combined under a special ministry.

To be distinguished from the administrators of the mosque is the nāṣr who is only concerned with the supervision of the erection of mosques. Any one could be entrusted with the building of a mosque (e.g. Makrizi, iv, 92); under the Mamluks there was also a clerk of works, mārādī bābāl al-amār or nāṣr al-mārāq: he was the overseer of the builders (ibid., p. 102; see Zuh'īt Khūf al-Mamlūk, ed. Rawāsī, p. 115, cf. p. 100; v. Benchem, C. A., i 742 sqq., 751).

The caliph or the ruler of the country was in this, as in other matters, supreme. As we have seen, he intervened in the administration and directed it as he wished. He was also able to interfere in the internal affairs of the mosque, as necessary through his usual officers. In 753 (1357) after the rising in the Fāyun, the chief of police issued strict orders by which it was forbidden to say the ṣawādah aloud in the mosque, the number of prayers in the month of Rāmādān was cut down. The adhān from the minaret to be uttered (i.e., Fath al-Ashārī, Rawāsī, p. 788, 1944), the governor ʿAbd al-Nūshārī had the mosque of 'Amr closed except at the salats because the Bait al-Mal was kept in, which however produced protests from the people (Makrizi, iv, 11; Kindī, Wudāt, p. 606; R. G. I., vi 110). Many similar examples could be mentioned, especially during periods of unrest. In 821 the nāṣr in communication with the kādis revised the budget of the Mosque of the Umayyads and made financial reforms (J. A. ser. v, 719. The adhān formalistic was ended down in edicts by the ruler (Makrizi, iv, 43 45).

In the year 755, the vizier in Baghshīd had a man whipped who had recited a variant text of the Qurān in the miḥābāt, after he had been heard in his defence in the presence of the nāṣrs and learned men (Yūsūf, Uṣūl, p. 306). The importance of the sovereign in connection with the mosques depended on his personality. As a rule he recognized the authority of the regular officials. When for example al-Kharīb bi-Baghdādī asked the Caliph al-Kāmīn for authority to read ṣawādah in the mosque of al-Mansūr, the latter referred the question to the nāṣr al-mārāq (Yūsūf, Uṣūl, p. 246 sqq.; cf. Watanbeld, N. C. v, iii, 280).

The consecration of the mosque was attended by certain ceremonies. When for example the midday service was conducted for the first time in the Dīfām al-Salāh in Cairo, a representative from Baghshīd was present (Makrizi, iv, 15). At the consecration of the Mosque of Ibn Fālim, the builder gave al-Kāmīn b. Sulaman, a paul of al-Shāfī, who lectured on the Qurān there; a purse of 1,000 dinars (Ṣuyūtī, Hunr al-Mustawfī, p. 130). Al-Makrizi describes the consecration ceremony at several mosques. In the M. al-Mu'ayyad the sūlān was present seated on a throne surrounded by his officers; the basin of the xilūr was filled with sugar and jālwa, the people ate and drank, lectures were given; then the salāt was read and khutba delivered and the sūlān distributed robes of honour among the officials of the Mosques and Sāfīs (Makrizi, iv, 139): similarly at the Zūh'īyā (p. 602, were poems were also recited of Qutemere, Hi i Sult. Maml., i, p. 225 sqq.; Madrasat al-Dīm al-Dīn, p. 811; al-Sa'īghanī, p. 757 (Makrizi, iv, p. 217 sqq., 253, 256).
H. The Personnel of the Mosque.

1. The Imam.

From the earliest days of Islam, the ruler was the leader of the salat; he was thus called imam as leader in war, and commander of the government and leader of the common salat. The governors of provinces thus became leaders of the salat and heads of the kharidj and when a special financial official took over the fiscal side, the governor was appointed ‘ala’ l-qalal wa l-kharb. He had to conduct ritual prayer, especially the Friday salat on which occasion he also delivered the khutba. If he was prevented, the chief of police, qadi al-kutb, was his khalifa (cf. Makrizi, iv. 83). ‘Amr b. al-As, the first of these, permitted the people of the villages to celebrate the two festivals, while the Friday divine service could only take place under those qualified to conduct it (who could punish and impose duties; ibid., p. 7). This was altered under the ‘Abbasids.

The caliphs no longer regularly conducted the salats (after the conquest of the Persians: Makrizi, iv. 45), and ‘Abbas b. Ishaq, the last Arab governor of Egypt (238-242), was also the last emir to conduct the salat in the djami’. An imam, paid out of the baits al-mul, was now appointed (ibid., p. 83), but the governor still continued to be formally appointed ‘ala’ l-qalal. Henceforth the ruler only exceptionally conducted the service, for example the Fatimids on ceremonial occasions, especially in the month of Ramadan (ibn Taghribirdi, ed. Juyonboli, ii. 482 sqq.; Makrizi, ii. 509 sqq.); in many individual mosques probably the most prominent man conducted the service; according to the Hadith, the one with the best knowledge of the Kur’an and, failing him, the eldest should officiate (Bukhari, Had. bab 46, 49).

The imam appointed was chosen from among those learned in religious matters; he was often a Hafiz (Ibn Tanbhih, ed. Renaissance, p. 147); he might at the same time be a kadi or his nizam (see Kindi, Wala’, p. 575, 599; ibn Haitha, i. 276 sq.). During the salat he stood beside the mihrab; al-Ma’mun mentions the anomaly that in Syria one performed one’s salat “in front of the imam” (R.C.A., ii. 202); he could also stand on an elevated position; on one occasion Abu Hurara conducted the salat in the Meccan mosque from the roof (Bukhari, Sahi, bab 17). In Mecca, in ibn Dhubair’s time, each of the four recognized madjihab (with the Zaidis in addition) had an imam; they conducted the salat, one after the other each in his place, in the following order: Shafi’is, Malikis, Hanafis and Hanbalis; they only performed the salat al-maghrib together; in Damascus they held the ‘arajih in different places in the mosque, which was also often conducted by the kurrat (Kouta, p. 109, 102, 145 sq.). This is still the case; very frequently one performs the salat, not after the imam of his own madhab (Smouk Hurgmone Mekki, ii. 79 sq.). In Jerusalem according to Mudjar al-Zakani the order was: Malikis, Shafi’is, Hanafis, Hanbalis, who prayed each in their own part of the Haram; in Hebron the order was the same (Sauvage, Hist. Jér. et Hebron, p. 156 sq.). In Ramadan extraordinary imams were appointed (ibid., p. 138).

As the imam no longer represented a political office, each mosque regularly had one. He had to maintain order and was in general in charge of the divine services in the mosque. In al-Makdisi’s time the imam of the Mosque of ‘Amr read a dju’at of the Kur’an every morning after the salat (B.G.A., iii. 205). It was his duty to conduct every salat, which is only valid fi ‘dju’ut. He must conform to the standards laid down in the law; but it is disputed whether the salat is invalid in the opposite case. According to some, the leader of the Friday salat should be a different man from the leader of the five daily salats (Maqari, al-Akhom al-Sultanawiya, ed. Enger, p. 171 sqq.; ibn al-Hajjji, K. al-Makdisi, ii. 41, 43 sqq., 50, 73 sqq.; ibn al-Suhhi, Mu’al’i al-Nam, ed. Myhrman, p. 163 sq.; for hadiths s. Wensinck, Handb., p. 109 sq.). Many cherished misgivings against payment being made for religious services and quoted in support of their view a saying of Aba Hanifa (B.G.A., iii. 127).

2. The Khutb.

The development of this office is analogous to that of imam. When the ‘Abbasid caliph no longer delivered khatbas regularly, a man learned in religious matters was appointed to the office of khutb [see D 1 and the article KHUTB]. It could be pointed out that the Prophet himself had a khatib namely Umar b. Hisham (Daraj, Bayan, i. 178) and sermons outside the Friday service had in any case become quite usual. Thus Hasan al-Basri was already a noted preacher (ibid., p. 190). Later it sometimes happened that a general like Djawbar himself acted as imam at the salat, while the khutba was left to a learned man (Makrizi, iv. 44).

As the khutb in theory represented the ruler, he uttered a blessing upon him; to this extent the office had a political significance. The caliph was blessed and the heir-apparent and the king of the country (cf. above D 1). When the caliph himself preached, he also pronounced a prayer for himself (Yahyia, ‘U’dab, ii. 349 sq.) and the Fatimid mentioned their fathers. The sermons gradually became quite stereotyped; ibn Batuta (i. 348) praises the khutb in Mecca, because he gave a new sermon every Friday. A kadi was frequently chosen as a khatib; a chief kadi could also at times preach in a large mosque (Kindi, Wala’, p. 589; Makrizi, iv. 132; ibn Dhubair, p. 156; according to Quatreme, Hist. Sult. Mawl, i. 115; bab 25, a kadi was for the first time appointed khutb in 694[1295] in Damascus). The khutb could also be a “witness” (Ihlas al-Safi, K. al-Waziri, ed. Amledor, p. 421 etc.) or hold another office like that of khatib alasr (Makrizi, iv. 137, 138, 139, 140); in the last mentioned case the office was hereditary, which we also find elsewhere (ibid., p. 98; Suyuti, ‘Ibnu al-Mahdura, i. 185: al-‘Irak]. The khutbas had frequently a khalifa. In the Kasha mosque, where in 444 two khatubs were deliberately appointed, they both preached at the same time on the minbar (Makrizi, p. 63 sq.). Later we find in the larger mosques a number of khatubs being appointed who relieve one another.

In Mecca the khutb was a particularly imposing figure. In his black robe, trimmed with gold, and turban with tula’s, he went up to the minbar between two black banners carried by mutaddins, while a servant walked in front of him cracking a whip; after he had kissed the Black Stone, the chief mutaddin went quickly in front of him with the sword with which he girded him on the minbar (Ibn Djubair, p. 95 sq.; ibn Battuta, i. 376 sqq.).
The whip (farak'a: Ibn Dhuibair, p. 96, 97, 144, 156; Ibn Batuta, i. 376, 379, 390, 394; see B. G. A., iv., s. v.) is also used as he goes out and on other occasions. The black was the colour of the 'Abbâsids; it was also used in Egypt (Ibn Dhuibair, p. 56). The Fâtimid khatib wore a cap (balânuma: Makrizi, iv., 214). The dress of the khatib varied with time and country (cf. ibid., p. 90; B. G. A., iii. 129, 416; Ibn al-Hâdjîdji, Madkhal, ii. 73). In Mecca there were celebrations when a young man became a khatib (Ibn Dhuibair, p. 149).

Very frequently the khatib and the imâm were one individual, especially in the smaller mosques, but sometimes also in larger ones (Yâkût, Udâbâz, vii. 174, 179; Makrizi, iv. 124). Ibn al-Hâdjîdji even regards this as the normal thing (K. al-Madkhal, i. 59, 60, 73, 74); s. also al-Subki, Minid, p. 160 sq. and the article KHIAT.

On these see C 3. Sometimes, in the later usage wa'ir is used of the official speaker, very like khatib (cf. Ibn Batuta, i. 9), while al-kâshâf is only applied to the street-story-teller (al-Subki, Minid al-Nâm, p. 161 sq.). The kâshâf are also frequently appointed to madrasas and particularly to mausoleums (Makrizi, iv. 223; Yâkût, iv. 509; Subki, Minid, p. 162; v. Berchem, C. I. A., i., N. 252).

4. The Mu'âdhîdhin.

According to most traditions, the office of mu'âdhîdhin was instituted in the year 1, according to others only after the isra', in the year 2, according to some weak traditions while Muhammad was still in Mecca. At first they came to the salat without being summoned. Trumpets (bâk) were blown and rattle (nâkâs) used or fires lit after the custom of Jews, Christians and Mädiqis. 'Abd Allah b. Zaid learned the adhâf in a dream; it was approved by the Prophet and when Bilâl proclaimed it, it was found that 'Omar had also learned the same procedure in a dream (Ibn Hishâm, p. 357 sq.; Khamis, i. 404 sq; Bukhârî, A. dâhîn, bâb 1; Zurkânî, i. 121 sqq.). There are also variants of the story, e.g. that the Prophet and 'Omar had the vision, or Abû Bakr or seven or fourteen Ânûr; according to some, the Prophet learned it at the mû'âfîâ from Gabriel, wherefore the introduction of the adhâf is dated after the isra'; among the suggestions made, the hoisting of a flag is mentioned (Sira Halabîya, ii. 100 sqq.). Note worthy is a tradition which goes back to Ibn Sa'd, according to which at 'Omar's suggestion at first a mû'âfîâ, Bilal, was sent out who called in the streets: al-salahtâ qâtmât. Only later were other possibilities discussed, but the method already in use was confirmed by the dream, only with another formula, the one later used (Khamis, i. 404; Sira Halabîya, ii. 100 sqq.). According to this account, the consideration of other methods would be a secondary episode and probably the tradition in general represents a later attitude to the practices of other religions. But in Islam other methods were certainly used. In Fâs, a flag was hung out in the minarets and a lamp at night (J. A., ser. xi, xii. 341). The flag is also found in the legend of the origin of the practice.

The public crier was a well-known institution among the Arabs. Among the tribes and in the towns important proclamations and invitations to general assemblies were made by criers. This crier was called Munâdî or Ma'âdhîdhin (Sira Halabîya, ii. 170; Lammens, La Musique, p. 62 sqq., 146; do, Berceau, i. 229 note; do, Moujadda, p. 150). A'dhân therefore means 'call to prayer,' Sûra vii. 70 'to proclaim' and 'crier'. Munâdî (Bukhârî, Fârîd al-Khulun, bâb 15) and Ma'âdhîdhin (ibid., Samâl, bâb 69; Sârâ, bâb 10 = Qisâya, bâb 16; Sira Halabîya, ii. 270) are names given to a person used by the Prophet or Abû Bakr for such purposes. Official proclamations were ordinarily made by criers (cf. Tabari, iii. 2131, 3). Sâdâjâs and Musâlimâs used a mu'âdhîdin to summon the people to their prayers (Tabari, i. 1919, 1932; cf. Annals dell' Islam, i. 410 sqq.; 638 sqq.). It therefore was a very natural thing for Muhammad to assemble the believers to common prayer through a crier (mu'a'âdîn or ila 'l-isâ'ilât, Sûra v. 65; Is. 9); the summons is called Nûdâ and A'dhân, the crier Munâdî (Bukhârî, Wâdi', bâb 5; A'dhân, bâb 7) and Ma'âdhîdhin; the two names are used quite indiscriminately (ibid., Wâdi', bâb 5; Tabari, ii. 297 sqq.). Munâdî 'l-Salât, B. G. A., ii. 182, 19, also سلَّمَ 'crier' is used (Tabari, iii. 861; Chron. Mekka, i. 340). In these conditions, it was very natural for the crier in the earliest period to be regarded as the assistant and servant of the ruler; he is his mu'âdhîdin (Ibn Sa'd, i. 7; Muslim, Salat, tr. 4: Makriz, iv. 43; cf.; Tabari, ii. 1120). 'Umar sent to Kûfa 'Amûmar b. Ya'qûr as emir and 'Abd Allâh b. Masûd as mu'âdhîdin and wa'ir (B. G. A., v. 165); he is thus the right hand of the ruler. Al-Ijusain had his munâdid with him and the latter summoned to the salât on the Imam's instructions (Tabari, ii. 297, 298; cf. Ibn Ziyâd, ibid., p. 260 and in the year 196 the 'âmil in Mecca, ibid., iii. 861, 13; also Chron. Mekka, i. 340). During the earliest period the mu'âdhîdins probably issued summons in the streets and the call was very short: al-salahtâ qâtmât (Ibn Sa'd, i. 7, 7; Chron. Mekka, i. 340; Tabari, iii. 861; cf. al-o in the year 196, Sira Halabîya, ii. 101; Khamis, i. 404 sq.). This brief summons was, according to Ibn Sa'd, also used later on irregular occasions (i. 7 sqq.; cf. the passage in Tabari). Perhaps also the summons was issued from a particular place even at a quite early date (see D 2a). After the public summons the mu'âdhîdin went to the Prophet, greeted him and called him to prayer; the same procedure was later used with his successors: when he had come, the mu'âdhîdin announced the beginning of the salât (al-khâma 'l-salât, cf. Bukhârî, Wâdi', bâb 5; A'dhân, bâb 8; Sûra Halabîya, ii. 104 sqq.; Makriz, ii. 45). The activity of the mu'âdhîdin thus fell into three sections: the assembling of the community, the summoning of the imâm and the announcement of the beginning of the salât. With time changes were made in all three stages.

The assembling of the community by crying aloud was not yet at all regular in the older period. During the fighting, Ibn Ziyâd in the year 60 called his munâdî with threats to the evening salât in the mosque and when after an hour the mosque was full he had the âkâma announced (Tabari, ii. 260). When a large number of mosques had come into existence, the public call to prayer had to be organized lest confusion arose, and the custom
of calling from a raised position became general after the introduction of the minaret. While previously the call to prayer had only been preparatory and the ʿikāma was the final summons, the actual call (adḥāna) and the ʿikāma now formed two distinct phases of the call to prayer. Tradition has retained a memory of the summoning in the streets, now completely fallen into disuse, when it tells us that ʿOthmān introduced a third adḥāna, a call in al-Zawrāʾ, which was made before the call from the minaret; this call however was transferred by Ḥishām b. ʿAbd al-Malik to the minaret (Bukhārī, *Djmāʿa*, bāb 22, 25; *Sira* Ḥalabīyā, ii. 110; Ibn al-Ḥāḍidī, *Madkhāl*, ii. 45). This may be evidence of the gradual cessation of the custom of summoning the community by going through the streets, Ibn Baṭṭūta, but this is exceptional, tells us that the muʿaddhīn in Khwarazm still fetched the people from their houses and those who did not come were whipped (i.ii. 4 sq.), which recalls Wāḥīdīn measures. When exactly the ʿinān and nīn calls were introduced to the ʿikāma formula, finally developed, can hardly be ascertained [see adḥāna]. The call haʾiya ʿalaʾr-fāṣidh is known from the time of ʿAbd al-Malik (65–85) (Akhṭal, ed. ʿAlāʾ, p. 2,541; see *Horovitz*, in *isl.,* xvi. 2971. p. 154; * transit * on adḥāna formulae see further *Sira* Ḥalabīyā, ii. 105 sq.). At first the call was only made at the chief mosque, as was the case in Medina and Miṣr (Makrizī, iv. 43 *infra*), but very quickly other mosques were also given muʿaddhīn: their calls were sufficiently audible in the whole town. The chief mosque retained this privilege, that its muʿaddhīn called first and the others followed together (Makrizī, iv. 43 *infra*, 44).

The summoning by the imām in Medina was therefore quite a natural thing. The custom, at first associated with the ruler's mosque, was not observed in Medina only (see for ʿOthmān and ʿAḥ: ʿTabārī, i. 3059 sq.), but was also usual under the Omayyads. The formula was: al-Salām ʿalākum Bismillah r-rāḥmūna r-rāḥimān ʿAlāh wa-r-rahimātulla h, haʾiya ʿalaʾl-ʿadāna, haʾiya ʿalaʾl- ʿadāna, haʾiya ʿalaʾl- ʿadāna (Makrizī, iv. 45; *Sira* Ḥalabīyā, ii. 105). After the alteration in the adḥāna and the greater distance of the ruler from the mosque, to summon him was no longer the natural conclusion to the assembling of the community. In the ʿAbbasid period and under the Fāṭimids there was a survival of the old custom, in as much as the muʿaddhīn ended the adḥāna call before the ṣalāt al-fāṣidh on the minarets with a ʿalāmah upon the caliph. This part of the muʿaddhīn's work was thus associated with the first adḥāna call. When ʿAlī b. ʿAbd al-Din came to power, he did not wish to be mentioned in the call to prayer, but instead he ordered a blessing upon the Prophet to be uttered before the adḥāna to the ʿalāmah al-fāṣidh, which after 761 only took place before the Friday service. A muḥta-ḥīb ordered that after 791 in Egypt and Syria at each adḥāna a ʿalāmah was to be uttered over the Prophet (Makrizī, iv. 45; *Sira* Ḥalabīyā, ii. 110). Ibn ʿUṯair relates that in Mecca after each ʿalāmah al-ṣalāmah, the foremost muʿaddhīn pronounced a duʿa upon the Abbasid Imām and on ʿAlī b. ʿAbd al-Ḥamīm from the Ṣemzem roof, in which the people joined with enthusiasm (p. 47) and according to Makrizī, after each ʿalāmah prayers for the ʿalāmah were uttered by the muʿaddhīn (iv. 53 sq.). Another relic of the old custom was that the trumpet was sounded at the door of the ruler at times of prayer; this honour was also shown to ʿAḥud al-Dawla in 368 by order of the caliph (Ibn Maskaʾi, *Cairo* 1275, p. 390).

The ʿikāma always remained the real prelude to the service and is therefore regarded as the original adḥāna (Bukhārī, *Djmāʿa*, bāb 24 sq.). In the earliest period it was fixed by the arrival of the ruler and it might happen that a considerable interval elapsed between the summoning of the people and the ʿikāma (cf. ʿṬabārī, ii. 260, 297 sq.). The times were later more accurately defined; one should be able to perform 1–3 ʿalāmahs between the calls (Bukhārī, *Adṛān*, bāb 14, 16). Some are said to have introduced the practice of the muʿaddhīn calling haʾiya ʿalaʾr-fāṣidh at the door of the mosque between the two calls (*Sira* Ḥalabīyā, ii. 105). From the nature of the case the ʿikāma was always called in the mosque; at the Friday service, it was done when the imām mounted the minbar (Bukhārī, *Djmāʿa*, bāb 22, 25; *Sira* Ḥalabīyā, ii. 110; Makrizī, iv. 43) and the muʿaddhīn stood in front of him. This μαυδόν in confessing to some, ought to be the one who called the adḥāna upon the minaret (*Sira* Ḥalabīyā, ii. 109), while Ibn al-Ḥāḍidī ignoring the historical facts only permits the call from the minaret (*Madkhāl*, ii. 45). In Tunisia, the ʿikāma was announced by ringing a bell in the churches (Zarkašī, transl. Fagnan, in *Rei. Scl. Arch. Constantine*, 1894, p. 111 sq.). A similarity to the responses in the Christian service is found in the fact that the call of the muʿaddhīn, which contains a confession of faith, is to be repeated or at least answered by every one who hears it (Bukhārī, *Djmāʿa*, bāb 23); this is an action which confers religious merit (Ibn Kuštuḫbūgha, *Ṭabāṣī al-Ḥanafīyya*, ed. Fugel, p. 50). It is possible that we should recognise in this as well as in the development of the formulae the influence of Christians converted to Islam (cf. Becker, Zur Gesch. d. islam. Kultur, in *isl.,* iii. 1912, p. 374 sqq. and Islamstudien, i. 472 sqq., who sees an imitation of the Christian custom in the ʿikāma in general; on the possibility of Jewish influence see Mittwoch, in *Abb. Pr. A. W.,* 1913, Phil.-Hist. Cl. 2).

The muʿaddhīn thus obtained a new importance. His work was not only to summon the people to divine service, but was in itself a kind of religious service. His sphere of activity was further developed. In Egypt we are told that Maslama b. Muḥammad (47–62) introduced the tasbih. This consisted in praises of God which were uttered by the muʿaddhīn all through the night until ṣuḥūr. This is explained as a polemical imitation of the Christians, for the governor was troubled by theroubling of the muʿaddhīn at night and forbade it during the adḥāna (Makrizī, iv. 48). In the time of ʿAbd al-Malik b. ʿUṯair and Khumāraʾwah, the muʿaddhīn recited religious texts throughout the night in a special room. ʿAlī b. ʿAbd al-Din ordered them to recite an ṣuḥūr in the night adḥāna and after 700 ʿādāk was performed on Friday morning on the minarets (*ibid.*, p. 48 sq.; *Sira* Ḥalabīyā, ii. 111). In Mecca also the muʿaddhīns performed ṣuḥūr throughout the night of the first ʿAshūrā and on ʿAlī al-Ḥaʾūm from the Ṣemzem roof, in which the people joined with enthusiasm (p. 49) and according to Makrizī, after each ʿalāmah the ʿalāmah were uttered by the muʿaddhīn (iv. 53 sq.). Another relic of the old custom was that
of the Maghrib in the eighth century each had regularly four mu'addhins who were stationed in different parts of the mosque during the salat (K. al-Makhdal, ii. 47 supra); but there were often quite a large number. In the Azhar mosque in the time of al-Hakim there were fifteen, each of whom was paid two dinars a month (Makrizi, iv. 51). Ibn Bat'uta found seventy mu'addhins in the Mosque of the Omayyads (i. 204). About 1900, in Medina there were in the Mosque of the Prophet fifty mu'addhins and twenty-six assistants (It-tanun, Rihla, p. 242). Blind men were often chosen for this office; Ibn Umm Maktum for example was blind (Bakr's, p. 429, n. 104; cf. Lane, op. cit., p. 75). Ibn al-Prophet is said to have forbidden the kaft to pay a mu'addhin (Wâsdti-Welzhausen, p. 353). Othman is said to have been the first to give payment to the mu'addhins (Makrizi, iv. 44) and Ahmad b. Talihin gave them large sums (ibid., p. 48). They regularly received their share in the endowments, often by special provisions in the documents establishing the foundations.

The mu'addhins were organized under chiefs (ru'ut = Makrizi, iv. 14). In Mecca the rû's al-mu'addhins were the two mosques with the mu'addhin al-Zamawî who had charge of the singing in the upper story of the Zenzen building (Chron. Mecca, iii. 424 sq.; Ibn Dhubair, p. 145; cf. Snouck Hurgronje, Mebka, n. 322). The rû's was next to the Imam but subordinate to him; in certain districts, it was the custom for him to mount the pulpit during the sermon with the Imam (when the latter acted as khâthî) (K. al-Makhdal, ii. 74; correct above p. 928, l. 31 sq. in keeping with this). The position which they originally occupied can still be seen from the part which they play in public processions of officials, e.g. of the Kûfî 'Alâ, when they walk in front and lead the ruler and his vizier (Makrizi, ii. 246).

Closely associated with the mu'addhin is the muwalkârî, the astronomer, whose task it was to ascertain the kibla and the time of prayer (Subki, Mu'âth', p. 165 sq.); sometimes the chief mu'addhin did this (Snouck Hurgronje, Mebka, n. 322).

5. SERVANTS

According to Abu Husain, the Mosque of the Prophet was swept by a negro (Buqhârî, Sahîh, bâhî b. 72, cf. 74). The large mosques gradually acquired a large staff of servants (ghâhibâni, mutâbâbî, coram, and water-carriers (cf. e.g. v. Berchem, C.C.A., i. No. 252) in Mecca there have always been special appointments, such as supervisor of the zeenâm and guard of the Ka'ba (sadîm, pl. sadan, also used of the officials of the mosque: Makrizi, iv. 76; cf. Ibn Dhubair, p. 278). In Ibn Bat'tûta's time the servants (zâbû.d) of the Mosque of the Prophet were numerous, particularly Abyssinian; their chief (zâbû.d al-khadâm) was like a great emir and paid by the Egyptian-Syrian government (c. 278, 458), cf. the title of an emir of the year 798: chîqâr bâd al-zâbû.d al-khadâm b'tûmâr al-fi.rîs a.t al-mawâ.dî (v. Berchem, C.C.A., i., No. 201). In the Mosque of Jerusalem about 300 A.H., there were no less than 140 servants (khâhidîn: B.G.A., v. 100); others give the figure 230 (Le Strange, Palestine, p. 165) and according to Medjl al-Dîn, 'Abd al-Malik appointed a guard of three hundred black slaves here, while the actual menial work was done by
certain Jewish and Christian families (Sauvage, Hist. fès et Mekn., p. 56 sq).

In other mosques superintendents (kāiyim, pl. ḫārāna) are mentioned, a vague title which covered a multitude of duties: thus the Madrasa al-Madżdiya had a kāiyim who looked after the cleaning, the staff, the lighting and water-supply (Ma'ṣrī, iv. 251), the Azhar Mosque had one for the mīḍā'a, who was paid twelve dinars (ibid., p. 51) and also four kāwāma, who were paid like mu'ādhdhins (two dinars a month) and are mentioned between them and the imāms, probably supervisors of the staff (ibid., p. 51). In other cases a kāiyim al-djātim, sometimes a kādi, is mentioned, who is apparently the same as the imām, the khāṭib or some similar individual of standing (ibid., p. 75, 121, cf. 122; cf. Ibn Dūbaī, p. 51). A muṣhirf, inspector, is also mentioned, e.g. in the Azhar (Ma'ṣrī, iv. 51).

II.

The Mosque in the Dutch East Indies.

In the Dutch East Indies, two kinds of mosque have to be distinguished, the mosque for the Friday service—these alone are called mosques (masjīd, also mursīq)—and simple houses of prayer. This second category is found all over the country, especially in smaller villages and owes its origin, partly to private initiative and partly to public efforts; they have native names (lahār [Javan.], ḥāfج [Sum.], zuwan [Malay]). The lahār, or whatever it may be called, of the village is a centre at which the ḥalīt can be performed, but it also serves other purposes of general interest. The upkeep of the building is the affair of the community and in particular one of the tasks of the religious official of the village. The upkeep of the other lahārs, erected by private individuals, is left to them. The building stands on its own site and is maintained by the founder or his descendants. The owner cannot however refuse admission to strangers who desire to use it for the ḥalīt or as shelter the night. Such private chapels are always found beside the Muḥammadan seminaries (hakimiyāt). We sometimes find that these lahārs are endowed as ṣawāfī (Jav. Mal. sēkap). The village lahār on the other hand has a more public character.

The mosques, i.e. the masjīd al-qimā, are found in larger places, usually in those which are also centres of administration. Their erection and maintenance is regarded as a duty of the Muslim community; every one contributes his share in materials, work or money, according as he is requested and is able to do. When a new mosque is to be built, not only is the site necessary for the building reserved, but also that for the dwelling of the staff and other people, whose piety induces them to seek a dwelling-place near the mosque; here they find the spot, where in their opinion they can be best benefitted by the atmosphere of their faith, spiritually and socially. This mosque area, at least the mosque itself and its immediate neighbourhood, is popularly regarded as ṣawāfī although the conditions necessary to make it an endowment in the sense of the sharī'a are not fulfilled. In ṣawāfī affairs, the sharī'a is regarded as authoritative and not affected by common law.

Each mosque has its own staff, of the size it requires; in the large mosques there may be 40 or more. In Java and Madura, they form a regular hierarchy; this holds also for the relation of the larger and smaller mosques to each other. A mosque serves the requirements of a definite area; the staff of the mosque at the chief place in a smaller district is subordinate to that of a larger one and so on up to the capital of a regency (which is the highest native administrative unit). At each mosque a superintendent is appointed and the head of the mosque at the capital of the regency is regarded as head of all the mosque officials in the whole district. On the other islands the native, political organisation is less developed, the hierarchy of the secular power therefore less influenced by it. Generally speaking the personnel of the mosque is the same everywhere; the more the secular hierarchy is graded, the more noticeable is the classification of the personnel of the different mosques into various ranks; but we always find one recognised as the head of the staff.

The superintendent of a mosque in Java and Madura bears the general name ṣawāfī hākim. His main duty is to see that the Friday service is held; he can act as imām at it himself but usually he leaves this to someone else. Besides him there are a large number of other officials, whose names usually are taken from the Arabic and whose duties are very varied; among them however we find the ḥādam (Jav. ḥādām). He delivers the sermon; but this also can be done by some one else. The maintenance of the building is also the duty of the superintendent. The expenses have to be met from the money collected by the staff, of which he has control (see below).

In Java and Madura generally, and very often elsewhere, the superintendent of a mosque is also an official, i.e. he is the legal authority who is present at the marriage ceremony; sometimes he acts as ṣawāfī of the ṣawāfī. He is also authorised to give in marriage women who have no blood-relative to act as wāli; in this capacity he is called ṣawāfī ṣawāfī. Marriages are concluded in the mosque; it is exceptional for the ṣawāfī hākim to perform the marriage ceremony in person; he usually leaves this to one of his subordinates. People of high rank marry in the house; on these occasions the ṣawāfī hākim himself acts. The same person holds mutātis mutānis of ṣawāfī and ṣawāfī; these also are reported to the ṣawāfī hākim and recorded by him along with marriages in a register.

In smaller centres, where there are only lahäuser (chapels) there is an official, who assists the villagers in matters of Muḥammadan law; he belongs to the village administration and may be regarded as the lowest rank of the mosque hierarchy; people desirous of matrimony apply to him; he accompanies them to the mosque of the district to which his village belongs; he also acts for the ṣawāfī hākim as 'āmil of the ṣawak (ṣakāt) and ṣawāfī (ṣakāt al-ṣawāfī) (see below). From this capacity comes the name he bears in some parts of the country, ṣawāfī hākim.

The appointment of the mosque officials (as distinct from the village officials in whose cases the local customary law is followed) is not done everywhere in the same way. In Java and Madura, it is in the hands of the native chiefs who are also the highest state officials; on the other islands of the East Indian Archipelago, in so far as Islam prevails on them, the wishes of
the Muslim community are more or less respected; the secular authorities however exert a great influence.

The revenues of mosque officials come from various sources: donations, freewill offerings, in cases where their services are required: — at religious festivals, burials, etc. — need only be mentioned. The chief source of revenue is the so-called marriage fees, less from *djakat* and *pitra*; these are administered and distributed by the superintendent of the mosque. As already mentioned the mosque and its accessories have to be maintained out of the income. Neglect of this duty has induced the chiefs in Java and Madura to intervene and form a special fund, the so-called mosque fund for this purpose. This was arranged as follows: a certain percentage of marriage fees and of the *djakat* and *pitra* was set aside; the chiefs took charge of these funds. The revenues of the mosque officials earmarked in this way were however only a small fraction of the total; the greater part, perhaps 4/5 or more, remained at the disposal of the officials. This same procedure is found here and there on other islands but is not general.

The Dutch government maintains a neutral attitude to Islam, in all business matters of the mosque also. It takes no part in the building or restoration of mosques; only very exceptionally does it give a contribution in money for such purposes. This was done for example in Kuta Raja (Atjeh), where the chief mosque, which had been destroyed during fighting, was rebuilt from government funds in 1881. But this act of the authorities was not appreciated by the Muslim population; in general, the government officials only see that no compulsion is used to procure materials or funds for the building or maintenance of mosques.

With the end of the sixteenth century the Colonial administration began to pay some attention to the regular organisation of the staffs of the mosques, primarily in Java and Madura. Their measures aimed at maintaining things as they were and at getting rid only of abuses and such customs as had tended to be a burden on the people. *Djakat* and *pitra* are regarded as "freewill offerings" by the colonial authorities; the native chiefs and village authorities were therefore forbidden to interfere with them. It is left to the individual to give them or not; he is also free to give his gifts to whom he pleases. The giving of *djakat* varies very much with places and persons and is smallest in Central Java. It is concerned almost entirely with agricultural produce, especially with the staple product and even then it rarely happens that the legal quantity is given. In practice the *djakat*, where it is levied, is collected by the village mosque officials and handed over to the *pa[h]ulu; he then distributes it in a certain proportion among his subordinates. The proceeds go almost entirely to the staff of the mosque and the village officials, firstly because they are "simul and secondly because they consider themselves *fakir* and *maslin*: they have, as they say, no means of livelihood like other people.

Pitra is paid regularly: it happens very frequently with this "donation" that it is paid direct to those entitled to it and not through the officials. Nevertheless a considerable portion goes the same way as the *djakat*.

The government confined itself to seeing that the *djakat* and *pitra* collected by the *pa[h]ulu, was distributed as it ought to be according to custom but this was not always done.

Marriage, *talak* and *rudjūs* have been regulated by a colonial law. The *pa[h]ulu or his deputy was confirmed in his already mentioned functions as an official with legal standing. At the same time, others than the appointed *pa[h]ulu were forbidden by the secular authority to perform marriages. The registration of marriages, *talak* and *rudjūs* was improved. The fees and their distribution among the staff were fixed according to local custom. Every effort is made to keep these as low as possible. Similar regulations were later promulgated for the other islands.

As to the funds of the mosques, it was ascertained that there was more money in them than was required for the maintenance of the building and that they were being used for other purposes than the traditional ones. This caused the government to place the funds of the mosques under the joint control of European and native authorities. This holds particularly of Java and Madura; but whenever else the mosque had funds, these were retained.

The regulations promulgated for Java and Madura have recently been attacked by Muslims; they wanted as far as possible to withdraw everything relating to marriage from government interference. The intervention of the government is now (since 1929) limited to the fact that parties who wish to enter into matrimony have to report themselves to a registrar. *Talak* and *rudjūs* have also to be reported to him. The marriage ceremony may be performed by others, but they are under the control of the registrar; this last method is now the exception: the majority continue to go to the district officer.

In one other respect the mosque has come under the control of government regulations. In Muslim districts of the East Indian Archipelago hardly a mosque is built without the consent of the local secular authority. Although it does not have to give its approval expressly, no work will be begun until the plan is approved. In Java and Madura the chiefs have long held themselves entitled to decide on the question whether a new mosque should be erected, though they justified this claim by saying among other things that a new mosque, if not desired by the entire community, may easily lead to jealousy and disputes about the validity of the Friday service etc., which might result in general unrest.

The custom of making the site of a mosque *wakaf* — or at least regarding it as such,— results in it being impossible to use such pieces of ground for public purposes, even if it is long since the mosque buildings had been removed from them.

These and other difficulties induced the government to require the approval of the chiefs for the building of new mosques on Java and Madura and also that the sites should become *wakaf*. It was however expressly laid down that there can be no possible question of interfering with the religious requirements of the Muslims; the chief can only refuse his consent in the public interest.

The law of the Dutch Indies demands the presence of the *pa[h]ulu or some one with similar functions, at the courts for Muslim natives and also when a native appears as accused or plaintiff
in a court, to assist the court as adviser. An
deavour is made to get the most suitable people
as advisers; they are officially appointed. It was
found to be desirable to combine this office and
that of the administrator of the mosque in the
one individual; and this is now the usual practice.
The influence of the government on the appoint-
ment of the personnel of the mosque, which
otherwise is reserved for the chief, has thus been
increased, especially as in the appointment of the
assistant[s] of the pui[sk]a, the ability of acting
as adviser is also taken into account.
The bonds which connect the personnel of the
mosque and the secular authority are thus fairly
close; — in the opinion of some too close. In
recent years the effort has been made in nationalist
Muslim circles, to loosen or even break all secular
connections in the fulfilment of religious duties.
One way of doing this is to get private individuals
to found mosques with the help of similar-minded
people. This is quite possible in the conditions
described and is still done.

III.

Architecture.
The mosque with an open quadrangle was
the natural form for the hot southern lands of Islam,
and is simply a continuation of the many types
of pillared halls and chambers which were to be
found all over the near east, beginning with the
Egyptian temples and coming down to the apadana-
of the Persians and the stoa of the Greeks, of
which of course only the latter influenced the
development of the early Muslim mosque. This
consists of a courtyard or quadrangle (javan) usually
very large which is surrounded by cloisters (maksura)
which are either connected by flat beams, or
more usually by arches and covered by a flat
roof. At the kibla side the maksura were deeper so
that the rows of worshippers could find shelter
from the sun. The supports were at first very
often columns taken from ancient buildings and
where these were not obtainable, were of wood
or brick. The pillared hall at the kibla side was
called jâwâr al-jebîl or liwân. A portion of the
liwân was shut off by a railing and reserved for
princes and priests. On the quadrangle side of the
liwân is a podium (dikâra) supported by pillars
and reached by a staircase or ladder; this is for
the officials of the mosque, who repeat the words
of the imâm during the service to make them
audible on all sides. At the end of the liwân the
maksura is set into the middle of the wall and
beside it is the mihrâb. In the centre of the
court is a well, originally intended for ritual
adutions but these were as a rule performed in
rooms specially set apart for the purpose.

These mosques with open quadrangle were built
in the first century A.H. on a large scale, as they
were primarily intended to be mosques for the
troops, whence they were called askar mosques.
The Djâmi' Ibn Tulûn in al-Katâi, Cairo is a
comparatively well preserved specimen of one of
these askar mosques. It was built in 264-267
(876-879) and measures 466 X 383 feet and its
court is 300 feet square. The principal liwân had
originally five rows of pillars but has now only four
since the first one fell down, the others had to move
each, which are connected by projecting walls parallel
to the walls, thus still following the type of the
Hellenistic agora. The pillars are built of brick
and into the corners are let small columns. Between
the pillars are pointed arches and ornamental
windows with little pillars at the sides. Similar windows
with stucco gratings pierce the outer walls. The
roof, most of which is now modern, was made of
palm trunks with sycamore planks nailed over
them. In front of the mihrâb was a makâsar for
the ruler. This makâsar was as here usually distin-
guished by its cupola. In the later mosques of
this kind an aisle of some width led through the
pillars up to the makâsar, usually through the
columns of the liwân so that the building was
adapted for a ceremonial procession by the ruler into
the mosque. In the Djâmi' Ibn Tulûn as in the askar
mosques of the third (ninth) century in general
there are no transepts as yet so that the succession
of pillars is quite uniform. The mihrâb projects
out as the wall juts out a little here and the niche
has two steps cut into the wall and then projects
in a semi-circle. Two marble pillars are built into
the angles formed by the projection of the niche,
which have been taken from older Christian build-
ings. The white stuccoed surfaces of the walls
are ornamented along the upper margins and ar-
ces, with decorative strips of carving and arches,
which were originally painted. The interiors of the arches
were also originally decorated but are now for
the most part whitewashed. Immediately below
the roof on a wooden frieze runs a Kufic inscrip-
tion two miles long with sâras from the Kur'an,
the letters of which are cut out of wood and nailed
on to the boards. The mosque has a battlemented
wall, which again was surrounded on three sides
by a second outer wall so that the whole area
was square in shape and the outer courtyards
put some distance between the quadrangle of the
mosque and the surrounding streets. The outer
walls of these early mosques have turned out
like a fortress with round projecting towers even
though not intended for defence. This was not
the case with the Mosque of Ibn Tulûn. On
the maqām, which stood outside the mosque among
the outer buildings on the north side and like the
mosque itself was restored under the Manûlî Sultan
Lâdjîn, cf. the article MANâRA. Similar mosques
for the troops were built in all the garrison towns
of the young empire, like Baṣra, Kûfah, Baghdad,
Nîmarra, Râqîa, in Cairo, Kâhitân and elsewhere.
The type of mosque with quadrangle and piers
or columns was however by no means limited
for the mosques of the troops but was general in
the early centuries of Islam and survived much
longer than this, just as the early Christian basilica
had done. Many pillared mosques, the foundation
of which dates back to the early centuries A.H.
are still in use, like the mosque of the Umayyads
in Damascus, the great mosque of Sidi Uâba in
Kâhitân, many mosques in the Maghrib, where
they have frequently remained faithful to this
type down to the present day, the Djâmi' al-Askar
and others in Cairo. In towns that are cold in winter, the
The **Dome Mosque**. The great mosques built on piers—in so far as they were not simply army mosques—were primarily used for the Friday service in the larger cities. In addition to these, there were in every town several smaller mosques either for the use of the separate quarters or for special purposes. For these also in Egypt and the lands of the Maghrib the type of piersed mosque with open quadrangle persisted while in Mesopotamia, the lands of the Caucasus and Persia, suiting the ruder climate and undoubtedly stimulated by the influence of the Christian churches the closed domed mosque became the type. Some of these mosques (e.g. in Werrâmân) reveal with their combination of a long building and a dome such a striking similarity to the older, mainly Nestorian, churches that M. Dieulafoy and van Berchem comprised them under a type to which they gave the name "mosque-eglise". Typical mosques of this kind with a central dome and number and internal piers are to be found in Tabriz, Esiwân, Diýãr Bakr etc. It was only under the Ottomans in Asia Minor that the domed mosque attained the next stage in its development and it reached its zenith— not by chance — where the similar Christian style of church architecture had reached its final development, namely in Constantinople.

**Madrasa**. The foundation for the further development of the mosque with a great open quadrangle, as perfected under the Saljûqs in the east, was the type of madrasa which had in the meanwhile been evolved (cf. the articles Madrasa and Architecture). The ideal plan of a madrasa is an open court with vaulted cloisters opening on a central quadrangle in the centre of the four façades, i.e. at the intersection of the axes. This plan however only became regular in Persia and we only find a few specimens exceptionally in Cairo. On both sides of these four iwâns are the cells and dwelling apartments of the teachers and pupils usually in two stories. In contrast to the piersed mosque with an open court, which arose out of a Hellenistic Mediterranean type of building, the model for the development of the eastern madrasa, which combined both school and monastery, was on the one hand the Indian Buddhist monastery and on the other the Khurâsân iwân, while the madrasa of Syria, Egypt and the Maghrib was influenced by native types of mosque and house. The Turkish peoples, as representatives of the Sunna and its propaganda through the madrasa, before they invaded Persia and became Muslims, were mainly under the influence of Buddhism and Nestorian Christianity, which survived much longer in Turkestan and the Tâizîm basin than in Persia and still was very important as late as the sixteenth century A.D., as is evident from the narrative of William of Rubruck. The Turks before they adopted Islâm had, among the Buddhists and Nestorians, become acquainted with the missionary side of religion. This seems to explain the prominent part later played by them as propagandists of Islam in Persia and Asia Minor. It may have seemed to them that the most suitable centre of propaganda was the same type of building as that used by the Nestorians and Buddhists, namely the monastery. The Buddhist monasteries which were courtyards with cells built round them, numbered hundreds

In Central Asia. They are as a rule oblong quadrangles with cells built round them and a stûpa in the centre and several large rooms for meetings. In Persia, under the influence of these buildings, the type of quadrangle and cells with 4 iwâns in the form of a cross became established as the ideal scheme of a madrasa. That this plan which was architectonic in origin was also the practical ideal for the fourfold doctrine of the Sunnis, was a fortunate combination, which in some large state madrasas became of practical significance.

The **Persian Mosque-Madrasa**. The quadrangle surrounded by cells with four iwâns of the Persian Madrasa was now combined with the old piersed mosque and the result was a very happy combination: the mosque-madrasa (as we Europeans call it). The important result of this combination was from the architectonic point of view the monumental quadrangle with cells, which now replaced the old courtyard with pillars or piers which was no longer architectonically satisfactory and was also foreign to the spirit of Persian architecture. But with this transition an important change was brought about in the spiritual aspect of the mosque. It symbolised the transformation which had meanwhile taken place internally and externally in Islam from a combative, conquering religion organised on military lines into a spiritual attitude to life, controlled by theologians and men of learning. The fight however, which was still conducted by military forces, and the conquests had now become more or less the private business of the secular rulers, above whom was the religious propaganda of the Muslim clergy. The most instructive example of this penetration of the older type of mosque by the Persian quadrangle surrounded with cells is the Masjid-i Diwâna in Isfâhân. This mosque, like all the Friday mosques in Persia was originally built as a piersed mosque and had been frequently enlarged. At the present day, as the plan shows, it consists of colonnades which have in course of centuries been added to one another from time to time. A great deal of wood must have been built into its framework, since Yâkût tells us that during the siege of Isâhân by the Saljûq Tughîl Beg (â42 = 105â/105â) the mosque was destroyed to obtain wood. From the contemporary accounts that have been handed down, we further learn that the Saljûq Sultan Malik Shîth when the mosque was completely restored by his orders began with roofing the wall of the courtyard. He is credited with building the southern iwân. The other three iwâns are over their present form of later origin. By covering over this huge quadrangle, the courtyard, the only characteristic architectural feature of the mosque, received the necessary unity and importance. (Around it, this mosque, like most Friday mosques, was completely surrounded by bazaars which made any external development impossible: the quadrangle was therefore all the more important) The rows of cells had here no longer any practical significance as dwellings but became an architectural feature. Behind the southern iwân, directed towards Mecca, a large domed hall was built as a Mausoleum. The wall of which were the mihrab and pulpit. Here the solemn Friday service was held. Thus the Friday mosque was created of the type which became general in Iran and Turkestan. Mosques and madrasas were frequently combined with mausoleums (cf. the article Architecture).
The Mosque building in the early period. Muhammad left no instructions as to how future mosques were to be built so that the earliest mosques varied considerably and we can hardly talk of a fully developed type before the third (ninth) century. The Prophet's house in Medina, where he performed the sala' with his faithful followers and instructed them, was a dār of the usual local type quite unsuitable as a model for the future mosque. It consisted of a courtyard surrounded by a brick wall with living rooms and outhouses along the inner wall. As was usual and still is in every house of this kind in Arabia and other tropical lands, palm trunks were put up in the courtyard and a flat roof of palmealves put over them and covered with a layer of clay. This is how the earliest accounts would lead us to picture the Prophet's house. In the courtyard was a reception tent furnished with fine carpets and materials, for Muhammad did not despise the nomadic luxuries and comforts of his fellow tribesmen. (cf. fatima et les filies de Mahomet and do., in J. A., 1915, p. 258 sqq.).

Around this establishment of the Prophet, his wife and daughters, lay the court in which his friends and followers used to assemble for the daily prayer and which thus became the first quadrangle of the first mosque. The use of a typical Arabian courtyard arranged in this way as a masjid however gives us no idea of the future impoing building. For half a century, it is true, they were content with this primitive mosque, during the patriarchal period of the first four caliphs, out of respect for the Prophet's house. The first Omayyad caliph, Walid I who in transforming the church of St. John in Damascus into the Mosque of the Omayyads had acquired experience in matters of building and connections with builders, on the occasion of his pilgrimage to Medina in 90 (709) ordered the primitive mosque which had served the purpose so far, to be removed so that an entirely new building could be erected on its site, which was extended. For this purpose, as Sahnidhis tells us, he asked the Byzantine emperor for skilled workmen and shells for the ornamentation, which were sent to him. "The walls and columns of the new mosque were built of large hewn stones of equal size and bound with plaster, ornamentation in shell and marble was carried out and the roof built of palm wood and covered with gold paint". Instead of the early primitive mosque, Walid had thus given the Medinenc a substantial pillared mosque, like the first mosques which he had built in Syria with the help of Byzantine arti-ans from pillars plundered from Hellenic-colonies and Christian churches. It was only in this Hellenised form that the mosque of Medina could have influenced the further development of the mosque in so far as we can speak of such influence at all. (It was given its present form by the Mamlik Sultan Kā'it Bey in 888 = 1483). The ordinary Arab village mosque is different in appearance. It has retained the form of the Arab pre-Islamic meqallā. This "place of sala'" was and still is a long hall supported by pillars, open on one side without a courtyard and having no mihrāb and miḥmar.

The lack of any generally binding or recognised rules or tradition is shown by the varying form of the mosque in the early centuries A.H. The earliest mosque of the general "Amr in Fustā' of 21 (642) was an enclosed rectangular hall without a courtyard, with a kibla which was not yet marked by a mihrāb. The first mosque in Basra was, like the whole city of encampments, built of reeds so that it could be taken down with the camp. In the year 16 or 17 A.H. Abu Abī Mecca, the newly appointed governor of Basra, built a mosque of unbaked brick and clay with a roof of grass. It was only under the Omayyad governor Ziyād that a mosque was built of brick and plaster with a roof of teak and pillars, which came from the quarries of Ahwāz on the Kūrīn river. The first mosque in Kūfa on the other hand of 17 A.H. was "a covered hall...which had no side wings nor buildings behind it" (Tabarī); before it was an open square and so, continues Tabarī, were all the mosques except the Masjid al-Harām (i.e. Mecca); out of respect for the sanctity of the latter, it was not copied in the other mosques. This mosque also was rebuilt by Ziyād, governor of Kūfa, the first Omayyad caliph in Syria, however, 661-680.

For it he had plans drawn up by Mazdaean architects: "Uno degli architetti gli fece un disegno sul modello degli edifici celti dai rai sasanidi, ossia un vasto colonnato con tetto e chiuso ai lati" (cf. Annali dell' Islam, 111, p. 47, p. 857). When, on the other hand, the conquerors found buildings in towns which were suitable for masjīds from the point of view of space, they utilised them. In al-Madā'in, for example, the old twin-city of Seleucia-Ctesiphon, the Ṣawra of the white palace was used as a place of assembly for the Friday sala', and the pictures of men and animals in it were not destroyed. In Syria, however, the churches were turned into mosques by changing the orientation from east to south and placing a quadrangle in front of them. In this way the building of the mosque of any place in the early centuries A.H. was adapted to the traditions in existence and where there were no buildings, as in the newly founded camp-cities, it was on every occasion a problem for the governor requiring much consideration. In spite of this uncertainty, as one can deduce from the descriptions, they were more inclined, even as early as the first century A.H., to the type of pilared mosque with a quadrangle, to which all the prototypes as well as the climate pointed.

Development of the Masdjid and the Madrasa in the different countries. Syria. As the place of residence of the first dynasty of the young Muslim empire and a land of ancient culture, Syria was naturally destined to build the first substantial mosques and to influence early developments. This influence it exercised on the one hand indirectly through the Syrian mosque built by Walid in Medina, next to Mecca the most sacred and most visited city of Islam; on the other hand, the Mosque of the Omayyads in Damascus, as we know from Arabic sources, was taken as a model as far away as Córdoba. The earliest centre of Muslim building was Jerusalem, which the Omayyads endeavoured to play off against Mecca. Beside the rotunda of the Kubbah al-Sakhra on the Harām al-Šarif, the sacred rock of which was to supplant the Ka'ba, "Abd al-Malik used the parts still standing of Justinian's Church of the Virgin to build the Dār al-İṣra (finished in 85 = 702). According to de Vogüé's plan, this building, later often restored or rebuilt, was a pil-
lared hall with three naves, of necessity oriented to the south with the mihrāb in the long axis. At a later date the transept with the dome and four side naves was added. The Mosque of the Omayyads in Damascus arose out of the rebuilding of the Church of St. John, which had been built on this site by the Mosquem and other stones of the Antonine temple of Jupiter. We must assume that Walid had the pillars of the basilica moved so that three equal naves were built. These were crossed in the centre by a transept, which led up to the mihrāb and had a dome over its centre. The rich decoration with mosaics was a suggestion from Syria and was probably done by Syrian workmen (plan and history of these buildings in Diez, Die Kunst d. islam. Volker, p. 14 sqq. of the first and p. 32 sg. of the second edition; with references to the literature). The Mosque of Damascus was the first to have a transept, the prototype of which Thiessen no doubt rightly finds in the chalc of Byzantium (Pharos, p. 214), which frequently appears again in Syria and Northern Mesopotamia. The great mosque of Aleppo was also built after the plan of the Omayyads with a transept, as the latter can hardly have been added until the rebuilding of 365 (976) (pictures in Saladin, Manuel, p. 85). The mosque of 'Iṣša in Ephesus, finished in 777 (1375), and the mosque of Dīyār Bakr arc northern outposts of this type, the influence of which can also often traced in Cairo and the Maghrib.

Alongside of these principal mosques in Syria a series of smaller mosques arose, partly out of ancient temples (Aleppo, Ḥamā, Ḥoms, Ba'albek, Tripoli, al-Ūmāya), partly built out of material available from Christian buildings (Ramla, ʿUṣayr, al-Hallabāt, Borsī). Some of these mosques may have been pre-Omayyad foundations, certainly the Mosque of ʿOmar in Baṣra. All these mosques, except ʿUṣayr al-Hallabāt, have the same type of quadrangle with halls around it, two or more being on the kibla side, without transept. The development of these halls varies however, as a result of local tradition or the material available (e.g. the naves of Christian churches). They are as a rule vaulted with pointed arches but sometimes have gable roofs and thus, along with their closed façades, in front of which we exceptionally have a bowered corridor, bear a western or northern stamp in keeping with the ruder climate. The later Syrian mosques under the Ayyūbids and Mamluks differ very much in their plans. The Mosque of Firdaws in Aleppo, for example, has a small pillared court and a broad nave, with a row of five small domes, the harām besides various side-rooms; cf. E. F. E. Diez, Voyage en Syrie (M. l. F. A. O., Cairo 1914, 2 vols.).

Madrasah in Syria. A very complete study of the madrasah in Syria and Egypt by K. A. C. Creswell (The Origin of the Cruciform Plan of the Cairoite Madrasah, B. I. F. A. O., 1920) has brought some clearness into the question of its typical form etc. After an examination of eight madrasas built before 1270 A. D., the plans of which can still be traced in Aleppo, Damascus and Ḥamā, Creswell shows that the symmetrical plan was unknown in Syria and that the plan was a regular scheme in the arrangement of the rooms, but it depended on the site available. A typical specimen is the always correctly oriented mosque: a nave of three vaulted rooms with three pointed arched doors to the court; a ṭurāb on the court, rows of cells in the rest of the court and usually two tomb-cupolas usually flanking the mosque; the rest of the area is occupied by rooms. Madrasas used by two rites had two iwans. Of the 80 madrasas counted by al-Ḥamawi in Damascus in the xviith century (F. A., ser. 9, vol. iii.-iv.), 33 were Hanāfī, 31 ʿAshārī, 9 Ḥanbalī, 1 Mālikī, 6 by Ṣahīfī and Ḥanāfīs. Creswell's investigation shows that in Syria there was not one madrasa of all four rites nor a cruciform one, a result, which suggests new deductions for the Egyptian madrasas.

Arabia. The indigenous form of the masjid in Arabia is a large hall formed of chambers with pillars and arches. The author found such oracles, more correctly to be described as miqaṣṣas, in Manāma on Bahrain (picture in Diez, K. d. isl. Arch., p. 46). These praying chambers, open to the street without a courtyard, have no furniture, not even a minbar or mihrāb. The latter was foreign to Arabia and in the larger mosques its place was taken simply by a slab of stone with some adornment. But these pillared halls were only a more substantial form of the local native masjid of palm-trunks, which could probably often be found in the simple villages of the interior and whose sanctified precursor was the masjid al-Nafāwī in Medina built in this fashion. Alongside of this type of mosque which was indigenous to Arabia we find imported forms, like the masjid in Medina (see above), of slight importance from the archaeological point of view. Mention may be made of the ruins of a mosque near Manāma of 749 (1339/1340) described in an inscriptions as masjd al-qāhir dhu l-imām dhut, with old pillars of teak of the fourth (seventh) century; the Shīʿa form of the creed on this as well as the inscriptions on the kiblah stones of the xivith century mark it as a Shīʿa edifice (see, Diez, Eine schützende Moscheenums auf der Insel Bahrain, in Jihāb, d. anat. Kunst, II, 1923).

Iraš and Mesopotamia. The earliest settlements of the conquering Arabs in the Iraš were primitive camps built of reeds; equally primitive were the earliest mosques. Masjīma, or ‘Umbān, were used for the purpose in conquered cities, like Ctesiphon. A pillared mosque was early built in Kīsā (17 Amīr), which Tabari describes and which was rebuilt as early as the beginning of the Omayyad period by "Persian builders" in the form of a completely enclosed pillared hall (see above). In the capital of the caliphs also, as a result of its complete destruction by Timūr nothing worthy of note has survived. We know however that the Friday mosqu of al-Manṣūr (1497-766) was built of pillars and a flat roof. A wooden dome over the ṭaḥqīra is probable. It was rebuilt under Ḥarūn in 192-193 (808). Al-Muʿṭāridi began to enlarge it after the return of the troops from Samarq (280 = 593) (cf. Sarre-Herfeld, Arch. Reis., II, 134 sqq. with plan). Outside of Baghdad the unlimited space available permitted great mosques for the soldiers to be systematically planned, as in Rāṣrā and Samarq; these were the great pillared mosques of the third (ninth) century, which were copied in the mosque of the Prophet in al-'Abbās in Cairo. Of the three large old mosques in Māzin, that of the Omayyads has completely disappeared; according to Yākāt's description it was "completely vaulted, with afaṣṭaṣ slabs". This seems to be the origin of that type of pillared mosque
with vaulted arches which was later further developed by the Saljūqs and Ottomans (see below). The Mosque of Nūr al-Dīn (541—560 = 1146—1173) or Ljāmī al-Kabīr was also vaulted from the first (with cross-vaulting) on piers (543 = 1148) and on its rebuilding in 566—568 (1170—1172) was crowned. The Third Mosque of the Madzhib, Kbihr Iyās, has been completely modernized. Smaller mosques of the 18th century like the Ljāmī Nābi, Djirās have single domed chambers as praying-rooms.

In the 19th and 20th centuries, the following madrasas were built under the Aḥṣāb: the Shāfī Nizāmīya in 459 (1066), the Tādjīya in 482 (1089), the Hanāfī Tuttūbiya in 508 (1114), the Nāṣirīya, c. 600 A.H. and the Mustaṣanīya about 630 A.H. Only the latter is still in existence and is used as a customs warehouse (sketch-plan in Sarre and Herzfeld, Arch. Mitt. ii. 161). Of remarkable oblong shape (86; x 210 feet) it has six iwans, a large vaulted hall, rows of columns and side rooms. In front of four iwans this, the first state madrasa, also accommodated a dār al-hadith and a dār al-‘urūrān. If the Mustaṣanīya was not planned in a strictly symmetrical way with four iwāns at the intersection of the axes, it nevertheless incorporated the same idea and may therefore have stimulated the development of the next type. In Muṣūl there were several Ḥanfī madrasas.

Egypt. The type of pillared mosque imported from the İlkak under Ibn Tūlūn prevailed in Cairo along with the pillared mosque down to the 11th century. It is the regular rule that the large central and Friday mosques always have piers. The smaller mosques intended for the people of the quarter have pillars. Some of the latter however were on occasion also used as Friday mosques. The rows of piers were always parallel to the Kibla wall and connected by arches, a natural result of the rectangular form of the piers, which had to run parallel to the rows of worshippers. In the pillared mosques the naves might also be perpendicular to the Kibla wall, without inconveniencing the worshippers. The Cairo mosques of this group are: The mosque of Amr Ibn al-isoner, Fatimid, J. A., 1891, reprint, p. 23.

The mosque of Al-Akmār, a small pillared mosque historically important: for its façade built by Abū ʿAli al-Manṣūr al-Amīr (495—524), finished in 519 (1125), restored by Barkūk in 799 (1396—1397) and then a manārā which was removed in 1414 (1412) (cf. M. v. Berchem, l.c., J. A., 1891, reprint, p. 81).

The mosque of al-Maḏīnī, built by the Fatimid caliph al-Zāhir in 543 (1148—1149) completely restored in the Ottoman period.

The mosque of al-Ṣalīḥī Tālīfī outside the Bāb al-Zuwāl, built about 550 (1160). A smaller pillared mosque of the usual type, which was sometimes used as a Friday Mosque (cf. M. v. Berchem, l.c., reprint, p. 3 sqq.; pictures in R. L. Devonshire, Some Cairo Mosques and their Founders, London 1921, pp. 1—10).

The mosque of al-Zāhirī Ḍawāb of the year 665—667 (1266—1269), a mosque with piers of brick, built for a mosque with a very strong stone wall and three portals jutting out like the mosque of al-Hākim. The six rows of columns in the jamāʿ are crossed by a transept with a dome of three naves breadth in diameter before the miḥrāb. Porticoes with double naves surrounded the court.

The mosque of Sulṭān Muḥammad al-Nāṣir on the citadel, of the year 718—735 (1318—1335) on pillars.

The mosque of Amr al-Mas (Ṣhāfī Ḥilmiyya) of 750 (1349—1350).

The mosque of the Maḏdānī of 739—740 (1338—1340) on pillars.

The mosque of Amr Akṣūkūr of 747—748 (1346—1348) on pillars.

The mosque of Muṣayyad of 819—823 (1416—1420).

Of pillared mosques in Egypt outside Cairo we may mention the mosque of St. Athanasius and the mosque of the "Thou-and Pillars" in Alexandria the plans of which were recorded by the French expedition (Description de l'Egypte, Antiquités, v., reproduced in Thiersch, op. cit., p. 224). Shortly before the arrival of the French, Alexandria still had 85 mosques, 46 of which were large. Practically nothing of these is left at the present day. The two above mentioned were pillared mosques and particularly the second, also called the "Mosque of the Seventy", with its iwāns of equal depth on all sides (only the northeastern one has 4 instead of 5 rows of pillars) the arches of which always run parallel to the outer walls, i.e. palm-like, continue the type of the Hellenistic pillared agora or the gymnasion as Thiersch has pointed out. The same type predominated in the towns of the Delta. The second, later type of mosque in Egypt was decisively influenced by the madrasa, to which we may now turn our attention. As Creswell has shown, the Egyptian madrasa was by no means always cruciform, as was usually supposed previously. It is also distinguished from the Syrian type and cannot be at once said to have been introduced from Syria. It is true that the first madrasa for all four rites in Cairo was built by Sāliḥ Naḏīm al-Dīn Ayyūb, but this Salihiya was a building divided into two halves and cannot be considered as the original of the later type (641 = 1243—1244). The first cruciform madrasa with 4 iwāns in Cairo was the Zāhirīya which was built on the site of a part of the old Fatimid palace which was cleared for this purpose and consecrated in.
The typical mosque of the Muslim west is the mosque with courtyard, on pillars or columns. It was only under Turkish rule that the domed mosque became established in those parts of North Africa affected by it. The rows of pillars ran, as a rule, perpendicular to the Kibla wall from which however they are separated by a transept. The axis of the latter is a continuation of the axis of the central nave which is always broader. Of the rows of pillars in the axis the two or three outermost ones are continued over the court and form the arcades, of which the inner entrance side of the court has as a rule only one.

The beginning and end of the central nave are as a rule marked by a dome. The western mosques are given their characteristic features by the horseshoe and bulbous arch (a mixture of the horseshoe and the pointed arch). The mihrab of the western mosques is as a rule a pentagonal niche considerably deeper than the eastern semi-circular one. The oldest surviving large mosques in the west are in Kairawan, Tunis and Cordoba (since the expulsion of the Church).

The foundation of the Great Mosque of Kairawan like that of ‘Amir in Cairo goes back to the first century A.H. but like that in Cairo also retains nothing from its founder ‘Abd b. Naif except the name. By 76 (695) the original masjid was rebuilt, and later enlarged but in 221 (836) it was completely taken down by the Aghlabid Ziyadat Allah and rebuilt and in the thirteenth century again enlarged on two occasions. In spite of many later restorations, the mosque has retained the form it was given in the thirteenth century. Seventeen naves on pillars run perpendicular to the Kibla wall from which however they are separated by the transept. The central nave is broader and flanked by double columns and marked externally by two domes. It may be noted as a special feature that the first two travées of the haram seem to be one with the court arcades while the part behind was shut off by doors. The arcades of the court rest on pillars with double columns in front of them, which with their bulbous arches give the eastern corner of the place its special character. The Qayrawan Great Mosque in Tunis was built as early as 114 (732) by the Omayyad governor Ibn al-Habbab but entirely rebuilt in 250 (864); in spite of many internal restorations, it has in the main retained to the present day its old form of the end of the ninth century. In Spain we have from the Omayyad period the (former) Mosque of Cordoba. It was built by ‘Abd al-Rahman I (912–961) and several times extended by his successors until the haram contained 19 rows of arcades. The special feature of this mosque is the double storied arrangement of its rows of arches, a bold innovation, which does not seem to have been imitated elsewhere. Recent investigations have revealed the original floor of the mosque at a much lower level, which is decorated with mosaic. This would alter the proportions. The horseshoe arch taken over from the Visigoths was varied in the clover leaf and indented arch and these arches were imitated in the Maghrib (mosques of Algiers, Tlemcen etc.). The domes swelling into various shapes were first imitated in Kairawan and Cordoba. The mosque of Seville (1236 = 850) and Sfax (235 = 849) were founded in the Aghlabid period but the latter was completely restored in the tenth century. The rise of
the Fatimid empire in North Africa (927 = 909) brought about a new development of mosque building. The mosque of the new Shi'i capital Mahdia in Tunis however corresponds completely to the preceding Aghlabid type. A novelty however is the use of cross vaulting which henceforth we find frequently, first of all in the two mosques of Monastir and in the new part of the Great Mosque of Sfax. Of the great pillared mosque of the Kala' of the Bani Hammad, the minaret of which still stands and was mentioned in the article MAXARA, it is only possible to reconstruct the ground plan, which had 13 naves with 8 travées (cf. Blanchet, *Nouvelles archives de Missions*, vol. xviii, P. 123 sqq. and De Beylié, *La Koutoubia*, p. 77 sqq.). A second mosque of the Bani Hammad has been destroyed in Bourg, but it is evident from an old description that it belonged to the type of Kairouâin (De Beylié, *op. cit.*, p. 102—104).

**Mosques of the Almoravids** (448—541 = 1056—1147) and Almohads (524—667 = 1120—1267). The great mosques in Algiers and Tlemcen, the Kutubiyya in Marrakesh and the mosque in Tinmâl are pillar mosques with bulbous arches. On the other hand the Mosque of Hasan in Rabat, now completely destroyed, the largest mosque of the Magrib, stood on round pillars (1610 x 465 feet; begun 539 = 1196—1197). A noteworthy feature is the mausoleum behind the mihrâb in the mosque of Tlemcen, which now becomes frequent in the Magrib (but seems not to have been unknown in eastern Islam, as the plan of the madrasa of Khargird shows; cf. Dece, *Churassan. Baudenknater*, p. 73).

**Marrinids in Morocco** (1195—1470). The Almohad Mosques of the Almohads (xvith—xviith century): a large mosque in Tâza, Morroco, piers, broad central nave and transversal nave, finished in 693 (1294). A large mosque in Auydâ on the Algerian-Moroccan frontier (696 = 1296). Sidi bîl-Hasan in Tlemcen (696 = 1296), a small mosque with minaret on onyx columns, and Alâd al-Iman in Tlemcen (710 = 1310), small, but richly decorated. The most important mosque in Tlemcen (736 = 1336), a very regular building, thirteen naves on onyx columns, a broad central nave, a three nave transept, a mausoleum in the centre, a polygonal mihrab with mausoleum behind. Sidi bîn Medyên of al-Imad (739 = 1339) and Sidi al-Halwî (754 = 1353), both in Tlemcen, small, the former on piers, the second on columns with slightly modified horseshoe arches with a wide span. Shelid (harbour of Rabat), Necropolis of the Marrinids, a tomb mosque (739 = 1339) (plan in Marçais, *Manuel*, ii. p. 408). Around Tlemcen are several small mosques of the xvith century. The Medersa of the Magrib. Medersas were first introduced into the western lands of Islam by the Almorahds but nothing of these seems to have survived. The oldest medersas date from the xiiiith—xivith centuries. The Marrinids in Magrib al-Askâ were particularly active in building and encouraging medersas, which, as in Syria and Egypt, were also state institutions. This evolution of the medersa was apparently a result of the Sunni, particularly Maliki, revival under the Marrinids (1195—1470). Al-Saffarînî, the oldest medersa in Fès, built by the great warrior and champion of the taif Yakûb Yûsûf (685—706 = 1286—1306) of the Marrinids who also built the mausoleum of the tombs (see above), was the prototype of all the other medersas in the extreme Magrib. An angular gateway, such as is usually only found in private houses leads into a court with a central basin and the cells. A domed chamber with a pentagonal mihrab adjoins it. On the analogy of the tombs, it is called kubbâ. Adjoining it reached by a corridor is a mi'dâ 'a, with a basin in the centre for ablutions and latries. These three main parts of the building, sahn, kubbâ and mi'dâ 'a and usually
1. Fostāt. Mosque of 'Amr.

11. Isfahān. Shāh Ḥusayn Madrasa.
Mashhad (Khurasan): Mosque in the sanctuary of Imam Reza.
a separate minaret, are found continually in a number of variations, usually dependent on the space available, which Maqriz, op. cit., ii. 504, divides into three groups. In Fes in addition to those mentioned there are other seven mederras of the xvi th century. With the mederras of Meke

nes, Sale, Taza and al-Awbd in Tlemcen we have in all eleven mederras of the Marinid extant (cf. the list in Maqriz, op. cit., ii. 504 sqq.). The most imposing and finest medera in Fes is the Bz Aina, founded by Abu 'Ain. 749—759 (1348—1358). With its madqul of two transepts at the end of the square court and two domed chambers in the central axis of the court it recalls the mosque of 1sAn in Cairo with its iwans. The façades on the court display the wealth of wall adornment usual in the Maghrib: tiles, stucco moulding and stalactites.

Mederras of the xvi th—xvii th centuries in Morocco: The Medessa of Ben Yiauf in Marrakesh is regarded as the largest in the Maghrib and stands on the site of an originally Almoravid (2) and next Marinid Medessa Abu '1-Ihsan. The plan seems to be old and in its regularity recalls the al-Hidri type of Arab palace and the palaces of the Omayyads and 'Abbasids built in this style in the desert (plan in Maqriz, op. cit., ii. p. 702). The Medessa al-Sharrati in Fes, begun in 1670, shows a similar plan but is smaller and simpler.

Mederras of the xvi th—xvii th centuries in Tunisia: In the xvi th century the Hasafs built a number of mederras here. Of the Turkish, the most interesting is the Medessa Bala-ya of Ali Pa5ha (1749—1755): a court with cells, madqul on pillars and mi6idin, but, like the Egyptian mederras, it has also the tomb of the founder and a public fountain. In Tunis, probably as the result of Egyptian or Oriental influence, it is common to find mederras and mosques associated with the tomb of the founder. The three varieties distinguished in Egypt by van Berchem, mosque-mausoleum, madrasa-mausoleum and monastery-mausoleum were also built in Tunis.

Saldjik empire in Rum, Armenia and Georgia. In Saldjik Anatolia (1457—706—1272) a great many of these were built. Of the courtyards one of the walls of the court within the madrasa and domed arcades are to be distinguished. The pierced wall was used as the large public mosque. On account of the colder climate the open courtyard with pillars was not found here. The pillars were sometimes of wood (Oshref Rm Djami), usually however of stone. The flat wooden roof rested directly on the piers or on the arches which connected them, which run sometimes parallel, sometimes perpendicular to the kibla wall. The Ul Djami in Wn has a vaulted roof resting on pillars, a system later often used in the Ottoman empire. Of more importance architecturally are the smaller (mosque-madrasas), which played a prominent part in the Saldjik empire: but they fell far behind the Persian madrasas in impressiveness and harmonious development. The model for the evolution of the Wn-madrasa was the Mesopotamian-Anatolian farra-house. From the latter came the bowers along the sides of the court which were placed in front of the Wn and the rows of cells. The combination of school and mausoleum in which the builders, usually high officials of state, were interred, was the rule. The domed madrasa consists of a domed hall with a water basin in place of the open court with living rooms, a lecture-room and a mausoleum adjoining it. The external ornamentation of these Saldjik madrasas and mosques is confined to the gateways. The façades of the gates, irrespective of the material used elsewhere in building (brick or moulding), were always covered with slabs and the portals then ornamented with strips of decoration or inscriptions, fantastic looking candle-labra of palmettes (Diwrigi), bundles of rods and convolutions in low and high relief and thus one of the highest points in Muslim decorative art was attained. The iwans along the court, interiors of the comparatively low domes (which here usually bridge over the corners on triangular consoles), the frizes on the wall and the nihabs are frequently adorned with glazed brick and mosaic frizes in a style which in pattern and colour is readily distinguished as an independent pattern from the Persian decoration. Here we find geometrical network patterns, which were not usual in Persia and a colour scheme which receives its special character from the much used black, alternating with bright and dark blue, although other colours are also found. The following is a list of the most important buildings, so far as they are known: 1. Piered mosques: 2. Court mosque: of A la al-Din in Konya, completed 616 (1200—1210), Djami Kebir in Siw, xth—xith century, madrasa-mausoleum, completing the highest, and great mosque 679 (1286—1281) in Diwrigi, Eshef Rum (Eski) Djami, xith century, in Beyshaher, Ulu Djami in Eshefir, xith century, all built in 1272 (1251) and the largest of this type.

The mosque of the Turcoman ruler Is 1 (1348—1590) in Ayasoluk (Ephesus) is an exception in Asia Minor; it was finished in 777 (1375—1376) and its architect is said to have been "Ah b. al-Dimshu. The interior is modelled on the mosque of the Omayyads in Damascus; the walls however are in the Turkish style of that period, as developed in the provinces of the Atabegs. The west façade is closely related to the façades of the mosque of 1sAn in Cairo, which also drew inspiration from Northern Mesopotamia.

The Ottoman empire. The Ottoman Turks further developed the types of mosque built by their predecessors, the Saldjiks. A second very important factor in the development was their expansion into Europe and the new model, the Byzantine domed churches, especially the Hagia Sophia in Constantinople. Here three main types of mosque may again be distinguished: the pierced hall, the cruciform domed mosque and the central or great domed mosque. The first and third were
commonly used for Friday mosques and mosques for the people, while the second type was reserved for the Sultan's Friday service and religious instruction, and was more used for private mosques. The Ottoman pierced hall mosque is distinguished from the Sa'djih, principally by its vaulting, rows of cupolas over the piers. The court is limited to a hypaethral water-basin of the same size as the dome above it. The Ulu Djam'i in Brussa for example is an undorned pillared hall, rectangular in shape with five aisles each with four domes in a row. The second group of four pillars in the central aisle was originally uncovered (now it has a glass dome) and contains the basin for ablutions, the rudiments of a court. The domes of the five aisles rise one above the other to the central row.

The most important buildings of this group are: Ulu Djam'i 1370–1420 in Brussa, Uc Sherefeli Djam'i 889–893 (1484–1487/8) in Adrianople, Ulu (Eski) Djam'i ca. 1403–1420 in Adrianople, Ulu Djam'i xvi century (1) in Manisa (Magnesia on Sipylus), Djumaya in Filibe (Philippopolis), old mosque (now museum) 882 (1477–1478) in Sofia, Sandjirifir Kuyu Djam'i ca. 1500, Ahmad Pasha Djam'i by Sinan ca. 1555 and Pasha Djam'i 1573, all in Constantinople, Eski Wulde in Scutari ca. 1570. The pierced hall as an annexed form became extinct in the xvi century. The Itekil Oghlu Djam'i in 1734 in Constantinople is a mixture of the latter with the great dome. The origin of the cruciform domed mosque is rightly sought by Wulzinger in the Sa'djih madrasim with courtyards which come in tune to be covered over with a dome. The centre which lies somewhat below the level of the rest, is occupied by a square roofed with a dome, again the rudiments of the former courtyard, and still often containing a fountain. The Kibla chamber is vaulted with a barrel or dome, the prying chambers to right and left are either like twins open towards the centre or have barrel-vaulting. The similarity of these mosques to Byzantine churches (in plan, not in structure) is involuntary and lies in the system. On the other hand, the open pierced outer court (köşvet) may go back to Byzantine stimulation. These outer courts however are very great in the east to give shade. The most important buildings of this type are according to Wulzinger's list (op. cit., p. 186): Mosque of Murad I 1359–1389 in Brussa, fin. end of xvi century, two storied, Mosque of Bayażid I Yıldırım (1389–1403), fin. after 1402, Yashil Djam'i in Brussa, fin. 1423, Mosque in the Koinames church in Isnik, beg. of xvi century, Nilufer Khatun 'imaret, end of xvi century, Piruz Bey Djam'i in Milas, fin. 797 (1394), Mosque of Murad II 1421–1451, fin. 1447 in Brussa, Mosque of Murad II in Adrianople, 'imaret Djam'i in Philippopolis 1359, Mosque of Hamza Bey before 1451 in Brussa, Ghazi Michal Djam'i ca. 1400 in Adrianople. The great domed mosque developed out of the more primitive single domed mosque which was very common throughout out Asia Minor and Turkey as the simple village mosque, private mosque etc. and continued to survive. (In Ayasoluk alone 14 small single domed mosques can be counted). This type of building was also used for the numerous turbines. The following are more important single domed mosques outside Constantinople: Yashil Djam'i 794 (1392) and Mahma Dželēb Djam'i about 1400 in Isnik, 

Masjīd of Khodja Vadygyar beg. 1369 in İnönü, Masjīd of Elias Bey fn. 806 (1404) in Balat (Mile). The development of the great domed mosque from this type took place in part through combination with cruciform domed types, but its aim was however the elimination of all minor domes which at first it had for constructive reasons to put at the sides. A. Gabriel's table gives a good idea of the different variations. He gives the mosques of Constantinople, which number 42 (with Scutari), under six main types (Les Mosquées de Constantinople, in Syria, viii, 1926, p. 352–495).

D. Square or oblong halls with one or more domes, sometimes flanked by secondary domed chambers: Mahma Pasha Djam'i 898 (1464). Murad Pasha Djam'i 870 (1466), Dâwâd Pasha Djam'i 890 (1485), 'Atık 'Ali Pasha Djam'i 902 (1497), Sultan Selim Djam'i 926 (1520).

E. Quadrangular single domed halls (continuing the list just given of the not yet very large single domed mosques from the city area of Constantinople): Firuz Ağa Djam'i 896 (1491), Diezen Kâsim Pasha Masjīd 921 (1515), 'Huseyî-ı Kurem Djam'i 946 (1539), Mehmed Ağa Djam'i 993 (1585), Châlî Djam'i 1050 (1649), Nûri 'Othmanî Djam'i 1169 (1755), Latifi Djam'i 1177 (1763), Wulide Djam'i 1287 (1790).

F. Square hall with a central dome, usually supported by two half domes: Sultan Bayazid Djam'i 906 (1500), Sultan Sulaiman Djam'i 957–964 (1550–1557), Kılıç Ali Pasha Djam'i 988 (1580).

D. Square hall with a central dome supported by four axial half domes: Şahzade Djam'i 965 (1548), Sultan Ahmad Djam'i 1026 (1617), Yeğen Wâlide Djam'i 1120 (1708), Sultan Mehmed Djam'i 867 (1463), reconstructed 1180 (1767); variants: oblong hall with a central dome supported by three half domes: Iskele Djam'i in Scutari 954 (1547).

E. Oblong hall with six domes of equal size (old type of people's mosque, cf. above): Zingirî Kuyu Djam'i xvi century, Filibe Pasha Djam'i 967 (1573).

F. Oblong hall with central dome and aisles.

Group a. Central dome with square plan and pendentives: Balk Pasha Djam'i middle of xvi (xvii) century, Mihrimâh Djam'i middle of xvi (xvii) century, Zâl Mahma Pasha Djam'i 958 (1551).

Group b. Central dome on octagonal basis: Ibrahim Pasha Djam'i 958 (1551), Rustam Pasha Djam'i middle of xvi (xvii) century, Eski 'Ali Pasha Djam'i 994 (1586), Yeğen Wâlide Djam'i 1120 (1708) in Scutari, Aştir Kapu Djam'i 985 (1577), Ayâb Sultan Djam'i founded xvi (xvii) century, rebuilt xvi (xvii) century, Nîshândîl Mehmed Pasha Djam'i 992 (1584).

Group c. Central dome on hexagonal basis: Ahmad Pasha Djam'i 962 (1555), Sultan Mehmed Pasha Djam'i 979 (1571), 'Atık Wâlide Djam'i 991 (1583) in Scutari, Ljebî Pasha Djam'i 1062 (1594), Hakim Oğlu 'Ali Pasha Djam'i 1147 (1734).

A survey of this list shows that the type given under A. is also the earliest. This was directly linked up with that in use in the older capital Brussa and already being built in Konya in the xvi century (Kara Tai Madrasa, Yıldırım and Yashil Djam'i) which seems to be continued in the Mahmud and Murad Pasha Djamis. But already the original Sultan Mehmed Djamis (rebuilt in the xvii century)
which forms a striking anachronism in Gabriel's list under D. with its date 1463 (only the second modern Mehmediya of 1767 belongs properly there), had made the first important step towards a single great chamber (cf. Agha Oghlu's reconstructed plan in Diez, Kunst d. isl. Volk, 2nd ed., p. 105) and this plan was repeated for the 'Atük 'Ali Pasha Djami', while the Dawud Pasha Djami' of 1485 had already used another variation (cf. the plans in Gabriel, op. cit.). This in brief is the historical development of the Constantinople mosque from the Anatolian Sajidijk-Ottoman type. The next important step to the gigantic domed mosques of Constantinople given under D. was completed by the greatest of Ottoman architects Sinan (1489-1588) in the Shah Mosque Djami', the Sultanâyye and the Selmici (1567-1574) in Adrianople. His guiding idea was, by thrusting the pillars of the domes as far back into the walls as possible, to get a single domed chamber of the largest possible dimensions, no longer interrupted by pillars: Sinan achieved this end in the Selmici in Adrianople.

**Persia, Turkestan and Afghanistan.**

Old mosques or remains of them have not survived in Persia, as in Egypt, the Maghreb and Syria, except perhaps for a few old parts still standing in the great complex of buildings, that formed the Friday Mosque of Mashhad, which is all that remains of the old Friday Mosque of Shiraz. We know however from literary sources that at the beginning of the Abbásid period large mosques were built everywhere in the towns and some must have existed even earlier. Abû Muslim, the celebrated general and Abbásid propagandist, built mosques in Merv and Nishâbûr. The latter was built on pillars of wood and similar structures are occasionally mentioned in Persia (e.g. at Rubâb in the province of Djiurdjân, Sirâf on the Persian Gulf etc.). In the ninth century, however, greater use began to be made of columns of brick or stone or marble columns taken from older buildings where they could be seen, as in Persian at Persepolis. 'Amr b. al-Lâthî (265-288 = 878-900), the second ruler of the Saffârid dynasty, renovated the Friday Mosque in Nishâbûr and among other mosques built the Djâmi' 'Atük in Shiraz, both mosques with columns of brick, of which parts are still standing in Shirâz. The Friday Mosque of Balkh destroyed by the Mongols in 1220, is said to have had splendid pillars, as Ibn Batûta records. An old mosque on piers of the fourth (tenth) century has survived in the remote desert town of Naiyûn, east of Isfâhân, and enables us to make deductions about the architecture of mosques in the lands of the east from the fourteenth century. In Balkh there were eleven barrel-vaulted aisles running perpendicular to the kibâ wall, of which the central one is broader than the others. The court is flanked by four-aisled riiâks which run parallel to the kibâ wall, only the wall of the entrance has an arcade. The plan is therefore similar to that of the mosques of the Maghrib. It is built on columns or piers of different forms. The part around the mihrâb is richly ornamented in stucco and has bands of inscriptions around it (cf. H. Viollet and S. Flury, *Un monument etc.*, *Syrie*, ii, 1921). How securely the pierced hall, as the type of Friday Mosque, maintained itself in the Sunni east, is seen from the rebuilding of Timâr's great mosque in Samarkand after his return from his raid on India in 1410, a mosque with columns, which was directly connected with the madrasa of Bibi Khanâm, but has now completely disappeared. The mosque had 460 columns of hewn stone, each seven ells in height. The vaulting was covered with large beautifully carved and polished slabs of marble. There was a minaret at each of the four corners of the mosque. The door was of bronze and the walls were covered inside and outside with inscriptions in relief (according to Sharif al-Dîn 'Ali Yâzîd). How far there was any Indian influence here cannot now be ascertained. In any case, the iwân and mihrâb court became established in Persia in the fifth (eleventh) century and as the above described Friday Mosque in Isfâhân shows, became structured with the pierced hall. The great Mosque of Herât (cf. Niedermayer-Diez, *Afghanistan*, p. 55 and figs. 149-153) shows a similar mihrâb court adapted to the (probably older) pierced hall. In the completely new building of the Timurid and Safavid period, the pierced hall completely disappeared and the hâmâr is extended by a central dome with vaulted halls at the sides, when the kibâ iwân itself does not fulfil the purpose. The mosque of the great sanctuaries in Kûm Muḥammad, Kerbelâ, the Masdjid-i Shâh in Isfâhân and many other urban mosques of Persia are built on this plan. Only in Eastern Khurâsân, as in the Turkestân-i Shahkh in Isfâhân, have we still an iwân with vaulted arches and a large dome in the centre of the hâmâr, all of which betrays Indian influence (cf. the plan in Diez, *Chauasische Baukunst*, p. 79).

Of the already characterised type of domed mosques may be mentioned: the "Blue Mosque" in Tabriz and the Masdjid-i Shâh in Mashhad, both similar in plan to a large central dome and two flanking minarets. The former was built during the reign of the Turkmân ruler Djihân Shâh (1437-1497), the latter by Mir Mâh Shâh, the architect being Ahmad b. Shams al-Dîn Muḥammad Tabrizî (cf. *J. R. A. S.*, 1910, p. 113). The Tabriz mosque, however, is dated 1611 and is built directly from the domed area with a second smaller dome. Both domes were decorated with tiles, the larger with white tendrils on a black ground, the smaller with white stars on a black ground (Tavernier). Only fragments survive of the Blue Mosque, which show how splendidly it was once decorated; on the other hand, the Masdjid-i Shâh in Mashhad is still standing, although the dome has lost its decoration. To this group belong also the mosque on the citadel mound of Eriwan, the mosque of Shahk Lyûf Allâh in Isfâhân, the Kalîyân mosque used as a royal private mosque and the public Mosque of 'Abdul Mejid, both with high entrance iwâns and without a court. At largely attended common prayer, the people assemble in front of such mosques. This is particularly the case in Turkestan; for the iwân and niches were simply very large mihrâbs and nothing further was necessary. In Balkh also there is a similar, formerly domed mosque probably intended for the ruler with a towering iwân (xvth century) (cf. Niedermayer-Diez, *Afghanistan*, figs. 204-205). Besides these large main types, there were and are in these lands of eastern Islam hundreds of smaller mosques in the towns and villages, which sometimes show very interesting structures. Thus in Djiâdjarîn in the Isfâhân steppe (northern Persia) there is a mosque with a small
open court and domed chamber in front of the mihrab, and two triple yoked aisles, probably a reminiscence of Nestorian churches (cf. Dietz, Chauras. Bukan, p. 83). We also find everywhere small madrasas, which are simply little oratories, where the people can promptiy worship at the proper time: flat-roofed large halls on wooden pillars, which are frequently richly carved in Turkستان, Afghanistan (Kabul) and Central Asia (Kashmir etc.).

The Madrasa in Persia, Turkestan and Afghanistan. Shahi madrasas were built in the Abbasiid period in Nishapur (where Hafiz Abru counted 17), Merv, Bukhara, Amol, Tus and other towns. Nasr, brother of Malikshir of Ghazna, is said to have built the first state madrasa. Under the Saljuq, Nasir al-Mulk, vizier of Alp Arslan, and of Malik Shah, built three state madrasas in Nishapur, Tus and Shahbad. None of these pre-Timurid madrasas in Persia has survived; unless the ruined iwan in Khargird is what is left of a madrasa, which is very probable (cf. Dietz, op. cit., p. 71 sq.). The runs of the Timurid period however give us a picture of the Persian madrasa of the golden period of Muslim Persian architecture. The madrasa in Khargird near Kafh close to the Afghan frontier, completed in 848 (1444-1445), still shows a pure unmixed madrasa design: a quadrangular court with four barrel-vaulted large iwan, equal in size, at the intersection of the axes, each flanked by two or, with the upper storey, four cells, four vaulted corner-chambers, a narthex-like outer building consisting of three successive domed chambers; low confined mihrab façades with low flanking towers at the corners. The walls, especially of the court, were adorned with rich tiled mosaic, the walls of the domed chambers with ornamental frescoes (cf. Dietz, Chauras. Bukan, p. 72-76, pl. 31-34). In contrast to the low façade of Khargird built by a West Persian (Shirazi) architect are the Turkestan madrasas with their high iwans; characteristic of the cast in general, and gateways especially. In Samarkand we have the three Rigestan madrasas: Shir dar (c. 1610), Tillya Kari (c. 1610) and Ulugh Beg (c. 1434); also the Madrasa Bibi Khanum (about 1410) built by Timur, all large courtyards with mihrab courts and domed chambers, usually four mumaret at the surrounding walls. In Bukhara, the Madrasa Mir Arab of the end of the xvth century is related to the Madrasa Shir Dar. Of the madrasas in Herat, e.g. the celebrated Ekkadissiya, nothing has survived, nor do we have anything left of the madrasa of Turbat-i Shahi Djam in Eastern Khurasan (cf. Dietz, op. cit., p. 78). A twin architecturally inter-ting the state madrasa founded in the xvith century by Malik Hamza, the Gumbaz-i Surkh at Kafa-i Fath in Sindjistan (cf. Tate, Sictistan, fig. p. 78). The cells are vaulted with the typical Persian house and haras dome. The last fine Persian madrasa is the Mader-i Shah Sultan Husain in Isfahan built by the Safavid Shah of this name (1694-1722). The tiled decoration of the court is among the finest of its kind that has survived in Persia (cf. Sarre, Pers. Bikan., and Dietz, Kunst d. Isfahans, p. 106-107). The dome still shows the original glazed tiles with foliage patterns: dark blue and white, changing to black slabs and yellow leaves on a turquoise blue ground.

India. In India the history of Muslim architecture so far known does not go beyond the xvith century. The two earliest mosques of which the ruins still survive, the mosques of Ajmir and of Delhi, are large covered courts, built of pillars taken from Jaina temples. The domes on eight pillars found in all Jaina temples are here found ranged in rows. The richly sculptured pillars were simply cleared of any figures on them before being used. Vaulting on square piers continued in use after there were no more pillars to plunder (mosques in Kulbarga and Bidjapur). For the rest, Indo-Muslim mosque architecture developed in different ways according to varied traditions and local conditions. In towns completely islamised like Randa on the Nerbada, the capital of the sultanate of Malwa founded by Dilawar Shah at the beginning of the xvith century, or Dwarapur near Bicnur, which was founded by the sultan of Delhi in 1359, Muslim places of worship show a marked synthesis of Hinduistic tradition with the rigid forms of Muslim symbolism. Similarly in the Muslim towns of Gujrat, in Ahammadabad, Cambay, Dholka, Mahammadabad, the characteristic architecture developed out of the local Hindu art so that the demands made by Islam on the shape of a mosque, such as an entrance-iwan and minaret, were carried through by purely Indian means and only the arch gave the building a Muslim stamp. In Bengal again, where the curved bamboo roof prevailed, mosques were built with curved roofs from the bricks in use there, as is shown, notably by the ruins in Gaur on the Ganges. Instead of glazed tiles, the walls were generally adorned with richly ornamented slabs of stone. South of the Vindhy range also, in the Deccan and in India local adaptations have been made according to the same general principles. In Ahmadnagar, Golconda, Kulbarga, Bidar, Aurangabad and other capitals of Muhammadan principalities, the building of mosques was much cultivated. Architectonically, the most important city was Bidjapur, the capital of the state of the same name, which became independent in 1490 under Yusuf 'Adil Shah and survived down to the xvith century, when its great period of building culminated in the gigantic dome of the mausoleum of 'Adil Shah. The mosque of Bidjapur (second half of the xvith century) consists of a pierced hall with small domes over each group of four piers and a large dome in the centre. In the Moghul period little change was made in this mixture of Hindu and Muslim methods, although the Persian elements were often more marked. The huge mosque with courtyard built by Akbar in Fatehpur Sikri has the usual plan with slight variations. The Great Mosque of Agra built by Akbar still shows little Indian pavilions on the tops of the cornices. It was only under his successors that a Puritan reaction set in, which finds its fullest expression in the mosques of Delhi and Lahore. The process of assimilation thus attained its end.

China and Indo-China. From the Magrib to the Pamirs and southeast of them the general character of the country, plains and deserts, linked the peoples of Islam together by certain common features, which also secured the mosque its uniformity of structure in the early centuries. In China where Islam was only the religion of a few isolated groups of immigrants the mosque soon adapted itself to the well marked Chinese style of architecture and the mosques of the south and western
province, where Islam has established itself in places, are not distinguished externally from the Chinese temples or yamen and internally only by the absence of idols which are replaced by the mihrāb and minābr. Exceptions are the mosques in the seaports, where the colonies of Muslims kept up steady intercourse with the home of Islam and the mosques were at the same time built by native architects. This holds for example of the mosques of Ts'iu-an-tchen, province of Fu-kien, the Zaṭṭān of mediaeval writers, which was built in 400 (1009–1010) and restored in 710 (1310–1311) by an architect, a native of Jerusalem, who came from Turāz, as the inscription testifies. This mosque which is built of hewn stone consists of a hypostyle hall, such as we find in Asia Minor (e.g. Sivas) and has bulb-shaped niches (cf. G. Arnaiz and M. v. Berchem, Mémoires sur les antiquités musulmanes (1865), T'eng Pao, vol. xvi., 1911). The medieaval chief mosque of Canton also followed the western tradition and even has a minaret, which is never seen on the mosques of the interior. The same holds of mosques in Burma and the Indian Archipelago. They are usually built of wood and adapted to the native architecture.

Bibliography: The works quoted under MANIRA will also serve for Mosque and Madrasa. Special works are quoted in the text. For the Maghrīb the new, excellent Manuel d'art musulman of G. Marçais was mainly used, which deals only with the Maghrib (2 vols., Paris 1927). (Ernst 1922)

AL-MASJID AL-AKṢA, the mosque built on the site of the Temple in Jerusalem.

The name means the "remotest sanctuary" and is first found in the Qur'an, Surā xxvii. 1: "Praise Him who made his servant journey in the night from the holy place to the remotest sanctuary, which we have surrounded with blessings to show him of our signs".

As was explained in the article ISRA [q. v.], the older exegesis refers this verse to the journey to heaven [cf. MIRGAL] and sees in the name al-Masjid al-Akṣa a reference to some heavenly place (cf. Surah al-Māniṣiyya, Surā liii. 14).

This explanation had however in time to give way to another, according to which the expression is a name of Jerusalem. This explanation is connected with Maḥmūdī's "journey in the night" (istar). The combination of the istar and mirgall thus gives the story of the Prophet's journey by night to the Masjid al-Akṣa (Jerusalem) and his journey following it from Jerusalem to the heavens.

The question arises how Jerusalem came to have this name among the events of the Qur'an. According to Schröder [cf. ISRA] it is a result of the Omayyad tendency to glorify Jerusalēm at the expense of the holy land of Islam. Horovitz has challenged this explanation in his "Surahs" of the Korān. Jerusalēm was far from very early times regarded in Islam as a sacred place, the original Kîlā, which, although abandoned in favour of Mecca, still retained its sanctity as may be seen, for example, from the fact that ʿOmar had a Masjid built on the site of the Temple [see AL-KUDS, li., p. 1097].

The name al-Masjid al-Akṣa is now particularly attached to the mosque in the south of the Temple area, which according to some was originally a church built by justinian [cf. AL-KUDS, li., p. 1096].

According to late Arab writers the mosque was built by the caliph ʿAbd al-Malik (785–805), a statement which might simply mean that Justinian's church was rebuilt. On this compare AL-KUDS, lii., p. 1093 sqq. where the further history of the mosque is given.

For a picture of the site and the mosque see Pl. v. to the article AL-KUDS; plan and description of the interior in Travels of A. B. B. London 1816, ii. 214 sqq.; Baedeker, Palastina und Syrien, p. 54 sqq.

AL-MASJID AL-ḤARĀM, the name of the Mosque of Mecca. The name is already found in the pre-Muhammadan period (Horovitz, Konvantsche Studien, p. 140 sqq.) in Ka'ba b. al-Khatūn, ed. Kowalski, v. 14. "By Allah, the Lord of the Holy Masjid and of that which is covered with Yemen stuffs, which are embroiled with hampen thread." (It would be very improbable if a Medina poet by these two references meant anything other than the Meccan sanctuary. The expression is also frequently in the Qur'an after the second Meccan period [Horovitz, Konvantsche Studien, p. 140 sqq.]).

In these passages masjīd ḥarām does not as in later times mean a building but simply Mecca as a holy place, just as in Surā xvii. 1 Masjid Al-As such "the remotest sanctuary" does not mean a particular building.

According to tradition, a ṣalāt performed in the Masjid al-Ḥarām is particularly meritorious (Bukhari, al-Sahih fi Madrasa al-Kabīr, bāb 1). The Masjid is the oldest, being forty years older than that of Jerusalem (Bukhari, Sahih, bāb 40).

This Meccan sanctuary included the Ka'ba [q. v.], the Zemzem [q. v.] and the Maqām Ibrahim [see KHAṬA], all three on a small open space. In the year 8, Muhammad made this place a mosque for worship, soon however it became too small and under ʿUmar and ʿUthmān, adjoining houses were taken down and a wall built. Under ʿAbd Allah ibn al-Zubair, the Omayyad and ʿAlāʾid caliphs, successive enlargements and embellishments were made. Ibn al-Zubair put a simple roof above the wall. Al-Mahdī had cypress trees planted around, which were covered by a roof of tiles. The number of minarets in time rose to seven. Little columns were put up around the Ka'ba for lighting purposes. The mosque was also given a feature which we only find paralleled in a few isolated instances: this was the putting up of small wooden buildings, or rather shelters for use during the ṣalāt by the imām, one for each of the four orthodox rites. The fact that one of these masajīms might be more or less elaborate than another occasionally gave
rise to jealousies between the Ḥanafis and the Ṣḥafiʿis. Ultimately the ground under the colonnades, which was covered with gravel was paved with marble slabs, in the maṭāf around the Kaʿba as well as on the different paths approaching the maṭāf.

The mosque was given its final form in the years 1572—1577, in the reign of the Sulṭān Selim II, who, in addition to making a number of minor improvements in the building, had the flat roof replaced by a number of small white-washed cone-shaped domes.

A person entering the mosque from the Masʿa or the eastern quarters of the town, has to descend a few steps. The site of the mosque, as far as possible, was always left unaltered, while the level of the ground around — as usual in oriental towns and especially in Mecca on account of the Sīl — gradually rose automatically in course of centuries (cf. Snouck Hurgronje, Mecca, i. 18—20).

The dimensions of the Ḥarām (interior) are given as follows (al-Batānī, Riḥa, p. 96): N.W. side 545; S.E. side 553 feet, N.W. side 824 feet; the corners are not right angles, so that the whole roughly represents a parallelogram.

Entering the maṭāf from the eastern side, one enters first the Bāb Bani Śheba, which marks an old boundary of the masjdīd. Entering through the door, the Maṭḥān ʿAbd al-Muʾmin is on the right, which is also the Maṭkān al-Ṣḥāfī, and to the right of it is the minbar. On the left is the Zemzem building. As late as the beginning of the sixth century, there stood in front of the latter, in the direction of the northeast of the mosque, two domed buildings (al-ʿAqbatat) which were used as store-houses (Chron. d. Stadt Mecca, ii. 357 sq.). These Kubbas were cleared away (cf. already Burckhardt, i. 265); they are not given in recent plans.

Around the Kaʿba are the maṭkāns for the imaḥs of the madhhabs, between the Kaʿba and the southeastern part of the mosque, the maṭkān (or musalla) al-Ḥanjabi, to the south-west the maṭkān al-Māḥkī, to the north-west the maṭkān al-Ḥanāfī. The latter has two stories; the upper one was used by the muʿṣalāghūn and the mabālīgh, the lower by the imaḥ and his assistants. Since Wāḥabī rule has been established, the Ḥanjabi imaḥ has been given the place of honour. The maṭkān al-Ḥanāfī stands on the site of the old Meccan council-chamber (dār al-nadwā) in which the course of centuries was several times rebuilt and used for different purposes. The maṭāf is marked by a row of thin brass columns connected by a wire. The lamps for lighting are fixed to this wire and in the colonnades.

The mosque has for centuries been the centre of the intellectual life of the metropolis of Islam. This fact has resulted in the building of madrasas and riwāks for students in or near the mosque, for example the madrasa of Kāṭī Bey on the left as one enters through the Bāb al-Salām. Many of these wakfs have however in course of time become devoted to other purposes (Burckhardt, i. 282; Snouck Hurgronje, Mecka, i. 17). For the staff of the mosque cf. Śheba (Hanū); Burckhardt, i. 287—291.

MAṢHAṬ. [See MUSHAF.]

MAṢHAF, GHIṢĀM HĀMADĀNĪ B. WALI MUḤammad, a distinguished Urdu poet, was born in Lucknow but went to Dilli in 1190 (1776), where he applied himself to the cultivation of Urdu poetry. His house was resorted to by the eminent poets of the capital. In 1201 (1786) he was appointed Lucknow and spent the rest of his life there under the patronage of Prince Sulaimān Shīkīh, son of Shāh ʿAlām. He died in 1240 (1824). He is the author of several Dīwāns in Persian and Hindustānī, and of biographies of Urdu poets, called Tadhkira-i Hindī. He also wrote another Tadhkira of Persian poets who flourished in India from the time of Muḥammad Shāh (1131—1161 = 1719—1748) to the reign of Shāh ʿAlām (1173—1221 = 1759—1806) entitled ʿIbād Thuraʿ, and a historical work in verse in which he entitled Shāh-Nāma.

MAṢHĀʾALLĀH, the son of Abūṣaʿīr or Sārīya, a celebrated astronomer, who, along with Nawbahkti fixed the day and hour for the foundation of Baghdād by order of al-Manṣūr. According to the Fihrist, he was a Jew whose original name was Miṣḥ (a corruption of Manashšū, i.e. Maṇasš); whether he later adopted Islam and for this reason took the name Maṣhāʾallāh is not recorded. The date of his birth is unknown, but it can hardly be later than 112 (730). He is said to have died in 200 (815).

In numerous works Maṣhāʾallāh covered the whole field of astrology, and also the making and uses of astronomical instruments. There has only survived in Arabic fragments of a treatise on the plan of various houses which was translated into Latin under the title Mensehlae Libelli de Motibus. Many of his astronomical works were translated into Latin by Johannes Hispalensis and others and later printed. Hebrew versions are also known. It may be safely assumed that Arabic originals will still be found in eastern libraries. The critical study of the Latin translations existing in manuscript and printed form is most desirable in view of the early date of the author.

Bibliography: Ibn al-Nadîm, Fihrist, ed. Flügel, i. 273; ii. 129; H. Suter, Das Mathematikerverzeichnis, 1892, p. 61—62; H. Suter, Die Mathemastiker und Astronomen der Araber, 1900. p. 5—6; Nachtrage, 1902, p. 158; M. Steinschneider, Die arāb. Litteratur der Juden,
Maskat, or Masqat, is one of the hottest towns in Persia. The maximum temperature was 45.8°C, the minimum 17.2°C. The rainfall varies between 75 and 150 mm. The high temperatures are caused mainly by the hot winds which at certain periods in the summer months usually blow from the Arabian desert and from the rocky hills for several hours in the night. From November to the middle of March the weather is however quite pleasant, but one must beware of malaria and the old poetry.

Horovitz (Kronanische Untersuchungen, p. 129) considers the possibility that it was taken over from the Ethiopians (masilh). Muhammad of course got the word from the Christian Arabs. In Arab writers we find the view mentioned that the word is a loan-word from Hebrew, Syriac, Turk-ex, or Aramaic. In the thirteenth and fourteenth centuries the word was used as a name of the Redeemer. The linguistic origin of the word is not known.

In the Kur'ān the word is first found in the Meccan sūras, a. alone: Sūra iv. 170; ix. 30; b. with Ibn Maryam: Sūra v. 19, 76, 79; ix. 31; c. with a.b. Maryam: Sūra ii. 152. None of these passages make it clear what Muḥammad understood by the word. From Sūra iii. 49: "O Maryam, see, Allah promi-est thee a word from Him, whose name is Al-Masīḥ 'Isā b. Maryam" one might suppose that al-Masīḥ was here to be taken as a proper name. Against this view however is the fact that the article is not found with non-Arabic proper names in the Kur'ān.

In canonical Ḥadīth, al-Masīḥ is found in three main connections: a. in Muhammad's dream, in which he relates how he saw at the Ka'ba a very handsome brown-complexioned man with beautiful locks, dripping with water, who walked supported by two men; to his question who this was the reply was given: al-Masīḥ b. Maryam (Bukhārī, Liḥā'ī, bāb 68; Taŷīrī, bāb 11; Muslim, Ḥanāfī, trad. 302): b. in the descriptions of the return of 'Isā (q.v.): c. at the Last Judgment the Christians will be told: "What have you worshipped?" They will reply: "We have worshipped al-Masīḥ, the Son of God". For this they shall wallow in Hell (Bukhārī, Taŷīrī, Sūra iv., bāb 8; Taŷīrī, bāb 24; Muslim, Ḥanāfī, trad. 302).

In Ḥadīth also we frequently find references to al-Masīḥ al-Kādīdhālī and al-Masīḥ al-Dādīzīlī; see the article AL-DA'DIJALī.

Bibliography: given in the article.

(Al. J. Wenzel)

Maskat, 1. a seaport on the Gulf of Oman, on the east coast of Arabia in 25° 37' 26" N. Lat. and 56° 15' 26" East Long. Maskat is the only harbour between Aden and the Persian Gulf, which ships of any size can enter and next to Aden and Jidda, the best harbour in the Peninsula. The port is of considerable importance from its position commanding the entrance to the Persian Gulf. It lies at the end of a hor-se-shoed bay 900 fathoms long and 400 broad which is enclosed and sheltered from the winds by multicoloured rocks of volcanic origin, devoid of any vegetation. Behind the white town rises a series of extensive ranges of mountains on the highest of which, the Džabal Akhdār, 9,000 feet high, snow occasionally lies in winter-time. On the slopes we even find the Muscadel vine growing which is said to have been introduced by the Portuguese. The harbour is very busy; in the middle on the shore stands the sultan's palace, at the south end the offices of the British political agent. On either side the town is flanked by an old Portuguese fort, Marānī and Džallī. The chapel in one of them bears the date 1588. The bazaar consists of low buildings and is of little importance. The mosques are remarkable for the absence of the usual tall minarets.

The climatic conditions are by no means favourable. With Aden-Dhaka and Džallī, Maskat is one of the hottest towns in Persia. The maximum temperature was 45.8°C, the minimum 17.2°C. The rainfall varies between 75 and 150 mm. The high temperatures are caused mainly by the hot winds which at certain periods in the summer months usually blow from the Arabian desert and from the rocky hills for several hours in the night. From November to the middle of March the weather is however quite pleasant, but one must beware of malaria and the old poetry.

Maskat plays a considerable part as centre of trade with the nearer east. There are regular communications with India, Persia, East Africa and Mauritius. The ships of certain maritime companies call regularly at Maskat, e.g. the British India Steam Navigation Company on the route from London to India, the Bucknell Steamship Company and the Strick Line to Bayra, the West Hartlepool Steam Navigation Company on the Aden-Basra route, the Hamburg-America Line monthly to the harbours of the Persian Gulf, the Arab Steamers Ltd. on the Bombay-Basra route, and the Compagnie Rusee de Navigation à Vapeur et de Commerce. In 1912-1913 the total tonnage entering the port was 98 steamers with 127,885 tons and 63 sailing vessels with 5,021 tons and leaving it 86 steamers of 90,805 tons and 30 sailing ships of 2,379 tons. The ships in question were mainly British (86.73%). Maskat has a regular postal service with the rest of the world instituted by the British, as well as a cable connection which the Indian Government has laid to Džallī. The population, which changes a good deal, is about 10,000 souls, primarily Arabs but there are also Persians, Indians, Indian Muslims, Belgradja and a few Europeans settled here, mainly traders.

Maskat was at one time a flourishing centre of the silk and cotton trade but in recent years this has almost been destroyed by Indian and American competition. The gold and silver work done by Indians here is famous, notably richly ornamented bowls and daggers. The imports of Maskat in 1912-1913 were valued at £ 463,551 and the exports at £ 301,477. The former were mainly arms and munitions, cereals, dyes, precious metals, pearls, foodstuffs, textiles, tobacco, building materials, enamel, glass, porcelain, ironmongery, perfumes and soaps, the latter camels, horses and asses, weapons, cereals, dried and salt fish, dates, lemons and pomegranates, fruits and dragon's blood, pearls, melted butter (ghār), mussels, mother-of-pearl and tortoise-shell, textiles, hides and leather.

The chief importer was India, then Belgium, England and Aden, the exports went mainly to India, the Arabian coast, England, Persia, America and Zanzibar.

According to local tradition Maskat was founded at an early period by Himyar colonists. A. Sprenger has identified Maskat with the kāoffee Asīm of Patrolly, vi. 7, 12. As the harbour has only a narrow entrance on the north and is enclosed on
the east by rocky heights, it is, as a matter of fact, easy for sailors to overlook it, and the name 'the hidden' would be quite appropriate. Al-
Mukaddash (B.G.A., iii. 93 sq.) who mentions the port of al-Maskat, says that it is the first place which the ships from Yemen reach and is a fine town, rich in fruits. Ibn al-Fakih al-Hamadhanl (B.G.A., v. 11) says of Maskat that it is the very end of Oman, about 200 parasangs from Shirf, the starting point for ships sailing to India and to Külümāli, a month's journey beyond it. Ships take in water here and Chinese ships pay 1,000 drhams for it, the other 10-20 dinār. Idris briefly mentions Maskat as a densely populated town, Ibn al-Mu-
djāwir is fuller (in A. Sprenger's Post- und Reise-
reise, p. 145 sq.) and tells us that Maskat was originally called Maskat—so also Niebuhr, p. 296—and that it is a considerable centre of trade with Africa and the east coast of the Persian Gulf, whence the wares are forwarded to Sulfiānā, Khūsān, Fajrah, Chawr and Zābūlahān. In the beginning of the xvth century A.D., Maskat, whose history had hitherto been that of Oman, attracted the attention of European powers. In 1506, Alburquerque appeared before the town and demanded that it should submit to the Portuguese. At the first the people seemed to be peacefully inclined and willing to accept its terms, but this attitude changed and the Portuguese admiral decided to attack and destroy the town. Forty large and small ships and many fishing-vessels and the lāmān's arsenal were destroyed, the mosque pulled down and the town burned. The Portuguese occupied the place and returned in 1527 and built two forts, Marīnī and Ujilāyā, and factories; the present buildings of these names were however only built after the union of Portugal with Spain in 1580 by direct instructions from Madrid. The Portuguese had no easy position here. They were frequently at-
tacked by the surrounding tribes and in addition by the Turks; in 1526 a rising in Maskat was put down by Lopo Vaz, the governor of India. In 1550 a Turkish fleet under Pir Hey appeared before Maskat, attacked the town and took it by storm after eighteen days' bombardment. The Por-
tuguese commander and crew were carried off to be Turkish galley-slaves, but in 1553 the Por-
tuguese succeeded in destroying the Turkish fleet and re-establishing their sway in the Persian Gulf. Maskat was now fortified as a naval base. But after 1631 Portuguese prestige began to decline rapidly. At the end of 1649 Maskat was attacked by the Imam's army and had to surrender on January 23, 1650, as relief came too late. The town now lost much of its former importance, although under Dutch influence its commerce was still considerable. Towards the end of the xvth century it attained again considerable notoriety as a nest of pirates, in 1757 it was taken by the Persians, who were driven out by Ahmad b. Sa'īd, the founder of the dynasty still ruling in Maskat, who had been installed in 1741. Since 1793 Maskat has been the capital of the sultanate of Oman. After 1747 the French began to be influential in Maskat, the town played a prominent part as a base for attacking India in Napoleon's grandly conceived plan for destroying England's power; we need therefore not be surprised that England al-
though paid no serious attention to the town. In January 1806, Capt. John Malcolm was sent to Maskat by the Indian government and concluded a treaty with the Sultan by which an earlier agree-
ment with the East India Company was ratified and an agent of the company established at Maskat. In 1807 and 1808 the French made treaties with the Sultan and also sent a consular agent to Maskat. The town flourished under this sultan, Sa'īd b. Sultan, and became a centre for commerce with the Persian Gulf. Maskat repelled an attack of the Wahhābis with the assistance of the English in 1809, but in 1833 it became tributary to them. The change from sailing to steamships brought about a decline in the importance of the town. In 1863 Palgrave describes Maskat as an important harbour with 40,000 inhabitants, but in 1895, Bent puts the population at only 20,000 and at present it can hardly be more than 10,000. In 1830 how-
ever, the sultan was able to negotiate a commercial treaty with the United States, followed by a similar one with England in 1839; in 1844 France and Maskat drew up a commercial treaty by which France obtained the privilege of the most favoured nation and French subjects were given full freedom to trade in Maskat. The independence of Maskat, although expressly stated in the Anglo-French declaration of 1862, was however little more than nominal, for England, who had several times come forward to protect the sultanate, had through her political agent considerable control over the sultan. In connection with the slave-trade, which England was endeavouring to suppress, the sultan of Maskat had bound himself in various ways to England and in 1854 even ceded to England the Khargān-Māriān Islands of which France was endeavouring to obtain possession. When Sultan Sa'īd Sa'īd died in 1856, his kingdom was divided between his two sons Thwālān b. and Mājid of whom the former received Maskat, while the latter was given Zanzibar which had belonged to Maskat since the end of the xvth century. This division was negotiated by England through Lord Canning, the Viceroy of India. In 1861 Zanzibar was declared independent, but it had still to pay an annual tribute to Maskat, which England in 1873 undertook to pay in com-
penation for various concessions of the sultan of Maskat in connection with the suppression of the slave-trade so long as the sultan fulfilled his engagements and showed friendship towards England. The readiness of the English was also seen in a telegraph agreement of 1864. In 1891 Sultan Faisal concluded a treaty of friendship, commerce and navigation with England in which the Sultan bound himself and his successors not to cede, sell or let land except to England. The French opposed this and in 1894 succeeded in obtaining a coal station five miles S. E. of Maskat. England raised objections and quoted the treaty with the sultan although France in the treaty of November 17, 1844, had secured the right to acquire land. Diplomatic negotiations finally brought about a settlement, by which France gave up the coal station in the Gulf of Oman, and in compensation was lent half the coal deposits of Maskat. As France in 1896 again lent this coal station to the English, the dispute was finally settled in favour of the English. A second treaty, was similarly settled, although for a time it caused grave diplomatic negotiations. The French consul of Maskat and Zanzibar had given French papers and flags to a number of ships belonging to Oman. The captains of these who often traded in slaves and smuggled arms, resented the jurisdiction of their sovereign, the
sultan of Maskat, and when the latter took steps to deal with them they were protected by France. The affair finally became so serious that in 1903 there appeared to be danger of a conflict between England and France, but in 1905 the question was submitted to the Hague Tribunal which decided that only those sailing-vessels which had received the French flag before January 2, 1892, had the privilege renewed and licences later issued were cancelled as invalid, in so far as they were not given to French protégés of 1863. As, in 1917, only 12 Oman sailing-vessels still carried the French flag, this privilege of France must soon die out. It was only natural that the active smuggling of weapons from Maskat not only to Persia and Afghanistan but also into the interior of Arabia, should cause anxiety to England. The flourishing trade in arms was put down in 1912 by the establishment of a depot for the sale of arms under government control, which alone could sell arms. It is true that the smugglers have now migrated to Birk, Shab#ain and Ruaisal, but the great decline in the import of arms into Maskat is best shown by the statistics of the year 1912-1913 when in the first half year 147,591 lbs. of arms were still imported while in the last five months the total was only 36,667. In 1913, the new ruler Sultan Taimur, who succeeded his father on October 4 and was recognised by England and France on November 15, 1913, met with serious opposition from the tribes in the south of Oman, who declared themselves independent under an imam whom they chose themselves. It is only England's power that keeps these rebels from Maskat and thus secures the existence of the dynasty, whose rule has long been quite nominal.

**Genealogical Table of the Imams of Maskat**

Ahmad b. Sa'id

(1154—1188 A.H.)

2. Maskat al-Ka'lin, a village on the road from al-Ba'ista to al-Niβāji.
3. Marke town on the Black Sea (Bahr al-Khazaz), said to have been founded by khūn-rāw Anūshīrwān.

Before this, he had very opportunely persuaded the caliph not to modify the order of succession to the disadvantage of Hishām. Yazīd was not long in finding fault with his brother, especially as he neglected to send him the taxes of his immense eastern vice-royalty. He recalled him to Syria, where Maslama endeavoured to combat the influence of favourites on this weak sovereign. Returning to the army in 108 he conquered Caesarea in Cappadocia. The following years were marked by Maslama’s great campaign in Armenia and the land of the Khazars. After partial successes in which the country was laid waste, the stubborn resistance of the natives and the Turkish tribes forced him to retire. The retreat was a disastrous one: with great difficulty Maslama succeeded in bringing back the remnants of his army to Arab territory by sacrificing all his baggage and equipment (115 a. h.). His intervention to support the claims of Walid b. Yazid [q.v.], heir presumptive to Hishām, compromised him at court. He died before this caliph and seems to have taken with him to his grave the fortune of the Marwānids, for they rapidly declined after his death.

MAŠMUDA (the broken plural Mašmūda is also found) one of the principal Berber ethnic groups forming a branch of the Barānis.

We set aside the Mašmūda elements mentioned by al-Iṣbārī in the neighbourhood of Būne' and the post-Islamic Mašmūda seem to have lived exclusively in the western extremity of the Maghrib; and as far back as one goes in the history of the interior of Morocco, we find them forming with the Šanhdā [q.v.], another group of Barānis Berbers, the main stock of the Berber population of this country. Indeed from the first Arab conquest in the seventh century to the importation of the Hālifs by the Almohad Sulṭān Yaʿqūb al-Manṣūr in 1190, it was the Mašmūda who inhabited the great region of plains, plateaus and mountains, which stretches from the Mediterranean to the Anti-Atlas to the west of a line from N. E. to S. W. passing through Meknās (Meknès) and Dīnārāt; the only parts of this territory which were not occupied by them were three small Šanhdā enclaves: the Šanhdāja of Tangier, of the valley of the Warghā and of Azamūr. To the north and to the west, the land of the Mašmūda was bounded by the Mediterranean and the Atlantic. To the east and south it was bounded by the lands of the Šanhdāja. To the north were the Šanhdāja of the region of Taza and those of
Wargha; in the centre, the Zanaga or Şanhadja of the Central Atlas, to which should be added the Zulfi of Fazaz; to the south, the Haskura, the Haha, and the Great Mountains.

It was from the presence of this Maşmuda bloc, extending continuously from Sus to the Mediterranean, that eastern Morocco generally must have received the name of Sus, a name found for example in Yāqūt (cf. Ma’jīyam, s. v. Sūs) who distinguishes a Hither Sus (capital Tangier) and a Farther Sus (capital Taifala) separated from the other by two months' journey. It is also to this racial unity that are due the legends according to which all the N.W. corner of Morocco was once inhabited by the people of Sus (ahl Sūs). Before the coming of the Hilālī Arabs, the Maşmuda peoples were divided into three groups:

1. In the north, from the Mediterranean to the Sahib and Wargha, the Ghamra [q. v.].

2. In the centre from the Sahib to the Wādi Umm Rabī′, the Baraghwata [s. BERGHAWA].

3. In the south, from the Wādi Umm Rabī′ to the Anti-Atlas, the Maşmuda in the strict sense of the word.

Like the majority of the Barānīs, who in this respect are a contrast to the Futr, who are inclined to be nomads, the Maşmuda were all settled; for if, in one passage, Ibn Khaldūn mentions two nomad tribes, the Lāghis and the Zaggen as forming part of the Maşmuda confederation of the Hilālī, he also points out that they were tribes of the Lamja, i.e. of the nomadic Şanhadja, who finally became incorporated in the Lhīwā Assān, Ma’kīl Arab nomads of Sus. Ibn Khaldūn further makes special mention of the fortresses and fortified villages (mazial wa-haṣīna) of the Maşmuda who lived in the mountains of Darān or the Great Atlas. Other Arab historians and geographers mention the many little towns (karya) in the plains occupied by the Dukkâla or the Baraghwata, a pastoral and agricultural people; but these were gradually ruined and destroyed in the course of the fighting which went on without interruption in their country from the establishment of the Şanhadja principalities of Şallal, Taddīl and Aqghmat: the Almoravids and Almohad conquerors, repeated campaigns against the heretical Baraghwata, the Hilālī occupation, the struggle between the Almohads and the Marinids, the rivalry between the Marinid kingdom of Fās and that of Marrākush and lastly the wars with the Portuguese. Exterminated as heretics, dispossessed of their lands and driven from them by the Arab or Zanata nomads brought into their territory, transported to a distance (region) of Fās by the Watâṣāli sultāns, for whose taste they showed to little hostility to the Portuguese, the central Maşmuda, the original inhabitant of Algīr, of Tāmnasā and of the land of the Duskala finally disappeared: their place was taken by nomads, Hilālī Arabs (in the north, in Habīt and Aqghmat, the Riyāḥ; in the south, the Djusam, Shufām, Khulīt, Banū Dāhār) and the Berbers (Zanata Hawwāra); in the xvth century the coming to power of the Shádi dynasty brought about the immigration of Maqīl Arab tribes to the same region: Abda, Aqhab, Rahāmīna, Barābush, Wālāya, Awlid Dulaīm, Zufa‘ir, etc.

From the xvth century onwards, as a result of the occupation of their central plains by the Arabs, Hilālī then Maqīl, the Maşmuda only survived in the mountainous regions which formed the northern and southern extremes of their old domains.

The Maşmuda of the north (or Maşmudat al-Sābili): "M. of the shores of al-Faysān were chiefly represented by the Ghamra group [q. v.]. But, alongside of them, we find two small groups having the same racial origin:

a. The Maşmuda of the Straits, settled between the district of Ceuta, which belonged to the Ghamra and that of Tangier, a Şanhadja country. It was they who gave their name to the fortified port of Kasr Maşmuda, also called Kasr al-Madījz, the modern al-Kasr al-Saghīr. Their presence here is attested in the tenth century, for it was while fighting here against them that Ibn-Mīn, the prophet of the Ghamra, was slain; al-Buki (xiii century) knows them in the same area corresponding to that of the modern Añjia.

b. Al-Bakri mentions another group of Maşmuda (tribe of the Asādā) settled in the land lying between al-Kasr al-Kaharib and Wāzzān; there is still a small Maşmuda tribe between these two towns.

The Maşmuda of the south, who inhabited the lands between the Wādi Umm Rabī′ and the Anti-Atlas, were divided into two groups: those of the plain and those of the mountain.

a. The Southern Maşmuda of the plain lived to the north of the Great Atlas. The chief tribes were the Dukkala, the Banū Māṣr (around Safi), the Hazīta; the Aqghmat, the Ilāha (to the south of the lower course of the Tānsīf). The chief town in this region was Safi (Ar. Asf), for the town of Azemmūl [q. v.] and the rība‘ of Tīq [q. v.] were in the enclave of Şanhadja; beside the port of Safi, we must also mention that of Kar (the Aqoz of the Portuguese) at the mouth of the Tānsīf, which gave Aqghmat access to the sea and had a rība‘, and that of Amāgdīl (the Mogador of the Portuguese) which served the district of Sus. Besides these three centres, there were, as in Tāmnasā, a large number of fortified little towns (karya) many of which survived down to the xvi century; the Portuguese chroniclers, Leo Africanus and Marmol have preserved for us many names of these places which have since disappeared, their very names being lost; the local laphigraphic collections and notably the Kihāb al-Tanīwawf of al-Tadīlī (xiii century) have preserved a good deal of valuable information on this subject. At the present day all the country to the north of the Atlas is aræbic-er and if the old Berber element has not completely disappeared, it is at least overwhelmed by Arabs of whom the majority seem to be of Maqīl origin. The Ilāha alone, between Mogador and Agadir, have remained almost intact and have retained the use of the Berber language.

b. The Southern Maşmuda of the mountains occupied the Great Atlas (Jubāl Daraw), the massif of Sarwā (anc. Suwān) and the Anti-Atlas or mountains of the N部分地区 (Beth. In Gist).

In the Great Atlas, the Maşmuda extended to the east as far as the upper course of the Tānsīf (a pass called Tizīn-Telwet). From east to west, the following were the chief groups: the Galuwa; the Hailīna (or Aidana); the Warika and the Hazāda, near Aqghmat; the Asādān, including the Maṣfīwa, the Māṣīfa and the Dughāgha or Banū Dughghā; the Hittūta, including the Ghaughīya; the people of Tin-Malāl, on the upper course of the river of Nafis; the Sāda or Zaunda, in the lower valley of the Assi al-Mai; the Gadmīwa and
Lastly in the west, the Gafsa, the chief tribe of which was the Saktowa or Saksawa.

The massif of Sirwa and the high valley of the Wadi Sna were inhabited by the Banū Wawasqat and the Saktowa. The N. E. part of the Anti-Atlas was occupied by the Hargha.

Further to the south, the Šūs, properly so-called, were inhabited by heterogeneous elements of Mašmūda origin (al-Idrisī, abīlīt mīn al-Farbar al-Mašmūd). Describing the road leading from Tārīdant to Aghmāt, al-Idrisī mentions between Tārīdant and the land of the Hargha, four tribes the names of which, corrupted by the copyists, are unfortunately hardly identifiable.

Besides these highlanders, who were strictly Mašmūdā, we must mention the Haskūra (or Hāsāıkīr). These were highlanders of Ṣanḥāda origin, brethren of the Lamta and Gazāla, who led a nomadic existence to the south of the Great Atlas and the Anti-Atlas. The Haskūra were settled in the high valley of Taissit and the Wādi al-ʿAbīd, on the two slopes of the mountain range which links the Great Atlas, the home of the Mašmūdā, with the Central Atlas, the home of the Zanāga (= Ṣanḥāda) of Taḍāl; their chief tribes were the Zamtanw, the Maghīmara, the Garmna, the Ghudja-dana, the Fatwā, the Mašūfa, the Ḥalțāna, and the Ḥanūfī, who, according as they lived on one slope or the other, belonged to the Haskūra al-Ṣibla (H. of the south) or to the Haskūra al-Dīl (H. of the north). Ibn Khaldūn, who calls attention to the Ṣanḥāda origin of the Haskūra, adds that as a result of their taking up the Almohad cause, it became customary to associate them with the Mašmūda tribes, but that they never enjoyed the same privileges as these latter.

History. In 682, ʿUqba b. Nāfi marched against the Mašmūdā of the Atlas with whom he fought several battles. On one occasion he was surrounded in the mountains and owed his safety solely to the help given him by a body of Zwata, in the same year he attacked and took the town of Naffis, which was occupied by ʿRūmī and Berbers professing Christianity. Thence he went to Ḥji, a town of Šūs which he also took.

Legend adds that he even thrust his way to the Atlantic where he rode his horse into the water, calling God to witness that there were no more lands for him to conquer. This first submission of the Mašmūdā does not however seem to have lasted after the departure of ʿUqba. In 707, Mīrā b. ʿUmar had to reconquer Morocco; he himself person took Tabira and Tāḍālīt and sent his son to the conquest of Šūs and the land of the Mašmūdā.

In 735, ʿAbd al-Malik b. al-Ḥabab was appointed governor of the Maghrib; he appointed his son Mūād an assistant to the governor of Morocco and gave him particular charge of the district of Šūs.

In 735, the same ʿAbd al-Malik sent Ḥābiš, grandson of ʿUqba, to make an expedition into Šūs against the Mašmūdā and the Ṣanḥāda. Ibn al-ʿArabī of 751, in his book concerning independent governors of the Maghrib, occupied Ḥji and built a camp there, the remains of which could still be seen in al-Ikkīr's time. It is to the same governor that is attributed the making of the well which supplies the road from Tāḍālīt to Awadāh through Wādiān, the modern Mauritania.

The land of the Mašmūdā then disappears from history till the ninth century. The conquests of Idrīs I did not extend in the south beyond the Tānsatā and the Tādālīt. But in 812 Idrīs II made an expedition against the town of Naffīs; on his death in 828, his son ʿAbd (or ʿUbad) Allāh obtained as his share of the kingdom, Aghmāt, Naffīs, the lands of the Mašmūdā and of the Lamta as well as Šūs. Al-Bakrī records that some of his descendants ruled as lords of Naffīs and among the Banū Lamāt, not far from Iglī. Other Idrīsīds, descendants of Yaḥyā b. Idrīs, were at this time lords of Darā.

With the decline of Idrīsīd power in the tenth century, the Mašmūdā again became independent and were ruled by elected chiefs or inğdārīn (= Arabic ʿāṣirī); al-Bakrī tells us that those of Aghmāt were appointed by the people for a term of one year. When at the end of the tenth century, Zanītā principalities became established in Morocco (at Fās, Shābīla and Tāḍālīt), Māǧrāwā established themselves at Aghmāt, but all we know of them is that they were attacked by the Almoravids. In 1057, after receiving the submission of Šūs and of the Mašmūdā (Zawāda, Shāfijīwā, Gānmīwā, Kagraqā and Ḥīffā), the Almoravid chief ʿAbd Allāh b. Yūsuf took Aghmāt; the last Mašmūdā ruler of which, Lagūt b. ʿAlī, fled to the famous Ḥafṣāwā, who was one of the Nafīzāwā, finally became the wife of Yūsuf b. Ṭasfīn whom she initiated into the fine art of diplomacy.

From 1057 Aghmāt was the capital of the Almoravids till 1062, when Yūsuf b. Ṭasfīn founded Marrakush (q. v.). In 1074 the same ruler, having divided his empire among several governors, gave his son Tamun the governorship of Marrakush, Aghmāt, of the Mašmūdā and of Šūs, then of Tāḍālīt and Tānsatā.

The Mašmūdā seem to have remained subject to the Almoravids till the rebellion in 1212 provoked by the Ṣuḥāl b. Tamart (q. v.) of the tribe of Hargha, who, supported by ʿUmar Intī, šākh of the Ḥintāta, and by ʿAbd al-Muʿāmin (q. v.), brought about the foundation of the Almohad dynasty (q. v.). The history of the Mašmūdā is henceforth involved with that of the dynasty which they brought to power and which was to last till 1269. The Mašmūdā, together with the Almohad dynasty, thus contributed to the rise of the Ḥifṣids (q. v.), who ruled over Ifṣkiyā from 1228 to 1274, through the descendants of ʿAbd Ḥajj ʿUrām Intī, šākh of the Ḥintāta.

During the first half of the xiiith century, the power of the Almohads, routed by the Christians of Spain at the battle of Ḥiṣna al-ʿUbbā (las Navas de Tolosa) in 1212 and vigorously attacked in Morocco by the Bandār Marīn, soon began to decline. The Mašmūdā of the Atlas, indifferent to the fate of the dynasty, took advantage of its plight to regain their independence. It was the tribes of the Ḥintāta and the Haskūra, which in 1224 at the proclamation of al-ʿAdīd assumed the leadership in the movement; frequently allied with the Ḥiḍī Arabs of the plains, Sāfīyān and Khūlūt, they found them fighting in all the civil wars and supporting various pretenders to the throne.

When in 1260, the Marinids had definitely crushed the Almohads, the Mašmūdā retained a certain amount of independence and lived more or less in submission to the central power, ruled by chiefs chosen from the great local families: Awdāl Yūmūn among the Ḥintāta; Awdāl Saʿd Allāh among the Gānmīwā, among the Saksawa, ʿUrām b. Ḥaddī
was an independent chief who went so far as to claim the Berber title agellid (=: king). In Sūs the Banū Yaddar founded an independent principality which lasted from 1254 till about 1340. As to the Ḥaskūra, the power among them was exercised by the Banū Ḥaṭṭāb.

Down to the xvth century, except during the first half of the reign of the Almohad dynasty of which they had been the principal supporters, the Maṣmūda of the Atlas were hardly ever under the direct rule of the Moroccan government; only the tribes of the plains, Ḍukkāla and Ḥaṭṭa in a position to dominate as a result of their geographical situation, were able to offer less resistance and had to submit. The later dynasties, Saʿdīan and ʿAlawī, were no better able to subdue the Maṣmūda of the highlands; but instead of gathering round local chiefs with temporal power, the latter now placed themselves under the leadership of holy men with religious prestige.

In the beginning of the xvth century, the land of the Maṣmūda was in a state of anarchy. Some ʿāghwiyāh of the tribe of the Ḥimāṭa held the lands of Marrakush; the most famous was Abū Ṣuqumūt; to the south of Tāsifft, the xvth century saw the rise of a group of Ṣūqumūt; Sūs: Tābnad. For about a century, the power of the mycēk an-Diẓūli [q. v.] spread among the Ḥaṭṭa. In the adjoining country of Darʿa, the Saʿdīan dynasty was rising, which after occupying Sūs imposed its domination on the whole of Morocco.

But it did not however succeed in subjecting completely the highlanders of the Atlas. The powerful Aḥmad al-Maṣnūr himself had to fight against a pretender who had proclaimed himself king of the Saksawa.

After the death of al-Maṣnūr, the Atlas and Sūs were all under the authority of local religious leaders of whom the most important were to be found among the Ḥaṭṭa and in Tāzaraṭ (family of Aḥmad U-Milā). It was the ʿAlawī Sulṭān Mawlāy Raḍīḥ who restored Sūs and the Atlas to the Moroccan empire. The only episode to note is the foundation in Tāzaraṭ, by a marabout Saiyīdi Ḥiṣḥān of a kind of independent kingdom, the capital of which was Ṭīghīt and which lasted from the end of the xvth century till 1856.

Henceforth the Maṣmūda disappear from history. The Atlas remained more or less independent, according to the degree of power of the ruling sovereigns, but all the important events in the region took place among the Ḥaṭṭa or in Sūs [q.v.].

The French occupation took the old Maṣmūda groups, since the death of the ʿAlawī Sulṭān Mawlāy al-Ḥasan, into three bodies each under the authority of a local family: the Glāwa in the east, the Gunṭafā in the centre, and the Mṭugga in the west. The only one now in existence is the Glāwa; as a result of the disappearance of their leaders, the two others were recently broken up.

The name Maṣmūda, still preserved in the north of Morocco in the name of a little tribe of al-Ḳāṣr al-Kabīr, seems to have completely disappeared in the south, where the former Maṣmūda peoples, continuing to talk Berber, bear the name of Ṣulṭān [q. v.]. It is probable that the name Maṣmūda, which is found so often in the Arab historians and geographers, was ever in regular use among the peoples to whom they applied it; it is, indeed, suggestive that it is not found in the long lists of ethnics given in the Kitāb al-Ansūb, published in the Documents inédits d'Histoire Almoravide.

Sociology. The Maṣmūda of the Atlas lead a settled life, living by a little agriculture and breeding a poor type of cattle; they live in villages or hamlets of stonehouses with clay roofs. Ibn Ḥaḍūd notes the existence among them of numerous little strongholds and fortified villages (māḍṣīl wa-ḥṣīn), the ancestors of the modern fitrens and agādīrs. There were no towns among the mountains; Tin Mallal, famous for the mosque where Ibn Ḥaḍūd was invited, was never a town. Before the Almavārīd ruler Yūsuf b. Tashfīn founded Marrakush in 1062, built moreover in the plains out of reach of the highlanders, whom it was to control, the only urban centres in the district were situated at the foot of the Atlas on its lowest slopes. The principal towns were in the north, the double town of Aghmāt [q. v.] and that of Nafisī on the river of the same name: in the south, in Sūs, Ḥiṣḥat and Tābnad; as places of less importance we may mention in the north, Shāfāwā (mod.: Shīfāwā), Aṣfān and Tamarūr; in the east, among the Ḥaṭṭa and in the borders of Shīshāwā. The great trade-routes which traversed the region started from Ṭiṣrīn and led to the port of Kūr (at the north of the Lānīfīt), Fās (via Ṭiṣrīn), Sīḍīmīsā (through the land of the Ḥaḍrāja and the Ḥaskūra), and Sūs (via Nafisī, the land of the Banū Māḡīs and Ḥiṣḥat; no doubt using the pass now called Tira-n-Ṭeṣṭ). Al-Bakrī particularly mentions the industry and application and the thirst for gain, characteristic of the Maṣmūda of the Atlas and of Sūs. The principal products of the country were fruits (nuts and almonds), honey and oil of argan (kargān, argān), a tree peculiar to the country, of which there were regular forests among the Ḥaṭṭa. The Maṣmūda could eat and work iron and also copper, which they exported in the form of ingots or "loaves" (Gangāl); they also worked and chased silver jewellery. In Sūs also the cultivation of the sugar-cane enabled sugar to be made.

From the intellectual point of view, the Maṣmūda seem to occupy a place of first rank among the Berbers. Each of their three principal groups has produced a reforming prophet, the author of sacred works in the Berber language: Ḥa-Mim of the Ghumar; Ṣāliḥ b. Ṣarīf of the Baraghāwā; Ibn Tūmar of the Maṣmūda of the Atlas. It may also be noted that, Sūs is one of those few districts in which books were written in Berber down to a quite recent date (cf. H. Basset, Études sur la littérature des Berbères, p. 73-81).

As regards religion, the Maṣmūda were converted to Islam in the viith century by ʿUkha b. Našīf, who left his comrade Shīkīr among them to teach the new religion. The latter died among them and was buried on the banks of the Tāṣīf where his tomb is still venerated. The place is now called Ṭirāb Saiyīdī Ṣūkār near the confluence with the river of the Shīshāwā. The Mosque of the town of Aghmāt of the Ḥaṭṭa was founded at the beginning of the eighth century in 704.

Ibn Ḥaḍūd describes the Maṣmūda of the Atlas as being not only the descendants from the first conquest, in which they suffered from their barbarous neighbours, the Berberes, who remained faithful to their heretical beliefs. At the beginning of the eighth century, several
of them accompanied Tarik on his conquest of Spain: the best known of these was Kuthayyir b. Wazîd b. Shamîl, of the tribe of the Abas, who settled in Spain and was the grandfather of Yalib b. Yahyâ, one of the rulers of the Musawwa; many others also settled in Spain and their descendants played important parts under the Omaysi.

In the eleventh century however, al-Bakri notes the hereditary among the Masmûda; these were the Banu Lamâs settled to the north of the Harqah and the town of Igli. In this district he also mentions the existence of idolaters who worshipped a ram: perhaps we have here a relic of the cult of the god Ammon among the ancient Berbers. The towns however formed important centres of Muslim culture, the influence of which was felt not only by the Masmûda of the district but also by the Shanâdja of the adjoining deserts: Lamata and Gazzala. We know that it was in the town of Naffis, with Wâggag b. Zollî, a learned jurist of Lamata origin and a pupil of Abû 'Irân al-Fâdi of al-Kaiaraîn, that in 1039 Yahyâ b. Ibrahim al-Guddâl recruited 'Abd Alâî b. Yâsîn al-Gazzali who was the promoter of the Almoravid movement. For the Almoravid period al-Taflî's hagiographic collection, entitled Kitâb al-Tadhqîqat al-wasif shows us the land of the Masmûda of the south full of wonder-working saints. Later the tribe of the Ragîga, settled on the lands now occupied by the Shajûma, was the cradle of a movement at once religious and charitable, the details of which are little known but the memory still alive. In the first half of the xivth century, religious activity seems to be concentrated in the south of Sîlah in Tawarqat where the descendants of the saint Sayîdî Ahmad U-Masjî carved themselves out an independent marabout principality.

G. S. Coats

Al-MAŞMUGHÂN, A Zoroastrian DYNASTY whom the Arabs found in the region of Dunbâwând (Dunbâwand) to the north of Rayî.

The origins of the Masmûghân dynasty. The dynasty seems to have been an old one though not particularly celebrated one as is shown by the legend recorded by Ibn al-Fâkih, p. 275-297 and in al-Biruni, p. 227. The title of masmûghân has been conferred by Farîdân upon Armaîl, Durâwârî's former cook (Zohâk), who had been able to save half the young men destitute of thrash in the wake of the tyrant's serpents. Armaîl (according to Yahyâ, ii. 606, a Nalataean, a native of the Zalî) showed himself to Farîdân in the mountains of Dablam and Shiriz, a whole nation of these refugees, which caused Farîdân to exclaim: "waâd dina adâd radârdâr, which is explained to mean: "What a large number of people of the house (alâšiq) that has saved that has saved''

The first historical reference to a masmûghân is found in Tabari's (i, 2658) account of the taking of Rayî by Naushir b. Ma'âshin in the years 18, 21 or 22; Marquart however puts these events as late as 98 (716-717). The King of Rayî, Siyyâwâd b. Mihrân b. Bahram-Cobin, had received reinforcements from the people of Dunbâwand, but when he was defeated, the masmûghân of Dunbâwand made peace at once with the Arabs and their position was at Farîdân's disposal (alâshiq naâdî naâdî la masmûghân) offering an annual payment of 200,000 dinars. The charter given by Naushir was addressed "to the masmûghân of Dunbâwand, Murad-dâjâh, to the people of Dunbâwand, of Khwâr, of Lâriz (Lâriqjân) and of Shiriz". This gives us an idea of the extent of the sway of the masmûghân. His possessions included the country round Mount Damâwând (q.v.) and stretched down the plains as far as the east of Rayî. The district of Dunbâwand (Dunbâwand, the land occupied by) the *Dunbâ clan* did not form part of Tabaristan. The Arabs mention it along with Rayî (Tabari, i., 2653-2656; Naushâhri, p. 209; Ibn al-Fâkih, p. 275-277) but as we have seen at the time of the conquest, Rayî and Dunbâwand were under different dynasties. The old capital of Dunbâwand may have been at Murad-dân, where, according to Ibn al-Fâkih, 'Armaîl had built a wondrous house of teak and ebony, which in the reign of Hârîn of Raishid was taken to pieces and transported to Baghâd. In the Arab period there were two towns in Dunbâwand: Wîmâ and Shâlamâra (the latter is marked on Stahil's map to the south of the modern town of Damâwând, which lies on the slopes of Mount Damâwând). According to Yâkût, the masmûghân's principal stronghold was called Durnâwân or Dunbâwand. This should be sought above the village of Reînâr, which must correspond to the old Kâryast al-Hâdâm, Ibn al-Fâkih's story of the shops (hawânî) in which worked the smiths, the noise of whose hammers excited the enameled Bûwâshâp must refer to the chambers carved out of the rock near Reînâ; cf. Crawshay-Williams, Rock-Dwellings at Reinâr, Z. A. S., 1904, p. 551; 1906, p. 217).

An attempt made by Abû Muslim in 131 to conquer the masmûghân was a disastrous failure: his general Mi'âb b. Kâ'b was attacked by the masmûghân's men and on account of the difficult nature of the country (lîdî lâlîdî) he was forced to return to Rayî (Ibn al-Âlibîr, v. 364; cf. Hâfiz Abîrî in Dorn, Antwerg, p. 441).

The principality was not conquered until 141. In this period there were dissensions in the family of the masmûghân. Abârâwî b. al-Âsâmûn b. al-Masâmûn quarelled with his brother and went over to the caliph al-Mas-âdîr who gave him a pension (Tabari, iii, 130). The Kitâb al-'iyân wa-l-haddîk, p. 228, testifies to his bravery in the rising of the Râwândiya and calls him "al-Masâmûn Maiîk b. Dinâr, Malik of Dunbâwand." This Abârwî (or Maiîk) had enjoyed considerable influence, for, according to Ibn al-Fâkih, the appointment of Omar b. 'Ali as commander of the army sent against Tabaristân was made on the advice of Abârwî who had known him since the trouble with Sumbâdî (on the partisans of this "Khurrami") in Tabaristân (cf. Reînâ, Reînâr, vi. 188) and with the Râwândiya.

In the year 141, the brother of Abârwî who occupied the throne of Dunbâwand was at war with his father-in-law, the ispaâhâd Khurshid of Tabaristân; but when he heard that the forces sent by al-Masâmûr were on their way to Tabaristân, he hastened to effect a reconciliation with his adversary (Tabari, iii, 136; Ibn al-Âlibîr, v. 386).
The stories of the campaign against Tabaristan directed by al-Mahdi by order of his father al-Mansur are very contradictory as is shown by their very detailed analysis in Vasmer, op. cit. After the defeat of the ispahbad, the Arabs conquered the masmughan and captured him and his daughters Bakhtariya (a) and Smyr (b) Shakla. Of these princesses one became the wife of Mahdi b. Mansur and the other the "num-wa-alad" of 'Ali b. Ra'i. According to a story in Ibn al-Fakih, p. 314, Khalid b. Barmaq (Vasmer, op. cit., p. 100) thought the expedition was sent especially against the lord of Dunbawand (the masmughan) and his wife and his two daughters to Baghdad, but in another passage, p. 275, the same writer says that the masmughan obtained "armâl" from Mahdi b. Mansur and came down from the mountain of al-Aiain (a). He was taken to Ray and there Mahdi ordered him to be beheaded.

After the death of the masmughan, the people of these mountain regions lapsed into barbarism (hawziya) and became like wild beasts (Tabari, iii. 136). According to Ibn al-Fakih (p. 276) however, the descendants of the masmughan (re Armâl?) were still well known.

Spiegel's and Marquart's hypotheses. Yâkût i. 244 interprets "masmughan as kalâr al-mugib" the 'great one of the magi" (mas, "great"; N.W. Iranian form). Spiegel thought of connecting this dynasty with the prince-priests of Rayi, whose existence is known from a well-known passage in the Avesta (Yâkût, ix. 15, transl. Darmesteter, i. 170; cf. Jackson, Zoroaster, p. 202—205). In spite of Marquart's criticisms, which says it is impossible to quote the authority of Avestan traditions which relate to much earlier state of affairs, Spiegel's suggestion is still of interest. We have certainly to deal with vague memories and not with actual facts. In the time of the Arab conquest the descendants of Bahram-Cobin were ruling in Rayi, but the Arabs (Tabari, i. 2653—2656) installed there a certain al-Zâinabi, son of Kûla and father of al-Furukhân. It remains to be seen if this family of Zainbad, "whom the Arabs call al-Zâinabi" (Balâghurt, p. 317) is connected with Dunbawand. Their stronghold in Rayi was called "Arin (c) which resembles the name of the mountain al-Aiain from which the last masmughan came down (cf. the note by de Goeje in Ibn al-Fakih, p. 275). Marquart wanted to connect the masmughans of the Bawand dynasty, the eponymous ancestor of which, Baw, a descendant of Kayils, brother of Khusraw I, is said to have lived in the time of the later Sásânians. This Baw was a man of piety and after the fall of Yazdâdird III had retired to his father's fire-temple. Marquart regards him as a "magus" and identifies him with the father of the Christian martyr Anastasius, who bore this name (829) and was a "master of magian lore". Lastly he quotes the fact that the Bawâinds appeared in 167 only after the disappearance of the masmughan (after 141) as if to continue their line. Unfortunately several details of the ingenious argument are not accurate: our sources (Ibn Isfandiyâr, Zahir al-Din p. 204—205) give not the slightest suggestion that Baw belonged to the priestly caste. According to Ibn Isfandiyâr (transl. Browne, p. 98), his grandfather's temple was at Kûsan, which Rabino, p. 160, locates a little distance west of Ashraf i.e. quite remote from Dunbawand. The passage in Tabari, iii. 1294, which Marquart quotes to prove the occurrence of the name Masmughan among the Bawand dynasty, refers to the cousin of Mziyâr of the Kârinid dynasty, which is quite different from the Bawand (cf. below).

The Kârinid masmughâns. It is curious that neither Ibn Isfandiyâr nor Zahir al-Din speak of the dynasty of the masmughân of Dunbawand, perhaps because they do not include this region in Tabaristan proper. On the other hand, they mention a masmughân (masmughân > masmughân) Walâsh, who was the marzubân of Miyan-du-rûd (Zahir al-Din, p. 42) and says that this canton was also the Sâri between the rivers Kalârud and Mihrubân and that on the east it adjoined Kâruughân; Miyan-du-rûd is thus quite close to where Rabino puts Kûsan!). This masmughân Walâsh (Ibn Isfandiyâr, p. 101; Zahir al-Din, p. 42) lived in the time of Djamâspid Farrukhân the Great (709—722) and belonged to the elder branch of the Kârinids descended from Zâmir b. Sûkhân. (We do not know why Justi, p. 430, takes this Walâsh as the son of the last masmughân of Dunbawand?). The Kârinid Wandâd Hurmuruz (of the younger line, descended from Kûrin, brother of Zâmir) in his rising against the caliph (cf. Mahdi, p. 153—159) had combined with the ispahbad Shâr- warned (772—797) and the masmughân Walâsh of Miyan-du-rûd. This latter (Ibn Isfandiyâr, p. 126; Zahir al-Din, p. 155) seems to have been one of the successors of the masmughân Walâsh mentioned above.

Under 224 (838) Tabari (iii. 1294) mentions a cousin of the Kârinid Mziyân, who was called Shâhriyâr b. al-Masmughân. According to this, al-Masmughân would be identical with Wandâd Ummid, uncle of Mziyân (cf. Justi, p. 439). On the other hand under the year 250 (864), Tabari, iii. 1529, mentions a Masmughân (re) among the allies of the 'Alî Hasan b. Zaid. Ibn Isfandiyâr, p. 165 calls him Masmughân b. Wandâd-Ummid. One must either suppose there is an error in Tabari's genealogy or admit that the title of masmughân was borne both by Wandâd-Ummid and his son, but the form of the designation of the former (مصادح) with the article) would rather show that the title had become a simple proper name (Brown is wrong in translating "the Masmughân").

To sum up then: Alongside of the masmughâns of Dunbawand, we have the masmughâns of Miyan-du-rûd. These masrûlûn, if we may rely on Zahir al-Din, belonged to the Zârânurí branch of the dynasty of Sûkhân (Sásânian governor of Tabaristan descended from Kûrin, son of the famous smith Kâwa). Later we find the title (or proper name!) of masmughân recurring in the younger branch of the line of Sûkhân (the Kârinid branch), which occupied a position in Tabaristan subordinate to the Bawandid ispahbads (Zahir al-Din, p. 154, 14).

MASSA (Berber MASSAT), the name of a small Berber tribe of Morocco of Sās, settled some 20 miles south of Agadir at the mouth of the Wādi Massa; the latter is probably the ḥumum masatat mentioned by Pliny the Elder (v. 9) to the north of the ḥumum Darat, the modern Wādi Darā, and the Massatas of the geographer would correspond to the modern aḥl Massāt.

The name Massa is associated with the first Arab conquest of Morocco; according to legend, it was on the shore there that, after conquering Sūs, 'Uṯman b. ʿAbdAllāh drove his steeds into the waves of the Atlantic calling God to witness that there were no more lands to conquer on the west. In any case, Massa appears very early as an important religious and commercial centre, Al-Yaḥyā b. ʿAbdAllāh (end of the third = ninth century) notes that the harbour here and mentions a ribāṭ already renowned, that of Bahālī. Al-Bakri and al-Idrisī mention the harbour of Massat; al-Bakri emphasizes the fame of the ribāṭ and the importance of the forts held there. Ibn Khaldūn devotes several passages in his Kitāb al-ṭabārīn to the ribāṭ of Massa, where according to popular belief the expected Mahdi or Fāṭimid was to appear; this belief induced many devout people to go and settle in this ribat and also sent many travellers there to raise rebellions.

Towards the end of the tenth century, the religious movement begun by al-Ḥarīrī made Massa one of the great masāyis of Sās. In the middle of the 15th century Leo Africanus describes Massa as a group of three little towns surrounded by a stone wall in the middle of a forest of palm-trees; the inhabitants were agriculturists and turned the rising of the waters of the Wādi to their advantage. Outside the town on the sea-shore was a very venerable "temple", from which the Mahdi was to come; a peculiar feature of it was that the little lagoons in it were formed of ribs of whalebone: the sea actually throws up many cetaceans on this coast and ambergris was collected there; local legend moreover says that it was on the shore of Massa that Jonah was cast up by the whale.

After the fall of the Ṣaḍānids, the development of the Marabout principality of Tāzarwāl again made Massa a commercial centre. The port was frequented by Europeans but it was soon supplanted by that of Agadir. The rapid decline of the principality of Tāzarwāl and the steadily increasing influence of the central Moroccan power finally destroyed almost completely any religious and economic importance of Massa.

MASʿUĐ, Abu Saʿīd, the eldest son of Sulṭān Ṭabāqta of Ghazna, was born in the year 388 (998). In 406 (1015-1016), Sulṭān Ṭabāqta nominated him his heir-apparent, and two years later made him governor of Herāt. In 411 (1020), at the command of his father, he led an expedition to Chūr and reduced the north-western part to submission. Shortly after this, he was disgraced and sent as a prisoner to Multān, but he was soon taken back into favour and was reinstated in his government at Herāt. When the province of Egypt was conquered in 420 (1030) Sulṭān Ṭabāqta placed it under Masʿūd who, after subjugating the outlying parts, conquered Hamadān and Ḩosain from their Buwayhid ruler, ʿAlī al-Dawla b. Kākawī, in the beginning of 421 (1030), and was making preparations for further conquest when news arrived of the death of his father and the succession to the throne of his brother Abīl Ṭāhir Muḥammad. Masʿūd hurried to Ghazna to claim the throne. In the meantime, the army tired of Muḥammad, deposed him, and had the ḥumma said in the name of Masʿūd. Muḥammad was blinded and sent to the fort of Manṣūrī, and Masʿūd ascended the throne in Shaʿwārī, 421 (October 1030), about 5 months after the death of his father. The Caliph al-Kādir b. ʿAbdAllāh conferred on him the titles of Naṣr b. ʿAbdAllāh, Ḥabīb b. Ṭāhir, Ḥusain, and Šahrizābāl al-Ṣāliḥīn. In 422 (1031), Sulṭān Ṭabāqta sent an army to punish Ḫusain, the ruler of Murrān, for his rebellion. Ḫusain was defeated and put to death, and his brother named Abu l-Muʿāṣkar was placed on the throne. In 424 (1032-1033), Masʿūd laid siege to a fort named Sarastī in the southern Kashmir hills, took it by assault and returned to Ghazna in the spring. After this he attacked Tabaristan, as the ruler of that country, named Abīl Kālimjīr, had adopted a hostile attitude, and captured Astarābād. Abū Kālimjīr was forced to offer submission and to promise to pay annual tribute. About the end of 426 (October 1033), Ṭabāqta b. Nīyālīgīm, the governor of Lahore, rebelled. Masʿūd sent against him one of his Hindī generals who was defeated and slain in battle. He then sent another Hindī general named Tīlak, who defeated Abīl Ṭāhir and forced him to fly to Sind where he was drowned while attempting to cross the river Indus. About the end of 427 (October 1036), Masʿūd led an expedition to India, took the forts of Hānṣt and Sūnpāt and returned to Ghazna, leaving his son Muṣṭāfī as the governor of the Punjab. In 430 (1039), Masʿūd crossed the Oξus to punish Pūṭīq, son of Ṭalḥīg, ruler of Bukhārā, for his hostility, but before he could accomplish anything he received news that the Saldžūqs were advancing to Bālḵ to cut off his retreat, and he immediately returned to Khurāsān.

Early in his reign, Sulṭān Masʿūd had been called upon to deal with the Saldžūqs whose power had considerably increased during the period of disturbance following the death of Sultan Ṭabāqta. They raided Herāt as early as 422 (1031) but were repulsed with heavy loss at Farāwāv and forced to take refuge in the Bālḵān Mountains. This however did not stop their activities, and by 425 (1033-1034) they had started to make systematic incursions into Khurāsān. In Shabān 426 (June, 1035) Masʿūd sent against them two of his generals, the Ḥādīj b. Baktrghūdī and Ḥusain "Ali b. Mikatāllī, who inflicted a crushing defeat on them, but while the Ghaznavid troops were engaged in plundering the camp of their vanquished foes, a body of the Saldžūqs under Dāwādīr issued from the hills, fell upon their disorderly ranks, and made fearful slaughter among them. Husain "Ali was taken prisoner, and
Bakhtoghdā managed to escape. Instead of marching against the Saldjūks, Masʿūd wasted his time in a fruitless expedition to India in 427, as stated above, and the result was that they became bolder and more powerful. In 428 (1036—1037), they captured Balkh, but retired to Marw at the approach of Sultan Masʿūd, and sued for peace. Masʿūd gladly consented to it, but it was only a shampeace and when Masʿūd started on his return march to Ghazna, the Saldjūks fell upon his rear and put many of his soldiers to death. Masʿūd turned round and took terrible revenge for this treachery. The Saldjūks redoubled their efforts against the Sultan, and won over the people of Sarakhs, Nasā and Baward to their side. Masʿūd now personally took the field against them. The Saldjūks advanced to meet him under their leader Tughrīl. The two armies met at Dandānakān on 8th Ramadān, 431 (May 23, 1040). Masʿūd fought bravely but being deserted by his generals and finding himself surrounded on all sides by the enemy, he fought his way out of the field of battle and managed to reach Ghazna in safety.

The Saldjūks had evidently become too strong for him, and he resolved to withdraw to India, possibly with a view to gaining a respite and preparing a large army there to retrieve his affairs. He left Ghazna with all his treasure, and accompanied by his captive brother Abu ʿAbd al-Muḥammad. At Ribāṭ-i Mārkalak, shortly after crossing the river Indus, his slaves rebelled against him, plundered his treasure, and, being joined by the rest of the army, they seized Masʿūd and proclaimed the blind Muḥammad as their sovereign. Masʿūd was sent as a prisoner to a fort where he was put to death on 11th Dhuʾl-Ḥijjah, 432 (January 17, 1041). His reign had lasted 10 years and three months.

Masʿūd was a man of strong build and great physical strength. He was brave and generous, but he lacked the wisdom of his father, and early in his reign, he lost the co-operation of his officers by foolishly attempting to bring about the ruin of the old servants of the House on the advice of his young and ambitious courtiers, and demanding the return of the money which Muḥammad had distributed among them at the time of his succession to the throne. Masʿūd was a great lover of learning, and numerous scholars had assembled at his court, one of whom was the famous ʿAbd Allāh al-Bīrūnī who dedicated some of his greatest works to him. Several poets sang his praises and were given manifold rewards. He adorned his capital with beautiful buildings, and the New Palace with its magnificent throne was one of the wonders of the times.

**Masʿūd B. Muhammad Abū l-Faḍl Shirvānī al-Dīn, a Saldjūk ruler in the ‘Ifrīqīy (529—547 = 1134—1152).** Like Muḥammad’s other sons, Masʿūd, when quite a child, was entrusted to an atābeg to be educated, namely the celebrated emir Mawdūd and when the latter was murdered, Ak ʿSonktor and Ali K ʿDjuvūsh Beg acted successively as Masʿūd’s tutors. The latter, an ambitious emir, in the beginning of Muḥammad’s reign tried to secure the sultanate for his protégé, then an eleven-year-old boy, but the attempt failed; in an encounter with Muḥammad’s troops he was put to flight and Masʿūd as well as his warī, the famous Arab poet al-Tughrī (q. v.), were taken prisoners (514 = 1120). On the fate of the poet see the article on him. Masʿūd was pardoned and later given Gandja by his brother, (534), his son Dāwūd was at first recognised as sultan but Sandjāl decided that Masʿūd’s brother Tughrī should be sultan. Masʿūd soon made peace with Dāwūd, after some fighting near Tabriz, and sought to obtain from the caliph al-Mustarshīd that the latter should mention him in the khaṭba in
Baghdad. The caliph, who had been approached with the same object by another brother of Mas'ud named Saldjük and his atabeg Karağaçlı, found himself forced to accede to both by having Mas'ud's name mentioned first, followed by that of Saldjük. He also collected his forces to go in alliance with them against Sandjar, but when he withdrew, so that Mas'ud and Saldjük had to continue the struggle against their uncle alone and they were routed by him near a hill called Pandy Anghuşht in the neighbourhood of Dinawar (1132). Sandjar however allowed Mas'ud to return unhindered to Gondja and at the end of the same year Mas'ud found an opportunity to go to Baghdad where Dāwūd also now was. Both princes were received by the caliph in public audience and given robes of honour and other tokens of esteem. Homage was paid to Mas'ud as sultan and to Dāwūd as heir-apparent. Thereafter he fought with varying fortune against his brother Tughrill and after the latter's premature death (528-539 = 1134) was generally recognised as sultan. Anushārwan b. Khash, the caliph's vizier, now was given the office of vizier to the sultan. Soon afterwards however, a number of Turkish emirs became dissatisfied with Mas'ud because they had felt themselves insulted by the advancement of Kara Sonkor, the powerful emir of Adharbādjan, and were able to win the caliph over to their party. In the hope that Dāwūd would join him, he went with some 7,000 horsemen towards Hamadān, where Mas'ud then was, but when the sultan's troops met him at Dāmarg, his own men left him in the lurch or even over to Mas'ud so that he and his vizier and other high officials were taken prisoners (529 = 1135). The sultan, it is true, treated him with deference, and began to discuss terms of peace, but he did not release him. He took him with him to Maragha, where in the same year (cf. the various dates given: Well, Gesch. der Chilījen, ii. 331, note 4) he was murdered by a number of ulama. The murderers were apparently hired by the sultan, on the advice of Sandjar, who had been stirred up against the Caliph by Dubaisi [q.v.]. The latter, who also was with Mas'ud, was soon afterwards treacherously slain by him. These deeds of violence naturally made a very bad impression on Dāwūd and Saldjük began again to bestir themselves; the new caliph al-Khash b. illah, a son of al-Mustaṣṣid, adopted a hostile attitude and other Turkish emirs, notably Zangl, the lord of al-Mawṣul, began to be inordinate; in a word, anarchy soon prevailed everywhere. But when Mas'ud returned to Baghdad with his troops they all retired. Mas'ud thereupon had the caliph, who had escaped with Zangl to al-Mawṣul, arrested by a force of the kadi's and jurists and approved the appointment of al-Maṭfa (530 = 1136). After peace had in this way been to some extent restored, Mas'ud thought he might now devote himself to his pleasures and remained the whole year of 1137 in Baghdad in comparative inactivity, without allowing his leisure to be disturbed by a demonstration by the mob of the capital, which was intended to remind him that it was his duty to wage war upon the unbelievers. Once again several Turkish emirs rebelled and tried to bring Dāwūd to the front again; among them the most dangerous were 'Abd al-Rāhmān b. Tughanyerek, lord of Kalkhāl, and particularly the prince Mingi-bars, whom Sandjar after Kara's death had sent to Fārs and who was vigorously supported by his deputy in Khuzistān, Buzāba. Mas'ud, it is true, sent troops against them under Kara Sonkor but they had to retire, and a battle was only fought when Mas'ud himself came up, at Kūshānbe near Hamadān (532 = 1138). The sultan was at first victorious and put Mingi-bars whom he had captured, to death; but when his troops were scattered plundering the enemy's camp, Buzāba fell suddenly upon them so that he and Kara Sonkor had narrow escapes and some twelve of the emirs with him were captured and all put to death by Buzāba. Fortunately for Mas'ud, Buzāba did not pursue him, but was content with occupying Fārs; the sultan was also able to make peace with Dāwūd, and the deposed caliph was murdered in Isfahan on Ramaḍān 25, 532 (June 6, 1138). The sultan's position however was not one whit better, for the different provinces of the empire were in the hands of powerful emirs, who not only paid no heed to the sultan, but occasionally appeared in open rebellion against him in the name of various Saldjük princes whose atabegs they were. The most powerful of these was still Kara Sonkor who began a war on Buzāba to avenge his son, who had been murdered by the latter. When he approached, however, Buzāba withdrew into an inaccessible citadel and when Kara Sonkor retired, he took prisoner the prince Saldjük whom he had appointed to rule over Fārs and then continued to rule in Fārs as atabeg of two sons of Muḥammad, Malikshāh and Muḥammad. After the death of Kara Sonkor, who died in 535 of a broken heart after the great losses he suffered in the terrible earthquake in Gondja in 533 (1138), Čawli al-Dānār took his place and like his predecessor was generally attached to Mas'ud. Buzāba's attempt along with another emir named 'Abbāb [q.v.], who had gained an influential position in al-Kay, to put the sultan's youngest brother Sulaimān on the throne therefore failed. Mas'ud invited this prince to come to him and when he came he was imprisoned in spite of the sultan's promise. Čawli died in 541 (1146) in the same year as Zangl and in the following year 'Abd al-Rāhmān and 'Abbāb were disposed of by assassination so that Buzāba alone remained of the enemies of Mas'ud. Buzāba now set out for Hamadān to attack the sultan, but not far from this city was taken prisoner in a fierce battle and executed (542 = 1147). The princes Muḥammad and Malikshāh who were with him escaped. Mas'ud afterwards sent for the latter, gave him his daughter in marriage and designated him his successor. In these negotiations the sultan followed the advice of his favourite beg Arslān b. Balangari, best known by the title Khāṣṣeg, who in this way disposed of all his rivals, but at the same time aroused great discontent so that even the aged Sandjar came once more to al-Raj to remonstrate with his nephew (544 = 1149). But all this was in vain; and when in 547 (1152) Mas'ud died, Khāṣṣeg put Malikshāh upon the throne; when in a short time the latter showed himself quite incapable, he sent for Muḥammad, who had Khāṣṣeg treacherously murdered.

Bibliography: In the article Seldjucks. — Ibn Khallikan's article on Mas'ud (Bulūk edition 1299, ii. 531) is of no importance. (M. Th. HOUTSMA)

MAS'UD b. SAD b. SALMAN, a poet in Arabic and Persian, was born in Lhore. His father
remained for a considerable time in the service of the kings of Ghazna and had become the possessor of great wealth and lands in Lāhore and other parts of India. After his father’s death these lands were confiscated by the Governor of Lāhore and Mas'ud was compelled to proceed to Ghazna to demand justice, but there also his enemies were able to put him to more troubles and bring against him a false accusation, which caused him to be imprisoned. He at last through the recommendation of Mas'ūd b. Sulṭān Ibrahim was permitted to return to India and take possession of his estate. When Saif al-Dīn Mūmādī b. Sulṭān Ibrahim came in India as viceroy, Mas'ūd attached himself to this prince as courtier and panegyrist, and became one of the special favourites of his court. But again, a false charge being brought against him, he once more fell upon evil days and loss of fortune. It was maliciously reported in 492 (1098) to Sulṭān Ibrahim b. Mūmādī that his son Saif al-Dīn Mūmādī intended to go to I‘rāq to Malikšāh. This report so much aroused the indignation of the Sulṭān that he ordered his son with all his courtiers to be arrested and put to prison. Our poet for the next ten years remained a prisoner. But on the intercession of Abu 'l-Kāsim Khaṣṣ, the Sulṭān pardoned him and released him from prison. He returned to India and was again placed in possession of his father’s lands and dignity.

He died in 515 (1121). He is the author of two diwāns, one in Arabic and the other in Persian.

(M. Hidvæt Hosain)

Al-Mas'ūdī, Abū l-Hassān al-'Abī al-Husain, Arab historian and geographer, and one of the most versatile authors of the fourth century A.D. Information about his life can only be gleaned from occasional references in his works; as his activity lay outside the lines of the regular schools of learning, he gets little mention from their representatives. The author of the Fihrist regards him as a Maqhlī. According to his own statement, however, he was born in Baghdad and descended from an Arab family which could trace its ancestry to a Companion of the Prophet. While still quite young he travelled through Persia where he spent part of 305 (915) in Isfahān. Next year he went to India and visited Multān and al-Maḥāran. He went by Kanbāya and Šāmīr as far as Ceylon, joined some merchants on a voyage to the China Sea and back to Zanbār from which he returned to Omān. We again find him travelling along the southern shore of the Caspian Sea and in 314 (926) at Tiberias in Palestine. In 332 (943) he visited Antioch and the Syrian frontier towns and after a brief visit to his native province of Baṣra, he was staying in Damascus in 334 (945). Afterwards he seems to have lived sometimes in Syria and sometimes in Egypt. He was in al-Fustā in 335 (947) and 334 (955) and he died there in Dūmādā II 345 (956) or 346.

His restless life is reflected in his literary activity. His travels were certainly stimulated not only by thirst for adventure but also by a strong desire for knowledge. But this was superficial and not deep. He never went into original sources, as did Burckhardt later, but contented himself with superficial enquiries and accepted tales and legends without criticism. Nevertheless we owe him a good deal of valuable information about the lands on the periphery of Islam. His method of presenting his material has the same faults as his scholarship. He is never able to finish a subject he has begun but continually diverges from his theme. His literary activity, in addition to philology and theology in the narrower sense, touched on almost all the fields of interest of his time, particularly natural philosophy, ethics and politics as well as heresiography. His works, a list of which is given by de Goeje in the Preface to the Kitiḥ al-Tanbih, p. vi., are for the most part lost because they were not of general interest. Posternity was only interested in him as a historian. In the year 332 (943) he began his great history of the world Kitāb Aḥkār al-Zamān wa-man ādālahu 'l-Hidūrīn mu'n al-Man al-Ma‘ṣūra wa-l-Ayyal al-khiliyya wa-l-Maran al-dāhīra, which is said to have filled 30 volumes. Burckhardt’s statement (Travels in Nubia, p. 527) that twenty volumes of it are preserved in the Aya Sofi in Constantinople is unfortunately not confirmed. Only a single volume, the first of the work, which A. v. Kremer obtained in Aleppo, is preserved in Vienna (see v. Kremer, S.B.W.A., 1850, p. 207–211; Fliegel, Die ar. pers. u. türk. Hs. der K.K. Hofbibliothek, ii. No. 1262; another MS. of the same part is in Berlin, see Ahlwardt, No. 9426) The work begins with the creation and after a brief geographical survey discusses the non-Muslim peoples and goes fully into the legendary history of Egypt. He reproduced extracts from this work in the Kitiḥ al-awṣat of which one volume perhaps survives in Oxford (see thr. Catalogus cod. MSS. or. i. 666). The substance of these two works he gave in a briefer form in the Muruḏī al-Dhahab wa-Murūḏī al-Dhāwīrī, which he finished in Dja-ˈmāhī I, 336 (Nov.–Dec. 947) but revised in 345 (956). In addition to the manuscripts used for the Paris edition, a number of others are in existence, e.g. in the Ambrosiana (R.S.O., iv. 97), in Fierz (Fihrist Masjid al-Karasīnī, n. 1208) and Mūsul (Dāwālī, Makhdūt al-Masjid, p. 122, No. 22; p. 173, No. 32); printed as Maçoud, Les prairies d'or (the more correct translation would be "Gold-washings"), as Gildemeister, W.Z.K.M., v. 202, Texte et Traductions par C. Barier de Meynad et Pavet de Courteille, 9 vols., Paris 1861–1877, Birkh. 1283. Cairo 1313, on the margin of Ibn al-ʿĀthir, Hādīk 1230, of Makkari, Noṣīḥ al-Ṭib, vol. 1–3, Cairo 1302. A synopsis of the Muruḏī al-Dhahab down to the fall of the Omanyads was made by İbrāhīm al-Nashtī in 1118 (1706) (MS. Vienna, Fliegel, No. 507). Another synopsis which we have is that of İbrahīm al-Maḥāran, which is placed in the same place as the two works on which it is based were not used in addition to the Muruḏī, with a continuation down to the year 638 (1248) was composed by İbrāhīm Ḍālāl ʿAbd Allāh Muḥammad b., Al-Shātibi of Tīra in Morocco under the title al-Džāmī ʿal-i Muḥāṣīr ʿAbd Allāh al-Zamān (wrongly ascribed by de Sacy, N. E., ii., 1787 to Makṣarī; MS. Gyanos, 64, fol. 31–195; see Asin Palacios, Escatologia, p. 374; other MSS. in Cairo and
MAŠYÄD, a town in Northern Syria on the eastern side of the Ḥablā al-Nuʿayrī. The pronunciation and orthography of the name varies between the forms Mašād, Mašāy (in official documents and on the inscriptions mentioned below of the years 646 and 570 A. H.), Mašāt and Mašāiy (on the march of Jand al-Shaibāy) (ed. Wustenfeld, Geschichtschreiber der Araber, vol. 119, Paris, 1897). The variants Mašāy (Yāḥyā, Muḥyīn, ed. Wustenfeld, iv. 556), Mašāy (Khālid al-Zahrī, Zaḥdīa, ed. Ravaisse, p. 49) and Mašāy (al-Nabūsulb, in. v. Kremer, S.B. Ak Wien, 1850, ii. 331) are no doubt due to mistakes in copying (van Berchem, J.A., Ser. 9, iv. [1897], 457, note 2). At a later period, the pronunciation Mašāy, Mašāy became usual (al-Dimashqī, ed. Meher, p. 208; al-Kašshāshī, Sūbāl al-ʿAqīl, Cano, iv. 113; Abū al-Sūḥān, Bārīt, 265; cf. Mašāy on v. Oppenheim's map in Petermann's Mitteilungen, iv. [1911], i. Taf. 1). The name is perhaps a corruption of a Greek Μασφηδ (Μασφήδος) or Μασφίνα κατοικία, which presumably lay on the Mašāyam, the boundary river of the Nazerim (ancestors of the Nuʿaymi).

A number of ancient pillars and capitals built into the gates of the fortresses (some reproduced in G. I. Bell, Syria: The Decret and the Scan, pp. 217–220) are its only remains of antiquity. An old Roman road (rāṣf) from Hamāl to the west passed the town (according to Miss Bell, loc. cit.).

Mašāy is not mentioned in the early middle ages; the first mention of the fortress is probably in a Frankish account of the advance of the Crusaders in 1099: "tereminus gaudentis hostitari ad quaeam Arabum castrum (Anonymi gesta Francorum et aliorum Hierosolimitanum, ed Hagenmeyer, 1890, p. 418 with note 29; Dussaud, Histoire et religion des Nazeris, Paris 1900, p. 21, note 4). When in 503 (1109–1110), the Franks advanced on Kafanyā, Ťughtakan set out to relieve it by the terms of the peace concluded between them, the Franks bound themselves to abandon all designs on Mašāyāh and then al-Akrād and in compensation these two places and Hīṣn Ṭūfān were to pay them tribute (Ṣibṭ b. al-D Jawār, Muḥāṣṣar al-Ṭūfān, in. Rec. Hist. Or. C. s., iii. 537). Before 521 (1127) the fortress was in possession of a branch of the Mirdāds, who sold it to the Banū Mū基īd. After the Nasirī citadels of Kādūns and al-Kāhī had fallen into the hands of the Ismāʿils in 527 (1132–1133), the latter also seized the fortress of Mašāyāh in 535 (1140–1141), by outwitting the commandant Sunkūr, a mamlūk in the service of the Banū Mū基īd of Shāizar, who was surprised and slain (Abū 'l-Fidāʾ, Muḥāṣṣar al-Ṭūfān, in. Rec. Hist. Or. C. s., i. 25; Ṭūfān al-Fal, Amīl ibid., i. 435; al-Nuwairī, ed. Leyden, 216, f. 222b, in. van Berchem, J.A., 1897, p. 564, note 1). Mašāyāh now became the residence of the Syrian Master of the sect (as we may call him, with van Berchem, to distinguish him from the Great Master in Alamāt, known as Shābyh al-Ǧabālī. After the Master (Muḥammad) Abū Muḥammad had gathered round him the members of the sect in the hills of Kādūns, about 557 (1162) Mašāyāh al-Dīn Sinān [q. v.] appeared in Syria, as envoy from the Persian Grand Master, took over command of the Assāsins [q. v.] there and displayed his unusual organisational ability, by raising the sect to be a well equipped and dreaded force, the terror of the Crusaders. Saladin, who wanted to punish them for two attempts on his life, invaded the land of the Ismāʿils in Muharam 572 (July–Aug. 1176), laid it waste and laid siege to Sinān in Kaṭar Mašāyāh. Through the mediation of Saladin's uncle Shābyh al-Dīn al-Hārimī, lord of Hamā, Sinān however succeeded in obtaining Saladin's forgiveness; in the beginning of August, he went with his army to Hamā (Abūl-Fidāʾ and Ibn al-Ǧalīr in. Rec. Hist. Or. C. s., i. 47, 626). Shortly before he raised the siege of Mašāyāh (about the 1st Šaṭar), he received from Usūma b. Mū基īd, who was in Damascus, a letter containing a panegyric of his great patron (Derenbourg, Vie d'Osmond, Paris 1893, p. 400 sqq.). Rāghid al-Dīn died in 588 (Sept. 1192). The Syrian Masters, as the official epithet al-Dūnāy wa-l-Dīn henceforth regularly borne by them shows, were raised by him to a position with power and privileges equal to those of sovereign rulers (van Berchem, op. cit., p. 470). While Sinān had completely emancipated himself from the suzerainty of the headquarters of the sect in Alamāt, in 608 we find the old conditions completely restored (Abū Shāma, al-Dīnī al-Kawāgam, in. van Berchem, op. cit., p. 475 sqq., note 1). According to an inscription in the inner gate of the castle (van Berchem, J.A., 1897, p. 482 = van Berchem–v. Oppenheim, Beitrage z. Assyriol., vii, 17, p. 17, No. 18), this building was restored by the Syrian Master Kamāl al-Dūnāy wa-l-Dīn al-Hāns b. Mašāy under the suzerainty of the Great Master of Alamāt ‘Ašr al-Ilm Mūḥammad III (618–653). The reference is probably to the al-Kamāl, who according to al-Nasawi (Hist. du Sultan Pydag al-Dīn Munkabirī, ed. Houdas, p. 132) was for a period before 624 governor in Syria for the grand master of the Ismāʿils. It is uncertain whether the commandant (mutawallī)
Majd al-Din, who received in 624 the ambassadors of Frederick I (Hamawi in Amari, Bibliotheca arabica-sciatica, App. ii, p. 30) was one of the Masters (van Berchem, J.A., 1897, p. 501, note 1) about 625/6 and still in 635, Siraj al-Din Mu'azzar b. al-Husain was Syrian Master (Na'awzi, op. cit., p. 45), inscription of al-Kahf, ed. van Berchem, op. cit., p. 488). A Persian from Alamut, Tadj al-Din, was in 637 mukaddam of the Syrian Isma'ili (Ibn Wasiil, Geschichte der Ayyubiden, Paris, MS. Ar. 1702, f. 333b in van Berchem, p. 466, note 2). As Tadj al-Din Abu'l-Futuh he appears in an inscription in Mayyad of Dhul-Ka'da 646 (Feb.-March 1249), according to which he had built the city wall of Mayyad and its south gate. The commander of the fortress under him was 'Abd Allah b. Abi l-Fadl b. 'Abd Allah (inscriptions A and B in van Berchem, J.A., 1897, p. 456 = van Berchem-v. Oppenheim, Beitr. z. Assyri., op. cit., p. 7. 10). Probably it was Tadj al-Din to whom the Dominican monk Yvo the Breton, a member of an embassy sent by Louis IX to the "Old Man of the Mountains" in May 1250, sent a naive and fruitful manuscript for a companion to Jean de Joinville's Chronicles, de St. Louis, ed. Wailly, p. 426 sqq.; van Berchem, J.A., 1897, p. 478—480). In the time of the Master Rid'ah al-Din Abu'l-Mus'lih in 658 (1260) the Tartars seized and held the fortress for a time, but after the victory of the Egyptian Sultan Chusuz at 'Ain Djalut, they abandoned it. About two years later Baibars began to interfere in the affairs of the Isma'ili and to demand tribute from them. He very soon deposed the Master Nadim al-Din Isma'ili and appointed his son-in-law Sarrun al-Din Mubarak in his place and took Mayyad from him. When the latter returned there, Baibars had him seized and brought to Cairo, where he was thrown into prison. Nadim al-Din was again recognised as Master for a brief period and then his son Shams al-Din, before the Sultan definitely incorporated Mayyad in his kingdom in Rasul 668 (1270) (Abu l-Fida', in Res. hist. or. cron., i. 153; Mafzadali b. Abi l-Fadl'ih, Geogr. d' Arabe, ed. Lochot, in Patrel. Orient., xiv. 445; van Berchem, J.A., 1897, p. 465, note 2).

Mayyad presumably at first belonged to the "royal province of fortunate conquests" the capital of which was Hisn al-Akrad, then to Tarabulus (after its capture in 688). It was later separated from this province and added to the niiya of Dimashq to which it still belonged in the time of Kalkashandi (Suhb al-Ashâr, Cairo, iv. 113, 202, 235) about 814 (1412). Khalil al-Zahiri (Zablat Khashif al-Mamalik, ed. Ravaisse, p. 49) includes Mayyad with Hamah (about 850) under Egyptian rule the position of the lands of the Isma'ili with Mayyad as capital was to some extent exceptional (Gaulier, Demombynes, La Syrie à l'Epoque des Mamelouks, Paris 1923, p. 182, No. 1).

Abu l-Fida' (about 720 = 1320) described Mayyad as an important town, with beautiful gardens through which streams flowed; it had a strong citadel and lay at the eastern base of the Jabel al-Lukkam (more accurately Djabal al-Sikkun) about a farsakh north of Barr and a day's journey west of Hamah (not Hims, as Le Strange, Palestine, p. 507 erroneously says: Abu l-Fida', Geogr., ed Reinaud, p. 229 sqq.). As a result of its high situation, it has a more temperate climate than the low ground on the Nahr al-'Asi; the young Uzama

in 516 (1122—1123) brought to Mayyad the wife and children of the emir of Shaiizar, his uncle 'Izz al-Din Abu l-'Asikr Suljan, from the heat of Shaiizar which was causing the emir anxiety about their health (Derenbourg, Vie d'Ousma, p. 43). Ibn Batutah passed through Mayyad in 736 (1335) and al-Nabilusi in 1165 (1744). The latter mentions that the governor of the town then was a certain Sulaamit of the tribe of Tanik. An inscription of Mayyad of Ramadân 870 (April—May 1666) contains a decree about taxes of the Sultan al-Malik al-Zahir Khushkdam (van Berchem-v. Oppenheim, Beitr. z. Assyri., vii., p. 20, No. 23: No. 22 is perhaps of the same Malik al-Zahir).

Of a later date are two inscriptions of an emir Mas'ud b. Idris, one of the year 1203 (1788—1789) relating to the building of a well (sabil) (op. cit., p. 21, No. 24), the other (No. 25) of 1208 (1793—1794) to the building of the house of the Isma'ili emir.

The Isma'ili lived constantly in open or secret enmity with the Nusairis, although various tribes of the latter had offered their services to the Isma'ili Masters, for example as early as 724 (1324) to Râjâ al-Din (Gyanard, Les grandes Armées des Assassins au temps de Saladin, J.A., 1877, p. 165; Dussaud, Histoire et Religion des Nusairis, p. 86). A number of Nusairis of the tribe of Raslan, whom the emir of Mayyad had allowed to settle in the town under their Shâikh Mahmûd, in 1808 murdered the emir, his son and about 300 Isma'ili and seized the town. The other inhabitants, who had sought refuge in flight, applied for protection to Yüsuf Pashâ, the governor of Damascus. He sent a punitive expedition of 4—5,000 men against the Nusairis; Mayyad had to be surrendered by the Bani Raslan after three months' stubborn resistance and the fugitive Isma'ili returned to Mayyad in 1810 (Dussaud, op. cit., p. 32; Burckhardt, Reisen in Syrien, p. 258) in 1812 Burckhardt estimated the population of Mayyad at 250 Isma'ili and 30 Christian families. The population since then seems to have diminished still further. Burckhardt and Lammens found many of the houses in ruins and large gardens within its walls. According to Burckhardt, the land east of the town is a desert moor, while in the north at the foot of the hills the citadel stands on a high steep rock: on the west side is a valley, in which the inhabitants grow wheat and oats. The town, which lies on the slope of a hill is about half an hour's walk, in circumference. Three older gates have been incorporated in the present more modern walls. The mosque is in ruins. The citadel has an outer wall from which the inner defences are reached by a vaulted passage (G. L. Bell, Syria: The Desert and the Sown, p. 218) The old citadel is for the most part destroyed; only a few buildings have been roughly restored and in parts are still inhabited.

The Darawish cut the head of Yohannes and sent it to the Mahdi as a sign of their victory.

The battle of Matamārah however had no greater value for the Mahdi's followers than a successfulrazzias: they retreated to the Sūdān after pillaging some neighbouring countries and did not occupy any territory of Ethiopia. On the contrary, Matamārah caused the end of the Northern Abyssinian dynasties; and the southern region—the Shāwā kingdom—became the political centre of the Empire, when in the same year, 1889 A.D., King Menilek proclaimed himself Emperor (Negus Negast) as a descendant of the Salomonic dynasty.

The death of the Emperor Yohannes as a martyr during the battle against the Muslims, hereditary enemies of the Christian Abyssinians, has been celebrated in many songs and poems. The following is a very interesting example of the Abyssinian poetry in recent times:

"The Emperor Yohannes was a fool, and we all despise him!
They said to him: "Regain in the middle of the country!"
He answered: "I will be the keeper of the frontier!"

The Emperor Yohannes was a liar.
He said: "I do not like drink!"
And we have seen him drinking a drink which causes the head to turn around!"

(The last verses allude to the head of the Emperor sent to the Mahdi by the Darawish.)

ENRICO CERULLI

MATGHARA, the name of a Berber tribe belonging to the great family of the Batr; they were related to the Zānāia and brethren of the Matamārah, Kūmāya, Lamāya, Ṣaddāna, Mādīynā, Maghlīha etc., with whom they form the racial group of the Banī Fātim. Like the other tribes belonging to this group, the Matghara originally came from Tripoliания: the most eastern members of the Matghara, however, known to al-Bakri and Ibn Khaldūn were those who lived in the mountainous regions along the Mediterranean from Mīlāyā and Ténès to the north of Ḫudjā (port of Tāhshrīṭ); those of the western part of this zone were allied with the Kūmāya; their mountain rose not far from Nadrūn and the fortress of Tawunt was on their territory.

Three sections had reached the western Maghrib as early as the eighth century and there formed an important bloc. These were:

1. The Matghara of Fās and the cōlour of Tāzā; al-Bakri observes that the source of the Wādī Fāsh was on their territory, in the region where Leo Africanus still mentions the Sāk al-ḥamis of the Matghara "fifteen miles west of Fās".

2. The Matghara of the Middle Atlas in the Ḩijāl Matghara which Ibn Khaldūn locates S.E. (byll) of Fās and which Leo Africanus says is five miles from Tāzā (to the south?) The reference then is to the mountain region now occupied by the Ait Wārān: an important section of the latter, the Ait Djeellidās, represents the Banū Gallidāsān.
whom al-Bakri gives as a section of the Matghara, settled near Tenes in Algeria. We still find among the Ait Warrain several sections of the Maghila who represent the Maghila, brethren of the old Matghara.

In al-Bakri's time (vth = xiiith century) these two sections of the Matghara had as neighbours in the west, the Zawarga of Fazes and of Todla. 3. The Matghara of the oases of the Sahara settled in the region of Sirjimnassa and in the town itself, in which they constitute the main element of the population, in the region of Figgig; in Tuwen, Tamaninit and as far away as Wallan (Ouallen). At the beginning of the Arab conquest, the Matghara are represented by Ibn Khaldun as settled and living in huts built of branches of trees (khatâ';) those of the Sahara lived in fortified villages (khatrû); and devoted themselves to growing dates. In the time of Leo Africanus, the Matghara of the Central Atlas occupied about fifty large villages.

Like other peoples belonging to the group of the Banû Fatûn, the Matghara took an active part in the events at the beginning of the Arab conquest and weakened themselves considerably in the fighting. As soon as they had become converted to Islam, a number of bodies of Matghara went over to Spain and settled there. Later, like their brethren, the MA'támâ, they adopted the principles of the Sûfîya; one of their chiefs, Masa'm, provoked the famous schismatic rising of 740, which was the beginning in Morocco of the Baraghwâta heresy. In a list of the tribes which adopted this heretical teaching we find the MA'tamâ and Matghara of the Central Atlas, as well as the Banû Abî Naşr, the modern Ait Bû-Nejâ, the eastern section of the Ait Warrain.

With the rise of Idrsî, the chief of the Maghara, Bahâlî, declared himself at fist a supporter of the caliph of Baghâdâd, Harûn al-Rashîd, then rallied to the new dynasty. Later and down to the xvith century, the Matghara of the Central Atlas do not seem to have played any part in politics; they retained their independence at least. From the xvith century, they seem to have been supplanted on their territory by invaders from the south. As to the Matghara of the shore, settled in the region of Nadrâ'a, their alliance with the Kûmûyû gained them considerable political importance, when the latter became supporters of the Almohads. It was at this period that they built the fortress of Tawunt. They then rallied to the Marinids but this brought upon them the wrath of the ruler of Tlemcen, the celebrated Yaghmurûsâm, who finally crushed them.

Ibn Khaldûn uses the form Madghara instead of Matghara; in Moroccan texts of late date we also find Madghara.

Bibliography: al-Bakri and al-Idrisî, inscriptions; Ibn Khaldûn, Kitâb al-'Ulûm, transl. of Slane i. 237—241: Leo Africanus, Description de l'Afrique, ed. Scherer, ii. 54 and 342; iii. 71 and 225. (G. S. Colis)

MATHAL (A., pl. anathâl) is originally by etymology, like the Eth. metûl, metûâ, Arm. mathûl, and Hebrew mîshâl (see O. Eissfeldt, Der Marschal im Alten Testament, Beiträge zur Z.A.T.W., xxiv., Giessen 1913), simile, comparison; as popular sayings commonly appear in this form, the term was applied to them in general and thus obtained the general sense of proverb and popular saying. The fondness for similes and allusions, which is common to all primitive cultures, survived among the Semites and especially among the Arabs with great tenacity and therefore plays an important part, even in the higher forms of literature. The simplest form of metaphor usually draws parallels between man and beast. Of a sleepless man, one says bâta bi-talâtî anâdâ (or anâdâ); he spent the night like a hedgehog" (Abû Hûlâl al-'Askari, Mat'âmâ al-Anfûl, on the margin of Maidâni, Cairo 1310, i. 193, 15; Liân al-'Arab, iv. 437) and with the downrightness beloved by the Arabs the good example and educative influence of a leader or father is described as bâta kînâmâ fa 'taâlîbî al-âmîrâr; or bâta fâdîrân fa-bâta fâdîrû fâdâmâ (al-Maidâni, Mat'âmâ al-Anfûl, Cairo 1310, i. 64, 65). The comparison to animals is also used to indicate veiled mockery of unpleasant social conditions as ba-lughâthâ fi ar陷入 yastanîrû "here among us the sparrow plays the falcon" (al-Askari, i. 193, 20). Such proverbs are sometimes developed into regular fables (see Brockelmann, Fabel und Tiermarchen in der alten arabischen Literatur, i, 90—128). Among them we find much that is common to all nations, which is hardly ever possible to trace back to a single source (cf. the discussion on the "goat and knife": Z. D. M. G., xlvii. 737 sqq.; xlvi. 86 sqq.), unless the origin is as well known as that of the two bulls from the Kitâla wa-Dimna, which is given by al-Ashkari, i. 47, 16 sqq. and therefore 'Ali cannot have applied it to its relationship to 'Othmân.

But the circumstances of everyday life also provide material for similes which usually take the form of a'ain min, as in those which al-'Askari and al-Maidâni quote at the end of each chapter of their collections of proverbs arranged in alphabetical order. Even quite banal happenings may pass into proverbs (fa-ulahat or fâdîrân mâtâlân or durûba bihi 't-mathûl, as so many Arabic stories end), like the story of Khâis of whom we know no more than that his aunt once gave him as a surety and never redeemed him (al-Mufa'dal b. Sulama, al-Fâghîr, ed. Storey, p. 24, N°. 61); or the story of the poor woman selling butter of whom a mugger took advantage after inducing her to hold two skins of butter firmly together in her hands (al-Fâghîr, p. 79, N°. 147). But the memory of important historical events is also perpetuated in proverbial sayings, like that of the fratricidal war between the Bakr and Taghlib provoked by Ba'sîs (al-Fâghîr, p. 76, N°. 157); al-Mufa'dal in his al-Fâghîr, p. 217—231, and al-Maidâni, i. 38—47, therefore give most of the notable battles of the Arabs in their lists of proverbs and proverbial allusions. Many incidents of the Muslim period have attained equal renown, like Mu'âwiya's exclamation of joy on hearing that al-Ashâr had been poisoned (see above, i. 594; al-Maidâni, i. 8. 15) or the memory of the fine voice of the two singers of the bon vivant Caliph Yazid b. 'Abd al-Malik (al-Maidâni, i. 137, 12). It is however not always epoch-making events that are handed down to posterity in this way, like the stormy night in the time of the Caliph al-Mahdi, which provoked him and his retinue to do such penance (al-Maidâni, i. 176, 12); or the story of the defeat and fall of the Khâkân, apparently that of the Khâlût, whom Asad b. 'Abd Allah conquered in the year 119 (737), which, according to Tâbarî, ii. 1616, made a great sensation at the court of Hishâm, while Mufa'dal in al-Fâghîr, p. 80, 11 sqq., refers it to the fighting
against the Khazars, but the historians record no event of the kind among them; or the story of Ma'awiyah's ambassador to the Emperor of Byzantium (Ibn Katlab. 'CYân, p. 238, and the proverb: "Askari, i. 76, 11 sqq.; Maidanî, ii. 72, 4"). Such historical memories are frequently preserved in the form of allusions like the famous sahîfat al-Mutahmainns and the gâsâ Sinimmâr. Many problems of this kind are of local origin, like the allusion to the two equally poor asses of the man from Hira (Maidanî, i. 72, 16) or to the Meccan dandy (Maidanî, i. 127, 1), such proverbial allusions are particularly numerous from Medina (ibid., i. 168, 6; 173, 26; 261, 18; 264, 4; 280, 25; 298, 1), but we also have them from Buya (ibid., i. 145, 26 and 30: a parallel from Kûfâ in DiBâgî, K. al-Hayyânîn, v. 153, 13). Kûfâ (ibid., i. 193, 23, as a rest of Sh骑行i, Wâqî (ibid., i. 97, 9) and Hîms (rubu', i. 190, 22). Men celebrated for particular qualities, as in other lands, are frequently commemorated among the Proverbs in prophetic sayings, but the popular imagination very often invents the representative of such virtues; when Hâlit has to share the reputation for liberality with the ljâd Kâb b. Mânî and Harîm b. Sinâm (Askari, i. 223 sqq.; Maidanî, i. 123 sqq.), this is due to tribal rivalry! There are therefore various typical representatives of liberality ("Askari, ii. 251 sqq.; Maidanî, ii. 231 sqq.), of percipacity (Maidanî, i. 210 sqq.), and also of stupidity (Dugha: al-fâkhr, p. 24, N°. 58; Maidanî, i. 147; Shâwla: al-fâkhr, p. 71, N°. 148: Gothamites of Arabia, the people of al-Hajjâr: Maidanî, i. 178, 10; Abû Ghâlîshân and others in Maidanî, i. 146 sqq., 150 sqq.), the best known is Dîwâb, around whom have crystallised the stories of a wandering rogue in the Arab literature (cf. Schwally, Z.D.M.G., lvi. 237†), but we also have the Omâny governor of the 'Irâk, Wâsîf b. 'Omar al-Thikâfi (Maidanî, i. 99, sqi). Memories of Penelope seem to have found their way to Arabia in a completely perversion form ("stupidity is the woman who continually undid her weaving", which is found as early as Karân, vi. 94: cf. Askarî, i. 283, 7; Maidanî, i. 172, 4) and of Siyamsh b. "Abî Yâver than he who turned the rock" (Maidanî, i. 287, 15), among the typical representatives of stupidity and greed respectively.

But among Arabic proverbs there are a few the meaning and origin of which had already been quite forgotten at the time they were put on record, so that Arab writers invented all kinds of explanation for them from pseudo-history, with a particular fondness for the Amalekites; not infrequently a choice is given of several stories, as for the "wasner" (Maidanî, i. 34, 29), the "gatherer of acacia shoots of the tribe of 'Anazî" (ibid., i. 49, 37; 288, 17, "the repentance of al-Kusâ""). We also find widely disseminated motives, as in the story of Khûzâ'a which the Prophet is said to have told his wives (al-fâkhr, p. 157, N°. 280). In many cases the learned editors have gone so far as to invent stories because they passed over the simplest explanation as too easy. Thus saying hidâ, hidâ, midâlmi'uka probably only means "Hawk, hawk, the ball which was shot from the bow before the invention of fire-arms" is behind you".

1) The Vurâdî Dhûbâ al-Kubrâ, ed Hikmet Bek Sharîf, Cairo 1346 (1928) are for the most part from the Turkish Nasrûdîn.

which Abû 'Ubâda refers to a children's game; al-Kalbî and al-Shârîki however take Hidâ and Bûnûnâ as names of South Arabian tribes who had fought with one another (al-fâkhr, p. 38, N°. 93). Similarly the same writers invent stories of the time of the Amalekites in which Himûr is a proper name to explain forâkahuq gâsâ in hisâmîn, which al-'Asmâ'î rightly takes literally (al-fâkhr, p. 12, N°. 18).

The number of proverbs is naturally very large in which maxims of life, often very trivial, are laid down; they include same which owe their origin to social conditions in Arabia, like "assist thy brother whether he is right or wrong" (al-fâkhr, p. 119, N°. 259). They also include much that is the common property of all nations, the origin of which can rarely be demonstrated, as in the Arabic pendant to the definitely Roman Res veniet ad triarios in al-Akârî, ii. 32, 16. The subject can only be touched on here. To the references given by the writer in Ostas. Zeitchrift, viii. 66 sqq. we may add a few Arabic parallels to our proverbs: "Walls have ears" (Maidanî, i. 57, 32); "Speak of an angel and you hear his wings" (ibid., p. 57); "Hammer and anvil" (ibid., p. 58), "A liar must have a good memory" (ibid., i. 49, 23); "Festina lente" (ibid., i. 87, 22); "Out of the frying-pan into the fire" (ibid., ii. 25, 9); "To fall between two stools" (ibid., ii. 64, 7); "To be on tender-books" (ii. 74, 4); "Hoist with his own petard" (ii. 168, 12); "A bird in the hand is worth two in the hush" (nafîwar fi 'l-kafî fi khairun min kurbyâin fi'l-dawâwîl; al-Hamadânî, Rasîl, Bairût 1890, p. 44, 3).

Among sayings which are internationally in character those disseminated by religious communities occupy a special position. It is of course not an accident, but is linked with the importance which, is becoming more and more evident, of Christianity for the intellectual life of ancient Arabia, that New Testament sayings are common among Arabic proverbs, notably from the Sermon on the Mount, like Mt. 7, 2 = Maidanî, ii. 67, 17; Mt. 7, 15 = Maidanî, i. 192, 23; Mt. 7, 16 = Maidanî, i. 34, 336; Mt. 11, 2, 18; Mt. 11, 24 = Maidanî, ii. 68, 1; Mt. 7, 23 = Maidanî, ii. 67, 26; Mt. 23, 24 = Maidanî, ii. 259, 16; Mt. 6, 7 = Maidanî, ii. 73, 10. On the other hand, except for a few echoes of Proverbs and Eccles. in which the origin is uncertain, the only one from the Old Testament is Maidanî, i. 228, 90, which looks like a quotation from Deut. 13, 15. From Christian legend we have also the proverbial martyrdom of Dîrjús (al-fâkhr, p. 256, N°. 517) and the story of the Seven Sleepers which appears in various forms (al-fâkhr, p. 109, 239; Maidanî, ii. 196, 14; Kaîl, Anawî, i. 61; cf. M.S.S. O., v. 228). On the other hand, of Old Testament figures we find only Noah once in a late proverb, probably native to Möûd (Maidanî, ii. 250, 1). The Mandaean Creator-deity Fiḻâl must have gone into the proverb Maidanî, ii. 62 sq. from the verse of Rûbâ' quoted there, to whom it was welcome, like other foreign matter, to give an appearance of learning (see Aâhwart. Der Divine der Rûbâ', xv.). Later tradition also associated with Lûkân [q. v.], the wise hero of Arab antiquity, sayings attributed to Aâkâr and common to many nations.

Although the proverb is from its nature anonymous, learned tradition often tries to find authors. Many proverbial sayings are therefore attributed
to the Prophet and his Companions. The Amthāl al-Nābi, which circulated outside the canonical collections of Tradition, was collected by Ibn Khaldūn al-Rāmūsī (Fihrist, p. 155) and Abu Hillal al-Askari; al-Ma'dāīnī accuses the latter of being uncritical and quotes in his preface as an example of genuine Ḥadīth the parable of the good and bad companion in Bukhārī, Ṣaḥīh (ed. Khehī, ii. 17). This does not prevent him however from putting in his collection a series of sayings of the Prophet, as his predecessors had done, and at the end of his book compiling a special chapter of them, which also includes sayings of the first Caliphs. Special popularity was always enjoyed— not only among Ṣaḥīhis—by sayings attributed to ‘Ali. Ibn Ṭuṭalīn in his Čīra‘īn al-Ākhārīn, in the fifth book, K‘ al-‘Imāma ‘l-Bayān (cod. Kopr., fol. 155b), already uses a collection of this kind, such as was current in various recensions (ano- nymous in al-Tuhfa al-Sulaimānī, Stambul 1302, p. 107—114). e. g. in order by ʿAbd al-Wahhāb b. Muhammad al-Āmīdī, entitled Ghuwār al-Ḥilāma wa-Durar al-Kalīm, lith. Bombay 1280 and also edited in Persian and Turkish (s. i. 209, and also W. Yule, Apeology of Asia the son of Aboob Talib [Mattīb bulk Tāliʿ] with an early Persian paraphrase and an Eng. translation, Edinburgh 1812; Sad Kūlīmānī Mushārī b. Muttabakīyān Amīr al-Muʿīminīn, Theran 1304; Nakhr al-ʿAllāī, the second coll. in Fleisher, with Turk, paraphrase by Muʿallim Nādīj entitled Amthāl ‘AI, Stambul 1313, with Turk. comm. by Nasīb entitled Rihātīyī Dāmāthī, Stambul 1257).

Numerous also are the proverbs which have a metrical form, while it is impossible to say whether the poets in whose ājaib they are, originated the idea or only gave it its form. Al-Sukkārī (Fihrist, p. 78) and ‘Uyayna b. al-Muʿātshī (ibid., p. 48108) collected such āvaʿa‘āla. A fine collection has been made by al-Iṣbāḥī in the Kitāb al-Mustaṱaf, Cairo 1320, i. 27 sqq. Among such metrical sayings are some by the greatest poets of the pagan period like Tārāfī (l‘Amīkhir, p. 254, 509; al-Ma‘ādīnī, i. 161), Imrā‘alākās (‘Aṣkārī, i. 255 = Maidaṇī, i. 153), Līdūb (‘Aṣkārī, i. 37) and by later poets like al-Farāzākī (l‘Amīkhir, p. 250, Nö. 48; al-‘Aṣkārī, i. 46) and Muṣ‘ī b. Iyäz, whose two palms of Ḥulāwān (‘Aṣkārī, i. 297, 452; Ma‘ādīnī, i. 297) are famous. From a misunderstanding of a verse of Farāzākī’s in which the way to ‘Usūlūn is mentioned (Maidaṇī, i. 38; quoted by Yākūt, iii. 736), this verse became typical of taking the wrong way. Al-Mutannahī’s verses that have passed into the language have become proverbial. When, after ʿĪsābī b. Tākālānī, d. 382/1574, 995 (Yākūt, Ittāhās, vi. 501—518; Suyūṭī, Ruyhāt al-Wulās, p. 35), in al-Amthāl al-‘āla‘a min Shīr al-Mutannahī (Fihrist, Cairo 2, ii. 23).

Proverbs excited the interest of the learned from the very beginning of Arabic literature; historians and philologists emulated one another in collecting and explaining them. Thus we find among the sources of the works that have survived to us the old historians and genealogists like al-Shārī b. al-Kūṭāmi (Wustenfeld, Geschichtsschreiber, Nö. 23) and ‘Awānī b. al-Hakam (ibid., Nö. 27) and Abu ʿl-‘Iṣbā‘ī al-Ya‘zan (ibid., p. 36; al-‘Amīkhir, p. 255); the two former very often as authorities for Ḥishām b. al-Kalbī, to whom with the great monographist Muḥammad b. Ḥabīb (Wustenfeld, Nö. 59), Zuhāir b. Bakkār (ibid., p. 61) and al-Ma‘ṣūlīn (ibid., p. 47); we owe most of the legendary and historical material. Almost all the philologists of note have devoted special works to the subject. To their interest in language is to be ascribed the fact that the limits of the scope of the subject are extended to include phrases and idioms which have really nothing to do with the proverb and, as for example la‘ananik ʾīšā‘ā (al-‘Amīkhir, p. 7), do not seem to require explanation; but we owe, for example, to al-Mufaḍḍal the interesting note that it had become a habit with some Syrian Arabs to use the Greek χριμ, “says he”. The oldest work of the kind that has survived is the Kitāb al-Amthāl al-Mufaḍḍal al-Dabbī († 710 = 786), pr. Stambul 1300. The next oldest, that of Abū Ubaid al-ʿAskārī b. Sallām al-Harawī (d. about 223 = 837), is preserved in a number of Stambul MSS. (s. Rescher, Z.D.M.G., lxv. 517, Nö. 43; M.S.O.S.A., xiv. 6; M.O., vii. 123), and in the Escurial (Derenbourg, Lévi-Provençal, Nö. 1757), also the commentary by Abū Allāh al-Bakrī (d. 487 = 1094), ibid., Nö. 526 and Lālīlī, Nö. 1793, printed as No. 1 of the al-Tuhfa al-Bakrīya, Stambul 1302, p. 2—16; on the other hand, the work dealt with by E. Bertheau in his Diss., Göttingen 1836 (s. Freytag, Arabum Proverbia, iii., vii.—x.), is much more recent. The Kitāb al-‘Amīkhir of al-Mufaḍḍal b. Salama, a pupil of Ibn al-ʿArabī (d. 231), has been edited by C. A. Storey for the De Goeje Found. 1 edyn. 1915. The specially numerous proverbs of the form af‘īb min were collected by Ḥamza ʿl-Iṣfahānī (d. between 450—460 = 960—970 in a work which only survives in a unique MS. in Munich (see Mittwoch, in M.S.O.S.A., 1909, p. 33 sqq.), which was used by later writers, and copied word for word by al-Ma‘ādīnī for the corresponding section of his book. Abū ʿĪsā b. ʿAskārī (d. after 295 = 1005) compiled the Qamārat al-Amthāl, extant in several MSS. in Stambul (see Rescher, Z.D.M.G., lxv. 513; M.F.O.B., v. 501; M.S.O.S.A., xiv. 36) and printed at Bombay in 1306—1307 as well as on the margin of Maidaṇī (Cairo 1310), in which an attempt was made for the first time to annotate every proverb from the philological and historical point of view, excluding all post-classical material, to which Ḥamza had allotted considerable space. Ma‘ādīnī [q. v.] collected the material compiled by his predecessors in his Madmūn al-Amthāl and expanded each section by an appendix on modern proverbs. This has since then been regarded as the standard work on the subject and not even Zamakhshārī’s Kitāb al-Muṣālikā b l‘Amthāl, although also much read (to the MSS. mentioned in G.A., i. 262, xiv.) could according to Ḥādījī Khālisf, Nö. 11421, permanently affect its popularity. Al-Mawardī’s [q. v.] book, including the different collections of sentiments made by al-Zamakhshārī, was from the first intended to deal rather with the literature than with the language of the people.

It was not till the sixṱth century that interest in the east was again aroused in proverbs under the influence of European scholarship. Almost all works on modern Arabic dialects contain collections of proverbs (cf. the lists which could of
course now be very much extended in A. Fischer, M.S.O.S. Am., i. 198—199 and E. Littmann, Arabie (Droste) collected by Mrs. A. P. Singer, Cairo (1919, p. ix); in addition to the works by modern Orientals there quoted we may mention: Ibrāhīm Sinārī, Lūbnānī, al-Durra al-zaytīna fī l-Anghāl al-adalma, Beirut 1871; Muḥammad Ef. Ṭalār al-Baṣīrī, Kītāb Anghāl al-mukalāfīn min 'Aqāma.[4a] Miṣrī (al-khomādānī ḥādāmānī fī ḫi-Mulqamar al-ṣārīn al-Dūnā bi-Bīlid al-Sūd wa l-.sequence of the Korān (single revelation and all revelation as a whole).

Spranger (Das Leben und die Lehre des Maḥmūd, Berlin 1801, i. 405 sq.) explains the word from the Hebrew ḥādānā to repeat" and the conception from Sūra xxix. 24, from which it would appear that the matṭănāt are part of the stories of punishment. This view has been adopted by D. H. Muller, Die Propheten in ihrer ursprünglichen Form, p. 138 sq.; H. Grimm, M., p. 137, and Mohammed, ii. 77; N. Khodakulakik, in W. Z. M. M. xlv. 66 sq.; J. Horovitz, Keramicke Untersuchungen, p. 26 sq. This would imply that, at least when Sūra xv. 87 was revealed, there were seven of these legends of punishment.

Early evidence of the use of the word outside of the Korān is found in a poem of Abu l-Aswad al-Duṣālī (text and transl. by Nöldeke, in Z.D.M.G., xvii. 36 sq.; cf. theoren Bevan, in J. Res, of A., 1921, p. 584 sq.; Horovitz, op. cit.). Here the matṭănāt are mentioned along with the Mṭāna, “the seven verses” along with the “hundred verses” Sūras of the Korān. The exact content of these groups is unknown.

In conclusion it may be mentioned that Goldzīher (Z.D.M.G., i. 366 sqq.) has called attention to a term matṭănāt, which occurs in non-canonical tradition and is obviously a new formation modelled on the Hebrew mishānā. (A. J. Wensinck)

**MATHAWI**, a form of poetry in which each ḥaṭ (verse) is normally a self-contained whole, grammatically complete and with the two miṣrā's (hemistichs) rhyming with one another and not—except accidentally—with the verses that follow. In Persian, Turkī, and Urdu, poetic compositions of any length dealing with epic, romantic, ethical or didactic themes are of the mathnawi form, which probably originated in Persia. Dawlātshāh (ed. E. G. Browne, p. 20) relates a tradition that in the time of the Dāwalīmāt Aḏud al-Dawla (d. 572 = 982) there was still to be found inscribed on the palace at Kašr-i Shīrīn a ḥaṭ in "Old Persian" having the two hemistichs rhyming. There would appear to be no pre-Islamic Fahlawi verse of the kind extant, and the mathnawi form may be merely a development or expansion of the matṭā of the ḫūṣuda or ḥaḏādā. However that may be, in the oldest fragments of Muslim Persian literature that have come down to us, there are examples both for the mathnawi as of the other forms of verse. Of these fragments the oldest belong to the work of Abū Shukrūr al-Baḥrī, who is said, probably on that account, to have invented the genre. They appear to be parts of a series of narrative mathnawis (cf. Assai's Lughat-i Fura, ed. P. Horn, p. 29 of the Persian, and also p. 22 sqg.). Alongside of them are to be found sufficient portions of the work of Rūḍagī (a later contemporary of his), to indicate that he also used the same form
for a translation of the Kalila u-Dimna (Asadi, op. cit., p. 19 sqq. and Dawlatshah, p. 31). There is also a complete in the hazaf metre indicating an erotic mathnawi (Asadi, p. 8; cf. Ehs. Rudi, in N. G. W. Gutt., 1873, p. 735 sqq.).

The first complete poem that has survived of the genre is the Shab-nama, begun by Da'khi and completed by Firdawsi. Actually, apart from the arrangement of the rhyme, it is not of the regular mathnawi type. More characteristic is Firdawsi's Yüsuf u-Zalikha, composed in the same metre (the muta'far rib). It begins with a number of introductory sections of which the first is in praise of Allah and the rest are headed respectively, "In praise of the Prophet", "In description of the king of Islam", "On the cause of the revelation of the Sûra of Joseph", "On the reason for setting down this narrative", etc. Then comes the story proper, commencing with the description of Jacob's working for Rachel and pursuing its way through the various episodes of Joseph's career until he becomes the home of the viceroy Potiphar, whose wife Zalikha falls in love with the youth. When he refuses her advances she denounces him for wizardry to her husband. Here is introduced the often illustrated incident of the Egyptian ladies who, at a feast to which they had been invited by Zalikha, catch sight of Joseph and are so astounded by his beauty that, without being conscious of what they are doing, they peel the skin from their hands instead of keeping their knives for their oranges. Then comes the account of the imprisonment of Joseph, the events that lead to his release and exaltation, the confusion of the wicked brethren, the repentance of Zalikha, her reunion and marriage to Joseph, and the death of Jacob.

A contemporary of Firdawsi's, U'suri, is credited with a mathnawi romance which has not survived: Wânik u-Adhira. What purports to be a version of the story is given in a Turkish mathnawi by Lâmi (d. 940 = 1533), according to which, Wânik, a priest in a fire-temple, is described as having fallen in love with Adhira, a maiden devoted to the cult. They are forced to part; Adhira going to the frozen regions of the North and Wânik to the torrid lands of Ethiopia. They pine away in separation, and dying are turned into stars. The maiden becomes Virgo holding Spica in her hand, while Wânik becomes Arcturus. The story bears marks of being of Pahlavi origin, the Arabic names being only translations.

Of mathnavis which have survived there follow chronologically two works of Nasiri Khusrav, namely the Rawshâna-nâma and the Sâdâha-nâma, two ethico-didactic poems written in the hazaf metre and similar in time is usually put the romance of Wîs u-Râmî described by 'Abînâ to Fâkhr al-Din Gurghâni (d. 440 = 1048), who is said to have derived it from the Pahlavi. In the version which has come down to us (ed. W. N. Lees, Calcutta 1865), we have a tale of passion unrequited, which Pizii (Poeia Persiana, ii. 88) characterizes as a vulgar product of India in Akbar's time. In the tale, Wis or Wisa, the wife of Mabod, king of Merw, has for her paramour her husband's brother Ram or Ramin, who proves unfaithful to her but in the end marries her after Mabod has been killed. If the work is genuine, it marks a step in the differentiation of the romantic from the epic mathnawi, being composed in the hazaf and not the muta'far rib metre which had hitherto been common to both.

The true creator of the romantic mathnawi is Niazmi of Gandja, who, after beginning with the composition in that form entitled the Mushsân al-Asrâr — a collection of ethical and religious maxims interspersed with anecdotes, — wrote in succession the four other works which form his Khoomsa or Pandj Gandji. This quintet provided the model for all subsequent mathnawi writers. Strictly speaking, only the second, third and fourth of them are romances; namely (a), the Khusrav u-Shirin, the story of the love of the Sassanian prince Khusraw Parviz for the Christian princess Shirin, who is also loved by the mighty builder and engineer Farhad, and of the latter's betrayal and tragic end; (b), the Lâlik u-Mâdân-nâma, the scene of which is laid in the desert and which shows the two lovers prevented from union by the hatred of their families for one another; and (c), the Haft Paikar, which has Bahram Ghr as its hero and consists of seven tales, each told to the king by one of his seven favourite wves. The Sîkadur-nâma, which forms the fifth of the group, treats of the life of Alexander in epic style, but with a mystical touch in the later passages which makes him a prophet as well as a conqueror. Each of the five mathnavis is prefaced by introductory sections similar to those in Firdawsi's Yüsuf u-Zalikha, with the necessary changes for the names of patrons etc. and with a further section headed "On the mîrâ'î of the Prophet" added in the works which follow the Khusrav u-Shirin. Every imitator of Niazmi's mathnawi copies him in this respect as in others, so that even the 18th century Judeo-Persian Danâl-nâma (by Khojâda Bahâr, British Museum, Ms. Or. 4743) has this introductory matter, though Mose is substituted for Muhammad in the section devoted to the Prophet.

The chief imitators of Niazmi are, in Persian, Dzami in Turkish, Shâhî with his Khusrav u-Shirin and Fa'dlî with his Lâlik u-Mâdân-nâma; in Turki, Mir 'Ali Shir Nawârî with his Khamsa; and in Urdu, Amin with a Yüsuf u-Zalikha, Tabâdli with a Lâlik u-Mâdân-nâma, etc. (cf. G. de Tassy, Auteurs Hindoustanis, Paris 1885, p. 50 sqq.).

The Mathnawi par excellence, i.e. the Mathnavi-i Ma'nawi of Djâlî al-Dîn Râmi, is in a class by itself, being a long medley of the doctrines of Sufism combined with parables, allegories, and pseudo-historical narratives. It is without the preliminary sections characteristic of the romantic mathnawi.

Arabic contains no poems of the mathnawi genre, but poems having the two mîrâ's of each haft rhyming together independently of the rest are known. The arrangement of the rhyme is known as muzadderja. Short specimens translated from Persian are quoted in Tha'âlibi's Yatânat al-Dahr (iv. 23), and there are longer compositions, metrical grammars, by Hariri (Mu'âth al-Fârâbî) and by Muhammad b. Mâlik (Kitâb al-Alfiya) (for both of which see de Sacy, Anthologie Arabe, p. 134 sqq. and 145 sqq. of the Arabic text and p. 325, 356 of the notes).

The metres normally associated with the mathnawi form are those used by the masters in their compositions: e.g., in addition to those mentioned above, the sarr and khofû' used by Nizami for Mathnawân al-Asrâr and the Haft Paikar respectively;
and the rāmaḥ, used by Dījāl al-Dīn Rumi in his Mathnawī and by Farid al-Dīn Āṭār in the Maṭṭāk al-Ta'īr.

Gibb, History of Ottoman Poetry; and Agha Ahmad 'Ali, Haft Aṣma'n (Bibliotheca Indiae), Calcutta 1873. (R. Levy)

**Mathurā**, name of a city, situated in 27° 31' N. latitude and 77° 41' E. longitude, and of a district of the same name in Northern India. The site of the city was of importance in the Buddhist period, as is proved by the numerous inscriptions and pieces of sculpture that have been found there. In later Hindu times it attained sanctity as the reputed birthplace of the god Kūnāḍh and the temples erected there acquired great wealth and reputation. In 1017 Mahmūd of Ghazna [q.v.] captured the city and levelled all the temples to the ground; there is no further record of the city until the reign of Sikandar Lodi, Sułṭān of Delhi (1438-1516), who destroyed all the temples that existed in Mathurā in his time. The city was practically refounded in the reign of Akbar, who visited the sacred site and gave permission for the erection of four temples, the tuns of which still exist. In 1666 Awrangzēb destroyed a vast temple that had been built in the reign of Lūhāngār and changed the name of Mathurā to Islāmābād, but like many other Muhammadan designations of towns in India it failed to displace the original name of the city. With the breakup of the Moghul empire after the death of Awrangzēb, Mathurā suffered from the political confusion in which all the country between Delhi and Āgra was involved, and at one time or another passed into the hands of the Dāhips, the Mārathas and finally the British.

In the centre of the modern city stands the mosque erected in 1661 by 'Abd al-Nabi Khan, who was appointed governor of Mathurā by Awrangzēb in 1659. The Muslim number 13,475 out of a total population of 56,665 (in 1921).

vi-MATIN. [See Allāhī.]

**Maṭṭāk**. Maṭṭāk, ascension. Two kinds of ascension are distinguished:

1. Ascension in the sphaera recta R. — Modern astronomers use the expression right ascension for all points of the heavens; the older astronomers only for those of the ecliptic. The right ascension \( R \) is found by drawing a circle of declination which is perpendicular to the equator through the corresponding points of the ecliptic. With us and as a rule with the Arabs the right ascension of the arc of the equator is between the beginning of Aries, the vernal equinox and the intersection of the circle of declination with the equator. Many Arab astronomers calculate the ascension \( R' \) from the beginning of Capricorn; then \( R' + 90° \) gives the degree of the equator which rises at the time at which the corresponding degree of the ecliptic culminates. The ascertaining of this is, according to Suter, of importance for certain astrological purposes. If in fig. 1, the point \( A \) or the star \( S \) of the ecliptic rises above the horizon, the point \( B \) of the equator, the poles of which are \( P \) and \( P' \), rises at the same time; \( \gamma B \) is therefore the ascension of the arc \( \gamma A \) of the ecliptic in the sphaera recta.

One also talks of the ascension of a sign of the zodiac; it is the arc of the equator which rises contemporaneously with the 30° of this sign. The longitude of the ascension generally varies with the signs, but from time to time is the same for those which are similarly situated at the beginning of Aries or of Libra, and for those which are at the beginning of Capricorn or of Cancer.

The maṭṭāk in the sphaera recta are therefore so important (for astronomical purposes also) because in stereographic projection they give the curves corresponding to the degrees of the ecliptic, according to which the ecliptic, which is projected as a circle, is to be divided on the astrolabe.

Tables for the right ascensions have been prepared by numerous Muslim scholars, e.g. by Muḥammad b. Mūsā al-Khwārizmi, al-Battānī, al-Bīrūnī etc.

If the point being observed does not lie on the ecliptic, the maṭṭāk (often with the addition of al-buriyū = the sign of the zodiac): \( fi 'l-Falak al-mustak̲āb \) (M. in the sphaera recta); \( fi 'l-Burūdi fi Ḫaṭṭ al-Istiwa' \); \( M. fi al-Burūdi bi-Ḥaṭṭ al-Istiwa' \); \( M. fi Mafffī Ḫaṭṭ al-Iṣṭī'a \); \( M. al-Kura al-mustak̲āba \); \( M. al-Kura al-muntajibah \) or \( fi 'l-Kura etc \); \( M. al-istī'a'ya \), and al-falakīya.

If one calculates from the degree of Capricorn, the right ascension is also called maṭṭāk al-kubba (i.e. Kubbat al-Arj, "M. of the dome"; namely of the dome of the earth).
2. The ascension obliqua (fig. 2) of a point $A$ in the ecliptic at any point is the curve $\gamma B$ of the equator the poles of which are $P$ and $P'$, between the beginning of Aries and the horizon at the moment in which this point rises (for any particular star $S$ substitute "star" for "point of the ecliptic"); it is often also made to begin at Capricorn.

Tables for the ascension obliqua can only be given for particular places as they differ from place to place. The ascension obliqua however can easily be calculated from the ascension recta.

The ascension obliqua is called: \(\text{Maghāri}\) al-Balad, al-Balad, \(\text{M. al-Dālūm}\) (of the clime), \(\text{M. al-Midūm}\), \(\text{M. al-\text{alā}yim}\), \(\text{M. al-\text{al}f}^2\text{k}\), \(\text{M. al-\text{al}g}^2\text{k}\), \(\text{M. al-\text{al}i}^2\text{k}\), \(\text{M. al-\text{al}f}^2\text{k}\). We may also note the terms \(\text{M. al-Nāṣir}\) and \(\text{M. al-Wāṣit}\).

Ascension recta might perhaps be translated direct or spherical ascension and ascension obliqua by local ascension.

Arab astronomers, following Ptolemy, have proposed the following formulae for the ascension obliqua. If $e$ is the plane of the ecliptic, $d$ the declination of the point $A$ on the ecliptic, $a_1$ its right ascension and $r$ the number of parts (usually 60) into which the radius is divided (with the later Arabs and modern astronomers $r = \phi$) then according to al-\(\text{Khaw}^2\text{rīm}\) and al-Battānī, we have:

$$\sin a_1 = \frac{\sin d}{\cos e} \cdot \cos e, \quad r = \tan \phi \cdot \epsilon + \phi.$$

The ascension obliqua $a_2$ is for the latitude $\phi$.

The ascension obliqua $a_2 = \text{ascension recta} (\phi) \oplus \text{arc} \left(\frac{\sin \phi}{\cos \phi} \cdot \cos \phi\right) = a_1 \pm \arcsin \left(\tan \phi \cdot \tan d\right)$. At the same time it is to be observed that al-\(\text{Khaw}^2\text{rīm}\) (d. about 850) and al-Battānī, who published his book before 900, give the formula with sine and cosine, while Ḥabash al-\(\text{Hāsib}\), who made his observations between 825 and 835, uses tangents and cotangents.

To ascertain the ascension, the above formulae are used if tables are not available. But one can also use one of the many apparatus which are made for the mechanical solution of such problems.

The simplest of these is the armillary sphere (see Nolte quoted in \(\text{Kura}\)) and the globe with the earth (see Schnell quoted in \(\text{Kura}\)) as in both cases the heavens can be used as the largest circles. There are also the monographic methods, in which projections of the sphere of heavens are used, as in the astrolabe (s. J. Frank, \textit{Die Verwendung des Astrolabiums nach al-\text{Khaw}^2\text{rīm}}, Abhandl. zur Gesch. der Naturwissenschaft, etc., Hefi iii., 1922), the universal plane, the Zarkāt plane (see an article to be published later by Mittelberger), Werner's

meteoroscope (\textit{Ioannes Verani de Meteorographia}, publ. by J. Wirschmidt, \textit{Abhandlungen zur Gesch. d. Mathematik}, Heft xxvii., 1913) and the mukantarā quadrants. On the sine quadrants, the system of lines which enable the sine and cosine to be read off, the above formulae can be obtained with the help of the latter (on the quadrants see F. Schmalz, \textit{Zur Geschichte des Quadranten bei den Arabern}, Munich 1929).

Along with the maṭālī, the maghāri also were ascertained. If one is observing, not rising but the setting points, the corresponding curves are called magharib (a table for the latter is given by al-Bīrūnī in the Maṣūdī Canon).

\textit{Addendum.} Among the Greeks and Arabs and European astronomers of the xiiith-xvith century \(\text{apō}^2\text{pē}\) means: 1. the globe or geometrical sphere; 2. the space between two surfaces of two concentric spheres, a shell of a sphere; 3. the circle which corresponds to the assumed path of a heavenly body, i.e. the ecliptic, the epicycle, the eccentric circles. — The Arabic \(\text{kū}^3\text{a}\) has only the first meaning, the word \(\text{fatāk}\) the second and third, the second in the theory of Ibn al-\(\text{Hājī}^2\tilde{\text{m}}\) (see al-\(\text{Khā}^2\text{rā debería}\)).

The spherea recta, \(\text{al-fatāk}^2\text{al-muṭakīm}\) is the sphere of the heavens, i.e. for the inhabitants of the equator; in the Latin translation of the tables of \(\text{al-\text{Khaw}^2\text{rīm}}\) (table 59) it is said of the ascension in the spherea recta "horoscopus secundum terram Arum" (Arin is a corruption of Arin-\(\text{U}^2\text{d}^2\text{j}^2\text{a}^2\text{i}^2\text{n}^2\text{y}^2\text{i}^2\text{n}^2\) in Sanskrit, which was erroneously taken to be the \(\text{*bub}^2\text{b}^2\text{b}^2\text{a}^2\text{l}^2\text{b}^2\text{a}^2\text{r}^2\text{d}^2\) of the earth, the centre of the equator and of the inhabited world).

At all places which do not lie on the equator, there is a spherea obliqua so that these are innumerably.

Suter, \textit{Die astronomischen Tafeln des Muhāmmed ibn Mūsā al-\text{Khaw}^2\text{rīm}} etc. [cf. also \(\text{al-\text{Khaw}^2\text{rīm}}\) and numerous works on astronomy. — (I am much indebted to Prof. Nallino for a number of suggestions). (E. WIEDEMANN.)

\textbf{MAṬMĀTA, the name of a Berber tribe, belonging to the large family of the Butr, and brethren of the Maghāta, Kāmā, Lāmāyā, Sādana, Madyūna, Maghāla, etc. They formed with them the ethnic group of the Banū Ḥattīn who, like all the other Butr, seem to have had their original home in Tripolitania.

Our chief source of information about the Maṭmāta are al-Bakī and Ibn Kahlūn. As with the majority of the Butr Berbers, three principal divisions can be distinguished:

1. Elements settled in the eastern Maghārīb not far from their original home: these are the modern Maṭmāta in Southern Tunisia, some 30 miles S.W. of Gābēs.

2. Elements which have settled in the Central Maghārīb: first in the plateau of the Sāra in the N.E. of Mīnās; then having been driven out of this territory by the Žanāta Banū Tūdān, they sought refuge in the mountainous massif of Wānsārī (the modern Ouarsı̇nī).

3. Elements which have migrated as far as Morocco. In the fourth (tenth) century we find them in the country of the modern Kābdīna (to the S.E. of Melilla) and in the upper valley of the Molūa at Amāskūr. Ibn Kahlūn also mentions a little isolated group settled on the mountain
which bears their name between Fas and Sufiyū; there must also have been some of them in the coastal of Taza for a place between Fas and Taza still bears their name. Finally we owe to al-Idrīsī the record of the most western body: the Matmāṭa of Tamsanī.

The Matmāṭa played a fairly important part in the early centuries of Islam. Those of the central Maghrib had adopted Abāḍī doctrines: being conquered by the Sanhāda and Zanāta, many of them migrated to Spain. The most famous member of this people was Sāliḥ b. Salāmān, the famous Berber genealogist, so frequently quoted by Ibn Khaldūn.

**MATN,** (m.), a term with different meanings (cf. the lexic, s.v.), of which that of text, especially that of the text of a tradition, deserves to be mentioned here.

Main occurs in the sense of text already in pre-Islamic poetry and is used in this sense in Arabic literature up to the present day. It denotes especially the text of a book as distinguished from its oral explanation or its written or printed commentary.

In connection with traditions main denotes the contents as distinguished from the chain of traditionalists who handed it down (ṣanā‘).

**MATRAḤ, a town on the Gulf of Oman,** two miles west of Masqat on the east coast of Arabia. The town, which has about 14,000 inhabitants, is the starting-point for caravan traffic into the interior of Arabia and next to Masqat, the most important commercial centre in Oman. The town is beautifully situated in fertile surroundings, has a good harbour, easily entered but little sheltered, from which Masqat can be reached in an hour by boat. The sultan of Oman used to have wharfs for shipbuilding here and the textile industry was not unimportant (spinning and weaving) a fort built by the Portuguese still stands as a memorial of their rule in Oman. According to Wakil-Spell the town used to have 20,000 inhabitants.

(A. Grohmann)

**MATURIDĪ, ABU MAṢĪR MUḤAMMAD B. MUḤAMMAD B. MAḤMūD AL-ḤANĀFĪ AL-MUṬAKALLIM.** Maturidī is the titular head of the Maturidite School of theology which, with the Ashʿarite School, forms orthodox Sunni Islam. The two schools are equally orthodox, but there has always been a tendency to suppress the Maturidī's name and to put al-ʿĀshʿarī forward as the champion of Islam against all heretics except in Transoxiana (Maʿṣūma al-Nakhiri) where his school has been, and is the dominant, representing the views of al-Ḥanāfī wa al-ʿĀshʿarī. Next to nothing is known of al-Matūrīdī's life, but he died at Samarqand in 333 (944), a contemporary of al-ʿĀshʿarī who died a little earlier about 330 (941), while al-Ṭāẖāwī [q.v.], another contemporary, died in Egypt in 331. All three represented the movement, which must have been very widely spread, to defend orthodox Islam by the same weapons of logical argument with which the Muṭazalites had attacked it. Matūrīdī or Māturīrī is a locality (maḥāl, kārva) in Samarqand. Its geographical reality and the identity of Abū Maṣūr al-Matūrīdī are assured by the article Māturīrī in the *Anrāb* of al-Samʿānī (fol. 498b, l. 4; cf. also Barthold, *Turkestân down to the Mongol Invasion*, G.M.S., p. 90, notes 9 and 10; p. 267, note 9, and the Russian references there). The books of Ḥanāfī Ṭabāḏkī give the names of his teachers, but to us they are names only (see Ibn Kuṭūbihāghā [ed. Flügel, Nº. 173] and Flügel's *Hänchen*, p. 271. 293, 295, 298, 513). The Sayyid Muṭraḍī in his little treatise on Māturīdī, inverted in his commentary on the *Ibhār* (ix. 6—14), complains that he has found only two biographies and that both are short (al-tāʿīgīr). Even Vāḥiṭ and his Muḥammad has no mention either of him or of Māturī. Ibn Khaldūn in his sketch of the origin and history of Kaṭāʾin (Maṭādalina, transl. de Slane, ii. 55 sqq.; ed. Quatremère, iii. 38 sqq.) has no place for him and speaks only of ʿĀshʿarī and the ʿĀshʿarites. For Ibn Ḥanẓl (d. 456 = 1064; Flügel, ed. Cairo 1320, ii. 111) the orthodox opponent of al-ʿĀshʿarī is Abū Ḥanīfa and he has no mention of al-Māturīdī. Similarly Shāhrastānī (d. 548 = 1153; Moll, transl. Haarbrucker, i., p. 159; text on margin of Ibn Ḥanẓl, i. 188) gives the views of Abū Ḥanīfa but does not mention Māturīdī. Abū Ḥanīfa, he says, inclined to the Mūṭalīṣites and his followers were even called the Mūṭalīṣites of the 'Arab, meaning, apparently, a form of Mūṭalīṣism consistent with orthodoxy. Similarly the Sayyid Muṭraḍī (loc. cit., p. 13 foot) says that the Mūṭalīṣites claimed Abū Ḥanīfa for themselves and rejected his authorship of one book because it was too fatally against their positions. The truth evidently was that Abū Ḥanīfa (d. 150 = 767) was the first to adopt the methods of the Mūṭalīṣites and apply argument to the foundation of the Faith. Also, from the beginning, his standing was so high that it was simply impossible to call him a heretic. This status continued in the Māturīdite School.

All this goes back to the time before kalām had become a technical term and when fikhr meant both theology and canon law, with the difference that theology was called "the greater fikhr" (al-fikhr al-akbar); see article Kalām above, vol. ii., p. 6726). That was the title of one of Abū Ḥanīfa's books and we have a commentary on it ascribed to Matūrīdī (Haidarībād 1321), the only writing a-typed by him apparently in print. This does not occur in the two exactly similar lists which we have of his books (Saiyid Mataradā, p. 5; Ibn Kuṭūbihāghā, p. 43): 1. Kīlāb al-Tishāḥid; 2. Kīlāb al-ʿAṣīr; 3. Kīlāb Radīʾ al-Din al-Allāh li-l-Kābi; 4. Kīlāb Rāyān al-Wath al-Muṭalaṣī; 5. Kīlāb Tūʾūlāt al-Kūrān. Of these only the last is given by Brockelmann, i., p. 195, 4; the biographers praise it highly. The others suggest only anti-Muṭalīṣite polemic (for al-ʿAṣībī see Horien, *Philosophische Systeme*, by index). As a matter of fact it is only in one MS. of the com-
MĀTURIDI — MĀ WARA’ AL-NAHR

from the Arabian Nights, composed in everyday language an elegy on her old master and at the end of each strophe she said: "O my masters!" Whence the name of this kind of poetry.

From the point of view of metre, the mawāli, a popular form from mawāliya or mawāliyā, is a division of the kastī metre (first orīfe) of which the last verse of each hemistich is ḥālim, ḥālim or ḥālim. In its primitive form, the mawāli consisted of strophes, each of four hemistichs rhyming with one another. Later it was somewhat altered: the strophe contained five hemistichs in which the first, second, third and fifth, but not the fourth rhymed together or it contained seven hemistichs of which the first, second, third and seventh had the same rhyme and the fourth, fifth and sixth rhymed together. The red mawāli is used for war-songs while the green mawāli is used for love-songs. In all cases the mawāli must be in the popular dialect and make use of alliteration.

MĀ WARA’ AL-NAHR (Arab.) (that which lies beyond the river); the name for the lands conquered by the Arabs and subjected to Islam north and east were where the power of Islam ceased and depended on political conditions; cf. the statements of the Arab geographers on Mā wara’ al-Nahr in G. Le Strange, The Lands of the Eastern Caliphate, Cambridge 1905, p. 453 sqq.; W. Barthold, Turkestan (G. M. S., N. S., v., London 1928), p. 64 sqq. The phrase Mā wara’ al-Nahr passed from Arabic literature into Persian. As late as the ninth (xvth) century, Ḥāfiẓ-i Abrāʿ [v. i.] devotes a special chapter (the last) to Mā wara’ al-Nahr in his geographical work. Under the influence of literary tradition, the phrase Mā wara’ al-Nahr was used down to quite recent times in Central Asia itself (Tābur, G. M. S., i., Index; the Orzeg Muḥī, Sīlim, Sprav. Knizh. Samark. Oblast, v. 240 et pass.)

Commentary on the Fīkh Akbar that this work is ascribed to al-Māturidī.

How the theological school of Abū ʿAbd Allāh Muḥāfiz came to be known as that of al-Māturidī we do not know. The epithet al-mutakallim, applied to al-Māturidī, may mean that he was the theologian of the school of Abū ʿAbd Allāh Muḥāfiz as opposed to those who were canon lawyers (ʿibāha). But the two tendencies to accept him and to suppress him still continue. The ʿAdīd of one of his followers, al-Nasaffī, fortified with the commentary of al-Ṭabīb, an Ashʿarī, is the theological text-book of the last two years of the Azhar course and is a final authority in Egypt. Yet when Muḥammad Abū ʿAbdī, the late chief Muftī of Egypt, a regenerator and reformer of Islam, put his views of the development of Muslim theology and of its final position into a course of lectures at Bairūt (Risālat al-nasrī: Exposé de la religion musulmane, traduite de l’Arabe . . . by B. Michel and Mou斯塔fă Abīl Kazīk, Paris 1925) he showed himself a Māturidīite with no mention of al-Māturidī.

The theological school in the two schools are commonly reckoned as thirteen in number; six, a difference in idea (ma‘na) and seven in expression (laṣa). For them in detail see the Siyād Murtaḍā, p. 8 sqq. and Abū Ḥalīfa, al-Kurṣān al-ḥalbī, Hādārābād 1904). They have been studied by Goldziher in his Vorlesungen, p. 110 sqq., and by Horten in his Philosophische Systeme, p. 531 sqq. It is frequently said that these points of difference are slight, but that is not so. The moral position of Abū Ḥanīfa is as plain in them as in his canon law. Al-ʿAshṣārī was concerned only to maintain the absoluteness of Allāh’s will; that he could do anything and that a thing was “good” because he willed it. Future rewards and punishments, therefore, had no “moral” basis. But Abū Ḥanīfa, and after him al-Māturidī and his School, recognizes that man possesses free-will (iḥrāf) actions for which he is rewarded and punished. No explanation is attempted of this fundamental attribution of predetermination and free-will; they are stated side by side as equal, if contradictory, facts. Similarly, while Abū Ḥanīfa admits that evil deeds are by the will (ihrāf) of Allāh—otherwise they could not happen—he cannot bring himself to say that they are by the “good pleasure” (rifq) of Allāh. Further, the Māturidīite School admits the doctrine of “assurance of salvation” and the Ashʿarī does not. A Māturidīite may say, “I am a believer, assuredly” (ḥākh), but an Ashʿarī must say, “I am a believer if Allah wills.” Because, then, of this essential difference in human and divine feeling the School of al-Māturidī has steadily penetrated the School of al-ʿAshṣārī and even the professed Ashʿarī at the present time is, to a greater or less extent, a Māturidīite.

Biography: has been given in the article. But cf. article KĀLĪM. throughout.

(D. B. MACDONALD)

AL-MĀ‘UN, title of Sūra cxvi. taken from Vs. 7 where mā‘un denotes the zakāt.

MAWALIYĀ, MAWALI, means a kind of popular song. Tradition says that this genre of poetry was invented by the people of Wahṣ, but that it was the people of Baghdad who after improving it made it fashionable. It is said that when Ḥārūn al-Rashīd had the most prominent Barmecced massacred, he forbade for lamentations them. One of the slaves of Ḥārūn, so well-known
although to the people of Central Asia the lands in question were on their side of and not across the river.

(W. BARTHOLOM)

ALMAWARDI, Abu 'l-Hasan Allah b. Muhammad b. Harib, a Shafi'i faqih, who on the conclusion of his studies taught in Bursa and Baghdad and after holding the office of chief faqih at Cstwua near Nasir, settled permanently in Baghdad. Here he often acted for the caliph al-Khadir (381–422 = 991–1031) in his negotiations with the Byzants, who then ruled al-Trak; when the Byzantines of Baghdad in 430 (1037–1038) asked the caliph al-Mukhtari to grant them the title of shah (muwali al-muwallid), he expressed his objections in a fatwa and thus earned the enmity of the Byzantines. He died on the 30th Rabi' I 450 (May 27, 1058) at the age of 86.

His works are said to have been collected and edited only after his death by one of his pupils. The following have survived: 1, Tusif al-Kirân or Kitâb al-Nukat wa'1-U'lamâ; MSS. in Kampur (s. Journ. As. Soc. Bengal, N.S., ii. xii.), Fez (Fihrist Madhî al-Karawiyyin, N1. 215) and Stambul (Kilic Sli, No. 90); 2, K. al-Hâdi' al-kullâr f.1 'Allâmâ; MSS. in the Brit. Museum U. 5829; S. Ellis and Edwards, Dict. Ist., p. 227, Cairo (Fihrist, ii. 215) and Stambul (Sulamianâ, No. 436); 3, his most celebrated work, dealing with constitutional law in purely theoretical fashion, disregarding the political conditions of the time (s. A. v. Kremers, Cultuurgeneesk. i. 396; M. Hartmann, Unpolitische Briefe aus der Türkei, p. 242), entitled K. al-Abhân al-Sultanîya, Constitutions politiques, ed. R. Enger, Bonn 1853; Pr. Cairo 1298, 1324, 1327. Translations: Public and administrative regla of the Îslam with an introduction reviewing the passions, in the Government of the Sultan, in the Netherlands-Indies by S. Keizer, s-gravenhage 1862; les constitutions politiques, trad. et commentées d'après les sources orientales par le comte L. Ostrogors, Paris 1900–1906; Les lois gouvernementales en règle de droit public et administratif trad. et comm. par F. Fagman, Algiers 1915; cf. II. A. Amedro, The Malazâim jurisdiction, J.R.A.S., 1911, p. 635–674; 4, K. Nasîbat al-Muluk, MS. in Paris, de Stange, No. 2447, 3, K. Tâbî'î al-Nâşir wa-Tâlîf al-'âsâfîr, on politics and the art of government; MS. in Germany, s. Fertisch, Fbr., No. 1527; 6, K. Kâdi in al-Subki, MS. in Vienna, Consularakademie, Kaff, p. 975, entitled Kânân al-Wâsir wa-Sayyid al-Muâq, MS. formerly in Lamberg's possession, s. Goldthorpe, Arch. xil, Philologia, ii, note p. 14 (the K. al-Wasir in Stambul. Top Kapu 2495) is however, according to Recher, R.O.S., iv. 710 perhaps only a part of No. 4); 7, K. al-'Imam al-Wa'ilûs; MS. in Berlin, Alexvayt, No. 2527; Cairo, Fihrist, p. 270; pr. Cairo 1310, 1330 (cf. Diet. Denkwürdheiten von Asien, ii. 382). Scheiner, in Klâfers Samste Studii, p. 502–513; S. K. Abd al-Âl-K, MS. in Stambul, Sulamiany, No. 581; K. al-Abhân al-Sultanîya, a collection of 300 traditions, 300 wise sayings, and 300 verses in 10 sa'f al-300 proverbs in Leyden, Catalogus, i. No. 582; 10, K. (al-Baghua al-wâlâ'î al-Fâhîm) al-Dûnî wa al-l-Dîn, a work still much read; pr. Stambul 1299, Cairo 1309, 1310, 1315, 1327, 1328, 1339; on the margin of al-Malik's Kâhiratu, Cairo 1316, in India 1315; Uways Wafa' b. 'Abd al-Azîznâni Khânzâde wrote a commentary entitled Minâhî al-Yahûm, pr. Stambul 1328. A synopsis was prepared by Ibn Liyûn a teacher of the vizier Liyûn al-Din b. al-Khâjîb (d. 776 = 1376), Madrid, No. 427. An anonymous synopsis entitled K. Madrîf al-Fadîlî is in the Escorial, s. Derenburg, ii. 748.

(From B. BROCKELMANN)

MAWdüD, Abu 1-Fath Muhammad al-Dawla wa-hûr al-Milla, ruler of Ghazna, was born about 412 (1021–1022). In Mahmarr 432 (September 1042) he was appointed to the government of Balkh with Khwaja Abu Nasir Ahmad b. Muhammad as vizier. A few months later, his father Sultan Marsâd was deposed and Muhammad, son of Sultan Mahmud, was raised to the throne. On learning news of this, Mawdûd left Balkh, took possession of Ghazna, and spent the winter in making preparations for a struggle for the throne with Muhammad. At the end of the winter, Muhammad marched from India to take Ghazna and Mawdûd advanced to meet him. A fierce battle took place on the 3rd Shaban, 432 (April 6, 1041) near Dunpur or Dinewar (modern Fathabad on the Peshawar-Kabul route) in which Mawdûd was victorious. Muhammad, all his sons except 'Abd al-Khâmî, Sulaimân b. Yûsuf, and Nâshîqûn of Balkh were taken prisoners and executed. Mawdûd returned to Ghazna in triumph, but he was not yet the undisputed master of the kingdom. His brother Malikdîd, governor of Multân, was advancing on Ghazna by way of Lahore, but three days after his arrival at Lahore, he died mysteriously on the morning of 10th Dhu 'l-Hijja, 432 (August 11, 1041).

In 435 (1043–1044) Sukhpal, alias Nawalâ Shâh, son of Dîpalî of the Hindusthani dynasty of Waihânî, formed a confederacy with some Hindî Râdja and laid siege to Lahore. Sukhpal was killed in action, and after his death the Râdjas quarrelled among themselves, raised the siege and retired to their respective kingdoms. The Muslims followed them in pursuit and laid siege to the fort of Sonjâst where one of the confederates named Dîpalî Haryâna had taken refuge. The fort was captured and given up to plunder but Dîpalî managed to escape. About 5,000 Muslims who had been imprisoned in the fort were released. The victors next attacked another Râdja called Tâhâ Bâri by Ibn al-Athîr, took his fort and returned to Lahore with immense booty. These victories restored for some time the waning prestige of the Ghaznavids in Upper India.

It was the ambition of Mawdûd to restore the greatness of his empire by conquering the provinces which his father had lost to the Saljûqs in Mahmarr 435 (August 1043) he attacked Khurâsân but was defeated by âlq 'Arslân b. Dâwîd. In the following month the Ghaznavids troops retrieved their reputation by inflicting a defeat on the Saljuq near Bâst, in spite of this reverse they became so powerful that Mawdûd found it difficult to overcome them single-handed. After protracted negotiations, he secured the assistance of the ruler of Isfahân and the Khân of Turkistan, and marched towards Balkh to join forces with the Khân of Turkistan, but he had not gone far
MAWĐUDD — MAWLĀ

when he was taken ill with colic and was forced to return to Ghazna where he died on 20th Rajab, 441 (December 18, 1049), at the age of 29 years.

Mawdūd was a good ruler and was famous for his generosity. Psakān-i Mawdūddi (the Arrow of Mawdūd) is called after him. It is stated that in his wars he used golden arrows so that if the victim was killed, the gold in the arrow would pay for his funeral, and if he was only wounded, it would defray the expenses of his treatment. He was a skilful general, and his premature death put an end to all hopes of crushing the power of the Saljuqs.

(M. Nāzīm)

MAWĐUDD b. ‘IMĀD AL-DIN ZANGI, KūTH AL-DIN AL-‘AḴRĀJ, lord of Mawlā. After the death of the elder brother Saif al-Dīn Ghāzā I [n.v.], Mawdūd was recognised as lord of al-Mawālī through the influence of the powerful vizier al-Djawād [q.v.] and of the commander-in-chief of the army Zain al-Dīn ‘Alī. A number of emirs negotiated with the third brother, Nūr al-Dīn Maḥmūd, who lived in Jālzāb and seized the town of Sindār, and Mawdūd began preparations for war. The vizier however, who feared not only Salābūn but also the Franks, succeeded in dissuading him, whereupon Nūr al-Dīn handed over Sindār to his brother and was given Ḥunṣ and al-Rūhba in stead. On other questions also Mawdūd followed his vizier’s advice; al-Djawād however fell into disgrace and in 558 (1163) he was thrown into prison and replaced by Zain al-Dīn Kāṭīk. In the next year Mawdūd joined forces with his brother Nūr al-Dīn in a war against the Franks, and in Ramaḏān (Sept. 1164) the latter defeated the Christian forces and stormed Kaftāt Hārm. According to the most usual statement, Mawdūd died on 22nd Dhu ’l-Hijjād 505 (Sept. 6, 1170) aged about forty. He is described by the Oriental historians as a just and benevolent ruler. He was succeeded in al-Mawālī by his son Saif al-Dīn Ghāzā II.

(K. V. Zetterstéen)

MAWḵĪF (A.), manum loci from κοίτη "to stand". Of the technical meanings of the term two may be mentioned here:

a. the place where the ṭāwāf [q.v.] is held during the pilgrimage, viz. ‘Arafāt [q.v.] and Muzdalīfah [q.v.] or Dhūn. In well known traditions Muḥammad declares that all ‘Arafāt and that all Muzdalīfah is mawḵīf (Muḥammad ibn Sa’īd, trad. 149).

Abū Dāwūd, Maḵṣūḥ, bāb 56, 64 etc.; cf. Handbuch of Early Mus. Tradition, s. v. ‘Arafāt.

Mawdūd has conjectured that these traditions were intended to deprive the hills of ‘Arafāt and Muzdalīfah of their sacred character, which they doubtless possessed in pre-Islamic times.

b. the place where on the day of resurrection several scenes of the last judgment will take place; cf. al-Ǧazālī, al-Durrā al-Ŷaǧīrī, ed. Gautier, p. 577, 683, 78, 513; cf. Kitāb ‘Aṣwād al-Ŷaṯīma, ed. M. Wolfl, p. 65 sqq.

(A. J. Wensinck)

MAWĻĀ (A.), a term with different meanings (cf. Layān al-Ŷarab, xx. 289 sqq.) of which the following may be mentioned:

a. Futur, trustee, helper. In this sense the word is used in the Kurān, Sūra xivv. 12: "God is the mawlā of the faithful, the unbelievers have no mawlā" (cf. Sūra iii. 143; vi. 62; xvi. 41; ix. 51; xx. 75; lvxv. 2). In the same sense mawlā is used in the Shi‘ite tradition, in which Muḥammad calls ‘Alī the mawlā of those whose mawlā he is himself. According to the author of the Liwān, mawlā has the sense of wālī in this tradition, which is connected with čhādīr al-Ŷaḥm (cf. v. c. V. a. C. v. Arondok. De ophokent van het Zuidtische imamaat, p. 18, 19). It may be observed that it occurs also in the Mawṣūl of Ḥayd b. Ḥanbal (i. 84, 118, 119, 152, 330 sqq.; iv. 281 etc.).

b. Lord. In the Kurān it is in this sense (which is synonymous with that of saiyd) applied to Allāh (Sūra ii 256; cf. vi. 62: x. 31), who is often called mawlānā ‘rādīnur Lord” in Arabic literature. Precisely for this reason in Tradition the slave is prohibited from calling his lord mawlā (Bukhārī, Qīḏāb, bāb 165; Muslim, Ḥadīth, trad. 15, 16).

It is not in contradiction to this prohibition that Tradition frequently uses mawlā in the sense of “lord of a slave”, e.g. in the well known Ḥadīth: “Three categories of people will receive twofold reward... and the slave who fulfills his duty in regard to Allāh as well as to his lords” (Bukhārī, Qīḏāb, bāb 31; Muslim, Amān, trad. 45).

Compositions of mawlā and suffixes are frequently used as titles in several parts of the Muslim world, e.g. mawdīyā (montār), “my Lord” especially in North Africa and in connection with saints; mawzūsit (moltā), “Lordship” (especially in India and in connection with scholars or sages).

The term mawlā is also applied to the former lord (patron) in his relation to his freeman, e.g. in the tradition: “Who clings to a (new) patron without the permission of his (legal) mawlā, on him rests the curse of Allāh” (Bukhārī, Qīḏāb, bāb 17; Muslim, Ḥadīth, trad. 18, 19).

c. Freed slave, e.g. in the tradition “the mawlā counts as the people to whom he belongs” (Bukhārī, Qīḏāb, bāb 24, etc.). In this sense mawlā, or rather the plural mawlāt, is frequently used in Arabic literature. The evolution of the idea as well as the position and the aspirations of the mawlā have been expounded by von Kremer (Gutlogschichte des Orients unter den Chasiten, i. 154) and by Goldziher (Muhammedanische Studien, i. 104 sqq.), by the latter especially in connection with the Ḥadīth [q.v.]. On the position of the
mawāli in the law of inheritance law cf. the art. MIRJAH.

MAWLAWI. [See MAWLAWI.]

MAWLAWIYA (Turkish pronunciation Mawlewīya), Order of Derwishes called by Europeans Dancing or Whirling Derwishes.

1. Origin of the Order. Its name is derived from mawlawānâ ("our master"), a title given par excellence to Djalal al-Din al-Rūmî (e.g. by the Turkish writers Sa'd al-Din and Pecewi, cited below), of which the Persian equivalent was called by the Munâshib al-'Arfîn (translated by Huwart in *L'Es. Sainte des Derviches Tourneurs*, Paris 1918-1922), bestowed on Djalal by Bulair [q.v.] by his father, with whom this biographical commencement commences. According to the same authority (i. 162), his adherents adopted the name Mawlawī, and indeed euphony of the *Mawlawâ* of the years 697 and 706 A. H. thus degenerate themselves (Nicholson's ed., i. 7 and ii. 11); yet Ibn Bâṭṭûta, who visited Konia after the latter date, asserts that they were styled Djalaliya, and the word Mawlawi seems to be used occasionally in the Munâshib in the sense of "scholar", which it ordinarily has in India. This work asserts that one Badr al-Dîn Ghiyârâsh (a historical personage, since he is mentioned in Ibn Bâdî's chronicle of the Seldjûks of Asm Minor) built a college at Konia for the children of Djalal al-Dîn's father, which was inherited by Djalal al-Dîn. The Munâshib (by Shams al-Dîn, Ahmad al-Alâkî 158-754 A.H.), however, so teem with anachronisms and extravagances of its statements must be used with great caution.

The European name is taken from the ritual of the dhikr, in which the derwishes revolve, using the right foot as a pivot, to the tune of various instruments. Djalal al-Dîn is said to have claimed that he had elevated the practice, but denied that it was an innovation (Munâshib, ii. 79). Certainly "dancing" ( lãq̇î) is mentioned as a Sîfi practice in works earlier by some centuries than Djalal al-Dîn's time, often with severe condemnation. The historian Sekhâr al-Tîbr al-Mawâshîd, p. 220, in recording an event narrated in 852 against the priests as well as in Egypt cites verses by one of the earliest Sâ'âdîs in which visions, which performers perform is compared to apes and are buttically reproached. Dancing is indeed a natural accompaniment of music (Aghâshî, x. 121) or poetry (Priásh al-Arzî, v. 151, 111), but the whirling of the derwishes would seem to have for its purpose the production of vertigo rather than the presentation of an idea in rhythm. Of the various reasons which have been assigned for it the most interesting is that recorded in the Munâshib (iii. 199) as the excuse of Djalal al-Dîn, viz. that it was a concession to the pleasure-loving inhabitants of Asm Minor, who might thereby be drawn to the true faith. The theory that the whirling was a reproduction of the motions of the celestial bodies is found in his *Mawlawâ* (ed. Nicholson, iv. 734), and the same view is offered in the much earlier *Akhla* of Ibn Thuâfîl (Caïro 1622, p. 75), where its hypnotic effect is emphasized. The same in the Munâshib are represented as able to maintain the exercise for many days and nights continuously, but the actual dhikr lasts only about an hour, with some intermission.

2. Relations with other Orders. Although the earlier mystics, such as Djuñâdî, Bištâmi and Hallâdî are mentioned in the Munâshib with profound reverence, the treatment of founders of orders who came near Djalal al-Dîn's time is very different. 'Abî al-Kâdir of Djalân is ignored, Ibn 'Arâbî mentioned with contempt, and Rifa'î with severe condemnation. Hâdîdî Bekîsh is represented as having sent a messenger to inquire into the proceedings of Djalal al-Dîn, and to have acknowledged the supremacy of the latter. At a later period the rivalry of the Mawlawi with the Bekâthi Order became acute.

It has been shown by F. W. Hasluck (*Christianity and Islam under the Sultans*, Oxford 1929, ii. 370 sqq.) that the environment wherein the Mawlawi Order originated was in favourance of Christians, and that throughout its history it has shown itself tolerant and inclined to regard all religions as reconcilable on a philosophic basis. He suggests that the veneration of the Muslims of Konia for the supposed burial-place of Plato (in a mosque which was once the church of St. Amphilectus) may have been intentionally favoured by the Mawlawi derwishes, or possibly their founder, as providing a cult which Muslim and Christian might share on equal terms. In three other sanctuaries ofKonia, one of them the mausoleum of Djalâl al-Dîn himself, he found evidence of a desire to provide an object of veneration to the adherents of both systems. It is not, however, easy to accept his inference that some sort of religious compromise on a philosophic basis was devised between the Seldjûk Sultan "Alî al-Dîn, Djalal al-Dîn, and the local Christian clergy. It appears from the Munâshib that the Order was frequently exposed to persecution from the *famâsh* in consequence of the music and dancing; and they found an analogy in Christian services to the employment of the farmer. They are credited in recent times with having impeded the massacres of Armenians.

3. Spread of the Order. The Munâshib attributes its propagation outside Konia to Djalal al-Dîn's son and second successor, Sultan Bahâ' al-Dîn Walid who "filled Asia Minor with his lieutenants" (ii. 262). It would however appear from Ibn Bâṭṭûta's narrative (ii. 282) that its following was not in his time extensive outside Konia, and was confined to Asia Minor. The story told after Sa'd al-Dîn by v. Hammer (*G.O.R.*, i. 147) and others, that as early as 759 (1357) Sulaimân son of Orkhan received a cap from a Mawlawi derwish at Bulur, has been shown by Hasluck (ii. 613) to be a fiction. The historians make no allusion to any importance attaching to the Mawlawi chief when Murâd I took Konia in 1386; but when the city was taken by Murâd II in 1435, peace was negotiated according to Sa'd al-Dîn (i. 358) by Mawlânâ Hâmîrî, but according to Neshîr (quoted *vind.*) by a descendant of Mawlânâ Djalal al-Dîn al-Kumî, "Arif Celebî, "who united all the glories of worth and pedigree, and possessed mystic attainments"; the rebellious vassals supposed that a holy man of the family of the Mawla would inspire more confidence. The same person performed a similar service in 1442 (Sa'd al-Dîn, i. 371). According to V. Cunet (*La Turquie d'Asie*, i. 829) Selim I when passing through Konia in 922 (1516) in pursuit of the Persians (?) ordered the destruction
MAWLAWIYA — MAWlid

of the Mawlāwīhānā, at the instance of the Shaikh al-Īslām; and though this command was repeated, the moral and religious authority of the head of the Order was gravely compromised. That the saints of Konia were highly revered in the Ottoman Empire later in the sixteenth century appears from the list of graves visited by Saiyid ʿAlī Kāpūdān in 1554, which commences with those of Ḥāṯāl ʿal-Dīn, his father and his son (Peschier's History, 1285, i. 377). In 1534 Murād IV assigned the kharājīh of Konia to the Čelbi. Yet the first reference to "dancing dervishes" in Constantinople which Hasluck produces, is from the time of the Sultan Ḥādem (1560–1568). Cuinet mentions three Mawlāwīhānā of the first rank and one Tekye of the second in Constantinople and the neighbourhood; he gives the names of the saints whose tombs they contain, without dates. He mentions seven other Mawlāwīhānā of the first rank, at Konia, Manisa, Kaɾaļiṣ-ār, Bāḥariyya, Egypt (Cairo), Gallipoli and Biusa; and as the more celebrated of the second rank that of Shamsī Tabrīzī at Konia, and those in Medina, Damascus and Jerusalem. To these Hasluck adds Tekye at Canea (Crete), founded about 1880, Karaman, Ramlı, Tatar (in Thessaly), and possibly Tempe (for we in Smyrna heard it was done in 1889 for one in Salonica see the work of Garnett, and for one in Cyprus that of Lukach cited below). It would seem then that the Order was confined to the limits of the Ottoman Empire, and indeed to its European and Asiatic territories.

By a decree of Sept. 4, 1925 all the Tekyes in Turkey were closed, and the library of the Mawlāwīhānā of Konia was transferred to the Museum of the city (Oriente Moderno, 1925, p. 455; 1926, p. 584).

4. Political importance of the Order. Reference may be made to Hasluck's work (i. 604 sq.) for refutation of the stories uncriedically reproduced by Cuinet and some less authoritative writers. In these "the Shaikh of the Mawlāwī becomes first the legitimate successor by blood of the Seljuq dynasty, and finally the real Caliph!" Hasluck supposes these tales to be based on the supposed "traditional right" of the Mawlāwī Shaikh to gird the new Sultan with a sword. This right cannot be traced earlier than 1648, and appears to have obtained recognition in the nineteenth century. It would seem that reforming Sultan ʿAlāʾ used the Mawlāwī Order as a make-weight against the Bektashis, who supported the Janissaries, and then against the ʿAlamā, who supported the treatment of the Muslim community as a privileged community against the dhimmis. In recent times the Sultan ʿAbd al-ʿAziz and Meḥmed Rūḥād were members of the Order.

5. The ritual of the Order has been described by numerous travellers, e.g. J. F. Brown, The Dervishes, 1889, p. 196–209; 1927, p. 250–258; W. Cuinet, loc. cit., p. 132; Garnett and Lukach in the Derwishes of the Eastern Turkey, (Curtius-W. Cuinet, Islamische Orient, 1910, iii. 12; S. Anderson, M. W., 1925, p. 191). The attire consisted of a cap called siba, a long sleeveless skirt called tevānür, with a jacket called desteq-gul, a waistband called elf-i-lām-end, and a cloak with sleeves called kherbe, thrown over the shoulders (in Lukach's description [Cyprus] "a violet gown worn over a black cassock"). The instruments employed according to the last report (dealing with Konia) are six: reed-flute, zither, rebeck, drum, tambourine, and one other. Cuinet enumerates four, of which three agree with the above, the last being hatil, vulgarly zil, a sort of small cymbal. Brown enumerates three: flute, violin, and kettle-drum. Those mentioned in the Manāṣik are rendered by Huayt, flûte, violon and tambour de basque. The service in Konia according to Lukach was held twice a month after the Friday prayer; in Constantinople, where there were several tekys, they were held more frequently, to enable the members of different tekys to join in.

6. Administration of the Order. The head of the Order, resident at Konia, had the titles Mullā Khânkūr, Ḥāfat-ı Pir, Čelebi Mullā, and ʿĀziz Efendi. A list of persons who have held the office is given by Hatimān (loc. cit., p. 192) after the Hâki-i Adhâkur-i Mawlānā, making 26 in all down to 1910; this list appears to be imperfect, and the Čelbi whom Lukach found in Konia was uncertain whether he was the 39th or the 40th. The head of the establishment at Manisa counted as second in authority. Cuinet enumerates seven officials subordinate to the Čelbi at Konia, but the names of several seem seriously mutilated. Others mention a secretary (sekkâ). An account of the discipline which those who assumed the title of Sharif had to endure is given by Huayt (Konia, la ville des Derviches Tourneurs. Paris 1897). They had to perform menial service for 1001 days, divided into periods of 40; when this was over, they were clothed in the uniform of the tekye, assigned cells, and instructed in the exercises of the Order; and they had to remain thus occupied till they believed themselves able to enter into relation with the Deity by means of whirling, meditation, and music.

MAWlid (A.) or MAWlid (pl. maawlid), time, place and celebration of the birth of any one, particularly of the Prophet Muhammad (Mawlid al-Nabī). From the moment when Islam in its attitude to Muḥammād abandoned the lines laid down in the Qurānic view of him and began to bring his personality within the sphere of the supernatural, the scenes among which his earthly life had been passed naturally began to assume a higher sanctity in the eyes of his followers. Among these, the house in which he was born, the ʿMawlid al-Nābi, in the modern Suq al-Lāl in Mekka, the history of which is preserved principally in the chronicles of the town (ed. Wustenfeld, i. 422), does not seem at first to have played a part of any note. It was al-Khāzuqānī (d. 173), the mother of Ḥārum al-Rūḥād, who first transformed it from a humble dwelling-house to a place of prayer. As the Prophet's birthplace in Mekka, the pious now made pilgrimages also to his mausoleum to show their reverence for it and to receive a share of its blessings (tīb i-tabarruk). In time also the reverence in which the house was held found expression in its development in a fitting architectural fashion (Ibn Djiqāl, ed. Wright, p. 114, 163; on the present state of the house: Snouck Hurgronje, Mecka, i. 106; ii. 27).

Records of the observation of the birthday of
the Prophet as a holy day only begin at a late date; according to the generally accepted view, the day was Monday, the 12th Rabi‘ al-Awwal. The story which Wustenfeld originated, according to which the pious Sha‘î ‘Iyâd bin Kâdîjî (d. 343) observed this day by breaking his fast upon it, which he only did on one occasion, is false. In his birthday lavish observance these solemnities were added, in the splendid veil festival of 13th Mawlid (487/515), p. 363 and pass. On the Jewish origin of fasting on Monday, see Weinsieck, Muhammed en de Joden, p. 126). But there on this day a special celebration was arranged, as distinct from private observation, one first learns for Mecca, where one would expect it earliest from the local traditions, from Ibn Dzhâbir (d. 614; Travels, p. 113), who however is obviously referring to a custom which has already been a considerable time in existence. The essential feature of the celebration is however only a somewhat considerable increase in the number of visitors to the Mawlid house, which was exceptionally open the whole day for this purpose. The visit and the ceremonies associated with it (mash etc.) are carried through entirely in forms which are characteristic of the older Muslim cult of saints.

But just as the later cult of the Prophet cannot be put on a level with the reverence shown to other holy men, so new and special forms developed for his birthday celebrations, which in spite of minor differences in time and place show the same general features everywhere and are comprised under the name Lu‘lî al-‘Aṣabî or briefly Mawlid al-‘Aṣabî. An anticipation of the Mawlid celebration is found in Egypt as early as the middle and later Fâtimid period. During the period of office of the vizier al-Malik (487—515), we hear that the "four Mawlid" were abolished but a little later revived in all their old glory (Maghrî, al-‘Aṣabî, i. 466; for the description of the festival: i. 433 sqq.). The celebration still took place in broad daylight and participation was practically limited to the official and religious circles of the city. There were not yet any preliminary ceremonies; but we already have a solemn procession of all the dignitaries to the palace of the caliph, in whose presence — he sits, covered with a veil on one of the balconies of the palace — the three khâtâba of Cairo (cf. above, ii., p. 928) in succession deliver a religious address, during which a special ceremonial is observed. As to the matter of the discourses, we only know that they were like those delivered on the nights of the illumination so that they presumably were quite mainly with the occasion of the celebration. It is interesting to note that the Mawlid ceremonies here are not confined to that of the Prophet but the Mawlis of ‘Ali, Fâtima and even that of the reigning Caliph, the Imam al-Hâ’ir, are similarly observed. As in the fundamental idea of these celebrations (Mawlid al-‘Imâm al-Hâ’ir), Shi‘a influence can also be traced in separate elements of it. It had not yet come to be a festival of the common people in the time of the Fâtimids. This no doubt explains why — except in Mâhrî and Kâla‘gândî, the great historians of Fâtimid Cairo — there is hardly any reference to these celebrations in the literature emanating from Sunni circles, not even when writers like ʻAli Paşa Muḥârak are dealing with features peculiar to Cairo and deal very fully with the history of the Mawlid festival.

The memory of these Fâtimid mawlîd seems to have almost completely disappeared before the festivals in which Muslim authors unanimously find the origin of the Mawlid, the Mawlid which we find first celebrated in Arabia by Ma‘rûf by Mu’tazâl-‘îb-‘în Kubârî, a brother-in-law of Saladin. The fullest account is given by a somewhat later contemporary, the great historian Ibn Khallîkân (d. 681) on whom later writers continually base their statements (e.g. al-Suyûtî, Hâfiz al-Mâkîrî [Brockelmann, G. A. L., ii. 157 and others). The personality of this ruler, his period so disturbed by the turmoil of the Crusades, and his milieu to which Ibn Khallîkân calls special attention, lead us to suggest marked Christian influence in the development of this celebration; his close relations with the Sûfî movement on the other hand suggest the possibility of influence of quite a different nature. This is clear from the description of the celebrations. Preparations are begun long before and people come in from remote districts. The prince takes special care that the visitors are housed in splendid wooden kubbahs specially built and they are entertained with music, singing and all kinds of amusements (shadow-plays, jugglers etc.). The streets of the town were, for weeks as busy as on the occasion of an annual fair. On the eve of the Mawlid night a torchlight procession took place from the citadel of the town to the khânkâh, led by the prince after the magrib ‘ârîf. Next morning the whole populace assembled in front of the khânkâh, where a wooden tower had been erected for the ruler and a pulpit for the wa‘îf. From this tower the prince surveyed not only the crowd assembled to hear the address but also the troops summoned to be reviewed on the adjoining maidân. We are told nothing of the substance of the address. On its conclusion the prince summoned the distinguished guests up to the tower to give them robes of honour. The people were then feasted at the prince’s expense in the maidân, while the notables were entertained in the khânkâh. The following night was spent by the prince like so many of the Sûfîs in samâ‘ (Ibn Khallûkah, Bâlîk 1299, ii. 559 sqq.).

In contrast to the Fâtimid celebrations, what is specially striking here is the large share taken in the festival by the Sûfîs and the common people, a circumstance which is all the more notable, as it is probably in this association with Sûfism that we have the reasons for the later great popularity of the mawlid. At the same time the torchlight procession, really foreign to Muslim sentiment, and borrowed from contemporary Christian customs at festivals deserves our attention; it is not found at the celebration in Cairo which was purely a day ceremony, while the lavish entertainment of all present, especially with sweets, and the addresses are found in both cases. In this remarkable ceremonial we seem really to have the foundation of all Mawlid celebrations. With the great political and religious movement, which we may call Salahî reaction, the Mawlid reached Egypt in Saladin’s time, where it is significant that Sûfism very quickly took deep roots, thus preparing the way for an observance like the Mawlid, which is essentially kept up by popular religious sentiment.

The observance of the festival spread sooner
or later from here to Mecca where its old form was transformed. Its further progress was along the coast of North Africa to Ceuta, Tlemcen and Fās to Spain but it also went eastwards to India, so that ultimately the whole Muslim world is united on this day in a ceremonial, frequently of unprecedented splendour, but alike everywhere in its main features. We have innumerable descriptions of the festival from all parts of the Muslim world, most fully for Mekka (Chronikten, ed. Wüstenfeld, iii. 438 sq.); Ibn Hadżar al-Haṭaimi, Mawlid ( Brockmann, G. A. L., ii. 389); for modern times: Snouck Hurgonje, Mekka, ii. 57 sqq.), where the celebrations have always been famous, for Egypt ( ʿUluḥ. Tawfiq al-Bakrī, Bait al-Sidfteh, Cairo 1323, p. 494 sqq.; Lane, Manners and Customs 5 (1871), i. 166 sqq.) and the Indies ( Snouck Hurgonje, Achehwezer, i. 207; do., Verspreide Geschriften, ii. 8 sqq.; Herklotz, Qamoune Islame (1832), p. 233 sq.; Goldziher, Coutte des saints (1886), p. 135; here it is frequently not the birth but the death of the Prophet that is commemorated). The Turkish element in Islām also has not resisted the advance of the celebration of the Mawlid (Turk.: Mevlid). Since Sulṭān Murād III introduced it in 996 into the Ottoman empire, it has enjoyed increasing popularity. Since the festival has been celebrated as a national festival. Accurate descriptions of the festival as celebrated in the older period of the court of Constantinople (Mouradgea d’Ohsson, Tohblan ginval, Paris 1787, i. 255 sqq; G. O. K., viii. 441) clearly reveal its relationship with the festivals of a more popular nature in other lands of Islām.

One element in particular is very prominent, and that is the most characteristic one of the later celebrators, namely the recital of mawlid’s i.e. panegyric poems or a very legendary character, which start with the birth of Muḥammad and praise his life and virtues in the most extravagant fashion. The origin of these addresses is already to be found in the religious addresses in Fī ḥalīd, Cairo, and in Arbe and perhaps in part at least goes back to the sermon usual at Christian festivals. The Ktaeb al-Mawlid al-Siraj fi Ḥasan al-Najla, which Ibn Dihya composed during his stay in Arbe at the suggestion of Kolburt was already famous as a mawlid at this period (Brockmann, G. A. L., ii. 310). It was not till later times however that mawlid became a predominant element in the celebration, along with torchlight processions, feasting and the fairs in the street, ever increasing in size. In Mecca, for example, at the present day they form the main feature of the celebration in the mosque among the pious they are the most popular evening entertainment for days before the celebration and teachers interrupt their lectures in order to deliver mawlids to the students and the people on the streets and in the coffee houses find edification and entertainment in listening to them. The number of such mawlids is quite considerable. Beside the famous but not very popular Bnāt Swādī of Kātb h. Zuhair of the older period, such as Būrda and the Hamziya of al-Huṣari and their numerous imitations, there are a whole series of regular mawlids, some of which are intended to instruct like that of Ibn Ḥadżar al-Haṭaimi, others purely edifying like a shorter version of it, and notably that of Ibn al-Djawi (G. A. L., i. 503) and al-Barzanjī (G. A. L., ii. 354). In addition to those in Arabic, there are a great many mawlids in Turkish (Irmlng. Engelke, Sulaymān Tschkleh’s Lobgedicht, 1926). It is significant of the part played by these poems, that they have passed from the mawlid celebrations to other festivals, so that the word has actually become a name for “festival” and particularly “feast” (Caṣima; cf. Snouck Hurgonje, Mekka, ii. 147, 154 and pass.; Becker, in Isl., ii., 1911, p. 26 sqq.). Quite apart from any festivals, the recitation of mawlids is popular, in Palestine for example in fulfillment of a religious vow (T. Canaan, in Journal of the Pal. Or. Soc., vi., 1926, p. 55 sqq.; cf. also the introductory anecdote in the mawlid alleged to be by Ibn al-Arabī [G. A. L., i. 441]). Like the substance of these mawlids, the form is very regular. Probe and poetry alternate, interrupted frequently by appeals to utter blessings on the Prophet. Dīkhts are usually added at the end.

The Mawlid as the finest expression of reverence for Muḥammad has found almost general recognition in Islām, as fulfilling a religious need of the people and as a result of the strength of the Sūfī movement. This must not however blind us to the fact that at all times there has also been vigorous opposition to it. This is found as early as the festival of Arbe and (al-Suyuti, Ḥusn al-Magjid). The celebration is a bida’, a religious innovation, which is in sharp contradiction to the tradition. Even ardent advocates of the festival confess this and the strictly orthodox, who adhere to the sunna, reject it most emphatically, but, as in so many other things, practice has here proved stronger than dogmatic theory. Once the festival had been thoroughly established in the religious life of the people, it was bound in time to find approval as an element of the iṯna’s. Its supporters found it easy to get this bida’ legitimated, in theory at least, as a bida’ alasana. When the festival had been accepted by the consensus of the community, the essential thing had been done and legitimate ground for opposition had been removed. While the opposition thus finds itself reduced to combating the outer forms of the festival and its developments, its supporters are never tired of calling attention to the merit that lies in feeding the poor, in the more frequent reading of the Qur’ān and mawlids, and in expressions of joy over the birth of the Prophet and all that the day brings with it. It is significant of the character of the opposition that the opponents object to those very forms which show the influence of Sūfism (dancing, samā’ī, ecstatic phenomena etc.) or Christianity (processions with lights, etc.). The most interesting document of this feud is a Sīrat al-Suyūṭī (d. 911; Brockmann, G. A. L., ii. 157: Ḥusn al-Magjid fi ‘Amal al-Mawlid) which gives a brief survey of the history of the festival, then discusses the pros and cons very fully and concludes that the festival deserves approval as a bida’ alasana, provided that all abuses are avoided. Ibn Ḥadżar al-Haṭaimi in his Mawlid and Kāṭb al-Din (Chronikten der Stadt Mekka, iii. 439 sq.) take the same view, while Ibn al-Ḥadžq (d. 737) in a more or less Miliki condemnation vehemently (K. al-Mawlid [1329], i. 152 sqq.).

Although the height of this struggle was apparently reached in the eighth—ninth century, it did not completely die down in later years; indeed it received new life with the coming of the Wahhabis. The cult of the Prophet is in such contradiction in their fundamental principle, the restoration of the ideal purified primitive Islām, that we can understand that they should completely
MAWLID. which the Tunis also the general l-Sahihain (fragment); Yakut, this two these doing founded numerous the rold/iher, 2 Moicco 84 ra 81. b particular addition Beni-Ze:

Moiocco 813, the Moicco 813, the connection 13 the from 155 a the Fuciis) chief c 9 1SS7, the the 258, the famous precursor of their movement, against innovations which are contrary to the sunna (Ibn Tamiya against the holding of khutbas in the Mawlid night: Fatwā [Cairo 1326], i. 312). Similar ideas are still found to-day even where Wahhabism is rejected, notably in the school which Goldzifer calls "Kulturwahhābīmus", founded by the celebrated Muhammad 'Abdul (d. 1905), who in connection with the worship of saints condemns the Mawlid also, in the periodical al-Mawāsid (Goldzifer, Richtungen des islam. Koranauslegung, p. 369 sq.).

In the reverence shown to other Muslim saints, the Mawilds also play a great part. Although the success of an appeal to a saint does not depend on particular days, yet certain days and birthdays in particular are regarded as particularly favourable. These celebrations are often connected with places, to which a certain sanctity had been attached from pre-Islamic times (the Mawlid of 'Abd-Allah Hasan al-Badawi in Taṣa: Goldzifer, Mūs. Stöud., ii. 318 sq.). There are also Mawilds of nameless saints. In the devotional orders, next to that of the Prophet, the Mawlid of the founder is held in particular popularity. 'Alla Fāsha Mubātak (Khitab Qudwā, i. 90; iii. 129 sqq.) mentions a large number of such festivities in modern Cairo, the characteristic features of which, he says, are the brilliant illumination of the town, the ceremonial procession (Mukhtal: at the Mawlid al-Nabi: mawâkāt; cf. P. Kahle, in Isl. vi., 1916, p. 155 sq.) and the great feasts. One cannot now imagine the popular religion of Egypt without these feasts.

H FECHT

AL-MAWSIL. [See MOSUL.]

MAWSIM (v. from the root w-s-m "to stagnate"), market festival. In this sense the term is used in ǧaith, especially in connection with the markets of early Arabia, such as those which were held in 'Uqād, Madānna, Dhu'l-Mudāq, 'Altā, etc. (Bukhāri, Ḥadīṣ. b. 150; Tāhirih, sūra 2, b 34). At these markets the worst elements of Arabia gathered (al-mawsim yaḍrūr râbī' al-nās, Bukhāri, Ḥadīṣ. b. 31). Advantage was also taken of these assemblies to make public proclamations and inquiries, e.g. in order to regulate the affairs of deceased persons (Bukhāri, Khūnas, b. 13: Munākib al-'Arūs, b. 27). As the pilgrimage was at the same time one of the chief markets of early Arabia, the term mawsim is often combined with it (mawsim al-ḥajj; Bukhāri, Ḥadīṣ. b. 150: Ḥaqq, b. 1; Abū Da'ud, Munākib, b. 6).

Upon this basis the term mawsim has developed chiefly in two directions; it has acquired the general meaning of (religious) festival (Dousy, Supplement, s. v.) and that of season. In the Lebanon mawṣim denotes the season of the preparation of silk (Bistān, Mawṣīs, s. v.).

In India and in European terminology referring to these parts of the world, it has acquired the meaning of season in connection with the weather-conditions special to those regions, such as the regularly returning winds and rainperiods. This usage and the Mawānīn, mawṣīn, mawṣīn and other corruptions of the term are found in this literature.

MAWWĀL. [See MAWLĪYA.]

MAWZŪNA, a small silver coin struck by the Shāhīs of Mūsācc in the eighteenth and early nineteenth century. It was the smallest silver piece and equivalent to 24 copper fulls or a quarter dirham. Another name for the mawzūna was ǧiṣ. In 1911 (1330) copper pieces of the type of 10, 5, 2 mawzūna were issued, the mawzūna being now the equivalent of a centime. On recent issues the name mawzūna has disappeared and its place is taken by sīt, i.e. 25 centimes.

AL-MAYURKI, nisba of three Arabic authors, belonging to Majorca (Mallorca), the largest of the Balearic Islands.

1. the poet Abu'l-'Hasan ʿAll b. Ahmad b. ʿAbd al-ʿAzīz b. Tūnāz, d. in 475 (1082), according to others in 477 at Kāzima near Baghādād; poems by him are preserved in the MS. of the Escorial in Derenburg, No. 467, 2; cf. al-Suyūtī, Būqayt al-ußālī, S. 327; Yāḥū, Msq. iv. 722.

2. the traditionalist Abu ʿAbd Allāh Muhammad b. Abī Tānṣī Fustūlī b. ʿAbd Allāh b. ʿAbd Allāh b. ʿAbd Allāh b. ʿAbd Allāh b. ʿAbd Allāh of Arabia, cf., for example, i. 3, where the sources should be added Yāḥū, Ḥadīth al-Arābī, vi. 58–60 and ʿAbd al-ʿAzīz al-Dīhlawi, Bustān al-Muhaddithīn, p. 81. In addition to the works there given, the following still exist: 1. al-Qāsim al-Ṣāḥibānī, al-Sūrī, al-Mulakābāt; MS. in Cairo, Fibrist, ii. 325 and Msīlīs, s. Dāwūd, Makātīb al-Mawṣīl, p. 194, 16 (fragment); Yahyā b. ʿAbd Allāh b. Huhnār al-Wādir (d. 560 = 1165) wrote a commentary on it; MSS. in Berlin, Ahlwardt, No. 1192; Leipzig, Volek, No. 313 and in the Brit. Museum, No. 1603. b. Tafsīr ʿārābī mā kī l-Sūrī, al-Masānīd, in the possession of A. Tāmirī Fāsha in Cairo, K. A. A.D., iii. 340. 3. 3. ʿAbd Allāh b. ʿAbd Allāh al-Tardjamān, born in Majorca of Christian parents, studied in Lerida and Bologna, then went to Tunis on the advice of Bishop Nicolaus Martell, who was himself a Muslim in secret, there adopted Islam and in 823 (1420) wrote a pamphlet against Christianity entitled Tafsīr al-ʿArābī (Adīb) b. ʿAbd Allāh al-Ṣāḥīb; MSS. in the Brit. Museum Or. 5942; Ellis and Edwards, Descriptive List, p. 131 in Stambul, Khālīs, No. 5275 (with Turkish translation); Fāth, No. 2999, Asād, No. 1147–1148; pr. Cairo
fortress there except the old ruined tower (al-Buraidja). The difficulty of entering the port of Azammar led the Portuguese to establish a more accessible base at Mazagan. During the summer of 1514 under the direction of the architects Diego and Francisco da Arruda, a square castle flanked by towers at each of the four corners was built. One of these bastions was formed by the old tower, al-Buraidja, the name of which survived among the natives as that of the Portuguese town. This early castle still exists almost in its entirety. Particularly striking is a magnificent subterranean hall, the vaulting of which is supported by 25 pillars. It was probably, rather than a salle d'armes, a huge granary built to hold the contributions in grain paid by the tribes subjected to the Portuguese protectorate. It was at a later date used as a cistern to hold supplies of drinking-water for the garrison, when the place blockaded by rebellious tribes had no longer any taxes in grain to collect, which happened in 1541. For ten years before, the situation of the Portuguese stations on the coast, in view of the religious and anti-foreign movement stirred up by the coming and successes of the Sa'dian Sharifs, had been so bad that the king of Portugal thought of abandoning several of his fortresses. The taking of Mazagan, at the Cape of Guer (Agadir) by the shahf (March 12, 1541) was a warning. John III decided to evacuate Safi and Azammar and to concentrate on Mazagan, a more favourable and more easily defended position, all the Portuguese forces he wanted to leave in the south of Morocco. The operation was carried through in the autumn (before Nov. 6). From the month of April onwards the work of putting the town in a state of defence had been going on. The work was actually pushed on during the last months of the year (1541) under the direction of the great architect João da Castro, who used plans prepared by an Italian engineer, Benito da Ravenna. This was when the walls of Mazagan were built as they still stand to-day.

In retaining Mazagan the Portuguese wanted to keep a base on the coast to secure protection for the route to India. They also hoped that the fortress would serve them as a base for the conquest of Morocco, when a favourable conjuncture should arise, which however never happened. In fact for the more than two hundred years in which the Portuguese retained it, the possession of Mazagan only served them as a pretext to obtain from the Pope bulls of Crusades, which supplied the Popal Treasury with appreciable revenues. The tribes kept the town so closely blockaded that the inhabitants could not go outside its walls without military protection. The collection of wood and the cultivation of a few gardens, continually devastated by the natives, gave rise to continual skirmishes. The Muslims of the country around had built two little towns, a few miles from Mazagan, Fatḥ al-Samarrī and Fatḥ Awlād Ṣawārī, where they entrenched themselves to keep up the blockade and where the devout, desirous of acquiring merit from participation in the holy war, used to come to discharge a few shots at Mazagan.

Badly supplied by sea, often a prey to famine and epidemics, the garrison and population however lived in sufficient security under their powerful walls, against which the tribes could do nothing. On several occasions however, they had to resist vigorous attacks. In April 1562 Muhammad, son
of the Sa'dian Sultan, 'Abd Allah al-Ghālib bi'llah, at the head of a vast horde of tribal warriors laid siege to Mazagan. Two assaults were repulsed and the besiegers lost heart. On Aug. 4, 1623, the place, attacked by 3,000 Muslims during the absence of the governor, who was led into an ambush, owed its safety to his wife who ordered the gate to be shut, organised the defence, distributed arms to the whole population, women as well as men, and sent them on to the walls. During the disorder which accompanied the decline of the Sa'dian dynasty, the governors of Mazagan seem to have succeeded in raising the blockade and resuming relations to some extent with the tribes. The mujahid Sidi Muhammad al-Ayād, to put an end to this, attacked the Portuguese in 1639 and inflicted some losses on them. Mawlāy Isma'il, occupied with the siege of Cauta, never seriously tried to take Mazagan. The honour of retaking it belonged to his grandson Sidi Muhammad b. 'Abd Allāh. The Sultan came to besiege it in person at the end of Jan. 1769. The place held out successfully for five weeks but, the order to abandon it having arrived from Lisbon, the governor surrendered on honourable terms. The garrison and civilian population returned to Portugal with their arms and baggage. On March 10, 1769 the Portuguese exploded mines which did great damage; the sultan entered a ruined town which he repopulated in part but it remained in so miserable a state that it was called al-Muḥādina "the ruined", until, in the reign of Sidi Muhammad b. Ḥiṣṭān in 1240 (1824–25) it was restored by Sidi Muhammad b. al-Ṭayyib, Ḥaḍī of Dukkan and Tāma-na, who gave it the name of al-Dżafūra by which it is generally known to Muslims.

The name of Gurgan to the Iranians was the "land of the wolves" (wūshkānīa) the region to its west was peopled by "Mazānian dhaws" (Bartholomea, Alter, Wörterbuch, col. 1169 under mazānīa dāči). Darmesteter, Le Zend-Avesta, ii. 373, note 32, thought that Mazandarān was a "comparative of direction" (Mazam-tārā'c. cf. sīrāh and Shi'āh). But Noldeke's hypothesis is the more probable (Grunds. d. iran. Phil., ii. 178) who thinks that Mazān-dār = "the gate of Mazān" was a particular place, distinct from the part of the country known as Tapuristān. [A village of Mesderan (?) is marked on Stahl's map 12 km. south of Fīrūzkuh!] In any case the name Mazāndarān seems to have no connection with "Mazādārān" (Bouhais and Mazāndaran, Monatsberichte Ab. Berlin, 1877, p. 777–781) with Mazār-dūrān, a station 12 farsakhs west of Sarakhs; cf. Ibn Khurādābīhī, p. 24; Mukaddasī, p. 351. cf. however the late source of 881 (1476) quoted by Dorn, Melanges asiat., ii. 42.

The Avestan and Pahlavi quotations given by Darmesteter, loc. cit., show to what degree the people of Mazāndarān were regarded by the Persians as a foreign group and little assimilated. According to the Buñuel, xv. 28, transl. West, p. 58, the "Mazāndarān" were descended from a different pair of ancestors to those of the Iranians and Arabs. The šīh-nāma reflects similar ideas (cf. the episode of Kal-kā's war in Mazāndarān and esp. Vullers ed., i., p. 332, v. 290: the war is waged against Ahirmān; p. 364, v. 792–793: Mazāndarān is contrasted with Iran; p. 374, v. 993: the holiest appearance of the king of Mazāndarān). On the other hand the mountains (north of Šīnna-nān) and the Amardes (Amsādī) who according to Andreas and Marquart have given their name to the town of Amol (although the change of rd to t is rather strange in the north of Persia). These two peoples were defeated by Alexander the Great. The Persian king Phra-dates I (in 176 n. c.) transplanted the Mazdes (Amardes) to the region of خاپس (Khār or the east of Warāmīn) and their place was taken by the Tapurīs, whose name came to be applied to the whole province.

The Arabs only know the region as Tabaristān (Tabaristan, on the Pahlavi coins). The name of Mazāndarān only reappears in the Sajjād period of Ibn al-Athir, x. 34, in speaking of the distribution of fiefs by Alp Arslān in 458 (1065) says that Mazāndarān was given to the emir Inānī Baγhū. Ibn Isānāydārī, p. 14, and Yākūt, iii., p. 509, think that Mazāndarān as a name for Tabaristān is only of fairly modern origin (in Arabic?) but according to Zakariyā Kāzīmīnī, p. 270, "the Persians call Tabaristān Mazāndarān". Hamdalāh Mustawfī distinguishes between Mazāndarān and Tabaristān. In his time (1340) the 7 tuman of the "wiltayat of Mazāndarān" were: Bīrdjān, Mūrāštūk (i.), Astarābād, Amol and Rostāndār, Dīhrān, Rughād and Sīyah-rustāk (ii.); on the other hand the diyār-i Kūms wa-Tabaristan included Šīmān, Dāmghān, Fīrūzkuh, a town of Dāmāvand, Firīrm etc. We find a similar distinction in Khwandamīr, ed. Dorn, p. 85.

Geography: The actual extent of Mazāndarān (Rahān) is 200 miles east to west and 46 to 70 miles from north to south. Except for the strip along the coast — broader in the east than the west — Mazāndarān is a very mountainous country. The main range of the Elburz forms barriers parallel to the south of the Caspian, while the ridges running down to the sea cut the country up into a multitude of valleys open on the north only. The principal of the latter ridges is the Mazār-čāb, which separates Tabaristān from Tūn-kuš. The latter is bordered on the south by the chain of the Elburz in the strict sense, which

424 MAZAGAN — MAZANDARĀN
separates it from the valley of the Shahrud (formed by the waters of the Alamut and Talakan and flowing westward into the Safid-rud).

To the east of Mazār-Čâbī, a number of ranges run out of the central massif of the Elburz: 1. to the east the chain of Nūr which cuts through the Harāz-pey and 2. to the S.E. the southern barrier which forms the watershed between the Caspian and the Astrakhan plateau. Between the two, rises in isolation the great volcanic cone of Damavand (9,900 feet).

To the east of Damavand the southern barrier rejoins the continuation of the Nūr and the new line of the watershed of eastern Mazandaran is marked by the ranges of Band-i-pey, Sawād-kūh, Shāh-mirzād (to the south of Simnān), of Harāz-darab (to the south of Dāmgān), of Shāh-kūh (to the south of Shahrūd) etc.

The rivers of Mazandaran are of two kinds. A hundred short streams run straight down into the sea from the outer mountains of Mazandaran. Much more important are the rivers which rise in the interior and after draining many valleys form a single great river when they break through the last barrier. Such are (from west to east): the Saradābūrd; the Čàllū; the Harāz-pey, which drains the region of mount Damavand and then runs past Amol: the Bābūl (the river of Bāfrūsh); the Tālār (river of Allābfād); the Tījīn (river of Sīrī) and the Nikā (or Aspānyaz) which flows from east to west, its valley forms a corner between the southern chain (cf. above) and the mountains which surround the Gulf of Astarābād on the north.

MAZANDARAN

The Arab geographers distinguished between the plain (al-sakhla) and the mountains (ad-djabaltya) of Tabaristan (Istakhri, p. 211, 271). The important towns of Tabaristan were in the lowlands: Amol, Nāṭīl, Shāhīl (Çallūs), Kalā (Kalār), Mila, Tārdī (Tūdīj, Bardīj); ‘An al-Humm, Māmār (= Bārāpur), Sārī, Tāndā (cf. Istakhri, p. 207; cf. Mukaddas, p. 355). The principal town (madīna) of Tabaristan in the time of Yağūbi, p. 276, still was Sīrā (p.-r.), but in the time of Masūdī, Tūbālī, p. 179. Istakhri, p. 211, and Ibn Hawkal, p. 271, the principal town (shāpāk) and the most flourishing one in Tabaristan was Amol (larger than Kāzin).

The mountain area was quite distinct and its connection with the plain is not very clear in the Arabic texts; cf. the confused summary in Istakhri, p. 204. Tabari, iii., 1295 under the year 224 (838) distinguishes three mountains in Tabaristan: 1. the mountain of Wandā-Humruz in the centre (waṣāf); 2. that of his brother Wandāsbandjī (fic) b. Alandā b. Kāzin and 3. that of Shārwin b. Surkhāb b. Bāhī. Now according to Ibn Rusta, p. 151, (the Kārinīd) Wandā-Humruz lived near Dūnbāwand. On the other hand, the same writer, p. 149, says that during the rule of Tabaristan by Djarīr b. Yazīd, Wandā-Humruz had bought 1,000 qārīb of domain lands (pawīf) outside the town of Sīr. Those alf qārīb seem to correspond to the region round the sources of the rivers Tūdīj and Nīk which in Persian is called Hānārgār. Later, the lands of Wandā-Humruz included the greater part of eastern Mazandaran. Wandāsbandjī seems to have ruled over the greater part of Mazandaran for his capital Muzz was the rallying point from which expeditions were set out against Dailam. Finally the mountain of Shārwin comprised the S.E. part of Mazandaran, for according to Ibn al-Fāqih, p. 305, it was close to Kūms.

In the time of Iṣṭakhri, the three divisions of the mountains specified are: the mountains of Rūbandjī, of Pādūbān and of Kārin. “They are high mountains (qārīb) and each of them (qārīb) has a chief.”

Rūbāndjī, according to Ibn Hawkal, lay between Raiy and Tabaristan. Barthold, Oiler, p. 155 emends the name to Rūyandjī and identifies it with Rūyān. Ibn Rusta, p. 149 says that Rūyān, near the lands of Raiy, did not form part of Tabaristan but formed a special kūra with the capital Kadjjī which was the headquarters of the Waṭ (cf. Kafarustāk in the būlūk of Kudjīlp). According to this, “Rūyān = Rūyān is to be located in the S.W. part of Mazandaran (north of Teheran). In the Mongol period, Hamdallāh Kazwīnī, p. 160, is the first to mention Rustāmdār (on the Shāhītūd). As Vasmer, loc. cit., p. 122—125, has shown, Rustāmdār later included all western Mazandaran between Saghnasr (Gīlān) and Āmol.
MÄZANDARAN 427

Rustandar therefore included Ruyan, without the two terms being completely synonymous.

Djibal Karin had only one town Shahrmar, a day's journey from Sari. The local chiefs of the Karin lived in the stronghold of Firrim which must have stood on the western branch of the river Tidjin, which later flows past Sari. The modern budak of Firrim is in the Hazar-Djarib (more accurately in its western half which is called Duhang). According to Ibn Isandwy, p. 95, the persons of the Karins included the mountains of Wandakummil (i.b., p. 25; the water supply of the mountains of Amol came from this mountain). Amol, Lsfr (on the eastern source of the river Bbul which runs to Befursah) and Firrim, "which is called Kuh-i Karin". According to Vest, iii. 283, the lands of the Karins included Djibal Sharran (cf. above) which Timad al-Saltana, Khitn al-Tadwin, p. 42, identifies with Sawad-khfirst known as the sources of the Talur (river of Alehâd between Amol and Befursah); the pass leading to Sawad-kh first is still called Shaflin < Sharrin.

History. The local dynasties of Mazanderan fall into three classes: 1. local families of pre-Islamic origin, 2. the Alid sayyids and 3. local families of secondary importance: 1. The king of Tabarestan and of Padshahvar (Marquart, Erzähler, p. 130: "the district opposite the region of Kharār"; Farbzwergler is a misreading of the name, which is also found in the Bawandids, xii. 17) was Gushnasp, whose ancestors had reigned since the time of Alexander. In 529-536 Tabarestan was ruled by the Sassanian prince Kayûs, son of Kâwat. Anişhirvan put in his place Zomir, who traced his descent from the famous smith Kawa; His dynasty ruled till 645 when Gil Gabhara (a descendant of the Sassanian Djamasp, son of Peroz) annexed Tabarestan to Gîlan. These families, on whom whose coins might throw some light (cf. below), had descendants ruling in the Muslim period.

The Bawandids (who claimed descent from Kayûs) provided three lines: the first 45-597 (665-1007) was overthrown on the conquest of Tabarestan by the Ziyârid Bâdîs b. Washmgir, the second reigned from 666-1073 to 666 (1210) when Mazanderan was conquered by Muhammed Kharâimshâh; the third from 655 (1237) to 750 (1349) as vassals of the Mongols. The last representative of the Bawandids was slain by Afrasiâyîb Čulâw.

The Karins (in the Kûhi Karin) claimed descent from Karin, brother of Zarmir (cf. above). Their last representative Mazyar [p. v.] was put to death in 224 (839).

The Padâsânids (Ruyan and Rustandar) claimed descendent from the Dâbîyids of Gîlan (their eponym was the son of Gil Gabhara: cf. above). They came to the front about 40 (660) and during the rule of the Alids were their vassals. Later, they were vassals of the Bawandids, who deserted them in 566 (1190). The dynasty, restored in 666, survived till the time of Timur; one of its branches (that of Kûwâna B. Kayâmshâh) reigned till 975 (1567) and the other (that of Iskândar B. Kayâmshâh) till 684 (1574).

II. Alongside of these native dynasties the Alids were able to establish themselves, principally in Tabarestan. In 250 the people of Ruyan, revelling against the governor, sent to Rayy for the Zaidi Sayîd Hasan b. Zaid, a descendant of the Caliph Alî in the sixth generation. This (Hasanid) branch ruled in Tabarestan till 316 (928). The Husainid branch ruled from 304 to 333 (7). Another dynasty of Marâqshây sayyids ruled in Mazanderan between 760 (1358) and 880 (1475). The founder of this dynasty was Kâwat al-Din, a descendant of Alî in the twelfth generation. A third family of Muradâli sayyids is known in Hazar-Djarib between 760 and 1005 A.D.

III. The noble families who enjoyed considerable influence, mainly in their feuds, are very numerous. Râhino mentions the Kiyâ of Čulâw (at Amol, Tâlân and Rustandar) between 795 A.D. and 909 A.D.; the Kiyâ Djâlâli of Sari in 750-763; the house of Rûzaftân of Sawâdkhû between 897 and 923; the Dîw in the period of Shâh Tahmâsp in certain parts of Mazanderan; the Bânu Kâfûs between 857 and 957; the Bânu Iskândar over 857 and 1006 and the different princes of Tamîsha, of Miyanârûd, of Lîrdjân, of Mâmîr, of Iftây etc.

Besides this confusion of feudal dynasties, a series of conquerors from outside has ruled in Mazanderan: the Arabs (their expeditions began in 22 = 644; the final conquest took place under al-Mansûr in 145-144 [cf. the article TABARISTAN]; in the following dates and facts given are contradictory as Vasmer has shown), the Tâhîrîs, the Safarîs, the Samânis, the Ziyârids, the Ghazarîs, the Saljuks, the Khwarizmshâhs, the Mongols, the Sarbodârs, Timûr and his descendants, the Safawîs. Shâh Ismâ'il sent an expedition to Mazanderan in 923 (1517) but it was under Shâh âbîs that the land was definitely incorporated in Persia in 1005 (1596). This monarch claimed hereditary
rights there from the connection of his family with the Saiyid Kiwan al-Din Marashi (Ham-
sh. Tehran, p. 354). Farahabad was founded in 1020 (1612) and in the next year Ashraf was
built with its famous palaces.

Logique, London 1844, xx, 248–255 (on the circum-
stances of the find made at Türcing-tap). Cf. Bode,
Anonymous coins were also struck. The issue of these coins with Sasanian types ended in the year 143 Tabaristan era (794, anonymous) but we have a coin of 161 (812) on the obverse of which in place of the king's head — as earlier on the coins of the governor Sulaiman (136–137) there is a rhombus with the puzzling Arabic letter چ and on the margin al-Fadl b. Sa'd Ibn-Kiyāsatan (in Arabic) is named; on the reverse, instead of the altar with its guardians are three parallel designs like fir branches, between them an inscription in four lines giving the Muhammadan creed in Kufic and the date and mint in Pahlavi (Tissaeu-hausen, "Zap. rest. old arch. obsch.", ix. 224).

We know diehams of Tabaristan mint of the Caliphs of the years 102 (Lavoix), 147 (Brit. Mus. with the name of the governor Rakh), 190–192, copper coins of the years 145 and 157 (Zambaur, "Numism. Ztschr.", xxvi., the latter with the name of Omar b. al-Ala). At a later date, coins were struck there by the diehams of the Alids (Amul, 253 A.H., 300 A.D. and A.H.), the Ḥiyād and Zayāris (Amul, Saniya and Fīrīm), the Bāwandāris (Fīrīm, 353–357, 401 A.H.), sometimes by the Sāmānids, (Amul A.D. 341, 353–355, 360) and Khurshid (Khurshid I., 357–359) by the Hulaguids, Berberdāris, Tinārids (Amul, Sār) and Shakhs of Persia (Amul, Sār, Tabaristan, Mazandaran). In Amul anonymous copper coins were struck from the xvith century onwards. On several pieces of this period the mint Tabaristan occurs. As these are all very rare, the issue must have been an occasional one. The dates are not preserved on any specimens. More common are copper pieces of the value of 4 Khābēk (18–22 grammes = 280–340 grains) with the lion and sun and mint Mazandaran, which belong to the xvith century. During the Russian occupation of Gilān in 1723–1732, to meet the shortage of currency provoked by the financial crisis in Russia at this time, Persian copper coins were overstruck with a Russian die (double-eagle) and circulated in the occupied provinces in place of Russian money.

These coins are often called Mazandaran pieces but this is not correct, as only Gilān and not Mazandaran was occupied.

tomb which is still standing (the first is said to have been destroyed by Čingiz Khan), was built in 836 (1431-1432). The masār does not seem to have been of any particular importance during the time of the Ozbeks and is hardly mentioned although several Ozbeks Sultans were buried there. In the first half of the sixteenth century, the place is usually simply called masār by travellers, the name Mashriq Sharif seems only to have arisen within the last hundred years. Abd al-Karim Bughāri (ed. Schefer, p. 4) does not mention Masār at all among the towns of Afghanistan: in 1832 when A. Buresh passed through it, it was a little town with about eight hundred houses. In 1860, the Afghan governor Na'il Abīn Khan, a Shī'ī, chose Masār Sharif as his residence; since then Masār Sharif has been the capital of Afghan Turkestan. In 1873 it was described by the Russian general Matveyev as one of the best towns in Northern Afghanistan with about 30,000 inhabitants (Kostenko, Turkestan, Kayi, ii. 157).

Masār, a name borne by over twenty Afghāni writers or men celebrated for their piety, among whom may be mentioned Abū 'I-Qubā Sulamīn b. Yākhfā al-Masār, a pupil of Abū 'Abd Allāh Muhāmmād b. Bakr. Celebrated for his learning and his virtues, he spent all his time in study and teaching and died in 474 (June 11, 1051—May 31, 1052) in a little town of the Banū Wissā (Wīsā, a clan of the tribe of Masār, which in those days occupied the lands between Gābeh and the south of Tippūn. He wrote a book on the principles of law (fusūl) entitled al-Muhaṣa.

Masād, the apostle of a religion, which was founded two centuries before him by Zādūqī, son of Khurshāh, but spread in Persia only after his propaganda; it had great political influence in the country in the time of Kāwād (488-531 A. D. with an interregnum). The latter adapted it and even made arrangements for putting its teaching into practice but after his restoration he put Masād and a large number of his followers to death. The best known feature of his teaching was the endeavour to remove every cause of covetousness and discord among men, and this to the point of, by making women and possessions common property.

It is not possible to reconstruct from the sources the Mazdaean doctrine in detail nor to settle its relations with the other religions or sects of Persia. The main features will be indicated here.

The sources. Detailed narratives of the reign of Kāwād and some important references to Masād and his teaching will be found in the contemporary Syrian and Byzantine writers (Joshua Stylites, Agathias, Procopius, Malalas, Theophanes). In Pahlavi literature there are few references to Masād. The bulk of our information about Masād and his relations with Kāwād comes to us from Arab and Persian writers and go back mainly to the Khvādīnāmâ or Royal Sasanian Chronicle, of which the best known Arabic version was that of Ibn al-Muqaffâ. Baron Rosen has shown that the other Arabic versions were not all dependent on this one, some of them having been prepared directly from the original. Some compilers also inserted historical or legendary episodes taken from other Pahlavi works and others attempted to harmonise different narratives and did a certain amount of retouching in their reconstruction of the original. The Persian and Arab writers who had these different versions or compilations at their disposal only very rarely mention their sources and endeavour in turn to reconcile the statements made. Noldeke has already distinguished two "Hauptquellen" for the various Arabic and Persian narratives (the first followed by Ibn Kūtībā and Eutychius and a part of Tabāri, the second by al-Ya'qūbī and another part of Tabāri). Christensen in his fundamental study thinks he can distinguish four lines of the tradition of the Khvādīnāmâ found by the Arabic and Persian authors in the form of narrations. Noldeke's two "Hauptquellen" correspond to the first two; a third is represented by al-Duwa'ari (Noldeke thinks his story is a harmonising of the two "Hauptquellen") and the Niyyāt al-ah hajj al-'Arab (J. R. A. S., 1900, p. 195 sq.); the fourth presents features of its own, some of which are legend in character and are found again in the Siyūsāt-Nāma of Niyyāt al-Mulk, which is independent of the Khvādīnāmâ. The common source of all these legendary features would be, according to Christensen, the Book of Mazdak, a Pahlavi work of fiction (like the Kūhīta wa-Dīnma), which enjoyed great popularity and was translated into Arabic by Ibn al-Muqaffâ and into Arabic verse by Abūn b. Abd al-Hamīd al-Laḥfī. The elements of this fourth line of tradition are, according to Christensen, found in the Kābīb al-'A伊斯兰, al-Hālibī, Firdawsi, al-Brījī, Ibn al-Muḥīr and Abū 'I-Fadī. Some references in al-Maṣādī and al-Khāṣṣānī can also be traced to the book of Mazdak.

Independent traditions would also be preserved elsewhere, for example by the Arabs of al-Iṣra. Al-Shahrestānī's notes (to which some critics deny any historical value) might go back to books of the sect now lost. These are not found elsewhere and their immediate source was Muhammad b. Harān Abū 'Iṣra al-Wārâq, a Zoroastrian converted to Islam. The source of the notices in the Fīriṣṭ is not known (it calls the Mazdakīs Zoroastrians); the Persian work of the xviith century called Daftār-i-Maṣādīhī, v. probably a mere compilation of no value, from sources already mentioned and the pretended Mazdakī book Daftār, which it quotes, is not genuine.

Doctrine. The fact that the majority of these sources emphasise the social aspect of the Mazdaean reforms and do not mention special doctrines or beliefs of the sect (some like the Fīriṣṭ and Ibn al-Muḥīr connect it with Mazdaitism) has convinced the majority of Orientalists who have studied this subject (e.g. Noldeke, Nicholson, v. Wesendonck) that the reforms must be considered as a social movement which aimed at purifying the Mazdæan religion: a communist system of which the precepts regarding women and property and those of an ascetic nature (like the prohibition of slaughtering
animals and eating their flesh) had however a religious aim, and were clearly distinguished by this character from modern social communism.

Christensen, in his work already quoted, comes to the contrary conclusion that Mazdakism was above all a religious movement and that its social precepts were originally a very secondary feature; it was, he says, a reform of Manichaeism, already preached by Zaradust, two centuries before Mazdak. Christensen supports his argument by two well known passages in Malala, of which the first deals with the doctrines propounded at Rome under Diocletian by the Manichean Bundos in opposition to official Manicheism. The second passage, which have afterward gone to Persia and spread his doctrine there, which was called *taut sa'artatū* (from the Pahlavi form *dirist-danem* = followers of the orthodox faith). The other passage calls king Kavadh *b' sa'artatū* (an inaccurate form for *b' sa'artatūs*), an epithet which contains an allusion to the Mazdaki faith. A popular form of *da'ītū* is said to be the origin of the very corrupt forms of this surname, which are found in the Arabic texts and are due to the similarity of certain Arabic letters (al-Tha'alib translates it “may his heard fall” which presupposes a form *da'ītū*).

Christensen thinks these links sufficient to identify Zaradust with Bundos (Bundos would be an honorific title of the reformer, “the venerable” from the Pahlavi *budāzg*, *bundūz* ) and defines Mazdakism as a Manichean ḍarštūzā. This theory is supported by al-Shahrastānī’s rūsūm, which gives us, along with the general character of the religious history of Iran, the best argument for this thesis, and those who hold the other view are forced to deny any force to the evidence of this historian of sects. Christensen also concludes that it is with good reason that the Byzantine historians call the Mazdaki Manichaean: but it must be added that their classification of a doctrine so little known in the west (where on the other hand Manicheism was well known and was, so to speak, the typical heresy of Persia) is not of much value.

According to al-Shahrastānī’s exposition, Mazdak's system resembled that of Mani; except that he said that the dark spirits did not act of their own will and without restraint (*l'kham wa l'khāthyār*), but blindly and by chance (*l'kham wa l'ittifāk*); that mixture is produced also *l'kham wa l'ittifāq* and liberation will be produced *l'kham wa l'ittifāk*. In this connection we must remember that the same author in his survey of the Manichaean testifies that the views of the Manichaean on the cause of mixture were divided and that some of them said that it was produced *l'kham wa l'ittifāk* the opposite of what was laid down in the original cosmogony. Other Muslim writers allude to this point in dispute among the dualist sects: Al-Mu'tahhar b. Tahir Al-Makdisi says, for example, that mixture *l'kham wa l'ittifāq* is taught by the Sabians, a name which is sometimes applied to the Manichaean. All this gives the impression that the mention of the Mazdaki teaching in this connection is quite in keeping with the conditions of polemic among dualists. Perhaps the practical teachings of Mazdakism should be connected with the doctrine of mixture *l'kham wa l'ittifāq*.

Al-Shahrastānī also gives from another source other details on Mazdaki cosmogony (the four forces, which surround the object of worship as court dignitaries surround the king of Persia; the seven virgins, the twelve spiritual beings, the three elements, the director of good and of evil), details which have their parallels in other gnostic and dualist cosmogonies, which should be studied with their names from the point of view of the latest studies in Iranian syncretism.

Al-Shahrastānī finally alludes to certain cabalistic speculations on the letters of the supreme name and mentius Mazdaki sects (like the Abū Muslimīya) still in existence in his time in Persia and as far away as Sogdiana. We may conclude that it is at least premature to deny all connection between Manichaeism and Mazdakism; it seems that rather than put the question in the form of a rigid alternative between Mazdaean or Manichean influence, it would be better to regard Mazdakism as a form of ignorance upon which two powerful religious forces have exerted an equal influence, the official religion and the Manichaean heresy, and some other elements also (just as Manichean gnosticism owes much to the national religion).

In any case, the feature which appears most clearly from the sources and which struck contemporaries was the general body of Mazdaki precepts with communist and humanitarian tendency and especially those which relate to community of women and property and were actually put into practice for a short time. The ascetic prescriptions are quite in keeping with a gnostic character of the sect (the prohibition of slaughtering animals and eating their flesh) which with communist teachings would be the elements forming the path to gnosis and liberation.

The presence of an ascetic strain in Mazdakism, as in Manichaeism, is probable. The people naturally seized on these principles and eagerly attempted to put them into practice on a large scale. Thus excesses resulted which, at least in origin, were very far from the intentions of the reformer and the elite of his adherents. This explains also why the religious character of the sect was forgotten and memory of its social teachings retained. Whether the founder and his leaders also abandoned themselves to the excesses of which the sources accuse them, one cannot say; we know that very frequently the initial good faith of reformers is disturbed by contact with reality.

It was natural to give a more practical value to this body of teaching, if we regard Mazdakism as a Puritan reform remaining within the Mazdaean religion and not becoming an independent religion.

Contemporary sources also tell us of a bishop elected by the Mazdakists, named, according to Malala, Indaraz (which Noldeke connects with the Pahlavi word *andaraz* = to advise; cf. the *imda* or *episkopos* of the Manicheans) who was slain with the other Mazdakis on the day of the massacre; according to Christensen, it is possible to identify him with Mazdak. During the persecution which followed the massacre, all the Mazdaki books were destroyed. The Persian work of the seventh century, *Dabistāni- Mazdakī* quotes a book called *Dinā* which is usually regarded as a forgery: all the notices of the sect professing to come from this book are
taken from the text of al-Shahristānī and other sources, like the rest of the book. The Book of Mazdak which enjoyed a great popularity and was translated in Arabic by Ibn al-Mukaffa’ and into Arabic verse by Abān b. ‘Abd al-Hamīd al-Lāhikī was a work of entertainment and not of religious teaching (cf. above).

History of the Mazdaki movement in the reign of Kawadh — The Massacre.

We know very little about the life of Mazdak (also written Mazdak). His father was called Barnādāh (a Persian name like Mazdak) and according to Tabar, they came from a town which Constantine compares to Tabard. Christensen is inclined to identify with Mādharaaya. L-pakhr and Tabriz are mentioned as the birth-place of the reformer. According to some sources, he had been a Zoroastrian priest (mādhādā); al-Bīfānī who sometimes follows a romantic tradition (cf. above), calls him mādhān mādhārā. The details of his doctrine are not known but it is certain that he developed and spread the teaching of his predecessor Zādū-ḵūt of Pāsā, who lived two centuries before him. It is evident that the disturbed condition of Persia after the victories of the Hepthalites facilitated the spread of revolutionary doctrines; but it is difficult to see why the king (whose reign began in 498) should have been converted to the new faith (and this is a question which also puzzled the ancients), and how he became connected with Mazdak.

The necessity of crushing the power of the nobility and higher clergy which he found annoying may have caused the king to use for his own ends a sect which aimed at destroying the privileges of these classes Nolderke (who thinks Kawadh was a man of strong will) credits him with this plan. Christensen (who had accepted this thesis) now sees in the allusions of some of the sources proof of the sincerity of Kawadh (whom, as he says, the contemporary sources do not credit with a “Machiavellian character”). Kawadh, he thinks, was moved almost entirely by religious motives and was attracted by the religious element in the new teaching, while ready to take advantage of any political advantages that the sect might be likely to gain for him. In any case it is evident that in his wars he was not restrained by any humanitarian prejudices, although one Arabic source with a hostile bias says that the king as a cantīf feared to spill blood. Christensen likes to compare his attitude with regard to Mazdaki morality with that of Constantine with regard to Christian teaching. In any case it is difficult to give a verdict on Kawadh, in view of the varying prejudices of the sources and the tradition of the time of Khusraw which in general tends to elevate the figure of Anisharwān at the expense of the others. There were numerous conversions among the upper classes; proselytising among the common people was facilitated by the wretched conditions in which they lived and of course also by the nature of the teaching which in every age has seduced the masses. Mazdakism thus became a remarkable force and permeated all the machinery of government. The practical effect of the king’s favour was seen in the measures alluded to in contemporary sources; but we do not know to what degree they realised the Mazdaki ideal, either as regards community of women (perhaps this was only an extension of regulations already existing in the Sasanian code?) or community of property (only taxes on the rich)!

But what is certain is that Khusraw at the beginning of his reign had to take important steps to remedy the disastrous results to property and the organisation of the family; such abuses were however not the direct result of the legal measure adopted by Kawadh but rather of the violent application of communism which was a later development.

The philo-Mazdak policy of the king and the growing power of the sect provoked a revolution in the palace and Kawadh was dethroned and imprisoned. Djamasp, his brother, was put on the throne in his stead. Kawadh succeeded in escaping and took refuge with the Hephalites and regained his kingdom with their assistance (498 or 499).

In the meanwhile, in spite of the dethronement of the king, the sect had grown more and more and its power became disquieting. The people, urged on by their leaders and more alive to the practical advantages than to the religious elements of the reform, naturally abandoned themselves to all sorts of excesses and disorder broke out everywhere.

The estates of the nobles were plundered, the women carried off, which, with a horror of communist principles, explains the violent language used by contemporary and Arabic and Persian sources against the sect. All this must have frightened the king on his return. Having revenged himself on his principal enemies immediately on his restoration, he now found it necessary to come to an agreement with the majority of the nobility and clergy in order to face the war with Byzantium. Prince Khusraw seeing his rights to the succession threatened by the activities of the sect, which, taking advantage of its power, was endeavouring to secure the election of Kawadh’s eldest son Padshahwār Shāh (Phthasuaran). It is also said (in the sources of the fourth line; cf. above) that Khusraw was eager to avenge himself on Mazdak, who had refused to take as his wife the mother of Khusraw (offered to him by Kawadh in recognition of the principles of the sect) until the prince humbled himself before him, then Khusraw, who had already begun to display his remarkable political abilities, must have had considerable influence with his father, who was persuaded to have Mazdak and his followers massacred, after inviting them en masse to the court on the pretence that a theological disputation was to be held (or according to another story, for the public proclamation of Padshahwār Shāh as heir to the throne). The massacre took place in 528 or at the beginning of 529. Arab writers wrongly put it at the beginning of the reign of Khusraw; this exploit earned him the title of Anisharwān. The number of slain is unknown. Kawadh died in 531 and after him Khusraw took special steps to restore order in the ownership of property and in the social organisation which had been upset by the application of communism. The surviving Mazdakis were persecuted in a blood-thirsty fashion and their books burned.

Mazdakism after the massacre. It is not probable that Mazdakism disappeared with the persecution; perhaps the survivors sought refuge in the mountains, in different parts of Persia where we later find sects (e. g. the Khu vamia) whom Muslim writers do not hesitate to connect with the Mazdakis. Nizām al-Mulk, who in his manual on the art of government attributes great political importance to a knowledge of the various sects, is very clear on this point. According to some
orientalists Mazdaki elements can be discovered in Bātinism and Isma'ilism. But the whole question of the relations between these sects (of which very often insufficent is known) and the old Persian religious forms must be examined thoroughly with a knowledge of the progress made in the study of Iranian gnoses and syncretisms. It cannot be dealt with here; cf. the articles ISMA'ILITA, KHURRAMIYA, MU'AYYIDA, MUHAMMARA, MU'AYNADYA, SINBAD etc.

**MAZHAR, Mirza DAIYUDIN, a n. Urdū poet and prominent play writer, also a dramatist, was born in 1110 (1699) or 1113 (1701) in Kālábāgh, Mālwā. His father Mirza Lījan, an officer of Awrangzīb [q.v.], who, when the news of his birth was conveyed to him, said his father was Mirza Lījan and hence his son should be called Dāyūddān; though his father afterwards named him Shams al-Dīn, yet he is known by the name which the emperor had selected for him. He was received into the Naḍjdabandhi order by Sayyid Mir Muhammad Badhdūnī and into the Kādīrī order by Muhammad 'Abd Sumāntī. He died in Dhihīlī on the 10th of Muharram 1195 (January 6, 1780) from a pistol shot fired at him by some Shī'īs fanatic. His memoirs with some letters, called Na'amāt Maṣḥāri or Labīf al-Ḥanasa are edited by Muhammad Beg b. Rahīm Beg, Dhihīlī A. H. 1301, A. D. 1882. His biography, together with notices of his disciples, has been written by Muḥammad Naʿīm Allāh Bahdrūdi in Bihārī al-Maṣḥāria.**

**MAZĪN, the name of several Arab tribes who are represented in all the great ethnic groupings of the Peninsula; this finds typical expression in the anecdote recorded in Aḥānī, v. 141 (= Yākūt, Irākād, ii. 382—383), according to which the Caliph al-Ḥārīm asked the grammarians Abū Qumān al-Māzin, who had come to his court, to which Mazīn he belonged: — if to the Mazīn of the Tamīm, to those of the Kāsa', to those of the Rabi'a or to those of the Yemen. The first are the Mazīn b. Mālik b. Amr b. Tamīm (Wustenfeld, Gener. Tabellen, L. 12); the second, the Mazīn b. Manṣūr (D. 10) or the Mazīn b. Fazāra (H. 12); the third, the Mazīn b. Shābān b. Dhuḥil (C. 19); the last, the Mazīn b. al-Nāḏīrī, a clan of the Khaḍrāz Anṣār (19, 24). But alongside of these, many other tribes and clans bore this name. The Djamharat al-Ansārī of Ibn al-Kalbī gives no less than seventy, of whom the best known are: the Mazīn b. Saʿd b. ʿUdhā (Ibn Kutāba, K. al-Maʿārīf, ed. Wustenfeld, p. 36; more accurately according to the Djamhara, MS. Br. Mus., Add. 23, 297, fol. 134r: Mazīn b. ʿAbd Manāt b. Bakr b. Saʿd b. Dhuḥil; not given in the Tabellen); Mazīn b. Saʿdā b. Muʿāwiya b. Bakr b. Haṣān (Ibn Kutāba, p. 42; Tabellen, H. 14); Mazīn b. Raʿīsh b. Qaṭafān (H. 10); Mazīn b. Raḥif b. Zuḥayr or Mazīn Madīhī (7, 18); Mazīn b. al-Azd (11, 11). The large number of tribes named Mazīn and their distribution over the whole of Arabia makes the hypothesis that we have here a single tribe that had been broken up into small sections impossible and we are led to suppose that the name Mazīn, is a descriptive rather than a proper name; since the verb mazāna means to “go away”, one might suppose that Mazīn originally meant “the emigrants” and was used in a general way as any ethnic group which became separated from its own tribe and was incorporated in a strange tribe. This etymology, like almost all those of the names of Arab tribes, is of only a small value.

The sources give a certain number of geographical and historical references to different tribes called Mazīn; but they are generally very scanty, none of these tribes having attained sufficient importance to make it independent of the larger body to which it was attached. We have a few details about the Mazīn b. al-Nāḏīrī, a fairly important group of Madinese Khaḍrāz (on the part played by them at the beginning of Islam see Castani, Annali dell’ Islam, Index to Vols. i.—ii.), as well as about the Mazīn b. Fazāra who took part as members of the tribe of the Dhubyān, in the war of Dāyūs and al-Qabilia (cf. Dhihīlī, and Aḥānī, xvi. 27). Ibn Maiyāda, himself a Dhubyān, directed a violent satire against them at the end of the first century a. H. (Aḥānī, i. 90, 102). As to the Mazīn b. al-Nāḏīrī b. Dhuḥil, to whom the grammarians Abū Qumān Othman belonged, we know from the anecdote above quoted that in their dialect, m (initial?) was pronounced like b (ba'smuka for ma'smuka, what is thy name?), a peculiarity which does not seem to be recorded of the dialect of other Rabi'a. Lastly the Mazīn b. al-Azd, whom tradition makes migrate to the north, their changed name to Ghassān [q. v.] under which they became celebrated.

It is only of the Mazīn b. Mālik b. Amr b. Tamīm that we have fairly full information. Legend, which has developed with unusual detail around the sons of Tamīm [q. v.] gives Mazīn a part in the story of his uncle 'Abd Shams b. Saʿd b. Qaʿit Manāt b. Tamīm's fight against al-ʾAnbar b. Amr b. Tamīm (cf. al-Mufaddal b. Salama, al-Fāıkī, ed. Storey, p. 233 and the references given in the note). This tribe of Mazīn never left the great group of the 'Amr b. Tamīm to which they were around the well of Safārī near Dhī Kār (Vančík, ed. Bevan, p. 48, note to line 17; Yākūt, ii. 95; Bakrī, p. 724. 1; 787—788); their principal subdivisions were the Bani Ḥurṣūs, Khuṣūs, Rūzām, Anār, Zabīna, Ḫūthā and Raʿīsh. In the Dḥāliya, the Mazīn followed their parent tribe and we find them sharing in the
MAZIN — MAZYADIS

wars of the latter; in rotation with the other Tamimi tribes they held the office of ḥakīm at the fair of ʿUkāṭa (Aḥadīdī, p. 438). At the coming of ʿɪl-am their chief was Muḥammad b. Shūḥāb, known as a poet (cf. especially al-Dhahībī, Bayānī, ii. 171; al-Kalī, Anāḥī, iii. 50; Ibn Ḥadjar, Ḥāfiẓ, Cairo 1325; vi. 156). Without being particularly zealous partisans of the new religion, they did not take part in the ṭīdās with the other Tamīmī tribes (11 a. 1.) and they even drove away the messengers sent them by the prophetess Ṣaḍjaḥ [q. v.] and made one of them prisoner, the Taghtībī al-Ḥuḍḥūlī b. ʿIrām; the latter waited for his revenge till the troubled period that followed the murder of the Ḥalīf ʿOṯmān (35 = 656), of which he took advantage to ravage the district of Safārī; but the Mazīn met him and slew him and threw him into the well (Ṭabārī, i. 1911, 1913; cf. Aḥānī, xix. 145—146, transl. in Caeter, Annāl dell'Islam, x. 552—553; in the last passage the expedition against the Safārī appears to have been a private affair). In the event of this downfall.

At a late date, the Mazīn settled in large numbers, like the rest of the Tamīmīs, in Khūrasān and took part in the conquest of Central Asia; among the Mazīnīs who distinguished themselves there were Shūḥāb b. Muḥkājī, son of the chief already mentioned (Ṭabārī, i. 2569, 2707); Ḥilāl b. al-ʿĀṯwāz, who in 1020 (720) slew the members of the family of Yazīd b. al-Muḥallab after the defeat of the latter (Ṭabārī, ii. 1912—1913); ʿUmar b. ʿṢūnān, who killed the Persian chief Ṣuthīl (Ibn al-Kalbī, Nastaʿl-qāhī, p. 30, note to lines 3—4). We also find many of the Banū Mazīn among the khurābd of the ʿAbīdīd army in the time of the rising against the Umayyads. But a no less number went to swell the ranks of the Khāḍījīdīs, the celebrated chief of the Azākīs, ʿAlī b. al-Fudāfī [q. v.], belonged to the Mazīnī clan of Kūwāya b. ʿUṯrīs. Very few of the remarkable number of poets produced by the Tamīmīs belonged to the Mazīn. We may note however Ḥilāl b. Asʿār of the Omayyad period (Aḥānī, xii. 186); Mālik b. al-Raḥbī, poet and brigand, contemporary of al-Ḥadījīdī (Aḥānī, xix. 162—169; Ibn Kutābā, al-Shībaw ʿl-ʿSwhāwa, ed. de Goeye, p. 205—207); Zuhāb b. ʿUrwa al-Sakī (Aḥānī, xix. 156: the few verses are not, however, often quoted. They are also attributed to his father, ʿUrwa b. Ḥiḍhām, and even to ʿAbd al-Rahmān b. Ḥassān b. Ṣuṭḥī: cf. Muḥajīfayat, ed. Lynell, p. 249, note y). Lastly it may be mentioned that the Mazīn have given to Arab philology two of its most illustrious masters: Abū ʿAmr b. ʿAlī [q. v.], d. 154) and Naṣr b. Ṣumāl whose genealogies are given in Wustenfeld, Tabellen (1.).

MAZYADIS, a Muḥammadan dynasty in al-Ḥilla. The Banū Mazīn belonged to the tribe of Asād and lived west of the Tigris, from Kūf to Hit. In the southeast, on the Ḥijjāzīst frontiers, the Banū Dubaisi settled. When Abū ʿl-Ghānāʾim Muḥammad b. Mayādī, who was related to the Banū Dubaisi, slew one of their chiefs with whom he had quarrelled, a war broke out between the two tribes (401 = 1010—1011). Abū ʿl-Ghānāʾim fled to his brother Abū ʿl-Hāsan ʿAlī; the latter set out against the Banū Dubaisi with an army, but was defeated and Abū ʿl-Ghānāʾim fell in the battle. In 403 (1012—1013) ʿAlī was recognized as emīr by the Būyid Sulṭān al-Dawla. In Muḥarram 405 (July 1014), he undertook a campaign against the Banū Dubaisi, to revenge himself for the defeat he had suffered and slew Ḥassān and Nābān, the sons of Dubaisi, but in Djiwādā of the same year (Oct.—Nov. 1014) he was routed by his brother Muṭar. After ʿAlī's death in Dhu ʿl-Kaʿdā 408 (March—April 1018), his son Dubaisi succeeded him. The latter's brother Abū-Ḥakamād with the help of Turkish mercenaries in Baghdād, endeavoured to seize the power for himself; but order was soon restored and Abū-Ḥakamād went to al-Mawṣil to the ʿUkāṭīs. In a few years Dubaisi became involved in war with Karawan b. al-Muḳallād [q. v.] and he had also troubles within his borders. In 412 (1022) the troops of al-Kādījīrā and Dījālāl al-Dawla invaded the brother's territory. Dubaisi had to take to flight and the land was laid waste. Peace however was soon arranged. Dubaisi was allowed to retain his lands but had to pay Dījālāl al-Dawla a considerable sum. The third brother ʿAbīḍī allied himself with al-Bāṣāsīrī, the military governor of Baghdād, and in 424 (1032—1033) they advanced against Dubaisi. The latter sent an army to meet them; but his troops were routed and he himself had to take to flight. After receiving reinforcements he advanced against ʿAbīḍī; they met at Dījār-ṣarī and after a fierce battle, Dubaisi had to cede a part of his possessions while al-Bāṣāsīrī, who arrived too late to take part in the battle, returned to Baghdād. In Radjāb 446 (Oct.—Nov. 1054) the Banū Kūfādā invades the country but were soon driven out with the help of al-Bāṣāsīrī. Two or three years later war broke out between al-Bāṣāsīrī who was joined by Dubaisi, and the Sāliḍī Sulṭān Toghrī Beg and his follower Karawan b. Badrān [q. v.], Dubaisi died in Shawwal 474 (March—April 1082) at the age of 80. His son Mansūr succeeded him but died in Rabi 1, 479 (June—July 1086). In the reign of his son and successor ʿṢadāka [q. v.] the power of the Mazīdīs spread over almost the whole of the ʿIrāq. At first he was a stout supporter of Bakhtyārīdī [q. v.]; in 494 (1100—1101) however he turned to his brother. The towns of Hit, Ṭaw, Basra and Talʿīt fell successively into his hands but, as the commander-in-chief ʿṢadāka in Basra did not prove fit for his task, Muḥammad seized the suzerainty of the town and installed a new governor. In ʿṢadāka's reign the capital al-Ḥijmān was extended and fortified, and given the name of al-Hilla (495 = 1101—1102). His steadily increasing power however aroused Muḥammad's misgivings and in spite of long negotiations, a rupture finally occurred between them. At the end of Radjāb 501 (Febr.—March 1108) Muḥammad himself set out from Baghdād against ʿṢadāka. A section of the Arabs allied with him fled and ʿṢadāka fell in the battle. His son Dubaisi was taken prisoner but the latter's two brothers escaped and were only able to return home after Muḥammad's death
In [511 = 1118], in [529 (1135)] he was treacherously murdered [cf. the article Dubais] and succeeded by his son Sadaka. In the war between Sultan Mas'ud and his nephew Dawud, Sadaka declared for the former. After Mas'ud's victory, the troops scattered to seek booty and several emirs including Sadaka were surprised and captured by the enemy and at once put to death ([532 = 1137—1138]). Sadaka's brother Muhammad was thereupon recognised as lord of al-Hilla. In [540 (1145—1146)] however, the third brother Ali went to al-Hilla, because he was afraid of the Sultan and drove out Muhammad. After he had taken the town, he drove back the Sultan's troops and it was not till 542 (1147—1148) that Salerkerd, one of Mas'ud's generals, was able to expel Ali but in the same year he was defeated by the latter and had to abandon the town. In [544 (1149—1150)] Ali endeavoured to induce the caliph al-Mu'tafid to abandon Mas'ud but, as the caliph refused and summoned the Sultan to his help, Ali had to submit and the rebels who had joined him dispersed. Ali died in the following year and al-Hilla was given as a fief to Salerkerd by Mas'ud. On Mas'ud's death in 547 (1152), the town fell into the hands of Mas'ud's illal, the commander of Baghda; the latter however was driven out by the caliph's troops who occupied al-Hilla. When in 551 (1157) Sultan Muhammad took the field against al-Mu'tafid [q.v.], they had to withdraw and Muhammad sent a garrison in the town. The Mazyadis submitted to his deputy but in 558 (1162—1163) the caliph al-Mustansird sent an army against them with an end to their power. 4,000 men were slain and the remainder outlawed so that they were scattered in all directions.

**Mazyar, [Bālādhir] gives the former Māzh-yāzd-yr, the last of the Kārīnīd rulers of Tabaristan, leader of the rising against the caliph al-Muttaṣim.**

**Origins.** The Kārīnīd dynasty claimed descent from Kārin b. Sūkhra, whom Khusrav Anuṣhirwān had established in Tabaristan and who was descended from the legendary smith Kāwa, who saved Farīdūn. The hereditary fief of the dynasty was the “mountain of Kārin” [or of Windād-Hurmuz], Tabarī, iii, 1295. The capital of this region was probably Lapīra (cf. Lafa'īn on the eastern source of the river Fābul which later runs through Bārfūrūsh). The Kārīnīd were subordinate to the Bāwandid ispakhabads (capital Firīm). The genealogy of the Kārnīds given by Zahrī al-Dīn, p. 167 and 321 is fantastic. The first Kārīnīd known is Windād-Hurmuz (138—190—755—805?) who raised a coalition of local chiefs against the Arabs (the Bāwandid Shawrīn, [the] Mās-muḥāfūz Wallāth of Mīyānūrd, the Fāḍūspān Shahrīyār b. Fāḍūspān) and defeated the generals sent by the caliph al-Mahdī (first Sālim Farghānī, then Fīrāsā; Ibn Isfandiyār, p. 128; Zahrī al-Dīn, p. 155—159). Windād-Hurmuz then submitted to Hādī, the son of the Caliph, and accompanied him to Bagdād. Soon he returned to his native mountains and resumed an independent attitude (ibid., p. 160). According to Ibn al-Fakīh, p. 304, Windād-Hurmuz came to the court of Hārūn al-Rashīd, who appointed him ispakhabad of Khurāsān. He died in the reign of al-Maʿmūn. His son and successor was Kārin (a contemporary of the Bāwandid Shahrīyār). According to Ibn Isfandiyār, p. 145, he accompanied al-Maʿmūn on his campaign against the Byzantines but this does not agree with the dates given for his successor.

According to Zahrī al-Dīn, p. 321, Māzīyar b. Kārin ruled for 30 years (194—224 = 809—839) but on p. 167 the same writer says that his (tyrannical) government lasted 7 years (217—224). Tabarī, iii, 1015, under the year 201, speaks of the conquests in Tabaristan of ἄbd Allāh b. Khuradbah (sic!) as a result of which the Bāwandid Shahrīyār b. Shawrīn had to leave the mountains and Māzīyar b. Kārin was sent to al-Maʿmūn. According to late sources,
Mazyr

Mazyr b. Sharwin had deprived Mazyr of his possessions. Mazyr sought refuge with his cousin Wind Ḫumid b. Windād-aspān, who handed him over to Shahryār. Mazyr however managed to escape, sought refuge with al-Ma'mūn and became a Muslim, assuming the name Muḥammad. After the death of Shahryār (210 = 825; Tabari, iii. 1093), Mazyr, returning to Tabaristan, slew Shahryār b. Shahryār and seized the mountain (Tabari, iii. 263). [Ibn al-Fāqih's story, p. 305—306, about the "son of Sharwin b. Shahryār", whom Mazyr assassinated treacherously seems to refer to Shahryār, the ally of the Muslims. Mazyr had built a mosque in Fīrān.] Mazyr assisted the Arab governor Mūsā b. Ḥāfṣ b. ʿOmar b. al-ʿĀli to subjugate the mountain of Sharwin and al-Ma'mūn appointed him governor of Tabaristan. Kūyān and Dunbawand with the rank of ispahbād (Istāḥlāl, p. 229; Ibn al-Fāqih, p. 309). At this time (Yaḥyā, Historie, ii. 582), Mazyr boasted the title of Ṭālī Ṭalīn, ispahbād ispakhbādān Bihār-Khurāsān (read ʿIṣbārak-Khurāsān), Muḥammad b. Kārīn, ummāli (sic) amīr al-muʿāmmalā (i.e. "ally" instead of masāʾili "client"). When Mūsā b. Ḥāfṣ died, Mazyr paid no heed to his son Muḥammad b. Mūsā. Complaints against Mazyr were taken to Baghdad by the Bawandids and by devout Muslims. But as al-Ma'mūn was setting out against the Byzantines (expedition of 210—213) Mazyr felt himself free from any control. In his turn he charged Muḥammad b. Mūsā with intrigue with the ʿAbīs and on this imaginary pretext besieged Amul. The town capitulated at the end of 8 months. Mazyr executed his enemies and imprisoned all the notables, including Muḥammad b. Mūsā, first at Ṭūd-bāt and then in his principal stronghold of Hurmuz-ābād. To judge from Tabari, iii. 1289—1292, the place must have been in the valley of the ʿIdrā, above ʿArum (Arum) at a distance of 3 farsākhā from Amul and from Sārī [cf. the article Mazândârân].

In the sixth year of the reign of al-Mu'tāsîm (218—227), Mazyr openly rebelled (Baladhuri, p. 229: Ṣafīrā wa-tarādārā). The šāh-āb Allāh, governor of Khurāsān, had denounced to the Caliph the "misdeeds, tyranny and apostasy" of Mazyr. When al-Mu'tāsîm's ambassador arrived, Mazyr would not listen to him. Ibn Isfandiyār, p. 152, even accuses him of having conferred honours "on Bābak, Mazdak and other Magians who had ordered the destruction of the mosques and the obliteration of all traces of Islam".

Mazyr's schemes. It is difficult to reconstruct Mazyr's programme from the sources, which are hostile to him, but the narratives of contemporary witnesses which Tabari, iii. 1268—1303, gives under the year 224 contain a number of curious and important details.

The extension of Mazyr's power (after the assassination of the Bawandid Shāhīr and the occupation of the mountain of Sharwin) had brought him into conflict with the Tāhirids to whom he refused to pay kāfara. It may be noted that Mazyr's very title ispahbād of Khurāsān (this variant is given in Yaḥyā, B. G. A., ii. 276) must have displeasing the Tāhirids. On the other hand the celebrated Afsīnī, who after his victory over Bābak was at the height of his glory, coveted Khurāsān. He therefore secretly encouraged Mazyr's resistance to his rivals and according to Tabari, iii. 1269, played upon his sentiments as a man of noble Iranian blood (yastamūlū bī ʾl-dāštunātī).

From the national point of view, Mazyr could recall the precedent of his grandfather Windād-Hurmuz to whom late sources attribute the organisation of the massacre of the Arab garrisons. Mazyr, who came out of "the mountain" where he had only an almost unknown town (lā-šahrī, p. 206: al-Asābīmār) must have looked askance at the urban elements of the great towns of the "plain" among whom Arabs and their clients (ḥabībī) predominated. The landowning class was certainly hostile to him, as in order to weaken and even exterminate them, he had relied on the support of the peasants. Mazyr's actions were certainly very violent, for ten centuries later, Zahir al-Dīn, p. 167, quotes the proverb: "so and so has done an injustice such as not even Mazyr could have done".

Coming out in open rebellion (probably before the year 224 under which Baladhuri and Tabari relate the dénouement) Mazyr had homage paid to himself, took hostages and levied kharrād at once. The doings of his governor Shūkhāstān in Sārī are characteristic. He transferred all the inhabitants of Sārī to Amul, where he shut them up in a fort; as to the people of Amul, he took 20,000 of them away into the mountains of Hurmuz-ābād (cf. above). The walls of Sārī, Amul and Šamīs were razed to the ground "to the sound of fītes and drums".

Mazyr had given orders to the peasants to attack and plunder their masters (Tabari, iii. 1269).

The next passage (iii. 1270) seems to indicate that a cadastral survey was ordered (amara an yamīnaḥ ʾl-balad) and the lands were let out, the rental being 50% (of the produce). As to Surkhūstān, he collected 260 nobles (ohnaʾ ḵešānaḏ), the bravest he could find, and on a pretext that "the ābānī were favourable to the Arabs and to the ʾAbbāsids", handed them over to dangerous individuals to the peasants, who slew them at his suggestion. He even tried to provoke a massacre of all the imprisoned landowners, saying to the peasants that "I have already handed over to you the houses of the landowners and their wives", but this time the peasants refused from following his advice.

The later sources retain the usual accusation of apostasy against Mazyr ("he once more assumed the garb of Zoroastrianism"), says Ibn Islāfīyār, p. 150 quoting the kādi of Amul). Baladhuri, p. 229 and Ibn al-Fāqih, p. 309 also say that Mazyr "renounced the faith and committed treason", but this point is more obscure in Tabari, where it only occurs in the list of charges made against Afsīnī, iii. 1311 (transl. in Browne, Lit. Hist of Persia, i. 334). The tone of the letter which Mazyr had addressed to his representatives, ibid., iii. 1351, is respectful to the Caliph, in form at least. But there is no smoke without fire, if we may believe the authors who mention the existence of a Māzūrīya in the 5th century connected with the Alwī Shāhīr. The yāʾsūr or Muḥammārī [q.v.] (i.e. followers of Bābak). Cf. al-Baghdādī (d. in 429), Fisṭ bain al-frak, p. 251—252; Tāhir al-Isfārānī (d. in 451), Taḥṣīr fī ʾl-dīn [quoted in Flugel, Baghēk, Z. D. M. G., 1869, p. 533] and Šamānī, G. M. S., fol. 501a.

Mazyr's end. 'Abd Allāh b. Tāhir sent against Mazyr his uncle Ḥasan b. Ḥusayn to operate from the direction of Dūrjīn as well as
Hajýa b. Djabala, who went with 4,000 horses via Kãmis towards Djabal al-Šahrîn (= Sawâdkûh; cf. the article Mâzânîrân). At the same time the caliph al-Mu'tâsîm sent considerable forces under the command of Muḥammad b. Ibrâhîm who entered Rûyân (western Šabāristân) by Shâlamba and Ruḏbâr (Tabârî, iii. 1264). Mansûr b. Šaḥân, "lord of Dunbawanâd", attacked from Raîy while Abu l-Sâdî advanced via Lâriz and Dunbawanâd.

The Arabs very skilfully exploited the rivalries and enmities in the entourage of Mâzâr. First of all his nephew Kârin b. Shâhrîyâr (his representative in the mountain of Šahrîn = Sawâdkûh) went over to Hajýa, who marched on Šârîn and began to negotiate with Mâzâr's brother Kûhîr. In the meanwhile Šurchâstân's army which occupied the Šâmîzha front dispersed and allowed Šaḥân, b. Ḥusain to advance. Kûhîr, who had been promised Mâzâr's place, submitted to Ḥusain Mâzâr seems to have lost his courage when he found himself surrounded by the Arabs and betrayed by his follower. He trusted Kûhîr, who had promised him the amân, and came with him to Ḥusain (Tabârî, iii. 1288—1291, dramatic story by an eye-witness) but Ḥusain did not even acknowledge his greeting. Mâzâr was handed over to Muḥammad b. Ibrâhîm and sent to Sâmrârâ. Here he was confronted with Afsân and seems to have denounced the latter. The caliph ordered him to be given 400 lashes, under which he died and his body was exposed beside that of Bâlak in 214 = 839.

Kûhîr's treachery served him little. He was slain as a traitor by his cousin Shâhrîyâr b. Mâzûn who commanded the Dâlamîs in the service of Mâzâr.

Šurchâstân was betrayed by the soldiers after the defeat at Šâmîzha and the other of Mâzâr's generals, al-Durî, who was fighting against Muḥammad b. Ibrâhîm on the Rûyân front, died while attempting to reach Dâlam (Tabârî, iii. 1300).

(Y. Mînorsky)

MECCA.

I

On the eve of the Hîdîrâ. It is with the birth of Muḥammad — between 570—580 A.D. — that Mecca suddenly emerges from the shadows of the past and thrusts itself upon the attention of the historian. The geographer Ptolemy seems to know it under the name Mâzâbû; but it must have been in existence long before his time. Mecca was probably one of the stations on the "incense route", the road by which the produce of the East especially valuable perfumes, came to the Mediterranean world. It owes its importance to its position at the

Intersection of great commercial routes. The town that had grown up around the well of Zamzam and the sanctuary of the Kâ'ba was advantageously placed at the extreme ends of the Asia of the whites and the Africa of the blacks, near a breach in the chain of the Sarât, close to a junction of roads leading from Babylonia and Syria to the plateaus of the Yemen, to the shores of the Indian Ocean and the Red Sea. By the latter it was in communication with the mysterious African continent. What advantages were offered by this situation at the boundary between civilisation and barbarism, at the point of contact of two societies, brought together by necessities more pressing than political ambitions or the quarrels of race and religion! This was the part played by the Palmyrans, situated between the Romans and the Parthians. It demanded an adaptability and diplomatic skill beyond the ordinary. The two societies were frequently at war; it required wits to deal tactfully with them. But if the position had its risks, it had the advantage of being able to fix the price for its services to the belligerents. In the delicate role of intermediary and broker between two worlds, the strength of will of the Ishmaelites and the tenacity that lay beneath his apparent complaisance assured his success from the first. Civilisation and barbarism might conclude peace for a time or be at war; he was able to trade on their agreement or exploit their dissensions with equal satisfaction to himself. Ambiguous and ambivalent, the Meccan was able to have a foot in both camps without it being possible to discern where his sympathies really lay.

At an early date we see the Meccans opening negotiations with the states adjoining Arabia: they obtained from them safe conducts and capitulations, permitting the free passage of their caravans. This is what their chronicles call the "guarantee of Caerar and of Chosroes". They also concluded agreements with the Negus of Abyssinia, with the principal shâhîks of Nâdîr, the kâ'î of the Yemen, with the phyarchs of Ghassân and of Hira. In the negotiations with the Greeks and Persians the principal of the "open door" was not admitted. Commercial transactions were carried through at posts on the frontier or in towns specially designated for the purpose. In Palestine these were the ports of Aila and Ghazza and perhaps also Jerusalem. In Syria, Boṣrâ was their principal outlet, their great market.

Siûr c. v. 2 mentions as a permanent institution "the double caravan of winter and summer". The masábû, genealogists, record the names of the Kurâsh chiefs who had succeeded in obtaining by negotiation permits to trade. The countries open to commerce in this way were called waḏīh, direction, maṭîgâr, region of trade. There were innumerable restrictions, limiting the extension of the privilege. Eastern governments did not permit free trade. Distrustful of merchants even when her own subjects, Byzantium showed herself still more
The verses of a Medinese poet, Ḥāṣān b. Thabit-
The office of "pavilion and reins" has nothing to do — as has been supposed — with the art of war. This dignity, which was an ancient one and no longer understood, was a memory of the ritual processions held in pagan Arabia. The ḫubbah was simply the pavilion or portable tabernacle, containing the fetish of the tribe and solemnly carried on the back of a camel. The chiefs and notables took turns at holding the reins of the animal bearing this precious burden. It is taking nothing from the glory of Khalīl b. al-Walīd to say that he had not a monopoly of this privilege. Behind the legend of the Arabic dignities, we perceive the intention of glorifying the cradle of the Prophet. In giving it administrative institutions, an attempt was made to conceal the modest beginnings of the Ḥāṣimīs and no less those of ʿAbū Bakr and ʿUmar. The onerous office of ḥiznākh, which had to pay compensation for murder and injury, was far beyond the financial resources of the modest citizen called ʿAbū Bakr. The entrusting to ʿUmar of the safāra or diplomatic missions cannot be reconciled with his extreme youth and plebeian origin.

I have elsewhere, for lack of a better term, called Mecca "a merchant republic". If ʿAbī Suʿyān is called "Ṣaḥīḥ and chief of the Kuraish", several of his contemporaries are given equally high sounding titles. There is not the slightest reason to think that he was a kind of Kuraish doge. The manner in which the events of the first eight years of the Hijra are recorded produces the fallacious impression that he held the power in Mecca in his hands. In reality he was only the ablest and most intelligent of his peers, the chiefs of the Kuraish clans. As al-Fāṣīr pertinently observes, all were equal: "no one exercised authority unless delegated or kindly permitted to do so by them". Did their chiefs constitute a regular official body? Yes, says tradition. Mecca is even said to have had a kind of Senate or Grand Council, the dīr al-nadwā. It met only in extraordinary circumstances. Usually however, we find that it is in the madālīs, family groups or clubs, the Nādī Kaum opening on the square of the Kāba — the forum and bourse of the town — that affairs of general interest were dealt with.

The Ḥurān cannot conceive of authority without a council of notables, without the maṭla. This institution is so frequently mentioned in the Ḥurān that the Prophet must have seen it working before his eyes. We think then that Mecca was ruled by the oligarchy of the maṭla', the equivalent in the town of the madālīs of the nomad tribe. This was an assembly of the chiefs of the wealthiest and most influential families. This is why Umayyads and Maḥkūmīs are most usually mentioned as composing the maṭla'. Neither election nor birth could necessarily open the way to a seat on it, but rather the fame of services rendered, the prestige of ability and wealth. Thus it welcomed to its counsels the very wealthy Ibn Djdān, a member of the humble clan of Taʾim. An assembly of elders or if you like of senators, in conformity with the principle of seniority among the Arabs: its authority, purely moral, was limited to advising, studying, looking ahead and giving to the merchant community the benefit of the experience of its conscript fathers. In the absence of any coercive
powers, persuasion was the only force it had to make its wishes obeyed. Hence the importance of eloquence in a milieu like this, where every family and every clan claimed autonomy. The cause of peace was in continual conflict with their claims. Without infringing their prerogatives, the *mala* was able to exert moral pressure when the general good required it. The system recalls, though remotely, the organisation of Palmyra and of Venice.

**Site and climate.** In the form of an elongated crescent with its points turned towards the flanks of the Kaʿbājīn, the town was hemmed in by a double range of bare and steep hills. The centre of this ill-ventilated couloir coincided with a depression in the soil. The early town occupied the bottom of this; this was the *wadi*, the valley, the *batn* Makkah, the hollow of Mecca. The centre, the lowest part of this depression, was called *at-Batā* (cf. above). Some buildings in this quarter were so close to the Kaʿba that in the morning and in the evening their shadows were merged in that of the sacred edifice. Between these houses and the Kaʿba [q. v.] a narrow esplanade *(fina)* lay below the level of the surrounding soil. This open area formed the primitive masjid, a sanctuary open to the heavens. The pre-Islamic *Batba* knew no other. The ends of the little streets opening on this open space were called the "gates of the ḥaram or of the masjid". The so-called gates or openings took their names from the clans settled around the Kaʿba. Thus one regularly spoke of the "gate of the Banū Dūmāl". The walls of their houses served to mark the boundaries of the masjid. It was on the ground floor of the buildings facing the sides of the Kaʿba that the *mafflis* or *nāṭi* of the chief families met, those that formed the *mala* (cf. above).

In the suburbs *(ważāḥir)*, and at a later date in the ravines *(zhō)* which had been dug by erosion out of the flanks of the hills, was a confusion of poor houses, low and ramshackle hovels. The unpleasant features of a town of this kind are obvious. The geographer Makdisī has summed these up strikingly: "suffocating heat, deadly winds, clouds of flies*. The continual difficulty was the dearth of water. The population was dependent on the variable output of the Zamzam. There were other wells, mainly outside the town. Those inside had a doubtful reputation. The scarcity of drinking-water is evident from the amount of precaution taken, when some thousands of pilgrims had to be supplied. In such deplorable conditions one can imagine what suffering the long days brought, *ramlī* Makkah "the burning of Mecca"; why the great families preferred to send their children to be brought up in the desert; why the *Sira* only incidentally mentions the plague of Mekka *(wahb* Makkah). Smallpox is mentioned only in connection with the enemies of the Prophet.

Rains are few and far between. Droughts sometimes last for four years. But when the winter season is wet, the rains may sometimes attain an unheard-of degree of violence. To the east of Mecca a rocky wall raises its steep barrier, a succession of strata and summits merging into the chain of the Sarāt. These jagged hills collect on their flanks the surplus rains of the monsoon which brings fertility to the Yemen. All along these slopes, where no shrub interrupts the fall — at the bottom of each a *sail* is formed — the cataracts augmented by all these tributaries fall into the hollow of Mecca, *batn* Makkah, of which the Kaʿba occupies the bottom. The waters rush to this depression they force a passage through the "gates of the masjid" and flow over the area around the sanctuary. They fill it and rise to attack the Kaʿba. Before the Hidjra, the Kurāish syndicate seems to have paid no heed to the flooding or said they were powerless to prevent it. Efforts made by the caliphs yielded "only mediocre results".

This is why the misdeeds of the *sail* fill the annals of Mecca. On several occasions their violence has overthrown the Kaʿba and turned the court of the great mosque into a lake. As a result of the floods, epidemics broke out. The deposit of filth brought by the waters polluted the wells; bodies left unburied formed centres of epidemic infection. The annalists avoid dwelling on this, troubled by the Tradition which says that the plague never reaches Mecca. The absolute sterility of the soil brought another scourge, that of famine. The slightest irregularity in the convey of grain from Syria or the Sarāt was enough to cause it. It continues to figure along with the ravages of flood and plague in the monotonous annals of the town.

**Economic life and finance.** On examining closely the picturesque literature of the *Sira* and *Hadith*, one receives the impression of business, of intense activity bursting out of the narrow and sterile valley of Mecca. The Kurān only strengthens this impression. All his life the Prophet retained the impress of his Kuraish education and training. This fundamentally mercantile character is revealed at every turn.

**Writing and arithmetic.** One is amazed at their importance in the economic life of the town. Relying on the Kurānic epithet *ummī*, i.e. pagan, gentle, and on biased writers like al-Balādhūrī, it has been held that, except for some fifteen individuals mentioned by name, all the pre-Hidjra Kurāish were illiterate. Alongside of the "book" of accounts, the scales always figure in the Meccan shops: not so much to weigh goods as to verify and check payments of all kinds including cash. Now, coins were not plentiful on the Meccan market; they were supplemented by the precious metals, ingots of gold and silver, by *tbr*, gold dust. Only the scales could determine the value. In the more delicate cases, recourse was had to the services of a *wassāin* or professional weigher.

It would be difficult to imagine a society in which capital enjoyed more active circulation. The *fadjar*, business man, was not engaged in hoarding, in gathering wealth into his strong boxes. He had a blind faith in the unlimited productivity of capital, in the virtue of credit. Brokers and agents, the bulk of the population lived on credit. The sleeping partnership was much in favour (mudārāb), especially the "partnership for the half", which supposes 50% participation in the profits by the sleeping partners. Thanks to the development of the institutions the humblest sums could be invested, down to a gold dinār or even a *maṣhik* or half dinār. Such a flexible organisation stimulated even the humblest to take his share in commercial enterprises.

The coins brought to Mecca were of very different kinds: the *denarius aureus* of the Byzantines
and the silver drachm of the Sasanids and Hīmyāns. These pieces often wore, ruderly engraved, very unequal in weight and form, came from the most varied mints. Only the money-changer had the requisite flair, the eye sufficiently trained to deal with the confusion of currencies, to determine accurately the standards, values, and the kinds in circulation. In addition there were the complications caused by the difference of standard and the oscillations of exchange. The Byzantine provinces, Syria and Egypt, were among the ahl al-dhahab or countries with a gold standard. Babylonia was ahl al-zarātī, a land with a silver, the Sāsānian, standard. On the eve of the departure of the caravans for Syria, there were regular battues in search of dinārs. The Meccan ṣāḥib was not distinct from the financier. His first article of trade was money. When occasion arose, he invested his capital in business, in the organisation of large caravans. To the leaders of the caravan, to the traders and to the factors, he advanced the funds necessary for their operations.

Primarily a clearing house, a banking town, Mecca had customs and institutions peculiar to this kind of transaction and to finance. Sometimes it is rībā, usury, in all its ugliness: dinār for dinār, dīthām for dīthām, i.e. 100% interest. To the condemnation of rība in the Qur'ān, the Kuraish objected that they saw in it only "a kind of sale" (Qūr'ān ii. 275), of letting out capital for a rent. Speculation too was rampant, on the rates of exchange, the load of a caravan which one tried to buy up, the yield of the harvests and of the flocks and lastly the provisioning of the town. Fictitious assessorates were formed and loans were made on which loans were borrowed. "Every Arab", says Strabo, "is either a trader or a broker". In Mecca, the hādīth "he who was not a merchant, counted for nothing". In setting out on a military expedition the citizens always took merchandise along with them. This is what they did when going to relieve the Bādhr caravan. The first thing the Meccan mubārakār did on arriving in Medina was to ask the way to the market-place. The women shared these commercial instincts: Abū ʿUbayl's mother ran a perfumery business. The activities of the mūdhirāt al-khālid are celebrated in Ḥadīth [q.v.], the wife of Abū Sufyān, sold her merchandise among the Kālibāt of Syria. Like their husbands the Meccan women had financial interests in the caravans. On the return of the convoys they gathered round Abū Sufyān to know what their money and their contributions had earned and to get their share of the profits.

The caravans. The organisation of a caravan was the subject of interminable palavers in the nādi around the Ka'bah. Its departure and return were events of public interest. The whole population was associated with it. En route it remained in continual communication with the metropolis through Beduins met on the journey or special couriers. Abū Sufyān sent one of these messengers to describe the critical position of the Bādhr caravan. It contained 25 dinārs, an enormous sum, but one proportionate to the value of the convoy in which Mecca had 50,000 dinārs invested. The Meccan caravans were of considerable size. Neither horses nor mules appeared in them. The number of camels on occasion rose to 2,500. The men (merchants, guides [ṣāhil] and guards) varied from 100 to 300. The escort was strengthened on approaching areas infested by bandits (ṣafā) or when traversing the territory of hostile tribes. The Bādhr caravan may be taken as typical. We do not know of another in which the capital invested attained such an amount. The greater part was supplied by the important Umayyad firm of Abū Uqbah, i.e. the family of Sa'd b. ʿAbd-Allah. This firm had formed a company of the family, adding to their own considerable reserves the contributions of its sleeping partners. To their 30,000 dinārs the other Umayyad houses added 10,000. Four-fifths of the capital of the Bādhr caravan was therefore of Umayyad origin. We can understand why the direction and supreme control of the convoy was entrusted to Abū Sufyān, who was personally interested in the enterprise.

In the first place a caravan from Mecca carried skins and leather, sometimes also the saḥīb of ṭayf, a kind of currant; then ingots of gold and silver partly from the mines of the Bānū Sulaim and tihr, gold dust from Africa. The texts frequently call it ḥattima, i.e. a convoy laden with perfume and rare spices. Of the perfumes, the most esteemed came not from the Ḥudayjār, but from southern Arabia, the "land of frankincense", or even from India and Africa. To these might be added aromatic gums and medicinal drugs, like the scents of Mecca, all objects of small bulk and purchased at higher prices by the luxury of the civilised countries.

From the Yemen the Meccan caravans brought back the products of India, the silks of China, the rich 'adānt cloths, so called from 'Adan. Besides gold dust, the main exports of Africa were slaves and ivory. In Mecca recruited her labourers and her mercenary soldiers, the Ḥajjābī or Abyssinians. In Egypt and in Syria, the Kuraish traders bought luxury articles, products of the industry of the Mediterranean, mainly cotton, linen or silk stuffs and cloths dyed in vivid purple. From Ḍuฤr and the Ḥarāt (Syria) came arms, cereals and oil, much appreciated by the Beduins. The pace of the caravan was slow but the articles transported, leather, metals, scented woods, feared neither damage nor the delays of long journeys. The expenses were confined to the hire of the animals, the payment of the escort, the tolls and presents to the chiefs of the tribes. With such an economical organisation, the profit of 100%, ascribed to our authors was quite usual. This was the case with the caravan of Bādhr "each dinār having brought back a dinār". Two years after this brilliant affair, the Companions of the Prophet who had sought refuge in Medina were able to carry out as profitable a transaction in the same field "since each of their dirhams gained a second dirham", that is to say a profit of 100% again.

Fortunes in Mecca. We can now imagine how money had gradually accumulated in the chests of the Meccan financiers, who were naturally of a saving disposition. This explains Pliny the Elder's ill-humour when he recalls "the millions of sesterces which the Arabs take annually from the Roman Empire giving nothing in return, nihīl invicem redimendībus" (Hist. Natur., vi. 28). This last statement is an exaggeration, but it should be remembered that the Meccan caravan carried only articles of high value, and that with regard to the Empire the Arabs were mainly importers, so that the trade balance was always very much
in their favour. The 30,000 dirhams invested by the one house of Abū Uhaiṣa in the Bādīr caravan suggests that H. Winckler is quite right when he tells us to think of the Palmyra of Zenoins if we wish to get an idea of the financial capacity of Mecca. The fortunes of the Makhlūmīs were no less than those of their Umayyad rivals. The Taimī ʿAbd Allāh b. Djūdʿān must have been a millionaire if the poet thought of comparing him to Caesar. The principal organizers of the Bādīr caravan were also millionaires. The thousands of dirhams subscribed by them did not even represent all their fortune. Other portions of their capital were out at interest or put in other speculations. Among other millionaires we may mention the Makhlūmīs Walīd b. al-Mughira and ʿAbd Allāh, father of the poet ʿUmar b. Abī Rabīʿā.

Next to these representatives of high finance come the well-to-do Meccans, like ʿAbd al-Rahmān b. ʿAwf who had a capital of 8,000 dirhams and al-Ḥārīṭī b. ʿAmīr and Umayyā b. Khalaf. Of the latter two, the first had 1,000 and the second 2,000 dirhams in the Bādīr caravan. Lastly there were the small trade owners, shop-keepers who formed the petite bourgeoisie of the town. To their commerce a number added the supervision of some industry like ironwork or carpentry. The most typical representative of this class is given us by the future caliph Abū Bakr, a bāṣraʾī, retailer of cloth. He belonged like Abū Djūdʿān to the plebeian clan of Taim, rich in men and women of initiative, like ʿAbd Allāh b. Abū Bakr. He seems to have had a capital of 40,000 dirhams. ʿAbdās, the uncle of the Prophet, is also mentioned among the rich bankers of Mecca, but we have no details about him. The other Hāshimīs lived in circumstances bordering on poverty. Those Meccans most certainly must have been wealthy who paid without a murmur the enormous ransoms demanded for their relatives after the defeat of Bādīr. After this sacrifice — it cost them not less than 200,000 dirhams — the Meccan chiefs gave up their share of the profits in the Bādīr enterprise — some 25,000 dirhams — to prepare for the revenge. They did this faiyībaʿiʿansīs “with a good heart”, with the easy grace of opulent financiers, used to running the risks of speculations on a large scale. One touching detail is recorded. They refused to touch the modest shares of the small contributors. This example shows how at Mecca, “the strong”, ʿabī al-ḥawwa (Wāṣīkī), i.e. the patricians, were able in critical circumstances to realise a spirit of solidarity and of sound democracy.

Mecca before the Hijra had neither ships nor a port. It was only exceptionally that foreign ships cast anchor in the little bay of Ṣuḥaila off a desert shore. It was here that the Byzantine ship was wrecked, the wood of which went to build the terrace of the Kaʿbah. It was to Ṣuḥaila that the first Muslim emigrants for Abyssinia went, no doubt on hearing that two merchant ships had touched there. More rarely sailings took place from the desolate shore of Djidda, which was nearer Mecca. From the time of ʿUthmān, Dijdā took the place of Ṣuḥaila and became the port of the Kurābā metropolis. When Muḥammad settled in Medina and cut their communications with Syria, the Meccan leaders never thought of taking to the sea but resigned themselves to the enormous detour through al-Najdī. The creation of an Arab navy was the work of the caliph Muʿāwiyah.

2. After the Hijra. We need not rehearse the events of the first eight years of the Hijra. They are summed up in the struggle with the Prophet. This struggle and the ridda, the surrender of Mecca, were fatal to its economic prosperity. One after the other, the great families migrated to Medina, now the capital of Islam. This tendency increased under the first three caliphs, who made their headquarters among the Ansār. ʿAli definitely left Arabia to settle in Kufa. Richly endowed by the state, the leading Kūraish, becoming generals and governors of provinces, lost interest in commerce. No more is heard about caravans or fairs in the Hijāz. It was only at the period of the pilgrimage that Mecca became alive again and saw the caliphs reappear at the head of the pilgrims. The conquest of the Ṣarḥ dealt the last blow to the economic decline of western Arabia. The Indian trade resumed its old route by the Persian Gulf and the valley of the Euphrates. Direct communication was established by land with the markets of the middle east. The Umayyad period. The situation improved with the coming of the Umayyad dynasty. Muʿāwiyah took an active interest in his native town. He erected buildings there and developed agriculture in the environs, dug wells and built dams to store up the water. Under his successors, especially the Marwānīs, Mecca became a city of pleasure and ease, the rendezvous of poets and musicians, attracted by the brilliant society formed by the sons of the Companions of the Prophet. Many people returned to live in Mecca after making their fortunes in the government of conquered provinces. Contact with foreign civilisations had made them refined and fastidious. They had become accustomed to baths, a luxury which presupposes an abundant water-supply. Water had to be procured from the hills of the Sarāt. Khalīl al-Kasrī's [q. v.] name is associated with this undertaking which changed the aspect of the town. To meet the scourge of flood, the caliphs ʿUmar and ʿUthmān had called in the aid of Christian engineers, who built barrages in the high-lying quarters. They also secured the area round the Kaʿbah by making dykes and embankments. The Umayyad caliphs continued and completed these works. They dug a new bed along the course of the sarīb and endeavoured to break its violence by barriers built at different levels. Their great anxiety was to protect the depression of the Baḥr where the Kaʿbah stood. The skill of the engineers of the period did not succeed in overcoming the topographical difficulties nor in averting the ravages of the winter rains, regular cloudbursts. They were frustrated by the steep slope of the ground, still further aggravated by the unusual shape of the Baḥr, a basin with no outlet. The houses on the bank of the sarīb were taken down and the alleys adjoining the Kaʿbah removed. Each modification of the old plan meant the sacrifice of more buildings. These clearances in time changed the traditional aspect of Mecca, where the sarīb continued to sow destruction.

Along with these precautions against flooding an endeavour was made to enlarge the exiguous court around the Kaʿbah. Islam desired to possess a temple in keeping with its worldwide claims. Successive expropriations begun by ʿUmar and finished
by Walid I prepared an esplanade. The plan of the great mosque [cf. AL-MASJID AL-HARĀM] with its galleries, a vast courtyard with the Ka'ba in the centre, is the work of the Umayyads. He had the assistance of Christian architects from Syria and Egypt to carry it out. The important governorship of the Hijāz with its three cities, Medina, Mecca and Ta'if, could in principle be given only to a member of the ruling family. Among the most celebrated of these Umayyads may be mentioned Sa'id b. al-As' and the two future caliphs, Marwan b. al-Ḥakam and 'Umar b. 'Abd al-'Azīz. When no Umayyad was available the choice fell upon an official of tried capacity like Ḥādīdā and Ḥālid al-Kassī. At first they were given Ta'if and then transferred to Mecca. It was only after this probation that the three towns were entrusted to them. But even then the centre of government remained in Medina, which under the Umayyads eclipsed Mecca by its political importance and by the fact that it was the home of the new Muslim aristocracy.

Under Yazid I, the rising of 'Abd Allāh b. al-Zubair [q.v.] brought Syrian troops to Mecca. The rebel had made his headquarters in the court of the great mosque. A scaffold of wood, covered with straw, protected the Ka'ba. The carelessness of a Meccan soldier set it on fire. Ibn al-Zubair rebuilt the edifice and included the Ḥijār within it [see KA'BA]. When Ḥādīdā had overthrown the Zubairids anti-caliph, he restored the Ka'ba to its former dimensions which have since remained unaltered. In 747 a Ḥārīrī rebel from the Yemen seized Mecca without meeting opposition. He was soon defeated and slain by the troops of the caliph Marwān II. In 750, Mecca passed with the rest of the caliphate under the rule of the 'Abbāsidas.

II

1. Mecca under the 'Abbāsidas down to the foundation of the Sharī'ī法治 (750—961).

Although the political centre of gravity in Islām now lay in Baghādād, this period at first presents the same picture as under Omayyad rule. The Ḥarammān are as a rule governed by 'Abbāsid princes or individuals closely connected with them (Die Chroniken der Stadt Mekka, ed. Wustenfeld, ii. 181 sqq.). Sometimes Mecca and Ta'if were under one ruler, who was at the same time leader of the Ḥādījī, while Medina had a separate governor of its own.

Arabia had however from the first century A.H. contained a number of 'Alīd groups, who, as was their wont, fished in troubled waters, lay in wait as brigands to plunder the Ḥājādī caravans and from time to time hoisted their flags when they were not restrained either by the superior strength or by the bribes of the caliphate. We find al-Mansūr (756—774) already having trouble in Western Arabia. Towards the end of the reign of al-Mahdī (785—795) a Ḥasanī, Ḥusain b. 'Alī, led a raid on Medina, which he ravaged; at Fākhkhh near Mecca, he was cut down with many of his followers by the 'Abbāsid leader of the Ḥādījī. The place where he was buried is now called al-Shuḥādā. It is significant that he is regarded as the "martyr of Fākhkhh" (Tabari, iii. 551 sqq.; Chron. Mekka, i. 435; 501 sqq.).

Ḥārūn al-Rašīdī on his nine pilgrimages expended vast sums in Mecca. He was not the only 'Abbāsid to scatter wealth in the holy land. This had a bad effect on the character of the Meccans. There were hardly any descendants left of the old distinguished families and the population grew accustomed to living at the expense of others and were ready to give vent to any dissatisfaction in rioting. This attitude was all too frequently stimulated by political conditions.

In the reign of al-Ma'mūn (198—218 = 817—833) it was again 'Alīd, Ḥusain al-Āfīs and Ibrāhīm b. Mūsā, who extended their rule over Medina, Mecca and the Yemen (Tabari, iii. 981 sqq.; Chron. Mekka, ii. 238), ravaged Western Arabia and plundered the treasuries of the Ka'bā. How strong 'Alīd influence already was at this time is evident from the fact that Ma'mūn appointed two 'Alīd as governors of Mecca (Tabari, iii. 1039; Chron. Mekka, ii. 191 sqq.).

With the decline of the 'Abbāsid caliphate after the death of Ma'mūn, a period of anarchy began in the holy land of Islām, which was frequently accompanied by scarcity or famine. It became the
regular custom for a number of rulers to be represented at the Ḥajjīj in the plain of ʿArafāt and to have their flags unfurled; the holy city was rarely spared fighting on these occasions. The safety of the pilgrim caravans was considerably affected; it was very often ʿAlids who distinguished themselves in plundering the pilgrims.

The ʿAlid cause received an important reinforcement at this time by the foundation of a Ḥasanid dynasty in Tabaristān (Tabari, ill. 1523–1533, 1533 sq., 1605–1685, 1693 sq., 1840, 1880, 1884 sq., 1940). In Mecca the repercussions of this event was felt in the appearance of two Ḥasanids (Chron. Mekka, i. 343; ii. 10, 195, 229 sq.), Ismaʿil b. Yūsuf and his brother Muhammad, who also ravaged Medina and DJidda in the way that had now become usual (251 = 865–866).

The appearance of the Karmatians [q.v.] brought still further misery to the country in the last fifty years before the foundation of the sharifate (Tabari, ill. 2124–220). Hard pressed themselves at the heart of the empire, the caliphs were hardly able even to think of giving active support to the holy land, and, besides, their representatives had not the necessary forces at their disposal. From 916 onwards the Karmatians barred the way is the pilgrim caravans. In 930, 1,500 Karmatian warriors raided Mecca, massacred the inhabitants by the thousand and carried off the Black Stone to Bahriyah. It was only when they realised that such deeds were bringing them no nearer their goal — the destruction of official Islam — that their zeal began to relax and in 950 they even brought the Ṣaf. It ended a period Mecca was relieved of serious danger from the Karmatians. The following years bear witness to the increasing influence of the ʿAlids in western Arabia in connection with the advance of Fāṭimid rule to the cast and with the Bayyid rule in Baghdād. From this time the Meccan ʿAlids are called by the title of Sharif which they have retained ever since.

2. From the foundation of the Sharifate to Katāda (c. 350–598 = 960–1200).

a. The Mūsāwīs. The sources do not agree as to the year in which ʿDjafar took Mecca. 966, 967, 968 and the period between 951 and 961 are mentioned (Chron. Mekka, ii. 205 sqq.). ʿAlids had already ruled him in the holy land. It is with him however that the reign of the Ḥasanids in Mecca begins, who are known collectively as sharifs, while in Medina this title is given to the reigning Ḥusainids.

The rise and continuance of the Sharifate indicates the relative independence of Western Arabia in face of the rest of the Islamic world from a political and religious point of view. Since the foundation of the Sharifate, Mecca takes the precedence possessed by Medina hitherto.

How strongly the Meccan sharifate endeavoured to assert its independence, is evident in this period from two facts. In 976 Mecca refused homage to the Fāṭimid Calif. Soon afterwards the Calif began to besiege the town and cut off all imports from Egypt. The Meccans were soon forced to give in, for the Hijāz was dependent on Egypt for its back supplies (Ibn al-ʿĀhir, Kamiil, viii. 491; Chron. Mekka, ii. 216).

The second sign of the Sharifs' feeling of independence is Abū ʿl-Futūḥ's (384–432 = 994–1039) setting himself up as Calif in 1011 (Chron. Mekka, ii. 207; Ibn al-ʿĀhir, Kamiil, ix. 233, 217). He was probably induced to do this by al-Ḥakīm's heretical innovations in Egypt. The latter however was soon able to reduce the new caliph's sphere of influence so much that he had hurriedly to return to Mecca where in the meanwhile one of his relatives had usurped the power. He was forced to make terms with al-Ḥakīm in order to be able to expel his relative.

With his son Shukr (432–453 = 1039–1061) the dynasty of the Mūsāwīs, i.e. the descendants of Mūsā b. ʿAbd ʿAlīh b. Mūsā b. ʿAbd ʿAlīh b. Hasan b. Hasan b. Ali b. Abī Ṭālib came to an end. He died without leaving male heirs, which caused a struggle within the family of the ʿAlids with the usual evil results for Mecca. When the family of the Banū Shāiba (q. v.; the ʿShebīns) went so far as to confiscate for their private use all precious metals in the house of Allāh, the ruler of Yemen, al-Ṣulāḥī (Chron. Mekka, ii. 208, 210 sqq.; Ibn al-ʿĀhir, Kamiil, ix. 422; x. 19, 38), intervened and restored order and security in the town.

This intervention by an outsider appeared more intolerable to the ʿAlids than fighting among themselves. They therefore proposed to al-Ṣulāḥī that he should instal one of their number as ruler and leave the town.

He therefore appointed Abū Ḥāṣim Mūḥammad (455–487 = 1063–1094) as Grand Sharif. With him begins the dynasty of the h. Hawāshīm (455–598 = 1063–1200), which takes its name from Abū Ḥāṣim Muhammad, a brother of the first Sharif ʿDjafar; the two brothers were descendants in the fourth generation from Mūsā II, the ancestor of the Mūsāwīs.

During the early years of his reign, Abū Ḥāṣim had to wage a continual struggle with the Sulaimānī branch, who thought themselves humiliated by his appointment. These Sulaimānīs were descended from Sulaimān, a brother of the Mūsā II above mentioned.

The reign of Abū Ḥāṣim is further noteworthy for the shameless way in which he offered the suzerainty, i.e. the mention in the khūṭba as well as the change of official rite which is indicated by the wording of the adhān, to the highest bidder i.e. the Fāṭimid Calif or the Saldʒūq sultan (Chron. Mekka, ii. 253; Ibn al-ʿĀhir, x. 67). It was very unwelcome to the Meccans that imports from Egypt stopped as soon as the official mention of the Fāṭimid in the khūṭba gave way to that of the Calif. The change was repeated several times with the result that the Saldʒūq, tired of this comedy, sent several bodies of Turkomans to Mecca.

The ill-feeling between Sulānī and Sharif also inflicted great misery on pilgrims coming from the ʿIrāq. As the leadership of the pilgrim caravans from this country had gradually been transferred from the ʿAlids to Turkish officials and soldiers, Abū Ḥāṣim did not hesitate occasionally to fall upon the pilgrims and plunder them (Chron. Mekka, ii. 254; Ibn al-ʿĀhir, x. 153).

The reign of his successor is also marked by covetousness and plundering. The Spanish pilgrim Ibn ʿDjauari, who visited Mecca in 1183 and 1185, gives hair-raising examples of this. Even then however the Hawāshīm were no longer absolutely their own masters; as over ten years before, the Aiyūbī dynasty had not only succeeded to the Fāṭimid in Egypt but was trying to get the whole of nearer Asia into their power.
Katada's life ended in a massacre which his son Hasan carried out in his family to rid himself of possible rivals (Chron. Mekka, ii. 215, 263 sqq.; Ibn al-Atir, Kamii, xii. 262 sqq.). The Ayyubid prince Mas'ud however soon put a limit to his ambition and had Mecca governed by his generals. On his death however power again passed into the hands of the sharifs, whose territory was allowed a certain degree of independence by the rulers of the Yemen as a bulwark against Egypt.

About the middle of the xili century the world of Islam assumes a new aspect as the result of the advent of persons and happenings of great importance. In 1258 the taking of Baghhd by Hulagu put an end to the caliphate. The pilgrim caravan from the 'Irak was no longer of any political significance. In Egypt power passed from the Ayyubids to the Mamluks; Sul tan Balbars (658–676 = 1260–1277) was soon the most powerful ruler in the lands of Islam. He was able to leave the government of Mecca in the hands of the sharif, because the latter, Abi Numaiy, was an energetic individual who ruled with firmness during the second half of the xili century (1254–1301). His long reign firmly established the power of the descendants of Katada.

Nevertheless the first half century after his death was almost entirely filled with fighting between different claimants to the throne. A'dlan's reign also (1346–1375) was filled with political unrest, so much so that the Mamluk Sultan is said on one occasion to have sworn to exterminate all the sharifs. A'dlan introduced a political innovation by appointing his son and future successor Abu-Mandes co-regent in 1361 by which step he hoped to avoid a fratricidal struggle before or after his death.

A second measure of A'dlan's also deserves mention, namely the harsh treatment of the Mu'tahibin and Imam of the Zaidis; this shows that the reigning sharifs had gone over to the predominant rite of al-Shaffi and forsaken the Zaidi creed of their forefathers.

Among the sons and successors of A'dlan special mention may be made of Hasan (1396–1426) because he endeavoured to extend his sway over the whole of the Hijaz and to guard his own financial interests carefully, at the same time being able to avoid giving his Egyptian suzerain cause to interfere.

But from 1425 he and his successors had to submit to a regular system of control as regards the allotment of the customs.

From the time of Hasan, in addition to the bodyguard of personal servants and freedmen, we find a regular army of mercenaries mentioned which was passed from one ruler to another. But the mode of life of the sharifs, unlike that of other Oriental rulers, remained simple and in harmony with their Arabian surroundings. As a vassal of the Egyptian Sultan the sharif received from him every year his irawdij [r. v.] and a robe of honour. On the ceremonies associated with the accession of the sharifs see Snouck Hurgronne, Mekka, i. 97 sq.

Of the three sons of Hasan who disputed the position in their father's lifetime, Barakat (I) was chosen by the sultan as co-regent; twenty years later, he succeeded his father and was able with slight interruptions to hold sway till his death in 1455. He had to submit to the sultan's sending a permanent garrison of 50 Turkish horsemen under an emir.
to Mecca. This emir may be regarded as the precursor of the later governors, who sometimes attained positions of considerable influence under Turkish suzerainty.

Mecca enjoyed a period of prosperity under Barakât's son Muḥammad (Chron. Mekkâ, ii. 344 sqq.; iii. 230 sqq.), whose reign (1455—1497) coincided with that of Kâthib [q. v.] in Egypt. The latter has left a fine memorial in the many buildings he erected in Mecca.

Under Muḥammad's son Barakât II (1497—1525) who displayed great ability and bravery in the usual struggle with his relatives, without getting the support he desired from Egypt (Chron. Mekkâ, ii. 342 sqq.; iii. 244 sqq.), the political situation in Islam was fundamentally altered by the Ottoman Sultan Selim’s conquest of Egypt in 1517.

Although henceforth Constantinople had the importance for Mecca that Baghdad once had and there was little real understanding between Turks and Arabs, Mecca at first experienced a period of peace under the shāris Muḥammad Abū Numaïy (1525—1556) and Ḥassan (1566—1601). Under Ottoman protection the territory of the sharifs was extended as far as Khobar in the north, to Hāli in the south and in the east into Najd. Dependence on Egypt still existed at the same time; when the government in Constantinople was a strong one, it was less perceptible, and vice versa. This dependence was not only political but had also a material and religious side. The Ḥijāz was dependent for its food supply on corn from Egypt. The foundations of a religious and educational nature now found powerful patrons in the Sultan’s of Turkey.

A darker side of the Ottoman suzerainty was its intervention in the administration of justice. Since the sharifs had adopted the Shāfī madhhab, the Shāfī Kādji was the chief judge; this office had also remained for centuries in one family. Now the highest bidder for the office was sent every year from Constantinople to Mecca; the Meccans of course had to pay the price with interest.

With Ḥassan’s death a new period of confusion and civil war began for Mecca. In the language of the historians, this circumstance makes itself apparent in the increasing use of the term Dhawī . . . for different groups of the descendants of Abū Numaīy who dispute the supremacy, often having their own territory, sometimes asserting a certain degree of independence from the Grand Sharif, while preserving a system of reciprocal protection which saved the whole family from disaster (Snouck Hurgronje, Mekkâ, i 112 sqq.).

The struggle for supremacy, interspersed with disputes with the officials of the suzerain, centred in the eighteenth century mainly around the 'Abādīla, the Dhawi Zaid and the Dhawi Barakāt. Zaid (1631—1686) was an energetic individual who would not tolerate everything the Turkish officials did. But he was unable to oppose successfully a measure which deserves mention on account of its general importance. The ill-feeling between the Sunni Turks and the Shi‘ī Persians had been extended to Mecca as a result of an order by Sultan Muṣār to expel all Persians from the holy city and not to permit them to make the pilgrimage in future. Neither the Sharifs nor the upper classes in Mecca had any reason to be pleased with this measure; it only served the mob as a pretext to plunder well-to-do Persians. As soon as the Turkish governor had ordered them to go, the Sharifs however gave permission as before to the Shi‘īs to take part in the pilgrimage and to remain in the town. The Sharifs likewise favoured the Zaidis, who had also been frequently forbidden Mecca by the Turks.

The further history of Mecca down to the coming of the Wahhābīs is a rather monotonous struggle of the Sharifan families among themselves (Dhawi Zaid, Dhawi Barakāt, Dhawi Maṣ‘ūd) and with the Ottoman officials in the town itself or in Dîjda.

4. The Sharifate from the Wahhābī period to its end. The Kingdom.

Although the Wahhābīs [q. v.] had already made their influence perceptible under his predecessors, it was Ghalib (1788—1813) who was the first to see the movement sweeping towards his territory like a flood; but he left no stone unturned to avert the danger. He sent his armies north, east and south; his brothers and brothers-in-law all took the field; the leaders of the Syrian and Egyptian pilgrim caravans were appealed to at every pilgrimage for help, but without success. In 1799 Ghalib made a treaty with the emir of Dar‘iya, by which the boundaries of their territories were laid down, with the stipulation that the Wahhābīs should be allowed access to the holy territory. Misunderstandings proved inevitable however and in 1803 the army of the emir Sa‘ūd approached the holy city. After Ghalib had withdrawn to Dîjda, in April Sa‘ūd entered Mecca, the inhabitants of which had announced their conversion. All kubbas were destroyed, all tobacco pipes and musical instruments burned, and the adhān purged of praises of the Prophet.

In July, Ghalib returned to Mecca but gradually he became shut in there by enemies as with a wall. In August the actual siege began and with it a period of famine and plague. In February of the following year, Ghalib had to submit to acknowledging Wahhābī suzerainty while retaining his own position.

The Sublime Porte had during all these happenings displayed no sign of life. It was only after the Wahhābīs had in 1807 sent back the pilgrim caravans from Syria and Egypt with their mallams, that Muḥammad ‘Ali was given instructions to deal with the Ḥijāz as soon as he was finished with Egypt. It was not till 1813 that he took Mecca and there met Ghalib who made cautious advanced to him. Ghalib however soon fell into the trap set for him by Muḥammad ‘Ali and his son Tusun. He was sent to Salonika, where he lived till his death in 1816.

In the meanwhile Muḥammad ‘Ali had installed Ghalib’s nephew Yaḥyā b Sarûr (1813—1827) as sharif. Thus ended the first period of Wahhābī rule over Mecca, and the Ḥijāz once more became dependent on Egypt. In Mecca, Muḥammad ‘Ali was honourably remembered because he restored the pious foundations which had fallen into ruins, revived the consignments of corn, and allotted stipends to those who had distinguished themselves in sacred lore or in other ways.

In 1827 Muḥammad ‘Ali had again to interfere in the domestic affairs of the sharifs. When Yaḥyā had made his position untenable by the vengeance he took on one of his relatives, the viceroy deposed the Dhawi Zaid and installed one of the ‘Abādīla,
Muhammad, usually called Muhammad b. Awn (1827–1851). He had first of all to go through the traditional struggle with his relatives. Trouble between him and Muhammad b. ‘Ali’s deputy resulted in both being removed to Cairo in 1836.

Here the sharif remained till 1840 when by the treaty between Muhammad b. ‘Ali and the Porte the Hijāz was again placed directly under the Porte. Muhammad b. Awn returned to his home and rank. Ottoman suzerainty was now incorporated in the person of the wali of Djidda. Friction was inevitable between him and Muhammad b. Awn; the latter’s friendship with Muhammad ‘Ali now proved of use to him. He earned the gratitude of the Turks for his expeditions against the Wahhābī chief Faisal in al-Riyād and against the ‘Aṣir tribes. This raids on the territory of Yemen also prepared the way for Ottoman rule over it.

In the meanwhile the head of the Dhawi Zaid, ‘Abd al-Muṭṭalib (1851–1856), had made good use of his friendship with the grand vizier and brought about the deposition of the ‘Abādīl in favour of the Dhawi Zaid. ‘Abd al-Muṭṭalib however did not succeed in keeping on good terms with one of the two pasha with whom he had successively to do. In 1855 it was decided in Constantinople to cancel his appointment and to recall Muhammad b. Awn. ‘Abd al-Muṭṭalib at first refused to recognise the genuineness of the order; and he was supported by the Turkophile feeling just provoked by the prohibition of slavery. Finally however, he had to give way to Muhammad b. Awn, who in 1856 entered upon the Sharifate for the second time; this reign lasted barely two years. Between his death in March 1858 and the arrival of his successor ‘Abd Allāh in October of the same year took place the murder of the Christians in Djidda (June 15) and the atonement for it (cf. Djidda, and Snouck Hurgronje, Een rector der meekansch university, in Bijdragen t. d. Taal-, Land- en Volkenkunde van Ned.-Indië, 5e volgr., deel ii, pp. 282–292, 1873).

The rule of ‘Abd Allāh (1858–1877) who was much liked by his subjects, was marked by peace at home and events of far-reaching importance abroad. The opening of the Suez Canal (1869) meant on the one hand the liberation of the Hijāz from Egypt, on the other however more direct connection with Constantinople. The installation of telegraphic connections between the Hijāz and the rest of the world had a similar importance. The reconquest of Yemen by the Turks was calculated to strengthen the impression that Arabia was now Turkish territory for ever.

The brief reign of his popular elder brother Husain (1877–1890) ended with the assassination of the sharif by an Afdhā. The fact that the aged ‘Abd al-Muṭṭalib (see above) was sent by the Dhawi Zaid from Constantinople as his successor (1880–1882) gave rise to an obvious supposition.

Although the plebs saw something of a saint in this old man, his rule was soon felt to be so oppressive that the notables petitioned for his deposition (Snouck Hurgronje, Mecka, i. 204 sqq.). As a result in 1881, the energetic Othmān Nūrī Pasha was sent with troops to the Hijāz as commander of the garrison with the task of preparing for the restoration of the ‘Abādīl. ‘Abd al-Muṭṭalib was outwitted and taken prisoner; he was kept under guard in one of his own houses in Mecca till his death in 1886.

Othmān Pasha, who was appointed wali in July 1882, hoped to see his friend ‘Abdallāh, one of the ‘Abādīl, installed as Grand Sharīf alongside of him. ‘Awn al-Raṭīfī (1882–1905) was however appointed (portrait in Snouck Hurgronje, Bilder aus Mecca, p. ). As the wali was an individual of great energy, who had ever done much for the public good and ‘Awn, although very retiring, was by no means insignificant, any eventuation, trouble between them was inevitable, especially as they had the same powers on many points, e.g. the administration of justice and supervision of the safety of the pilgrim routes. After a good deal of friction Othmān was dismissed in 1886. His successor was Djamal Pasha, who only held office for a short period and was succeeded by Saflat Pasha. Only Ahmad Rāṭīb could keep his place alongside of ‘Awn and that by shutting his eyes to many things and being satisfied with certain material advantages. After ‘Awn’s death ‘Abdallāh was chosen as his successor. He died however before he could start on the journey from Constantinople to Mecca. ‘Awn’s actual successor was therefore his nephew ‘Alī (1905–1908). In 1908 he and Ahmad Rāṭīb both lost their positions with the Turkish Revolution.

With Husain (1908–1916–1924), also a nephew of ‘Awn’s, the last sharif came to power. But for the Great War his sharifate would probably have run the usual course. The fact that Turkey was now completely involved in the war induced him to declare himself independent in 1916. He endeavoured to extend his power as far as possible, first as liberator (muḥāfīz) of the Arabs, then (June 22, 1916) as king of the Hijāz or king of Arabia and finally as caliph. Very soon however, it became apparent that the Sultan of Najd, ‘Abd al-Azīz Al Sa‘ūd, like his Wahhābī forefathers, was destined to have a powerful say in the affairs of Arabia. In Sept. 1924 his troops took Taif and in October Mecca. King Husain fled first to Akaba and from there in May 1925 to Cyprus. His son ‘Alī retired to Djidda and afterwards to this town and Medina for a year, avoiding bloodshed and complications with European powers. Both towns surrendered in December 1925.

Since January 1926, Ibn Sa‘ūd has been king of the Hijāz; the official title of his kingdom now is Hijāz, Najd and dependencies. A political unit has thus been formed which covers a larger area than the sharifs ever ruled and possesses greater internal strength than has been seen in Arabia since the end of ‘Abbasid power.

By the organisation of the Najd warriors (iḥkāwān) as agriculturists also, by the maintenance of a strict discipline among the Beduins, by the creation of a military police, which is held in awe, security has been created such as Arabia has perhaps never known and secure foundations laid for traffic, especially of the pilgrims.

With the representatives of foreign governments in Djidda the king maintains friendly relations. Recently several states have raised their consulates there to the rank of an embassy. Treaties have been concluded with a number of states.

By making use of modern technical skill, the king is endeavouring to counteract the natural poverty of the land. The automobile has become of importance for the pilgrim traffic, agricultural machinery is being imported and cisterns built to hold the rain water. A project for examining the
ground to prospect for minerals has been drawn up as well as a plan for a quay in the harbour of Djjida.

Wahhabism — or as they prefer to call it in Arabia: Islam according to the Ḥanbali rite — is the state religion. But it has advanced cautiously in comparison with its attitude at the beginning of the xixth century. The external symbols of veneration for saints and the dead have been removed; Muhammad's tomb in Medina has however been spared. The mahmal [q.v.] no longer comes to the hajj; the new covering for the Ka'ba is made every year in Mecca. The pilgrim traffic again shows high figures and even Shi'is are admitted again to the pilgrimage.

The religious and economic life of the city has from the earliest times centred round the pilgrimage (cf. the article حرم) and the Mosque (cf. AL-MASJID AL-ḤARAM). The character of Mecca as the metropolis of Islam is reflected in the great variety of its population. Besides the original Meccan nucleus we have numerous Arab elements — among which the Ḥadrāmis are particularly prominent on account of their energy — and colonies of foreigners from all parts of the Muslim world who have out of worldly or religious motives taken up their abode permanently in the capital. Among these, special mention must be made of those from the Malay Archipelago who are known collectively as Djawa; with them is it exclusively religious motives that have caused them to take up permanent residence in Mecca.

Even at the present day, slaves mainly African, form an important element in Meccan society. Abyssinian slave girls have always been highly esteemed as concubines. The slave-market however is no longer of the importance it once was. Freedmen rise from the slave caste and their dwellings, huts put together of every conceivable material, are on the outskirts of the city.

Artisans are, or at least down to the end of the sixteenth century were, organised in gilds. Among these gilds, those of the Muhammadids (muhawwaris, q.v.), who have agents in Djidda and outside Arabia, is the most important; it lives entirely on the pilgrim traffic.

This is true in a way of the whole population, which has arranged to let houses to the pilgrims for a considerable portion of the year. By the eighth month, tens of thousands of these visitors are in the town. Their number increases till the twelfth. In Muḥarram, Mecca resumes its usual appearance.

During the last few hundred years — except for the first Wahhabi period — the cult of saints in Mecca has steadily increased. Numerous places have sacred merit that of Muhammad and his family, the most prominent muḥāḍarāt and later saints: numerous kubbas were built over their graves and āwals and mōlids were celebrated in their honour. The Wahhabis have done away with a great deal of this, how much is not exactly known.

Mecca is the seat of the government, although the king's residence is in Riyād. The official gazette Umūr al-Kārūr appears weekly. There are also printing presses, which mainly print Wahhabi or Ḥanbal literature.

List of the Sharifs of Mecca (ca. 961—1916).

MEDEA, a town in Algeria (department of Algiers), 60 miles S. of Algiers, in 56° 15' 50'' N. Lat. and 2° 45' E. Long. (Greenwich). Medea lies at an altitude of 3,070 feet on the northern border of the mountainous massif which divides the high plateaus from the Mitidja. Down to the French occupation, it could only be reached by a bridle-path over the Muzala pass (3,270 feet). The building of a road through the gorges of the Chiffa, alongside of which a railway now runs, has made access to it easier. The town itself is built at the foot of slopes covered with vineyards which yield wines of superior quality and orchards in which, as a result of the temperate climate, fruit trees grow very well. In the neighbourhood a number of European villages have grown up in which the cultivation of cereals is combined with that of the vine. There is also a fairly busy market but it is losing in importance since the railway has been extended to Djelfa at the southern end of the high plateaus. The population (census of 1926) is 13,816 of whom 2,225 are Europeans, almost all French and 11,591 natives.

Medea occupies the site of the Roman settlement of Lambidia, on the ruins of which Boluggin b. Ziri in the tenth century built the modern town. The district in which it was built was, according to Ibn Khaldun (Barber, ii. 242), inhabited by the Sanahidja tribe of Lendia, whence no doubt the name Lendani taken by natives of Medea. Of the history of the town itself we know hardly anything. Leo Africanus (Bk. iv., ed. Schefer, iii. 66) and following him Marmol (Africa, ii. 394) only tell us that after having belonged to the sultans of Tlemcen who kept a garrison there, it passed into the hands of the sultans of Tenes, and then of the Turks when the Barbarossa established themselves in Algiers. Under Hasan Khair al-Din, Medea became the capital of one of the three provinces (beyliks) of the Regency, the beylik of the south or of Tilleri, to which at a later date was added the lower valley of the Sebou in Kabylia. Down to about 1770 we therefore find the key of this province living alternately at Medea and Bordj-Sebou. It was not till this date that, the region of Sebou having been incorporated in the Dar al-Sultan governed by the bey, the bey of Tilleri settled permanently at Medea where he was in a better position to control the nomadic tribes of the plateau. He had however no authority over the inhabitants of the town itself, who were under the authority of a hâkim appointed by the agha of Algiers. The population, which did not exceed 4,000—5,000 among whom there were many Turks, retired from the service, became wealthy through its trade with the south. Caravans brought thither the produce of the Sahara and also negro slaves who were sold to the citizens of Algiers.

During the years which followed the capture of Algiers, the French on several occasions (Nov. 1830—May 1831—April 1836) occupied Medea, without taking permanent possession. 'Abd al-Kâdir however placed a bây in it and had his ownership of it recognised by the treaty of the Tafna [cf. 'Abd al-Kâdir]. The outbreak of hostilities again between the Emir and the French led to the final occupation of Medea by the latter on May 17, 1840.

(G. Vyer)

MEDINA. The Arabic word madina "town" [cf. al-Madinat] has survived in Spain in a number of place-names. The principal are Medina de las Torres in the province of Badajoz, Medina del Campo and Medina de Rioseco, in the province of Valladolid, Medina de Pomar, in the province of Burgos, Medinaceli, in the province of Soria and Medina-Sidonia, in the province of Cadiz. The Arabic place-names Madinat Walid and Madinat al-Farâdî correspond to Valladolid [v.q.v.] and to Guadaljara respectively (from the second Arabic name of this town: Wađî 'l-Hisâra) [cf. above ii. 177, and it may be added that the town took its name from a known individual, Mâlik b. 'Abd al-Rahmân Ibn al-Farâdî, according to Ibn al-Kâhil, Fijiata, MS. in the Escorial, i. 189].

(E. Lévi-Provençal)

MEDEINACELI, a little town in the N. E. of Spain on the railway from Madrid to Saragossa, about halfway between these two towns, some 3500 feet above sea-level on the left bank of the Jalón. In the Muslim period it was called Madinat-Sâlim, which is not to be confused with Madinat Ibn 'l-Sâlim, in the Sewith district (Idrisî, Desers des l'Espagne, 174/208 and note 5, 177/215), the modern Grazalema in the province of Cadiz.

The Arab geographers give brief descriptions of Medinaceli. According to Idrisî, it was a large town built in a hollow with many large buildings, gardens and orchards. Abu 'I-Fidaî says that this town was the capital of the Middle March (al-thâbar al-awsat); Yâqût adds that Târîk [v.q.v.] found the town in ruins at the conquest of Spain but it was repopulated under Islâm and became a prosperous town.

Through its geographical position, Madinat-Sâlim was of considerable strategic importance for the Umayyads from the fourth century onwards. It was on many occasions, as the last stronghold on Muslim territory, the point from which forces assembled at Cordova finally started for expeditions against the Christians of the N. E. of the Peninsula and to which they retired. Though somewhat decayed down to the reign of 'Abd al-Rahmân III al-Nâsir, it was rebuilt, if we may believe the detailed evidence of a chronicler quoted by Ibn 'l-Andalusi, in 335 (946); this ruler put the work in charge of his client, the general Ghâlib, and all the garrisons of the country lent their aid in the work.

This Ghâlib remained governor of Medinaceli and all the Middle March until the power was seized by al-Mansûr Ibn Abî 'Amir [v.q.v.]. It was in Medinaceli that this famous hâdîdî died on 27th Ramadân 392 (Aug. 10, 1002) on returning from his last expedition against Castile. In the following century Medinaceli was frequently taken by the Christians and retaken by the Muslims, before being finally incorporated in the Kingdom of Castile.

MEDINÁ-SIDÓNIA, a little town in the S.W. of Spain, in the province of Cadiz, almost equidistant from Algeciras and Jerez de la Frontera. Under the name of Shāhda it was in the Muslim period the capital of the district of this name; its territory formed part of the province of Seville and adjoined that of Morón.

MEDJELLE (a. medjelle). Under this name the Civil Law Code of Turkey; is generally known It is an abbreviation of Medjelle-i akhām-i adīyya. The elaboration of this Civil Code took place between 1869 and 1876 and was a part of the legislative programme of the Tanzimat (q.v.). It had been preceded by a Penal Code (1858) and Commercial Code (1861), but, while these two codifications had been based in a large measure on the laws of European countries, the Medjelle was a codification of that part of Hanafite fikr, which treats of obligations (miakhirāt). The codification was done by a commission of seven members, having as president Ahmed Bajewdet Pasha (q.v.). In a preliminary report (madbāṭ), dated 18 Dhū 'l-Hijja 1285 (April 1, 1869), this commission explains the reasons why a codification of this matter had become necessary. The Medjelle was a codification, that is to say, a code. In it the judges did not know much, as a rule, about fikr; it had, therefore, been thought wise to appoint the president of the so-called religious tribunal at the same time president of the secular tribunal. This, however, did not prove satisfactory and so it was necessary to put the main points of the law of obligations into a code that could be more easily consulted than the voluminous fikr-books. Among the previous endeavours to bring Hanafite law into this form the commission mentions expressly Ibn Nudjaim (q.v.); the biography of this jurist is to be found at the end of the first part of the Cairo edition of 1334 of his Al-Baṣr al-rāfi (communication of Dr. C. van Arendonk). The editors have followed as a rule those opinions of Hanafite doctors, which are most in harmony with the exigencies of modern life and business. It is, however, expressly stated that the Introduction (makaddime) and the first Book have been approved by the Shāikh al-islam and other prominent jurists.

Though the different parts were successively sanctioned by Imperial kharīj, with the formula mudjibrughe 'amāl olim', the Medjelle cannot be said to have had an exclusive authority in the matter regulated. The judges were perfectly free to form their own opinion as a result of the study of the Hanafite law books and their decisions were really used.

The makaddime of the Medjelle contains in 100 articles a number of principles (kawāsit) as already elaborated by Ibn Nudjaim and his school; then follow sixteen books (kitāb), beginning with the Kitāb al-Bayān; the last four books deal with process matters. The whole has 1,801 articles. The first part of each book gives definitions of the technical law terms used, and most of the articles are followed by examples taken from the collections of felāwān. The introduction and the first book obtained the imperial sanction on the 8th Muḥarram 1286 (April 20, 1869) and the last two books on the 26th of Shāhān 1293 (September 16, 1876).

The text of the Medjelle is to be found in the big code collection Dostur (the introduction and book i.—viii. in vol. i.; book ix.—xiv. in vol. iii.; and books xv. and xvi. in vol. vi.). It has been published several times with a commentary, as the Medjelle-i Akhām-i adīyye sharḥ by E. M. Dyaly al-Din (Der-i Se'ādet 1311) and a work under the same title by the in his time famous jurist 'Aṣif Bey (Der-i Se'ādet, in different parts from 1328 to 1339; most parts had a second and the first part a third edition); the latter commentary, however, does not go beyond art. 1448. A full French translation is found in G. Young, Corps de Droit Ottoman, vol. vi., Oxford 1896, p. 170—446.

Since the Great National Assembly has adopted, on February 17, 1926, a new civil code (Kânun-i mivānd; cf. Orient. Moderne, vol. 134, 192), which is substantially the Swiss civil code, the authority of the Medjelle has disappeared.

(J. II. KRAMERS)

MEDJİDİYE. In February 1844 (Muḥarram 1260) in the reign of 'Abd al-Medjid the Turkish coinage was entirely re-organised on European models and this currency is known as the Medjidiye. The name Medjidiye was also given to the largest silver piece in the new coinage: the 20 piastre piece of this new issue; it weighed 372 grains (24.08 grammes). (J. ALLAN)

MEHEDJA [See Kamanhaya.]

MEHMET, MEHMETMED, MEHMETMED. (See Muhammed.)

MEHMED MEDİHA. [See Karanmehmed Medihmed Pasha.]

MEHİR 1), the language of the Mahra country in Southern Arabia, which with Ṣawwar (spoken in the mountains northeast of Zafar) and the dialect of the island of Sokotra forms a separate branch of South Semitic; the relation of this branch to the new extinct languages found in the inscriptions of the Sabaeans, Minaeans and Hadhramauts has not yet been accurately defined. Mehire itself as a spoken language in South Arabia is seriously threatened by the steady advance of northern Arabic. The Mahra people are already almost all bilingual and their native idiom is very much influenced, especially in vocabulary, by northern Arabic; for example, of its old numerals it has preserved only the first ten; all higher numbers have been replaced by the northern Arabic forms. It is therefore not always easy to distinguish with certainty old words which are also found in northern Arabic from later borrowings.

As regards Phonetics, the Mehri consonants are in general agreement with Arabic and Ethiopic. Of the laryngeal loss of 'ain, which still sur-

1) In this article the author's system of transliteration is retained for philological reasons.
vives in Shḥawri, is characteristic of Mehri. The
uplar plosive t seems always to be voiceless; of
the palatals the t\h\ which still survives in Shḥawri,
is always liquidated, as in northern Arabic, to t.\h.
The case of the schilants is particularly characteristic.
The original Semitic gh has been preserved as
such, but in many words, as in northern Arabic,
the original Semitic gh has coalesced with it. This
sound, which is preserved in Shḥawri as well as in
Canaanite and Aramaic, has often been replaced by h in genuine Mehri words, initially for example in
kina (he) "heard" (compare mingha "ear-
muscle") and medially in nehā "forgotten"; in
the final position it may be dropped, as in tay
"a little goat", hār "head". But when we find
alongside of kina "to obstruct" sma "to carry
over, to come to an agreement", which is con-
ected with the Arabic salād "straight, correct", the
latter can only be regarded as borrowed from the
Arabic. This s however is also found in words like līfas (he) "put on" and in the pronoun of the third
persons fem. se, sen, etc., in which any such borrowing is highly improbable; these must therefore belong to a dialect for which the phonetic law gh → d did not hold. The primitive Semitic gh has also survived where a following t was
assimilated to it, even when the consequent doublet
was dropped, as in the prefix to the causative
reduplicated sdn. A primitive Semitic sound seems
also to have survived in the sin, to which Jahn
gives the name "lateral", and which is trans-
literated in the Vienna texts by s; it corresponds
typologically to the Arabic sin, and therefore to the
sin in Canaanite and old Aramaic. Whether the
position of articulation was exactly the same cannot
of course be decided; but the description of the sound
as "lateral" probably means the same as the pronuncia-
tion with flattened tongue which is assumed
for Canaanite and Aramaic. Among the dialects
we find alongside of d and t also the fricatives dh
and th in native as well as loanwords; but in
both groups the fricative pronunciation has fre-
quently been dropped, e.g. in the case of dh
regularly in the demonstratives; alongside of the ab-
dative 300, we have tätibin 30. In "behind" s ap-
pears instead of the th in the Arabic athār
"track", probably under the influence of r, like dh
in the Eth. athār instead of the athār which
we should expect. So also in the case of z; the
fricative has in many cases become a plosive t under
conditions still to be explained, as in fahr
"moon", aṣām "great" = Arabic aṣār, ṣārīn. The
voiced d has a lateral articulation differing from the
Arabic. In the labials, as in Arabic, the voice-
less fricative f corresponds to the voiced explosive t
of the languages, n. when in proximity to velar
and palatalts, is frequently more nasal than in
Arabic. b and t before consonant-frequently lose
their own sound and merge in the preceding
vowel, as marīt, t slām from fətru, údī, údī,
the cursive t is from fəunu (by dissimilation in lef
"night", kīlīr "every night"), kār t > la ṣām "horn",
kwāt > kōw "belly".

The vowels are frequently prefixed with the
laryngal fricative instead of the laryngal plosive, i.e.
we often have hār for ḥār. As in Ethiopic
and probably also in primitive Semitic, only two
short vowel sounds, a and e, are distinguished.
while long vowels we have a, e, and i. The
old dahiphons are contracted to e and ə. These
base vowels are however more strongly affected
than in Arabic by the predominant articulation of
consonants. The distinction between a and e is
thus frequently obliterated. Stress brings about
the disappearance of short vowels in accented
syllables and lengthens them in accented ones,
whereas if they are not retained by laryngal
emphatic (i.e. pharyngalized) consonants, become
a (which often passes into i), open sounds ad-
joining it however become i, ì (matra). Assimilation
of vowels in adjacent syllables is frequent. Original
long vowels after laryngals and emphatic consonants
become au, at and e, e, i.

Of the phenomena of sound-shifting and
sound-change in combination, a characteristic
feature is the tendency, paralleled in the vowel
assimilation just described, to bring voiced and
unvoiced sounds into agreement (Jahn, Gramm.
p. 8). On this is based the transformation of Arabic
al-qādūr "of others", the root of which poetic
language retains in wākīl to be delayed", into
ghāsher with metathesis of the initial sound (hom.
being replaced by h) (cf. meğābīr "thereupon", while
the ghāir of the Arabic, which Bittner,
Studia, i. 15 compares with this, is to be regarded
the primitive Semitic "as the assimilation of
n is, as in Arabic, usually counteracted by the
necessity of maintaining the verbal system. Although
the disappearance of vowels produced by such
sounds sometimes produces double consonants initially, this
is frequently avoided at the ends of words by the
insertion of an epenthetic vowel, e.g. arof along side
of ar and earth. Such additional vowels are found
medially also before sonants as in the sub, yikdīf
(cf. yikdīf), after laryngals as in yikabīr and velar-
as in yikhabīr, yikhabēz, etc. Dissimilation, especi-
ally between sonants (panīt " idol" from zamūn, sabūn <
zamūn "time"; Hem., p. 117,35), haplography as in
�ātīl > fātīf, fātīf "one" (fem.) and strong metathes-
se like kātāl > l. tāk "he slew", kāhām(l) > kāmīt
> kītān, kītēn, "heavens" also contribute to give
the Mehri vocabulary its special features
becomes.

The pronoun has pre-erved very archaic forms.
The first personal pronoun hā, hā can probably
not be equated (as Bittner, Studi., n. 17 suggests)
to hā in Accadian antāku, as the change k → h
is not found elsewhere in Mehri, but must be
connected with the primitive Semitic *ā (with
aspiration of the initial vowel — see above). It is
also improbable that the 2nd pers. pronoun sg. kēt,
plur. m. fem. f. tin, should pre-erve in the singular, with
assimilation of the n, the initial syllable *ān found
in the other Semitic languages, but reject it in
the plural. It is perhaps more probable that the initial
sound of the 2nd pers. has been assimilated to
that of the 1. and 3. The 1. plur. nāhā reveals
a corruption of the primitive Semitic nāhā. The
3. pers. has. alone among Semitic languages pre-
erved the original difference in the initial sounds.
m. hā, f. hā, plur. m. hām, fem. f. tin; on the other
hand, the double distinction through the vowels
has been dropped. Among the suffixes may be
noted the distinction of genders, found also in
some North Semitic dialects, in the 2. pers. m.
k. s, with palatalization from k. as in shāmā
hāsilāt (Muller, u. 141, 14) and Sakk. zābihā (Muller,
n. 227, 208), "liver". In place of the suffixes,
the independent pronouns may also be used
with the genitive particle as mōād dī-hā, "my farm",
hāmān lihēt, "thy sheep".

The demonstrative pronouns end in the
sg. m. d (in place of dh) and distinguish the
The feminine ending at takes the accent in nominatives with short stem vowels; and therefore appears as at, or with assimilation to close front vowels as et, as in *salāmit "rain"; *fajūt "heal", *ḥājirī "chamber"; after long stem vowels however, it is unaccented, as in *alādīt "flag", *ḥādīt "tube", *ḏāfarīt "palm-wood", especially in loanwords from the Arabic, while in true Meheri vowel-longing the vowel at is lost; the stem vowel then disappears and the vowel of the new closed root syllable is abbreviated, as in *jafrīt (a Yemeni "town", "village", "full", "good") from *jafrīt (from *jafrīt) "noble lady" from *sherīf. The endings of the nominative likewise end in this way in infinitive "egg" from *ēfīt, *lāmit "conson" from *īmīt, *sāfīt "curtain" from *saft (alongside of the usual ending as *hāzīfat "head", *wajīfīt "date-palm") as in Tigre and Tigraí, these are really feminine of adjectives of relation, which in their original meaning preserve the full form *īfāt (see Rhodokanakis, cp. cit. p. 6, 7).

Of the dual only a trace remains in *fīrūz; perhaps however also in the ending of nouns before this numeral, like *kārhītā "his", if this is not simply an epenthesis vowel before the double consonant. *Ghīfīt, borrowed from the Arabic al-sawārīt, *takāfīt "at the time before the 'air'; *haṣīfīt "at the time before the 'air'.

The sound plural of the masculine with the ending in *iin "is", before suffixes is still in use to a greater extent than in Arabic. The plural of adjectives of relation in *fāzīm is still found alongside of the contracted form in, frequently in names of trades like ḥammānt-un, *wuṣārīn (Rhodokanakis, cp. cit. p. 9). The ending of the fem. pl. is ēt, sometimes ṣet, which does not, as Bittner thought, maintain the nominative which survives in Meher (as modern Arabic and in Hebrew and Ethiopic) only in adverbs. The suffix syllable is the plural ending of the masc. in unaccented syllables (Grundr., t. 442), just as the fem. sg. if takes the masc.

...
ending (see above), or it may be, as Rhodokanakis (op. cit., p. 8) suggests, the other plural ending *an, as in Accad. *kullatin “all”. In the formation and usage of the broken plural, Mehri adopts a scheme between Arabic and Ethiopic. Characteristic are number of formations from plurals of the plural, such as are found also in Arabic, e.g. *surk “a piece of wood”, plur. *surrik, then *sirdiyik and thence *sryak (Rhodokanakis, p. 11 sqq.). Double plurals also arise through the addition of the masc. pl. ending in *rik *wind”, *hjem-in “tails”, *shimin “bows”, to which the original plurals *rik, *shenn, *shin are then taken as singulares (Rhodokanakis, p. 9). And again with vowel reduction after the accentuated syllable in *kiltım “bitches”, *kohastun “daughters”, in which however Rhodokanakis (p. 15) sees the ending *an.

The case-infections, except for a few remains of the accusative in some adverbs, have completely disappeared. The genitive is expressed by the simple juxtaposition of two nouns, more frequently by the relative, sometimes with a demonstrative suffix, as in *geliden de *ghelsh *hibri di *begrett “the skin of the steer, the young of the cow”. Hein, p. 15, 16, alongside of *hbr *tich *the young of the bull"; ibid., p. 5, 17.

The prepositions of Mehri are for the most part new formations, some of uncertain origin. Of the Old Semitic prepositions, only hi (ba, b), *beh, *bad “after”, *bt < *dtu and *tlu, and min have survived; *ka, *kr has come to mean “with”. The place of *lì has been taken by *ka, *ke, which Bittner traces to the first syllable of *lul “dust”, but this is not very probable. The other prepositions have been replaced by words indicating place, like *fenwen “in front”, *chaven “behind”, *negbren “later”.

In the treatment of the verbal infinitives, as in the causative *hakdt “to cause to write”, in the reflexive *ketteb, *ketti, *ketti, in the caus. refl. *shogfer and *shakhem. From these imperatives is formed the affective mood (Bittner’s subjunctive), like yitker “that he crush”, yitkab “that he put on”, *yitser “that he travel”, yitkabeb “that he write”, yiketteb, *yiketteb, *yiketteb, *yshogfer, *yishakhem. Next there is expressed the progressive aspect, which presents the action as in progress, often with limitation to the present and future, a form which doubles the second radical in the simple verb but, as in the intensive, has replaced the reduplication by lengthening the vowel as in *yitber “he crushes”, so also in the causative *yikabeb, but in the intensive and sometimes in the reflexive shows an ending corresponding to the Arabic energics, as in yinfe in “the travels”, refl. *yikettleb and *yikettleb, caus. refl. *yishakhem. In the intransitive simple verb, the affective mood serves also to indicate that an event is happening at the present time (as a so called indicative); on account of the relations of the intrans. to the caus. and refl. already referred to this formation, but now for the indicative only, is transferred to these forms in *yikabeb (alongside of *yikabeb), *yishef and *yiketteb (from ketteb).

As the so called perfect in active verbs, the stress remains on the second syllable in the exception of the 3rd fem. sg., the ending of which *p is, as in the noun, attracts the emphasis to itself (teber). The 3rd pl. has lost the endings and replaces them only in the masc. by *em, which comes from the pronoun. The consonantal terminations have lost their vowels, but the double consonant at the end of a word is separated by the insertion of an epenthetic vowel only before the sonant *n of the 1st pers. plur. (teberron); after other terminations these are maintained. As in Ethiopic the initial of the 2nd pers. is assimilated to that of the 1st (-d); as in the suffix, the 2nd fem. sg. appears in the palatalised form *th. The intransitives with the exception of the 3rd fem. sing. retain the stress on the first syllable of the stem, the vowel of which is assimilated to that of the second (titer). In the intensive the lengthening of the a to o is found only in the forms which do not add a termination.

In the imperative in the transitive simple verb as well as in the causative there is no distinction of gender in the singular. In the intransitive form however, the vowel of the second accented syllable of the stem was assimilated to the feminine ending *i, so that even after it was dropped the distinction between m. teber and f. tebr was retained, similarly in the reflexive *featm, *fehim.

Accordingly, in the intensive and its reflexive and in the causative reflexive the distinction of gender is expressed also by changing the accented vowel: m. *teber, f. *tebr, m. *tebed, f. *tebed, m. *tebedef, f. *tebedef. In the plural the genders are distinguished by the endings in -em, f. -en. In the intransitive simple form however, the vowel change is transferred from the singular to the plural, m. *tebedem, f. *tebeden and in the reflexive of the scheme *ketteb, with peculiar change of function m. *ketteben (assimilation to the indir. imp. *yketteben, pl. *yketteben), f. *ketteben. The same change of function is also found in the perf. of the causal: 3 m. pl. *hakdetem, f. *hakdetem.

Out of the imperative arises the so-called subj,
of the impf. by means of the same personal prefixes as in all Semitic languages and with the endings for the 2nd sg. and m. -em, f. -en for the plural of the 2nd and 3rd pers. In the corresponding indicative the distinction of gender is expressed in the second person by internal vowel change, m. tiberen, f. tiber and on the addition of the plural endings the short vowel (yitiberen etc.) is restored. In the intransitive simple verb the moods are not distinguished, the genders of the 2nd pers. sg. are distinguished by the same vowel change as in the imperative; this vowel change is also transferred to the plural (m. tiberen, f. tiberen) and with exchange of functions also to the 3rd pers. (m. yitiberen, f. tiberen). In the intensive, distinction of gender in the second person is expressed only in the singular (subj. tefter, f. tefter, indic. m. tefteren, f. tefteren); before the endings, the vowels are short and the mood endings give way to the plural endings so that the 3rd pers. f. sg. and pl. are the same.

The participles are in the simple form active seboren, f. tevite (see above), pass. metguren; in the derivative stems as e.g. intensive mekhate, m. mekhetere, caus. mekhake, m. mekhateketer; in the passive they follow the model of the simple verb, makkis "deshatched" (in the intensive only when borrowed from the Arabic like meqadam "chief").

The infinitives are in the simple verb of the form tiber (more rarely like gadol: "to carry"), mitol "to be ill") or gahfis "to take" (frequently with med. lar.), with prefix like maimul "work", or with ending like gashon "to forgive"; in the intensive mohid "to cool down", in the causative and the reflexives (kehul, yikheul, sometimes with lengthening: kahser "get up"), yanadyer, zah [Jahn, p. 113, 29] "give heed", yighadh.

The medial u and i verbs are, as in Ethiopic, to a great extent assimilated to the plan of the strong verbs, ya and wad being treated as consonants. Only in the simple form of the med. u is the old Semitic inflexion retained in principle. But the old form yinuit (frequently yininit) has become indicative, and a new subj. has been formed with vowel change, yiniet, followed by the imperative miet. As in the infinitives, the ending of the 2nd sg. f. reacts on the stem in the indicative: temit, whence also the fem. plur. temiton to the m. temiten, and the 3rd pers. with these reversed: simiten, temiten. In the perf. mid<7<ewna is retained but abbreviated before consonant suffixes, as metet; the participle from it is mete
ten. But the pass. part. is quite strong in formation as makk
"feared". Some verbs, probably formed from nouns, follow the strong paradigm throughout the simple form like tawil "to be finished", hawel "to be mad". This is always the case in the reflexive of the base, e.g. tekhek "to long for home" and in the causative, as kete
ten "turned" and its reflexive, e.g. khekoh "warmed himself", as well as in the med. ya verbs e.g. seyor "travelled".

The intensive stem shows a peculiar formation, e.g. acaid "returned", impf. i. ya
dvin, subj. ye
dvin, imp. awad, part. ma
dvad, inf. awadet (from the simple verb, elsewhere however like tata
dry) and arit "called aloud" following the formation of the doubled verbs.

The bilateral roots with short vowel (the so-called med. gem. or doubled verbs) have retained the primitive Semitic inflexion with doubling of the second radical only in the perfect of the simple form; in addition the consonantal endings take an epenthetic vowel: 3rd m. temm "was at an end";
The suffixes are added to the 3rd pers. sg. m. of the perf. with the "bound vowel" ḫ which as in the similarly constructed forms of the Syr. imperf. (e.g. ʾḥušša) may have been an originally independent particle, which in Arabic is expanded to ḫ and which ḫašša has released, but in other respects follows the pattern of the verb ḥašša. Only before the 2nd pers. sg. m. it appears instead of unknown reasons. T may also appear in association with the element t found in North Semitic (Hebrew ʾt, ʾt etc.) probably abbreviated from the verb ʾtaša ʿto come", which with the 2nd pers. sg. m. it also shows t. These independent suffixes however may also appear after all the other verbal forms, which otherwise take the suffixes direct or with an epithetic vowel.

The vocabulary shows the closest affinity, apart from later borrowings, to northern Arabic, but possesses, in addition to many characteristic new formations like ḥašša "mouth" (cf. Arap. ḫurūba "mouth"), many old words which otherwise survive only in outlying regions, like ḥušša "foot" as in Panic, instead of the phonetically inconvenient rṯ. so ḫušša, ḥušša. Sok. teen, etc. Muller, iv. 170, 37, 1, 2. "sheep = ḥašša" Aram. and Manda. ḫašša (see Liebscher, Ersk. ii, 1907, 256: ḫašša) in 213 notes ṭašša "together", cf. Arab ḫašša "to assemble". The language of the Bermins and that of poetry has in addition many special features, particularly in its vocabulary.

Verstudien zur Grammatik und zum Worterbuch der Semitisch-Sudarabischen Sprache, i, ibid., vol. clxix./3, 1913; N. Khodokanakis, Zur Formenlehre der Meḥrī, ibid., vol. clx., 1910. — The Vienna Academy possesses a wealth of material for a dictionary of the Meḥrī language from material left by the late W. Hein; V. Christian is expected to edit it. (C. Brockelmann, MEKNES = Meknès and Meknez, in Arab. Al-Zar(t)y, a town in Morocco, one of the residences of the Sultan. The old French name Mogenes or Maghenes has not prevailed against the form inspired by the ethnic.

Situated in 5° 39' W. Long. (Greenw.) and 35° 53' N. Lat. at an average height of 1,700 feet above sea level, Meknes is 80 miles east of Rabat and 40 west of Fès. It occupies the centre of the transitional zone which lies between the Middle Atlas, 30 miles to the south, and the Schil. It commands the exit towards the Gharb of the depression ("south Rifian pass") which separates the massif of the Zerihoun from the plateau of el-Hd phá. At Meknes intersect the roads from Rabat to Fès, from Tafnìt through the land of the Beni Mrzîf and Aẓrû, from Marakhûn through the Tafnìt. Meknes at the present day is economically connected with Kenīra.

The temperature rarely exceeds 36° C. or falls below 5°. The rainfall (491 mm. in 1929) is remarkably equal from one year to the other. The excellent water supply of the plain of Meknes and the quality of its light soil, resting on a subsoil of permeable limestone, makes it one of the best agricultural districts of Morocco.

The population at the last census was 30,000, of whom 16,000 were Muslims and 6,000 Jews. Canal in 1902 put it at 20,000 of whom 9,000 were Ḥaṭhîrîs and 5,000 Jews.

Meknes is built on the flank of a mountain spur. The ruins of the Kasba of Mawlavî Isâ citation to the S.T. of the native town, and give to the old town, surrounded by wall of clay, a considerable extension, of which the madina itself covers about a third. Beyond the ravine dug out by the Wâdî el-Fekra the European town has been laid out and is being built. The appearance of the native town, dominating this ravine and placed upon a verdant plateau, is striking. The houses of the madina, often sub-terminal, are always very simple. There are only fifteen or so houses of an artistic interest. They date for the most part from the reigns of Sultan Muhammad b. Aʾl-ʿAl-Khâmîn and Mawlavî el-Hâson. The suburbs of the town look like the streets of a country village. The selîs, which lie between the Madrasa
Meknes

Bu Inania and the Djami al-Nadijdjarin (shops of the jewellers, carpenters and curiositvs shops) have no remarkable features except the covered Qujarita [q.v.] the booths of which were ornamented a few years ago with shutters of painted wood. The melah [q.v.] of Meknes is to the south of the medina; it seems to have been here since the reign of Mawlai Muhammad b. 'Aid Allah. A new melah of Meknes is one of those which have retained their native character most unaffected. Only one street, the Kauthaa street, is accessible to European trade and traffic. The centre of the town's activity is the Hedim square. In the evening the 'story-tellers and balloonists, who usually call themselves shafi' of Mawlai Abd al-Kadir al-Hadi, are surrounded by a crowd, the animation of which is exceeded only by that which fills the Lynam al-Fina at Marrakush. To the S.E. lie the vast ruins of the ksar of Mawlai Isma'il. They now reveal nothing but chaos and disorder. The only buildings still kept in repair are the Lynam b. Almadani, which have certain parts of which have made a charming garden, and the Dar al-Ba'itah which is now a school for native officers. In the Dar al-Mekheen live the last surviving women of the family of Mawlai al-San and sometimes it is used as a royal residence. Begun at the end of the sixteenth century this palace was built in several periods. The old Dar al-Makhzen dates from 1589. In the ruins of the Dar Khara live the families of the Hasani shafi', near the abode of the naab of the shafi'. Mawlai Kabir b. Zalim 'To the Lynam al-Akkher and mosque the ksar of shafi' and principal officials go every Friday and on the occasion of solemn prayers. In the old Agdal of Mawli Isma'il, among waste lands, an ornamental farm, the origin of which goes back to Mawlai 'Abd Allah has been laid out, beside an experimental garden. Farther on there is a horse-breeding establishment. The remainder is nothing but ruins. The visitor goes along miles of measure walls and finds enormous ruins: the Harfi al-Masaf used as a stable and storage house for forage, the walls, the granary and the ornamental water left to dry.'

There is very little industry in Meknes: carpentry and particularly weaving, already noted by al-Iddri, is the most notable artistic industries are the many coloured embroideries of large irregular point lace and painted wood. The public services are a great deal of business. In Meknes as elsewhere, some classes of artisans, like the tailors, smiths and potters. The building trades, on this side, are flourishing, Siqiq is held outside the town and are attended by the country people. The Siqiq of the Bi-dhyl, before the gate on which the heads of rebel mobs are displayed for the edification of the tribes, the Siqiq al-Khamas and that of the Lanterns. There is no native commercial house of any importance. The market of Meknes does not extend beyond the environs of the town: it exports nothing except in years of abundant harvest. The region was already famed in the tenth century for its fruits, its vines, its gardens and its vegetables. The mills, four or five of which are still working, date from the same period. Since the French occupation, colonization has developed considerably. The colonists, most of whom have come from Algeria, cultivate mainly wheat, of which they are obtaining increasing yields. The cultivation of the vine is increasing each year. The region of Mawlai Idris is one of the principal centres of olive-growing in Morocco (400,000 trees); 330 farms are laid out in the district, covering 85,000 hectares. Official colonization which has now disposed of almost all the reserved lands been out-distanced since 1927 by private colonization. The native farms (130,000 hectares) tend to disappear from the plains to become themselves to mixed farming in the mountains. Prospecting for minerals has only been done piece-meal. Traces of petroleum have been found beside Petritane and of lead in the Central Atlas.

The government of Meknes, which is a moharbatina town, is in the hands of a Beibeh. He is also faqih of the Bakkher, who have retained a relic of their past greatness in a special statute and edict till 1912 provided the garrison of the town (500 men according to I. C. Chatelain). The beibeh of the Hasani shafi' exercises a jurisdiction independent of that of the beibeh. In the administrative organization of the province, Meknes has been made the capital of a very considerable area. It was from it that the military operations in the Central Atlas were directed. Although this active part is now over, Meknes is still a military command, and its administrative region, although greatly reduced, still stretches to Mulek, situated in the centre of Morocco at the junction of important roads. Meknes is marked out as one of the strong places of the country in the future: a military camp is being laid out at el-Haajeb.

The population consists of many distinct elements: Shafi', Bakkher, Berbers and Jews. The Hasani shafi', who have played their part in the history of the town and retain privileges (of the numerous descendants of Mawlai Idris, only the families residing in Fas and Meknes are allowed to share in the income of the zawiya of Fas) and the Hasani shafi', who have many privileges of their own, form a kind of aristocracy, generally penurious. The Bakkher, descendants of the 'Abd of Mawlai Isma'il, up till 1912 formed an unreliable element, which was always a nucleus of trouble. Since that date they have been taking up the trades of mat-makers and farriers. The have close to the town of old kasbas and gardens which belong to the Makhzen, and in the old kasba of Mawlai Isma'il in the 13th Mithqal quarter. Their houses, framed with thatch, look like African encampments. But it is the Berber (Afghani) element which predominates at Meknes and gives it its desire for independence, a feature of which has for centuries been a jealousy of Fas. It is the Berbers of the mountains who give it its tone; when they come down to the town, their women give colour to the streets of the medina with their short skirts, their leather gaiters and their wide-brimmed hats. The Berber elements of the plain are much more mixed, having undergone many vicissitudes since the day when Mawlai Muhammad b. 'Abd Allah inaugurated the policy, considerably practised by his successors, of transferring tribes.

A considerable part of the population of Meknes consists of floating elements who come, usually between harvests, to work as artisans. These immigrants, almost all, come from the south, from Tafilalet in particular (potters, tanners and porters).
from Sis (grocers), from Tütt (oil-makers), from Figgig and Dar'a (masons). The Rifans and Jbala supply most of the agricultural labourers. A small number of Fibis, who have in recent years merged into the population of the town, are cloth-merchants, old-clothes-dealers and shoemakers.

Jews form a quarter of the native population. Foucault estimated the mellah of Meknes to be half that of Fas. Chénier remarked on its prosperity. It has increased since his day as elsewhere and the position of the Jews is greatly improved since the establishment of the French Protectorate.

Religious Life. From the presence of the Idrisids and Hasanids shoffa, the proximity of the sanctuary of Mawlāi ʿIdrīs and the religious event of the celebrations of his miʿṣūr (class, mawṣūn, q.v.) every year, Meknes is one of the most important centres of Sufism. At the same time for the Berber population it is a centre of marabout rites of the most elementary kind. All the brotherhoods that have ṣawāja in Morocco are represented in Meknes. The most important are those of the Kadiyīya, Ṭidāniya, and especially Ḥanāḍhā and the largest, the ʿĪṣaw, to which half the population are attached. Meknes, whose patron saint is Sīdī Muhammad b. Ṣāqī and which has its tomb under the kubba erected by Mawlālī Muhammad b. ʿAbd Allāh, is the capital of the order. This saint came here at the end of the xvth century. His teaching at first met with a vigorous resistance, which he overcame so completely that, when the governor of the town sought to take steps against him, the people protected him. Before his death he acquired an estate, constituted it kubba and set it aside as a cemetery. It is still used and many men of religion are buried there. The celebration of his miʿṣūr on the first day of the mīlīd (masculid) festival is the great event of the year. The preparations for it begin forty days before and become all-absorbing ten days before the festival. On the day before or the preceding day delegations flock in from all parts of Morocco, following the traditional routes. The most generous hospitality is given to the pilgrims by the descendants of Ṣaḥḥārī al-Ḵāmilī, who have the mīlīd (Brunel). The excesses committed on the occasion of this pilgrimage have been frequently described. Many other special cults are observed in Meknes. Bu Ṣerī is the patron of the graziers, and Mawlālī ʿIdrīs of the Zāhrīn is the patron of the tanners, weavers and butchers (Maʿṣūnū). There is even the cult of a living holy man, Mawlālī ʿAhmād Wazzānī. As it was his custom to sit in the public way in a very simple costume, he was in 1917 granted clothes and a kubba at the request of Mawlālī Yūsuf. The kubba is at the entrance to a dispensary and the admirers of the saint come there daily to keep him company.

History. We know nothing certain about the history of the region in the Roman period nor in the centuries which followed. The most advanced Roman stations were on the slopes of the Zāhrīn guarding the plain, out of which the warriors of the Central Atlas might debouch, and perhaps throwing out a screen as far as the plateau of el-Hādegb.

We do not know at what date the people here had their first contact with Islam, nor even if it was not till the Hīdlah invasion that Islam became securely established here. The Berber tribes of the Sātis and Sebū made the most of the fertility of their country. A tradition records that a fire destroyed the gardens there in 917. It was at this period that the country was covered, from Tāzā to Meknes, by the migration of a Zanita tribe, the Mīnkāša, a section of whom, who received the name of Mīnkāša al-Zatān to distinguish them from the Mīnkāša Tāzā, who lived farther to the east, established themselves securely in the plain. The Idrisids met with a vigorous resistance from the Mīnkāša. They always found in them opponents whom they could not overcome in spite of several campaigns, and who were the medium of Umayyad intervention.

The Kirfi records that a governor of the district, al-Mahdī b. Yūsuf al-Kazānī, having joined Yūsuf b. Tāshfin, was assassinated by the tribesmen, but the terrified citizens hastened to disown the murder. At this date a few villages stood on the site of Meknes. One cannot say at what date, perhaps in the tenth century, they were grouped together to form the Tuzaḍa as mentioned by Idrīsī (Ṭagrāt, according to the Khāb al-Idrīṣī). The population seems to have been more numerous in the Anosara period than later, and prosperous. Enclosed by a wall, Meknes looked like a pleasure resort, with its gardens, cultivated fields, its mosques, its baths and water channels. It had become the capital of the district of Meknes and was the residence of the governors of the country.

The Mīnkāša vigorously opposed the Almohad onslaught. When passing through this region in 1120—21, Ibn Tūmār preached here but he was not well received. Twenty years later, 'Abd al-Maʿmūn laid siege to Meknes but it was not he who took it. He left it to enter Fas, leaving the conduct of siege in the hands of Yahyā b. Ẓaghūr. The Kirfi says the siege lasted seven years. The town fell in 1150. It was plundered, the defences dismantled, a part of its wealth confiscated and all its garrison put to death, except the governor Yaddīr b. Uqlūq, who is said to have gone over to the Almohads before the surrender in order to save his head. On the site, or beside the ruins, Meknes rapidly rose again under the shelter of the fortifications built by the Almohads. At the end of the century, it had regained some importance and the mosque of al-Najīḍīrīn was finished. This is the oldest monument in Meknes: in 1756—1757 Muhammad b. 'Abd Allāh had it restored and built the present minaret. The Almohads brought water hither from Tādžennā, five miles away. In 1182 the khāba was said in five different places in Meknes and there were six gates in the wall which surrounded the town.

In the course of the following century, the intrigues of the Banū Ṣaḥḥār (q.v.) disturbed the country, where the fighting that accompanied the fall of the Almohads was particularly lively. In 1231—1232, al-Maʿmūn had to intervene against the Banū Ṭāzā and Meklāta, who were ravaging Meknes. In 1236—1237, as a result of the Marinid success in the battle in which al-Saʿīd's son was slain, Abū Bakr entered the town. This occupation was only temporary but the Almohad restoration was not secure. In 1245—1246, the governor left there by al-Saʿīd was slain in a rising in the town in favour of Abū Zakariya the Ḥafsid. Al-Saʿīd again returned victorious, causing Yahya b. 'Abd al-Haṣān to fly to Tāzā. The Marinid had only two years to wait; after the death of the Almo- had governor, he returned to Meknes to occupy it definitely.

The first period of greatness for Meknes dates from the Marinids. They set out to make it beautiful
like Rabat and Fas. Abū Yusuf moved from Fas to Djedid to Meknes, which owed to him a kāša and a mosque (1276). Abū l-Hasan improved its water-supply, built bridges on the road to Fas and began the Madrasa Djidida which Abū l-Insān was to finish. It bears the latter's name and is still the most notable building in Meknes, in spite of the indiscreet restorations carried out in 1917-1922. Other madrasas, Aṭṭārīn and Fisīhā, were built by the Marinids.

During this period the political organisation of the country was developing in quite a different direction. The Idrīsīd shorfa, having assisted the Marinids to gain power, prepared to take advantage of the organisation which the latter had given them. Thus the foundations were laid for the movement which was to end in the partition of Morocco in the last years of the 13th century into practically independent divisions. The shorfa were numerous in Meknes. When the weakening of the Marinids and the decline of their prestige made it possible, they supplied leaders. History has preserved the name of Mawān Zayyān. The Waṭṭasids only once intervened, it appears, when at the beginning of the 13th century Masā'id b. Aḥmad al-Nāṣir, having rebelled against Muhammad al-Burtugallī, found an asylum at Meknes. The Sultan besieged the town, took it, then instated his brother al-Nāṣir al-Kiddīlī there, who however did not prove faithful to him. The few years of independence enjoyed by Meknes were not particularly glorious. They mark, however, an epoch in the history of the town destined at other periods to be only the prey of anarchy or the plaything of a tyrant.

The rise of the brotherhoods of the 14th century found a favourable soil among the Mīknāsī. The Sā'īd ibn Zayyān was established there, as in several places in Morocco. A few years later, Muḥammad b. Isā was teaching there. Meknes was thus well prepared to welcome the Sa'diyya. When Muḥammad al-Sha'iḥī approached in 1548 he entered the town without much trouble. The Marinids al-Nāṣir al-Kāšī was said to have agreed to hand over the town in return for the liberty of his father Aḥmad Bu Zakariyya, and the marabouts to have demanded the conclusion of such an agreement. Muḥammad al-Sha'iḥī however took a sufficiently sure method to establish his authority; when the Khatīb Abū ʻl-Ḥasan ʻAlī b. Ḥaẓīz began to preach against him, he had him sentenced to death. When he returned two years later, he was welcomed with gifts. The estimates of travellers of this time put the population of the town at 6,000 hearths. It was the only town in the region. The Sā'īdīs took little interest in Meknes which never attracted their attention. The country was well in hand and the Berber tribes peaceful to such a degree that the road from Marrākkush by the Taŷla was regularly used. It was the practice to make Meknes the residence of one of the sons of the Sultan. There was however no important command attached to it. Leo Africanus credits it with a revenue equal to half that of the viceroyalty of Fas, which is astonishing. Under Aḥmad al-Mansūr, Abū ʻl-Ḥasan ʻAlī lived there and then after the second partition, Zadīn and, lastly Mawlawī al-Sha'iḥī, but as a prisoner in the last years of his father's life.

The civil war which broke out on the death of al-Manṣūr placed Meknes at the mercy of the Berber risings and marabout intrigues. Mawlawī Abū Allāh b. al-Sha'iḥī lived by brigandage and often found a refuge in al-Kaṣr al-Kabīr. In 1619, his brother Muḥammad defeated him near Meknes. After that Aḥmad also mentions for the next year the rising of an individual who called himself the Sharīf Aḥmād. In the midst of this disorder an authority gradually made itself felt, that of the Sā'īdīs, and especially the Sā'īdī ibn Dīlā. In 1640-1641, Muḥammad al-Hāḍidī was even able to seize the sovereign power and get himself recognised by Fas and Meknes after his victory over Mawlawī Muḥammad al-Sha'iḥī b. Zadīn. He gained over the Berber tribes, and Mawlawī al-Rashīdī in 1666 found the Bāb Mīr against him, allied with the Dīlā. Abū Aḥmad Allāh, and he had to fight them again in 1668.

Mawlawī al-Rashīdī seems to have been interested in Meknes, the Kāša of which he restored. In burning him in the mausoleum of al-Majdallī, Mawlawī Ismā'il said he was fulfilling the last wishes of the deceased. But the most important event was that al-Rashīdī sent Mawlawī Ismā'il to Meknes. The latter lived before his accession in the Almohad ka-ba, as a landed proprietor managing his estates.

In his choice of a capital, we see the attraction of a rich district like this. He wished to have in his own image and realisation of his desire. For fifty years Meknes was simply the framework for his splendid, the scene of his extravagances.

He at once decided to build himself a palace and at once a grandiose scheme was projected. He began by clearing a space. The houses adjoining the Almohad wall east of the town were destroyed and their owners forced to carry the debris off to a site which has retained the name of Hedām, then to rebuild on a site which the sharīf enclosed by a wall to the N.W. of the mādina. The site which he chose for himself was also separate from the town. His palace was built, and one even more splendid for his women. This first edifice, Dār Khiṣa, was finished in 1679. It was a series, without intelligible plan, of three or four apartments, embellished with fountains, paved with marble, surrounded by galleries which were supported by columns of marble; the apartments opened on to three galleries. The sovereign's palace was in two suites, that of his ladies in four and larger than his. His four wives and his favourites were equally splendidly housed. The other environs of whom he had 500 of all nations, were housed in rooms along the passage. At the end was a common hall, on a higher level, which gave a view over the gardens through iron grilles. The reception pavillons were planned on the same scale; one of them had forty rooms. The palace contained in all 45 pavilions and twenty kubbīs. The whole was surrounded by a crenelated wall pierced by twenty gates. It was triple in the N.E. with a road round it and it could be defended equally well against the interior of the kābra. The bastions supported batteries of guns and mortars. The women being subject to rigorous confinement and Mawlawī Ismā'il being very meticulous in the performance of the duties of religion, a mosque was set aside for them. Another had been begun in 1672, communicating with the town by the Bāb ʻIsā. Lastly the palace with its dependencies contained four mosques; two are still in use, the Dīlā al-Aḥkār and in the quarter of the mews, very broken down, the Dīlā al-Rwāā. To the south was a garden, the area of which is equal to that of the present mādina, an
orchard in which olive trees predominated. Further on were the stables to which the Sultan admitted only picked horses, to the number of 1,200: two parallel rows of arcades about 100 feet apart. In the centre ran running water. Each animal had its stall and a shelter for its equipment. Opposite was a storeroom, the kör or, which supported a supplementary palace with twenty pavilions. Between the palace and the stables was the granary, forty feet high and big enough it was said, to contain the whole harvest of Morocco. At the side was a pool for irrigation purposes and also subterranean reservoirs of water in case of a siege.

The buildings did not stop here. To the south-west of the town lay a city of pleasure, Mamlàt al-Rìyāq, where the officials had palaces, where Mamlàt Ismà'il himself had his mosque, his hammam, his fondos, and the offices of the uma of the Treasury, with the shops of the Shīrāzi tailors. In 1732–1733 Mamlàt 'Abd Allāh, on returning from an unsuccessful expedition into the Sāh, had the Mamlàt al-Rìyāq destroyed by Christian slaves. There is nothing left of it to-day except the 'Aib al-Shāh, dated 1667, one of the finest and best preserved gates in the city.

Lastly a site was reserved for the troops. To the west of Meknes a large garden was settled with kush and their families. To the east of the Dār al-Makhen, free kush for the 13,000 men of the gish were gradually incorporated in the great kush.

After fifty years of unorganized but superhuman effort, the buildings were not yet completed. It was in 1732–1733 that Mamlàt 'Abd Allāh finished the surrounding wall and the Bab Mānsūr, the most finished example of the Ismā'īlī gateway, proportions of proportions by no means perfect but imposing, of which the Bab al-Baṣr in the city and Bab al-Nār are the two other finest examples at Meknes at the present day. This name of a renegade, Mānsūr 'Abd Allāh, is no doubt that of a keeper of the gate. Mamlàt Ismà'il directed all the operations himself. During the first twenty-four years of his reign he never spent twelve months on end at Meknes. But he returned there after each expedition; in proportion as his ambition and his power increased, his despotism and the needs of his government, his army and his family grew; his scheme became more and more grandiose: the work done was unsatisfactory, modifications were made, buildings taken down and the work begun all over again. The result certainly was symptomatic and imposing but also odd and varied.

All the country helped in the work. Mamlàt Ismà'il collected materials wherever he could. Voutelles, Chella, Marrakech were plundered. If he destroyed the Bab, it was perhaps out of jealousy of Syrián work, or perhaps simply to get materials. Like Ahmad al-Mansùr, he procured marble from Fustat. One day when a caravan ship had stranded near Tangier he ordered the Khumpà to bring the stone from it by means of manual labour. Where he died the columns of marble which were still on their way were left at the roadside.

Labour was recruited by similar means. The Sultan impounded days of labour on the tribes, levied forced labour as he pleased, sent his ministers to the workshops, but relied mainly on renegades and Christian slaves who were his permanent workmen. From 1689 the work was pushed on frenziedly. All the Christians in Morocco were collected there. The Trinitarians of Fas joined them. The slaves were at first housed in sheds near the building-yards, then they were moved to the Dār al-Makhen, then to near the stables, under the arches of a bridge, where their lot was particularly miserable, finally to the interior of a ruined bordj, east of the town along the north wall of the Dār al-Makhen. They were able to organise themselves a little there, to build themselves a church, to have chapels, a convent and infirmaries. A pharmacist monk made up a medicine, the "Christian deconcoction"; this was the means by which humane relations were established with the natives, even with the dwellers in the palace. Their last historian has reduced the number of Christian prisoners in the service of Mamlàt Ismà'il to its real figure: they did not as a rule reach a thousand and the Sultan, in the course of over fifty years, himself killed only one hundred and nine (Koehler).

The emperor revealed in his palaces his extravagance and his cupidity; he accumulated wealth as he did buildings, but only to hide it. The consuls and ambassadours who came to negotiate the ransom of captives he received with a mixture of beneficence and cupidity. Frequent mention is made of the cruelty and the terror which this ruler inspired; he loved to torture his women and cut off heads to show his skill. His amusements were of a similar character; he liked to shoot with his kush at the deer in his menageries then to finish them off with spearthrusts. "Let us avert our eyes from all these horrors which make nature shudder," says Chénier. Following his example his household inspired terror in the town. He had six hundred children, a nursery of slaves, who might have had a happier lot if he had loved them as much as his horses. On the approach of any of them, "every one bid all that he might take a fancy to", and the &l;àdib in their turn, negroes rebel in bright colours, went about bullying, in the name of their master at first and then in their own.

All his work was to collapse at his death, but he was able to keep it up in his lifetime. From the troubles that broke out when he disappeared from the scene, one can judge of the energy of this man of eighty who maintained order among his horde of negroes and in this country destined by God to anarchy. The kush of Zarfīn, the kush of Aũī in the middle of the Central Atlas, defended Meknes on North and South. He was able also to preserve it from other scourges; when an epidemic of plague broke out, the &l;àdib were simply given orders to kill any people who came from Fas. Mamlàt Ismà'il was buried like his brother in the mausoleum of Sa'id 'Abd al-Rahmān al-Majdūlī, a moralist saint of the xvmth century. His son, the rebel Mamlàt Muhammad, killed at Tûrīn in 1706, and Mamlàt Zidan in 1707, had already joined Mamlàt Rashīd. In 1859 the ashes of Mamlàt 'Abd al-Rahmān were also deposited there.

On the death of Mamlàt Ismà'il, the Braghers and the soldiers of the gish stirred up a palace war which lasted twenty years. Mamlàt 'Abd Allāh lost and regained his throne six times. But however great this danger was, the other threat was still more disturbing; having got rid of the garrisons of the Ismā'īlī kushas, the Berbers, armed, came down from the mountains. The problem for the sultans was to choose the lesser evil; they
declined to disband the 'abid and in the struggle which naturally arose between these and the Berbers relied more on the former. The civil war extended to the tribes of the plain and the garrisons of Fès, especially the Cidhār; pretenders stirred up the flames, readily giving the signal to plunder and, in the rivalries of races and tribes, easily finding a party to support them. Gradually the Berbers sank in misfortune. It was in vain that Mawla'i 'Abd Allāh and his sons expended the blood of Mawla'i Iṣāmī for them. The worst of it for Meknès was that every one ceased or began by plundering it.

Muhammad b. 'Abd Allāh almost re-established order and restored to the town its past glory. He did a great deal for it; his palace of Dār al-Balāda, the severe architecture of which, not without charm, can still be seen in a part of the olive-grove of al-Hamriyya; in the Kaṣba, he built the Dājūn al-Anwar and in the suq, the mnemor of the Dājūn; al-Nahījah, the ka'bah of the Prophet in Morocco, the Ummayyad mosque of al-Ŷarūb, al-Bawāṭīkhī: Mālay Berrima and Sidi Ūmmūn. It was he who made the 12,000 books of the library of Mawla'i Iṣāmī available for the benefit of all the mosques of Meknès. As regards the tribes his policy was to break them up. He transplanted many of them and tried several repressive measures. The end of his reign was marked by the success of the Berbers whose attacks had been resumed about 1775.

Soon nothing was to be left of the work of Mawla'i Iṣāmī. The Christian community lost its Franciscan mission in the reign of Mawla'i Yūsuf and did not survive the persecution of this shah. The earthquake of 1755 had destroyed their church, convent and hospice. The renegades, who had gathered together at Kaṣba Āzūrāni, were gradually absorbed.

The Berber crisis was again acute from 1811. Communication with Fès was continually being cut and it was something to boast of for the Meknès of Meknès, in the person of Ūmmūn b. 'Alī, who had undertaken to restore the Kaṣba and rebuild the bridges on the road to Fès and who would have liked to get rid of the Berbers, decided to settle in Fès. His walls were his only defence at Meknès, which was blockaded by the tribes. Mawla'i Abū al-Rahmān, whom Delcroix saw there and who built a ka'bah in Dājūn b. Ḫalīma, left the Berbers in semi-independence and Ūmmūn disbanded the 'abid without even granting those who remained in Meknès the character of Maghreb troops. His son carefully avoided all quarrels.

Mawla'i al-Hašāni revived the tradition of the great 'ajīb and made his authority felt. He was able to enter Meknès after his accession by crushing the power of the tribes. In 1879 he conducted a campaign against the Beni Mšur. In 1887 he forced his way through the country of the Beni Mšur in his campaign against the Xin. On his death the Berbers regained their independence. If they retained their ka'abs it was because the latter cast off their allegiance to the Mekhān. After the fall of Mawla'i Abū al-'Arīf, Meknès recognised all the competitors in succession. It was Meknès that proclaimed Abī al-Ḥafṣī, who had come via the Berbers of Taṛā in 1908, in 1909 it summoned the shāhīr al-Kītānī and in 1911 rallied to Mawla'i Zain. It was in this year that General Mounier entered Meknès and two years later Colonel Henrys took the direction of General Lyuthey pacified the Beni Mšur country.

b. (F. F Ranck-Bretnano)
agents and often gave them valuable financial support. All the towns of Morocco, even the large ones, did not necessarily have a mellah. Thus at Tangier there are certain quarters particularly inhabited by Jews but they are not set aside for them and we also find Muslims there. As to Rabat, its present mellah was established only in 1865 by Sultan Mawlay Sulaiman; formerly the Jews lived together in the al-Bahaira quarter (el-Bajara) where there were also Muslims. When he founded Fas in 805, Idris II compelled the Jewish refugees who flocked into the capital to reside in the northern part of the 'Adwat al-Karawaiin (Aghlan quarter as far as the gate called lâb III-Sulihan); this was undoubtedly the first Moroccan ghetto; and the present Fondak el-Khândi ("the Jew's warehouse") apparently preserves its memory. But at the end of the xii th century the Marinid [11, v.] dynasty, wishing to create a new capital, founded alongside of Old Fas (Fas al-Bâdi) "New Fas" (Fas al-Jâdil) or "White City" (al-Mâlakat al-Ba'diyya). In the first half of the xiv th century, the town of I'imsâ was built close beside Fas and at first occupied by the Ghuzz archers who formed a part of the regular Marinid army; after the suppression of this force in 1320, I'imsâ became the quarters of the Christian mercenaries, whom we find there in 1561. Later, probably at the beginning of the xv th century, and no doubt as the result of massacres, the Jews of Old Fas were ordered to settle in I'imsâ; this town was built on a site known as al-Mellah, the "salt spring", or "salt marsh", and the new ghetto became known by this name. From a proper, this became a common noun, and passed from Fas to the other towns of Morocco as the name for the quarter assigned to the Jews. The etymology proposed by Dozy in his Supplement (al-Mellah < al-naâhalla "quarter") is therefore to be rejected, as are the explanations as "salted, accursed land", or "quarter of the Jews who were forced to salt the heads of decapitated rebels". In Morocco instead of al-mellah, in speaking, the expression elmellahs (class. al-mâatû) is often used by anti-Pharisees, lit. "salted".

The mellah of Fas is therefore the oldest in Morocco in every way. For a long time it was also the most important; in the middle of the xith century, al-Bakri says that Fas has the town with most Jews in the Maghrib, which has given rise to the proverbial saying: Fas balad bi-tâ nás. "Fas, a town where there are no people (worth mentioning)". But the constitution of Marrakush in 1663 resulted in the foundation in southern Morocco of a new Jewish centre which was to attract to it the Jewish and pseudo-Jewish peoples of the Atlas. The term el-mellah however appears for Marrakush only in the second half of the xv th century (cf. E. Fagnan, Extraits inédits relatifs au Maroc, p. 486). At the present day the mellah of Marrakush and the Jewish town of Mogador form the most important Jewish centres of Morocco.

The name el-mellah is peculiar to Morocco; there, however, it is applied not only to the Jewish quarter in a town but also to little mountain villages exclusively inhabited by Jews. At Tlemcen the term dar el-clâsil (class. dar el-sâkîd) is used; at Constantine ejl-châra and in Algiers, Tunis and Tripoli: el-hâra.

On the interior organisation of the present day Moroccan mellah see E. Aubin, Le Marrac d'aujourd'hui:

MELLİLLA (in modern Arabic: Milya, Berber Temilti, "the white", in the Arab geographers: Mellila), a seaport on the east coast of Morocco on a promontory on the peninsula of Gêliya at the end of which is the Cape Tres Forcas or the Three Forks (Triâl Hûrk of the Arab geographers, now Triâl Work). Mellilla probably corresponds to the Russudir of the ancients (cf. Rhyssadir oppidum et portus Pliny, v. 18), Russudir Colonia of the Antoninian itinerary. Leo Africanus says that it had belonged for a time to the Goths and that the Arabs took it from them, but in reality we know nothing of the ancient history of the town.

It is only at the beginning of the xith century that Mellilla appears in the Muslim history of Morocco. In 930, the Umayyad Caliph of Spain, 'Abd al-Rahmân al-Nâşir li-Din Allâh succeeded in detaching from the Fatimids the famous Mîkânas chief Mâsâ b. Abî l-'Afïya, who had established his authority over the basin of the Moluya and the district of Tlaa; having seized Mellilla; al-Nâşir built ramparts around it and gave it to his new ally, who thus had at his command a base of defence (wâqit) against the Fâtûnids of Ifriqiya and a port which made communication with Spain easy. Later on, the descendants of his son, al-Bâri Mâsâ, rebuilt the town, which remained one of the strongholds of the Mîkânas in Morocco down to the time of the decline of the power of the tribe, who were definitely defeated and scattered by the Almoravids Yusuf b. Tâshfîn in 1070.

But the Mîkânas must have abandoned it before their dynasty was crushed by the Almoravids; for al-Bakri shows us that by 1067 a descendant of the Hamadhân Idrisids of Spain had been summoned to Mellilla and recognised as ruler by the people of the district.

At the period when al-Bakri wrote (1068), Mellilla was a town surrounded by a wall of stone; inside was a very strong citadel, a great mosque, a hammâm and markets. The inhabitants belonged to the tribe of the Banû Wattâdi (or B. Wattardâ), a branch of the Şanhâla group of the Bâtîya. Mellilla had a harbour which was accessible only in summer. It was the terminus of a trade route which connected Sidjilmassa with the Mediterranean through the valley of the Moluya and Agarsif (French: Guercif). The trade must have been considerable; the principal exports were no doubt those mentioned by Leo Africanus: iron from the mines of the mountains of the Banû Sa'id and honey from the Kabdâna country; we may also add pearls which were taken from oysters found in the harbour itself. Al-Bakri notes that the inhabitants made money by granting protection to merchants. The environs of the town were occupied by the Banû Wattâdi (who also occupied the stronghold called Kûlû Gâre), the Maţmahâ, the Ahi Kabdân, the Marnasa of the "White Hill" (al-Kudrît el-bôdîya) and the Chassasâ of the massif which ends in Cape Tres Forcas (Triâl Hûrk). All this region was then independent and had no political
link with the kingdom of Fás or that of Nakīr.

But in 1680 the Almoravid sovereign Yüsuf b. Tāshfin took Melilla and added its territory to the Almoravid empire. In 1141-1142, in the course of the Almoravid pursuit of the Almohads, a body of the latter set out from Tamsman to lay siege to Melilla, which was taken and plundered. In 1272, the Marinid Sultan Ya'qūb took Melilla from the Almohads and Ibn Khaldūn simply mentions it as a fortified place. It seems in fact that these three captures of the town had destroyed its commercial importance to the advantage of another town on the west coast of the peninsula of the (Gellās) also called Al-Kudayt al-hājaz, the Alcudia of the Portolans; in the eighteenth century it is this latter town that appears as the Mediterranean port of Fás and Tāzā, and it was through it that political and commercial relations with eastern Spain and Italy (Genoa and Venice) were carried on.

Leo Africanus says that in 1490, hearing that an attack on it was planned by the Spaniards, the inhabitants abandoned the town and fled to the mountains of the Ḥassān; to punish them for this the Wantsūl Sultan had the town burned down; when in Sept. 1497 the Spaniards arrived they were thus able to disembark without resistance and occupied the town, abandoned and destroyed. The occupation of Melilla enabled the Spaniards to attack the port of Ḥassān and it was taken in April 1506. The Moroccans recaptured it in 1533 but the dangerous proximity of Melilla henceforth deprived it of importance. The commercial activity of this region was moved farther west to the port of al-Marlima (Spanish: Alhucemas, Fr. Alhucema), and the central position of Muslim resistance in this part of Morocco was henceforth the stronghold of Tāzā, which after having been the capital of the Marinid sultan of the Banū Wāṭṭas became that of a practically independent leader of a holy war. After passing into the hands of the Spaniards, Melilla was continuously besieged by the Muslims, mainly by the forces of the leaders of holy war established at Tāzā and at Mijāu (the Mezgeo of Leo Africanus). Occupied by the Christians, the town naturally became one of the places in Morocco in which Muslim pretenders and rebels found asylum and support against the central authority, especially at the beginning of the Saʿdīan dynasty. In 1549, it sheltered the dispossessed Waṣṣād Abū Ḥassān, "king" of Bādis; in 1550 it welcomed with his family the Mawlāy Amār, "king" of Debū. It was from Melilla that in 1595, the pretender Naṣir b. al-Qādīh bi'tlāsh set out against his uncle Sultan Ahmad al-Mansūr.

Later Melilla only appears in history in connection with sieges which it had to suffer: sieges by Mawlāy Ismāʿīl in 1637 and 1655; sieges in 1774 by Mawlāy Muhammad b. Abū Allāh; Spanish-Moroccan war of 1893 (Sūd Waryāsh affair). From 1903 to 1908 the region of Melilla was the scene of struggles between the pretender al-Djilāl al-Rūgī, established in the ǧāba of Selwān, and the troops of the Sultan Abū al-ʿAzīz; defeated and receiving no support, the latter had to take refuge in Spanish territory and be repatriated. Still more recently in 1921, the same district witnessed the sanguinary battles between the Spaniards and the Rifians under Abū al-Kārim (Awāl disaster). Melilla is for Spain a "place of sovereignty" like Alhucemas, Peñó de Velez and Ceuta. Before the establishment of the French protectorate, Melilla, constituted a free port, was the landing-place for all the European merchandise (cotton, sugar, tea) intended not only for eastern Morocco but also for the Saharan regions of Morocco and Spain. It has now lost much of its commercial importance.

**Mendrez, the name of two rivers in western Anatolia:**

1. Büyük Mendrez (called by al-'Umari Menderes), by Piri Reis, Mendrez or Menderor), the ancient Maeander, the Mandra of the Crusaders. It rises in the district of Germiyan in a little lake, the Huveiran Golou (Sani) above Diner (according to Abū Bakr b. Bahām in a spring called Buḫār bāgh, a day's journey from Ioma), flows past Homa at some distance off, then through the plain of Ḥalāf and the kaṣās of Ḥalāf and Cāl. In the kaṣā of Carshamba (capital Buldān) it is joined by the Banāz Cā (called Mainār Bahgī Suwā in Abū Bakr b. Bahām whose statement that it flows past Ḫalafī is wrong), which rises in the Murūd Daḡ and flows past Banāz. Farther down its course, in the plain of Denizli, it receives the Čūrük Su, the ancient Lycus Fl. Farther on a ruined bridge called Dormtash Kupūsu marked the frontier between the two old liwa of Germiyan and Aḏīn; according to Abū Bakr a warm spring rising in its foundations had contributed to the destruction of this bridge.

2. In the territory of Aḏīn the Büyük Mendrez flows past at a distance the villages of Ortekol, Nazılı, Sultānmehr, Korkar and Gureštjār Aḏīn, breaks up into several arms in the plain of Balat (Palatia, the ancient Miletos) and feeds a lake full of fish (al-'Umari there, which is now called Bavi Delezi (Lake of Palatia, the ancient λήστης Λυθηος). A little below Balat, it enters the sea.

Al-'Umari who, generally speaking, is inaccurately informed about its course (he puts Delezi and Birgi on it, i.e. brings the Caspian into its basin and makes it flow into the Black Sea) compares the Maeander for its șenti at low level with the Nile, in flood however with a sea. According to him, it is navigable and the people on its banks sail from its mouth on military or commercial enterprises. Western writers also speak of the trade borne on the Maeander in the later middle ages. The main centre of trade on the Maeander and also on the land routes through the valley was Palatia (Balat, the ancient Miletos); in later times, however, the caravan route down the Maeander valley ended in Scalanaova (Kush Adasi).

2. Kecik Mendrez, the ancient Caiustus. The central part of its course runs in a wide plain on the northern edge of which is Birgi, on the southern edge Tire, the old capital of the liwa of Aḏīn. A little below Ayasolough, the ancient Ephesus, it enters the sea.

In the middle ages the centre of trade with the hinterland reached by the Caspian was Altuluogo (from "Αλτουόγος), the ancient Ephesus (Turk. Ayasolough, now called Seljuk); later Scalanaova (Kush Adasi). In the Ottoman period Smyrna attracted all the trade of the Aegean Sea with the Anatolian hinterland. The caravan routes which
MENDEREZ — MENTESHE-OGHULARI

MENTESHE-ELI, a little principality in Anatolia. The boundaries of the territory of the Menteshe-oghul's (q. v.) are given by Madoğ-
djim-bashî (cf. Fr. Babinger, G.Ö.W., p. 234 sq.) on his Sâbehî al-Ahâsî (Stambul 1285) as marked by Mughba, Bâhk, Baz-Cyuk, Mila, Lâoğan, Marin, Çine, Tâvâs, Bornaz, Makri, Gardbi, Foca and Mermere. They thus correspond approximately to those of the ancient Caria. The origin of the name is uncertain, but it can confidently be asserted that the opinion, presumably first put forward by F. Menticus (Lexicon, i.e. 737) and still quite recently upheld, that the district takes its name from the Myndus (Μυνδώς in Strabo) of the ancients is not worthy of credence. Several of the places above mentioned play a not unimportant part as centres of scholarship and literature in the earlier period of Ottoman intellectual life. Thus in the time of the Menteshe-oghul Mehmed (1775-1777) a certain Mahîmdî b. Mohammed of Bağdûn composed a Fâl<sq>ûlû which was published by J. v. Hammer-Purgstall under the title "Falkenschwe" (Pes 1849) from the Milan MS. and rightly described as one of the earlier documents of the Ottoman language. In many of these places there were academies where an active intellectual life flourished, so that the share of the district of Menteshe in Ottoman literature is strikingly large.

(Fe. Babinger)

MENTESHE-OGHULARI, a petty dinsyasty in Anatolia. The princes of Menteshe first appear in history after the break up of the Seljûk empire. The founder of the family is said to have been a certain Menteshe b. Bâbhân al-Îibîn Kûnû. He had his main seat Mila (Milyas) in the ancient Caria, and not far from it his stronghold Pusûn (Petaona). His descendants also lived in Mila until they moved their court to Miletus. The son of Menteshe was Urkhan Beg, who is known from an inscription on a building in Mila and from Ibn Bâbhân who visited him in 1334 in Mila (cf. Ibn Bâbhân, Fugades, ed. Defrémery, Paris 1854, p. 278 sq.)Urkhan's successor was his son Ilbrîm, who built a mosque in Mughla in 733 (1344) and left two sons, Ahmed Ghâzi and Mehmed. The second succeeded him in 755 (1351), but succumbed in the struggle for the throne to his brother Ahmed, who took Eskî Heşrî in 755 (1351). In 1375 founded an academy at Bâdijî and at the end of Dönümâ II, 328 (Oct. 1378) completed the Liû Laţiî in Mila. Ahmed Ghâzi died in Sâhîn 793 (July 1391) and was succeeded by his nephew Ilhas. The Ottomans had in his reign already taken possession of several principalities in the neighbourhood of Menteshe-oghul, such as that of the Germûtan-oghul (q. v.) and of the Hamûdî-oghul (q. v.) and now seriously threatened the existence of the Menteshe. Immediately after the accession of Ilhas Beg, Hayazî I., who had just become Sultan, deprived the lords of Menteshe of the last vestiges of independence. They sought refuge with the ruler of Sûndî, Bağdûn Kûnû, and later with the conqueror of the Ottomans, Timûr-Lenk. Ilhas Beg, who built a mosque in Miletus, regained possession of Menteshe-oghul in 1402. On 21 July 1403, he concluded a treaty with the Count of Crete, Marco Falieri (publ. by M. Iatthe at the end of his essay, Comptes d'Ephèse et de Milet mouen ât; in the Bibl. de l'École d. d. Carits, Ser. v. Vol. vi. Paris 1864, p. 226 sq.) and with
the admiral Ser Pietro Civano on 17th Oct. 1414 (cf. Diplomatarium Veneto-Levantinum, ii. 305, 293 and W. Heyd, Histoire du commerce du Levant, ii. 553 sq.). The reign of Ilyas Beg, filled with fighting and activities of all kinds, ended in 824 (1421) when his lands passed to the Ottomans. Mehmed I had struck coins as early as 818 (1415) on which he calls himself lord of Menteshe. Among the children of Ilyas Beg, mention is made of Laith Beg, but the shadowy part he played is quite uncertain. The year 829 (1426) saw the end of the princes of Menteshe. A certain Bahban was appointed as Ottoman governor of Menteshe-eli and henceforward the district forms a part of the Ottoman empire. The chronology of the dynasts of Menteshe is still uncertain and essential points have still to be cleared up, which will require a systematic study of the many monuments in Menteshe-eli with their important inscriptions, especially in Milas, Milatos, Bardjam, Mugla, etc.

The following genealogical table shows the relationship of the various princes and is based on coins and inscriptions.

MERDAWIDI. See MAHDAWI.

MERIDA, At. Merida, from the Latin Emerita, a town in the southwest of Spain, in the modern province of Badajoz, where it is the capital of a partido, on the right bank of the Guadiana. Now somewhat decayed, it has only 11,150 inhabitants. It is on the Madrid-Badajoz railway and is also connected by rail with Cáceres in the north and Seville in the south.

The ancient capital of Lusitania, Augusta Emerita, was founded in 23 B.C. and under the Roman empire attained remarkable importance and the splendour. Numerous remains of Roman buildings still testify to the position it held in the Iberian peninsula in those days: a bridge of 64 arches, a circus, a theatre, and the famous aqueduct of Malagon, of which there are still standing ten arches of brick and granite. Merida under the Visigoths became the metropolis of Lusitania and according to Rodrigo of Toledo was fortified and strongly defended, which explains why the Muslim conquerors led by Mūsā b. Nūsair [q.v.] had some difficulty in taking it. The Arab leader on landing in Spain in Ramāḍān 93 (June 713) first took Medina-Sidonia and Cármona, then Seville. He next had siege to Merida, before which he stayed for several months; but the inhabitants in the end capitulated and the town surrendered on 1st Shawwal 94 (June 30, 713). From Merida, Mūsā b. Nūsair continued his advance to Toledo. Under the Arab governors, Merida seems to have soon become a really strong fort for a large number of rebels of Arab and Spanish origin. It was there that al-Fāhrī endeavoured to organise a movement against that organised for his own benefit by 'Abd al-Raḥmān al-Raqqī in 141 (758). At a later date, a Berber named Aṭhayb b. 'Abd Allāh b. Wāṣā was rebelled there against al-Hakam I in 190 (805) and the emir of Cordova had for the next seven years to undertake summer campaigns against him before bringing him to reason. Another rebellion broke out in Merida in 213 (828) and the town had to be besieged in 217 and again in 254 (868). In the reign of Emir 'Abd al-Raḥmān III al-Nāṣir when it submitted in 316 (928) to the ḫālid Ahmad b. Alyās.

From the 10th century, Merida began to decline in favour of Badajoz, especially when the latter town became the capital of the independent little kingdom of the Afisids [q.v.]. It remained in the hands of the Muslims till the beginning of the 12th century. In 1228 it was taken by Alfonso IX of Leon but never recovered its former importance.

The Arab geographers who mention Merida, describe its Roman ruins in detail; they also mention the Muslim citadel, the foundation inscription of which has been preserved. It was built in 220 (835) by the governor 'Abd Allāh b. Kulaib b. Thālabīa by order of the Umayyad Emir 'Abd al-Raḥmān II.

Bibliography: The Arabic historians of

MERINIDS (Bañû Mârîn, a Berber dynasty, which ruled over the extreme Magrib (Morocco) from the middle of the xith to the middle of the xive century.

The first references we have to the Bañû Marin show them living a nomadic life in the Sahara between Figûig [q. v.] and Tâfîlît [q. v.]. Like the other groups who claimed to be Zenîts, they must have been driven to the west by the nomad Arab Bañû Hilal in the second half of the xivth century. Like their brethren, the Bañû ‘Abî al-Wâl, whose lands joined theirs, they had attempted in 1115 to revind the conquest of the Central Magrib by the Almohads and had been defeated. While the Bañû ‘Abî al-Wâd entered the service of the conquerors, the Bañû Marin took refuge in the desert. The weakening of the Almohad empire gave them a chance to take their revenge. In the course of their periodic movements in the valley of the Muluya, they learned of the weakness of the defences of the extreme Magrib, the best forces of which were engaged in Spain, and the Bañû Marin therefore made a formidable razzia northwards in 613 (1216). This was the first step in a series of foreign expeditions, which was pursued by step for 53 years. It was continued the next year by the crushing of the Bañû Rîyâh Arabs, who lived in the plains of the west, and by a first fiscal exploitation of the country. The Almohads, paralysed by dynastic feuds, made no serious thrust in return until 27 years later, when the Bañû Marin were defeated by the troops of the caliph al-Sâdî (642 = 1244). After a forced check, the conquest was resumed with more method by the amir ‘Abî Yahyâ b ‘Abî al-Hâfî. He endeavoured to increase his military forces by granting lands to groups of his kinsmen and taking into his service foreign mercenaries, and so made every effort to capture towns. To achieve this end and to gain a moral support which he lacked, the amir claimed to be the mandator of the Hâfîsids [q. v.], the Almohads of Ifrîkiya. He further declared himself the protector of the holy men, who were venerated by the people. It was thus that he took possession of Meknès, Fas, Tárîz, Rabat and Sûla. Finally the help he gave the Almohad pretender ‘Abî Dâbîbî enabled the amir ‘Abî Yûsuf Yağhûb, Abu Yahyà’s successor, to annex Marrakesh, which marked the completion of the Marinid conquest (669 = 1269).

Inheriting this area of the western Muslim world, which had been the very heart of the great Almohad empire, the Merinids also inherited the traditions of those they had dispossessed and their dreams of hegemony in Spain and Barbary.

As in the time of the Almoravids and Almohads, Spain was for the Merinids the land of martyrs for the faith. Not only did the dynasty send there its troublesome sons, princes whose presence in the Magrib might be inconvenient and who formed the corps of volunteers of the faith, but several sultans fought there in person: ‘Abî Yûsuf, whose secession of the holy war was his one great scheme, his successor Abu Yağhûb, and Abu ‘l-Hîsân, who saw the failure of these overseas expeditions.

In crossing the Strait, Abu Yûsuf fulfilled his deepest vow but he was also answering the reiterated appeals of the Bañû ‘Al-Âmar of Granada, who were tired of enduring the exactions and insults of the King of Castille. He was received there as a saviour and at once undertook a plundering expedition. Don Nuño de Lara, endeavouring to capture the loot taken from the Christians, sustained a heavy defeat near Ceija and was himself slain (674 = 1275). Very few other pitched battles are mentioned in these wars of the Merinids in Spain, but almost daily razzias into Christian territory. The Muslims destroyed or carried off the crops and stocks and they took prisoners who were sold as slaves in the Magrib. The relations between the Sultans of Fâs and of Granada, by no means warm at the time of the landing in Spain, became decidedly hostile when Abu Yûsuf claimed the ownership of the town of Almeria as a base for his future operations in the Peninsula. Ibn al-Âmar appealed to the King of Castille for help against the encroachments of his rescuer. An alliance was formed between Christians and Muslims of Spain which Yaghmorsân, sultan of Tlemên, soon joined. The latter undertook to prevent or impede any further crossings of the Moroccan ruler into Andalusia.

The entente with the Christians did not however prevent the latter from continuing the task of the Reconquista in 709 (1309) they took Gibraltar and which was repeated again to the Magribi Sultan, Abu ‘l-Hîsân sent his son ‘Abî al-Malik who recaptured Gibraltar (733 = 1333). ‘Abî al-Malik having been killed, Abu ‘l-Hîsân sent a large army on ships supplied by the ports of Ifrîkiya and himself landed near Tarifa. This town was in the hands of the Christians. He tried to take it but was routed by the combined forces of Alfonso XI of Castille and Alfonso IV of Portugal. This disaster of 1340 and the taking of Algeciras by the King of Castille finally discouraged the Merinid sultan. Neither he nor his successors again made attempts in Spain.

If conducting their wars from reviving against Christianity the glories of the wars of the Almohads, they were able to devote themselves to regaining the great African empire of their predecessors and they succeeded in doing so for a comparatively short time. That empire, as is well known, covered in addition to the kingdom of the Merinids, that of the ‘Abî al-Wâdîds of Tlemên and that of the Hâfisids of Tunis [q. v.]. The kingdom of Tlemên was that most directly threatened by the ambitions of the sultans of Fâs. Causes of quarrel were numerous between these neighbouring and related dynasties. To old rivals, dating from the days when the two clans were nomads, had been added the competition of two adjoining states each seeking to extend their frontiers.
The Ḥab al-Wādīds very soon lost hope of annexing territory in the west. If, as we have seen, they were a thorn in the side of the Merīnīds who desired to cross into Spain, this policy was of brief duration. Very soon they had to confine themselves strictly to the defensive. On many occasions, the kingdom of Tlemcen was invaded and the Tlemcenians shut up within their walls. For example for eight years and three months, from 698 (1299), they were blockaded, during which period the Merīnīds established a permanent camp which became the town of al-Manṣūra [q.v.]. In addition to numerous other works of circumvallation, Tlemcen however did not fall till later. In 737 (1337) Abu l-Ḥasan took it; he and his son Abū Ḥanīfa were to hold it for 22 years. For these two princes, whose reigns mark the apogee of the dynasty, Tlemcen was only a first stage towards Ifrīkīya. The dream of recreating the empire of the Almoravids was to be realised by annexing the Ḥaṣid kingdom.

Constant relations, in which each hoped to gain some advantage, united the two states of east and west, Banū Ḥaḍa al-Mansūr and Banū Marīn. To a contemporary observer like the Egyptian al-Umārī, the Banū Marīn alone counted as a military power, but the Banū Ḥaḍa, descendants of the Almoravids, had a prestige which the Banū Marīn could not claim in spite of the title of Amīr al-Mamlūkīn which Abū Ḥanīfa arrogantly assumed. This explains why, from the very first, the Banū Marīn in annexing the towns of the Maghrib declared themselves mandatories of the sovereigns of Tunis and why they married Ḥaṣid princesses. On their side, the Banū Ḥaḍa did not think it wise to refuse their daughters; they dealt tactfully with the Moroccan šūgūn, who might be useful in protecting them against the šūgūn of Tlemcen.

In a word, they hoped to see the Merīnīds attack central Maghrib but not to become complete masters of it, which would directly expose Ifrīkīya to the attacks of the conquerors.

This is what actually happened in 1347. Taking advantage of the usurpation of the throne of Tunis and of the troubles which followed it, Abu l-Ḥasan invaded Ifrīkīya and sought to impose his authority there as in his own kingdom. The situation here however was very different from what he was familiar with in the Maghrib. In Ifrīkīya, the Arabs were still very strong. Abu l-Ḥasan came to grief against the Arab tribes united against a foreign master and near Kairawan they inflicted a disastrous defeat on him in Muḥarram 749 (April 1348). This disaster even endangered the position of the Merīnīds in the Maghrib itself. An attempt by Abū Ḥanīfa, son of Abu l-Ḥasan, to reconquer Ifrīkīya proved fruitless.

In spite of the collapse of Marīnīd aims, the period of these two last šūgūn was nevertheless one of the greatest in the history of Muslim Barbary, one of those which has left us most memorials of its magnificence.

The Merīnīds were vigorous builders. In 1276, Abū Yūsuf had founded New Fās, west of the old town, to make it his official capital; but it was during the first half of the 14th century that the greatest building activity was displayed. The majority of those that have come down to us date from this period. Works of considerable artistic value, they are at the same time evidence of the military activity and religious ardour of the Banū Marīn, like the ramparts and the mosque of al-Manṣūra, the walls and necropolis of Chella, the madrasas of Fās and Sale, the different buildings erected near Tlemcen around the tomb of the great ascetic Sidi Bū Madyan. Piety in the form of mysticism was the dominating note in the intellectual life of the Maghrib. We must however not forget that the court of Fās was frequented by men like Abū al-Rāhīm b. Khaldūn, Ibn al-Khābib and Ibn Bāṭtūta, who have left a name in the field of literature and profane learning.

The failure of the attempts upon Ifrīkīya and the disaster at Kairawān may be taken as the beginning of the decline of the Merīnīds. As a result of these military failures, the troops stationed in some parts of the Maghrib had to be withdrawn. The passes of the Atlas being no longer guarded, the Arabs of Sūs and Ṭafilāt, excited by the rumours from Ifrīkīya, began to display their turbulent spirit. The tribes who paid taxes now paid only at longer and longer intervals under the threat of expeditionary forces sent against them. There was still a graver cause of decline: the power of the viziers vastly increased. An aristocracy of high officials related to the royal family handed down offices from father to son, backed by powerful clans, and ended by acquiring the power to nominate the new sovereigns. To keep them in tutelage, there was to choose for the throne a minor or a weakling.

When the Sultan displayed some desire to rule in person, they did not hesitate to dethrone or assassinate him. Thus in 1362 (1561) Abū Sālim was decapitated by a soldier of the Christian militia; his successor Tāshfīn, an idiot, was deposed and replaced by Abū Zayyān, who was found strangled and drowned in a reservoir.

In the midst of these palace revolutions the unity of the kingdom was destroyed. We find the prince who governs Sījlīmāsīs fighting with the sultan reigning at Fās. The vizier who has control of the legitimate sovereign has pretenders against him, who end by dividing up the country among them. Marrakesh fights against Fās. At one time, the traditional enemies of the dynasty, the 'Abd al-Wādīds of Tlemcen, endeavour to profit by the occasion to resume the aggressive policy of Yaghmurān. But Tlemcen was itself too weakened to attain success. Besides, it was attacked in the rear by the Arabs of the Central Maghrib, instigated from Fās. One of the shockgs of the Sūward Arabs is called the ‘friend and patron of the Merīnīd dynasty’. The Banū Marīn had another means of neutralizing Tlemcen; this was to support pretenders of the ‘Abd al-Wādī family. To sum it up, in spite of the weakness of the Banū Marīn, the Banū ‘Abd al-Wād, whose lands had for the most part passed into the hands of the Arabs, cut a still sadder figure and could not resist when attacks from the west were resumed. From 1389 all the šūgūn of Tlemcen ruled under the suzerainty of Fās.

But grave events were to turn the attention of the Merīnīds from the affairs of the Central Maghrib. In 1401, King Henry III of Castile landed in Barbary to take vengeance for outrages of the Muslim corsairs and destroyed Tetuan. This attack, which produced considerable commotion in the Maghrib, and the taking of Ceuta by the Portuguese in 818 (1415), provoked a vigorous response by the religious element. The threat from abroad, combined with its weakness in meeting this critical
situation, brought about a series of troubles under which the dynasty succumbed. In 823 (1420) after the assassination of the Sultan Abū Sa'id, the Merinids gave place to the Bani Wāqṣūṣ.

MERKEZ, MUSLIH AL-DIN MEST, an Ottoman Shaikh of an Order and Saint. Merkez Muslih al-Din-Muslih b. Múslih b. Kildj b. Hajdjar belonged to the village of Šar Shī Ṣamālū in the Anatolian district of Adãhībâyâ. He was at first a pupil of the Mollā Ahmad Pasha, son of Khusraw Meg [q.v.], and later of the famous Khâlid Shaikh Sâlim Efeñî, founder of the Sunbūyâa, a branch of the Khabūyâa, head of the village of Kudju Muslih Pasha in Stambul (cf. on him: Brûsi, Mehemmed Takır, ‘Ocmâlî Mûlîddîrî, i. 78 sqq.). When the latter died in 936 (1529), Merkez Efeñî succeeded him in the dignity of Pir. He held the office of head of a monastery for 23 years and died in the odour of sanctity in 950 (1552), aged nearly 90. He was buried in Stambul in the mosque which bears his name (cf. Hadišet al-Diwan, i. 230 sqq.; J. v. Hammer, O. O. K., iv. 95, N°. 495) before the Ayn Kusya. At the tomb of Merkez Efeñî there is much visited holy well, an aynâ, to which one descends by steps. Its reddish water is said to have the miraculous power of healing those sick of a fever (cf. Ewliya Čelebi, i. 372; J. v. Hammer, Constantinopolis, i. 503; do., G. O. K., ix. 95, N°. 495, following the Ḥadišet al-Diwan, loc. cit.). Beside it is the cell (çâwîya) of Merkez Efendi, of which wonderful stories still circulate among the people. He had many pupils, including his son Ahmad, famous as the translator of the Kâmil, his son-in-law Muslih al-Din (cf. Ewliya, i. 372), the poet Ramdân Efendi, called Bihışkî and many others.

MERÇINA, an Anatolian sea-port on the south coast of Asia Minor. Merçina, the port and capital of the former sandjak of the same name (with an area of 1,780 sq. m.) in the vilayet of Adana [q.v.] on the south coast of Anatolia, is 40 miles from Adana, to which a railway runs. The name Merçina comes from the Greek mýrsini (μύρσιν), myrtle, because this tree grows in large numbers in this region. The regularly built town, founded only in 1852, with about 21,171 inhabitants (1927) is only of importance as a port for the export of silk, corn and cotton. The climate is very unhealthy in summer. The old name of Merçina was Zephrinum; in the vicinity (8 miles S.W.) lie the ruins of Soloi or Pompeipolis. The town which is quite modern is of no Muslim historical interest.

**Bibliography:** V. Guignet, La Turquie d’Asie, ii. 50 sq. (FR, BâBINER)

MERTOLA, ATR. Marrûla and Mirtûla, a little town in the south of Portugal on the Guadiana, 35 miles above and north of the mouth of this river, at its junction with the Guadiana. This place, the Murillôs of the Romans, was of some importance in the Muslim period. It was in the district of Beja and according to 'Ali was the best defended stronghold in the whole of the west of the Peninsula. At the end of the ninth century it was the headquarters of an independent chief, 'Abd al-Malik b. Abi l-Djawâd, who was in alliance with the lords of Badajoz and Osonoba and held his own against the Cordovan emir ‘Abd Allah.

MÉRWARA, a British district in Râdiputâna, lying between 25° 24' and 26° 11' N. and 73° 45' and 74° 29' E., has an area of 641 sq. miles and a population (1901) of 100,459. Beyond the fact that between 1138 and 1232 (1725 and 1816), several unsuccessful attempts were made by Râdipûts and Mârâhâs to subdue the country, the history of Mërwâra is a blank up to 1234 (1818), when the British appeared on the scene. The District was at one time an impenetrable jungle, inhabited by outlaws and fugitives from surrounding states. The population known under the name of Meis originally comprised a mixture of castes, Candîla Gujarâs, Bîlî, Râdiûts, Brahmans and Minâs. It is said that Nisâlde, the
MÉRWĀRA — MESHHED

Čauḫān King of Adjmir, subdued the inhabitants and made them draw water in the streets of Adjmir. The country has made much progress under the British rule.

(M. Hidayet Hosain)

MÉRZĪFĪN, also called MĀRŠIWAH, a town in the Anatolian wilāyāt of Siwās [q.v.], and in the lands of Amasia [q.v.] at the beginning of the fertile plain of Süla Owa, with 11,334 inhabitants (in 1922), of whom the Armenians have had to migrate, which produces a good deal of wine and makes some cotton. Mārṣīfīn before the World War was the centre of activity of the Protestant missions in this region and contained the Anatolia College. The town most probably occupies the site of the ancient Phazemon (Φαζεμών) in the district of Phazenomitis; the name is probably a development of Φαζεμών. Ibn Bīfī (cf. Recueil de textes relatifs à l'histoire des Seljoukides, ed. M. Th. Houtsma, iv., Leyden 1902, p. 292–293) also gives the form چاوستن. Little is known of the early history of the town in the Muslim period. It belonged to the kingdom of the Danishmands [q.v.] and when in 1393 Bayzāz I drove the ruler of Siwās, Mir Ahmad, out of the country, the land of “Marṣawīn”, as the Traveller Hans Schiltberger (cf. Hans Schiltbergers Reiserück, ed. V. Langmantei, Tübingen 1885, p. 12) called it, passed to the Ottoman empire. Mārṣīfīn plays a notable part in the history of Ottoman culture at the birth-place and scene of the activities of learned men and authors (cf. A. D. Mordtmann, Anatolien, ed. F. Babinger, Hanover 1925, p. 88). In Mārṣīfīn there used to be a number of dervish monasteries (cf. Ewliya Čelebi, Sīyāhētnāne, ii. 306 infra, where several are mentioned). Of special interest are the mosques, mainly converted from Byzantine churches, including the so-called Eski Džamī, on the walls of which Christian paintings could until recently be seen (cf. V. Cüceit, La Turquie d’Aile, i. 486) and the mosque of Hamd II, both on the market-place. The saint locally revered was Piri Dede Şulţān, said to be a pupil of Hāddīj Bektāşī (Ewliya, op. cit., p. 306). In A. D. Mordtmann’s time (1852) the “whole Turkish population” consisted of shaits, i.e. descendants of the Prophet.

Bibliography: Ewliya Čelebi, Sīyāhētnāne, ii. 306 sqq.; Engl. transl. by J. v. Hammer, ii. 212 sqq.; Le Voyage du Mendiant d’Asie, . . . . . , ed. Ch. Schefer, Paris 1887, p. 68; J. Mörer, Journey through Persia, Armenia and Asia Minor, London 1812, p. 350; Petermann’s Mitteilungen, 1859, Heft 12; C. Bitter, Erdkunde von Kleinasiien, i. 179 sqq.; Wm. Ainsworth, Travels in Asia Minor, London 1842, i. 33; Wm. Hamilton, Researches in Asia Minor, London 1842, i. 329; A. D. Mordtmann, Anatolien, ed. by F. Babinger, Hanover 1925, p. 87 sqq.; Henry J. van Lennep, Travels in little-known parts of Asia Minor, London 1870, i. 82; F. Camont, Sinope Pontica, ii. 140; ii. 162; V. Cüceit, La Turquie d’Aile, i. 758 sqq. — As regards the derivation of the name Mārṣīfīn from Phazemon, it must be pointed out that the ancient name no longer came easily to the mouths of the later Greeks: Stephen of Byzantium (fifth century A. D.) already writes Φαζεμων (var. lect. Φαζεμών, Φαζεμών)). (Fr. Babinger)

MESHHED (al-Maṣḥāb), capital of the Persian province of Khurāsān (q.v., ii., p. 966), the greatest place of pilgrimage for the Shi‘īs in Persia. It lies 3,000 feet above sea level in 59° 35’ E. Long. (Greenw.) and 16° 17’ N. Lat. in the valley from 10 to 25 miles broad of the Keshf-e Rūd, which runs from N. W. to S. E. This river, also called Ab-i Meshhēd (the River of Meshhēd), rises about 14 miles N. W. of the ruins of Tus [q.v.] in the little lake of Cheshme-i Gūās (cf. Fraser, op. cit., p. 350; Khānīkoff, op. cit., p. 110; Yate, op. cit., p. 315) and joins the Heri (Hari)-Rūd (q.v., and cf. Le Strange, op. cit., p. 407 sqq.) about 100 miles S. E. of Meshhēd on the Russo-Persian frontier. Meshhēd lies about 4 miles south of the bank of the Keshf-e Rūd. The hills which run along the valley rise to 8,000 or 9,000 feet at Meshhēd.

In consequence of its high situation and proximity to the mountains, the climate of Meshhēd is in the winter rather severe, in the summer, however, often tropically hot; it is regarded as healthy.

Meshhēd may in a way be regarded as the successor of the older pre-Muhammadan Ṭūs [q.v.], and it has not infrequently been erroneously conflated with it.

The fact that Ṭūs is the name of both a town and a district, together with the fact that two places are always mentioned as the principal towns of this district, has given rise among the later Arab geographers to the erroneous opinion that the capital Ṭūs is a double town consisting of Ṣābānīn and Nīkān; e.g., Yākūt, iii. 560, 1 (correct at iv. 825, 3) and in the Lubāb of Ibn al-ʿAjīb [q.v.], quoted by Abu l-Fida (op. cit., p. 453). Kāzvinī (Aṣḥāb al-Bīlāb, ed. Westenfeld, p. 275, 21) next made the two towns thought to be joined together into two quarters (mashālī). This quite erroneous idea of a double town Ṭūs found its way into European literature generally. Sykes (J. R. A. S., 1910, p. 1115—1116) and following him, Elgood (A History of Persia, London 1918, i. 53 sq.) have rightly challenged this untenable idea. The older Arab geographers quite correctly distinguish between Ṣābānīn and Nīkān as two quite separate towns. Nīkān, according to the express testimony of the Arabic sources, was only 4½ parasang (farsāṅk) or one Arabic mile from the tomb of Ibrāhīm al-Rasīd and ʿAlī al-Rīdā (see below) and must therefore have been very close to the modern Meshhēd. The ruins of Ṣābānīn-Ṭūs and Meshhēd are about 15 miles apart.

As to Nīkān (often wrongly vocalised Nawḵān) it is sometimes called more precisely (e.g., Yākūt, iii. 153, 21) Nīkān Ṭūs, and occasionally (e.g., Ḩāqi, = B. G. A., i. 257, 3; Ḩādī Māḥmūd Mustawfi, op. cit., p. 151, 2—3) included with Sanābād. The distance between these two towns is put at an Arabic mile (Yākūt, iii. 153, 21) or what is practically the same, 1½ parasang (e.g., Ḩāqi, op. cit.; ibn ʿArabī in Abu l-Fida’, op. cit., p. 451). Nīkān must have lain to the east and northeast of the modern Meshhēd and a small part of it is the northeastern quarter of the latter town.

In Nīkān or in the village of Sanābādīh belonging to it two distinguished figures in Muslim history
were buried within one decade: the caliph Ḥaṟūn al-Raḍḥid and the ʿAlī al-Riḍā b. Mūsā.

When Ḥaṟūn al-Raḍḥid was preparing to take the field in Khurṭān, he was stricken mortally ill in a country house at Sanābād on where he had stopped, and died in a few days (193 = 809). The caliph, we are told (Tabari, cf. cit., iii. 737; 15-17), realising he was about to die, had grave dug in the garden of this country mansion and consecrated by Kūfī-ān-readers.

The three available accounts differ at first sight as to the house in which Ḥaṟūn spent his last hours. Two of them are given by Tabari: according to the first (iii. 736, 17-29; 734, 4) it was on the estate of Ḥunaid b. Abd al-Raḥmān that the caliph stopped; the second story (iii. 735; 15-16; 738, 14-15) says that Ḥaṟūn lived in the mansion of Ḥunaid b. Abī Ghannām. A third story in Vāḵūt (iv. 560) says that the tombs of Ḥaṟūn and of ʿAlī al-Riḍā were in one of the gardens of the house of Ḥunaid b. Kājṭābā. Now there is not the slightest doubt that the references to the house (Jūr) of Ḥunaid b. Kājṭābā and to that of Ḥunaid b. Abī Ghannām are to the same place. Ḥunaid b. Kājṭābā must be the same person as Ḥunaid b. Abī Ghannām; they are both described as the man of Taṭī.

As to Tabari’s second story, which substitu- tes a dūr b. Abd al-Raḥmān for a dūr Ḥunaid, it may be observed that Ḥunaid b. Abd al-Raḥmān held the office of governor of Ḥārānās under the Omayyads (caliphate of Iḥām) from 111 to 116 (729-734) (on him cf. above i. 1109 sp.; ii. 375b; Weil, cf. cit., i. 629-631; E. von Zambaur, cf. cit., p. 47). Ḥunaid probably resided as a rule not in Nīḫāpūr or Tūs but in the palace at Sanābād which he had probably built. One of his successors, Ḥunaid, also chose to live here and seems to have enlarged the place. This would explain how our sources call the same house the house of Ḥunaid and of Ḥunaid. Perhaps the estate became the property of the ʿAbbāsid on the death of Ḥunaid.

About a century after the death of Ḥaṟūn, the caliph al-Maʿṣūm died on his way from Māzandarān and spent a few days in this palace. Along with him was his son-in-law ʿAlī al-Riḍā b. Muḥaṣṣel, the caliph designate, the eighth imām of the Twelvers. The latter died suddenly here in 205 (818); the actual day is uncertain (cf. Strothmann, Die Zeitschr. für Geschichte, Leipzig 1926, p. 171). On ʿAlī al-Riḍā and his death cf. above i. 296, 298j; iii. 222v; Weil, cf. cit., p. ii. 225b; Fraser, Narrative of a Journey into Khurasan (London 1825), p. 449-451 (gives the story current in Meshhed of the main’s death); Yate, cf. cit., p. 349-342; Sykes, The Glory of the Shah World, London 1916, p. 235-238; W. Jackson, cf. cit., p. 312.

It was not the tomb of the caliph but that of a highly venerated imām which made Sanābād (Nūḵān) celebrated throughout the Shi’a world, and the great town which grew up in course of time out of the little village actually became called al-Maḥsād (Meshhed) which means “sepulchral chapel” (primarily of a martyr belonging to the family of the Prophet). Cf. on the conception of Mashhad, iii. 523 and v. Berchem in Dizī, Churrasäische Bandemwalter, i. (Berlin 1915), p. 89-90. Ibn Hawkāl (p. 313) calls our sanctuary simply Meşhād, Vāḵūt (iv. 153) more accurately al-Maḥsād al-Riḍāwī = the tomb-chapel of al-Riḍā; we also find the Persian name Mešḥād-i moḵداد = “the sanctified chapel” (e.g. in Ḥaṃd ʿAllāh Muṣṭafwī, p. 157). As a place-name Meshhed first appears in al-Muḵkaddasī (p. 352), i.e. in the last third of the tenth century. About the middle of the sixteenth century the traveller Ibn Baṭṭaṭa (iii. 77) uses the expression “town of Maḥsād al-Riḍā”. Towards the end of the middle ages the name Nūḵān, which is still found on coins in the first half of the sixteenth century under the Ilkhanīs (cf. Codrington, A Manual of Musliman Numismatics, London 1904), p. 189), seems to have been gradually ousted by al-Maḥsād or Meshhed. At the present day Meshhed is often more precisely known as Meshhed-i Riḍā, Meshhed-i moḵkadas, Meshhed-i Tūs (so already in Ibn Baṭṭaṭa, iii. 66). Not infrequently in literature, especially in poetry, we find only Tūs mentioned, i.e. New Tūs in contrast to Old Tūs or the proper town of this name; cf. e.g. Muḥammad Mahdī al-ʿAlawi, Tūrīkh Tūs aw al-Maḥsād al-Riḍāwī, Bagdad 1927, p. 3.

The importance of Sanābād-Meshhed continually increased with the growing fame of its sanctuary and the decline of Tūs. Tūs received its death blow in 791 (1389) from Miṃrāṅghāt, a son of Timūr. When the Mongol noble who governed the place rebelled and attempted to make himself independent, Mirāṅghāt was sent against him by his father. Tūs was stormed after a siege of several months, sacked and left a heap of ruins; 10,000 inhabitants of Yate, p. 316; Sykes, in J.R.A.S., 1910, p. 1118 and Browne, cf. cit., iii., p. 190). Those who escaped the holocaust settled in the shelter of the ’Alid sanctuary. Tūs was henceforth abandoned and Meshhed took its place as the capital of the district.

As to the political history of Meshhed it coincides in its main lines with that of the province of Khurasān [q.v.]. Here we shall only briefly mention a few of the more important events in the past of the town. Like all the larger towns of Persia, Meshhed frequently saw risings and the approach of war within its walls. To protect the mausoleum of ʿAlī al-Riḍā in the reign of the Ghaznavid Maḥdī [q.v.], the then governor of Khurasān erected defences in 1037. In 1121 a wall was built round the whole town which afforded protection from attack for some time. In 1161 however, the Ghuʾz [q.v.] succeeded in taking the place, but they spared the sacred area in their pillaging. We hear of a further visitation by Mongol hordes in 1296 in the time of Sulṭān Ghāzān [q.v.]. Probably the greatest benefactors of the town and especially of its sanctuary were the first Timūrid Shah Rukh (809-850 = 1406-1446; see vol. iv. 265 sp.) and his pious wife Dīwāhr-Shāhī.
With the rise of the national Safavid dynasty [q. v.], a new era of prosperity began for Meshed. The very first Shâh of this family, Ismâ'îl I (907–930 = 1501–1524; q. v.), established Shi'ism as the state religion and, in keeping with this, care for the sacred cities within the Persian frontier, especially Meshed and Kumm, became an important feature in his programme as in those of his successors. Pilgrimage to the holy tombs at these places experienced a considerable revival. In Meshed the royal court displayed a great deal of building activity. In this respect Tâhmasp I, Ismâ'îl I's successor (930–984 = 1524–1576; q. v.), and the great Shâh 'Abbâs I (995–1037 = 1587–1627; q. v.) were especially distinguished.

In the xvith century the town suffered considerably from the repeated raids of the Ozbegs (Uzbek). In 1507 it was taken by the troops of the Shâhâbî Shâh Khan [cf. Shâhâbîzâde]; it was not till 1528 that Shâh Tâhmasp I succeeded in repelling the enemy from the town again. Stronger walls and bastions were then built and another attack by the same Ozbegs was thwarted. But in 1544 the Ozbegs again succeeded in entering the town and plundering and murdering there. The year 1559 was a disastrous one for Meshed. The Shâhâbî Shâh 'Abîl-Mu'min after a four months' siege forced the town to surrender. The streets of the town ran with blood and the thoroughness of the pillaging did not stop at the gates of the sacred area. Shâh 'Abbâs I who lived in Meshed from 1555 till his official ascent of the throne in Kâzvin in 1557 was not able to retake Meshed from the Ozbegs till 1598.

At the beginning of the reign of Tâhmasp II [q. v.] in 1722 the Afghan tribe of Ablâhî [q. v.] invaded Khorasan. Meshed fell before them, but in 1726 the Persians succeeded in retaking it after a two months' siege. Nâdir Shâh [q. v.] (1736–1747) had a mausoleum built for himself in Meshed.

After the death of Nâdir Shâh civil war broke out among the claimants to the throne, in the course of which the unity of the Persian empire was broken. The whole eastern part of the kingdom of Nâdir Shâh, particularly Khorasan (except the district of Râshâb), passed in this period of Persian impotence under the rule of the vigorous Afghan Shâh Ahmad Durrânî. An attempt by Kârim Khan Zand to unite Khorasan to the rest of Persia failed. Ahmad defeated the Persians and took Meshed after an eight months' siege in 1167 (1753); cf. above i. p. 160, 202, 203. Ahmad Shâh and his successor Timûr Shâh left Shâh Rukh in possession of Khorasan as their vassal, making Khorasan a kind of buffer state between them and Persia. As the real rulers however, both these Afghan rulers struck coins in Meshed (cf. above i. p. 202). Otherwise the reign of the blind Shâh Rukh, which with repeated short interruptions lasted for nearly half a century, passed without any events of special note. It was only after the death of Timûr-Shâh (1207 = 1792) that Agha Muhammad Khan, the founder of the Kâjjâr dynasty, succeeded in taking Shâh Rukh's life, putting him to death in 1210 (1795) and thus ending the separation of Khorasan from the rest of Persia (cf. above, i, p. 204). The death soon afterwards of Agha Muhammad (1211 = 1796) enabled Nâdir, who had escaped to Hârât, to return to Meshed and take up the reigns of government again. A siege of his capital by a Kâjjâr army remained without success; but in 1803 Fath 'Ali Shâh was able to take it after a siege of several months when Nâdir's funds were exhausted.

From 1825 Khurâsân suffered greatly from the raids of Turkoman hordes and the continual feuds of the tribal leaders (cf. Conolly, op. cit., i. 288 and Yate, op. cit., p. 53). To restore order the crown prince 'Abbâs Mirza entered Khurâsân with an army and made Meshed his headquarters. He died there in 1849 (1833).

The most important political event of the xixe century for Meshed was the rebellion of Hasan Khan Sâlîr, the prince-governor of Khurâsân, a cousin of the reigning Shâh Muhammad-î 'Abbâs. For two years (1847–1849) he held out against the government troops sent against him. At the time of the accession of Nâsir-al-Dîn (1848) Khurâsân was actually independent. It was only when the people of Meshed, under pressure of famine, rebelled against Sâlîr that Hasan al-Saltana's army succeeded in taking the town.

In 1911 a certain Mr. F. MacGregor, a native of Herât declared himself independent in Meshed under the name of Muhammad-î 'Ali Shâh and for a period disturbed Khurâsân considerably with the help of a body of reactionaries who gathered round him. This gave the Russians a pretext for armed intervention, and on March 29, 1912, they bombardeed Meshed in gross violation of Persia's suzerain rights and many innocent people, citizens and pilgrims, were slain. This bombardment of the national sanctuary of Persia made a most painful impression in the whole Muslim world. Yusuf Khan was later captured by the Persians and put to death (cf. E. G. Browne, The Press and Posts of Modern Persia, Cambridge, 1914, p. 124, 127, 156; Sykes, History of Persia, London 1927, ii. 426–427).

Meshed is now the centre of eastern Persia, the capital of the province of Khurâsân which, since its eastern part was taken by the Afghans in the xvith century, is barely half its former size (cf. Le Strange, op. cit., p. 383 sq.; Yate, xi, 108 sq. and above, ii. 966). In the middle ages it was not Tâs, Meshed's predecessor, but Nâsîshbîr (modern Persean Nishapûr) that was the capital of this extensive and important province. A royal prince has usually been governor since the fall of the Nâdirids. Since 1845 the lucrative and influential post of Mutawalli-Itâslu, the controller or treasurer of the sanctuary of the Imâm, has usually been combined with the governorship (cf. Yate, op. cit., p. 322).

The only plan — not very accurate — of Meshed known to me is that of Colonel Dolmāje (cf. Curzon, op. cit., i. 151, note 2; 160) and was made about 1870. It is published in MacGregor, op. cit., i. 284. The plan of the town is an irregular oblong with its longer axis running from N.W. to S.E. Its circumference is according to the most reliable calculations about 6 miles, the greatest breadth about a mile, and the length not quite two miles measured along the main street Khâbâhân which runs right through the town.

Like most Persian towns Meshed is encircled by a great girdle of walls, which gives it a very picturesque appearance. The lines built to stiffen the defences, namely a small moat with escarpment before the main wall and a broad ditch around outside, are now in ruins and in places have completely disappeared.
MESHHED

The citadel (ark) in the southwest part of the town is directly connected with the system of defence. It is in the form of a rectangle with four great towers at the corners and smaller bastions. The palace begun by 'Abbâs Mîrâb but finished only in his lifetime or by his son, is connected with the fortress proper, now fallen into disrepair (cf. Vate, op. cit., p. 327). It is used as the governor's residence. The whole quarter of government buildings which, according to MacGregor, occupies an area of 1,200 yards, is separated from the town by an open space, the Maidûn-i-Tôp (Cannon Place) which is used for military parades.

There are six gates in the city walls.

The town is divided into six great and ten smaller quarters (naddâla, see Vate, op. cit., p. 328). The six larger bear the names of their gates; see al-Mahdi al-'Alawi, op. cit.

The principal street which divides the whole town into two roughly equal halves, the Khîyâbân, is a creation of Shâh 'Abbâs I who did a great deal for Meshhed (1587-1627; see Vate, op. cit., p. 319; cf. the picture in Skyes, The Glory of the Shîa World, p. 149). The street, 34 feet wide and well-paved, was let out for the benefit of the Imâm al-Rîdâ. In the sixteenth century Fraser (1852, 1853), Conolly (1853), Burns (1853), Ferrier (1845), Eastwick (1862), Vâmbéry (1863), Colonel Dolmane (the sixties) and Massey (1853) visited the sacred area. Only Fraser, Conolly, Dolmane and Massey actually entered the sepulchral chapel itself. Vâmbéry and Massey were dressed as Muslims while the others retained their European dress. Except Dolmane, all these travellers have given more or less full descriptions of the sacred area. The full and accurate description given by Skyes in the J. R. I. S., 1910, p. 1130-1148 and in The Glory of the Shîa World is based on information supplied by the attaché to the British Consulate, Khân Bahâdur Ahmad al-Khân (cf. J. R. A. S., 1910, p. 1113 and The Shîa World, p. 1128 and in Glory of the Shîa World, p. 100. The latter differs in details not incomparably from 'Amîn al-Dawâ's plan; which is right we have not the means of telling.

The history of the sanctuary of 'Ali al-Rîdâ is pretty well known from inscriptions and literary sources (cf. especially the references in Vate, op. cit., p. 317 sqq.; Sykes, J. R. A. S., 1910, p. 1130 sqq.; and Mahdî al-'Alawi, op. 14 sqq.). According to local legend, Alexander the Great built a wall around the site as he foresaw in a dream that it was destined to be the tomb of a saint (cf. Fraser, Narrative, p. 449; Sykes, op. cit., p. 1130). As early as the second half of the tenth century, as Ibn Hawkal tells us (B. G. A., ii. 313), the Alîid sanctuary had a strong wall built around it, within which devout men who wished to lead an ascetic life (tihâf, q.v.) took up their abode. The almost contemporary account of al-Mahdî in Abu 'Abîd, p. 542 is similar. A few decades later, Sultan Mahâmil of Ghâzan (1998-1930) as a result of a dream enlarged the bazaars, dwellings, etc., it forms a town by itself; a wall around it cuts it off completely from the rest of Meshhed. The main entrances from the Khîyâbân are two great doors on north and south, but they are barred by chains so that no vehicle or peddler can enter for the ground of the Bast is holy and may only be trodden on foot. Animals which get in by accident become the property of the administration of the Imâm. The Bast also has the right of asylum (whence the name Bast). Debtors who take refuge in it are safe from their creditors; criminals can only be handed over by order of the Mutawalli-Bashi, which is now usually done after three days. In the whole of the sacred area strict discipline is maintained by its own police; there is a special prison for thieves (see the plan in Yate, p. 332, No. 75; cf. also Conolly, i. 263; Khânlûkî, p. 98; Bassett, op. cit., p. 224; Curzon, i. 153-154; Massey, op. cit., p. 1006; Yate, p. 334).

Entrance to the Bast is strictly forbidden to all non-Muslims. In earlier times the rule does not seem to have been so strict, for Clavijo (see Bibl. 1404 was able to go into the source of the Imâm al-Rîdâ. In the sixteenth century Fraser (1822, 1823), Conolly (1830), Burns (1832), Ferrier (1845), Eastwick (1862), Vâmbéry (1863), Colonel Dolmane (in the sixties) and Massey (1853) visited the sacred area. Only Fraser, Conolly, Dolmane and Massey actually entered the sepulchral chapel itself. Vâmbéry and Massey were dressed as Muslims while the others retained their European dress. Except Dolmane, all these travellers have given more or less full descriptions of the sacred area. The full and accurate description given by Skyes in the J. R. I. S., 1910, p. 1130-1148 and in The Glory of the Shîa World is based on information supplied by the attaché to the British Consulate, Khân Bahâdur Ahmad al-Khân (cf. J. R. A. S., 1910, p. 1113 and The Shîa World, p. 1128 and in Glory of the Shîa World, p. 100. The latter differs in details not incomparably from 'Amîn al-Dawâ's plan; which is right we have not the means of telling.

The history of the sanctuary of 'Ali al-Rîdâ is pretty well known from inscriptions and literary sources (cf. especially the references in Vate, op. cit., p. 317 sqq.; Sykes, J. R. A. S., 1910, p. 1130 sqq.; and Mahdî al-'Alawi, op. 14 sqq.). According to local legend, Alexander the Great built a wall around the site as he foresaw in a dream that it was destined to be the tomb of a saint (cf. Fraser, Narrative, p. 449; Sykes, op. cit., p. 1130). As early as the second half of the tenth century, as Ibn Hawkal tells us (B. G. A., ii. 313), the Alîid sanctuary had a strong wall built around it, within which devout men who wished to lead an ascetic life (tihâf, q.v.) took up their abode. The almost contemporary account of al-Mahdî in Abu 'Abîd, p. 542 is similar. A few decades later, Sultan Mahâmil of Ghâzan (1998-1930) as a result of a dream enlarged the
buildings of the tomb and provided a new wall around them (see Sykes, p. 1130). The sanctuary at a later date seems to have fallen somewhat into decay, for about a century later it was restored by the Saldjik Sultan Sandzir, (cf. Sykes, p. 1132) and the tomb was divided by small local tradition says, for the miraculous cure effected on his sick son there (see Fraser, op. cit., p. 451; Napier, F. R. G. S., xiv. [1876], p. 80 sq.; Sykes, op. cit., p. 1141—1142 and in Glory of the Sia World, p. 238 of it). It is to this event that an inscription of 512 (1118) inside the chamber of the tomb refers (see Sykes, p. 1140—1141 and cf. Mahdi al-Sawabi, p. 18). There is also a second inscription (in Sykes, p. 1142—1143) which records a restoration undertaken in 612 (1215).

The existence of these two inscriptions, the oldest in Meshhed, shows that the Mongols of Tughril Kuhna when they swept over Khorasan in 1220, if they may have plundered the sanctuary, spared the buildings. We hear of another restoration of the buildings in the reign of Sultan Ulujji Khudibanda (1304—1316; cf. Sykes, F. R. G. S., 1910, p. 1132; Mahdi al-Sawabi, p. 18). From the middle of the sixteenth century we have the somewhat fuller description of the sanctuary of 'Ali al-Rida by Ibn Battuta (ii. 77—79). Timur's son Shah Kuhk (1406—1449) and his wife Jwahar Shahid did a great deal for the Haram. The latter built the splendid mosque to the south of the tomb which still bears her name. The Dari al-Siyeda, the fine hall west of the tomb, and the adjoining chamber, the Dari al-Huffa, are also due to this period. Under Timur's grandson Sultan Husain Bahkta (1469—1506) [q. v.], the visier Shir 'Abd erected the southern part of the Sahi-Kuhna, the "old court", with the imposing portico; see the inscription reproduced in Sykes, p. 1132.

With the coming to power of the Safavids a new and brilliant era dawned on Meshhed. The rulers of this dynasty vied with one another in the development and adornment of the sanctuary of 'Ali al-Rida, which they raised to the religious centre of their kingdom. In this re-peat Tahmasb I (1524—1576) erected a minaret covered with gold in the northern part of the Sahi-Kuhna, adorned the dome of the tomb with sheets of gold and put a golden pillar on the top of it. The Ozbegs carried off this rich adornment on their raid in 1589. 'Abbas I the Great did most of all the Safawids (1587—1627) for Meshhed. 'Abbas I (1611—1666) devoted his attention mainly to the further decoration of the Sahi-Kuhna. The inscription published in part by Sykes, p. 1132 (cf. also Khanikoff, p. 103) was written by the master hand of Muhammad Reja 'Abbasii (on him cf. Sarre and Wittich, Ziehungen der Ria Abbasib, Munich 1914, p. 15—16). Sultan I (1666—1694) devoted special attention to the decoration of the dome of the Imam's tomb; see Mahdi al-Sawabi, p. 19 (cf. also Yate, p. 348; Sykes, p. 1137).

Foreign potentates also gave great gifts to the 'Aliid sanctuary in the Safawid period, such as the Emperor Akbar of India who made the pilgrimage to Meshhed in 1615 (cf. Yate, p. 319) and in 1512 the Kuch (Kutch) ruler of the Deccan, was Nadjif Shah (1576—1747) who did most for the town of Meshhed in the eighteenth century. Although very strict Sunni, he devoted a considerable part of the enormous wealth which he had brought back from his Indian campaign to the embellishment of the great Shah's place of pilgrimage. He restored thoroughly the southern half of the Sahi-Kuhna built in the reign of Sultan Husain Bahkta. He decorated the peculiarly richly and covered it with sheets of gold so that it is still called "Nadir's Golden Gate" after him. In 1730, before his accession to the throne, Nadjir erected a minaret covered with gold in the upper part of the Sahi, as a counterpart to that erected by Tahmasb I on the north side of the "old court". Cf. on Nadjir Shah's activities at the sanctuary of al-Rida, Muhammad 'AbdHamid Turabkh Akshib Shakib (Memoirs, ed. Balfour, London 1851, p. 272).

The rulers of the Kajjar dynasty of the sixteenth century, Fath 'Ali (1797—1834), Muhammad Shah (1834—1848) and Nadjir al-Din (1848—1896), faithfully followed in the footsteps of their predecessors, as regards attention to the Imam's sanctuary.

In spit e of the number of times which the 'Aliid sanctuary has been plundered in course of time, it still has countless treasures within its buildings and puts in the shade, as regards this wealth and the extent of its buildings and courts, all the other great Muslim sanctuaries, except perhaps Mecca, but including the much admired Najaf and Kerbela'.

A detailed and accurate description of the Haram and an account of its architectural history based on its present state cannot be given because the strict prohibition of admission to members of other faiths has prevented non-Muslim scholars from examining thoroughly and reproducing the buildings. Relying on descriptions of the sacred area prepared by Europeans and Orientals and on the valuable data contained in inscriptions (the latter were first noted by Khanikoff, p. 103—104; the more important were published by Sykes assisted by Khan Bahador Ahmad Din, in J. R. A. I., 1910, p. 1151 sq.); we can assume with considerable probability that, except the tomb proper, which in its present form (excluding the later dome) according to the inscription (512 = 1118), dates from the beginning of the sixteenth century, only insignificant remains of the earlier mediaval period have survived. The Haram in its present form is in the main a creation of the last 500 years, as is briefly outlined in the above short historical sketch of the sanctuary.

The dome of the tomb with its various annexes rises in the centre of the sacred area and is surrounded on the north and east by two great rectangular courts, the Sahi-Kuhna and the Sahi-Now, while in the south it is flanked by the extensive buildings of the Jwahar Shahid mosque.

The most popular entrance to the Kuch and the one preferred by pilgrims is the gateway in the Bilt Khaydan bazaar by a chain. The road runs for 259 yards through this street flanked with shops and ends at a great gateway through which the Sahi-Kuhna, the "old court" is entered. Its northern part dates from the time of Shah 'Abbas I, while the southern is as old as the second half of the sixteenth century (reign of Sultan Husain Bahkta) but was completely restored by Nadir Shah.

But the great towers with niches-like halls, hence called Minarets admit to the court. The simplest are the west and east towers built by 'Abbas I; the former has the clock-tower, while the platform of the latter is used as a nikah-khan. i.e., "music-
house”, where, according to an old Persian custom, found in other royal cities, sunrise and sunset are greeted with music. From the east gate one reaches the eastern part of the Boust through the Haram of the Pain-Khiyaban. Much more impressive from the architectural point of view are the northern gateway built by 'Abbâs II and especially the southern gateway of the court, “Nâdir's Golden Gate”, Nâdir Shâh’s most splendid achievement and the most imposing building of the whole Haram. At each of the two great gates stands a minaret 100 feet high, the upper part of which is covered with gold; the builder of the northern gate was Tâhmasp I and of the southern Nâdir Shâh. Nâdir built in the centre the famous octagon of “Nâdir’s Well” covered by a gilt baldachin (Sahâ-l-Khâmî Nâdirî = Nâdir’s water-carrier-house”); it was hewn out of a huge block of white marble which the Shâh had brought at great expense from Herât. The walls of the court are pierced by two rows of alcoves, the lower of which is occupied by artists, schools and dwellings of the servants of the mosque, while the higher officials of the Imam occupy the upper storey. The whole courtyard has a length of about 100 yards and a breadth of 70, is paved with dark Meshhed stones (cf. below) which are also to some extent tombstones. For pictures of the Sahñl Kuhna with clock tower and Nâdir’s Well see above, ill. 354, pl. 15; Yate, p. 340, 346; Sykes, Glory of the Shâh World, p. 241; picture of Nâdir’s Golden Gate in Yate, p. 326 and Sykes, p. 245. Nâdir’s golden gateway leads southwards into the area of the holy tomb, the sepulchral chamber with the halls and rooms surrounding it. Strictly speaking, it is only this nucleus of the whole sacred area that should be called Haram or Haram-i Maškâdâr or Haram-ul Mubârâk, terms often extended to the whole Bast. The names al-Rawâya al-Mašâkhâra and Āsînâm = the (holy) threshold, are also used. After passing through the Golden Gate one enters the Dâr al-Siyâda, built by Dzâwâr Shâh, the finest hall in the sacred quarter. Hung on a wall here is a round dome (ahwâl) to be that on which the poisoned grapes were offered to ‘Ali. The pilgrim can see into the sepulchral chamber through a silver grille from the Dâr-al-Sîyâda. Turning to the southeast one enters a smaller, more simply decorated chamber, the Dâr al-Huffâz. Adjoining the Dâr al-Huffâz in the north is the dome of the Mausoleum of the Imam. The interior of the sepulchral chamber (see the picture in Sykes, op. cit., p. 241), an almost square area 30 x 27 feet, is, as there are no proper windows, lit by the dim light from golden lamps and chandeliers and furnished with the greatest splendour. The tomb itself is in the N.E. corner and surrounded by three beautiful grilles, one of which, dated 1747, is said to contain the mausoleum of Nadîr Shâh now destroyed. ‘Abbâs I gave the top of the tomb with its gold covering. In a projection at the foot of the tomb, Fath ‘Alî Shâh placed a false door of gold inlaid with jewels (picture in Sykes, op. cit., p. 255). In niches in the wall behind glass are kept very valuable votive offerings (jewelled arms, etc., mainly gifts of the ruling house). On the wall are the two inscriptions already mentioned of 512 (1118) and 612 (1215) of which the first is the earliest known example of the so-called round hand (thulûth) in Arabic epigraphy (cf. v. Berchem in Dics, Churassan, Banldenmârter, i. 97, note 8). These enable us to place the building of the present chamber in the beginning of the 12th century, while the dome 65 feet high covered with sheets of gilt copper was built only in 1607 by ‘Abbâs I and renovated in 1675 by Sulaimân I, according to inscriptions on its outside. As the thread of tradition regarding the site of the Imam’s grave can hardly have been broken, it may be assumed practically with certainty that the present dome is built on the true site. There is no longer any trace of Harun’s grave; it probably was in the centre of the mausoleum, whence the tomb of the ‘Aliid who died later was put in a corner of the same place. Of the other chambers and isolated buildings belonging to the system of the Haram proper, we shall only mention here the Gumbad (domed tomb) of Allâh Wadî Khân, which lies to the N.E. and takes its name from its builder, a famous general of ‘Abbâs I (cf. Conolly, i. 271; Sykes, The Glory of the Shâh World, p. 266; see also the picture in Dics, Persien: Islam. Baukünst in Churassan, p. 54). Leaving the sacred chamber by the eastern door one reaches, after traversing two adjoining rooms, the “Golden Gate” of Nâşir al-Din, which leads into the New Court (Sahn-i Naw) its northside is bounded by the Pain Khiyaban. Fath ‘Ali Shâh began this court in 1819. His two successors continued the building, which was completed in 1855. If one turns southwards from the Dâr al-Siyâda already mentioned, one soon enters the area of the charming mosque endowed by Sultan Dzawâr Shâh and bearing her name. Like the Sahñl Kuhna this older court, an oblong running N. to S. about 100 yards long and 90 broad, is broken in the middle of each of its four sides by an arched hall (aiwân), while the unbroken parts of the walls have rows of alcoves fitted up as dwellings. The largest and finest of these four aiwâns of the mosque, the Aiwan-i Maškâra in the south (for Maškâra = stall, cf. iii., p. 330), is used for prayers; in it is a wooden pulpit in which the Mahdi will one day show himself to the faithful. The entrance hall is covered by a blue dome which surpasses that on the tomb of the Imam in height and width, and is flanked by two high minarets covered with blue glass tiles. The centre of the court is occupied by the Masjîdi Pir Zun = “Mosque of the Old Woman”, a square unroofed area surrounded by a wooden balustrade around which runs water in a deep stone channel. The Dzawâr Shâh mosque is the noblest and finest building in the sacred area; cf. the opinions of Fraser, Narrative, p. 447; Vâmbéry, Meine Wanderungen etc., p. 322 and Sykes, F.R.A.S., 1910, p. 1145.—Pictures of the mosque in Sykes, The Glory of the Shâh World, p. 265; J.R.A.S., 1916, p. 344 (Aiwâni Maškâra and Pir Zun); Dics, Persien: Islam. Baukünst, p. 45-48. Of the various small sanctuaries which the pilgim visit in the Haram, only two need be mentioned here, the Ziyârât Kadam-i Mubârâk or Sharîf = “place of the pilgrimage of the blessed or excellent foot” also called Dzâh-i Sir-i Cihâr-pâ = “place of the foot-stone” (see the plan in Yate, p. 332, No. 16). A circular space covered by a dome (east of the north aiwan of the Dzaw-
har Şâdh mosque), in which reverence is paid to a dark grey oval-shaped stone said to contain an impression of ʿAli al-Ridā’s foot (cf. Massy, op. cit., p. 1003—1004). The second noteworthy feature of the Bâst is a tall stone pillar, out of which a water basin has been roughly hewn. It is said to have fallen into the Bâst as a shapeless block from heaven (see Massy, op. cit., p. 1002).

Inside of the sacred area are the richest and busiest bazaars of the town, the most richly endowed madrasas, the most profitable caravanserais and the most popular baths. These are all, like the dwelling houses there, the absolute property of the Imám, the ʿAlîd burlæd here, i.e. of the ecclesiastical authorities who administer the sanctuary on his behalf. The whole Bâst belongs exclusively to them. This dead hand however has still more possessions in land, buildings, canals (bawāt, q.v.), in all the provinces of Persia, especially in the immediate and more distant vicinity of Meshhéd.

To the vast sums which these properties yield in produce and rents, are to be added the considerable payments for funerals and tombs, the gifts of pilgrims etc. There is also considerable expenditure, the payment of a considerable number of higher officials and of a large number of lower officials and servants, the maintenance of many pilgrims, the cost of repairs, lighting, decoration of the sanctuaries etc. The income of the Hâram in course of time has naturally varied. Towards the end of the ʿṢâfâwî period it is said to have been about £15,000 while at the time of Frasér’s first visit (1822), as a result of the troubled times, it had sunk to £2,000—2,500 (Frasér, Narrative, p. 456). Later travellers, like Basset (1878) and Curzon (1889), estimated the annual revenues of the Imâm at £16,000 to £17,000 (without revenue in kind); for the last decade of the sixteenth century Massy (p. 1106) and Yate (p. 344) give £20,000. Forhâm Beg’s estimate (op. cit., p. 43) of £40,000 is certainly much too high.

At the head of the administration of the Hâram there has been from early times a Muṭawâllî-Bâšî, who must be a layman. In view of the very influential position which this official occupies in his capacity as head of the greatest Persian sanctuary and treasurer of a very considerable estate, it is only natural that an appointment to such a position of trust is regarded as a very special honour. As it was not uncommon for disputes about the limits of their respective spheres of authority or other matters to arise between the holder of this office, the representative of ecclesiastical power, and the governor of Khurāsān, the clerical element has since the middle of the sixteenth century been subordinated to the civil power by giving the office of Muṭawâllî-Bâšî to the governor of the time (see Yate, p. 322, 344). This very lucrative double office — the Muṭawâllî-Bâšî gets 10% of the revenues of the Hâram — is as a rule only held for a few years by the same individual.

The Muṭawâllî-Bâšî is assisted by a staff of higher officials (muṭawâllîs). His directions in his capacity the varied hierarchy of the sacred area, among whom the muṭāsâfīs [q. v.], who have a thorough knowledge of religious law and are men of great prestige and influence, occupy the first place. Next comes a regular army of lower clerics (mullâs) who conduct the services, teach in the schools and guide the rites of the pilgrims, not a few of them make a living by supplying official documents sealed with the seal of the Imâm (see the picture in Sykes, Glory of the Shîa World, p. 275) which deal among other matters with the answering of petitions made by the pilgrims at the sacred tomb (cf. Khanîkoff, p. 99). On the administration of the sanctuary of Meshhéd cf. Frasér, op. cit., p. 455—456; Curzon, i, 162—164; Massy, p. 1006 and especially Yate, p. 344—346.

As we know from mediaeval Arabic sources, pilgrimage to the tomb of ʿAlî al-Ridā began at an early date. We occasionally hear also of royal visits from the sixth century onwards.

As to the number of pilgrims who visit Meshhéd annually we have different estimates for the sixteenth century but as exact figures can hardly be kept and the numbers vary greatly, they can only claim reliability to a very limited extent. While Yate (p. 334) gives the annual number for the last decade of the sixteenth century at 30,000, earlier travellers, except Marsh (1872: 20—30,000), give much higher figures, e.g. Bellew (1872): 40—50,000; Ferrier (1845): 50,000; Khanîkoff (1858) and Eastwick (1862): over 50,000; Curzon (1889) even gives 100,000, but this is certainly too high. The numbers go up considerably when special religious ceremonies are going on, e.g. at the anniversary of ʿAlî al-Ridā’s death (cf. the pictures in Diez, Persien, p. 46) and during the first third of the month of Muḥarram at the Tâdiya (q.v.) in memory of the tragedy of Kerbela. We have a full description of the Meshhéd festival of the year 1830 from Conolly (see his Journey, i, 267—284, 335—336) and a shorter one of 1894 by Yate (op. cit., p. 144—148); cf. also the illustrations in Yate, p. 146 and the drawing by the painter ʿAlî Rida ʿAbdî of a Meshhéd pilgrim at the time of the Muḥarram festival in Sarre and Mittwoch, Zeichnungen des Rize Abbasî (Munich 1914), Plate i (thereon p. 23, 49 and Id., ii, 216 sq.).

Every pilgrim who arrives has a right to free maintenance for three (according to Vâmbéry: six) days. In the sacred quarter, south of the Bâsh Khiyân (see the plan in Yate, p. 332), there is a special kitchen used exclusively for pilgrims, which gives out 5—600 free meals every day (cf. Vâmbéry, op. cit., p. 325; Goldsmith, Eastern Persia, i, 364 and Curzon, i, 162).

On the ceremonies which the pilgrims have to perform at their visit to the tomb of ʿAlî al-Ridā, we have accounts by Massy, op. cit., and the notes supplied by Khân Bahâdûr Ahîmd al-Dîn Khân in Sykes, J.R.A.S., 1910, p. 144—145 and in the Glory of the Shîa World, p. 240 sq. Special mention may be made of the three circumambulations (bawâf [q. v.] of the tomb and the cursing of all enemies of the imâm three times especially the Caliphs Harûn and Maʿîmân.

Every pilgrim who has performed the pilgrimage to ʿAlî al-Ridâ’s grave in the prescribed fashion is entitled to call himself Meshhedi. Meshhéd occupies first place among all the places of pilgrimage in Persia. Among the great sanctuaries of the Muslim world, Meshhéd stands seventh in the view of Shîa theologians, coming after, not only Mecca and Maʿîmân, but also the four specifically Shîa sanctuaries of the Ḥâkîm, Nâdir, Kerbela, Sâmarra and Kâtîmân, in the order (cf. Sykes, The Glory of the Shiâ World, p. xiv). According to a version current in Shîa
circles which Curzon (i. 150) gives. Meshhed is entitled to the sixth place, coming between Kārim-
main as fifth and Sāmārāšt, which is put seventh.

The longing of every Shi'ī to find a last resting place in the shadow of one of the beloved Imāms
caused extensive cemeteries to be laid out at an early date at the great centres of pilgrimage.
Thousands of corpses are brought every year to Meshhed, mainly from Persia, but also from all the Shi'a lands, particularly India, also Afghanistān and Turkestān. Nowhere in the whole of Persia are there so many tombs as at Meshhed. As the ground of the cemeteries must be used over and over again, the graves change their occupants every few years. Fine solid tombstones are not used, but simply rough blocks of granite or soapstone from the quarries of the neighbourhood (cf. also Conolly, p. 343—4 and Khanikoff, p. 105). Graves within the sacred quarter itself are naturally most desired. Every available space there is used for the purpose; the pavingstones in the courtyards are often tombstones for the dead below. The fees for graves within the Bast, which vary with the distance from the Mausoleum of 'Ali al-Ridā, bring a not inconsiderable revenue to the authorities.

Of the large cemeteries (maqbaras) outside the Bast the most important is the Maqbara Kāt-i Gāh ("place of the killing") lying north of the sacred area. East of it is that of Saliyād Aḥmad in which three children of the seventh Imām, Muṣā al-Kaẓīm, are buried (cf. Mahdī al-Alawī, p. 8). In the Ħāfīz Khīyānī quarter is the Maqbarat Pīr-i Fāṭīmā. S.E. of the citadel is the mausoleum of Gumbād-i Sāhī ("green dome") which takes its name from a half ruined mausoleum there, now inhabited by dervishes (cf. Yate, p. 328; Mahdī al-Alawī, p. 9).

In the Nūkān quarter is the Maqbara Shāh-za de Mahjīmad (see Mahdī al-Alawī, p. 8). We may also mention that outside the Nūkān gate on the site of the old town of Nūkān (see above), are visible the remains of a gigantic cemetery on which, according to Sykes (J. R. A. S., 1910, p. 1116), there may be found stone sarcophagi with inscriptions carved upon them dating from 760 to 1099 (1359—1688).

Outside of Meshhed a good half hour's journey to the south, on rocky ground is the mausoleum of Mirzā Ibrāhīm al-Riḍā (see Mahdī, op. cit., p. 8) and still farther from the town, 3 miles north of it, is the Maqbara Kāt-i Māfīdā (cf. Sykes, op. cit., p. 1124 and Ibn Sādī, vi. 127 sq.). According to the popular view, he was a Sūfī in spite of his relations with 'Ali and is therefore in a way regarded as the patron of the Sūfīs in Khurāsān, of whom those who live in Meshhed are usually buried near his tomb. Kāt-i Māfīdā's mausoleum is one of the most interesting in the whole of Khurāsān: it is a large octagonal building crowned by a dome but now it is in a half ruined condition.

Meshhed is the centre of Muslim theological and legal studies in Persia. A number of colleges (madrasas) there are devoted to teaching these subjects. Lists of them with dates are given by Fraser (p. 456—460) who mentions 14 of the present 16 madrasas, also by Khanikoff (p. 107) who gives 3, and by Mahdī al-Alawī (p. 9—12). The latter observes that there were 20 older colleges, of which he gives 13, and a number of more modern ones. Fraser also gives brief notes on the possessions of the various madrasas and the clerics (mulās) attached to them. Yate (p. 329—330) simply mentions six of the best known. From these lists, which supplement one another in welcome fashion, we get the names of 20 colleges.

From the dates of foundation we find that the oldest of the madrasas still standing in Meshhed is the Madrasa Dūdar, which was built in 823 (1420) by the Timūrid Sultan Shāh Rukh and restored by Salāmān I. Under the same ruler was built the Pārīzād Madrasa which was completely remodelled by Salāmān I. From the time of 'Abbās II date the two almost contemporary colleges Khirārī Khān (1058 = 1649) and Mīrzā Dījā'far (1059 = 1650). The majority of the older colleges, no fewer than nine in number, date from the time of Salāmān I, who also restored some buildings (1666—1694). As to the Kādārs, one was founded in the reign of Fāṭīmā Shāh and two in that of Nāṣīr al-Dīn, who also restored two that had fallen into ruins.

From an artistic point of view, the finest is the Madrasa of Mīrzā Dījā'far which was built and richly endowed in 1659 (1650) by a Persian of this name who had made a fortune in India. It is generally regarded as the third finest building in Meshhed, next to the Mausoleum of 'Ali al-Ridā and the Diwāhar Shāhī Mosque. In its plan, with vaulted halls and courtyard with niches, and its rich decoration, it follows the style of the courts and mosques of the sacred area above described, typical of the ecclesiastical architecture of Persia (cf. above, li. 439, 447 sq. and also Fraser, p. 466—467). Not only the Madrasa of Mīrzā Dījā'far but also other richly endowed colleges, like that of Pā'īn-Pā'ī (both of the time of Salāmān I) owe their origin to Persians who had made fortunes in India (cf. on the foundation of the two last named colleges: Fraser, p. 457—459; Sykes, The Glory etc., pp. 267—269). The most esteemed colleges are in the Bast, namely the three already mentioned as the oldest, Dūdar, Pārīzād and Khirārī Khān, also Iltīsār and 'Ali Naḳī Mīrzā. Others, like the above mentioned Mīrzā Dījā'far Madrasa and the Mustaṣṭar Madrasa have doors communicating with the Šah-n-i Khāna of the Haram quarter.

Students also live in the madrasas, their maintenance being provided for by pious endowments. While in Khanikoff's time (1858) there were no outstanding teachers there and the number of students was small, the reputation of the Meshhed colleges went up again in the second half of the 19th century so that Sykes (The Glory etc., p. 267 sq.) in 1910 puts the attendance at 1,000 students, who came from Persia, India and other Shi'a regions. The student who wishes to take a higher theological training after the nine years' course at Meshhed must go to Meshhed 'Ali (Nedjeff, q. v.) and attend the lectures of the teachers there, who are the first authorities on Shi'a theology.

We have no details of the libraries of the Meshhed colleges. Of the rich Fāṭimā Khān Madrasa, Fraser only says (p. 457) that it has a valuable library. The administration of the Haram also has a large and valuable collection of books (cf. its location see the plan in Yate, p. 332, No. 65 and cf. No. 29), founded in the first half of the xvth century by Sultan Shāh Rukh. The treasures accumulated under him and his successors were for the most part lost when Meshhed was sacked by
the Ozbegs under 'Abd al-Mu'min Khan (1589; cf. Yate, p. 318; Sykes, The Glory etc., p. 239; cf. also Herfeld, in Ephemerides Orientales, 1926, No. 28, p. 7—8). A thorough examination of the manuscripts here might give valuable results.

In this connection we may mention the activity of the Meshhed printing press. The town began with the last decade of the sixteenth century; see thereon Brown, The Press and Poetry of Modern Persia (Cambridge 1914), p. 348 (Index, s. v. Meshed); Brown, Literary History of Persia, iv., Cambridge 1928, p. 233, 489; Mahdi 'Alawi, p. 12.

Meshed is remarkably rich in mosques which are built in the sacred area, at cemeteries and at separate ways, and are connected with madrasas and other buildings of a religious character.

Here we may also mention the Musalla which stands outside the town, 1/2 mile from the Fárin Khiyá'íén gate on the Haráát road. It is a hall (arváán) about 30 feet high which opens into a great arch about 60 feet high.

However picturesque Meshed may look from outside, the impression one gets on entering it is far from pleasing, excepting the Bst which forms a separate enclave. Except for the already described broad main street (Khiyá'íán), there are only narrow dark alleys the level of which is almost always considerably above that of the inner courts of the houses of brick, so that they can only be entered by long gloomy passages (cf. Khanikoff, p. 304; Yate, p. 328).

As to the population of Meshed, — the permanent residents, excluding the many pilgrims — it is at its highest in the reign of Nádir Sháh, who frequently held his court here and in every way contributed to the prosperity of the town. At that date Meshed had not less than 60,000 inhabitants. But the half century of turmoil which followed the reign of Nádir Sháh brought about a great decline in the town so that only 5,000 houses were reckoned there in 1796 (cf. Yate, p. 330). In the sixteenth century a slow but steady rise. Trulliher in 1807 estimated the number of houses at 4,000; Fraser in 1822 at 7,700 with 25,300 inhabitants. Conolly (1830) and Burnes (1832) estimate 40,000 inhabitants; Ferrier (1845) and Khanikoff (1858) at 60,000. In 1875 Khabirzadeh suffered a terrible famine and 24,000 in Meshed alone died of starvation (see Goldsáimid, i. 361).

Baker is too high in putting the figure at 80,000 in 1873 and Curzon too low at 45,000 for 1889. Meshed at the present day is said to have 100,000 inhabitants (see Mahdi 'Alawi, p. 4); it is in any case the third largest town in Persia.

The permanent population of Meshed is a rather mixed one; in consequence of the great influx of pilgrims and the commerce which was very great at least in an earlier period, many foreigners (Turkomans, Afghanis, Indians etc.) settled in Meshed. Except for a very small section, all the Muslims of the town are Shi'ís. The small number of Sunnis are mainly Afghans and Turkomans. We have already mentioned that the Masjidi Sháh and the Makbara Khvá'í Kabi are used by the Sunnis. The number of Christians is infinitesimal and is confined to a few Armenian traders and the personnel of English and Russian consulates established in 1889.

Nádir Sháh settled 100 Jewish families in Meshed whom he had transplanted from Kazwin. After his death their position became a miserable one, especially after the catastrophe which overwhelmed them in 1839. When in this year, during the celebration of the Muslim Kurbaan festival, a Jewess on medical advice placed her hand, which was suffering from an eruption, in the bowl of the holy sweet water dog, the Muhammadans took this for an insult to their religious observances. The excited mob, seizing the excuse, fell upon the Jewish quarter, plundering and murdering as they pleased and destroyed the synagogue. The surviving Jews had to adopt Islam. These Jewish converts are described by Dájjad, more fully Dájjad al-'Ism = "new comers to Islam", because their forced conversion is of recent date. The change of faith was only an external one; it is true that these Dájjad to avoid suspicion regularly attend the mosque, but not a few of them are said to observe their old rites in secret. The number of Judeo-Muslims in Meshed at the present day who are small traders, physicians, etc., was put by Basset (1878) at 300 families, by Yate at 200 in the Jews of Meshed and their persecution in 1839 (cf. Trulliher, p. 273; Conolly, i. p. 304—308; J. Wolff, Narrative, p. 177, 394—396; Ferrier, p. 122—125; J. J. Benjamin (see Rabi), p. 189—190; Vámbéry, Wanderungen, p. 324—325; Basset, p. 230—233; Yate, p. 322.

The clerical element is strong in the Muslim population; everywhere one sees mullás, 'ulamas (students) and derívishes. The town swarms with saiyádís (alleged descendants of 'Ali among whom the 'Ish'á'í, who claim descent from 'Ali al-Khá'í, enjoy special privileges. Meshed is not only one of the most famous cities in the whole Muslim world but also one of the most immoral in Asia. Prostitution, the so-called pilgrim marriage (Pers. Dárát: cf. Muri' and iv., p. 353, 355), sanctioned by the 'Imámi group of the Shá'í, abounds here. Most pilgrims take advantage of this in the institutes of temporary marriage (cf. Khanikoff, p. 98; Curzon, i. 164—165; Ibrahim Beg, p. 45; Yate, p. 419: Allemane, iii. 86—87).

The people of Meshed are described as very superstitious; see especially Basset, p. 228 cf. and the Meshed Stories in Conolly, i. 316—318. Many stories are told of miracles wrought in the holy sanctuaries: see Fraser, p. 451—452; Basset, p. 426—427; Massy, p. 992—993, 1002; Yate, p. 325—337.

The population of the town lives partly by catering for pilgrims and partly on local industries and commerce.

The industries, once very flourishing, have now declined. The famous manufacture of sword blades, introduced by a colony of swordsmen transplanted by Timur from Persia, has now almost entirely disappeared (cf. Trulliher, p. 275; Fraser, p. 124; Ferrier, p. 468; Curzon, i. 160).

A speciality of Meshed is the manufacture of decorated vessels (household utensils, like jugs, pots, dishes etc.) out of serpenite and dark grey soapstone (Meshed stone), from the quarries 11/2 hours south of Meshed. This stone industry is old and the Arabic sources of the middle ages mention it as native to the district of Tásh and especially to the town of Nükán (the predecessor of Meshed), cf. B. Götz, ii. 313; iii. 324—326; al-Muhallabi in Al-Bukhári, p. 452; Ali Hámíd 'Alí Sháhání, in J. A., 1925, p. 203; Yü'úsuf, iv. 824 and cf. G. Le Strange, op. cit.
For the sixth century cf. Trullihier, p. 274–275; Fraser, p. 469; Ferrier, p. 124; Bellew, p. 356–367; Baker, p. 184; MacGregor, i. 291–292; Bennett, p. 234; Curzon, i. 167.

Persia, the trade in the turquoise mines east of Meshhed (about 16 days’ journey distant; cf. FiehEits and Le Strange, op. cit., p. 368; Fraser, p. 409–420; Ferrier, p. 106–107; Khankoil, p. 90–92; Bassett, p. 216–217; Yale, p. 399–408) at one time were of special significance in Meshhed’s trade and industry. Meshhed was the centre of the turquoise trade; for the whole output of these mines came to it and they were controlled by Meshed merchants. The turquoise were sorted in Meshed and put into commerce there. Now however, the finest specimens are usually sent directly abroad from the mines and only pieces of inferior quality come to Meshed, to be worked there by the still very stilled stone cutters into ornaments and souvenirs for pilgrims. On the turquoise industry of Meshed cf. Trullihier, p. 274; Bellew, p. 357; Goldsmith, i. 365; Baker, p. 234.

Weaving is another important industry in Meshed. The carpets produced here were at one time of immensely greater value than those of the present day, which are produced in factory fashion. The modern shawls of Kashmir style are especially prized and known as Meshed, as are the velvets, which in Fraser’s time were regarded as the best in Persia. On weaving in Meshed cf. Fraser, p. 468; Ferrier, p. 124; Goldsmith, i. 365; Baker, p. 184–185; Curzon, i. 167; Ibrahim Beg, p. 47; Schweinitz, p. 27–28; Allemagne, iii. 110.

Until the second half of the sixth century, Meshed was one of the first emporia of Eastern Iran. At the intersection of important caravan routes, it was the entrepôt for the trade of Central Asia and especially of Afghanistan. Since however Russia has become established in Turkistan and built the Transcaspian railway, Meshed’s trade has much declined. Nevertheless the town must still be described as an important centre of traffic and trade, not least on account of the numerous pilgrim routes that lead to it. Meshed is 150 miles from the Russian railway station of Ashkabad [q. v.], the capital of the Transcaspian area; there is a good road between the two towns.

For the housing of the numerous pilgrims and other strangers who come to Meshed, a considerable number of caravanserais are available. In Fraser’s time (1822), there were at least 25–30 such places in use, apart from some that had been abandoned and allowed to fall into ruins (see Fraser, Narrative, p. 460). Khankoil (p. 107–108) gives 16, four of which, intended for pilgrims only, were inside the last; of these latter the oldest is the Sultân Caravanseri, built by Tahmâsp I; others date from Sulamân I.

**MESSHD HUSAIN (KEBELA)**, a place of pilgrimage west of the Euphrates about 60 miles S.W. of Baghdad on the edge of the desert (Yākh, Mādīm, ed. Wüstenfeld. iv. 249). It lay opposite Kāsir ibn Hubaira (al-Iṣākhī, B.G.A., 1, 85; cf. al-Baladhūrī, *Futūh*, ed. de Goeje, p. 287; al-Makdisī, B.G.A., i. 121. The name Kēbela is probably connected with Aram. Krbēla (Daniel, 3. xx) and Assyr. Karbalā (a kind of headress) (G. Jacob, *Türkische Bibliothek*, xi. 35. note 2). It is not mentioned in the pre-Arab period.

After the taking of al-Iṣāf, Khalīd b. al-Wahd is said to have encamped in Kēbela (Yākhū, ir. 250). On the 13th of the 1st month (the 9th Muḥarram) 61 (Oct. 10, 680) the Imām Husain b. 'Alī (cf. ii., p. 339) on the march from Mecca to the Ḥira, where he intended to enforce his claims to the Caliphate, fell in the plain of Kēbela in the district of al-Tabarī, iii. 2190; Yākhū, ir. 870; now according to Māssignon Khānā Kāʿā; according to Musil: Ishān Nainwa) in a battle with the troops of the governor of al-Kūfa and was buried in al-Ḥār (Yākhū, ii. 188 sq.; al-Tabarī, iii. 752; E. Herzfeld, cf. above, ii., p. 221).

The place where the decapitated body of the Prophet's grandson was interred (on the fate of the head which was cut off and sent to Damascus to Varsī, cf. van Berchem, *Festwrit*, ed. So- thawez, Berlin 1915, p. 298–310), called Kāb al-Husain, soon became a celebrated place of pilgrimage for the Shi'is (cf. art. sīfa'). As early as 65 (684–685) we find Sulaimān b. Šarāf going with his followers to Husain's grave where he spent a day and a night (al-Tabarī, ed. de Goeje, ii. 545 sq.). Ibn al-Athīr (*Ṭūrīk*, ed. Tornberg, v. 184; ix. 338) mentions further pilgrimages in the years 122 (739–740) and 346 (1054–1055). The parts of Meshed Husain at quite an early date were endowed by the pious benefactions of Ann Mūsā, mother of the Caliph al-Mahdā (al-Tabarī, iii. 752).

The Caliph al-Mutawakkil in 236 (850–851) destroyed the tomb and its annexes and had the ground levelled and sown; he prohibited under threat of heavy penalties visiting the holy places (al-Tabarī, iii. 1407; Ḥamd Allah al-Mustawfī, *Nizāt al-Khūlāb*, ed. Le Strange, p. 32). Ibn Hawkal (ed. de Goeje, p. 160), however, mentions about 977 A.D. a large meghed with a domed chamber, entered by a door on each side, over the tomb of Husain, which in his time was already much visited by pilgrims. Dābī b. Mūhammad al-Asā'ī of 'Ain al-Tamr, supreme chief of a number of tribes, devastated Meshed al-Ḥār (Kēbela) along with other sanctuaries in which a punitive expedition was sent against 'Ain al-Tamr in 369 (979–980) before which he fled into the desert (Ibn Miskawaih, *Ṭūrīk*, ed. Le Strange, p. 32). Ibn Sāfin (ed. de Goeje, p. 160), however, mentions another large meghed with a domed chamber, entered by a door on each side, over the tomb of Husain, which in his time was already much visited by pilgrims. Dābī b. Mūhammad al-Asā'ī of 'Ain al-Tamr, supreme chief of a number of tribes, devastated Meshed al-Ḥār (Kēbela) along with other sanctuaries in which a punitive expedition was sent against 'Ain al-Tamr in 369 (979–980) before which he fled into the desert (Ibn Miskawaih, *Ṭūrīk*, ed. Le Strange, p. 32).

In Rābiʾ al-awwal 407 (Aug./Sept. 1016), a great conflagration broke out caused by the upsetting of two wax candles, which reduced the main building (al-Kabba) and the open halls (al-Arwākha) to ashes (Ibn al-Athīr, ix. 209).

When the Saḵitū Shāhīn Shah Shāh came to Baghādād in 479 (1086–1087) he did not neglect to visit the two Mesheds of Ḵal and al-Husain (Ibn al-Athīr, x. 103). The two sanctuaries at this time were known as al-Maghābān (al-Bundāši al-Iṣākhī. *Ṭawīrīk*, ed. Houtsma, in *Revue des textes*, ii. 77) on the analogy of the duals al-Iṣākhān, al-Bundān, al-Iṣākhān, al-Mīrankān.

The Ikhān Ghażān in 1303 visited Kerbelā and gave lavish gifts to the sanctuary. He or his father Argān is credited with bringing water to the district by leading a canal from the Frāt (the modern Nahr al-Husaynīya) (A. Noldeke, *Das Heiligum al-Husayn zu Kerbalā*, Berlin 1909, p. 40). Ibn Bāṭnātā (ed. Defremery and Sanguinetti, ii. 99) visited Kerbelā in 727 (1325–1327) from al-Ḥilla and describes it as a small town which lies among palm groves and gets its water from the Frāt. In the centre is the sacred tomb; beside it is a large madrasa and the famous hostel

"MESSHED — MESHED HUSAIN"

477
the alluvial plain it is an important "desert port" for trade with the interior of Arabia.

The old town with its tortuous streets is surrounded by modern suburbs. About half to three quarters of the citizens are Persians, the remainder Shi'i Arabs. The most important tribes among them are the Bani Sa'd, Salâme, al-Wuzûm, al-Tâhâmaz and al-Nâşiriyê. The Dede family is the richest: for constructing the Nahr al-Husainiya it was rewarded with extensive estates by Sultan Selim.

The name Kerbelâ strictly speaking only applies to the eastern part of the palm gardens which surround the town in a semi-circle on its east side (Muñil, The Middle Empires, p. 41). The town itself is called al-Meshhed or Meshhed al-Husain.

The sanctuary of the third Imâm lies in a court yard (šahra) 354 x 270 feet in area, which is surrounded by 726 ans and cells. Its walls are decorated with a continuous ornamental band which is said to contain the whole Kur'ân written in white on a blue ground. The building itself is 156 x 138 feet in area. The rectangular main building entered by the "golden outer hall" (picture in Grothe, Geogr. Charakterbilder, pl. Ixxviii., fig. 136) is surrounded by a vaulted corridor (now called Mâna; A. Noldeke, op. cit., p. 20, 3) in which the pilgrims go round the sanctuary (pawâf) (Wehlar, Reise arâb. Heidennamen, p. 100—112). In the middle of the central domed chamber is the shrine (sârâb) of Husain about 6 feet high and 12 long surrounded by silver mazhribiya work, at the foot of which stands a second smaller shrine, that of his son and companion-in-arms ʿAlî Akbar (Māsun, Kitâb al-Tanbûh, ed. de Goeje, B. G. A., vii. 503).

"The general impression made by the interior must be called fairy-like, when in the dusk — even in the daytime it is dim inside — the light of innumerable lamps and candles around the silver shrine, reflected a thousand and again a thousand times from the innumerable small crystal facets, produces a effect like the dreams of imagination. In the roof of the dome the light loses its strength; only here and there a few crystal surfaces gleam like the stars in the sky" (A. Noldeke, op. cit., p. 25 sq.).

The sanctuary is adorned on the Kibla face with magnificent and costly ornamentation. Two manâtras flank the entrance. A third, the Manâfr al-ʿAbd, rises before the buildings on the east side of the Šahra; south of it the face of the buildings surrounding the court recedes about 50 feet; on this spot is a Sunna mosque. Adjoining the Šahra on the north side is a large medrese the courtyard of which measures about 85 feet square with a mosque of its own and several mihrâbs (on the present condition of the sanctuary: cf. A. Noldeke, op. cit., p. 5—26, on its history p. 35—50 and on its architectural history, p. 51—66).

About 600 yards N.E. of the sanctuary of Husain is the mausoleum of his half-brother ʿAbbâs. On the road which runs westward out of the town is the site of the tent of Husain (Khaunagâh). The building erected there (plan in Noldeke, pl. viii.; photograph in Grothe, pl. Ixxxviii., fig. 145) has the plan of a tent and on both sides of the entrance there are stone copies of camel saddles.

On the desert plains (seh) west of the town stretch the graves of the devout Shi'is. North of the gardens of Kerbelâ lie the suburbs, gardens.
and fields of al-Bikâr, N.W. those of Kurra, S. those of al-Qâhêriyya (Yâkût, iii. 768). Among places in the vicinity, Yâkût mentions al-Akr (iii. 695) and al-Nawâyi (iv. 816).

A branch line diverging north of al-Hilla connects Kerbelâ with the Baghdad–al-Basra railway. Caravan roads lead to al-Hilla and Najaf. The sanctuary of Hûsain still has the reputation of securing entrance to Paradise for those buried there, because many aged pilgrims and those in failing health go there to die on the holy spot.

(E. Hönigmann)

**MESHED-I MISHRIYAN**, a ruined site in Transsaspians (Turkmenian). N. W. of the confluence of the Atrak and its right bank tributary the Sunbar, or more exactly, on the road which runs from Cât at right angles to the road connecting Cikighir with the railway station of Aydân.

The ruins are surrounded by a wall of brick and a ditch and have an area of 320 acres. The old town, situated in the steppes which are now peopled by Turkomans, received its water from a canal led from the Atrak about 40 miles above Cât. Near the latter place the canal diverged northwards from the river, crossed the Sunbar by a bridge and finally followed an embankment 6 feet high on which the bed of the canal was 12 feet broad.

The ruins of a fine mosque can still be seen, the gateway of which, decorated with faience, has an inscription according to which this ribât was built by 'Abî al-Dânya; wa 'Abî-Allah al-Islâm wa 'Abî-Mus'lîm ZZîl Allâh fî. 'Abî-Mus'lîm Sultan Mu-Samam b. Sultan Tâkî, Bûtân Amîr al-Mu'minîn. The Khârîshâshâh Maülâmmed in question reigned 1200–1220. On one of the two towers (minarets) is written: bismilâh ... barakanâ min Allâm majma' amara bihi Abî Dîführ Afméd b. Abî 'Abd-Allâh sâhîl al-ribât, d'azwâzi 'llâmâ. *Anâl Ali R. (.) (.)*. The identity of this Afméd is unknown but the title "lord of the ribât" which he gives himself, confirms the fact that M.-Mishriyân was a frontier fortress (ribât). Near the east gate stood another white mosque.

Tradition (Conolly) ascribes the destruction of Mishriyân to the "Kâlmuq Tatars". The appearance of the Kâlmuqs in these regions may be dated about 1600.

The name Meshed-i Mishriyân (variants: Mes-\-torian, Mest-\-Dobian, Mest-\-Dovran, Mustan) is obscure, unless Mestorian is to be explained as "Nestoriyan "Nestorian Christians"; it may be that during his campaign in the Col (*弥勒," to the east of the Caspian, Yazlagird II persecuted the Christians (Hoffmann, p. 50; Labouret, Le christianisme dans l'Empire d'Occident, 1824, p. 126).

The site of the ruin (to the north of Djûrđân) is given the name Dihîsân in Muslim sources, which recalls the name of the old Scythian people Daha who led a nomadic life on the Atrak (Grek Άθα and ἁθά; cf. Tomachev in Paulycl-Wissowa, Real-Encycl. ü., iv., col 1945). From the Dahan clan of the Pomôi was descended the Arghakhâdi dynasty which imposed its authority on the Parthians (cf. Mi\-norsky, Transcaspia, J.A., 1930, July–Sept., p. 6).

The basin of the Atrak (the ancient Škêra) is at the extreme limit of the lands described in the classical and Muslim annal geographers. The sources mention several settlements in Dihîsân but in a somewhat confusing fashion. As the analysis by Hoffmann and by Barthold has shown, a distinction must be made between: 1. the settlement on the sea-shore, 2. the town of Dihîsân and 3. the ribât Dihîsân.

1. The first of these was built on a promontory (dokht) behind which ships could shelter. Martz, Erzähler, p. 130, reads the name concealed in the variants in ɪstâkhrî, p. 219, note b, as "Dihîsân Bayâsîn" which he connects with the district of Bayâsan mentioned (in Dihêrjan) by Tabari, ii. 1330; Bairazi, p. 337 and Ibn Khûr-\-dâdhîbû, p. 35. The Hûdod al-\-Àâm mentions a peninsula of Dihîsân-Sur on the coast of Dihîsân. This خرب may be an echo of the name of the Turkish (†) princes (Hoffmann, p. 281) who attacked Djûrđân from the north (Ibn al-\-Athîr, ii. 22). Lastly Tabari, ii. 1325, locates an island of Buhaira 5 farsakh from Dihîsân. Barthold identifies all these names with the cape of Hasan-Kul which shelters the bay into which the Atrak flows. (If also the article تیکان, on the Dizî-\-Aram mentioned in the شیخ-\-نامه).
A difficulty is raised by Iṣṭakhrī (p. 219) who puts at 50 farsākh and p. 226 at 6 marbala (each of 87/a farsākh) the distance between Abasḵân (at the mouth of the river Djurdjân, now Giummāsh-tapā?) and the cape of Dihistān in question. If we follow this double indication literally, we ought (with Hoffmann, p. 279, who reads the name "Dihistān—Tābahīr") to move the cape of Dihistān considerably to the north, in the bay of Krasawodsk, which is certainly a very important place. In this case the cape would be a different one from Bahāʾī = Ḥasan Kūli (Hoffmann, p. 278).

2. The town of Dihistān, according to the middle Persian list of the towns of Erān, was founded by a certain Narsaḵhār the Arḵakid (Marquart, Erānī, p. 73) and according to the Nāṣr al-Kūhī, p. 166, by the Sāsnād Khūshā b. Pūrtāz. According to Muḥaddāsī, the town of Dihistān was called Akhūr. Tabārī locates (the town of) Dihistān 23 farsākh from (the river of) Djurdjān and, as we have seen, 3 farsākh from Bahāʾī. This latter distance is by the way less than the actual distance between Ḥasan Kūli and Meshēd-i-Miṣrīyān.

3. The ruins of Meshēd-i-Miṣrīyān (as the inscription on the mosque suggests) must correspond to the town of Dihistān, which Muḥaddāsī, p. 358 (cf. also p. 312, 367, 372) mentions distinct from Akhūr. This ribāṭ situated on the borders of the steppes had fine mosques and rich markets. Relying on Yāḵtā, i. 39, Barthold thinks that in the ninth century the ribāṭ (and not Akhūr) to the east of the Djurdjān-ribāṭ road) was the capital of the district of Dihistān.

(M. Minorsky)

MESFI, an important Ottoman poet of the time of Bayzid II. Born in Frighina (northern Albania), he came as a youth to Constantinople and there he became a sofat (theological student) and distinguished himself as a calligrapher. In the end he won the favour of the grand vizier Kâdim Alī Pasha [q. v.] and became his divan-kâtip. But his irregular life and carelessness in the performance of his duties frequently irritated his patron (Alī Pasha called him Skhī r ʾeghūtān). He held his post, however, till the death of Alī Pasha in 917 (1511) in battle against the Shīʿis rebels under Shāh Kūli. Mesfi wrote an elegy on his death, full of the deepest emotion.

His attempts to find a new patron failed. He had to be content with a miserable fief in Bosnia where he soon died in 918 (1512), poor and forgotten and still quite young.

According to Ahmad Pasha [q. v.] and Nedjāt (d. 914 = 1509), Mesfi was regarded as the third great Ottoman poet and the greatest lyric poet before Bâki. He is a most artistic and original figure. His output was not extensive, but of lasting influence. His Divān has not yet been printed, and a fate could be to nearly all important Turkish poets. In his lyric poems he is above the average of contemporary poets. In addition to the grace and delicacy of his diction, there is a certain novelty in his style. New images and pictures are introduced with great boldness, perhaps a result of his Albanian blood. The best known of his poems, in Europe is his Ode to Spring (marochba) which Sir William Jones published with a Latin translation: Poëtas Asiaticae commentariorum libri sex, Leipzig 1774 and has been repeatedly reprinted (by Toderini, by Wieland in the Deutsche Merkur, by J. v. Hammer etc.). His Divān is also of importance linguistically, for it bears the stamp of the language of Constantinople.

Mesfi's most original work is his Miṣnad, Skhī r-ʾengīz (the "Thriller of the Town"), which is also the most original work in Turkish literature down to Mesfi's time. It is original in subject also, as it did not have a Persian model.

It introduced quite a new style of poem, which was frequently imitated. Skhī r-ʾengīz represents the first attempt at humorous verse in Turkey, and its language is very close to the spoken speech. Here Mesfi could write Turkish to his heart's content, while in other forms he had to use the learned jargon. He laments in one passage that without Persian and Arabic there would be no room for him as a poet, even if he had come down from heaven.

Skhī r-ʾengīz is a burlesque catalogue of the beautiful "boys" of Adrianople — it is interesting to note that they are all Mūhammadan — and became popular on account of its unsuitable language.

As a product of his activity as a secretary, we also have a collection of inšī'ā, elegant specimens of epistolary style, not without historical interest, entitled Gūlī ʾSal Berg (the hundred-leaved rose). I have a manuscript of this work, which seems to be rather rare, of 991 (1583) entitled 'Inšī' ī Mesfi.'

(Th. Menzel)
MEZWOMORTO, an Ottoman Grand Admiral whose real name was IZDIJH HUSAIN PASHA.

Hadjdjy Husein Pasha, known as Mezzomorto, i.e. "half-dead" because he was severely wounded in a naval battle, came from the Balearic Islands, if A. de la Motraye's statement (Voyages, The Hague 1727, i. 206) that he was born in Mallorca is right. He probably spent his youth sailing with corsairs on the seas off the North African coast. He first appears as a desperate pirate in the summer of 1682 in the Barbary States. When France was preparing to deal a decisive blow at the powers of Algiers, whose arrogance had passed all bounds, he was handed over as a hostage to the French after the bombardment of Algiers, but managed to return there, to strike down with his own hand, in a mimicry of the mercenaries whom he had stirred up, the Dey of Algiers Baba Hasan, who was ready to make peace and to fight his way to the head of the state (summer of 1683; cf. Zinkeisen, G.O.R., v. 51 sq.). Husein Reis in the following year concluded with Louis XIV of France a truce for a hundred years, which however was only of brief duration. His own rule over Algiers was not long either (till 1688; cf. A. Bernard, L'Algérie, Paris 1902, p. 159). Ten years later, in Muhammad I. 1107 (Aug. 1693), Husein Reis, who had already distinguished himself as commander of a galleon (kştän) (kştän-i dorya) in succession to Amüldj率达到Husein Pasha, who was appointed governor of Adana after the taking of Chios. He owed his promotion to his skilful seamanship at the capture of Chios where he distinguished himself in the battle with the Venetian fleet (spring of 1695). In 1697 Husein Pasha inflicted a disastrous defeat on the Venetian Captain General Alessandro Molino off the island of Lemnos, and in the following year in a naval fight on July 6 with Molino's successor, Giacomo Cornaro, near Mytilene it was very doubtful whether the Crescent on the Lion of St. Mark gained the victory (cf. Zinkeisen, G.O.R., v. 183, from the account by the imposante Garzoni in his Istoria della Repubblica di Venezia, Venice 1705, p. 644 sqq. 691 sqq. 748 sqg. and 775 sqg.) Ottoman authorities and the historian Rashid (fol. 231; cf. J. v. Hammer, G.O.R., vi. 635) credit the victory to the Ottomans. In 1113 Mezzomorto was dismissed from his rank and re

placed by 'Abd al-Fattah Pasha. He retired to Chios, where his adventurous life came to an end in the same year on the 13th Safar 1113 (July 20, 1701, according to Safvet, op. cit.), on the 14th Safar 1114 (i.e. July 9, 1702) according to others. J. v. Hammer, G.O.R., vi. 766 and vii. 624, gives the date as 15th Rabii-i 1113 (Aug. 20, 1701). One of these dates is probably that of his dismissal.

MIDHANA, [See MANARA.]

MIDJAT PASHA, Ottoman statesman, twice grand vizier.

Midhat Pasha was born in Stambul in Safar 1238 (beg. Oct. 18, 1822), the son of Hddjdjy 'Ali Efendi-Zade Hddjdjy Hdsig Mjemmed Efendi Efendi, a native of Kuschuk. The family seem to have been a profession Bektashi and Midhat Pasha also had a leaning towards them. His earliest youth was spent in his parents' home at Wildin, Lošca (Bulgaria) and later in Stambul, where his father held judicial offices. In 1836 he was working in the secretariat of the grand vizier and later he filled confidential posts in various governovernors' (including two years in Damascus). In 1841 he came to Konya and in 1849 became second, in 1851 first secretary to the Council (savciler-ve'lası). In 1854 the grand vizier Kebir-Mehmed Pasha gave him the difficult task of pacifying the provinces of Adrianople and the Balkans and clearing them of robber bands. Here he displayed for the first time his special talent for administration, which were not unnoticed by the Porte and soon afterwards brought him the appointment of governor of the Danube districts (Wildin, Siltin). In 1858 he spent six months travelling for study in western Europe, including Vienna, Paris, Brussels and London. In 1851 he was appointed governor (sâhiil-i*) of Denizli and Priyren with which he was already familiar from his time in the Porte, where he earned distinction by his pacification of the country, so that, when the new organization of wilayets was carried out in 1864, he was given the model province, Danube-Bulgaria (Fati Wilayet). During his four years' governorship, he raised the province to a level rate in Turkey, although it was only under his successor that the people learned to thank him for it. He built schools and educational institutes everywhere, created funds to make advances to and support useful undertakings, built hospitals, granaries, roads (2,000 miles) and bridges (1,400) and improved communications in every way. As he required money for all these progressive undertakings, which the government could not give him and he would not receive by abuse of taxation, he raised the necessary funds by "voluntary contribution" from the people. The Bulgars, with whom for national reasons he had no sympathy, suffered not a little from the enterprising spirit and unrestrained love of work of the young governor who, of unbending will and inexorable severity, was of a nature not attractive, but rather arrogant and conceited. At the same time he was quite modern in his views and had no scruples about
1876 Midhat Pasha became grand vizier for the second time, and five days later, the constitution was solemnly proclaimed. The reactionary party and a powerful camarilla never ceased its endeavours to bring about the fall of Midhat Pasha and to bring his progressive schemes to nought. Under the pretext of high treason he was dismissed on Feb. 5, 1877 and banished to Europe. He was put upon a steamer and went via Rome and Paris to England. He was only permitted to return in 1878 and then only to Crete. In November 1878 under pressure from England, he was appointed governor-general of Syria. In 1880 he was transferred to Smyrna as governor. Here Abd al-Hamid's wrath overwhelmed him. In May 1881 he was arrested and brought to Stambul. The latter charge of having caused the assassination of Sultan 'Abd al-Aziz was brought against him. Midhat Pasha was condemned to death but the sentence was not carried out. He was banished for life to Tā'īf in Arabia. After repeated attempts to poison him, he was strangled on April 10, 1883 (Radjah 29, 1301) in prison. In this tragic fashion ended the life of one of the most notable and best statesmen of Turkey, perhaps the most important administrator that the Ottoman empire has produced in modern times. Midhat Pasha had a son, 'Ali Haidar Midhat Bey, who after his death conducted a campaign to clear his memory and wrote a very full life of his father.

Rbiography: The main source for the life of Midhat Pasha is the work of his son 'Ali Haidar Midhat Bey, which appeared in 2 vols. entitled Midhat Pasha, Hayati-i iyiyileyi, hikmati, mensü hayati at Stambul in 1325 (1909) (vol. 1: Taşkıri-i ibret; vol. 2: Miftahi-i Hafet, Hidaf press). — He had previously published The Life of Midhat Pasha. By his son 'Ali Haydar Midhat, London 1903, xii, and Midhat-Pasha, ta väi — son awwer. Par son fifs Ali Haydar Midhat Bey, Paris 1908, xxii. A kind of translation of these works is: Vasef Kamal Bey Hatatta, Muğżhəhur Midhat Pasha, 1st ed., 2 vols. (Paris, 1910), 2nd ed., 3 vols. (Paris, 1916). — Another work was given him which had not been accepted with reluctance and held for barely three months. On Feb. 17, 1874 he was again dismissed and retired once more to private life. He used the leisure thus forced upon him to work out the schemes which he later unfolded and which meant a decisive change in the orientation of the Ottoman empire. In August 1875 his old enemy Mahmud Nedim Pasha, who had again received the imperial seals, appointed him minister of justice but by November he had handed in his resignation which was accepted. The empire was then in a state of complete confusion rising, famine, an empty treasury and a hostile people. Midhat Pasha then composed his famous memorandum of March 9, 1876, which was to have such momentous results. On May 20, 1876 he entered the cabinet of the grand vizier Muterrif Ahmed Rushdi Pasha as minister without portfolio. In the night of May 30, Sultan 'Abd al-Aziz was deposed and Murad V raised to the throne of his fathers. On July 15, a proclamation issued in the name of the new sovereign used for the first time the word "constitution". Midhat Pasha was the soul of the new movement and he worked ardenty with a few kindred spirits to give Turkey a constitution. Sultan Murad V became insane and was replaced by his brother 'Abd al-Hamid; on December 18,
Leipzig 1878, p. 82 sqq.; [G. Dempoßoff], Snrail and Shoe Ptolemy, Vienna 1879, p. 237 sqq.; Carl Desse, Geschichte der Buchdruckerei in den Turkei, Vienna 1906, p. 37 sqq. But the western sources have mainly to be used with caution, as the very varying statements about its origin, date and place of birth show.

(From R. Baringer)

MIDILLÜ, Turkish form for Mytilene, name of the island of Lesbos, which in the middle ages had already taken the name of its capital. The island is about 650 sq. m. in area and has two large gulf, the Gulf of Kalloni (Kaláma) and that of Jeros (Kelemia). When Mytilene first became acquainted with the island, it belonged to the Byzantine empire. Its conquest in the reign of the emperor Alexios Comnenos in 1084 (1054) by the Emir of Smyrna, Techas, father-in-law of the Seldjük Khalil Arslan I b. Sulaiman, was only temporary. After the conquest of Constantinople by the Latins (1204), the island passed for a time to the Venetians. In 1355, the emperor John Palaeologus, on the marriage of his sister with the Genoese Francesco Gattilusio, granted the island to the latter as a fief. It belonged to this family until Mehmed II the Conqueror took Constantinople in 1454. The last Sultan to pay tribute to the Turks, to which the Gattilusio had in the hope of retaining their position readily agreed; and when the grand vizier Hamza Pasha in 1456 anchored off Lesbos on the voyage to Rhodes, the prince Döno Gattilusio sent rich gifts to the Turkish commander through the lieutenant Ducas. After the death of Dornno, his son and successor Domenico sent an embassy under the same Ducas to try to gain the good graces of the Sultan, but the Turks imposed rather harsh conditions. In 1458 Domenico was slain by his brother Nicolaus who had escaped from Lemnos and the latter seized the island. On the pretext that he had given shelter to the pirates that harassed the A. Minor coast and had committed other acts hostile to the Sultan, Mehmed II in 1462 set out against Lesbos. The grand vizier Miqmat Pasha conducted the siege of the capital. It was taken on 27 days' bombardment and the Sultan received the surrender of the island in person (Xedji Pasha Zade, ed. Giese, Leipzig 1899, p. 158 sqq.; Hadji: Khalifa, Tuhf el-Abyad il-Efsar al-Ra'is, Constantinople 1844 [1728-1729], fol. 6²; Hammer, ii. 15, 67; Zinkeisen, ii. 226, 239 sqq.). A mosque in the citadel of Midillü was built by Fath; cf. Newton, i. 117; Koldewey, p. 11.

Attempts of the Venetians under Orsato Guisti-nian (1464) to take the island from the Turks failed (v. Hammer, ii. 81 sqq.). An expedition against the island in 1500 of the allied French and Venetian fleets was thwarted by the Turkish forces (v. Ham-mer, ii. 337; Hadji: Khalifa, ed. supra, fol. 108). Since that date the island has been in undisputed possession of the Turks during the Balkan War it was handed over to the Greeks on Nov. 24, 1912 and finally conceded to them by the Peace of London of May 30, 1913, although with certain reservations by Turkey.

The island, the largest in the Archipelago, belonged to the "wilayet of the Archipelago" (Djezzar-i Bahr-i sefid) and formed in it the sandjak of Midillü with 5 kazas: Midillü (with the capital, in the east of the island); Pilemar (= Plomary, in the south); Molova (= Molivo, the anti- cient Methynna, in the north); Sighri in the west of the island; and lastly the Junda Islands (Maskonisi) of Midillü; cf. Sani, Kamal d'Al-Ma'moun, i. 1894, 4243; Cuinet, La Turquie d'Asie, ii. 449—472; cf. also: Suleiman Fa'is, Rikhal Derya, i. (Stambul 1929), p. 55 sqq. — According to Bae-deker 1014, the island had 140,500 inhabitants of whom 6/7th were Greeks and 1/7th Muhammadans.

Bibliography: On the island in ancient times and most of the questions connected with it, see the very full article by Burchner on Lesbos in Pauly-Wissowa-Kroll, xii. (1925), col. 2107—2133.

A full description for the earlier Turkish period is given in his Turk Piri Re's in his Behiye written in 1521; this section has been translated by Maximilian Bittner in Paul Kretsch- mer, Der heutige Littische Dialekt (= Schriften der Balkankommission, 11,4), Vienna 1905, col. 579—584 and in my ed. of the Behiye of Piri Re's (Berlin and Leipzig 1925), chap. ix.: Midillü, text p. 21—26, transl. p. 32—42.

The most important later descriptions are those of Pococke, Description of the East, v.1/1, London 1745; Newton, Travels and Discoveries in the Levant, London 1805, i. 37 sqq.: A. Conze, Reise auf der Insel Assyros and R. Koldewey, Die antiken Bauwerke der Insel Lesbos. In Auftrage des Kaiserlich-Deutschen Archologischen Institutes untersucht und aufgenommen, Berlin 1890. This book gives details of early explorations of the island and accurate maps on a larger scale of sections of it.

MIDIMARA, the censer, from jamara, "glowing coal". The Arabic name for the con- stellation of the A. where the Scorpion (scorpio) in Arabus, arc in Uccco, Manulis etc.) or censer (jaqar in Prome, tarbun in Geminius.

MIDRĀR BANE. [See SULAMITI.]

MIHNA (A.), noun derived from the root m-h-n, appearing in the Arabic verb mahan, "to smooth", and in some Ashtopian derivations, tsg. (e.g. the trials to which the prophets and especially the family of Muhammad. the 'Alids, are exposed in this world. cf. Goldzweig, Vorlesungen, p. 212 sqq. 261.), inquisition. In the latter sense it is usually applied to the Mu'tazilite inquisition and persecution extending from 215—234 (833—849). On the word form of the verb, mahan, "to torture", especially the so-called Inquisition des sultans mustabik, vide, p. 81, note 101.

The first Mu'tazilite inquisition was instituted towards the end of his reign by the A. al-Ma'mun (q.v. 195—218 = 835—853), who was a Mu'tazilite by conviction, especially with regard to the creation of the Qur'an [cf. the articles AL-QUR'AN and MU'TAZILITES]. He sent a letter to the governor of Bagdad, l-ḥāk b. Ibrāhīm, ordering him to cite before him the kāfis under his jurisdiction in order to test them in accordance with their opinion on the Qur'an (Tabari, ii. 1112 sqq., transl. by Paton, ed. cit., p. 57—61; Kahr Bu-Akhd, p. 338 sqq., cf. Abu l-Mahāsin, b. 556).
of the caliph (Abu l-Maḥāṣīn, i. 683; Patton, p. 115 sqq.), although it is said that he had restrained his father from prosecuting the miḥna any further. He ordered the governors of the provinces to know the consequences of this order. Āḥmad b. Ḥanbal in the meanwhile had become a favourite teacher; when, however, he heard of the renewed activity of Āḥmad b. Abī Dūād he refrained of his own will from teaching, and was henceforth left alone.

Al-Walīḥī personally intervened in the trial of one of these persons. The theologian Āḥmad b. Naṣr b. Mālik al-Kūzātī who had moreover taken part in a conspiracy (Weil, ii. 341; Patton, p. 116 sq.; cf. Tabari, iii. 1343 sqq.; de Goeje, Fragm. hist. arab., p. 529 sqq.). Questioned about the Kurʾān, al-Kūzātī replied that he believed it to be the word of God. The trial had not proceeded much farther, when the caliph put an end to it and personally made an attempt to behave his victim, in which he did not succeed without the assistance of some one more skilled than himself (Shaḥbān 231 = 846).

Other persons of note who remained steadfast under al-Walīḥī were Naʿūmān b. Ḥammād and the well known Abī Yaḥyā Yūsuf b. Abī Bawāji, the pupils of al-Salih, the editor and one of some of his works (Patton, p. 119). Both died in prison. As an instance of the fanaticism of Āḥmad b. Abī Dūād it is related that, when in 231 (846) it was proposed to ransom 4,600 Muslim prisoners from the Byzantines, he proposed to abandon those who would not admit the creation of the Kurʾān; this was actually done (Tabari, iii. 1351 sqq.; Fra.m. hist. arab., ii. 532; Abu l-Maḥāṣīn, i. 654; Patton, p. 120). It is said that al-Walīḥī gave up his Muʿzatīite views before his death. The miḥna continued to exist during the first years of the reign of his successor al-Mutawakkil (232—247 = 847—861), but in 234 this caliph stopped its application and forbade the profession of the creation of the Kurʾān on pain of death.

MIHRAB, the seventh month of the Persian solar year which runs from Sept. 17 to Oct. 16 and therefore begins the autumn. Mihr is also the name of the 16th day of each month. To distinguish between the month Mihr and the day, the former is called Mihr Māh and the latter Mihr Kūs. On the 16th Mihr, the day when Mihr Māh and Mihr Kūs coincide, called Mihr-gān, one of the great feasts begins, which is also called Mihr-gān and lasts till the 21st of the month. The first day of the feast is called Mihr-i ʿImāma, the general Mihr, the last Mihr-i khitān, the special, proper Mihr. The associations of this feast partly relate to the beginning of autumn, partly to the sun, whose name the month indeed bears, and partly to herioc legend: Mihr-gān is the feast of Firdūsū’s accession after his victory over Ḍaḥḥāk. The rites observed at the feast see the sources mentioned below.

**MIHRĪ MĀH SULTĀN. daughter of Sulaimān the Magnificent. Mihrī Māh (sometimes also written Mihr-ū-māh: cf. Karačelēbī-āde, Kaušat al-Ebrār, p. 458) was the only daughter of Sulaimān the Magnificent [q.v., as well as F. Babinger, *in Mißer der Politik*, III, Berlin 1933, p. 39—65]. While still quite young she was married to the grand vizier Rūstem Pāsha (cf. F. Babinger, *G. O. W.*, p. 81 sqq.) in the beginning of December 1539 (cf. J. H. Mordtmann, *in M. S. O. S., Year xxxi., Part 2, p. 17), but the marriage does not seem to have been a happy one. She used her enormous wealth — St. Gerlach in 1576 estimated her daily income at not less than 2,000 ducats (cf. *Tagbuck*, Frankfurt 1674, p. 266) — for many pious endowments. Among these the most important were the two mosques built by her, one in Şam at the Adriamopite gate (*Edirne Kōtus* Diyarbakır, and Eivlyı Şam at Sivas, 1567; Hājī Ḥusain, *Hadībat al-Dīnārîn*, i. 24 and J. v. H. Hammer, *G. O. K.,* ix. 50, No. 91) and the other (Mihr-i Māh Sultān Dāmānī; cf. Eivlyı, op. cit., i. 466 472 473; Hājī Ḥusain, op. cit., ii. 186 and J. v. H. Hammer, *G. O. K.,* ix. 128, No. 741) near the landing-stage in Şamatur. The second was the work of the great architect Sinān [q. v.] who built it in 954 (1547) and also erected a palace for Mihr-i Māh in Şamatur near this mosque. After her husband’s death (July 8, 1561) Mihr-i Māh Sultān intervened in political matters on several occasions; for example, she continually urged upon her father that the conquest of Malta should be one of the main undertakings of the Holy War and offered to equip 400 galleys for this campaign at her own expense. She was still alive at the reconciliation with her brother Selim and his accession. The correct date of her death, Jan. 25 1578 is given only by Gerlach, *Tagbuck*, p. 449: the date in Karačelēbī-āde, op. cit., p. 458, namely Dhu l-Ka’dā 954 (Jan. 20—Feb. 18, 1577), is a whole year out. She was buried beside her father in his turbe (tomb-mosque) in Şamatur. From her marriage with Rūstem Pāsha two sons and a daughter Vāhid Khānum were born: the latter married the grand vizier Ahmad Pāsha.

**Bibliography:** In addition to the references in the text, cf. Mehemed Tḥuraytā, *Ṣīḏīl-i ṣelḥmīn*, i. 83; J. v. Hammer, *G. O. R.*, iii. 393, 425 and pass.: a description of the circumcision festivals of her sons Dāhāngīr and Bayāzīd is given in the Turkish MS., No. 34, fol. 453 sqq. in the Pruss. State Library (cf. W. Pertsch, *Verselhinas*, 66). (FR. BABINGER)

**MIHRĀB (see also MASHHĪD, D. C.) Derivation of the niche.** The mihrāb niche has been given a twofold origin by Orientalists and historians of art: from the Christian apsis and the Buddhist niche. “Tout ce qui reste de la bastique dans le sanctuaire de la mosquée c’est la qibla, sorte d’abside atrophée” says M. v. Berchem in his *Notes d’archéologie arabe* (cf. *A.*, vol. xvii., 1891, p. 427).

The introduction of the niche mihrāb into the mosque is no doubt rightly ascribed to the Omeyyads, who were the first to build mosques of any size, under the influence of the Christian architecture of their lands. The simple Arabian and Persian village mosques have no niches— even at the present day. According to tradition, Walī ʿAbd, when he visited the mosque built for him with the help of Byzantine masons in Medina, was reproached with having built the mosque in the style of Christian churches (Wustenfeld, *Geschichte der Stadt Medina*, Abh. G. W. Götta, i., 1861). When ʿUmar b. ʿAbd-al-ʿAzīz in his Syrian buildings had the kīlā built in the form of a niche, he provoked the opposition and anger of the zealots on account of the similarity which was thus produced between the mosques and churches. H. Lawrens has collected a number of references, in which the mihrāb is roundly asserted to be copied from the Christians and to have become naturalised only with difficulty and not till the second century (Zayyāt, p. 94, note 1 quoted by C. H. Becker, *Zur Geschichte des islamischen Cultus, Islamstudia*, p. 493). Perhaps the custom of placing several niches in the kīlā wall of large mosques was also a gesture against the appearance of imitating the Christian custom. On the other hand it should not be forgotten that the semicircular niche was one of the most widely disseminated ornamental in Mediterranean architecture, and its adoption was much more natural than an imitation of the much larger apses. The derivation of the mihrāb from the Buddhist or Hindu niche for idols has as much or as little in its favour as the other. For it was only exceptionally that the Indian idol stood in a niche, but regularly it was in a separate quadrangular cell. The separate phenomenon of the eastern polygonal mihrāb developed by the Turkish peoples, which was brought by the Seljuks and other Turkic Mutasarrifs to Mesopotamia from the end of the 9th century can only be explained satisfactorily as a deliberate creation of its makers. As the heart of the house of worship, the mihrāb forms the culminating point in the equipment of the mosque, and as the carrier of the varied forms of decoration and continually changing systems of Muslim decorative art through the centuries is of considerable importance in the history of art. As a barometer of culture and art the mihrāb, if properly read, shows the prevailing tendency of art and its changes as a result of social changes. The writing of its history is a task for the future and it can only be outlined here. *History.* The kīlā was originally indicated not by a niche but by some mark such as a strip of paint or a flat stone marked in some way. Ac-
MIHRĀB

cording to Abū Hurairah, it was introduced into the first mosque of the Prophet in Medina: *In-
stead of a mihrāb or prayer niche a block of stone directed the congregation; at first it was
placed tangent to the boundary, and it was removed to the southern when Mecca
became the Kiblah* (R. F. Burton, Personal Narrative of a Pilgrimage to Mecca and Medina, 1874,
ii. 72). The oldest mosque of ʿAmar in Fustāt of
21 (642) had no niche, but the kibla, accurately
calculated, was marked (Corbett. J. R. A. S., 1890,
p. 757–800). The Arabian use of slabs to indicate
the kibla instead of a niche survived, alongside of
the mihrāb and in spite of it, for several centuries
within and without Arabia. The mosques in Arabia
proper are still unknown and only a few buildings
on the borders enable us to draw some con-
clusions. The runs of the xith–xith century on
hal在当地 (Diez. Eine syrische Moscheeum auf der Insel Bûhrain, Fahrb. d. assiat. Kunst, 1925,
II. Halbband) and the mosque of Kisimkazi on
Zanzibar (J. R. A. S., 1922, pl. iii.) show examples
of a type later well known. Such slabs of
or stucco were frequently built into the front
pillars of the ābādān down to the xiliith century
to indicate the kibla. They are to be found in
Mogul (Herzfeld, Arch. Reis., ii. 277, 280) and
they would certainly have been found in Baghdad
for example had the old mosques survived there.
They gave the caliph and his representatives the
opportunity, so limited in Islam, of perpetuating
their names and bestowing themselves helpers of
Islam by erecting such flat mihrābs. Examples are
the richly ornamented stucco slab presented
by the vizier al-ʿAfdal in the name of the Caliph
al-Mustaʿṣir (485 = 1092) to the mosque of Ibn
Ṭūlūn and its counterpart ordered by Sulṭān Lāḏūn
(696–698 = 1290–938) (Illustr. in F. Flury,
Die Ornamente der Hürim und Ashar-Moschee, 1912, pl. xvi.). When Muslim architecture is
deliberately developed on a grand scale however we
find the mihrāb in the xith century as a semi-
circular shell-shaped niche flanked by pillars, and
this is the form that has survived essentially with
local variations to the present day.
Mesopotamia. The oldest example here is the
mihrāb of the Džām al-Ḵbāṣ-ski in Baghdad.
It consists of a single marble block 5′ 4″ inches
high and 3′ 8″ broad with a semi-circular niche in
it 1′ 2″ deep. The columns have spiral grooves
in them and Corinthian-like capitals upon which
the horse-shoe-shaped shell is directly placed
without an abacus. The niche, otherwise smooth, has
in the central axis a perpendicular strip of ornament
as its sole decoration, which is quite devoid of
any structural function and is quite in the textile-
like style of late ʿIbāḍite decoration. Herzfeld
supposes that this mihrāb was brought by water
about 145 A.H. for the newly founded Baghdad
from North Syria or Djīyār Bakr and suggests for
this similar mihrābs of Northern Mesopotamia,
the similar niches in Christian churches as models
(H. J. 35 sq.). The Ḵbāṣ-ski type of mihrāb
is found again in the walls of Amur, which were
built in 297 (910) by al-Nuṣrād (M. v. Berchem.
Imitation aus Syrien etc., coll. by Frh. von
Oppenheim: The Bayudh. Prize in Samarra. Fig.
in Berchem-Strz.), in Amurā, fig. 12 (1922,
pl. III sq.) the change to the pointed arch
however took place here probably by the tenth
century, certainly in the xith A.D. Instead of the
semicircular we find also flat niches cut out in
the form of a rectangle e.g. in the tomb of a
holy man in Abū Hurairah (Sarre-Herzfeld, Arch.
Reis., i. 133 sq.). The use of stucco, which is so
easily worked, hastened the development of the
form of the niche in the xith century. In the
mausoleum of the Forty Faithful (al-ʿArbaʿin) in
Takrit there is a stucco mihrāb of 690 (1261–62)
with a stepped arch in profile. The tomb of Zāin al-
Sindjār of about 657 (1258) contains a richly
decorated stucco mihrāb completely covered with
ornaments and scrolls (Arch. Reis., p. 308 sq.,
pl. iv.). This wealth of decoration may in turn
have reacted on the niches of stone, as the rich
mihrāb of the great mosque of 543 (1148) and
other niches in Mōsul show (Arch. K., pl. v.
xxi. xciii.). In contrast to Persia, stone remained
the usual material here. We now find twisted
little pillars with vase bases and vase capitals,
zigzag arches and richly fluted bands with plumed
furnacions (mihrāb of Bād-i-Dīn in Mōsul). The
Hellenistic massel-shell, so far as it still survives,
was easily worked, and structural ornament
into ornament. The rectangular frame of the arch
of the niche completed the adaptation of an originally
Hellenistic type to the oriental spirit of architecture.
In the vacant field below the couch we here frequently
have a musel shell carved in relief. We find vari-
ations like the flat rectangular niches with the base of
the couch protruding as in the Džāmil al-ʿOmariya
(Arch. K., pl. cxxxv.). When however we find in
Pandjāb ʿAli in Mōsul in 686 (1287) i.e. under
the Ilkhan Argūn, a polygonal mihrāb with sa-
lacte canopy, we have apparently eastern, Sel-
dūk influence, which produced the abstract stereo-
metric crystallisation of the details and general form.
Their seeming structural function is taken from
the flanking pillars by direct continuation around
the arch. Finally we may mention the occurrence of
corner mihrābs in Mesopotamia when the kibla
demanded it and it was not possible to orient the
whole building properly. Such exceptions were
confined to sepulchral domes (Māshhād Ṣīmān ᾃn-
Syria. The Mosque of the Omayyads in Damascus
has twelve mihrābs in all (cf. the plan by A. Dické,
supplemented by C. Watzinger and K. Wutzinger,
Damasus, Die islamische Stadt). If systematically studied, they would probably give a conspectus of
the development of the mihrāb in Syria. Only the
principal mihrāb appears, at least in its architectonic
development, if not in its embellishment to go back
to the time of the foundation of the mosque. The
other niches were put up mainly in the sixth century
and later (cf. 1890, ser. vii., p. 158). The two
favourite styles of decorating the walls in use among
Byzantine workmen under Walid were essetībāte
and glass mosaic. They must have been used almost
exclusively for the early mosques along with carved
mouldings. The description by Ibn Djbair, who
visited the mosque in 580 (1184) i.e. not till
after the first great fire of 461 (1069), gives us an
idea of the mihrāb as it then was, probably still
predominantly Omayyad. The mihrāb wall was
covered with marble slabs: the arch of the niche
had inscriptions in gilt letters on a blue ground,
probably in mosaic, and had a quadrangular frame.
The wedges between arch and frame were decorated
with the famous “vineyard of Walīh”, as we may
safely assume, in mosaic. The vaulting of the niche
was probably adorned in the same way. The frame
of the miḥrāb was crowned by a miniature arced, a motive which with others was taken to Spain (see below) and above this the wall was adorned with views of celebrated towns and trees in mosaic, the Ka'ba in the centre. Remains of these mosaics still survive and the mosaics discovered a few years ago in the mosque by the French give us an idea of the splendour of their colouring. The miḥrāb destroyed in the fire of 1803 had a miniature arced (illustr. in Saladin, Manuel, fig. 35); it had also an arch encircling it above, which also suggests an Omayyad origin. (According to Marqās, La mosquée d’el-Walid à Damas et son influence sur l’architecture musulmane d’Occident, R. A., L., where the dependence of the mosque of Cordova on that of Damascus is discussed, in Damascus all arches were originally horseshoe-shaped — and as in the rebuilding — arranged in two stories as we see from old descriptions). Of the miḥrāb of the Ḥārām al-ʿAṣāf we know that it was covered with marble in 583 (1187) by order of Saladin. It has a wide niche formed of segments, with a pointed arch. The two sets of pillars with acanthus capitals are earlier than Saladin (Saladin, op. cit., fig. 28). Le Bon mentions two peculiar miḥrāb niches in the transept of the mosque (La civilisation arabe, p. 148 and fig. 68). Under the Aljūḥids the use of interlacing patterns in stone was popular in Northern Syrian architecture. They are sometimes teeliner, sometimes rounded interlaces of textile origin which were used on the fronts of doors and prayer niches either in profile or as bands of stone in alternating colours. The decoration of the miḥrāb thus received a remarkable stimulus, as the prayer niches of the Madrasa al-Sultāniyya and the Ḥārām of Madrasa al-Firdaws of 633 (1235), both in Aleppo, and the miḥrāb restored by Ṣubīl of the Kubbat al-Silsileh in Jerusalem, etc. (picture in Creswell, The Works of Sultan Baibars, B. F. F. A. O., pl. xxvi., pl. 28, 29). Another peculiarity of the Syrian miḥrāb is the occasionally found adornment of the vaulting of the niche with — it is true very rounded — views of women and men in opus sectile, as an example of which we may take the miḥrāb of the great mosque of Tripoli founded in 603 (1294) (cut. in M.I.F.A.O., vol. xxv. 1909, pl. 5). The later Syrian miḥrābs continued the traditional elaboration with different colourful mosaics to which Turkish influence added the stalactite conch.

Egypt. The principal miḥrāb of the oldest mosque that has survived in Cairo, the mosque of Ḥāmid b. Ṣulṭān, is thought to be the original one in its general structure. The miḥrāb frieze with inscription at the level of the capitals and the marble covering below belong either to the restoration by Kālān or may probably to that of Ladjīn. Thus a type was created in Cairo in the middle of the third century which is characterised by the double stepping of the niche with two pillars on each side. In this case taken from old Christian buildings and by the studded pointed arch and rectangular frame; this form became the Egyptian model in place of the Māqṣūrī potamian conch, the top of the niche was smooth and probably, as in Kānawān, painted. The narrow top continued through the Fatimid period while the double recess of the niche with pillars gives all later Cairene miḥrābs their character. A stucco miḥrāb of the fourth (tenth) century, only the upper third of which has survived in its original form, of which there is a copy in the Arab Museum, had the same structure with two pairs of pillars. The conch was imposed later (Flury, Ein Stückmiḥrāb des IV. (X.) Jahrhunderts, Sarre-Festschrift, 1925, Fig. 4.-3). The stucco miḥrāb of the sepulchral mosque of Dījiyūṣī on the Muḥāymin in Cairo, a century later (478 = 1085) and particularly richly decorated, has a simialt niche with a high pointed top (cut. in Flury, Ornamente lxxiv. cit., pl. xii.; Springer, Heilb. d. K., vi., fig. 400). It is to be assumed that the original miḥrābs of the Fāṭimid mosques of Ḥākim and al-Ẓāhir also belonged to this group. The al-Akmar mosque, completed in 519 (1125) introduced a new motif in its façade, which was much imitated in Cairo, the placing of a row of ribs like the corrugation of a shell along the top of the niche. The stucco miḥrāb already mentioned, a copy of which is in the Arab Museum, must have been embellished about this time by a mussel shell. The miḥrāb in the sepulchral chapel of Shadjarat al-Durr [q. v.] the widow of Sultan Ṣulṭān Naṣrān al-Din Ayūb of c. 648 = 1250 (fig. in R. L. Devonshire, Some Cairo Mosques, London 1921, p. 32) shows this fashion in a much more decided and more advanced muqarnas stage. Such variations were however the exception. On the other hand the stucco miḥrāb survived down to the Mamlūk period Creswell, etc. ascribes the stucco miḥrāb on the outside of the north wall of the mosque of ʿAmr, rebuilt by Sulṭān Baibars, to the time of Baibars on grounds of style (658—676 = 1260—1277) (The Works of Sultan Baibars, F. F. F. A. O., fig. 400, 1926). The splendour of the exceedingly thick stucco ornamentation in relief is here increased by the muqarnas in the miniature arceding of the upper part of the niche. Stucco decoration thus reached its last effective possibilities. With the Mongol invasion of Syria, Syrian influence on Egyptian art was renewed (Cairo also benefited by the taking of Mōṣul by the Mongols in 653 = 1255 and the resultant migration of the celebrated coppersmiths of Mōṣul to Cairo, work which this time on the art of the metal-workers flourished, cf. Creswell, op. cit., p. 182). Syrian influence also brought the Syrian miḥrāb overlaid with marble slabs and stone mosaic to Egypt, where it drove out the other types and became predominant. The oldest prayer niches of this new kind appear in the buildings of Kālān at the end of the viiiith (xiiith) century. The plastering double pillars give them their Gothic grace and elevation. The arches are usually composed of alternating coloured wedge shaped stones serrated in various ways. The walls of the niches are decorated with mosaic in geometric patterns between miniature arceding and the conch vaulting overlaid with light and dark strips of colour alternating (often zigzag). Exceptionally we also find glass mosaic, as in the masjid of the Mārisīn of Kālān. Under the late rulers of the Circassian Mamluks the decoration of the niche reached its height. The inlaying was done with all kinds of costly materials such as mother-of-pearl, turquoise, lapis lazuli. (Madrasa of Aḥṣāf b. Murkāb and al-ʿĀmīn: cf. Briggs, Media. arch., fig. 119 and 127).

A small group by itself is formed by the three portable miḥrābs of the viith (xivith) century from al-Ẓāhir, Sayyida Rukayya and Sayyida Nafīsā which are now preserved in the Arab Museum.

Mağrib. The history of the miḥrāb in the
western lands of Islam begins with the prayer niche in the great mosque of Kairwan. It was not the direct model for the later miḥrābs — this was reserved for the portal of the library of this mosque — but with its wide semi-circular niche and the slightly rounded but still pointed arch it forms the transition to the western form of miḥrāb. The pillars of mottled red and yellow stone rest on late antique bases and support pseudo-lycanthus porphyry capitals the abacuses of which are decorated with Kufic inscriptions. The wall of the niche is covered with marble slabs, some perforated, some carved in relief, the frames of which also bear inscriptions Beland is a recess. The vaulting of the niche still shows traces of having been painted with vine tendrils arranged in circular patterns, which remind one of Mshatta (pictures in G. Marçais, Confepe et palpons de la Grande Mosquée de Kairwan, 1925, pl. viii.). The frise separating the recess and the vaulting of the niche, and the surrounding walls are covered with the famous lustre tiles made, in some Baghdad and some by a Baghdad artist in Tunis, and presented in 281 (844) by Iḥšāb b. Ağḥāb. This remarkable miḥrāb of the early period, when Islam was still in search of a style, thus combines all that the empire could produce in decoration, sculpture, painting, both richly brightened by gold and shining tiles. The fully developed western style is found a century later in the miḥrāb of the Mosque in Cordoba. This miḥrāb, built by Hākim II about 970, consists of an isolated hexagonal space 12 feet broad and 23 to 26 feet high. One side is formed by the wall containing the door. The floor and walls are covered with regular pieces of white marble, above are a frise of inscriptions and the cornice, on which a richly carved niche wall with clover-leaf arch on marble pillars with gilt capitals forms the upper part, which again terminates in an enriched frise and is covered by a single piece of marble in the shape of a musel shell. In the inscription on the outer wall the artist is mentioned "the work of Badr b. al-Khājiya." The historically important part here is the entrance wall to this chamber, which consists of a horseshoe-arch gateway with rectangular frames and miniature arceding at the top. This form of wall, which now become typical for miḥrāb- and portal walls in most lands of the Maghrib and shows its own course of development, has been traced to the portal wall of the library of the great mosque in Kairwan as the earliest model, or both go back to a common Persian original (cf. Marçais, Manuel, i. 264 sq.) In Cordoba we meet with a special shape of the miḥrāb recess, the origin of which is doubtless different from that of the niche and goes back to an original with special functions connected with the cult of relics and of the dead. According to tradition, a relic of the Prophet was actually preserved in this space and the believers used to pay reverence to it in a sevenfold circumambulation. A quite singular, similar, isolated miḥrāb is found in the madrasa in Khargird, Khurāsān (cf. Ma‘gird and below Persia). (Whether here we have the influence of the pradakshina of the Indian cult of relics cannot be settled. The circumambulation of altars, tombs of saints, and other sacred objects was of course a widespread custom in northern lands also) Horseshoe-arches, multiple rectangular border and miniature arcade are the typical elements of the henceforth canonical miḥrāb wall. The wedge-shaped stones of the horse-shoe arch are not serrated in complicated fashion, as in Egypt and Syria, but usually alternate in colour and are all smooth, as in Cordoba, or alternately smooth and carved in relief. In Cordoba the spandrils are still filled with palm-branches and acanthus-like tendrils in relief and the two borders decorated with Kufic inscriptions (cf. R. Amador de los Ríos, Inscripciones arabes de Cordoba, Madrid 1892). The niches of the miniature arceding with clover-leaf arches are covered with mosaic (piet. in E. Kühnel, Maurische Kunst, K. d. O., pl. 13, 14). The wall of the pentagonal miḥrāb niche in the great mosque of Tlemsen of about 1155 A.D. is similarly formed (piet. in Kühnel, op. cit., pl. 24). But we already find here in the spandrils the isolated rosettes which first appear on the miḥrāb of the Aljafería in Saragossa of the second half of the eleventh century (piet. in Marçais, Manuel, fig. 215). The miḥrāb wall of the Almohad mosque in Timițăl in the Atlas (1153 A.D. shows, instead of the tendrils, a woven pattern such as is often found on carpets (piet. in Marçais, op. cit., fig. 216); and in place of the miniature arceding we have round windows alternating with flat niches. A divergence from the canonical type is found in the miḥrāb of the mosque in Tozeur built in 590 (1194) in the oasis of Djerid (piet. in Marçais, op. cit., fig. 218). It has a double arch and profuse ornamentation, on the wall of the niche also. Marçais explains the divergence by saying that the mosque was built by a conqueror of Almoravid descent in the Almohad period by workmen from Andalus. The niche bears the stamp of hurried improvisation. The miḥrāb here reproduced, in the Sidi Ogha mosque in the Sībi oasis at Biskra which is considered the oldest mosque in Algeria, may be regarded as an example more in the popular tradition, therefore particularly interesting. The date is unknown. The decoration belongs to the field of Khirbuni. Under the dynasties which succeeded the Almohads from the xii.—xiv. century the Cordoba type remains the model in principle. Only the proportions are more slender, the horseshoe arches more elegant and, instead of the miniature arceding, windows with coloured glass in a stucco framework have become naturalised. The isolated miḥrāb chambers have given place to semicircular or polygonal niches. Examples are the miḥrāb of the mosques in Taza, Sidi bel Hassan and al-Uṣbā in and near Tlemsen, in Fès and the Hamlet of Granada. The latter covered with mosaic (piet. in Marçais, op. cit., fig. 336—338 and P. Ricard, pl. x. xi.). In Tunis of the xv.—xvith century also the miḥrāb with flat round niche and horse-shoe arch of alternately coloured and ornamented stones and rectangular frame continued to predominate. The plinths are regularly covered with marble or tiles, while the niche vaulings are fluted like a musel shell.

Persia, Turkestān, Afghānīstān. The two earliest prayer niches in Persia, so far as is known, are in the mosque at Nayin, east of Isfahān, of the x.—ix. century A.D. (Viollet-le-Duc and Flury in Syria, 1921, pl. xxx and S. Flury, in Syria, 1930) and in the Towān at Khargird, Khurāsān, of the x.—xvi. century (Diez, Chrishānische Baudenk-märke, pl. 30). In spite of their different ornamentation, these

two stucco mihrābs are very similar. Both are rectangular niches flanked by inset 3/4 pillars with leaf capitals, with pointed arches diagonally set and thickly decorated with tendrils in a rectangular frame. The back wall under the arch presents a repetition of the architecture of the niche so that we have a niche in a niche. In Persia therefore, if Flurry is right in his early dating, perhaps as early as the third (ninth) century, a rich double framed style of mihrāb had been developed, which lasted down to the xivth century, as is shown by the next surviving monument of this group, the stucco mihrāb in the Masjīd-i Dūm'a in Isfāhān of 710(1310)(Diez, K. d. ist. Volker, p. 109, 2nd ed., p. 85). In the interval however the decoration, at first purely floral, had become mainly epigraphic, a transition that can be followed step by step from the xivth century. The stucco mihrāb of the mosque of Dījīyārī on the Mūkātām in Cairo of 478(1085) is also of importance for this sequence of development (pict. in Flurry, Ornamenten etc., pl. xvii).

But in Persia a second type developed alongside of the stucco mihrāb, the mihrāb decorated with lustre faience, with which this part of the decoration of the mosque and with it Persian faience reached its zenith. The lustre mihrāb of Khāgān of 624(1226) in Bīlīn (pict in Springer's Kunstgeschichte, vl. 458) and a similar niche from Warāmīn in the possession of the firm of Kelekan (Cat. of the Exhib. of Persian Art, London 1931) may be quoted as examples. These mihrābs show the same double niches as their stucco counterparts but are flatter, more framework than niche. In place of the curved arch, the canopy is a rectilinear gable, a change in shape probably mainly due to the material. The colours are predominantly a light blue ground with letters in dark blue relief and decorations in brown lustre. By the combined effect of the colours and the profuse ornamentation, these mihrābs have a truly fairlike suggestion and reach the highest ideal of Islamic decorative art. The mihrāb assumed a new form in the Timūrid period. Instead of the semi-circular or flat rectangular niche we now find under Turkish influence the polygonal — pentagon constructed out of an octagon — of larger dimensions than previously, broader and deeper. The ornamentation proceeds parallel with the usual Timūrid wall decoration. In the same way the plinth is covered breast-high with polygonal tiles and the walls above usually with flat miniature arcing, which pass into vaulted muğharašt painted or covered with tiles. Finally the frames and the scrolls of inscription filling them are frequently inlaid with that finely executed tile-mosaic which forms the glory of Timūrid architectural ornament. As examples may be mentioned the mihrābs in the praying chambers of the madrasa in Khağırd (Diez, Chur. Baukunstler, pl. 33. 1), the mihrāb of Isyārʿ Abī Walīn near Herāt (Niedermayer-Dietz, Afghan., fig. 174), the splendid prayer niche in the mosque of Džawar-Zade in Masjīd (Diez, K. d. ist. Volker, v. fig. 456 and 108) all of the xivth century. The mihrāb in the splendid madrasa in Herāt, now destroyed, may have been similar to that in Mīshhīd, here reproduced, having being founded by the same prince and probably built by the same architect (cf. above iii. p. 387). In the Safavid period, we find alongside of mihrābs with mosaic and muğharašt also painted niches, which show intertwining tendrils standing out in white from a brick red ground. Mihrābs like this are to be seen in the ruins of the Mūsālā outside Isfāhān and in Reshān, Khūrāsān (fig. Diez, Chur. Baukunstler, pl. 22, 3). They seem to have been very widely disseminated. It may be mentioned in conclusion that in place of a prayer niche in the Kūhā-īwān of the Timūrid madrasa in Khūrāsān, there is a rectangular windowless chamber, accessible by a doorway through the inner wall. The similarity with the mihrāb chambers frequently found in the Maghīb is remarkable and is discussed under Spain.

In India. No mosques earlier than the xivth century have survived in India. In the mosques of the xivth—xvth centuries the prayer niche in India is usually flanked by decorated Indian pillars adorned with Indian ornamentation. The gable-shaped panels over the niches are particularly ornamental. The wall of the niche is usually adorned in relief with a lotus rossette and a pendant vase out of which grow tendrils. Numerous niches of this kind are to be found in mosques of Gūḍjadēr and Aḥmadābād of the xivth—xvth centuries. An Indian peculiarity is the placing of three to five, sometimes even seven mihrābs in the kišār wall in keeping with the architectonic units of the main building, each marked by a dome (Djāmāf Masjīd in Bīrūn, and Champañīr, Gūḍjadēr etc.). There are also mosques with mihrāb chambers, which we can assume with Havel to be adaptations of the former cells for idols (Dhołka, Gūḍjadēr, Khāns Masjīd and Aḥmadābād). It is therefore not impossible that isolated mihrāb chambers outside of India, as in Khūrāsān, Persia, or even in the Maghīb, should be traced to Indian influence, although this feature is not found in the earliest mosques in Aṣmīn and Déhī. In Gūḍjadēr however these chambers might have been used as mihrābs in the oldest mosques and provinces with a sea coast and international trade may have had influence abroad (cf. Arch. Survey of India, Western India, vol. vii, Gūḍjadēr, Aḥmadābād). When Persian influence began to be felt under the Moghīl emperors, the Indian elements gradually disappeared from the mihrābs and their place was taken by the polygonal niche in the wall incrustted with coloured marble. Under Aḳbar Indian detail still survived. The arches of the mihrāb of the great mosque in Fāḥšār Sīkht, for example, are edged with a lacework of carved palmate frizzes; the material is stone but the inlay work imitates the Persian tiled mihrābs (pict. in V. A. Smith, A History of Fine. Art in India and Diez, K. d. ist. Volker, p. 229 and p. 141). In the court mosques of Agra and Déhī we find dazzling white marble mihrābs with coloured intarsia of flowers. The most splendid mihrāb in India and indeed in all the lands of Islam is the niche of the Friday mosque in Būlāpār, the former capital of the ʿĀdil Shāhī in the Dekhān. The only rival that it can ever have had is Wald's mihrāb in Damascus. Framed by a gigantic arch resting on double pillars, the pentagonal niche recess constructed out of an octagon goes deep into the wall on whose surfaces the motif of the niche is three times repeated. The central of the three niche areas is mystically marked by a girt eight-pointed star as the real kišār. In gigantic letters of gold the two sacred names Allah and Muhammad in the spandrels of the arch impress themselves on the hearts of the worshipper, and chime in
afresh in the drumshaped flanking pillars, which, in Bīdījāpūr decoration are frequently used as conventional ornament but are here of structural importance. Manāras and sepulchral domes crown the structure and their principal motive is again a niche in the centre. This imposing decoration is carried out in shallow relief and is painted with red, blue and black colours heightened with gold. In the rectangular fields on both sides and in the arches are inscriptions on bands and in medallions of which we give Cousens translation of one because it sums up Muslim philosophy in a nutshell:

"Place no trust in life: it is but brief".
"There is no rest in this transitory world".
"The world is very pleasing to the senses".
"Life is the best of all gifts but it is not lasting".
"Malik Ya'qūb, a servant of the mosque and the slave of Sūltān Muḥammad, completed the mosque".

This gilding and ornamental work was done by orders of the Sūltān Muḥammad Aḍīl Shāh, 1045" (1636 A.D.).

Asia Minor, Armenia and Turkey. The mihrāb took a development quite of its own among the Seldjūqs of Rūm. Instead of the descent of the niche of the high, Hellenistic round niche, we find here a prayer niche which rather resembles a hearth and is probably to be explained as an adaptation of the prayer carpet to this form of building. The appearance of these niches, which are thus of no structural significance, is however made up for by their stereometrically crystallised cone-shaped vaulting formed of cells. The Turkish art of the Seldjūqs brought as its dowry to the art of the Muslim world the Mugharnāt, the suggestion of which, it in turn owed to Buddhist art, for the Seldjūqs came from Central Asia where Buddhist art had long prevailed. During the short period of Seldjūq architecture in Asia Minor, the xiiith century, the form of the niches remained unaltered. They are low rectangular shallow niches with pillars built in without bases, which bear rhomboidal crystal bodies as capitals and come to a point with the conical cells of the vaulting. The spandrels and frames are inlaid with the usual Seldjūq white, blue and black tile mosaic (pict. in Löytved, Sarre, Springer-Kühnel and Dier, op. cit.).

The most important change undergone by this early Turkish mihrāb in Ottoman architecture was the raising of the supporting niche to its full height. The niche assumed polygonal form, i.e., it has three or five surfaces constructed out of the octagon, such as we find in India and Persia from the xviith century; it was however raised higher and looks more slender and regularly ended in a mugharnāt cone. The decoration consists mainly of marble and Turkish tiles. A moulded tinfoil frieze formed the usual framework for the whole. The combination of Byzantine and early Turkish elements, the forms and a certain rationalism in execution give these mihrābs that cold appearance which is peculiar to Ottoman art. The mihrāb and masjid apply also to mihrāb. The mihrāb has not yet had separate studies devoted to it. The following works have been specially used here: F. Sarre and E. Herzfeld, Archäologische Reise, 4 vols.; E. Herzfeld, Die Genese der islamischen Kunst und das Miḥrābproblem (for the Khasṣāki Mihrāb), in Iṣlāh, 1.; M. v. Berchem and J. Strzygowski, Anida; H. MIHRĀN, the name given by Muslim writers to the Indus (Sanskrit Sindhu), called by the Greeks Ἰδέας and Ἰδέα, by the Romans Sinus and Indus, and by early Muslim writers Aḥ-Ī Sind (the Water of Sind). The name is more particularly applied to the lower reaches of the river, after it enters Sind. Pliny writes of "Indus, incisus Sindus appellatur".

The Indus rises in 32° N. and 81° E., receives the Kābul river almost opposite to Ṭāk, and the Pāndjān, the accumulated waters of the five rivers of the Pāndjāb, just above Mīhankot. Near Kakh- 

mūr, in 28° 26' N. and 69° 47' E., the river enters Sind, and below Bakkar is locally known as Dāryā, "the Sea". It falls into the Arabian Sea in 23° 58' N. and 67° 30' E. Its drainage basin is estimated at 372,700 square miles and its length at a little over 1,800 miles.

The courses of the Indus and its tributaries have undergone, even in historical times, extensive changes of which it is impossible to give details in this article, and which have misled historians who have disregarded them. They have been minutely and elaborately described in J. A. S. I., vol. lxi. (1892) by the late Major H. G. Raverty, who has illustrated his scholarly monograph by a series of admirable maps.

MIHRĀN. [See Mīhr.]

MIHRĪ KHATŪN (originally Mīhr-i Māh), an important Turkish poetess of the end of the xviith and beginning of the xvith centuries. She belonged to Amasia, which produced a number of poets, and spent her whole life there. She was one of the family of Pār Iyās. Her father was a kāšī and wrote poetry under the makhhīs of Belaš. She inherited from him her poetic gifts and also

Bibliography: The references given under
received from him the poetic and theological training ascribed to her by Ewliyâ.

Not much is known of her life. This is in part to be explained by the reticence of the East regarding women. That in the East boys rather than girls are sung of in love songs is due not so much to a preponderancy of paederasty as to a disinclination to talk of women at all. She died in 912 (1506). Her tomb in Amasia is a place of pilgrimage. She belonged to the literary circle of prince Äymâd, the second son of Sultân Bâyâzîd, who was governor of Amasia in 886–918 (1481–1512). Of a circumcision festival in the konâk of the prince in 914 (1509), it is recorded that Mihrî was the chief of the poets present.

In spite of the love affairs ascribed to her and sung by her (with Iskender, son of Sinân Pasha, with Mu'ićayd-zâde [born 860 = 1456] and others), the Turkish biographers emphasize besides her beauty her virgin life, in spite of the glowing fervour with which she described her nights of love. Her nature was evidently not quite clearly understood by the teqkeredî. Contrary to the Oriental custom, Mihrî remained unmarried in spite of many wooers. It is not improbable that the experiences described by her are not quite inventions but evidence of her passionate nature which drove her to unfeathered love. Mihrî's great merit is that she did not suppress her femininity, so that in her poems she reveals a truly womanly soul. In this respect, she is the most personal among Turkish poetesses.

As a woman she found it doubly difficult, in view of the restrictions on her sex at the time, to win a place as a poet, as the study of the Persian poets was absolutely necessary for this. The energy with which she managed to achieve her aim is remarkable. Her chief model was Nedjâmî (d. 914 = 1509), the most important poet of the period, with whom she tried to compete. Most of her pieces are written in Nedjâmî's manner. She is not very original, but very few Turkish poets are. In language and in images she is conventional. But her freshness, directness and passionate feeling, in which no other poetesses equal her, are remarkable. Her eloquence and brilliant style were proverbial.

She left a Divân (edition in preparation by Martinovitch) and several treatises in rhyme. A number of her poems have been made accessible to us by Smirnow. According to Ewliyâ's statement (in MSS., not in the printed text), she also composed risâla's on fikû and farâ'îd.

(Th. Menzel)

MIKAL, the archangel Michael [cf. MAL'îk], whose name occurs once in the Qûrân, viz. in sûra ii. 92: "Whosoever is an enemy to Allah, or his angels, or his apostles, or to Gabriel, or to Michael, verily Allah is an enemy to the unbelievers". In explanation of this verse two stories are told. According to the first, the Jews, wishing to test the valor of the mission of Muhammad, asked him several questions, on all of which he gave the true answer. Finally they asked him who transmitted the revelations to him. When he answered, Gabriel, the Jews declared that this angel was their enemy and the angel of destruction and penury, in opposition to Michael whom they said to be their protector and the angel of fertility and salvation (Tabârî, Tâfîrî, i. 324 sqq.). — According to the second story, 'Umar once entered the synagogue (miqârat) of Madina and asked the Jews questions concerning Gabriel. They gave of that angel as well as of Michael an account similar to the one mentioned above, whereupon 'Umar asked: What is the position of those two angels with Allah? They replied: Gabriel is to His right and Michael to His left hand, and there is enmity between the two. Whereupon 'Umar answered: If they have that position with Allah, there can be no enmity between them. But you are unbelievers: more than asses are, and whoever is an enemy to one of the two, is an enemy to Allah Thereupon 'Umar went to meet Muhammad, who received him with the words: Gabriel has anticipated you by the revelation of: 'Whosoever is an enemy' etc. (sûra ii. 92; Tabârî, Tâfîrî, i. 327; Zamâkhsârî, p. 92; Bâdawî ad sûra n. 91).

We do not know of any Jewish traditions which ascribe to Gabriela hostile attitude towards the Jews. For the statements regarding Michael as communicated above, there is sufficient literary evidence. In Daniel xii. 1 Michael is called the great prince, the protector of the people of Israel; cf. Tâqûm Contin., viii. 9: "Michael, the lord of Israel"; Daniel x. 13, 21 where Michael is said to have protected the Jews against the kings of Persia and Greece; further 1 Enoch xx. 5 where he is called the protector of the best part of mankind: Testamentum Levi, xvi. 6; Test. Dan., vi. 2.

In Vita Adae et Eovâ, chap. xii. 294, it is Michael who orders Satan and the other angels to worship Adam. Although the story is mentioned several times in the Korân [cf. Inds.], there is no trace in Muslim literature of the role ascribed to Michael in Vita Adae et Eovâ: the only mention of Michael in the Muslim legend is that he and Gabriel were the first to worship Adam, in opposition to Iblis who refused to do so (al-Kisâ', p. 27).

Neither does Muslim literature seem to have preserved other traditions ascribed to Michael in Jewish Apocrypha (mediator between God and mankind, 1 Enoch x. 9; Test. Dan., vi. 2; 3 Baruch, x. 2), or in the New Testament (Ep. Jude, vi. 9: Michael disputing with the devil about the body of Moses; Revelation xii. 7 sqq.) — Michael and his angels
fighting against the dragon and the final discomfiture of the latter). Perhaps a faint recollection of Michael as the protector of mankind (the Jews, the Christians) may be found in the tradition according to which Michael has never laughed since the creation of Hell (Ahmad b. Hanbal, iii, 224). Further, however, Michael is rarely mentioned in hadith (al-Tahāri, ed. Mālik, the guardian of Hell, and Gabriel, appears to Muḥammad in a dream; Naṣaʿī, Ittiḥād, b. 37 where Michael incites Gabriel to urge Muḥammad to recite the Kūrān according to seven ahruf).

al-Yaʿqūbī mentions in a story of which we have no counterpart in Jewish or Christian literature either, which is not amazing, the story bearing an outspoken Shiʿite tendency. One day Al-lāh announced to Gabriel and Michael that one of them must die. Neither however was willing to sacrifice himself in behalf of his partner, whereupon Al-lāh said to them: Take 'Āli as an example, who was willing to give his life on behalf of Muḥammad (the night before the hījāra; Yaʿqūbī, ii, 39).

Michael is further mentioned by name as one of the angels who opened the breast of Muḥammad before his night journey (Ṭabarī, ed. de Goeje, i, 1157—59; Ibn al-Aʿārī, ed. Tornberg, ii, 96 sq.), and as one of those who came to the aid of the Muslims in the battle of Ḥadhr (Ibn Saʿd, n/f. 9, 19).

In the text of the Kūrān as well as in a verse cited by Ṭabarī (ed. de Goeje, i, 329), the name of the form is Mīkāl as if it were a mīfāl form from wakāla (Horovitz). A direct reminiscence of the Greek, probably also of the Hebrew and Arabaic, forms of the name is to be found in the tradition preserved by al-Kīsaʿī (p. 12), which calls Mīkhāl the attendant of the second heaven, in contradiction to Mīkāl, who is the guardian of the sea in the seventh heaven (p. 15). Other forms of the name are Mīkāl, Mīkāl, Mīkāl, Mīkāl, and Mīkāl. It is hardly necessary to say that in the magical use of the names of the archangels that of Mīkāl is on the same level as that of his companion (e.g., Zwemer, The Influence of Animism on Islam, p. 195, 197).

MIKĀT (A., mīfāl-form from w-k-t, plural mawākīt) appointed or exact time. In this sense the term occurs several times in the Kūrān (sūra ii, 185; vii, 138, 139, 154; xxvi, 37; xliv, 40; lvi, 90; lxviii, 17).

In hadith and ḥadīth the term is applied to the times of prayer and to the places where those who enter the ḥaram are bound to put on the iḥrām. For the latter meaning of the term cf. IHRĀM, 1.

Although some general indications for the times at which some salāts are to be performed occur in the Kūrān (cf. sūra ii, 239; xi, 116; xvii, 80; xxiv, 29), it may be considered above doubt that during Muḥammad’s lifetime neither the number of the daily salāts nor their exact times had been fixed and that this happened in the first decades after his death.

A reminiscence of that period of uncertainty may be preserved in those traditions which apply a deviating nomenclature to some of the salāts. The salāt al-ṣawr e.g. is called al-ḥadījir al-ṣāwī; the salāt al-maghrib, ʿīṣa; the salāt al-Īṣāba, ʿatama; the salāt al-fadjir, al-maghrib (Bukhārī, Mawākit al-Salāt, bāb 13, 19). In other traditions the term al-ʿatama as applied to the salāt al-Īṣāba is ascribed to the Beduins and prohibited (Mīlākh, Mawājīdīd, trad. 228, 229; Abū Dāwud, Mawājit, bāb 78; Ahmad b. Hanbal, Maḥānīd, ii, 10 etc.); cf. on the other hand Bukhārī, Mawākit, bāb 20; Mīlākh, Salāt, trad. 129 etc., where the term al-ʿatama is used without censure.

From some traditions so much may be gathered, that the — or at least some of the — Mīrājīs showed a predilection for postponing the times of the salāt (Bukhārī, Mawākit, b. 7; Mīlākh, Mawājīdīd, trad. 166, 167; al-Nasāʾī, Imāma, b. 18, 55; Zaid b. ʿAlī, Mawājīdī al-Fālīkh, No. 113).

In opposition to this a salāt in due time is declared the best of works (Bukhārī, Dīhād, b. 1; Mawākit, b. 5; Mīlākh, Imāna, trad. 158, 159; Tirmidhī, Salāt, b. 13; Bīrū, b. 2). In other traditions this is said of a salāt at its earliest time (Tirmidhī, Salāt, b. 13).

This early state of things is reflected in several respects in a tradition according to which Ṣumār b. ʿAbd al-ʿAzīz once postponed one of the salāts and was rebuked for this by Ṣumār b. ʿAbd al-ʿAzīz, who related to him that al-Mughira b. ʿAwha had once been rebuked for the same reason by Abū Masʿūd al-Anṣārī, on account of the fact that Gabriel himself had descended five times in order to perform the five salāts at their exact times in the presence of Muḥammad. Thereupon Ṣumār admonished Ṣumār to be careful in his statements (Bukhārī, Mawākit, b. 1; Mīlākh, Mawājīdīd, trad. 166, 167; al-Nasāʾī, Mawākit, b. 10).

Some early groups of traditions affect to reproduce reminiscences of the practice in Madīna in Muḥammad’s time.

a. the salāt al-ṣawr was performed at noon, when the sun was beginning to decline (Bukhārī, Mawākit, b. 11).

b. the salāt al-ʿāṣr when the sun was shining into ʿAwha’s room, no shadow being yet cast there (Bukhārī, Mawākit, b. 13; Mīlākh, Mawājīdīd, trad. 168). After this salāt people had still time to visit the remotest parts of the town, while the sun was still “alive” or “pure” (Bukhārī, Mawākit, b. 1, 13, 14, 15, 21).

c. the salāt al-mīlākhīd was finished at a time when people could still perceive the places where their arrows fell down (Bukhārī, Mawākit, b. 21).

d. the salāt al-Īṣāba was sometimes postponed till a late hour, sometimes till the first third of the night had passed (Bukhārī, Mawākit, b. 11, 20, 21, 24).

e. the salāt al-fadjir was performed by Muḥammad at a time when a man could discern his neighbour (Bukhārī, Mawākit, b. 13); but the women on their way home could not yet be recognised (Bukhārī, Mawākit, b. 27).

In a second layer of traditions these general indications are specified by the mention of the first and the last limits allowed for the different
prayers (cf. e.g. Muslim, Musağid, trad. 176, 177). On one day Muḥammad performed: a. the salāt al-‘asr when the sun began to decline; b. the salāt al-asr when the sun was still high, and pure; c. the salāt al-magrib immediately after sunset; d. the salāt al-‘ishā when the twilight had disappeared; e. the salāt al-fajr at daybreak. On the following day Muḥammad performed: a. the suhr later than the day before; b. the ‘asr later than the day before, the sun being still high up; c. the magrib before the twilight had disappeared; d. the ‘ishā when the first third of the night had passed; e. the fajr when sunrise was near (asfara bikhā). In a tradition communicated by al-Ṣaḥīḥ (Kitāb al-Qum, i. 62) the fixing of the mawākīt just mentioned is ascribed to the example of Gabriel (cf. Zaid b. ‘Ali, Mağmu’ at-Fikāh, No. 109). These mawākīt have for the most part passed into the books of fikāh. We cannot reproduce all details here. The following scheme may suffice: a. suhr: from the time when the sun begins to decline to the time when shadows are of equal length with the objects by which they are cast, apart from their shadows at noon. The Ḥānasīnes alone deviate in one of their branches in so far as they replace the ultimate term by the time when the shadows are twice as large as their objects. In times of great heat it is recommended to postpone the suhr as late as possible; b. ‘asr: from the last time allowed for suhr till before sunset. According to Mālik the first term begins somewhat later; c. magrib: from the time after sunset till the time when the red twilight has disappeared. Small deviations only, in connection with a predilection for the first term; d. ‘ishā: from the last term mentioned for the salāt al-magrib till when a third, or half of the night has passed, or: till daybreak; e. fajr: from daybreak till before sunrise. Side by side with these mawākīt we find in the books of Tradition of and of Law the times on which it is not allowed to perform prayer, viz. sunrise, noon, and sunset (Bukhāri, Maswākīt, b. 30—32; Muslim, Salāt al-Musāfīrīn, trad. 285—294; cf. al-Nawawi’s commentary for controversies regarding this point, and further Wensinck, A Handbook of Early Muh. Trad., p. 192a). According to ‘Aḥṣa it is only forbidden to await sunrise and sunset for prayer (Muslim, Musāfīrīn, trad. 296). In Makkah prayer is allowed at all times (Bukhārī, Ḥadīṣī, b. 73; Tirmidhī, Ḥadīṣī, b. 42).

MIKHĀLI SABBĀGH, an Arabic author born of Catholic parents in Akko in 1784, was educated in Damascus and then came to Egypt. Here he joined the French army of Napoleon’s expedition, had to leave the country with them and came to Paris. The State printing works employed him as a proof-reader and the Bibliothèque Nationale as a copyist of Oriental manuscripts; his irregular habits prevented him leading a comfortable or settled existence, although de Sacy and his pupils appreciated his thorough knowledge of his mother tongue. He himself only used it to compose Ḷaṣālas in the old style in praise of great men of the period and to make some money thereby. For example in 1805 he addressed a poem to the Grand Juge when he visited the printing works, in 1805 to Pope Pius VII, in 1810 to Napoleon on his marriage, in 1811 to the King of Rome, in 1814 to Louis XVIII. Three poems were printed at the government press, that to Pius VII with a Latin translation by de Sacy, that to Louis XVIII with a French one by Grandjean de Lagrange. He also published a work on carrier pigeons entitled Kitāb Muḥāṣat al-Bārī wa l-‘Aḥlām fī Ṣalāt al-Ḥamām. The colombe messagère, plus rapide que l’éclair, plus prompte que la nue, par M. S. traduit de l’Arabe en Français par Silv. de Sacy, Paris 1805; based on the preceding: Die blitzgeschw. Briefe, oder sinnreiche Kunst des Oriental, Träumen zum Bestellen der Briefe abzurichten, nach dem Arab. des M.S. Herborn 1806; Beschreibung der Kunst der Taubenpost, welche seit der Zeit der Erledigung gebräuch- licht, wird, aus dem Arab. von Dr. Th. J. K. Arnold, Frankfurt 1817; La colombe messagère, plus rapide que del lampo, trad. di S. A. Cataneo, Mailand 1822; Die Brieftauben schmächtiger als die Blitzen von dem Arab. von C. Loper, Strassburg 1879. — The last manuscript is a history of the Arab desert tribes of Syria, a history of Syria and Egypt and important for its lexigraphical information; al-Rāblī, al-dīnām al-tamām wa l-Kalām al-‘Azmah fi Ahwāl al-Kalām al-dārīj, M.S. Grammatik der arabischen Umgangssprache in Syrien und Ägypten, nach der Munchener Hs. herausg. von H. Thorbecke, Strassburg 1886.

MIKHĀL-OGHLU, an old Ottoman noble family. This family traces its descent to the feudal lord Kose Mâlik Abî Allâf, originally a Greek (cf. F. A. Guéroul, in Ch. Schefer, Petit traité de l’Origine des Turcs par Th. Spankoum Cantacuzin, Paris 1896, p. 297: L’Anc. dett. Grecc est nomm. Michaîl… Dus uit Michâl sont descendus de Mâlochî). Who appears in the reign of Othmân I as lord of Chirmenki (Kirmendjik) at the foot of Olympus near Edreos, and later as an ally of the first Ottoman ruler earned great merit for his share in aiding the latter’s expansion (cf. J. v. Hammer, in G.O.R. i. 48, 57, following Idris Bitlisî and Neshî). Converted to Islam, Kose Mâlik appears again in the reign of Othmân’s son Urkhan. The rank of commander of the army’s [q.v.] became hereditary in the family of Kose Mâlik.
which is even said to have been related to the royal house of Savoy and of France (cf. Paolo Giovio: *Michalogi di sangue Turchesco e per via di donum*; si sa parente del Duca di Savoia e del Re di Francia; in this case Mikhâl [Mîkhâl] alias Köse Mîkhâl must have been descended from the Palaeologoi; cf. J. V. Hammer, *G.O.R. i. 582,* and along with the Mâloko-oghlu (properly Malković, i.e. Marković), the Ewrenos-oghlu [q. v.], Timûr-tash-oghlu [q. v.] and Tarâkhan-oghlu [q. v.] was among the most celebrated of the noble families of the early Ottoman empire. Köse Mîkhâl, called ‘Abd Allâh, died in Adrianople and was buried in the mosque founded there by him in the western Yildırım quarter.

The following genealogical table shows the order of succession of the Mîkhâl-oghlus:

<table>
<thead>
<tr>
<th>Ghâzî Mehemmed-Beg</th>
<th>Ghâzî Yakhshî-Beg</th>
<th>Ghâzî Ball-Beg</th>

If we compare the article *Yurkuč Pasha* in , where the descendants of this general are given, Mehemmed Suraiya, *Sidjil-i oṣmâni,* iv. 652, 1 we get a different picture of the genealogy.

1) According to Mehemmed Suraiya, *Sidjil-i oṣmâni,* iv. 101, Iskender-Beg had four sons, ‘Ali, Mehemmed, Khîdr and Suleimân. This must be wrong and the genealogy is as above.
MİKHÂL-OGHLU – MILAS

MIRNâS. [See MeKesNes.]

MîkiyaS, any simple instrument for measuring, e.g. the pointer on a sundial; in Egypt the name of the Nilometer, i.e. the gauge on which the regular rise and fall of the river can be read. To get an undisturbed surface, the water was led into a basin; in the centre of this stood the water gauge, a column on which ells and fingers were carefully measured off. The level of the water was ascertained by an official daily and proclaimed by cries.

Originally the rising of the Nile was measured by the gauge (al-rajîts). According to Ibn 'Abd al-Hašmat, al-KudâJî, and others, Josaph, the son of Jacob, built the first Nilometer at Memphis; at a later date, the "aged Dalâka" built Nilometers in Ajûnîn and Anýâbî (Antinoe). These were the Nilometers in use throughout the Greek period till the conquest of Egypt by 'Amr b. al-Ôy. The latter erected a Nilometer at Assuan and a second at Dendera. Others were built in the reigns of Mu'ašiya and 'Abd al-Ôarzî. Finally the Caliph al-Mu'âwawakkîl had a large Nilometer built and instead of the Christian officials appointed Abu l-Raddâd to look after it, and the office remained hereditary in his family down to the time of al-Mâkrî (d. 1442).

The ancient Egyptians are said to have drowned a virgin in the Nile at the beginning of its rise as a sacrifice. 'Amr compelled the Nile to rise and fall at God's command by means of a writing which he threw into the water.

MİLAD (a.). According to some Arabic lexicographers the meaning of this term is time of birth in contra-distinction to mâwîl which may denote also "place of birth". The latter is the usual term for birthday, especially in connection with the birthday of Muhammad and Muslim saints [cf. the art. Mâwîl]; milâd denotes also Christmas. For other special meanings cf. Dory, Supplement aux dictionnaires arabes, i.e.

Bibliography: the Arabic lexicons.

MİLAS, the ancient Mylasa, capital of Caria and famous in antiquity for its sanctuaries of the Carian Zeus (in medioeval and modern western sources: Milas, Milavo, Melas, Melavo), a town in S. W. Anatolia, 15 miles from its seaport, Kulluk (on the Gulf of Mendelia). It is the capital of the köza of the same name in the wilayet of Mugla (formerly the sandjak of Men-
tegh) and has 7,346 inhabitants (census of 1928) compared with 7,261 (of whom 3,200 were Greeks) who were removed by the exchange of 1922. 739 Jews, who still flourish, and 71 foreigners in 1908 (Silvanum Altia, of 1326 A. H.).

Milas lies on a low eastern spur of the Sodra Dagh (Gr. St. Elias) in the centre of a very fertile plain surrounded on all sides by hills, and watered by the Sarı Cay which flows round the Sodra Dagh on north and west. The road to the sea however does not follow this marshy watercourse but crosses the hills south of the Sodra Dagh, here commanded by the once powerful medieval fortress of Pégin (three miles S. of Milas). The bay itself was in the middle ages defended by the island citadel of Asn Kafesi (Judichel, Iassos Athen. Mittel., xx. 139) and later by a castle at the harbour built by Meḥmed II (Piri Keïn, Babrîr, ed. P. Kahle, chap. 21). At Milas met the old, and although difficult, only roads to the west to the important mediaeval port of Balât (Miletus), to the north into the fertile plain of Karpuzlu Ov‡as and Cine and into the Maender valley, and eastward to Mughla, the other important town of the district. This and its protected situation near the sea within a broad fertile plain destined the town to be once more a capital when the region again attained political independence under the Turkish dynasty of the Mentehše ([q. v.]).

The region first passed temporarily under Turkish rule when, after the victory of the Seljûks at Manzikert in 1071 the western Anatolian coast with Nicaea, Smyrna and Ephesus and even islands like Samos and Rhodes were occupied by the Turks. Although we have no definite information about Milas itself we know that the monks of the neighbouring Latmos had to leave their monasteries on account of the Turks (in 1079; cf. Th. Wiegand, Milet, iii. 185). But Byzantine rule was soon restored. It was only when the centre of the imperial government was withdrawn to Constantinople after the victory over the Latins in 1261 that this region finally passed into Turkish hands. When and after the final conquest took place we do not exactly know. Melanudion, which with Milas formed a theme from the period of the Comnenos (W. Tomaschek, Z. hist. Topographie Kleinasiens im M.A., Vienna 1891, Abh. d. Ak. d. W., p. 38), and is therefore to be located in the neighbourhood of Milas and was Byzantine till 1273 at least, was again taken for a time from the Turks of Mentehše in 1296, so that it must have been occupied by them a few years before (Wiegand, op. cit.). That Mentehše is called Σαλέκεζ = Sâhi̇lı Haqî, Emir al-Sawâhîl in Pachymeres (i. 472; ii. 211, Bonn ed.), in Sanudo (Hopf, Chron. gro−romanae, p. 145) Turquen−
domar (read: Turquemdomar = "Turkoman of the sea") suggests a conquest from the sea. There is no longer any record at this period of the bishopric of Milas, which as a church of the eparchy of Caria (see G. Parthey, Hierocles Synedemus et notitiae graecae episcopatum, p. 32, 112 etc.) was under the metropolis of Stavropolis, which still existed in the xivth century (A. Wachter, Der Verfall des Griechentums in Kleinasiens im XIV. Jahrh., p. 34 sqq.) (Stavropolis, the ancient Aphrodisiae and the village of Gere, twenty miles west of Denizli).

Milas appears as the capital of the principality of Mentehše about 1330 in al−Umari (ed. Taesch− ner, p. 21; transl. Râlaš, while Fâkeb = Phocaean which appears as a capital in the Genoese report, ibid., p. 47 is probably an error of the writer and is not to be corrected to Mughla) and in Ibn Battûta (ed. Defrémery and Sanguineti, ii. 278 sqq.) also, who here enjoyed the hospitality of the Akhî gild (on a Fatûrası̇çı̇me written in Milas at the end of the xivth century see Taschner, in Islamica, iv. 40) and admires the wealth of the town in gardens and orchards and gives the name of the lord of the country as Shüdî al−Dîn Urkhân b. Mentehše, whom he visited in his capital Pégin, not far away. The Mentehše built very little in Milas as they were engaged in embellishing their residence. It is noteworthy that the two mosques of this period lie outside the old town, still largely enclosed in its old walls; one to the south, in the Hâddîjî Hyûs quarter, the little Şahâl al−Dîn Dîmâni with outer court and stepped minaret, built under Urkhân Bey in 1330; the other just outside the walls to the east, the mosque of Ahmed Gâzî built in 1378, which with its entrance in the narrow side (without an outer court) and the stepped minaret built above it (Imâmî ھکّت, Kîtabeler, Istanbul 1929, fig. 47) looks as if it had once been a church (cf. Wul− zinger, Die Pirâs−Mencûte zu Milas, in Festh. d. Techn. Hochschule in Karlsruhe, 1925, p. 10 of the reprint). The minbar of this mosque also dated 780 (1378) is now in the Çinili Köşk in Konstantinople. From the position of these mosques, it may be deduced that the old town remained in the occupation of the Christians, who still held the most of it in quite recent times. The only mosque in the old town, just in its centre, and in the highest part of it, the Bulund Dîmâni, seems also to have been a church and was probably used by the garrison, if it is old. The medresse of Khoja Bedr al−Dîn, which dates from the period of the Mentehše, unfortunately cannot be exactly dated (Rev. Hist., v. 58).

Milas received its first important building from the first Ottoman governor Fırûz, whom Bâyazîd I appointed over Mentehše−iî (Dustûrunâme−i Enveri, ed. Mucrîm Hilâl, İstanbul 1928, p. 88) after the conquest (792 = 1390) (the date given by most Turkish sources is supported by Bâyazîd's confirmation of the Venetian privileges for Balât of May 21, 1390, Diplomatatarium Veneto−lacuntinum, Venice 1899, ii. No. 134). The Mentehše who fled to Egypt (Dustûrunâme, i. c.) was probably the prince of the house ruling in Balât, while the senior Ahmed Gâzî may have held out in Milas and Pégin till July 1391 (according to his tombstone he died in Pégin in Şahîdan 793 as sheikh). In 1394 Fırûz built to the north of the old town and outside of it a splendid mosque in the style of the Brusa private mosques (cf. Wulzinger's monograph). Ottoman rule was interrupted by Tumûr who passed through Milas on his return from Smyrna in the winter after the battle of Angora (1402) (Ducas, p. 76, Bonn ed.), for about twenty years by the restoration of the former dynasty. This last period of the Mentehše−oghlu has left no memorials in Milas or Pégin. The Ottoman commanders then made their headquarters in Pégin after which this last of the Mentehše sandjak was long called (Ahi Bekr b. Bahrâm in Hâddîjî Khlâifa, Dîkân−namâ, p. 638, i.e. the second half of the xvith century) and only moved

to Milas at a later date, when a magnificent official residence was erected, with defensive towers, and is still partly inhabited.

From the second half of the sixteenth century we have Ewliya's description of the town (in the unprinted vol. ix. of his Saiyâhet-nâme, MS. Beghîr Agha, No. 452, fol. 51) He says the town had 4 mosques, 3 madrâsahs and two large khâns. At this time the garrison was still in Peçin. He praises the gardens of the town but rightly describes the climate as unhealthy. Among the products he mentions tobacco, with which Milas supplied the whole of Anatolia. Among the holy places mentioned by him, we may note that of Shaikh Shashteri because it probably belongs to the Baba al-Shushteri met here by Ibn Battûta. Ewliya's description of the old ruins is much exaggerated, although he saw a good deal more than now exists. Pococke (Ti. avell., ii. 2, ch. 6) at the end of the eighteenth century was still able to sketch a temple of Augustus and Roma here. All that now survives in addition to the town walls is the Balta Kapû (a Corinthian gateway with the Carian double-axe) and a mausoleum called Gümühsâh (filigree-worker) (Choseal-Gourlay, Voyage dans l'Empire Ottoman, i. 234 sqq., pl. 84 — 92). In the adjacent village of Shashteri is the tomb of Shaikh Bedr al-Din b. Shaikh Kasim, who died at Brusa in 824 (1429) and is buried here, a kâltâf of Saiyid Muhammad al-Bukhari (see Rev. Hist., v. 311 sqq.), on the site of a church of St. Xene, who died here (Bull. de Corr. Hell., xiv. 616 sqq.).

The capital of the Menteşhe, already mentioned several times, Peçin (Gr. Petsona) consists of an imposing citadel built over ancient foundations and Byzantine masonry and an extensive town lying south of it. The citadel with its walls and towers crowns a steep rock that rises out of the southern end of the plain of Milas (Ismâ'il Haâktî, fig. 40) and is accessible only at the south side by a great door flanked by a tower adorned with lions carved upon it. Inside the fortress, where there is no little village, the only architectural remains are foundations of a church. Opposite to the entrance to the citadel, on a plateau surrounded by walls, some of which still stand, lie the palace and its annexes, now mostly in ruins. All that survives is the charming medrese, built of stone, of Ahmed Gâhari of 777 = 1375 (Ismâ'il Haâktî, fig. 51 — 54). In the Fırtan, the arch of which is flanked in the spandrels by reliefs of lions holding flags, the founder is buried (see above); opposite the medrese stands a mosque built by Urkhan Bey in 752 (1352), in ruins except for the gateway of Byzantine doorbeams and fragments of ambors (the inscription is given in Ewliya), probably the one that Ibn Battûta saw being built on his visit to Peçin (Bardjin). There is also a mosque and medrese, a bath and a palatial serai, all in ruins. Exceptionally finely carved tombstones give the names of important people who lived here down to the xvith century. Ewliya, who still found about one hundred houses here, thought there must once have been a great town here. Peçin is mentioned by Kaîkahântî, Şahâl ad-Aş'âhî, viii. 18, as the possession of a certain Emîr Mîsha, lord of Balâç and Bardjin (Ş.), who is known from a coin in the collection of J. H. Mordtmann. A native of Bardjin was Maḥmûd b. Meşkid, who was the middle of the xivth century dedicated his "Book of the Falconer" (Bâzânûre) written in Turkish to a Menteşhe-oghlu (v. Hammer, Falknerkat, Vienna 1840; Thûry, Türkîk nihâyet-nâmecâhî a XIV. yüz. e., p. 29). On October 17, 1414 in Peçona the Menteşhe-oghlu Ilîbâs Bey concluded a treaty with the Venetians (Diplomaturnum Veneto-Levantinum, ii. 30, No. 166).

Biблиography: In addition to the works mentioned in the text: V. Caime, Turquie Salée, iii. 606 sqq.: Ch. Texier, Asie Mineure, Paris 1872, p. 648; Heyd, Gesch. d. Levantenthands im MA, i. 584 (Fr. ed., i. 553). I was unable to consult the work mentioned by Hasluck, Christianity and Islam, ii. 596 entitled I. Koutoulis, Τά Νέα Μόναξα, in Εωσφορίς, iii. 448 sqq. For the Muslim inscriptions see A. Tewfîd, in Rev. Hist. (Constantinople), ii. 761; iii. 1146, also Haïî-Kadr (ibid., v. 57, 308) and Ismâ'il Haâktî, Kîtabeler, Istanbul 1929, p. 155 sqq.

(F. WITTEK)

MILA (a.), possession, property. The word is not found in the Kurâ'n, but is in regular use in legal terminology. The double meaning of the word shows that the usual distinction in our legal language between the conceptions of possession and property are not found in the fikr. There is, it is true, a special term for the actual power over a thing, what we call possession in the narrower sense, namely yâd, lit. "hand", but the distinction between a judicial ownership and the actual control is not found in Muslim jurisprudence and there is not a word for property which takes into account the actual ownership, either from the positive or the negative point of view. As a result we find, for example, that the ownership of a thing passes directly by an agreement if this was intended, even if the thing in question is not at once handed over. On the other hand, not only things but also rights can be owned.

The following are excluded from the possibility of being property and subject to legal regulations: 1. useless things (e.g. wild animals); 2. things the use of which is prohibited by religion (e.g. wine-grapes); 3. things which are ritually impure or have become polluted to such an extent that they cannot be purified (e.g. swine, dung etc.) so long as they are not essential parts of a pure or permitted thing. If such things, however, are acquired, one talks not of nilâlt but of ilâm (see special claim upon them; legal transactions relating to such things have a special vocabulary of their own.

Kamîl almîlk is a necessary preliminary for the property of an owner being liable to zakât [q.v.].

Biблиography: The articles "Amîn, Batî", Mâl, Şirka, Tîyarâ and the literature there given; Juyâmbol, Handleiding (1930), 360 and the references there given; al-Dîjasâli, al-Wâjiûa, i. 55 sqq.

MILLA (a.), religion, rite. However obvious it may be to connect this word with the Hebrew and Jewish and Christian-Aramaic milla, "utterance, word", it has not been satisfactorily proved how and where it received the meaning which is taken for granted in the Kurâ'n: religion or rite. Nor is it known whether it is a purely Arabic word or a loanword adopted by Muslims or others before him (Noldeke, Z. D. M. G., lvi. 413 seems to hold that it is Arabic for he refers to the 4 th form amilâ or amîlâ "to dictate"). In the Kurâ'n it always means (even in
the somewhat obscure passage, Sûra xxxviii. 6) "religion" and it is used of the heathen religions (vi. 86 sqq.; xiv. 15; xviii. 19) as well as of those of the Jews and Christians (ii. 114), and of the true religion of the fathers (xii. 38). The word acquired a special significance in the Medina sections where the Prophet in his polemic against the Jews speaks of "Abraham's milâa", by which he means the original revelation in its purity, which it was his duty to restore (ii. 124; iii. 89; xvi. 124; xxii. 77 sqq.; cf. iv. 124; vi. 162; xii. 37). Muslim literature follows this Qur'anic usage but the word is not in frequent use. With the article, al-mîlla means the true religion revealed by Muhammad and is occasionally used elliptically for alîl al-mîlla, the followers of the Muhammadan religion (Tabarî, iii. 813, 853, 8), just as its opposite al-djâmûs is an abbreviation for alîl al-djâmûs, the non-Muhammadans who are under the protection of Islâm; e.g., Ibn Sa'd, iii./1, 238, 25; cf. also the derivative milâmî opposed to dhâmîn, client (Ba'ha'i, ed. Schwally, p. 121 infra).

MÌM, 24th letter of the Arabic alphabet, with the numerical value of forty. On different forms of the letter cf. ARABIA, plate i. In some dialects of Southern Arabia and of tribes coming from that region, mam is and is used as the article of determination, side by side with l. A well known tradition is put into the mouth of a man from Southern Arabia in the following form: Lâta mùa am-birri am-mirî fi 'âmîla fârî. Cf. Ibn Ya'la, ed. Jahn, ii. 1531; Landesbr., Études sur les dialectes de l'Arabe méridional, ii./ii. 281—290.

(A. J. WENSINCK)

MINA, later often pronounced Muná, a place in the hills east of Mecca on the road from it to 'Arafa [q.v.]. The distance between the two is given by Mu'addas as one parasang, while Wavell calls it five miles and says the continuation to 'Arafa is nine miles. Minâ lies in a narrow valley running from west to east, 1,500 paces long according to Burckhardt, surrounded by steep barren granite cliffs. On the north side rises a hill called Thâbir. Travellers from Mecca come down into the valley by a hill path with steps in it; this is the 'Aksâba [q.v.] which became famous in connection with Muhammad's negotiations with the Madinians. The town consists of stone houses of fair size which form two long streets. Close beside the 'Aksâba is a rudely hewn short pillar leaning against a wall: this is the "great djarna" or the "Aksâba djarna", at which the pilgrims cast stones [cf. DJAMRA]. A little to the east in the middle of the street is the "middle djarna" also marked by a pillar and lastly at a similar distance the third (the so-called "first djarna"). As one approaches the east end of the valley, there is on the right of the road a square mosque surrounded by a wall, the Masjîd al-Khair, which was rebuilt by Saladin and in 874 (1467) reconstructed by the Mamlûk Sulân Kâ'tî Bey. Along the west side of the surrounding wall is a colonnade with three rows of pillars, but there is none on the other sides. It was different earlier, for Ibn Rusta (c. 300 A. H.) tells us that the mosque had 168 pillars of which only seventy-eight supported the west wing. The north side of the wall is pierced by several doors. In the centre of the court of the mosque is a little domed building with a minaret built over a fountain. There is another dome over the colonnade on the west side (see the illustrations, ii. 256).

The most striking feature of Minâ is the very great difference, noted already by Mu'addas, between the quiet and empty streets of the greater part of the year and the tremendous throng and bustle of the pilgrimage month when, as Wavell says, half a million people with heavily laden beasts of burden hope to cover nine miles in the period between sunrise and 10 a.m. Every spot in the valley is then covered with tents in which the pilgrims spend the night. Mu'addas talks of fine houses built of tusk and stone (among them was a frequently mentioned Dâr al-Imâra), and large stone buildings are still to be found in Minâ; but these are usually empty and are only let at the pilgrimage to the more wealthy pilgrims and even among these many prefer to live in tents. This depopulation of the city has been a subject for discussion among the legists, for some held that this circumstance enables Minâ and Mecca to be regarded as one city (miyâr), a view which others reject. But another circumstance must have contributed to preserve a permanent settlement of the town, which is also true of other places on the pilgrims' route, namely the incredible filth and dreadful stench which is caused by such masses of humanity at the Hajjîj. Complaints are made even of the uncleanness of the Masjîd al-Khaîf and at Minâ there are further the decomposing remains of the countless animals sacrificed. Probably the old pagan period [cf. HADJÛ], for Muhammad, as usual in taking over old customs, contented himself with cutting out the too obviously pagan elements, the result being that we can no longer reconstruct the old forms with certainty. The old poets make only passing references to them (cf. DJAMRA); that they were similar to the Muslim practices is evident, for example, from an interesting passage in the Medina poet Kâsî b. Khatîm (ed. Kowalski, No. 4, p. 1 292) where there is a reference to the "three days in Minâ" and where we further learn that the festival held there offered an occasion for entering into and carrying on love-affairs. The stone throwing is certainly very ancient; its significance is quite unimpeachable in Islám, although it is doubtful if there were already three heaps of stones in the pre-Islamic period [cf. DJAMRA]. It is also clear that the ceremonies in Minâ formed the conclusion of the Hajjîj even in ancient times. Muhammad however made some serious alterations here, for he inserted a visit to Mecca before the stay in Minâ, whereby the ceremony first received its legitimate Muhammadan character; but the old elements remained the important factors, for the Hajjîj ends not in Mecca but, as before, in Minâ, to which the pilgrims return after the digestion to Mecca. A survival of the pagan period probably exists in the slaughtering place preferred by the majority on the southern slopes of Thâbir "the place of sacrifice of the ram" (cf. Sûra xxxviii. 101 sqq.), as its association with the story of Abraham probably enabled an old pagan secret not to be adopted into Islâm. From Burton's description it is a square rocky platform reached by a few steps. Muhammad himself did not directly forbid the use
of the pagan place of slaughter, but deprived it of its importance by saying that all Minā is a place of sacrifice; a clever procedure which he also followed at 'Arafāt and Muzdalīfā.

According to the law of Išlām, the pilgrims who arrive in Mecca on the 8th Muharram 'I-Hijjādja should leave this town in time to be able to perform the mid-day ṣaḥāf in Minā and remain there till sunrise on the 8th and only then go on to 'Arafāt. The majority however do not do this but go on the 8th straight on to 'Arafāt where they arrive in the evening. After performing the ceremonies of the pilgrimage in 'Arafāt and Muzdalīfā [q. v.], they go before sunrise on the 10th to Minā to celebrate the day of the great sacrifice (Ya'qūm al-ṣaḥāf or Yawm al-nahr) (in contrast to the pre-Islamic practice, which was to start only after sunrise). Here the concluding rites are gone through, the slaughtering, the clipping of the hair and nails and the ligation. There is not complete agreement as to the order of these ceremonies, which some tradition (Waṣiṣṭī, transl. Wellhausen, p. 423) makes Muhammad declare to be quite irrelevant. The modification of the stone throwing is noteworthy, for on the day of sacrifice it is only done at the 'Aṣ'āb heap, while on the three following days each pilgrim daily throws seven little stones on all three heaps (cf. the illustrations above, ii. 256 and Burton, ii. 205). The conclusion of the whole pilgrimage is the three Minā or 'Abhād days, the 11th, 12th and 13th Muharram 'I-Hijjādja (cf. above, ii. 199 and the article TASHKHĪL). They are days of rejoicing which are celebrated with great jubilation, illumination and the firing of shots. All the pilgrims however do not wait for these three days but set off on their return journey before then.

MINARET. [See MANĀRA.]

MINBAR (A.), pulpit [cf. MASJID]. On the origin of the form of the minbar the reader may be referred to C. H. Becker's exhaustive study Die Kanzel im Kultur des alten Islam (Nordische Festschrift und Islamstudien). Becker refers to the earliest historical statement which says that the Prophet in the year 7 A. H. made his minbar on which he used to preach to the people; it had two steps and a seat (mahāf). The minbar was therefore originally a raised seat or throne. On the morning after the death of the Prophet, after stormy disputes, Abū Bakr took his seat on the Prophet's minbar in a solemn assembly and received the general homage here. The later caliphs followed this tradition, as did the governors, who ascended the pulpit on their accession to office and on their resignation. The minbar in the early period was therefore not at all specially associated with worship but was the seat of the ruler in the council. The pulpit only gradually grew out of it with the development of public worship. According to Becker, the date of the change from the ruler's or judge's seat to the simple pulpit coincides with the end of the Omayyad dynasty. In 132 A.H. all the mosques in the provinces of Egypt were provided with minbars, about the same period probably in the other lands of Išlām also. At the beginning of the 'Abbāsid period the minbar was already a pulpit exclusively. The first tendency to its use as a pulpit is seen by Becker in the introduction of the minbar into the divine service at the Mūsāllā in Medina, which is ascribed to Mu'tawwya or to his governor. The Prophet did not have a minbar at the Mūsāllā and nothing but divine service could have been held there.

The typical form of the minbar as a pulpit, which is placed to the right of the mihrāb and of the spectator, is an erection on steps with a portal or without a door at the entrance to the steps and a ciboriumlike canopy to the platform. This form is peculiar to the minbar of wood, which is the most usual. The variants in stone and brick are more simple and frequently are only a bare platform reached by three to five steps. The fine series of minbars of wood begins with that most famous of all in the history of art, the minbar in the great mosque in Kairawān. On the occasion of the extension of the mosque by 'Abdrīm ibn 'Aqlab (281–289 = 874–902) it is said to have been brought with the lustre tiles of the mihrāb wall from Bagdad and set up. It is made of plane-tree wood and is in the canonical minbar shape with a staircase—here of 17 steps—to the preacher's platform. The pulpit, however, has not yet the stylized structure of the later wooden minbar. It has not the portal nor the canopy at the top. Its composition of about 200 carved panels and narrow strips of unequal size, is simply a primitive agglomeration of profuse ornamentation, still very nomadic in feeling, such as would hardly ever have been found in Bagdad, and even in Kairawān can scarcely be regarded as original. Saladin has pointed out that the pulpit must have been restored after Kairawān had been sacked by the troops of the Fatimid Mustansir Abū Tamīm in 441 (1049). In any case it has several times suffered damage and undergone restoration so that its present general appearance cannot be dealt with critically until we have a thorough monograph based on exact investigation on the spot. The ornamentation must, as Kühnel observes, be regarded as Omayyad (Springer's Kunstgeschichte, vi. 358).

The vane brushes of the frame-strips and the panels filled with floral patterns and leaves resemble the decoration at Mashqīt [q. v.] and some of the geometrical patterns, which are of all imaginable combinations, are already found on the shafts of
pre-Islamic columns in Deyr Bakr (cf. van Berchem-Strygowski, *Amida*). The archaistic combination of designs on the minbar has no connection with the decoration which since Sāmārāḏ we call *Abbaṣīd. We have here a phenomenon comparable to *Mshattā* since here also ornamentations from different sources are combined to form a general scheme whose common denominator is formed by the formal quality of the chiaroscuro common to them all. We do not even know how long the nucleus of these carved strips and latticed panels may have previously existed in Baghdād and they may have there belonged to an Omayyad minbar before the pieces were brought to Ḫairawān and supplemented by copies and additions of local workmanship.

The few pulpits that have survived from the Fāṭimid period follow the Syro-Egyptian style of woodwork of the period with their system of frames filled with foliage. The tendrils were prevented from over-running the whole surface by being placed within small polygonal areas which were grouped together in cassettes (Kühnel, Springer's *Kunstgeschichte*, vi. 406). The wooden mīhrāb of the xith century from Cairo illustrated in the article *Mīhrāb* illustrates this style, which is also represented by the minbar made in 1091 A.D. for the mosque in *Asḵālān* and now in Hebron, and by the pulpit of 1155 A.D. in the mosque of *ʿAmr* in Ǧūs on the upper Nile.

During the Fāṭimid period the pulpit developed its canonical form as represented in the minbar of the Māṣjd al-ʿĀṣāf in Jerusalem, which was built in 1168 A.D. by Nūr al-Dīn to Aleppo and later taken by Sālādīn to Jerusalem (Salūdī, *Minbar*, p. 243). It has one of the upper ways and the domed canopy. The main decorative motives are 8-pointed stars and the polygonal and star-shaped subsidiary panels show carving in relief inlaid with ivory and mother-of-pearl. Of the minbar of Sulṭān Lāḏīn in the mosque of Ibn Ṭūlūn of the year 1269 A.D. little more is left than the framework, while the panels are preserved in the Arab Museum in Cairo and in the South Kensington Museum (cf. *Descriptive Catalogue of the Arab Museum*, Cairo). That wooden minbars were sometimes copied in stone is shown by the stone pulpit in the mosque-madrasa of Sulṭān Ḥassān (757—764 = 1356—1363). The mukḥaras on the door case and soon after found on the dome also, here as in the mīhrāb goes back to Turkish influence transmitted through Syria. Like the mīhrāb, the minbar also attained its finest workmanship in Cairo under the second Mamlūk dynasty in the xvth century and later. No essential alteration was later made in its canonical form and its embellishment remained standardised and varied only in details. A fine example of this fully developed Cairo type is in the South Kensington Museum. According to the inscription, it was presented by Kaʿīt Bey (1468—1495) and has finely carved ivory panels and traces of painting on the wooden parts. The usual star pattern is replaced by a smooth surface. The gilt onion-shaped dome with its finial and cresting on the stalactite cornices are, as Briggs observes, characteristic of the period (Briggs, *Minbar*, Archit. in Egypt and Palestine, p. 217).

After the Turkish conquest, the general deterioration in craftsmanship in Cairo affected the minbar also, but exceptions, like the finely-worked pulpit of the mosque of al-Burdānī, however show that the good old tradition still survived. Ḥakām II's minbar in Córdoba has not survived but from the descriptions of the Arab writers it must have been a peculiarly valuable piece of work, for according to al-Maḳḳārī it cost 35,703 dinars. It could be moved on wheels and contained the caliph ʿOmar's Kurān. In the mosque of ʿAlāʾ al-Dīn in Konya is a minbar of hazelwood, according to an inscription on the posts supporting the upper part, the work of an artist of Ḳairāwān of the year 550 (1155). Two inscriptions on the door of the pulpit mention Sulṭān Masʿūd I (510—551 = 1116—1156) and ʿAlīṣūr ʿAṣlān II (551—584 = 1156—1188) (cf. J. H. Loytved, *Konia* and F. Sarre, *Seldschuksche Kleinkunst*, p. 27 sqq., pl. vi.—viii.). Inscriptions from the Kurān decorate the frames of the balustrades of the steps. The pulpit is of the traditional Syro-Egyptian form, but is, however, distinguished from them by its vigorous structure. Polygons and star-shaped panels fill the sideframes, together with the same tendril patterns symmetrically interwoven, as we find naturalised in all the eastern lands of Islām from the beginning of the eleventh century (detailed illustration in Sarre, *op. cit.*, fig. 24).

In Persia and Afghānīstān all the old minbars seem to have been destroyed by the Mongol invasion. On the other hand, the minbar illustrated here in the mosque of Dīwār Shāh Agha in the sanctuary of the Imām Rādā in Mshhed which was built about 840—850 (1436—1446) is original in ornamentation and an example of the Timūrid minbar. The structural motive is thrust into the background by the profuse covering of small pentagonal and star-shaped wooden panels with tendrils carved in relief after the style of the contemporary tiles. The effect is that of a carpet. Nothing is known of old minbars in Turkestān. In India, pulpits were built almost exclusively of stone. Many, some of them richly carved, still exist in the Muslim provinces and towns of India. The pavilion on four pillars, common and popular in India, which gives a charm to buildings for Muslim worship as a decorative finish to the roof, was also used here for the stone minbar. Indeed one might even wonder whether this originally Indian structure was carried by the Eastern Turks to Central Asian lands and adopted by them for the minbar. Minbars with such canopy are frequently found in the mosques of the province of Guḍjarāt and in Aḥmadābād (cf. these volumes in the *Arch. Survey of India, Western India*). The mosque of Ḩilāl Khān Kāḏi of 1333 A.D. in Dholka, for example, has a stone minbar with seven steps and a canopy on pillars on the roof, but no entrance gate. The triangular side walls are divided into square areas which are carved in relief (*Arch. Survey of India, Western India*, vol. vi., Guḍjarāt, pl. xxvii., xxx.). In Ḥaḏarābād, the Muslim state of the south, on the other hand, the minbars are more simple and heavier, and have no canopy (cf. illustration from Osmanībād).

(E. Diez)

MINṬAḴA or MINṬAKAT AL-BURŪḌI also MINṬAḴ AL-FALAK AL-BURŪḌI or (more rarely) MINṬAḴ AL-BURŪḌI means, like the technical term Falak al-Burūḍi most frequently used in scientific literature, the circle (minṭaḵa) of the twelve signs of the zodiac ("towers", Greek πύργοι), then the zone of the ecliptic formed of the twelve signs each covering 30°.

The Kūrān contains references to minṭaḵa in thirty different passages, viz:  
Sūra xxv. 16: "We have placed towers (burūḍi) in the heavens and adorned them for the spectators".  
Sūra xxv. 61: "Blessed be he that placed towers (burūḍi) in the heavens and who placed a lamp in them and a light-giving moon".  
Sūra lxxv. is entitled al-Burūḍi and verse 1: "By the heavens with its towers (burūḍī)".

Babylonia may with great probability be assumed to be the original home of the zodiacal circle. The period of its origin cannot be fixed with certainty: the first attempts at a grouping of the constellations on the path of the sun and the planets, however, date from before the period of Hammurabi and in any case into the third millennium B.C. Almost all the names familiar to us are already found in Sumerian inscriptions. The Boghaz-Köi list of about 1300 B.C. gives all the signs of the zodiac with the exception of Leo and Libra.

The only pictorial representation of the starry heavens of the early Muslim period, the fresco on the dome of Kuṣair Amra shows the ecliptic as a broad band, along which are arranged the twelve burūḍi; it also shows the pole of the ecliptic and the 12 (ecliptical) degrees of longitude, as well as the equator and a series of parallel circles. The peculiarity of the arrangement of the heavens with considerable southern latitudes shown beyond the equator on the hemispherical inner surface of the dome results in the equator and ecliptic not being shown as the largest circles. The method of representing the separate constellations on the fresco, especially the minṭaḵa, is, broadly speaking, the same as that on the Al-Farnese. (n.b. It should be noted that the fresco of Kuṣair Amra represents the heavens reflected as in a mirror).

The Twelve Burūḍi. Preliminary Note:  
The names of the burūḍi are given in Arabic literature with many variations: those quoted below are the most usual. With the fixed stars a distinction is made between those which form the outline of a constellation (Kawāṣṭān min al-tūrā, i.e. the essential stars and such as "go beyond the constellation" (khrāḍ al-tūrā) and are regarded as only being loosely connected with it, i.e. the unessential stars.

The account here given is based in its main features on the statements in the first part of al-Kazwīnī's Cosmography.

1. al-Ḥamal or al-Kaḥīb, the Ram (Aries). It consists of 13 essential stars, 5 unessential Lie in its immediate vicinity; its fore-part is turned to the west and its hind-part to the east. It has its face on its back. The two bright stars on the horn (β and γ) are called al-Sharafānī or al-Nāṭīkh (the butters); they form at the same time the first of the 28 stations (mansions) of the moon (masūli). According to another reading the name al-Nāṭīkh is given to the unessential star α Arietis situated above the figure of the Ram. The three stars ε, δ and γ Aretis form the second station of the moon and are called al-būṯafīn ("little paunch").

2. al-Thawr, the Bull (Taurus). 32 essential and 11 unessential stars; its forepart faces the east. The bright star at the point of the norther horn (presumably β Tauri) is also included in the Waggoner (Auriga) as well as in the Bull. α is called al-Dabarān, ʿAlīn al-Thawr, Tālān ʿAlīn al-Thawr, Ḥadd al-Ṭawrīnh and al-Farīb ("large camel"), while the Hyades which surround it are called al-Ḳīṭā (the "young camels"). The Pleiades are called al-Thurayiya, κ and λ togetheral-Kāblānī ("the two dogs") of al-Dabarān. The Pleiades form the third, al-Dabarān and the Hyades together the fourth station of the moon.

3. al-Dhū' al-Naʿmān or al-Dhurawa, the Twins (Gemini). 18 essential and 7 unessential stars. The Twins are in the form of two men whose heads are turned to the northeast and feet to the southwest. Castor and Pollux (α and β) are called al-Dhīrāc al-muḥabbiḥa; they form the seventh station of the moon. γ and δ are called al-Hanʿa; together with three other stars of the Twins they form the sixth station of the moon. The name of γ and μ Geminorum is al-Bākhiṭa.

4. al-Surāfān, the Crab (Cancer). 9 essential and 4 unessential stars. ε Cancri with γ and δ form the eighth station of the moon and have the peculiar Arab name of al-Nahrā ("the cartilage of the nose") or in keeping with the Almagest, al-Māṭāf (= processus). The star β on the south hind-foot is called al-Turāf ("the extremity").  
5. al-Asad, the Lion (Leo). 27 essential and 8 unessential stars; he is conceived of as looking to the west. α (Regulus), γ, ζ and η are called al-Dājūḥa ("Forehead of the Lion") and form the tenth station of the moon; ζ and δ are the eleventh station of the moon, al-Zubra ("back-hair" or "mane of the Lion") or Kūḥil al-Asad. β Leonis is called Kunīb al-Asad or as the twelfth station of the moon al-Surā. According to another reading, the name Kunīb al-Asad is given to small stars in the vicinity of al-Surā.

5. al-Adhārā (only in the catalogue of fixed stars taken from the Almagest), the Virgin (Virgo) or al-Snubūla, the ear of corn. 26 essential and 6 unessential stars; the head of the Virgin lies south of β Leonis, her feet west of α and β Librae. The five stars in the shoulders β, γ, δ and ε Virginis, form the thirteenth station of the moon al-Awādā; α Virginis forms the fourteenth station of the moon, al-Snubūla or al-Snubūla (cf. Spica) which name is applied to the whole constellation of the Virgin. (N. B. The name al-Adhārā for a Virginis is not quoted as a name of the fourteenth station of the moon). The fifteenth station of the moon consists of the stars ρ, σ, τ and λ on the left foot; it is called al-Ghafr.

7. al-Mīzān, the Scales (Libra). 8 essential and 9 unessential stars. α and β Librae on the pans of the balance form the sixteenth station of the moon which is called al-Zubānā or Za-bānā al-ʾArāb ("claws of the Scorpion") (cf. Sumerian Š.KA AN.NA., Akkadian Zibanīta as the name of the constellation Libra).

8. al-ʾArāb, the Scorpion. 22 essential and 3 unessential stars; it has its head to the west and its tail to the east. β, δ and σ Scorpis mark the seventeenth station of the moon al-
Ikth, the eighteenth station of the moon, Kalb al-'Akrab, and the nineteenth station of the moon al-Sawala ("Sting of the Scorpion"). The stars $\alpha$ and $\tau$ to the right and left of Kalb al-'Akrab, are called al-Niyat.

9. al-Rimî, the Archer (Sagittarius) or al-Kaww, the Bow or al-Samah, the Arrow. 31 essential and no unessential stars; the face with bow and arrow is turned to the west, the hind-part of the horse's body to the cast. (The fresco on the dome at Kaşan 'Amra on the other hand shows the upper part of the body of the archer turned towards the hind-part of the horse's body, and aiming with the bow over this to the west. The stars $\gamma$ (on the point of the arrow), $\delta$ (on the how-grip) $\epsilon$ (at the south end of the bow), $\omega$ (on the right foot) are called al-Nama'am al-wârid, $\sigma$ (on the left shoulder), $\phi$ (on the notch of the arrow), $\tau$ (on the shoulder blade) and $\zeta$ (under the shoulder) al-Nama'am al-sâdir. Both constellations together form the twentieth station of the moon, al-Nama'am. $\mu$ and $\lambda$ Sagittarii on the northern bend of the bow are called al-Zalîmân, $\alpha$ (on the knee), and $\beta_1$, $\beta_2$ (on the shin-bone) are together called al-Suradânî. The space almost void of stars at $\pi$ Sagittarii marks the twenty-first station of the moon, al-Balad or Burdaj al-Dirâsh.

10. al-Ljâdî, the Goat (Capricornus). 28 essential, no unessential stars: the figure is conceived of as looking to the west, $\alpha$ and $\beta$ on the eastern horn form the twenty-second station of the moon Soâd al-Dhâbih $\gamma$ and $\delta$ on the tail are called al-Muthallathânî.

11. Soâbih al-Ma'â or al-Sâhih, the water-carrier (Aquarius) or al-Dawû, the pall. 42 essential and 3 unessential stars; the head of Aquarius points to the N.W., the feet S.E. $\alpha$ and $\phi$ on the right shoulder are called Soâd al-Mallik or Soâd al-Mulk. The two (or three) stars on the left hand ($\mu$, $\nu$ or $\mu$, $\nu$, $\epsilon$, $\delta$) form the twenty-third station of the moon. Soâd al-Bula', $\beta$ and $\zeta$ on the left shoulder together with $\gamma$ and $\lambda$ form the twenty-fourth station of the moon Soâd al-Sâ'id. The four stars $\gamma$, $\zeta$, $\pi$ and $\epsilon$ on the right fore-arm and the right hand are called Soâd al-Akhiyâ and form the twenty-fifth station of the moon.

12. al-Samakâtâh, the two Fishes (Pisces) or al-Hût, the Fish. 34 essential and 4 unessential stars; the figure is conceived as two fishes, the western in the south of the back of Pegasus, the eastern in the south of Andromeda. The two fishes are connected by a hand of stars of al-Kazwini does not mention any outstanding stars.

It is evident, then, that by far the greater part of the 26 mansûl fall into the area of the 12 burâjî and form part of them. Only the following four do not belong to them: No. 5 al-Hûkâ (A. $\phi$, $\phi_2$ Orionis), No. 26 al-Fargh al-dawâl ($\beta$ Pegasi), No. 27 al-Fargh al-thââni ($\gamma$ Pegasi, $\alpha$ Andromedae), No. 28 al-Bin al-fârî or al-Yâshî (a large number of stars forming a fish in the neighborhood of $\beta$ Andromedae).

The zodiacal figures No. 1, al-Ḥamal, No. 4, al-Sarafân, No. 7, al-Miṣas and No. 10, al-Ljâdî are known together as Burâjî minâhû, Greek ζώνες τρικτής; No. 2, al-Thawr, No. 5, al-Asâd, No. 8, al-Ąkrab and No. 11, al-Dawû under Burâjî dhâlîkî, ζώνα στρικτής; No. 3, al-Djâwâd, No. 6, al-Ądârâ; No. 9, al-Rimî and No. 12, al-Samar.
altered, but not the astrological interpretations associated with them.

Buyüt. The Greek ἄρης or τόξο, Lat. domicilia or (mediaeval) domus, are called in Arabic buyüt (sg. baṭīʿ). The sun and moon are each ruler (ṣāhib, ṣābi, Greek ἀσκετής [cf. above muthallathār]) over one sign of the zodiac; each of the other five planets rules over two signs at the same time, according to the following scheme, and is also laid down in the Ṭerṭebīlas:

| Lion | Sun | Archer | Jupiter |
| Crab | Moon | Fishes |         |
| Scales | Venus | Goat | Water-carrier |
| Bull | Saturn | Scorpion |           |
| Ram | Mars | Virgin | Twins |
| Fishes | Mercury |                |           |

The burūdā from the Lion to the Goat are day-houses, the rest night-houses. If a planet is in its day-house during the hours of day or in its night-house at night, it is credited with particularly powerful astrological influence.

Sharaf and Hubūt. By sharaf (pl. asharf) we understand the Wāṣa of the Greeks, sublimitas of Pliny, altitudo of Firmicus Maternus, exaltatio in mediaeval Latin; hubūt is the Greek τεταρτώμα, τεταρτόμα, more rarely κεῖμα, class Lat. directio, med. Lat. casus.

A planet attains its maximum astrological influence in its sharaf; its influence is least in the hubūt, i.e. the point in the heavens diametrically opposite the sharaf on the circle of the ecliptic.

The only inaccuracy in the list of exaltations, already fixed in ancient times, is giving 20° instead of 21° to the Scales for Saturn, which however goes back to a very old error; it is also found in Pliny, Firmicus and in the Hindu astronomer Varāha-Mihira.

al-Baʿrāʾī assumed that at the time of the creation of the world the planets were in their aghrāf.

Various Arab writers since Abū Maʿṣūr also ascribe exaltations and dejections to the nodes of the moon (ʿaṣba or ʿuṣulānī, scil. al-kanūr); ascending node (yāʿ) as sharaf the Twins 3°, and as hubūt, the Archer 3°; vice versa to the descending node (ḥanāb) as sharaf the Archer 3°; as hubūt the Twins 3°. This allocation is not known to the Greek astrologers.

Hubūt. Each of the five planets (excluding the sun and moon) possesses in each of the 12 burūdā a sphere of influence covering several degrees (Arab. ḫadd, pl. ḫuddā, Greek ἄφοι, Lat. fines, med. Latin terminus) which has the same astrological significance as the planet itself and can represent it at any time in horoscopes. On the distribution of these spheres of influence within the zodiacal circle opinions differed widely and unanimity could never be attained. Ptolemy added one more to the Egyptian and Chaldaean divisions already in existence. (The various systems are fully expounded in the Ṭerṭebīlas, i.e. 20, fol. 43: Boll has studied this question very fully in Neues zur babylonischen Planetenordnung, Z. A., xxxviii. [1913], p. 340 sqq.).

**Miṅṭaka in Astronomy.**

The Miṅṭaka is, as in the Greek astronomy, the fundamental basis for all calculations. It is divided into 360° degrees (dīnā, pl. aṭ welded, dīnā, coll. dīnā, pl. darājār), each degree into 60 minutes (dabāka, pl. dābātā), each minute into 60 seconds (dānīya, pl. ḥawānī), each second into 60 thirds (kāliqa, pl. ḥrawlīhā) and so on.

The points of intersection of the ecliptic with the equator (dīrā or ṣalā muddad al-ṣamāh) define the two equinoxes (al-tīdāliyān), the points of the greatest northerly and southerly declination the two solstices (al-tīdāliyān). The position of a fixed star or planet with respect to the Miṅṭaka is given by its longitude (ṭil, pl. aṭwil or in al-Battānī al-dīrā al-tīqal ḥāfiz al-akwakāb) and latitude (ārd, pl. ṣurūf). The longitudes are numbered from the vernal point (al-burudā al-ṣamāh). The axis erected perpendicular to the plane of the ecliptic meets the sphere of the fixed stars in the two poles of the ecliptic (khnā ḍarār al-burūdā)

On Arab star-maps and -globes, we frequently find a mixed ecliptical and equatorial system of coordinates used (cf. the remarks above on the fresco on the dome at Kūshir ‘Arma), which consists of elliptical circles of longitude through the poles of the ecliptic and equatorial parallel circles.

**Precession** (in al-Battānī Ḥarīs al-kawākīb al-ṭāliba, in later authors more precisely Mubādarat muddad al-tīdāl). Among the Arab astronomers supporters were found for the theory of Ptolemy, who explained the precession as a continual revolution of the whole heavens around the pole of the ecliptic with a period of 36,000 years, as well as for that handed down by Thoēon of Alexandria (Ṭūwān al-Iskandārī) from older sources, according to which the process of the precessions consisted of an oscillation to and from around the “nodes of the path of the sun”. The greatest amount of the precession according to this theory is 8° west or east of the nodes; the retrogression amounts to 1° in 80 years so that the whole phenomenon repeats itself after 2,560 years. The latter theory found particular approval in India and was further developed there. Thābit b. Kura gave an explanation for it which at the same time took into account the (more suspected than observed) diminution in the obliquity of the ecliptic and calculated the length of the period at 4171/2 years. al-Battānī attacked and refuted this oscillation hypothesis of Thoēon and of the Ḥariq al-thālabāt (ṣawtul ashwāyat); on a basis of new and comparative observations he found that the precession amounted to 1° in 66 years, which corresponds to a period of 23,760 years, which is roughly 10% too small. The very accurate estimate of 1° in 70 years is also occasionally, if rarely, given in Arabic literature, according to E. Zinner, Geschicte der Sternkunde, p. 289.

**Obliquity** (Maḥl ṣalā al-burūdā, very frequently al-malik kālund hu ʿal-hul ʿi in contrast to al-malik al-dīnā, “declination of the separate points in the Miṅṭaka”, cf. al- Ağhāzī, p. 21). The pro-
blem of estimating the obliquity of the ecliptic was during the classical period a centre of interest for the Muslim astronomers. As a first attempt at an exact estimate in the Muslim period, Ibn Yunus (ch. ix., p. 222 of the Leyden Codex or of the Paris Codex, No. 2475) mentions an observation of the period between 778 and 786 which gave the value $\varepsilon = 23^\circ 31'$. We have an unusually large number of observations of later dates. (For details see Nallino's notes on al-Battānī's *Opus Astronomicum*, i. 157 sqq.).

al-Battānī in his observations used a parallactic ruler (tri-quetrum, išāda fāvitel) as well as a finely divided wall quadrant (ilhām). He ascertained with these instruments in al-Rakka the smallest zenith distance of the sun at $12^\circ 26'$, the greatest at $59^\circ 36'$; this gave $\varepsilon = \frac{2}{23}^\circ 10' = 23^\circ 35'$. This value is at the basis of all al-Battānī's calculations and tables and has been adopted by many other Arab astronomers.

The question whether the amount of obliquity remains constant at all times or is subject to a secular diminution was answered in different ways by different students. As a matter of fact the degree of accuracy of observation was not sufficient to settle this point and the old Hindu value of $\varepsilon = 24^\circ$, on which these investigations were often based, was based not on observations but only on a statement of Euclid's according to which astronomers of his time used to estimate the obliquity as a thirteenth part of the circumference of the circle.

The following table gives a survey of the Arab values for the obliquity of the ecliptic (cf. Nallino, *al-Battānī, Opus Astronomicum*, loc. cit.). The column “average obliquity” gives by Bessel's formula:

$$\varepsilon = 23^\circ 28' 28'.0 - 0'.48 368.1 - 0'.000 002 722 95.1^2 $$ (i.e., years after 1750) the true values calculated for the periods in question. The year given in brackets are only approximate, i.e. not given by the authors themselves.

**MINICOY**, a coral island in the Arabian Sea midway between the Laccadive and the Maldives Islands; it belongs like the former to the Ah Rājāh of Cannanore but ethnographically and geographically has more claim to be attached to the Maldives group. It is six miles long but very narrow, being only $\frac{1}{2}$ square miles in area. The population is about 3,000. The people, who are probably of Singhalese origin, have been Muhām-madāns since the xivth century. The language is Mahā but the Arabīl character is used. They are strictly monogamous. A girl's consent is required for her marriage and she brings no dowry, but receives presents from the bridegroom. The women go unveiled. There are three castes in the island. The inhabitants all live in one village which is divided into ten quarters in, each of which the men and women are separately organised with their own headmen and headwomen. All work on land is done by women. The men are sailors and fishermen. Most of the island's food supply has to be imported. The chief exports are cocoanuts, coir, cowries and dried fish. The important position held by women in Minicoy has suggested its identification with Marco Polo's *Female Island* (ed. Yule, ii. 404).

---

MINUCHRI, Abu ’l-NADIM AHMAD b. YA’qûb, PERSIAN poet, nicknamed Shašt-gâla = “sixty-herds”, because of the wealth he accumulated in horses and cattle; but some say the name should be read Shašt-kul or Shašt-kula i.e. “crooked-thumb”. He was a native of Dâmgânî, calling himself Dâmgânî in his verse although Dawlatshâh says he came from Balkh. He was a younger contemporary and imitator of ’Unsûrî [g. v.], but he is considered to have excelled his model in poetic power. After completing his studies under Abu ’l-Fârâbî of Sistân (d. circa 392 = 1020) he enrolled himself in the service of the Amir Minûchîr b. Kâbûs b. Washmîrî, ruler of Dârdjân and vassal of Mâhmûd of Ghazna, and from the name of this first patron he took his taḥkâlaš. Presumably through the influence of Unsûrî he later became attached to Mâhmûd’s entourage of literary men at Ghazna, and wrote kâfûs in praise of his new patron and of his sons Mâhmûd (who reigned for less than a year) and Mâshûd who succeeded to the Ghaznawid throne. The latter was assassinated in 432 (1041), and Minûchîr did not long survive him (Kirât-kût Khân, Mâdînîn al-Faṣâdî, i. 545, says he died in the same year and quotes “Aâfî as having called him “short-lived””). In his work Minûchîr shows himself to be a skilful versifier, displaying a clever felicity of rhyme and very often a refreshing simplicity and straightforwardness of language. Also he did not hesitate to use new forms for his verse, and he is the earliest Persian writer we know of to have used the strophic form of the muwammât, which, as used by him, consists of a series of mirâs or stichai, in groups of six. All six may rhyme together, or only five; in the latter case the last line rhymes with the last lines of the other strophes. In spite of his qualities as a versifier, Minûchîr cannot be regarded as a great poet, even for his day. His themes, — women, love, divination and the virtue of patrons — are of the stock pattern, and his kâfûs are deliberately moulded on the Arabic form, with all its artificialities. In flattery of his patrons he is as servile as any in the whole range of Persian panegyrists and his conceit of himself as it appears in his work is sometimes ludicrous in its effect (cf. N. 48 in Biberstein-Kazimirsky’s edition, Paris 1886).

Bibliography: works quoted above and Ethé, in Grundrisse d. iran. Philologie. A Fârâbî ed. of the Drewan was published in 1307 A.H. (K. LEVY)

MIR, a Persian title abbreviated from the Arabic amîr and approximating in meaning both to the Arabic amîr [g. v.]. (For the dropping of the initial a’rîf, cf. Bâ Sahî for Abî Sahî etc.). Like amîr the title is applied to princes (Minûchîr, ed. Biberstein-Kazimirsky, 1886, p. 96, speaks of Mâshûd, Sultan of Ghazna, as “Mir”), but it is also borne by poets and other men of letters (e.g. Mir ’Ali Shîr, Mir Khwând, Mir Mâshûn; cf. the following art.). In India, Saiyids sometimes call themselves by the title. As a common noun, it is used as an equivalent of sâbî, e.g. Mir pand, mir ʰâhîr. In Turkish there was derived from it the colloquial adjective mirî (“belonging to the government”), which gave rise to al-mirî (“the government”) in the colloquial Arabic of Trak.

(M. HIDAYET HOSEIN)

MINOCAY — MÎRÂDÎ

MIR AMMÂN. [See AMMÂN.]

In the Kur’ân, Sûra Ixxv. 12—18 and lîl. 1—12, a vision is described in which a heavenly messenger appears to Muhammad and Sûra lîl. 12—15 deals with a second message of a similar kind. In both cases the Prophet sees a heavenly figure approaching him from the distance but there is no suggestion that he himself was carried off. It is otherwise with the experience alluded to in Sûra xvi. 1: “Praise him, who travelled in one night with his servant from the Masjid al-Ḥaṣâm to the Masjid al-ʾAqṣâ, whose surroundings we blessed, in order to show him our signs”. That Muhammad is meant by the “servant” is generally assumed and there is no reason to doubt it (Schirke, Islam, vi. 13, note 6; Bevan, Z. A. T. W., xxvii. 55 sq.); that the Masjid al-Ḥaṣâm is the Meccan sanctuary is certain from Kur’ânic usage (Horovitz, Koran, Unters., p. 140); but what is the Masjid al-ʾAqṣâ? According to the traditional explanation, but not the only one recognised in Ḥadîth (see Schirke, op. cit., p. 12, 14 and above, s. v. ISRÁ’) it would mean Jerusalem, but how could Muḥammad, who in Sûra xxx. 1 speaks of Palestine as adma ’lārdî, call a sanctuary situated in Jerusalem al-masjid al-ʾAqṣâ? The age of this explanation is not quite certain; perhaps it was already known to ’Umar b. Abî Râbi’a (ed. Schwartz, xclx) and Abî Shâkr (Lieder der Hudwiliten, ed. Wellhausen, cclxxiv. 24); but even these belong only to the Umayyad period (contrary to Lamens, Sacrifices, p. 72, this is true also of Abî Shâkr, who according to Aqîhî, xxi. 94 was a partisan of the Banû Marwân and panegyrist of ’Abd al-Malik). Muḥammad probably meant by al-Masjid al-ʾAqṣâ a place in heaven, such as the place in the highest of the seven heavens in which the angels sing praises of Allah and we would then have in Sûra xvii. 1, evidence from the Prophet himself about his nocturnal ascension into heavenly spheres (Schirke, op. cit., p. 13 sqq.; Horovitz, J. i., 161 sqq.), testimony which is however content with the mention of the experience itself and says nothing about its course. The question
of the possibility of an ascent to heaven is several times touched on in the Qur’an. In Sūra xi. 38 Fir’awn gives Hāmān orders to build a palace so that he can reach the cords of heaven and climb up to the god of Mūsā (cf. also Sūra xxviii. 3). In Sūra lii. 38, the calumniators are asked whether they had perchance a ladder (zillum) so that they could hear the heavenly voice and in Sūra vi. 35 the consequences are considered which the signs brought by the Prophet with the help of a ladder to heaven might have on his hearers. The old poets also talk of ascending to heaven by a ladder, as a means of escaping something one wants to avoid (Zuhair, Malālābā, p. 54; A’ishah, xv. 32).

Hadīth gives further details of the Prophet’s ascension. Here the ascension is usually associated with the nocturnal journey to Jerusalem, so that the ascent to heaven takes place from this sanctuary. We also have accounts preserved which make the ascent start from Mecca and make no mention of the journey to Jerusalem. In one of these the ascent takes place immediately after the “purification of the heart” (see Bukhārī, Sahih, bāb 1; Ḥadīth, bāb 76; Manātikī, bāb 42; Ahmad b. Ḥanbal, Musnad, iv. 207, v. 143; Tabarī, ed. de Goeje, i. 1157 sq.). In the last mentioned passage we read: “When the Prophet had received his revelation and was sleeping at the Ka’ba, as the Kūraṣḥ used to do, the angels Gabriel and Michael came to him and said: With regard to whom have we received the order? Whereupon they themselves answered: With regard to their lord. Thereupon they went away but came back the next night, three of them. When they found him sleeping they laid him on his back, opened his body, brought water from the Zāmam well and washed away all that they found within his body of doubt, idolatry, paganism and error. They then brought a golden vessel which was filled with wisdom and belief and then his body was filled with wisdom and belief. Thereupon he was taken up to the lowest heaven”. The other versions of the same story show many additions and variants; according to one, for example, Gabriel came to Muhammad through the roof of his house which opened to receive him; according to another, it was Gabriel alone who appeared to him and there are many similar variants. All these versions however put Muhammad’s ascension at an early period and make it a kind of dedication of him as a Prophet, for which the purification of the heart had paved the way. Ethnographical parallels (Schirke, op. cit., p. 2–4) show other instances of a purification being preliminary to an ascension. Similar stories are found in pagan Arabia (Horovitz, op. cit., p. 171 sqq.) and also in Christian legends (op. cit., p. 170 sqq.). Another story (Ibn Sa’d, vii. 143) says that the ascension took place from Mecca although it does not associate it with “the purification of the heart” which it puts back to the childhood of the Prophet [cf. Ḥa ilma].

In the Arabic the word is used in two different senses and this, obviously the earlier, tradition of Mecca as the starting point of the ascension was ousted by the other which made it take place from Jerusalem? The localisation of the Kur’ānic Masjid al-ʾAṣrā in Jerusalem is by some connected with the efforts of ʿAbd al-Malik to raise Jerusalem to a place of special esteem in the eyes of believers (Schirke, op. cit., p. 13; Horovitz, op. cit., p. 165 sqq.; do., in

Islamic Culture, ii. 35 sqq.) and in any case it cannot be proved that this identification is older than the time of ʿAbd al-Malik. It might all the easier obtain currency as Jerusalem to the Christians was the starting point of Christ’s ascension and from the fourth century Jesus’s footprint had been shown to pilgrims in the Basilica of the Ascension; as now, perhaps as early as the time of ʿAbd al-Malik, that of their Prophet was shown to Muslim pilgrims (Horovitz, op. cit., p. 167 sqq.). The idea of the “heavenly Jerusalem” may have had some influence on the development of the isra’ legends; when Muhammad meets ʿĪrāhīm, Mūsā and ʿĪsā in Jerusalem, the presence of these prophets in the earthly Jerusalem is not at once intelligible, but it loses any remarkable features if Bait al-Makdis (Ibn Hishām, p. 267) from the first meant the “Heavenly Jerusalem” (Horovitz, op. cit., p. 168, another explanation cf. ii. 604). Perhaps also the phrase ala ʾl-iṣrā haram al-mashhur was taken to support the reference to Jerusalem; when these words occur elsewhere in the Qur’an they refer to sites in the holy land (Lammens, op. cit., p. 72, note). While the stories quoted above only say that Gabriel took the Prophet up to the heights of heaven, but are silent as to how, others add that a ladder (miʿrāj) was used for the ascent (see Ibn Hishām, p. 268; Tabarī, Taʾṣīr, xv. 10; Ibn Sād, i/1, 143); this ladder was of splendid appearance; it is the one to which the dying turn their eyes and with the help of which the souls of men ascend to heaven. The ladder is probably identical with Jacob’s ladder in Genesis, xxviii. 12; the Ethiopic Book of Jubilees, xxvii. 21 calls this miʿrāj and Sūra lxx. 3, 4 calls Allāh Ḍhwʾ I-Malādiri “to whom the angels and the spirit ascend” (ḥaʾrāj). According to Sūra xxxii. 4, the amūr rises to Allāh; according to Sūra lii. 4 and xxxxiv. 2, Allāh knows “what descends from heaven and what ascends to it”, and in Sūra xlii. 32 there is a reference to steps (maʿrādir) in the houses of men. Muhammad therefore already knew the word, which is presumably taken from Ethiopian (Horovitz, op. cit., p. 174 sqq.). Among the Mandaeans also the ladder (sumhilā) is the means of ascending to heaven (Ginz, transl. Litbarksi, p. 49, 208, 490) and there are parallels to the ladder of the dead in the mysteries of Osiris (see Andrae, Die Osiris-Mysterien, p. 45; Wetter, Phos, p. 114, note 2); the Mandaeans amūd al-taḥbī (Fbrist, p. 335, 10) by means of which the dead man is taken to the sphere of the moon is a more distant parallel (Bevan, op. cit., p. 59).

Just as the miʿrāj is associated with the ascension, so Burāq is originally connected with the night journey to Jerusalem; it found its way however at an early date into the legend of the ascension (see Bukhārī, Manātikī, bāb 42; Ahmad b. Ḥanbal, Musnad, iv. 207; v. 387; Tabarī, Taʾṣīr, xv. 12). The prophets earlier than Muhammad had used Burāq as their steed (Ibn Hishām, p. 263; Diyarbakrī, Taʾrīkh al-Khami, i. 349, p. 410); that this, obviously the earlier, tradition of Mecca as the starting point of the ascension was ousted by the other which made it take place from Jerusalem? The localisation of the Kur’ānic Masjid al-ʾAṣrā in Jerusalem is by some connected with the efforts of ʿAbd al-Malik to raise Jerusalem to a place of special esteem in the eyes of believers (Schirke, op. cit., p. 13; Horovitz, op. cit., p. 165 sqq.; do., in
the Messiah will make his entrance (cf. also Ibn Sa'd, i/i. 176). The recollection that this steed was an ass survives in Muslim tradition so that Burāk is described as “smaller than a mule and larger than an ass” (Bukhari, Manāthakh, bāb 43; similarly Ibn Highām, p. 264; Ibn Sa'd, i/i. 143). Ibn Sa'd already describes Burāk as a female beast and, as early as a story attributed by Ibn Ishaq to al-Ḥasan al-Baṣri, Burāk is given wings (Ibn Highām, loc. cit.). Tha'labi seems to be the first who speaks of Burāk’s human face (in Halabī, i. 370); in the miniatures the Prophet comes to Burāk usually has a woman’s head.

At the gate of each of the seven heavens through which he wanders with the Prophet, Gabriel is asked for his own name and that of his companion (Bukhari, Sañat, bāb 1, Tabari, Tafsir, xv. 4; Annalès, ed. de Goeje, i. 1157). After he gives these he is next asked if Muhammad has already been sent as a prophet (awakad bu'ishya ilaihi, for the original awakad bi'ishīya found in Tabari, Annalès, i. 1158; see Snouck Hurgronje, Isl., vi., 5, note 4); this also indicates that the ascension originally belonged to the period immediately after his call (Schrieke, op. cit., p. 6). In each heaven they meet one of the earlier messengers of God, usually Adam in the first, Yahiya and Isā in the second, Vaisūf in the third, Idrīs in the fourth, Harūn in the fifth, Mūsā in the sixth and Ibrāhīm in the seventh heaven; there are also variations and Adam appears as judge over the spirits of the dead (Andrae, p. 44 sq.; Schrieke, p. 17; Ahmad b. Hanbal, Musnad, v. 143; cf. Apoc. Mosis, p. 37). Of the other messengers of God we are only told — as addition to what is given a description of their personal appearance — that they greeted Muḥammad; Mūsā is an exception who expressly says that Muḥammad is higher in the esteem of Allāh than himself and that the number of his followers surpasses his own (Tabari, Tafsir, xv. 11). On another occasion, Muḥammad engages in a conversation with Mūsā after Allāh had imposed upon him 50 ṣalāt a day as obligatory prayers for the faithful. On Mūsā’s advice, Muḥammad asks several times for an alleviation and each time Allāh grants it; but when Mūsā says 5 salāt still are too many, the Prophet refuses to ask for less (on Genesis, xviii. 23 sqq. as the prototype of this episode; cf. Goldziher, Studien, i. 36; Schrieke, p. 19; Andrae, p. 82). According to some versions, Mūsā dwells in the seventh heaven and the conversation seems to be more natural there. To the ascension belong the visits to paradise and to hell. Paradise according to many versions is in the seventh heaven, according to others knowledge of the first; in some it is not mentioned at all. The statements about its rivers are contradictory (Schrieke, p. 19; cf. above Kāthīr), the Sidrāt al-Muntahā is usually placed in the seventh heaven (Beyan, p. 59; Schrieke, p. 18). In one description hell is put below the first heaven (Ibn Highām, p. 269; Tabari, Tafsir, iv. 19). According to another, the place of punishment of the damned is on the way between heaven and earth and Muhammad sees it on his journey to the Bait al-Maqdis (Tabari, xv. 101, also Ahmad b. Hanbal, Musnad, i. 257; ii. 353; iii. 120, 152, 224, 231, 239). On the punishment in hell cf. Schrieke, p. 17; Andrae, p. 44; Horovitz, p. 173; Reitzenstein, Das mandäische Buch der Grosse, p. 91 sqq.; Litzbarski, Johannismus, p. 98 sqq.; Ginsa, p. 153.

That Muḥammad appeared before Allāh’s throne in the seventh heaven and that the conversation about the obligatory prayers took place there, is already recorded in the oldest stories (see above) but only rarely do they extend the conversation between Allāh and the Prophet to other subjects (Tabari, xxvii. 26; Musnad, iv. 66 as a dream; Andrae, p. 70). But objection was raised to the assertion that Muḥammad on this occasion saw Allāh face to face (Andrae, p. 71 sqq.), and the question was also raised at an early date whether the ascension was a dream or a reality, whether only the soul of the Prophet was carried up or also his body (Caetani, Annali, Intr. § 32; Andrae, p. 72; Beyan, p. 60; Schrieke, p. 13, note 1).

The Hadith contains, besides these, other details which Asin (Escatologia, Madrid 1919, p. 7—52; do., Dante y el Islam, Madrid 1927, p. 25—71) has discussed. In developing the story of the Prophet’s ascension Muhammadan writers have used models afforded them by the Jewish and Christian Apocalypses. A few features may also come from the Parables from the Arda Viraf; cf. the works already mentioned by Andrae, Beyan, Schrieke, Horovitz and W. Bouisset, in A. R. W., iv. 136—169.

Later accounts (Chauvin, Bibliographie, xi. 207 sqq.; Asin, Escatologia, p. 53 sqq.; do., Dante etc., p. 72 sqq.; Nallino, in R. S. O., viii. 802) collect and systematise the material scattered in the older sources; they only increase the matter without however increasing the depth of its thought. Among the Mi‘rādj-books which have become popular in modern times that of al-Ghaṭīṭi may be mentioned (this is the correct form, see Nallino, op. cit., p. 813) on which Dardir (d. 1201) wrote a ḥikâyā; also that of Barzanjī (d. 1179). In the non-Arab lands of Islām, Persian, Turkish, Hindustānī and Malay versions of the legend have contributed to its dispersion (see Chauvin, loc. cit.).

The ascension of the Prophet later served as a model for the description of the journey of the soul of the deceased to the throne of the divine judge (Ašin, Eschatologia, p. 59 sqq.); for the Stüffel however, it is a symbol of the rise of the soul from the bonds of sensuality to the heights of mystic knowledge. Ibn al-‘Arabī thus expounds it in his work Kāf ir al-‘Irād ilā Maqṣūm al-‘Irād (Ašin, p. 61 sqq.; Andrae, p. 81 sqq.), and in his Futūḥāt, i. 356—375 he makes a believer and a philosopher make the journey together but the philosopher only reaches the seventh heaven, while no secret remains hidden from the pious Muslim (Ašin, p. 63 sqq.). Abu l’-‘Alā ’al-Ma’arrī’s Risālat al-Qaṣf al-Fāmīn is a parody on the traditional accounts of the Mi‘rādj (Ašin, p. 71 sqq.). Ašin in his two books quoted has dealt with the knowledge of Muslim legends of the ascension possessed by the Christian middle ages and their influence on Dante. In a separate work (La escatología musulmana en la divina comedia, Madrid 1924) he has collected and discussed the literature produced by his Escatologia down to 1923.

According to Ibn Sa’d, i/i. 147 the irād took place on the 17th Rabī‘ 1, the ascension on the 17th Ramaḍān. For centuries however, the night before the 25th Rādjab — a date also significant in the history of Mecca (see Snouck Hurgronje, Mecca, ii. 71) — has been regarded by the pious as the Lailat al-Mi‘rādīj, and the eye is like the Mawlid al-Nabī devoted to reading the legend of the feast.
Mirâdî, whose full name was Mr. Muḥammad b. Kāḍī Sāḥīn-dāt, b. Kāḍī Kalandar, commonly called Miṣrân Mir or Miṣrânî, born 938 (1531) in Siwâṣtân, Sûnd. He traced his origin to the caliph ʿUmar and spent the last 60 years of his life in great sanctity at Lâḥûr. He died in 1045 (1635). But according to the Bâdsâkâl-Nâmâ of ʿAbd al-Ḥamîd, i. 339, his death took place in 1044 (1634). Shâh Dîjâhân repeatedly visited the saint and Prince Dîrâ Shîkîh erected a splendid dome over his tomb. The Prince also wrote a work called Sâfinat al-Awliyâ in which he described fully the lives of this Indian saint and his disciples.

Mirân Muḥammad Shâh I, of Khândesh, was the eleventh prince of the Fârûkî dynasty. He belonged to the younger branch of that line, which had taken refuge in Gudjarât, and his ancestors had lived in that kingdom and had married princesses of the Mûsâfîrt family until Mâhmûd I of Gudjarât had, on the extinction of the elder branch of the Fârûkîs, placed ʿAdî Kânî III, Muḥammad's father, on the throne of Khândesh. Muḥammad, who was, through his mother, the great-grandson of Mâhmûd, and the grandson of his son, Mûsâfîr II, succeeded his father in Khândesh in 1520, and in 1527 incautiously intervened in the cause of ʿAlî al-Dîn ʿImâd Shâh of Bârûr by siding against his enemy, Bârûhân Nâṣîr Shâh I of Aḥmâd-nâgâr. He was defeated and driven back into Khândesh, but succeeded in persuading his uncle, Bâhâdûr of Gudjarât, to intervene, and with him invaded the kingdom of Aḥmâd-nâgâr. The campaign was only partially successful, but Muḥammad was indemnified by Bâhânî I for his losses. He accompanied his uncle in the campaign which ended, in 1531, in the capture of Mândû and the annexation of Mâlwa to Gudjarât, and on Bâhâdûr's death in 1537, was summoned, in his mother's right, to the throne of Gudjarât, but died on his way to Aḥmâd-nâbâd.

Mirâth (A.), inheritance (pl. mawârîth), mawârîth legator, wâhir heir.

I. The law of inheritance (ʿilm al-fardîd, the science of dispositions), i.e. of the quotas laid down in accordance with Sûra iv. 16, which is called after its most important and most difficult part) is one of the branches of Muḥammadan law in which Muḥammad more deeply modified earlier practice by legislation. Although the Kurânic regulations are fairly detailed, the task of deducing all necessary conclusions from them, to which lawyers turned with particular enthusiasm, gave rise to a great mass of traditions and considerable divergences of opinion on questions not expressly decided in the Kurânic. In the law of inheritance we can also still trace fundamental old Arabian pre-Islamic features.

2. In the period before the rise of Islam, in keeping with the patriarchal system prevailing among the Arabs, the estate of a deceased tribesman went, if he died intestate, to the nearest male relative(s), the order of succession in which these relatives, the so-called ʿazâba (corresponding to agnats), were called upon to inherit survives systematised in its order in the Muslim law of inheritance (cf. below). Minors were, as incapable of bearing arms, excluded from the succession as were female relatives: widows also were not entitled to inherit, and originally no doubt themselves formed a part of the estate, a view which survived in the levirate marriage usual among the Arabs, to which Sûra iv. 23 (cf. below) refers in forbidding it. There is no evidence of any preferential treatment of the first-born, which we find elsewhere in Semitic law. This, the original legal position, had by Muḥammad's time most certainly altered somewhat in favour of women; in cases where the deceased left no male relatives his daughters seem frequently to have obtained the estate: but woman had by no means equal treatment with man, as is clear from Muḥammad's regulations. In addition to these principal heirs the pre-Islamic Arabs had also secondary heirs who correspond to the later so-called quota-heirs (Khawwâs al-farîdîd) and received a part of the estate, the bulk of which went to the ʿazâba. From Kurânic ii. 176 and iv. 37 which confirm this arrangement, we can see that these included the parents, the "relatives" — apparently so far as they were not ʿazâba — and the so-called confederates (ḥalîf, plur. ḥalîfâ). The settlement of the portions falling to them was done in accordance with Sûra ii. 176 — at least in part — according to the last will of the testator.

3. Muḥammad modified this system considerably in details, the main point being the improvement in the treatment of women as in his innovations with regard to the laws of family life generally (cf. Taśhîk); at the same time there is a clear endeavour to fix in legal form the practice which had varied considerably in heathen times. The main lines of the system and the general conceptions as above briefly outlined were retained by the Prophet. One provision which had been made under special circumstances he was not able later to keep in force; immediately after the Hijârâ, he had ordered that those who migrated with him (the muḥâdîřûn) and the believers in Medina (the anîrûr) should regard themselves as brethren and therefore able to inherit from one another, while all bonds of relationship between the muḥâdîřûn and their relatives left in Mecca, even if they were believers, were to be regarded as broken (Sûra viii. 73, with the limitation imposed in viii. 76); but this was expressly revoked by Sûra xxxii. 6. Tradition regards this fraternisation as a special case of confederacy (ḥalîfâ). cf. above, section 2). For the rest, Muḥammad in his first Medina period confirmed the system of secondary heirs and the whole general practice in regard to inheritance (cf. ibid; Sûra ii. 176 is probably to be dated in Kâmaṭân of the year 2 and iv. 37, of which the first view in
al-Baidawi is undoubtedly the right one, cannot be much later); that in ii. 176 he expressly makes the fair treatment of the secondary heirs a duty, already reveals the direction which later ordinances were to take. Connected with this is the probably contemporary ii. 241 sqq. which secures the wife, if she survives her husband, a legacy of maintenance for a year. Not much later, about the year 3, is Sura iv. 23: “Ye, who are believers, are not permitted to inherit women against their will”; this is a prohibition against the ‘azaba forcing the widow of the deceased into a levirate marriage and generally assuming the position of wali over her which belongs only to her male relatives; this is not meant as a regular legal ordinance but is part of Muhammad’s endeavour to improve the position of women. [cf. Pālāq.] Very soon after the battle of Uhud, when numerous Muslims had fallen, we have — as a result of it — the final Kur’ānic ordinance of Sura iv. 8–18: “To the men belongs a share of what their parents and relatives leave, and to the women a share of what their parents and relatives leave — whether it be much or little — as a definite share. 9. If the relatives (not entitled to inherit), the orphans and the poor are present at the division, give them some of it and speak kindly to them (verses 10 sqq. go on to deal with the treatment of orphans). 12. Allāh commands you, as regards your children, as follows: to the boy belongs as much as the share of two girls; if however there are (only) girls (and) more than two, two-thirds of the estate belongs to them and if there is one (girl) to her belongs the half. And the parents shall each have a sixth if (the legator) had children, and if he had no children and (only) his parents inherit from him, his mother shall have a third. If however he have brothers, his mother shall have a sixth. (All this) after deducting any bequests he may have made or a debt. Ye know not whether your parents or your children be of greater use to you. (This is) an ordinance of Allāh and Allāh is all-knowing and wise. 13. To you belongs the half of the estate of your wives, if they have no children; but if they have children you shall receive a fourth of their estate — after deducting any bequest that they may have made or any debt. 14. To them belongs a fourth of your estate, if you have no children; but if you have children an eighth of your estate belongs to them after deducting any bequest that you may have made or any debt. 15. If distant relatives inherit from a legator, male or female, and he has a brother or a sister, each shall have a sixth; but if there are more, they shall have a third among them after deducting any bequest which he may have made or debt. 16. Without prejudice (this is) an ordinance of Allāh. Allāh is all-knowing and gracious”. (Verse 17 sqq. contain promises and threats). As the settlement of the succession in indirect lines left questions undecided, Sura iv. 175 supplements the above: “They ask thee for a decision. Say: Allāh gives you the following decision for remoter kindred: if a man die childless and have a sister, half of what he has is hers and if she die childless, he is her heir; if there be two sisters, two-thirds of the estate belongs to them; but if there be both brothers and sisters, the brother shall have as much as two sisters”. The object of these regulations is simply to supplement the law regarding the rights of the ‘azaba; they are not a reorganisation of the whole law. Each of the persons named is therefore only allotted a definite portion. The remainder, and this is as a rule the major portion, of the estate falls as before to the ‘azaba. There is a distinct tendency to give female relatives half the share of male relatives of the same degree; even in the case when there are daughters but no sons (and correspondingly sisters but no brothers), they do not receive all that would belong to the sons or brothers; but as regards a few smaller portions the two sexes rank equally. The quotas here given abolished the testamentary settlement of the portions usual in the heathen period, which was still approved by Sura ii. 176; this is the historical starting point for the tradition — early interpreted in another sense — that a legacy in favour of the heirs is not valid. Sura ii. 241 sqq. (cf. above) is probably rightly regarded as abrogated by the settling of the widow’s portion in tradition. There is a slight difficulty in interpretation only in iv. 15; but there can be no doubt that this verse refers to half-sisters on the mother’s side, as indeed it has always been interpreted; the text of Ubai’ even inserts an addition to this effect (cf. Nöldeke-Bergstihsser, Geschichte des Qur’ān, ii. 85, 93, note 5). The verse iv. 175 on the other hand refers to full sisters; how the Kurān wished half-sisters on the father’s side to be dealt with, is difficult to say. In iv. 12 “more than two” (girls) is to be interpreted, as the sense requires, as “two and more”; similarly, in the case in which the mother is allotted a third of the estate, it is presumed that the father gets the other two-thirds.

4. The full details which tradition is able to give regarding the causes of the revelation of the regulation of the law of inheritance are not historical; on internal grounds all we can say is that it took place soon after the battle of Uhud (cf. above, section 3). The numerous hadiths which simply repeat the Kur’ānic regulations may be neglected here. Tradition can only record very few actual divergences from the prescriptions of the Kurān: one of these is that a woman received back as her inheritance a slave whom she had presented to her mother and who represented the latter’s whole estate (in a parallel case it is a man who has given his mother a garden; by this alteration the divergence is disposed of). According to another story, the Prophet is said to have laid it down that the wives of the mukhāfiṣīn should inherit the houses of their husbands; according to the wording, it cannot have been a temporary arrangement which was abolished by the final settlement. While nothing can be quoted in favour of the first hadith, the second, which does not seem to be intended as a foundation for any legal clause, may have a grain of historical truth in it.

5. The prescriptions of the Kurān are supplemented and developed in countless traditions among which a comparatively large number relate not decisions of the Prophet himself, but of his Companions (we may cite Ibn Ḥanbal, iv. 279 sqq. as a typical mixed form); in reality they must not for a moment be regarded as fact, but only as anonymous evidence of the first developments of the Kur’ānic law of inheritance. At this stage of development it is already firmly established that an unbeliever cannot inherit from a Muslim; the right of a Muslim to inherit from an unbeliever is finally also denied, although there is some opposition to this view; on the question
of inheritance of a murāḍ, unity was not attained. Excluded from the right of inheritance is also one who has killed the legator; according to one view, always, according to another only if the slaying was deliberate (with 'āmīt; cf. article KAT)/. That a slave has no right of inheritance is taken for granted. Legal relationship is necessary for the right of inheritance; thus illegitimate children or those whose paternity has been disputed by līdān [q. v.] have no legal claim on the estates of their father and his relations. The patron (mawāla, q.v.) is included among the 'ażaba, who are placed in the order which had been handed down from the pre-Islamic period and continued to hold good: the patron and the manumitted slave inherit from one another and according to one view, the same right is granted to the mawāla, meaning the man before whom the person concerned has adopted İslām. After the mawāla come — although some oppose this — the dhawwā 'l-arkām, i.e. persons related to the legator in the female line, whose representative is usually the kāḍī or maternal uncle. In case all these heirs should not exist, the fellow-trihesmen are named. The law in Sūra iv. 14 is also extended to the widow whose husband dies before the consummation of the marriage; on the question what should he share the two daughters, we have the answer two-thirds, doubtless in keeping with the sense of Sūra iv. 12, but also that based on the literal interpretation (the half); finally half-brothers on the father's side, about whom the Kurān lays down nothing definitely, are excluded from inheriting by full brothers. With certain modifications which occur again in the later teaching, a son's daughters are treated like daughters and grandparents like parents, but this regulation only won recognition after opposition and varying practice in details. Here arises the problem of the different shares of the grandfather along with the brothers when he appears with them as 'ażaba, which goes back to his varying position in the series (cf. below sect 60); along with other views we find quoted also the one that later prevailed but it does not seem to be the earliest. The Kurān lays it down that before dividing the estate the amount of any legacies and debts should be deducted; and in early times — and probably in literal interpretation of the Kurānic passages — the legacies often were given preference to debts; after some opposition the opposite teaching prevailed. The diya [q.v.] to be paid for a slain man was in itself subject to the usual laws as part of his estate; but in early times the wife was not allowed a share in the diya of her slain husband, which goes back to old Arab conceptions of the family; the other view ultimately prevailed. In addition there are numerous, often contradictory, views on separate points which show the eager interest taken in the matter. The interest taken in early İslām in the law of inheritance is reflected in Ḥadīth; there are traditions in which the Prophet orders the law of inheritance to be taught and learned, calling it "the heritage of knowledge" on account of its difficulty and expressing the fear that this subject, so difficult to remember, might in time disappear from the memory of his community.

6. The law of inheritance attained its full development in the system of fik. The following are its principles according to the Shāfi'i teaching (for the most important divergences in the other schools cf. below sect 7).

a. The law of intestacy in general. According to Muslim law, there is no fusion between the property of the legator and that of the heir. The creditors of the estate can therefore only assert their claims against the estate; on the other hand, the heirs have no claim on the estate until all debts are paid. The fik has therefore no special teaching on the rejection of legacies, the different ways of succeeding to an inheritance, etc. In addition to pledges entered into by the deceased, the debts of the estate include the funeral expenses and the religious duties omitted by the deceased so far as they consist of concrete things (e.g. unpaid saḥī) or can be atoned for by payment (e.g. neglected fasts [ra vim]) or can be carried through at the expense of the estate by a deputy (e.g. the fik omitted without good reason); in the opinion of a minority of Shāfi'i legists, omitted sulphates may also be included in these. After the debts any legacies have to be paid [cf. waṣīta]; the remainder passes to the heirs. A necessary condition for inheriting is that the heir has survived the testator; in doubtful cases, when persons who would inherit from one another have died without its being certain which died first, as a rule no inheritance passes between them (this decision is already found in Tradition; there was a very old difference of opinion on the point). The heir must also have existed when the testator died; only in the case where a man leaves a pregnant widow or 'umān al-wasālād, is a child's share reserved for the unborn child (Tradition is not agreed on this point). If a man is missing long enough to be considered dead, the kāḍī can declare him "presumably dead" at the request of the heirs after investigating the circumstances; the heirs thus receive the right to take possession of the estate for the time. Excluded from succession are the following: one who has caused the death of the deceased, the murāḍ, an unbeliever from the succession to a Muslim and vice versa, the ḥarī (the unbelieving member of a state with which the Muslim stands in no treaty relation) and the slave. As in old Arab law the succession of the 'ażaba is the basis of the law of inheritance in the case of an intestate; the 'ażaba are the usual heirs, inheritance by others is only an exception from the general rule; on the order of succession among the 'ażaba receive the whole estate after the deduction of the portions set aside for the quota-heirs by the Kurān (cf. under e). If there are no 'ażaba, that portion of the estate which remains after the deduction of the portions of the quota-heirs goes to the state treasury (bait al-mal); a notable change from the view found in traditions — cf. section 5 —; even 'Omar II is said to have decided otherwise, cf. al-Dārimī, farradd, bab 56), it being presumed that this is administered according to law for the benefit of the Muslims; otherwise the Kurānic quota-heirs receive the remainder of the estate in proportion to their quota by the so-called law of reversion, with the exception of the widower or widow if they are not also at the same time parents or children of the deceased (here also as in the case of the exclusion of the widow from sharing in the diya of her slain husband, the basis is the old Arab family law). Only if there are neither 'ażaba nor quota-heirs and the state treasury is not being administered in accordance with the law are the dhawwā 'l-arkām — i.e. persons related to the deceased in the female line as well as those
female relatives who cannot be quota-heirs — called upon to inherit (there are two theories regarding their order of succession). If there are none of these relatives, any Muslim may take possession of the estate, if he is capable and ready to administer it for the general good of Muslims.

b. Rights of the 'asaba. The 'asaba are called upon to inherit in the following order which in essentials already existed in the pre-Muhammadan period: 1. The male descendants of the legator in the male line, a nearer excluding the more distant relatives from the succession. 2. The nearest male relative in the ascending male line with the provision that the father, but not the grandfather (and remoter descendant), of the deceased inherits before his brothers; the grandfather shares with the brothers (cf. below). 3. The nearest male relative in the male line in the descendants of the father: first the full brother, then the half-brother on the father's side, then the descendants of the full brother, then those of the half-brother on the father's side. 4. The nearest male relative in the male line among the descendants of the grandfather (as under 3) etc.; 5. lastly the mawla, i.e., the patron (or patroness), if the deceased was a freed man, and then his 'asaba. — The brothers of the deceased inherit only with the grandfather as 'asaba in equal shares with him, but if there are more than two brothers there, the grandfather receives one-third of what is to be divided between him and the brothers. If there are also quota-heirs, the grandfather is allowed in addition at least a sixth of the estate (which he would inherit as a quota-heir; cf. below 2). He can then choose the most favourable of the three arrangements. This rule seems to be a compromise between the two earlier contradictory views that the grandfather excluded the brothers or vice versa was excluded by them (cf. above section 5). — Female 'asaba. If the deceased left sons as well as daughters they inherit jointly, the share of a son being twice as large as that of a daughter (according to Sura iv. 12) while the quota allotted to the daughters ('ibid) is dropped, as is intended by the spirit of the Kur'anic law. The daughter who inherits along with a son is therefore also entitled 'asaba and in order to distinguish her from the male 'asaba, the 'asaba binafsiki ("asaba by themselves"); she is called 'asaba bi 'l-far'i ("become 'asaba through another"). The daughter of a son of the legator is similarly treated, inheriting along with the son of a son; and the full sister who inherits along with a full brother (by Sura iv. 175); finally it applies also to the half-sister on the father's side who inherits with a half-brother on the father's side (the grandfather makes the full sister as well as the half-sister on the mother's side 'asaba bi 'l-far'i). — If the full sister and the half-sister on the father's side inherit along with a daughter of the deceased or of a son, they do not receive their Kur'anic quota (Sura iv. 175) which in this case goes to the daughter or son's daughter (according to Sura iv. 12), but the rest of the estate after deduction of all quotas that have to be paid; they are in this case therefore called 'asaba ma'a 'l-far'i ("inheriting with one another as 'asaba").

c. Rights of the quota-heirs (dha'wa 'l-far'idi; cf. the article FARA'). The regulations in this connection are in general based on literal interpretation of the Kur'anic regulations. It is true that here only the daughters, parents, husband and wife, and brothers and sisters are allotted a quota but (with some limitations) the rules holding for the daughters have been extended to the daughters of the son and those for the parents to the grandparents; in addition, a distinction has been made among the sisters between the full sister, the half-sister on the father's side and the half-sister on the mother's side. The total number of quota-heirs has thus been raised to twelve: 1. The daughter is entitled to half the estate, two or more daughters get two-thirds, but if daughters inherit along with sons, their claim to the quota drops and sons and daughters receive the whole after deduction of the quotas to be paid; in this case the daughter's share is half a son's. 2. The daughter of a son is subject to the same rules as a daughter; inheriting along with the son of a son she receives half as much as he as 'asaba bi 'l-far'i. As the son's daughter is related to the son through him, she is excluded from participation when a son of the legator inherits. A daughter on the other hand does not exclude a son's daughter from the succession; as however daughters and son's daughters together have only two-thirds of the estate as their quota, a son's daughter has only a sixth if there is one daughter, and nothing if there are two or more, unless she inherits in these cases along with a son's son as 'asaba bi 'l-far'i. 3. The father's quota is always a sixth of the estate; in addition he appears as 'asaba and receives as his quota also any residuum of the estate after deducting all quotas, unless male descendants of the legator inherit jointly with him. 4. The paternal grandfather (in default of him, the remoter ascendants) also receives one sixth of the estate as his quota but is excluded by the father; he also appears as 'asaba (like the father) if there are no male descendants nor father of the deceased. But if in addition to him there are also brothers of the legator, he appears with them as 'asaba (on the share which falls to the grandfather in this case and in the case where there are also quota-heirs cf. above b). 5. The mother by Sura iv. 12 receives one-sixth of the estate if there are children, son's children or two or more brothers or sisters of the legator; otherwise a third (on the meaning of the Kur'anic rule cf. above; in practice the father in this case as a rule receives two-thirds, i.e. according to the scheme, one sixth as quota-heir and the rest as 'asaba; on the exceptions cf. below under d). 6. The quota of the grandmother is always a sixth, from this the mother's mother is excluded by the mother, and the father's mother by the father; her mother; all other female ascendants of the legator rank equally with the grandmothers on both sides if there is no father and mother, so far as they are not related to the deceased by a male descendant not entitled to inherit (therefore for example the mother of the maternal grandfather inherits nothing). 7. A full sister receives half, two or more such sisters receive together two-thirds of the estate (Sura iv. 175). Along with a full brother or grandfather she becomes 'asaba bi 'l-far'i and receives the half of the brother's share (Sura iv. 175). Along with the daughter or son's daughter she becomes 'asaba ma'a 'l-far'i (cf. above b); sons, sons' sons and the father exclude her from succession. She has a claim to the quota only when the legator has died without leaving de-
scendants or male ascendants. The treatment of the half-sister on the father's side in general corresponds to that of the full sister; along with a half-brother on the father's side or the grand-
father, she becomes *'asaba bi *'l-ghairi*, with the daughter or son's daughter *'asaba ma'a *'l-ghairi* (cf. above); sons, sons' sons, father and full brothers exclude her from the succession. Full sisters ex-
clude her only in so far as two or more full sisters receive together two-thirds of the estate, so that nothing is left for the half-sisters; if however the half-
sister inherits along with one full sister they receive together two-thirds, the full sister getting a half and the half-sister a sixth; unless she in these cases inherits along with a half-brother on the father's side as *'asaba bi *'l-ghairi* (i.e. the same rule as with daughters and sons' daughters; cf. above). 9 and 10. The rights of the half-brother on the mother's side and of the half-sister on the mother's side are based on Sūra iv. 15: each of them receives a sixth, two or more together share a third among them; they are excluded from the succession by descendants and male ascendants. 11. By Sūra iv. 13 the widower receives half of the estate, but only a quarter if there is a son or son's child; it is indifferent whether these are his wife's or his own descendants. 12. The widow, by Sūra iv. 14, receives the half of what a widower would receive under the same circumstances; if the deceased leaves more than one widow they share equally the quota allotted to the widow. During the *idda (period of waiting; q.v.) after a revocable *talāk* a man and woman are still regarded as man and wife for purposes of in-
heritance.

**d. Exceptions from the general rules.** Although the quota-heirs can never all inherit to-
gether and in particular the collateral relatives are excluded from their quotas by those in the direct line, the number of qualified quota-heirs may sometimes be so large that the sum of their shares is larger than the whole estate; in this case their shares are proportionately reduced (cf. *'awl*). Otherwise, the occurrence of a number of heirs makes no change from the main rules necessary, except in a few particular cases which have special names; these are cases in which, if the main rules were strictly carried through, the inheritances would be in a proportion to one another which would be contrary to the law; e.g. in the case of the so-called *gharbiyat*: if some one dies leaving a husband or wife and both parents, the mother would receive in this case a third, the father's share however, which is usually two-thirds (cf. above c 1), would be here reduced by the quota either of the widow i.e. a quarter or of the widower, i.e. the half, and thus reduced to live-
twelfths or a sixth; according to tradition it was 'Omar who decided in this case that father and mother should share, in the proportion of two to one, what remains after deducting the portion of the widow or widower, an arrangement which is doubtless in the spirit of the Kur'ānic rule. Another case, the so-called *mutzharraka*, is that in which a wife leaves her husband, her mother, two

decided by 'Omar, the law lays down that the full brothers have the same rights as the half-
brothers so that all inherit in equal shares the third originally set aside for the half-brothers. On a third case of this kind cf. *akdariya*.

7. The most important points of difference among the madhāhib, including the early legists, are the following. It is unanimously agreed that an unbeliever cannot inherit from a Muslim nor a Muslim from an unbeliever; but Sa'id b. al-
Musaiyib and Ibrāhīm al-Nakha'i recognized the right to inherit in the latter case. Unbelievers who belong to different religions cannot inherit from one another according to Mālik and Ibn Ḥanbal, but they can according to Abū Ḥanīfa and al-Shāfi'i. There are three views regarding ability to inherit from the *murtadā* according to Mālik, al-Shāfi'i and Ibn Ḥanbal his whole estate goes to the state treasury; according to Abū Yūsuf and al-Shābānī it goes to his Muslim heirs; ac-
cording to Abū Ḥanīfa what he has made while a Muslim goes to his Muslim heirs, but what he made after his apostacy goes to the treasury. If a legator has been deliberately (with *'and*) and illegally slain, his slayer, it is unanimously agreed, is excluded from inheriting. Abū Ḥanīfa, al-Shāfi'i and Ibn Ḥanbal, but not Mālik, also exclude one who has killed him without design (with *khafa*; q.v.). One who is a slave to some degree can, according to Abū Ḥanīfa, Mālik and al-Shāfi'i, neither inherit nor bequeath; according to Ibn Ḥanbal, Abū Yūsuf, al-Shābānī and al-Muzani he can inherit or bequeath in the proportion he is free. According to Abū Ḥanīfa and Ibn Ḥanbal, if there are no *'asaba* and quota-heirs, the *dā`an* *'l-arham* inherits; according to Mālik and al-Shāfi'i (cf. above 6 a) as well as Zuhār, al-Awzā'ī and Dāwūd al-Zāhirī, in this case the treasury steps in. If there are only quota-heirs, according to Mālik and al-Shāfi'i the remainder goes to the treasury, according to Abū Ḥanīfa and Ibn Ḥanbal however also to the quota-heirs; according to Sa'id b. al-Musaiyib the maternal, uncle inherits along with the daughters. The relationship of *maslā*, which is produced by some one attaching himself to the tribe (usually on the adoption of Ḳāsim by a non-Arab; cf. above, sect. 5) and which results in the patron becoming surety for the *diya* (q.v.) of the client, does not, according to the usual view, give any right to inherit. Ibrāhīm al-Nakha'i and Abū Ḥanīfa take the opposite view but hold but it may be dissolved at any time by either side so long as the patron has not paid a *diya* for his client. The paternal grandmother is not excluded from the succession by the father, according to Ibn Ḥanbal only; in his view, in this case she inherits a sixth either alone or shared equally with the mother. Among female ascendants, according to Mālik, only the mothers of the two grandmothers inherit, likewise their mothers and so on, but according to Abū Ḥanīfa also the mothers of all male ascendants and their mothers again, and so on; both views are quoted by al-
Shāfi'i, but the latter is best known and has established itself in the madhāhab. According to Mālik and al-Shāfi'i, the female ascendants on the father's and mother's side share in equal portions the sixth allotted to the grandmother who is nearer of the two to the legator. According to Abū Ḥanīfa, however, the nearer female descendant on the father's side excludes the remoter on the

GREAT BRITAIN
mother's side from the succession. Whichever of the two sides is entitled to inherit a quota inherits, according to Malik and al-Shafi'i, only on ground of "stronger" relationship, according to Abū Hurairā and Ibn Hanbal on ground of both respects (this case, particularly frequent in the marriages of the Parsees, has been decided in various ways in Tradition; cf. al-Dārimi, Farāḍīd, bāb 42); in the case of two cousins on the father's side, of which one is also the brother on the mother's side, the latter, it is unanimously agreed, receives a sixth and the remainder falls to the two as 'asaba in equal portions, while Abū Tāwār and al-Ḥasan of Baṣrā make him inherit the whole. The estate of a child, whose paternity has been disputed by ūṣūm, as well as that of an illegitimate child, passes in default of other heirs, according to Abū Ḥanīfa, entirely to the mother (a third as Kurānic quota and the remainder as quasi-'asaba); according to Malik and al-Shafi'i the mother receives a third as Kurānic quota and the remainder goes to the treasury; according to one view transmitted from Ibn Ḥanbal the 'asaba of his mother are regarded as his 'asaba, and receive the remainder; the other view corresponds to that of Abū Ḥanīfa. In the special case of the so-called 'unānā, Malik's view agrees with that of al-Shafi'i (cf. above 62a); this is also the opinion of al-Zuhrī and of Sa'īd b. al-Mussiyib and others; according to Abū Ḥanīfa and his fellows, Ibn Ḥanbal and Dāwūd al-Zāhīrī, the full brothers actually receive nothing.

8 a. The law of the Imāms (Twelver-Shī'is) as regards inheritance is based on the same principles as that of the Sunnis but in its practice shows a number of features of its own, which already can for the most part be traced in the tradition, i.e., in the earliest post-Kurānic development. Among the divergences—apart from differences in terminology and presentation—are the classing of the 'asaba and the ḍhaww tārāmām together into one group of relatives, which is divided into three classes: 1. the ascendants in the first degree and the descendants; 2. the other ascendants and the descendants of the ascendants of the first degree; 3. the maternal and paternal uncles and aunts. Each of these classes excludes the following one from the succession and within the two categories of the second class the relative of the nearest degree excludes all others of a remoter degree of relationship, i.e., for example, the daughter excludes the son's son; within the third class a distinction is made between the uncles and aunts of the legator and their descendants, the uncles and aunts of his parents, and their descendants etc., and here also the member of a nearer degree excludes those of a remoter degree. Within the same grade all full relatives (male or female) exclude all relatives of the mother's (not of the father's) side, i.e., full sisters exclude half-brothers; the relatives on the mother's side are excluded only from a share in the residuary estate by all other relatives of the same degree. If relatives whose relationships with the legator is traced through several persons inherit jointly, the proportion of their shares is settled by the (hypothetical) shares of the persons through whom they are related to the deceased. If, for example, paternal and maternal uncles inherit together, the former divide two-thirds of the estate (i.e., the father's hypothetical share), the latter a third (i.e., the mother's hypothetical share); correspondingly, son's children and daughters children, children of brothers and children of sisters, and ascendants on the mother's and father's side. The rules applying to the brothers and sisters of a legator are also applied to his father's brothers and sisters and so on, if the latter are called upon to inherit; if, for example, father's full brothers and sisters (uncles and aunts), father's brothers and sisters on the mother's side exist together, the latter are not excluded by the former but receive a third (if there is only one, a sixth) which is divided equally among them (Sūra iv. 15), and the former receive the remaining two-thirds (or five-sixths as the case may be) of which each uncle gets twice the share of an aunt; the process is similar when their children take the place of uncles and aunts; the grandfather (and if the case arises the remoter ascendants) also inherits equally with the brothers of the legator. Within similar groups the male inherits double as much as the female, so far as there are no special regulations to the contrary (cf. above); for the rest the male relative on the father's side is not specially privileged before the others, as among the Sunnis. Besides these heirs by blood, there are heirs for special reasons, i.e., the husband and the patron (mawla) of a man who has released the legator from slavery; 2. a patron before whom the legator has become a Muslim, or who has pledged himself to pay the diva for him; 3. the imām, who here takes the place of the state treasury, and who, as the general protector of all Muslims, is entitled to inherit in the last resort. In both main groups there are simple heirs and such as have a claim to a Kurānic quota. If the estate does not suffice to satisfy all the quotas, the shares are divided to the paternal relatives only, never to the maternal. What is left over after satisfying the quotas is given to relatives by blood according to the above rule; but if there are no blood relatives entitled to inherit, the quota-heirs, with the exception of the husband or wife, receive the residuum also by the residuary law (cf. however above); if there are no heirs by blood the patrons come in, in the order given, so that the imām, i.e., the treasury, inherits only in the last resort. (These rules are not meant to assess the distribution of an estate to look very different among the Shī'is from among the Sunnis. But there are in addition differences in detail, of which the most important are the following: The Muslim can inherit from the unbeliever (and apostate); even the remotest Muslim heir of an unbeliever has a preference over all non-Muslim heirs; unbelievers of all sects inherit from one another; the succession of the heirs to the estate of an apostate who was born a Muslim begins from his apostasy. The accidental killing of a legator does not exclude the slayer from inheriting. If the sole existing heir is a slave, he is purchased at the expense of the estate (his owner cannot refuse to sell him), thus becomes free and inherits what is left; if the parents of the legator are slaves, they must in all cases be purchased at the expense of the estate, according to some the children also (this is disputed) and according to others every heir (this has not been accepted). The part-slave inherits to the degree in which he is free. One who has a claim to an inheritance from two sides inherits on both grounds. Of the estate of a child whose paternity has been disputed by Ḥasan, the mother receives a third as the Kurānic quota...
and the remainder as quasi-'asaba, according to the more usual view; according to the other the remainder goes to the imām. There are no legal relationships between an illegitimate child and his ascendants (including his mother and her relatives), only between him and his descendants; if there are none, the estate goes to the imām. In the special case of the so-called ḥanibātān (cf. above 6 d'), there is no divergence from the general principles. — On the whole then the Shi'a law of inheritance represents an independent, just as the legacy (for the distribution of the common principles found in the Kur'ān and tradition but diverging further from the old Arab pre-Islamic principles; whether and how far it the Sunni system already presupposes (as has been proved for the Zaidīs; cf. Bergstrasser, O. L.Z., vol. xxv., p. 124) has not yet been investigated.

c. The most important peculiarities of the law of inheritance among the Khāridjī Ilūdīs are the following: the paternal grandfather inherits as quasi-heir a sixth of the estate if there are no descendants of the legator; otherwise he inherits as 'asaba, thus excluding the brothers, just as he himself is excluded by the father. The grandmother is only excluded by the mother. Female descendants, like husband or wife, have no right to the residuum. Manumission confers no rights of inheritance; freedmen, negroes, Indians, Abyssinians or Nubians can inherit from another if there are no other heirs (cf. above, sect. 5). If there are no heirs at all, the estate is given away in charity. The special case of the so-called maqārahā is settled as among the ŠHābīs (cf. above 6 d'). — The dependence of this system on the Sunnī is apparent.

d. The law of inheritance, as a branch of family law and as possessing a peculiarly religious character from its very full regulation in the Kur'ān, has always been one of the chapters of Muslim law most carefully observed in practice [cf. 'ada and šarī'a]. As in the long run it must lead inevitably to the splitting up of even the largest estates, various endeavours have been made to avoid this result, which was considered undesirable. A plan, frequently adopted, was to constitute considerable portions of the estate religious endowments [cf. waqf]; the proceeds of which could be disposed of by the grantor as he pleased; but most endowments in course of time became much broken up. Another way adopted in the Dutch Indies is, in keeping with the local 'ada, to admit only a portion of the actual estate to division among the heirs; we also frequently find an estate divided already in a lifetime by gift or friendly arrangement, and not infrequently some member of the family, according to circumstances, simply takes over the estate and obligations of the deceased; lands here are taken out of the control of Muslim law. So far only a very few Indian modernists (notably Khuda Baksh) have dared to criticise the Muslim law of inheritance and demand its abolition. It is the general practice of Muslim lands and is used by the šarī'a tribunals, which also undertake the distribution of the estate, a thing too difficult for a layman to attempt. The Muslim law of inheritance is also applied to members of other creeds, when they come with problems to be settled to the ŠHārīa tribunals, which often happens in Muslim countries.

(M. E. SCHLIECHT)

MIRDAS B. UDAIYÁ, Khāridjī leader in Baṣra, killed in 61 (680—681). He belonged to the Rabīb b. Ḥanṣāla b. Mālik b. Zaidīnāt (called Rabīb al-Wuṣṭā, Naḍā', ed. Bevan, p. 185, 5 = 699, 112 Mufaddalīyāt, ed. Lyall, p. 123, 12, 772, a branch of the tribe of Tamīm which supplied so many leaders to the Khāridjī movement. His father was called Ḥaḍār b. 'Amr b. Abd b. Ka'b and Udaīya was his mother's or grandmother's name; she belonged to the tribe of Muhārib b. Ḥaṣāfa (Ibn Duraid, Kitāb al-'Ilāhī, ed. Wüstenfeld, p. 134; Ibn Kūtāla, Kitāb al-Ma'ārif, ed. Wüstenfeld, p. 209; Ţābarī, Mubarrad, Balāḏūrī, cf. Bīkī). He is often called by his kunya Abū Bī'llāh.

His brother Īrwa b. Udaīya had been one of the instigators of the Khāridjī movement of secession at the battle of Siīta; he himself had taken part in the movement and had fought against the Caliph 'Ali at al-Nahrawān (38 a. H.); after this defeat he gave up all political activity although, like his brother, he remained faithful to his old opinions; but he declared himself against armed insurrection, political assassination (istīrād) and the participation of women in the Khāridjī movement. These moderate views, which Mirdās retained till the extreme of the caliphate to class him among the ša'dā (quietists) of the Khāridjīs, made it all the more remarkable when he came out openly and actively against the excesses of the governor of Baṣra, ʿAbdallāh b. Ziyād, in his repression of Khāridjīsm. A woman named al-Balāḏī or al-Balāḏūrī (the latter form, given by Ibn al-Bītir from al-Balāḏūrī, seems to be wrong) had been cruelly martyred by the governor. Mirdās's indignation was so aroused that he left Baṣra with 40 of his followers and went to al-Ahwāz on the Fārs frontier, where he held out for a long time without committing any of those acts of fanaticism usual among the Khāridjīs and confined himself to imposing a levy equal in value to the pension
This episode, insignificant in itself, provoked a tremendous reaction throughout the 'Irak in view of the fame which the piety and moderation of Mirdas has brought him. His death was promptly avenged by 'Abdīa b. Hillī, who was later to become one of the leaders of the Azrā'īs rising, and it was in the name of Mirdas that the Khāridjīs rebelled again on the death of the Caliph Yazīd I (65 A.H.). The heroism and death of Mirdas were sung by several poets, notably the famous 'Imrān b. Hātān [q.v.]; his memory was cherished for long in Khāridjī circles and especially in 'Omān, the centre of the Šufyā (al-Mubarakk, p. 533, l. 14 = Aghānī, xvi. 154). The latter, whose insincerity is much less marked than that of the Azrā'īs, may rightly regard Mirdas as their predecessor (cf. Haarbrucker, asch-Scharastānīs Religionstheorien und Philosophen-Schulen, ii. 406, from the Kitāb al-Tahtīf f. 'ldin of Shāfīrū b. Tahīr al-Jasfārānī [Brock, i. 387]); on the other hand, the Mu'tazilīs held that Mirdas had only rebelled at Mandīnā (the title comes) and the Shi'īs even denied that he was a true Khāridjī (al-Mubarakk, p. 560–561). Mirdas's brother, 'Urwa b. Udaya, does not seem to have taken part in the insurrection; but this did not save him from persecution by Ibn Ziyād, who had him arrested and executed shortly after the death of Mirdas; the version which puts his execution before the rising of Mirdas in 58 A.H. (Tabarī, i. 185) is less probable. Bibliography: The fullest and most complete account is that of al-Mubarakk, al-Kāmil, ed. Wright, p. 584–596, without indication of source; al-Baladūrī, Anwār al-Asfīrī, Constantiopolis MS. ʾAshīr Efendi, p. 386–387b, is very close to but not identical with al-Mubarakk's and quotes a large number of verses. He also omits the innād, al-Tabarī, Amīnae, ed. de Goeje, ii. 186–187, 390–391 relies on two sources, Wāhī b. Dājrīr and an anonymous one, of which the former does not seem very reliable and the latter follows al-Mubarakk and al-Baladūrī, but is much shorter. Wāhī, Maqdūm al-Bulūnd, ed. Wüstenfeld, i. 61–62 (cf. also ii. 434, l. 1) seems to have used an independent source. Ibn al-ʿAţīr, al-Kāmil, ed. Tornberg, iii. 428–430, iv. 81–82 harmonises al-Tabarī and al-Baladūrī, and follows al-Mubarakk, p. 592 for the death of ʿUrwa; al-Dinawārī, al-Āqīdūr al-Ḥimāl, ed. Guirgias, p. 278–279 knows the episode, but wrongly attributes it to the Azrā'īs (sic!) and does not even mention Mirdas. — Cf. also Wellhausen, Die rel.-pol. Oppositionsparteien (Abh. G. W. Goetz, phil.-hist. Kl. N. J. V., 2, 1901), p. 25–27.

MIRDASIDS, an Arabic nymph of the 3rd century BC, probably from Syria. The Mirdasids took their name from the leader of the Beduin tribe of the Kilabits, Sāliḥ b. Mirdas. We know nothing of Mirdas himself. On Sāliḥ of the art. and on his successor Šbihl al-Dawla, the art.; for the other members of the dynasty cf. Ḥalāb.

In the beginning of the fifth (eleventh) century the Kilabits migrated from the ʿIrāk to the region of Aleppo. In 414 (1023) their leader Sāliḥ took the town. The dynasty, at first so strong, gradually became so feeble that its last representative Šbihl exchanged the town in 472 (1079) in spite of his brothers' protest for a few smaller towns with the then powerful Beduin chief Muslim b. Kurāīsḥ.

The importance of the Mirdasids, the second last Arab ruling family of Syria, lies in the fact that they successfully defended the northern province of Aleppo by arms and policy against the Byzantines and Turks. Lane-Poole gives the genealogy in his Muhammadan Dynasties, London 1894; Šbihl al-Dawla Nasīr (2) had also a son Mūdrak and Rashīd al-Dawla Māhmūd (4) had also sons Šbihīb and Wāḏīhāb.

Bibliography: given in the article.

MIRJAM. [See MARYAM]

MIR KHAWAND, historian, author of the Rawdat al-Safāʾ ("Garden of Purity"). He was son of Bahān al-Dīn Khwānd Shīb, native of Transoxiana, and, apparently, of Buğhūra. He lived much in Ḥerāt and died there on June 22, 1408, aged 66. His work is a universal history in seven volumes, beginning with the Creation and ending at the death of Shūṭḥ Ḥasan in Ḥerāt in 1505. The last volume, however, is really the work of his grandson, Khāwandīm [q.v.]. His work is not so interesting as his grandson's Ḥalīb al-Šīyar, for it is a compendium and wants the personal note. The style too is bombastic, and there is little historical criticism. But it is a work of great industry and has a high reputation in the East. It was lithographed in Bombay 1848, in Ẓāhrān 1852; a Turkish translation appeared at Constantinople in 1842; partial translations were made by Jenisch, Mitscharlik, Wilken, Vulders, Shea (O.T.F. series), Rehatsek (T.F. series), Jourdain and Silvestre de Sacy (Journal des Savants, 1937).

Bibliography: Quatremerre (Journal des Savants, 1843, p. 127, 170); Rieu, Cat. Port. MSS. British Museum, i. 87; Elliot-Dowson, iv. 127 (and the authorities quoted there, p. 132 sq.); Ethé (s. v. Mirkhoud), Enc. Brit., 11th ed., vol. xviii. (H. Beveridge)

AL-MIRRIKH, the planet Mars. The etymology of the name is unknown. The sphere of Mars is the fifth sphere of the planets. It is bounded on the inner side by the sphere of the sun and on the outer side by the sphere of Jupiter, and its breadth is according to Ptolemy (xx. 376) 998 miles. Its period of revolution is estimated at 1 year, 10 months and 22 days. In about 17 years, after 9 revolutions, Mars comes back to the same spot in the heavens; it spends about 40 days in each sign of the zodiac and covers about 40
minutes each day. It is said to be one and half times the size of the earth.

Astrologers call Mars al-Nakš al-aghar, the minor misfortune. It is the planet, which next to Saturn is credited with the most ominous omens and effects, war, revolts, death, configuration etc. The character of those born under Mars is in keeping with this.

**MIRZĀ or MIRZĀ, a Persian title, from Mir-zāda or Amīr-zāda, and originally meaning born of a prince** (cf. Malik-zāda and Farhang-zāda, which occur in Sādi etc.). The title, in addition to bearing its original significance, was also given to noblemen and others of good birth, thus corresponding to the Turkish Ağha. Since the time of Nādir Shāh’s conquest of India it has been further applied to educated men outside of the class of mullahs or ‘ulamā‘. In modern times the title is placed after the name of a prince, and before the name of other persons bearing it: e.g. Ḥusain Mirzā “Prince Ḥusain”, whereas Mirzā Ḥusain is practically equivalent to Ḥusain. (R. Levy)

**MIRZĀPŪR, a district (and town) in India** in the Benares division of the Central Provinces: area 5,240 square miles. The population is nearly 1,100,000 of whom barely 9% are Muhammadans. The latter show a tendency to increase in proportion to the Hindus, owing to their greater stability, comparing as they do a smaller proportion of the very poor. The district is however a stronghold of Hindaisms, and Islām makes little progress by conversion. Nothing is known of the early history of the district. It was occupied by Rājputs in the eleventh century A.D. and in the next century passed into the power of the Muslim rulers of Dwaynepur. Down to the Moghul conquest, the district played an important part in the military history of India, as it contained the great stronghold of Ćunar which guarded the gateway of the east.

At Rasulpur near Āhura is the tomb of a Muslim named Sājid al-‘Āṣaf. “All which is a place of pilgrimage. Near the gateway of the fort of Bijnaghar is shown the tomb of Sājid Zain al-‘Ābidin, the saint who miraculously took the stronghold for Shīr Shāh. The town of Ćunar contains two mosques at one of which is preserved marble said to have belonged to Ħasan and Ǧusîn. The tomb of the Āfghān saint Shāh Ǧasîm Sulaimānī (1545–1606) with those of his family forms a group of buildings of architectural interest. His festival is celebrated on the 17th–21st Dju‘amā‘dī I.

**Mirzāpūr city** is the capital of the district of the same name. It has a population of 50,000 of whom a sixth are Muslims. It is a Moghul foundation dating from late in the xvith century: in the xvith and early xviith centuries it attained great prosperity as a trading centre, being at the junction of important roads and at the highest point on the Ganges reached by the larger ships. In 1864 the opening of the East India Railway left the town isolated; since then it has declined, as the railway now carries the trade with which it used to deal.

Among the mosques is one founded in the middle of the xivth century by a Muslim lady named Gām, who also left funds to build a sarai. The town contains the celebrated Hindu shrine of Vindhyesvāri, much visited by pilgrims and formerly held in special veneration by Thugs.

**MIRZĀ TAḴĪ KHĀN, Amir-i Niẓām or Amir-i Kābir,** was born at Farāhān of humble parents, his father having been first the cook and then the steward of the Kā’im Mākām, Mirzā Abu-l-Kāsim, who ended his life as the first minister of Muḥammad Shāh Kāfant (1534–1548). In 1850, as a young menial, Taḵī Khān accompanied the Persian Commander-in-Chief on the Mission which was sent to St. Petersburg after the murder at Tīhrān of the Russian ambassador Gribacoff. On his return to Persia after this visit to Europe, he was promoted to be a mirzā or writer, and subsequently was advanced to the rank of khān. By the time his master and patron died the young official had achieved distinction enough to be made wazīr responsible for the army in Āḏbarsīmān. Still further honours came, when, during the negotiations at Erzerūm for the settling of outstanding disputes between Persia and Turkey, he was sent to represent his own country in place of the Mughāl Nawâb, who had fallen ill after his appointment as plenipotentiary. On the conclusion of the Treaty of Erzerūm, Mirzā Taḵī returned to Tīhrān and was then commissioned to accompany the young Shāh, Nāṣir al-Dīn Mirzā to Tabrīz, to which the Shāh was sent as governor of Āḏbarsīmān. In 1848, Taḵī Khān’s master became Shāh, and on the way back to Tīhrān he appointed his lieutenant to the post of Prime Minister. It is said that either modesty or prudence caused him to refuse the title of Sāḏr-i A‘pām which is bestowed on the holders of the office, but, in any event, he contented himself with the less imposing one of Amir-i Niẓām, which he held in Āḏbarsīmān as Commander-in-Chief. As a mark of the royal favour he was given the sister of the Shāh in marriage, and found in her a wife who displayed the utmost devotion to him for the short remainder of his life.

In office he had the rare distinction in Persia of being inamnable to bribery, and he had a regard for his country which led him to resist interference from foreign powers in its affairs. Moreover, recognizing the reactionary influence of the ‘ulamā‘, he attempted in such ways as were open to him to counteract their activities.

He reorganised the army in spite of attempts by his enemies to rouse certain sections of the troops into revolt against him, he made efforts to improve the fiscal system of the country and had some success in making the provincial treasuries self-supporting. Trade, both internal and external, was encouraged by him, and it was he that equipped Tīhrān with the fine bazaars which it now has. As has been indicated, his period of office was not a peaceful one. In 1850 occurred the execution of the “Bābi” [q. v.] at Tabrīz, the revolts of the Bābis at Yazd and Zind致します and the execution of the “Seven (Bābi) Martyrs” at Tīhrān. The risings were put down with great cruelty, and in consequence an attempt was made by the Bābis on the life of the Amir-i Niẓām, whom they regarded as responsible. Almost from the begin-
ning of his period of office he had aroused by his influence over the Shāh the jealousy of the latter's mother and of possible rivals, and their secret attacks were helped by his overbearing character. In November 1851 his enemies succeeded in securing his dismissal, after which the ill-judged attempt of the Russian ambassador to give the fallen minister his protection roused the anger of the Shāh who ordered him to retire in disgrace to Kāshān. There, on January 9, 1852, he met his death at the hands of the sovereign's farāsh-bāshī.

MISĀHA (science of measurement, plane and solid geometry) is the name given by the Arabs to the science of comparing magnitudes and its methods. In the wider sense it covers the measurement of all things which can or need be measured, mainly lengths, areas, volumes, weights and numbers; in particular however, the ḥul al-misāha deals with geometry, with definitions of solids and geometrical figures as well as the laying down of rules for the calculation of lengths, areas and volumes of the different figures in elementary plane and solid geometry. The conception misāha therefore includes only a portion of what we call measurement in the wider sense, or practical or technical geometry (i.e. the measurement of things having length, breadth and volume); in particular it excludes mensuration in the narrow sense, geodesy. The Arabs possessed special treatises dealing with the problems of geodesy. They therefore make the same distinction between theoretical and applied measurement, which had developed among the Greeks from the time of Aristotle and is most clearly expressed by Hero in his Metrica and Dioptra.

The definitions given by the Arabs themselves of the conception misāha are very varied. Some authors give a very wide one (e.g. al-ʿUmayt: "Measurement consists in ascertaining an unknown quantity by means of a known one. The result gives the amount of the unknown quantity in units of the quantity used for measuring"); most of them mean by it the measurement of length, area and volume. Al-Shinshawī makes a clear distinction between direct measurement, "the test of coincidence" (tāḥīk), and indirect measurement by calculating from certain formulae.

We find treatises on geometry throughout the whole period in which the Arabs acted as the transmitters of the ancient culture with which they had become acquainted, from the earliest beginnings of their literary activity at the beginning of the ninth century A.D. to the decline of Arab mathematics about 1600. The purpose of such works was to give the future surveyor, architect or soldier the necessary equipment, the theoretical foundation for his profession. Three groups of these treatises can be distinguished according to their method of treatment:

a. those which contain examples, completely worked out, illustrating the process of calculation (e.g. that of al-Baghḍādī);

b. those which only contain a series of fully worked out problems, and are a kind of exercise book (e.g. that of Abū Bakr).

On the method of exposition in these works it should be noted that we cannot of course speak of mathematical formulae in our sense of the word among the Arabs. They, especially the eastern Arabs, had no language of mathematical formulae; it was only late among the western Arabs and probably only in the field of algebra that a technical language was developed. The rules for measuring were always written out fully in words, sometimes even the figures occurring in the text.

The matter of the works on misāha, especially the larger ones, as a rule comprises introductory remarks, rules for calculating areas and volumes and the most important lengths found on them, and occasionally also practical exercises.

A. Introductory remarks. These are as a rule

1. Definition of the term misāha.

2. Explanation, description and systematic classification of the geometrical figures to be discussed.

3. Definition and list of the most common units of measurement.

B. Rules for calculation.

I. Plane surfaces (and the lengths occurring on them).

1. Quadrilaterals (square, rectangle, rhomboid trapezium, trapezoid, quadrilateral with salient angle).

2. Triangles (equilateral, isosceles, scalene, right angled, acute-angled and obtuse-angled).

3. Polygons (regular, irregular, "drumshaped figure" (mudhabbat), "hollow figure" (mudjawwaf), "stepshaped figure" (mudjawāj).

"Drumshaped" and "hollow" figures are formed by the combination of two congruent trapeziums in such a way that in the former the shorter, in the latter the longer parallel sides coincide; a number of varieties are distinguished. The stepped figure is formed by placing together a number of rectangles of the same length but different breadth, in which the proportions of the breadths form an arithmetical progression.

4. Circle. Segments of a circle (semi-circle, segment, sector, circumference) and related areas (horseshoe or crescent [kīṭāl], egg-shape, bean-or lentil-shaped, or oval figures).

The crescent is formed by the subtraction of two segments of circles of different radius with a common chord. Egg-shape and bean-shape by the addition of two congruous segments which in the egg-shape are less, in the bean-shape greater than the semi-circle. The area of the oval (ellipse) is given by Savasorda as \( \frac{1}{4} (a + b)^2 \pi \).

II. Solids (and the areas, especially superficies, and lengths that occur on them).

1. Prism (ordinary straight and oblique prism, square column, rectangular column, dice, triangular prism, obliquely cut prism, corpus simile domui in Abū Bakr as translated by Gerard of Cremona).

2. Cylinder.
Pyramids (straight and oblique pyramids, sections of pyramids).
4. Cones (straight and oblique cone, section of cone).
5. Sphere and section of a sphere, hemisphere, segment, sector and zone.
6. Regular and semi-regular bodies (the five Platonic and two Archimedean are treated at any length only in al-Kāshi).
7. Other bodies [cylindrical vault (azdžāj and ṭibān; the only difference between them is the length) hollow dome (ḫubbā), roof-shape (corpus simile cabur) in Abū Bakr), wreaths and discus (hollow cylinder), terrace-shaped figures].

C. Practical exercises.

These are generally speaking rare in works on misāḥa. We frequently find exercises in dividing fields modelled on Hero and Euclid. Savasorda has a number of exercises on fields on slopes, in hollows and on summits and on the calculation of the heights of hills; al-Ḥanbalī has some on the measurement of inaccessible pieces of ground, the depth of wells and breadth of rivers. Of other problems may be mentioned, for example, the calculation of the number of pieces of stone or bricks required to build a house or a roof, the ascertainment of the height of a wall.

It must not however be supposed that the subject matter as above described is fully contained in any work on misāḥa. The individual works differ in subject matter according to the inclinations and abilities of their authors, just as our text-books of geometry do at the present day. We find works planned on a very comprehensive scale (by al-Ḥanbalī and al-Kāshi), alongside of very brief ones, often dealing only with portions of the subject (e.g. the anonymous Berlin MS. N°. 5954 which contains only formulae for calculating plane surfaces), or even only a single problem (like the treatise by al-Shinehwarti). We therefore often find expositions which are only put into works on geometry in order to show the author's special knowledge or results of his research in a particular field.

Among remarkable examples of this kind are those which were by Ḥamūghī al-Kāshī in a work on mīṣāḥa of a treatment of regular and some semi-regular bodies (the calculation worked out by him in sexagesimal fractions to the fifths is so accurate that it only begins to differ from the correct figure in the tenth decimal place); the formulae for the area of a surface given by al-Ḥumāwī \( F = V \), for trapezoids with a right angle and his improvement of Hero's formulae for the segments of a circle; the formula for an arc given by al-Karkhī; the formula \( d^2 = \frac{1}{2} [n(n-1) + 6] a^2 \) where \( d \) is the diameter of the circle around a regular polygon of \( n \) sides of length \( a \) given by the same author and al-Bağhdādī (the same formula is found in Nemerurus and Regiomontanus and attributed by the latter to the Hindus; it is however, so far as we know, not found in any Hindu mathematician's work yet published) also the application of algebra to geometry by Abū Bakr and Ibn al-Banna. The former uses the algebraical solution for problems of areas in order to show the application of equations of the first and second degree to the six cases distinguished by al-Khwārizmī; the latter uses combinatorial analysis to investigate the different possibilities of stating the problem.

The methods of calculating the volume are the same as we find among the Greeks and Egyptians. When it is not a question of matter that has been taken over from them, in which case the formulae are directly adopted, the obtaining of results is purely inductive and empirical. Al-Karkhī for example for the volume of a sphere gives, in addition to the formulae \( d^2 (\frac{11}{4} a^2) \), on the method of obtaining which he says nothing, also \( d^3 \left( \frac{28}{45} \right) \) which he gets by comparing the weight of a cube of wax with the weight of a sphere, which is made out of the cube of wax and whose diameter is equal to the edge of the cube. al-Bağhdādī deals with a method of ascertaining the volume from the weight and specific gravity. al-Kāshī knows the method of immersion of Archimedes mentioned by Hero. The direct method of measuring the length of areas by laying a thread along them is still recommended as the most reliable by al-Karkhī and Bahā al-Dīn. It is evident that such methods must lead to approximative results and formulae of approximation, the typical feature of practical geometry, continue to be used by the Arabs in measuring long after they obviously knew of their inaccuracy. Ibn Mammātī criticises the usual formula for the area of a triangle \( \frac{1}{2} (a + b + c) \), and \( \frac{1}{2} (a + b) \), al-Bağhdādī the formula for a quadrilateral \( \frac{1}{4}(a + c) \frac{1}{4}(c + d) \), which comes from the Egyptians.

The reasons for the long survival of such rules are partly that the formulae gave in practice quite useful results and partly that the practical men who were concerned with measurement in the exercise of their trade wanted values easy to calculate rather than great mathematical accuracy and took no note of slight errors, especially if they thereby avoided calculations with roots. For similar reasons and in keeping with the traditional practice, almost all works of mīṣāḥa give no scientific geometrical proofs of the accuracy of the formulae they quote. Only the book of the Jew Abraham Savasorda, who may be reckoned among the western Arabs, gives logically worked out proofs in any number; we occasionally find references to early mathematicians (especially Euclid) in Ibn al-Banna and Ibn al-Ḥanbalī. Probably inspection was quite sufficient (Abū al-Azīz for example draws plane figures in a network of squares each of one unit and counts the squares and their parts within this area) or a simple demonstration in some form or a calculation to prove the correctness of the procedure, which was frequently illustrated also by examples completely worked out.

A further peculiarity of Arabic authors was to give formulae which agree completely in substance in different algebraical forms. The Berlin MS. N°. 5954 gives for example for the calculation of the section of the hypotenuse \( q \) in the right angled triangle the following formulae: \( q = \frac{1}{2} [a + (c^2 - b^2); a] = \frac{1}{2} (a + c + b) (c - b); a] = \frac{1}{2} [a + (c + b); \frac{c}{a}] = \frac{1}{2} [a + (c + b) - \frac{c}{a}]; \frac{c}{a}] = \frac{1}{2} [a^2 + (c^2 - b^2); a]. \) This differentiation was probably only intended to give as many forms as possible of the relations between the known and unknown magnitudes so as to afford the practical man a choice of different correct formulae of which one might suit the special case better than another.

The sources of Arab geometry are to be sought among the Greeks and Hindus. The form and
substance of the rules are almost entirely Greek, especially in the older authors. Hero's "elaborations" in particular, which in turn go back to Egypt, seem to have been the model for Arab works on geometry. To Egypt may be traced the prefaceing of a metrological section (found in many books on miskha), the problems on dividing fields, the formula for the trapezoid, the special name for the upper side of a quadrilateral (re c al-'urf), Hindu are the values for π in al-Khwārizmī, the formula \( V = abd \), for the quadrilateral inscribed in a circle, the terms are, perpendicular from the summit of an arc and chord, the marking of lengths in Hindu figures, the use of algebra to solve geometrical problems (equations, method of double error, combinatorial analysis). The chief teachers were however the Greeks, whose achievements the Arabs generally speaking never surpassed; the requirements of practical mensuration gave them no new problems and practical geometry remained down to quite modern times elementary, the majority of the works of which had been finally settled long ago by the Greeks.

The services of the Arabs to geometry lie less in the extension of the field by ascertaining new, hitherto unknown facts, although in the miskha works we do find a series of new and novel rules, than in their enrolment of this science by new methods of calculation and teaching and especially in their preserving the inheritance of the ancients and handing it down to the western world. Although Hero's geometry first became known in northwestern Europe through Roman surveyors, it was mainly the Arab sources which gave new life to this subject which had become stagnant in its old form. Arabic original works were made accessible to the west in Latin translations. Leonardo of Pisa in his Practica geometriae, which remained a standard work for three centuries, depended closely on Savasorda, who most probably owes a great deal to Abū Bakr as there are striking similarities between the Liber embadorum and the Liber mensurationis; down to late in the xvith century we continually come across writings on practical geometry, which in form and content show to what originality they go back.

**Bibliography:** a. Manuscripts: Arab. authors translated into Latin:

II. Arabic works (the titles are given as translated by E. Wiedemann and J. Ruska):

1. Ibn al-Dīyāb (c. 1150) "Records of the measurement of surfaces", Escurial, old N°. 924, fol. 1a. 70b: 2. 'Imād al-Dīn al-Baghdādī (+1335; Suter, N°. 494), "Work on the science of measurement and the sharing of difficulties", Berlin 5976, fol. 17a. 26v: 3. Ibn al-Banna' (+1359: 1340; Suter, N°. 399), "Treatise on the doctrine of measurement", Berlin 5945, fol. 70v. 73v:

4. anonymous, "Treatise on the principles of the doctrine of measurement" (written in 1355), Berlin 5953, fol. 56b. 59v:

(H. SCHIRMER)
sura (Yāqūt, iii. 449; al-Khāzīn, i.e. as Marquart, S. B. B. A., 1912, p. 492) has recognized, the agglutinative Turkic name for Kâshghar, Ordunkand. Of this kingdom of the Boghākhāns however, this author (p. 447 sqq.) tells us that it belonged to the tribe of Boghārā, whose ruler was a descendant of Āli, as the East Turkholic legend of Satok Boghārā Khān says of his grandson. The story is therefore compiled from various sources. Marquart (Sachau, "Festschrift", p. 271—272) has also recognized that the alleged ruler of Sadjištān whom the author claims (op. cit., p. 458, 4) to have met, Abū Ǧāfār Muḥam- 

mūjās, a p. 1, of the third world of Kazwin's Cosmography in the Gotha Mss. 1506 (Möller, No. 2316) and has been edited from it by Schlozer.

**MISBAH.** [see Surbā.]

**MISKĪN,** poor, a loanword which has shown remarkable vitality. It goes back to the Assyrian miskīnu, "poor" (in the Laws of Hammurabi it is a name for a class between those enjoying full citizenship and slaves; according to L. W. King: freemen who do not belong to the ruling race). In the meaning "poor" it has passed into Aramaic (miskīn), Hebrew (miskīn), North Arabic (miskīn or, against analogy, miskīnī), into Southern Arabic and Ethiopic (miskīn). It has passed from Arabic into Italian and as meschino into French as mis- 

guin. In Arabic, on the analogy of the form miskīlī, it is usually of common gender but the feminine form miskīnā is also found with plural miskīnūt. Muḥamād often uses the word in the Kurān in the list of persons whom it was a duty for believers to support. As in Sūra ix. 60 it is found alongside of fukārā', commentators and jurists have felt that some distinction must be made between the two. They usually explain miskīn as needy, but not absolutely without possessions like the fukārā', and refer to Sūra xviii. 78, where there is a reference to poor people who possess a ship among them. How uncertain this is, is however evident from the fact that the Mālikīs in opposition to the Šafī'īs take the other view and regard the miskīnānūs as the most needy; cf. also the various definitions collected by Lane. Dāh Matrāba in Sūra xc. 16 does not help us. From the meaning "poor" gradually developed that of "base, miserable", also in the moral sense, cf. e.g. Ibn Sa'd, iii/6. ult. where Abu Sufyān's wife Hind is called al-Miskīnā. On the other hand, the word can mean "humble" as in the words attributed to Muḥamād: "Let me live as a miskīn

and die as a miskīn and include me among the miskīnānūn."

**MIṢR,** a. a proper name denoting the eponym of Egypt, the ancestor of the Berbers and the Copts. In accordance with the Biblical genealogy (Genesis x. 1 sqq.) Miṣr is called the son of Ḥām, the son of Nēb. The Biblical origin of the pedigree appears clearly in the form Miṣrīm or Miṣrīn (cf. Hebrew Miṣrāyim) which is found side by side with Miṣr.

In some genealogies between Ḥām and Miṣr there is inserted Bāṣār, a name of which the origin is unknown to me.

There exists, however, also quite a different genealogy, according to which Miṣrān is a son of Tablīl, one of the early heroes (ḏāqābīra), who ruled Egypt after the Deluge.

**Bibliography:** al-Ṭabarī, *Ṭibrīz*, ed. de Goëe, i. 217; al-Ya'[ābī, *Ṭibrīz*, ed. Hout- 

b. a proper name denoting Egypt as a country. It may be supposed that Miṣr was already the name of Egypt among the Arabs in pre-Islamic times as it is used in the Kurān (e.g. sūra x. 87; xii. 21, 100; xiii. 59), where the Biblical form Miṣrām does not occur. It has remained the Arabic name of Egypt [q. v.] up to the present day.

**b. a proper name denoting the capital of Egypt, i.e. at present and since its foundation Cairo, which with its full name is called Miṣr al- 

Kāhirā (cf. Cairo). Miṣr occurs, however, already as the name of the city or the cities situated south- 

west of later Cairo; when the name had been transferred to this city, the name Miṣr al-kādira (Old Miṣr) clung to the old settlement, situated between the mosque of Āmīr and the right bank of the Nile (cf. Butler, *Babylon of Egypt*, p. 16).

In the period between the Arab conquest and the foundation of Cairo the name Miṣr is regularly applied to the settlement just mentioned (Ibn Khūrdadhbih, *B.G.A.*, vi. 287, 271; Ibn Rosteh, *B.G.A.*, vii. 116 sqq.; al-Bukhārī, *Farād al-Kāmiš*, bāb 13; Abū Dāwūd, *Taḥāra*, bāb 74). We are, however, not able to decide which of its parts (Babylon, Fustāṭ or the Tūlūnīd capital) is especially denoted by it. It may be supposed that the combination of Fustāṭ Miṣr "Fustāṭ in Egypt" (cf. e.g. Masûdī, *Tanbih*, *B.G.A.*, xii. 388; Maqītī, *Ḳitāb*, i. 168 opposes Fustāṭ Miṣr to ord Miṣr) forms the link between the application of the name Miṣr to the country and to the capital. After the conquest of Egypt by the Muslims there were two settlements only on the right bank of the Nile where it divides, viz. Babylon and Fustāṭ. The papyri never mention Miṣr as the name of either of these settlements. Yet in the latter part of the seventh century A. D. the application of the name Miṣr to one or to the other or to both
must have begun, as is attested by John of Nikiu who at least once uses Mésr as the name of a city, where he speaks of "the gates of Mésr" (p. 25). In other passages Mésr appears as the name of the country (p. 201, 209). The statement that the use of Mésr as the name of a town arose after the Muslim conquest only, is in opposition to Butler, who maintains that at least since the age of Diocletian there existed on the right bank of the Nile, to the South of the later Babylon, a city called Mésr (cf. Butler, Babylon of Egypt, p. 15; do., The Arab Conquest, p. 221 note). Caetani (Annali, A. H. 19, § 47) has already pointed to the fact, that the traditions concerning the Arab conquest of Egypt do not give the slightest credit to the existence of a city bearing the name of Mésr. Butler's reference to the Synaxary proves nothing, as this work was composed many centuries after the conquest. — The Coptic name of Babylon was Keme.

d. a common noun, denoting a town; it is used especially in connection with the capitals of the provinces in the times of the conquests, e.g. in the tradition: "The amār will be conquered at your hands" (Abū Dawūd, Dībālāh, bāb 28). Basra and Kāfa are often called "the two misr" (Bukhārī, Haqīqī, bāb 13; Yaqūt, Maqāmī, iv. 454). Further any town may be called misr (e.g. Bukhārī, Dībālāh, bāb 2; Aḥfāl, bāb 15; Idrīs, bāb 25; Tirmidhī, Nīkāh, bāb 32 etc.). This misr is a genuine Semitic word, cf. Liṣān al-ʿArab, s. v. and the Jewish-Aramaic mīṣr, māṣrād, which have the same meaning, viz. that of a house or a field as an exactly delineated and demarcated territory (cf. J. Levy, Chaldäisches Worterbuch; do., Neuhébraisches-talmudisches Worterbuch).

It may be supposed that the geographical name Mīṣr (cf. above, a.—c.) comes from the same root and has originally a meaning akin to that of the common noun. (A. J. Wensinck).

Mîṣrā', a term in Arabic prosody applied to a hemistich or half line (huit): the first hemistich is called ʿadār and the second ʿadār. Each has two, three or four feet, tafṣīda or ḥāfī.(1) The last foot of the first hemistich is called ʿarūd and the last of the second ʿarūd. As a general rule, and in the first verse of a poem, the ʿarūd foot should have the same measure (tāfṣīr) and rhyme (tafṣīd) as the ʿadār foot.

(MOI. BEN CHENER)

Mîṣṣīs, arab. al-Maṣṣīṣa, a town in Cilicia on the Dājhīn.

In antiquity it was called Māṣāu ʾistīna a name, which (like that of Māṣāu ḫūdīn in the Cilician passes) is derived from the cult of the legendary seer Mopos (cf. Meyer, Gesch. d. Altert., viii, 2, § 483). In ancient times, the town was chiefly famous for its bishop Theodorus (d. 426), the teacher of Nestorius and friend of the suffragan bishop and inventor of the Armenian alphabet, Maγhṭāoē (Peeters, Revue des Études Armén., ix., Paris 1929, p. 210; on him cf. e.g. al-Maṣṣūdī, Tanbih, ed. de Goeje, p. 152; Mich. Syr., transl. Chatbot, ii. 3; Barhebraeus, Chron. eccles., ed. Alboum-Lamy, i. 133; Theophanes, Chron., ed. de Boor, i. 77, 96 sqq.). In 1761 a synod was held in Moposheisia in June 550 to see that his name was removed from the diplomas of the bishops (Masis, Acta Concil., ix., col. 275—289; Hefele, Konzilien geschichte, ii, 832—834). At a later date the name of the town was usually written Moposuēstia (pronounced: Mobsuhestia); cf. Append. ad Petri Sivili hist. Manich., ed. Gieseler, p. 63, i.; Wilh. Schultze, Zeitschr. f. vergl. Sprachforsch., xxxvii., new series, xii., 1895, p. 372; references in Gerber to Georg Kypr. 819; Syr. Moposheisia: Noldke, W. Z. K. M., iii, 1889, p. 356; Severus Antioch., Epíst., v. 6, ed. Ioukois, p. 338; Arab. Mobsbustiā in Ibn Khurābdībūtī, ed. de Goeje, p. 90). As early as the end of classical times we already find the popular form Mōmpštis (Tab Peut), Byzant. Māṣṣīs (Michael Glykys, Annali, Bonn. Corp., p. 507; A. Kanumucka, ed. Reурсмыхед, i. 140; in al-Īdrīsī, ed. Gilemiller in Z. D. P. T., viii, 24; Mēnsrī; the Byzantine work on "Towns with later altered names", ed. Burckhardt, Iberikos, Šeńskim, Leipzig 1893, p. 62, Appendix I., No. 29, wrongly says: Kαταχάλα κω είναι τή Māṣṣīs: the former is rather the modern Būdūm Kāfī, Māsīs (Theodosius, De sit u terrae sanctae, c. 52, ed. Geyer in Corp. Script. Eccles. Lat., xxxix., 159, ed. J. Syriaca Maṣṣūdī, ed. Heister, Antichena, ed. Re✞münk. I. fasti della chiesa patriarcale Antichena, Rome 1920, p. v.; Byzant. Inschr. xxv., 74, 81), from which the Arabic al-Maṣṣīṣa, Armen. Misiēs, and Turk. Mīṣrīs or Misīs have arisen.

The emperor Heraclius is said to have removed the inhabitants and laid waste the district between Antioch and Mopsueisia on the advance of the Arabs, in order to create a desert zone between them (al-Tabari, i. 2396; al-Baladhuri, ed. de Goeje, p. 163; between al-Ikandarūn and Tarsūs), and under the Omayyads all the towns taken by the Arabs from al-Maṣṣīṣa to the fourth Armenian (Malaya) and still (one left behind for fortified and uninhabited as a result of the inroads of the Mardaites. (Theoph., ed. de Boor, i. 363, 17). According to Abu l-Khaṭṭāb al-Āzdī (in al-Baladhuri, p. 164), the Arabs conquered al-Maṣṣīṣa and Tarsūs under Abu ʿUliba, according to others under Musa b. Maṣūrī, who was sent by him and who thereafter advanced as far as Zanda (in 16 = 637; Caetani, Annali dell' Iscr., ii, 805, § 311). Mūʿawiyā on his campaign against Ṭammūriyya in 25 A. H. found all the fortresses abandoned between Anṭākīya and Ṭarsūs (see above), According to the Māṣṣīs Mūʿawiyā had himself destroyed all the Byzantine fortresses up to ʾAntākīya in 31 (651—652) on his return from Darawīla (Darwīla in Phrygia) (al-Baladhuri, p. 164)). After the Syrian rebellion against ʿAbd al-Malīk, the emperor Constantine IV Pogonatos in 65 (684—685 a. d.) advanced against the town and regained it (al-Yaḥūbī, ed. Houtsma, ii. 321). Yahyā b. al-Khaqam in 77 marched against Mard al-Shām between Malaya and al-Maṣṣīṣa (al-Yaḥūbī, ii. 337). It was only in 64 (703) that ʿAbd al-Malīk's son ʿAbd al-ʿĀṣ returned the town, and had the eschatol rebuilt on its old foundations (Baladhuri, p. 165; Yāḥūbī, ii. 466; Wākīdī in Tabari, ii. 321).
MISSÍS

1127; Ibn al-Athir, ed. Tornberg, iv. 398; Theoph., Chron., ed. de Boor, p. 372, 41; Mich. Syr., transl. Chabot, ii. 477; Elias Nisibeni, Opus chronolog., ed. Brooklyn, p. 155; ibid., p. 75; Scot. Syr., chronica monasterii, ed. Guidi, p. 232, transl. p. 176, under 1015 Sel. year: Weil, Gesch. d. Chalifen, i. 472. In the following year, he installed a garrison in the fortress, including 300 specially picked soldiers, and built a mosque on the citadel hill (Tall al-Hisæ); a Christian church was turned into a granary (kurna, kurnâ = korram, korra: al-Baladhuri, p. 165; Ibn al-Sijîna, ed. Bâinî, p. 179). To the same event no doubt refers the wrongly dated reference in the Chronicon of the Armenian Samuel of Ani of the year 692 A.D. to the fortification with strong walls of the town of "Ma- mesta, i. e. Misr" by the Muslims under 'Abd al-Malik (Ratic temporumque ad saum actent pretiâri Samuelli Anticius, in Euseb. Pamphil., Chron., ed. A. Mai and I. Zohrab, Mediolani 1818, App. p. 57; Alişan, Sisoevan, p. 280). Every year from 1500 to 2000 men of the corps (paxwâd) of Antakya used to winter in the town. According to Michael Syrus (transl. Chabot, iii. 478), 'Abd al-Malik died in 1017 Sel. (705 A.D.) in al-Masqîs. 'Umar II is said to have intended to destroy the town and all the fortifications between it and Antioch and to have been either prevented by his own death (Baladhuri, p. 167) or dissuaded by his advisers; according to this version, he then had a large mosque built in the suburb of Karfâbâyina in which there was a cistern with his inscription. It was called the "Citadel Mosque" and kept up till the time of al-Mu'tasim (al-Baladhuri, p. 165); but Karfâbâyina was probably not really built till the time of al-Mahdi or Hurrîn al-Raghib; [see below]. Yazîd b. Djughar ('Azâd, a tooth) in 704 A.D. attacked Sis (ze Sîsu kâstro: in al-Tabarî and Ibn al-Athir; Sisâna in the Nâhiya of al-Masqîs) but was driven off by Heraclius, the emperor's brother (Theophan., ed. de Boor, p. 372, 23; A. M. 6196: according to al-Tabarî, ii. 1185; and Ibn al-Athir, iv. 419, wrongly not till 87 A.H.). Hijsân built the suburb (al-Rabaq), Marwân II the quarter of al-Khûsîs east of the Dîjâhân, which he surrounded with a wall with a wooden door and a ditch. The bridge of Dûsir al-Walid between al-Masqîs and Ahdâna, 9 mil from the former, was built in 125 (742-743 A.D.) and restored in 225 (840) by Mu'tasim (al-Baladhuri, p. 168; Yaqût, Mu'jam, ed. Wustenfeld, ii. 82; Safi al-Din, Mrâzîd, ed. Juynboll, i. 255). In the first half of the viith century the caliphs al-Walid II and Yazîd III brought the gipsy tribe of the Zu't, who had been deported to Başra by Mu'awiya in 670 A.D., and settled them with great hordes of buffalo in the region of al-Masqîs in order to fight the plague of lions in the district of the Dîjâbal al-Lukkâm (al-Baladhuri, p. 168; De Goede, Bijdrage tot de Geschiedenis der Eigeners, 1875, p. 17-22). The first Abbassíd, Abu 'l-Abbâs al-Saffâh, on his accession strengthened the garrison by 400 men, to whom he gave lands; the same estates were later allotted to them by al-Masûr. The latter in 139 (756-757) restored the wall, which had been damaged by an earthquake in the preceding year, and increased with 8000 settlers the much diminished population of the town, which he called: al-Mâmu'ra (al-Baladhuri, p. 166; Ibn al-Athir, v. 382; Yaqût in 579, s.v. al-Mâmu'ira: Ibn al-Sijîna, p. 179). On the site of a heathen temple be built a large mosque which far surpassed the mosque of 'Umar in size. When 'Abd Allah b. 'Abî was governor of Maârib (i.e. 211-226), it was enlarged by al-Ma'mûn. Al-Masûr increased the garrison to 1000 men and settled in the town the inhabitants of al-Khûsîs, Persians, Slavs and Christian Arabs (Nabâtaeans), whom Marwân had transplanted thither (see above), and gave them allotments of land. It is probably that to the same event the story refers that Sâlih b. 'Ali, when in the 'Abbâsid period the inhabitants of al-Masqîs, harassed by the Byzantines, resolved to migrate, sent Djughar b. Yahyâ al-Raghibi al-Khurâsâni in 140 (757-758) to rebuild the town and settle it with Muslim inhabitants (al-Baladhuri, p. 166; according to al-Tabarî, ii. 135 in the year 141). Under al-Mahdi the garrison was increased to 2000; in addition there were the Amîkîya corps of almost the same size which wintered here regularly until Sâlih of Turrius. Beched increased the garrison by 500 men instead. There is a brief reference in the Syriac inscription of 'Eneshâ to a raid by al-Mahdi to the Dîjâhân (Syr. Gîhân) in 780 A.D. (1091 Sel.: Chabot, in J. D., ser. ix., xvi., 1900, p. 287; Pognon, Inscription, de la Syrie et de la Mesopotamie, p. 148-150, No. 84). Hurrîn al-Raghib built Kafarbaîya or according to another story, altered the plans for this suburb prepared by al-Mahdi and fortified it with a ditch; he also built walls which were only completed after his death by al-Mu'tasim. In 187 (803) an earthquake laid waste the town (al-Tabarî, iii. 688). In the following year, the Byzantines invaded and pillaged the region of al-Masqîs and 'Ain Zarba and carried off the inhabitants of Tarshûs into captivity, whereupon Hurrîn al-Raghib attacked and defeated them (Mich. Syr., iii. 16). According to al-Tabarî (iii. 709) and Ibn al-Athir (vi. 135), the Byzantines in 190 (806) invaded 'Ain Zarba and Kansat al-Sawdî and took prisoners there; but the people of al-Masqîs regained all their loot from them. If, as it seems, the curious story in the Byzantine chronicles (Theoph., Chron., ed. de Boor, p. 446, 15; Georg. Kodren, Bonn. Corpus, ii. 17) that in 771-772 (A. M. 6264) 'Alâ'edar Balad, i.e. el-Fâdûl b. Dîhât, who had 500 Byzantine prisoners with him, lost 1000 men and all his booty through a sortie of the Mäghribîs, refers to the same events, the latter would appear to be wrongly reported and wrongly dated.

On the 13th Hizârân 1112 Sel. (811 A.D.) the walls and many houses in the town and three adjoining villages fell in a great earthquake; near al-Masqîs the course of the Dijâhân was dammed up so that the boats lay on the dry bed (Mich. Syr., iii. 17). In 198 (813-814) Thâbit b. Naqîr al-Khûsîs was fighting in the Syrian marches of al-Masqîs and Ahdâna (Yâkîbî, i. 541). On his campaign into Bilâd al-Rûm, al-Ma'mûn passed through al-Masqîs and Tarshûs in Muharram 215 (March 830: al-Tabarî, iii. 1103; Ibn al-Athir, vi. 204; Abu 'l-Fidâ', Anales Musulm., ed. Reiske, ii. 152: Weil, Gesch. d. Chal., ii. 239). In revenge the emperor Theophilos in 216 (831) raided the lands around these two towns and slew or took prisoner 2000 men (al-Tabarî, iii. 1104; Ibn al-Athir, vi. 295).

After the emperor's campaign against Zibatra (837 A.D.) in which he also defeated the Mäghribîs (Const. Porphyrog., De castris, ed.,
Bonr, p. 503; Vasilev, *Visintiya i Arabi*, in *Zapiski ist.-filol. fak. imp. S.-Pthg. Univ.*, čast Ivi., 1900, p. 85 sq., note 4), al-Muʾṣaṣim bi Liḥṭa in the following year attacked ʿAttārūya; his general Baṣhir commanded a part of the army which included the Maṣṣaṣa contingents (Mich. Syr., iii. 96). In 245 (859) the town was again visited by an earthquake which destroyed many places in Syria, Mesopotamia and Cilicia (al-ʿAkkāṣi, 1440). The Caliph al-Muʿāṣirid after restoring order in the Thughfūr al-Šāmiyya (289 = 900) returned from al-Maṣṣaṣa via Fundūq al-Ḥussain, al-Iṣkandariyya and Baghrūs to Anṭākiyya, Ḥalab and al-Kaḳka (al-Taibānī, iii. 2198–2200; al-Fundūq, a place in the latter near al-Maṣṣaṣa: Yāḥūt, iii. 918; Saʿīd al-Din, Marāṣīl, ii. 365).

In 352 the emperor Nicephorus took Adana, the inhabitants of which fled to al-Maṣṣaṣa, and sent the Domesticus John Taimissēs (Yāḥūya b. al-Shimīṣīkī b. al-Dumīstikī) against this town. The latter besieged it for several days but had to withdraw as his supplies were running short, and after laying waste the country round burned the adjoining al-Mallūn (Maṣṣaṣī) at the mouth of the Djahān (Yāḥūya b. Saʿīdī, *op. cit.*, p. 74 sq.). The commander himself came again against him l-Kaḍa, 352 (Nov. 964) to the marches (al-Thughfūr) and besieged al-Maṣṣaṣa for over 50 days but had again to abandon the siege owing to shortage of supplies and retired to winter in Kaṣāriyya. Finally the town was stormed by John Taimissēs (Arm. Kuṭīr Zan) on Thursday the 11th Radja 354 (July 13, 965). The inhabitants set it on fire and fled to Kafarbaḥiya. After a desperate struggle on the bridge between the two towns the Greeks took this suburb also and carried off all the inhabitants into captivity (Yāḥūya b. Saʿīdī, *op. cit.*, p. 795; Ibn al-ʿĀthir, vii. 408–411; Abu l-ʿIffālī, *Ann. Musl.*, ed. Reiske, ii. 452 sq.; Mich. Syr., iii. 128; Elias Nisibīnī, ed. Brooks, p. 218; transl. p. 106; Georg. Cedren, ed. Bonn, ii. 362; Leona Diakon, ed. Bonn, p. 52 sq.; Mattīeas Uthayecī, ed. Dularier in *Rev. hist. croix*, Docum. Arm., i. 5; Stepʿan Ašokī of Taron, Arm. Gesch., transl. H. Gelzer and A. Burkhardt, Leipzig 1907, p. 134, 24). They were, to the number of 200,000, it is said, led past the gates of Taṣrūs, which at that time was being besieged by the emperor's brother Leo, to terrify the people of the town (Ibn Shīhāna, *Rawaẓid al-Maṣṣasī*, in Freytag, *Z. D. M. G.*, Elias Nisibīnī, *op. cit.*). The gates of Taṣrūs and of al-Maṣṣaṣa were gilded and taken as trophies to Constantinople, where one set was put in the citadel and the others on the walls of the Golden Gate (Georg. Cedren., ii. 365).

The town remained for over a century in the hands of the Byzantines; the Emperor Bassil II Bolgaroktonos stayed for six months in the region of al-Maṣṣaṣa and Taṣrūs before going to Armenia after the death (March 31, 1000 A.D.) of the Kουpalēs (Yahya b. Saʿīdi, *Tarīkh*, ed. Rosen, p. 39. in *Zap. Imp. Akad. Nauk.*, xliiv., St. Petersburg 1883). In 1042 the Armenian prince ʿAlpargīrī, son of Ḥasan and grandson of Khašākū of the house of the Arcrunians, was sent by the emperor Constantine Monomonachos as governor to Cilicia (St. Martin, *Mon. sur l'Arm.*, i. 199). In 1055 A.D., Philaretos Hrachomios, who was appointed in Constantinople perhaps Sebastos (Mich. Syr., iii. 173) or at least Kουpalēs (Mich. Attal., Bonn ed., p. 301) and whose ephemeral kingdom comprised the land from Taṣrūs to Matlāya, Urfa and Anṭākiyya, held al-Maṣṣaṣa (Mich. Syr., loc. cit.: Laurent, *Byzant. et Antioche sous le courapate Philaretos*, Rev. des Et. Arm., ix., 1929, p. 61–72). Shortly before the arrival of the Crusaders, the Seldjuk Turks took Taṣrūs, al-Maṣṣaṣa, ʿĀīn Zarba and the other towns of Cilicia (Mich. Syr., iii. 179). About the end of Sept. 1097 the Franks under Tancred, who had been invited thither by Lambert of Uskin III., took the town which was stormed after a day's siege: the inhabitants were slain and rich booty fell into the hands of the victor (Albert. Aquens., i. 15 sq., in Migne, *Patrol. Lat.* clxvi., col. 446 sq.; Radulf. Cadom., *Gesta Tancrodi*, c. 39 sq.). William of Tyre describes al-Maṣṣaṣa on this occasion (i. 21, in Migne, *Patrol. Lat.*, col. 295): "Erat autem Manimistra una de nobilissimis ciuitatem provinciae civilitates, quod et multorum incolarum insignis, sedet optimo agro et glba where et amabiliter præcipua commendatibis". Count Baldwin, who had quarrelled with Tancred, followed him along with the admiral Winimer of Boulogne and encamped in a meadow near the Djahān bridge: Winimer left him there and went with his fleet to al-Kaḍa, while the two rivals had a desperate battle, after which Baldwin withdrew to the east (Albert. Aquens., iii., i. 15, 59, in Migne, *op. cit.*, col. 446, 472). Tancred followed him, after he had improved on the city "plus paternas quam principis leges" (Radulf. Cadom., c. 44). The Byzantine general Tatikios, who had joined the Crusaders to take over their conquests in name of the emperor, left them in the lurch in the beginning of Feb. 1098 at the siege of Anṭākiyya and ceded to Bohemund the town of Tursol (Taṣrūs), Manimistra and Ademna (Adana) (Raymond of Aguiles, in Bonn, *Gesta Del per Francos*, Hanover 1861, p. 126). Bohemund only took possession of the towns of Taṣrūs, ʿĀīn Zarba and al-Maṣṣaṣa in August (Will. of Tyre, vii. 2). After the town had again fallen to the Greeks for a period. Tancred again took it in 1011 (Rad. Cad., c. 143). But to hand it over with Taṣrūs, Adana and ʿĀīn Zarba to Bohemund on his return from captivity in 1103 (Will. of Tyre, vii. 2. in Migne, *op. cit.*, col. 379). In the following year however, Longinas, Taṣrūs, Adana and Maṣṣaṣa were regained by Byzantium by the campaign of the general Monasras (Anna Connona, *Alēsikē*, ed. Reifferscheid, ii. 140, 5, who apparently did not recognise the identity of Maṣṣaṣa with Méfou

In 1122/3 the Rupénid Levon I (Rupenov), son of Constantine, took the town (Arm. Mēsas, Misas, Mamestra or Manuesta from the Greeks (Cinnamos, i. 7; iii. 14; Smbat Sranper, Chronicle, in Docum. Arm., i. 615). The brother of the emperor John I Komnenos went to him and Levon gave his sons his daughters with the towns of all Adana as dowries. But when they quarrelled he took back from the Greeks all that he had given them, and Isaac had to flee with his sons to Sulṭān Masūd (Michael Syr., ii. 230). Levon, falling through treachery into the hands of Raymond of Poitiers, had to cede (1136–1137) al-Massja, Adana and Sarvanti'kar (now Sawaran Ka'fe?), but regained his liberty in a couple of months; he very soon retook these towns (Docum. Arm., i. 152 sq. = Chron. de Mathieu d'Edesse, transl. Dulaurier, p. 457; Smbat, op. cit., p. 616). The emperor John in 1137 (1448 Sel.) had his revenge on Levon. He invaded Cilicia, took Taras, Adana and al-Massja, sent his Levon himself with his wife and children and took them to Constantinople, where Levon subsequently died (Ibn al-Aswār, xi. 357; Michael Syrus, iii. 245; Gregor. presb., Forts. d. Chronik des Mattiæ, transl. Dulaurier, p. 323; cf. Docum. Arm., i. p. xxxii, i and 153, 4; Will. of Tyre, xiv. 24; Rohricht, Gesch. d. Kg. Jerus., p. 211). John installed Comlan (Calamanus), son of Boris and grandson of King Comlan of Hungary, as governor of Cilicia (Will. Tyre, xiv. 24, xix. 9, in Migne, Patr. Lat., cc., col. 603, 756; a "Dux Ciliciei" mentioned in Regum et principum epistolar., no. 24, in Bongars, Gesta Dei per Franc., p. 1512, l. 46 and passim). When the emperor John died at Marsj al-Dībādī on April 8, 1143 (Will. of Tyre, xvi. 22 sq.; Rohricht, Gesch. d. Kg. Jerus., p. 238, 4), his successor Manuel I Komnenos had his body brought by boat from Mopsuestia down the Pyramos to the sea and taken by sea to the capital (Niketas Choniats, Man. Komn., i., Bonn ed., p. 67).

Thoros II, the son of Levon who had escaped home from his confinement in Constantinople, was again able to cast off the Byzantine yoke. When in 1151 he took Mēsas and Tīl (Tall Ḥamādīn) from the Byzantines (Smbat, in Docum. Arm., i. 619) and made their general Thomas prisoner, the emperor Manuel in the following year sent against him with 12,000 cavalry Andronicos Komnenos, whom he had appointed governor of Tarṣūs and al-Massja (Gregor. presb., in Docum. Arm., i. 167 = Matth. Edessa, transl. Dulaurier, p. 334; Smbat, Chron., in Doc. Arm., i. 619). Andronicos, who did not recognise Thoros as ruler of Asia Minor, advanced against al-Massja but was surprised by the Armenians and put an ignominious flight with his 12,000 men. Thus not only the town, which was very well supplied with the boundaries and military material of all kinds, fell into his hands, but also a great part of Cilicia (Gregor. presb., transl. Dulaurier, p. 334–336 = Doc. Arm., i. 167 sqq.; Smbat, op. cit.). The emperor, himself too weak to avenge the insult, induced by gifts the Sulṭān Kīlājb Arslān II (Gregor. wrongly: Mas'ūd) of Kūnīya to attack Thoros. The Sulṭān, who on the first occasion (1153 A.D.) was content with the defeat of the Armenian and the return of the lands taken from the Greeks, again attacked al-Massja, 'Ain Zarha and Tall Ḥamādīn (Arm. Tilin Hamunun) in 1156 but could do nothing against them and had finally to retire after heavy losses (Gregor., op. cit., p. 338 = Doc. Arm., i. 171).

The emperor Manuel himself passed through Cilicia in 1159 with a large army to the assistance of the Crusaders. Thoros had already retired to Yakhka in the desolate mountains (Armen. Rhyma Chron., in Doc. Arm., i. 505) when the emperor entered al-Massja at the beginning of November, but he did no injury to any one there (Gregor., transl. Dulaurier, p. 353 sq. = Doc. Arm., i. 187). The Frankish kings led by Baldwin came to pay homage to the king in the town or on the adjoining pratum pallarium (as Will of Tyre, xii. 27 translates Marsj al-Dībādī) where his court was held in camp for 7 months (Gregor., transl. Dulaurier, p. 358; Rohricht, Gesch. d. Kg. Jerus., p. 298). Thoros was also able with great tact to become reconciled with him, and on acknowledging Byzantine suzerainty and ceding several towns in Cilicia, was recognised as "Sebastos" of Mēsas, Anazarbos and Yakhka (Doc. Arm., i. 186; Smbat, ibid., p. 622). His brother Mēh, who attempted his life while out hunting at al-Massja and
Adana, was banished by Thoros and given by Nūr al-Dīn the town of Kūrus (Kyrrhos; Smbat, loc. cit.). After the death of Thoros of Mésis (1168–1169; Smbat, p. 623), Meh (Arab. Malūb b. Li-vun al-Armāni) succeeded him and at first ruled only over the district of the passes (Bilâd al-Durâbī). In 1171 he surprised Count Stephen of Blois at Mamistra and plundered him (Will of Tyre, xx. 25–28). In 1171 (1117–1113), supported by troops of his ally Nūr al-Dīn, he took from the Greeks Adana, al-Maṣṣaṣa and Tarsus (Ibn al-Adhrī, xi. 255; Kamāl al-Dīn, transl. in Röhrich, in Beiträge z. Gesch. d. Kreuzzüge, i, Berlin 1874, p. 336).

When Meh's successor Rūpēn III fell through treachery into the hands of Bohemund of Antioch, his brother Levon (I) obtained his release in 1184 by ceding al-Maṣṣaṣa, Adana and Tall Hamdūn (Ṭīna) and paying 3,000 dinars; immediately afterwards, Rūpēn retook these strongholds from the Franks (Mich. Syr., iii. 397; Doc. arm., i. 394).

Het'um, the nephew of the Catholicos Grigor IV and son of Çortanēl of Taron, who came to Cilicia in 1189 with his brother Shahinshah, received from Levon II (1185–1219) his niece Alice, daughter of Rūpēn III, in marriage and the town of Masis, but died in the same year (Smbat, in Doc. arm., i. 629; Marquart, Südarmenien und die Tigrisquellen, Vienna 1930, p. 481 sq.). The Emperor Frederick II (1190) was about to go to Syria via Tarsus and al-Maṣṣaṣa when he met his tragic end in the Kalakados (alleged[?] letter of the Armenian Catholics in Ibn Shaddīd, in Rec. Hist. Orient. des Crois., iii. 162): a portion of his army thereupon went to Antioch via Tarsus, Mamištria and Thegō (Iššīn al-Muṭahk-kab; not Portella, the Syrian passes, with which Röhrich, Gesch. d. Kgr. Jerusalem, p. 530, i, identifies it).

Wilbrand of Oldenburg, who visited the East in the train of Duke Leopold VII of Austria and Steiermark and the Teutonic Grandmaster Hermann von Salza, came to Cilicia in 1212 to Mamistre, which he describes as follows: (Wilbr., c. 18, ed. Laurent, Peregrinationes, Leipzig 1864, p. 175): "Hiera est civilitas bona, super flumen sita, satis aequa, nummus habens circa se turritum, sed antiquitate corrossum, paucos in quod damus, hanc habet, habebatur, quibus omnibus rex illius terrae imperat et dominatūr". In the vicinity lay "quoddam castrum quod etiam de patri-mone beati Pauli... sed nunc temporis positi detur a Graecis". "In hac civitate [Mamistre] habitats sepulchrorum beati Pantalonii. Ipsa vero dicta Camamella (cf. Tomaschek, S. R. Ak. Wien, 1891, ap. vol. p. 71) magnum dictum". Levon II granted the privileges of Genoa and Venice the privilege of having their own trading centres in al-Maṣṣaṣa, which could be reached by ship from the sea before the mouth of the Djîlah became silted up (Alisjahb, Sisuan ou l'Arménie-Cilicie, p. 287). The attempt of Raymond Rūpēn of Antioch to seize the throne of Armenia after Levon's death in 1219 failed; he was, it is true, able to take Tarsus and attack al-Maṣṣaṣa but he was taken prisoner by Constance of Barzberd and died in prison in 1222 (Doc. arm., i. 514; Röhrich, Gesch. d. Kgr. Jerusalem, p. 74 sq.).

For a century the Rūpēnids ruled almost undisturbed in the town. Their glory reached its height under the splendid-loving Het'um I (1219–1270). Here were held the annual festivals of the Church at which numerous princes and nobles used to gather down to the last and difficult years of the king. Here was held the brilliant ceremony at which his 20-year old son Levon was dubbed knight. Hither the king brought the seat of government after the destruction of Sis (Alis-şah, Sisuan, p. 287 sq.).

In 1322, the Egyptians crossed the Djîlah by a bridge of boats, got behind the Armenians who had retired to Masis and inflicted a severe defeat upon them; among those who fell are mentioned the barons Het'um of Djîlkanoç, his brother Constantine, Wahram Lotik, Oshin, the son of the marshal, along with 21 knights and many men (Smbat's Continuator, in Doc. arm., i. 668). This authority also mentions a raid by an Egyptian force against al-Maṣṣaṣa (Manouestia), Adana, al-Ma'llūn (Mlûn) and Tarsus in 1334–1335 (Doc. arm., i. 671; Tomaschek, S. R. Ak. Wien, 1861, part viii, p. 68). The last Egyptian invasion took place in 823 (1373–1374). Among the towns destroyed were Sis, Adana, al-Maṣṣaṣa and ʿAin Zarba, and Levon IV had to surrender in 1375 after a siege of nine months in Ghaban (Doc. arm., i. 686, note 3). The town thus passed nominally into the Fatihār al-Djâhāntya of the Mamlūk empire; it had, it is true, by now sunk into insignificance and it is not mentioned, for example, among the towns taken by Shahsawār in 1467 (Alisjahb, Sisuan, p. 290).

Armenian sources mention 8 archbishops of the town from 1175 to 1370 (1175–1206 David, 1215 Johannes, 1266 Sion, 1306 Constantine 1316 John, 1332 Stephen, 1342 Basil, 1362–1370 unnamed; cf. Alisjahb, op. cit., p. 290). Michael Syrus knows only Job of about 800 A. D. (Chron., transl,
Chabot, iii. 23 sq., 451, No. 27) and the Frankish writers from 1100 onwards Bartholomaeus, before 1234 Radulphus and in the years from 1162–1238 three or four more unnamed bishops (Albert, Aquens., ix. 16; Will of Tyre, xiv. 10; Le Quén, Oriens Christianus, i. 119–1200; Rohricht, Gesch. d. Kyr. Jerus., p. 42, 202). On account of the many Egyptian invasions the Latin archbishopric was removed to Ayas by Pope John XXII in 1320 (Alişhan, Sisovan, p. 290).

After the fall of the kingdom of Little Armenia, the power of the Karamdín-Oghlu and Dhu T-Kadr-Oghlu gradually spread in Cilicia. Selim I on his campaign against Egypt in 922 (1516) and on his return also preferred to keep to the east of their land (Taechehn, Anatol. Wergnete, ii. 32). Missis has been Ottoman since that year, in which the decisive battle was fought on Mardi al-Dibbj on.

In Kafarbayia a khan was built for caravans passing through in 1542 and restored in 1830 by Hasan Paşa. The Djallán bridge became useless in 1736 when the central arch collapsed; in 1766 this was repaired but it was blown up in 1832 on the retreat of the Turkish troops from the fighting at Balân in order to hold up the advance of Ibrahim Paşa’s pursuing army. As late as the middle of the 18th century it could only be crossed by an improvised wooden footbridge.

In modern times Missis is mentioned only by eastern pilgrims and travellers who as a rule only spent a short time there. Thus it was visited in 1432 by the Burgundian Bertrand de la Broquière (“Mistre-s-Fehán”), in the xvi century by P. Belon, 1682 the Mecca pilgrim Meryed Edib, 1695 the Armenian Patriarch of Antiochia Makarios, 1704 Paul Lucas, 1736 Chevalier Oter, 1766 the Dane Carsten Widen, 1813 Mac. Kinnell, 1834 Aucter Eloy, 1836 Colonel Cheaney, 1840 Ainsworth, 1853 Victor Langlois, whose reports were exhaustively used by Carl Ritter (Erkundige, xix. 66–115). The “Merges Galles” visited by Ludwig von Rauter on July 8, 1568, is not (as in Rohricht-Meisner, Deutsche Pilgerreisen nach dem K. L. 1880, p. 434, note 43) al-Massisa, but Merkez Kafes on the Bâb Iskandarân (Cilic.-Syr. passes). Somewhat fuller descriptions of the modern Missis and its vicinity and mediaeval ruins were given in the xvi century by Langlois, Alişhan and its beginning of the xxi century by Cousin (see Bibliography).

The stretch of the Baghdad railway from Doura south of the Taurus via Adana and Missis to Mâmûra at the foot of the Amanos was opened on April 27, 1912. As a station on the railway (the station is actually 1½ miles N.W. of the place) the town gained a certain strategic importance in the Cilician campaign of the French in 1919–1920 (1919: settlement of about 1,250 Armenians; May 27–28, 1920: futile Turkish blockade of the town, viz. 1,000 strong; end of July: withdrawal of the troops by Adana; cf. E. Brémond, La Civilité en 1919–1920, in Rev. Etud. Arm., Paris 1920, i, p. 311, 360, 363, 365). After the Turkish occupation the newly settled Armenians were probably exterminated in the usual way. The importance of the town has now passed to the neighbouring Djilân. According to the Arab geographers, al-Massisa lay on the Djilân (Htgas), sometimes confused by the Byzantine authors with the Edgab, Arab. Sahlân, with which it seems to have had at one time a common mouth: George Cedrenus, ii. 362; Anna Comn., ii. 147, 1–2 days’ journey from Baiyâ and one from ‘Ain Zarba and Aghana, 12 miles from the Djilân. The town should be seen from the Friday mosque in the town; in front of the town lay a beautiful fertile plain (the ancient ‘Aţâr al-nilâ). Al-Massisa lying on the right bank was connected with Kafarbayia by an ancient stone bridge built by Constantinus and restored by Justinian. The country round was rich in gardens and cornfields, watered by the Djilân. According to Yaḳût, the town originally had a wall with 5 gates and Kafarbayia, one with 4 gates. A pecularity of the town were the valuable fur-cloaks exported all over the world. Ten miles from al-Massisa, which is somewhat inaccurately placed by Ibn Khuradhdhib, Yaḳût and others on the Djilân al-Lükkâm (Amanos), was the plain of Mardi al-Dibâjî, which is often mentioned in the records of the fighting between the Mamlûks and Little Armenia (probably the “ager Mississa” on which Ciceri encamped: ad fam., iii. 8). In its N.E. on the town on the road to Sis, was the fort of al-Amûdân (al-Mâkrît, ed. Quatremère, ii. 111, 61); cf. Kal’at al-Amudân in Abu l-Fida, Ann. Muri., ed. Reiske, v. 18; located by Alişhan, Sişovan, p. 225 sq. too far east in “Hemité-kalessi”). A field on Mardi al-Arâfîn is also mentioned near al-Massisa (Yaḳût, iv. 487; Saft al-Din, Marazi, ii. 74). Tall Hâmîd, a strong fortress of the Thughûr al-Massisa, corresponds to the modern Hâmidieh, now called Lîqîân (Z.D.M.G., xi. 101, 200; Yaḳût, i, 866; Saft al-Din, Marazi, i. 211; Ibn al-Shihâna; Bairât ed., p. 339). There also was Tall Hîm (Yaḳût, i. 867; Marazi, i. 211; Ibn al-Shihâna, ibid.; exact site unknown). Al-Ain at the foot of the Djilân al-Lükân, over which went the Darb al-Ain pass, was also one of the forts of al-Massisa (Yaḳût, iii. 756; Marazi, ii. 293); on the frontier against Ḥalab lay Bâqa (q.v.; cf. van Berchem, Voyage en Syrie, i. p. 257, 8). Hisn Si İn (al-Balâdhûr, p. 165; Yaḳût, iii. 153) is probably also to be sought near al-Massisa. A pass called Thînyat al-Uçbîk, to be distinguished from that of the same name near Damascus, was in the region of al-Massisa (Yaḳût, i. 936; Marazi, i. 230). Even the remote fortress of Samâli (on its site cf. Tomashka, Petitschrift f. H. Ktirt, p. 144) was sometimes reckoned in the Syrian Thughûr and located near al-Massisa and al-Tarsîs, Balâdhûr, p. 170 (Dhamalî, Yaḳût, iii. 416; Marazi, ii. 167; Byzantine le kârîm synulâq); al-Sâfâf on the present Sugulît (Z.D.M.G., xi. 180; Reiske on Abu l-Fida, Annal., ii. 649, note 76 according to Ḥâdîjî Khahîsh: “Hisn Safûf, that is Sugul”) is also reckoned by Yaḳût (iii. 410) to the marches of al-Massisa. Not far from the town was a Syrian monastery, Gawkîth (mentioned about 1200 a.d.: Barhebr., Chron. eccle., ed. Abbeles-lamy, i. 624; in Alişhan, Sişovan, p. 265: Dukkât, probably identical with Touchbeh). The neighboring fortress of a damodoq (now Tumlu-Kale) and Cumbetefort ("in territorio Meloni", i.e. of Miln, Arabic: al-Mallûn) were according to Wilbrand of Oldenburg (op. cit.) about 1212 in the possession of the Teutonic Order (Allemann). The Venetians had a church in al-Massisa (Gestes des Chiffres, in Doc. arm., ii. 831). Armenian authors mention there the churches of St. Sarkis, Thors and Stephan (Alişhan, p. 288 sq.). The present Missis (frequently also written Missaş).

Kafarbina use of "Huranije"). (Voyage 1,179, which mentions (in Travels, 1909, to 2500 of Turkish town al-Shihna, which was studied by the Austrian "Theodor Kotschy on 24th- 268 April 1859. On account of its medicinal herbs, Ibn al-Rumiya in his commentary on the book of Dioscorides says that many writers took al-Maṣṣaṣa to be the city of the wise Hippocrates (Ibuḵrāt) who, however, according to others, belonged to Ḫimṣ (Mufaḍḍal b. Abī l-Faḍlīl, in Patrol, Orient., xiv. 393; Ibn al-Shiḥna, Bairūt, p. 180).

Near the mouth of the Djiḥānī, which at one time was navigable for small ships up to al-Maṣṣaṣa, lay al-Mallūn, the site of which is not known (Mallāz; now rather Beblef than Karatāsh; cf. R. Kiepert, Form. orb. antiqu., viii., text p. 19). The Frankish writers also speak of a "portus de Mo- mistra" (Raimundus de Aiguliers, Historia Francorum qui ceverum iterum carente, c. xi. ibid. arm., i. p. xlii, note 1), probably on the "fauces fluminii Malmistoae" in which al-Idrīsī mentions the place al-Busā (Z. D. P. V., viii. 141; Tomschesch, S. B. Ak. Wien, cxxiv, 1891, fig. viii., p. 69 writes al-Buṣā).

as appears e.g. from the tradition in which it is related that Muhammad one day received a visitor and kept the tooth-pick "at the end of his tongue" (Mir, Tahāra, trad. 45). Concerning Zaid b. Khālid it is related that he used to sit in the mosque keeping the tooth-pick behind his ear, "just as a writer will keep his pen" (Abū Dāwūd, Tahāra, bāb 25; al-Tirmidhī, Tahāra, bāb 18). When Muhammad was in his last hours, there entered a man with a piece of wood fit for a síwāk; 'Abdīya took and chewed it, so as to make it smooth (Bukhārī, Maqāzīh, bāb 83).

In general Ḥadīth emphasises the value attached by Muhammad to the síwāk. When he entered his house, his first movement was towards it (Muslim, Tahāra, trad. 43; Abū Dāwūd, Tahāra, bāb 27). His servant 'Abd Allāh b. Mas'ūd has received the epithet of šāhīh al-sīwāk "the one who used to take care of Muhammad's síwāk" (Bukhārī, Fadail al-Sijāh, bāb 20). When Muhammad awoke at night, he cleansed his mouth by means of the síwāk before he washed himself and performed night-prayer (Bukhārī, Adāhān, bāb 8; Wudū', bāb 73; Tahāra, bāb 47). When fasting, Muhammad also made use of the síwāk (Ahmad b. Ḥanbal, iii. 445, 446).

The miswāk is chiefly used before wuḍū' as a preparation before the salāt. It is said that this was the practice of Muḥammad (Muslim, Tahāra, trad. 48) who attached so great a value to it, that he would have declared it obligatory before every salāt, were it not that he feared thereby to over-burden his community (Bukhārī, Adāhān, bāb 8; Muslim, Tahāra, trad. 42; Abū Dāwūd, Tahāra, bāb 23; Tirmidhī, Tahāra, bāb 18). In one tradition it is said, as a matter of fact, that the obligatory use of the síwāk before every salāt was introduced by Muhammad as a compensation for the abolition of the obligatory wuḍū' before every salāt (Abū Dāwūd, Tahāra, bāb 25). In another tradition (Nāṣiḥi, Dijamā', bāb 66) the use of the síwāk is called obligatory before the Friday-service.

The appreciation of the miswāk which appears from all these traditions culminates in the fact that it belongs to the customs of the "natural religion" (āfāra: Abū Dāwūd, Tahāra, bāb 29) or to the ordinances of the Apostles (Tirmidhī, Nikāh, bāb 1).

Nevertheless Fīkḥ does not declare the use of the miswāk obligatory in any case. There is general agreement on this point. According to some traditions, however, the Zāhirites did declare the use of the miswāk obligatory before the salāt, but these traditions are not generally accepted. According to Fīkḥ the use of the miswāk is recommended at all times, especially in 5 cases: in connection with the salāt, under all circumstances; in connection with the wuḍū'; with the recitation of the Kurān; after sleep; and as often as the mouth has lost its freshness, e.g. after long silence.

According to the学校 of Shāfī the use of the miswāk is bīlāmāble (makrūḥ) between noon and sunset at the time of fasting; for the nasty smell (khalaft) of the faster's breath is beloved by Allāh (cf. Nāṣīḥi, Tahāra, bāb 6).

It is recommended to use a miswāk of arāk-wood of medium hardness, neither too dry nor too moist; to cleanse the palate as well as all sides of the teeth, beginning from the right side of the mouth, moving the miswāk upwards and downwards in order not to hurt the alveoles.

**Mīzāf.** [See Mūrīz.]

**Mīthkāl.** (A.), the weight of a thing; this is the meaning of the word in the Kurān; a particular weight for weighing precious metals, jewels, drugs, etc., probably the oldest unit in the Arab Troy system. The mīthkāl corresponds to the Roman solids of the Constantinian system which the Arabs adopted in Syria. 'Abd al-Malik took it over for his unit of gold when he reformed the currency in 77 (696). His dinār weighed a mīthkāl of 65.5 grains (4.25 grammes), hence mīthkāl is used as a synonym for dinār. The silver dirham weighed 1/10 of a mīthkāl and the mīthkāl contains 24 kīrāts. Slight variations in weight are found in the different parts of the Muḥammadan world.

**Mīwadnā.** [See Ḥamāk.]

**Mīzāf, Mīzāfī.** (A., plur. Māsāfī). Among the various classes of musical instruments dealt with by Arabic, Persian and Turkish writers on music is one which embraces those with "open strings" (awār mušākā) such as the lyre or cithara, harp, psalter and dulcimer. Among them are instruments grouped as māsāfī. Nowadays, this term refers to all stringed and wind instruments (M. F. O. E., vi. 28) but in the Middle Ages it had a more restricted meaning and stood for "instruments of open strings", Al-Djawhari (d. ca. 1003) and al-Ṣaghānī (d. 1261) define them as "musical instruments which you beat upon as in the ṣād (lute), ṣinbār (pandore) and the likē", meaning by this that māsāfī are played with the fingers or plectrum in the same way as the ṣād and ṣinbār were. The Ṣādī's Al-Arīṣ includes the tambourine among the māsāfī, but it is an erroneous deduction from the saying of 'Cmar, marra bi-ṣāfīi 'udīn ("he passed by the sounding of the udin") which has misled many writers (cf. Sachs, Reallexikon der Musikinstrumente, s. v.). The author of Māsāfī al-ʿalām (12th cent.) states that the mīsāfā is "a stringed instrument belonging to the people of al-ʾIrāk" (p. 237), whilst al-Muʿarrīzī (12th cent.) says that the mīsāfā was "made by the people of al-Vāmān", a provenance which Ibn Khurābdīb (d. 912) also gives the instrument (al-Maṣādī, viii. 93). A more precise classification is allowed by al-Ṣabhānī who includes the mīsāf among barbītons (barābī) and lyres (laʿīrān), which agrees with our oldest authority, al-Ladī b. al-Muẓaffār (viith cent.), who says that both mīsāfā and mīsāfā were given to an "instrument of many strings", whilst al-Farābī (d. 950) specifically denotes mīsāfī as instruments of "open strings" (Kosegarten, Lib. cent., p. 77, 110). In the Klīb al-ʾAghānī the mīsāfā is rarely placed in the hands of the minstrels, probably because it was of inartistic merit. One performer on the instrument, Muḥammad b. al-Ḥārīmī b. Baskīrī (11th cent.), was asked sarcastically if it were a rat-trap (Aghānī, x. 153).

Tradition averes that māsāfī were "invented" by ʾAbīlā the daughter of Lamak, who was of the
seventh generation from Adam (al-Mas'udi, viii. 89). Since there was hadith condemning 
ma'ṣaf as signs of the end of the world (al-Tirmidhi, ii. 33) it is quite likely that the fukaha thought it consistent with policy to make Dilal or Dañal ("error, destruction") the originator of these ma-
lahi or "forbidden pleasures". On the other hand, we read that "David the Prophet had a mīṣaf on which he used to play when he recited the psalms" (Ibid. al-Farâd, iii. 189), which was an echo of the Jewish tradition that he was an adept on the kinnar (I Samuel, xxvi. 16, 23). The name may be a survival from the days of belief in sympathetic magic. The voice of the djinn was termed the 'aṣaf, and the spiritual world could be conjured by the sounds of the mīṣaf. In Islamic times musicians claimed that their music was inspired by the djinn. The Greek μῆδαθες was an instrument of the same class as the mīṣaf. It was of Lydian origin and the name is suspiciously like the Semitic one. 

Lyre and cithara. Although we see these instruments in the hands of the ancient Semites on the monuments they do not appear to have had acceptance among the musicians of Islamic times except with the fallāthun, unless the seven-stringed wanaḍī (="sanafī") of Khūrāsān was such an instrument (al-Mas'udi, viii. 90). Both words are of Greek origin and they appear in Arabic as ṛur and ḥāfara generally. In Palestine and Egypt to-day, a primitive type of lyre is known under the name of ṛubāra barbariya or ḥāfara (kissara) barbariya. Villoteau (Descr. de l'Egypte, état mod. i. 918) and Saint-Saëns (Lavignac, Encyc. de la musique, 1852) have shown that much of the ancient Greek method of lyre-playing still obtains in the modern Egyptian ḥāfara-playing. It is worthy of notice that the Arabic word for striking the ḥāfara strings is ḥarraba, and this is practically identical with the Greek κύπων. 

Harp. Whilst we possess an actual example of a Sumerian harp with the sound-chest below the strings, this type does not seem to have had any vogue with the Arabs or Persians in artistic music, and is only found among the peasantry. In Palestine and Upper Egypt to-day it is called the ṛubāra sumdānī and nanga. The harp with the sound-chest above the strings has been a far more important instrument and the Semites and is to be found in the Assyrian sculptures (cf. the Assy. word sanak and the Ethiopic ṭanbo). That extremely chatty Turkish writer Ewliya' Celebi says that this instrument, which the Persians called the ṭang, was "invented" by Pythagoras to solace Solomon (Travel. i.ii. 227), and while al-Shalalī says that it was of Byzantine (Ḳūm) origin (fol. 15). Yet Ibn Khuradhībīh and al-Dj awhari show that it was peculiar to the Persians and, indeed, the name may be found on the Ša-
sian sculptures (Ker Porter, Travels, ii. 175). The Arabs called it the ḏinak and/or ṣanafī (cf. al-Dj awālikī, ed. Sachau, p. 97). It may be that the ḏinak and ṣanafī were different types of harp, the Persian and Arabān. There were certainly two types, the straight sound-chest and the crooked. In the Maṣfīth al-Kūm the Byzantine salbāk (ṣenbūn) and ṭur (ṣūba) are likened to the ḏinak and ṣanafī respectively. Among the Arabs the ḏinak is mentioned as early as al-Ashā Māmūn (d. ca 829). Al-Fārābī devotes a section in his Kitāb al-Maṣāfīt to ma'ṣaf, djinnik and/or ṣanafī, and other instruments "in which there is made to every note, according to its state, a solitary string", and he shows them strung with both fifteen (diatonic) and twenty-five (chromatic) strings (Kosegarten, i. c.). Both Ibn Sinā (d. 1037) and Ibn Zaila (d. 1048) deal with the ṣanafī, whilst in the Kanān al-Talāfī (xivth century) and the works of Ibn Ghālī (d. 1435) the ṭang is fully described. The oblique sound-chest was 109 cm. long, and the handle (dastū) 81 cm. long. From the sound-chest to the horizontal bar below twenty-four or twenty-five strings of goat's hair were stretched, being fastened to metal pegs (ma'llāfī). Some players even used thirty-five strings so as to embrace the scale of the Systematists. The face of the sound-
chest was of skin, but the remainder of the framework was of vine or plum tree wood. The handle was placed under the left arm (cf. the pictures in MSS.) and the fingers of both hands were used in performance, plectra (ṣażūnīt) being fastened to the finger tips. Nowadays the harp has fallen into complete desuetude among the Arabs and Turks. Even among the Persians it has become rare, and in its modern form it was little different from the occidental instrument (Advieille, La mu-
tique chez les Persans, p. 13), whilst the instrument shown by Kämper (xvith century), under this name was a zither. In 1658 Ewliya' Celebi found only twelve players of the ṭang in Constantinople because, he said, it was a difficult instrument to play (Travel. ili. 234). At this time the Turkish ṭang had forty strings, and a very large instrument of the xvith (not xivth) century is given by Engel (Mus. instr. in the South Kensington Museum, p. 59). 

Although the "humped back" of the ṭang or ḏinak became a favourite theme for poets, and it was certainly the best known type, yet an instrument with a "straight back" was also to be found. A more pronounced "hump" existed in a type mentioned by Ibn Ghali and called, probably on account of this feature, the ṣagrī. It was strong similarly to the ṭang but had a wooden instead of a skin face on the sound-chest, and its tuning-
pegs were also of wood. 

A Byzantine harp called the salbāk (erroneously written salyak, ṣalāyak [cf. the art. ṣalayk, which clashes with the opinion of the present writer, Red.], or salbān in most dictionaries and MSS.) was also known to the Arabs. It was actually a survival of the old Greek σαλβάν (salvān, salvān) and is described in the Maṣfīth al-Kūm as "an instrument of the Greeks (Yūmānūyūn) and Byzantines (Ḳūmūn) resembling the ḏinak" (p. 236). According to Ibn Khuradhībīh it had twenty-four strings (al-Mas'udi, viii. 91: cf. Farmer, Byzantine musical instruments in the ninth century, p. 4 sq.). Ibn Sinā classes it with the ṣanafī among the instruments with "open strings" stretched across a space. 

Psalter. In describing those instruments with "open strings" stretched across a surface, both Ibn Sinā and Ibn Zaila mention a particular type named the ṣanafī. Whilst the name suggests a "long necked" instrument, the details given of "strings of different lengths but identically situated bridges (hamḥīlīt), compel one to recognize it in a trapezoidal psaltery. one species of which was known later as the ṭīnānī. The word ṣanafī also stood for "phoenix", and we know that the Greeks of old had an instrument called the psalē. This

THE ENCYCLOPEDIA OF ISLAM, III.
may account for both the instrument and the name among the Arabs. It is not mentioned however, after the 8th century.

The Ḧanūn [q.v.], the present-day psaltery of the Arabs and Turks, is said by Ibn Ghālibī to have been invented by Plato, although the instrument as known in the 8th century is attributed to al-Fārābī (Ibn Khallikān, Biog. Dict., iii. 309). The word itself is derived from the Greek κιθάρα. Although the instrument is delineated in the various MSS. of the Syriac lexicon of Bar Ḥabīl (10th century) sub “Ṣibārā”, yet the name Ḧanūn is not given. It is mentioned in the Thousana and One Nights (ed. Macnaghten, 49th and 149th nights), and in one place is designated the Ḧanūn miṣrī (“Egyptian psaltery”). In Spain it was particularly favoured and al-Ṣaḥḥānī (d. 1231) includes it among the Andalusian instruments manufactured at Seville (al-Makkari, Analectes, ii. 143–144). In the Persian Kanz al-Tawḥīf and in Ibn Ghālibī it is described in detail. The shallow, flat, trapezoidal sound-cast, 9 cm. deep, was made of vine or plum tree wood. The lengths of the back and treble sides were 81 and 40.5 cm. respectively, whilst the oblique side was 74.25 cm. It was mounted with sixty-four strings (seventy-two in Ibn Ghālibī), arranged trichordally. Although the Ḧanūn has fallen into disuse in Persia, it is still a great favourite in the Maghrib, Egypt, Syria, and Turkey, and where it is to be found strung trichordally with from fifty-one to seventy-five strings.

A rectangular type of psaltery of greater compass was the nūkha. It was invented by ʿAbd al-Dīn ʿAbd al-Muʾmīn (d. 1294) and a design is sometimes to be found in his Kitāb al-Aṣwār (see Farmer, Arabic musical mss. in the Bodleian Library, frontispiece). Its features are also fully discussed in the Kanz al-Tawḥīf and by Ibn Ghālibī. Its dimensions were 74.25 × 54 cm., whilst the depth of the sound-cast was 27 cm. 108 strings were mounted on the instrument.

Dulcimer. Ibn Sinā and Ibn Zaila describe an instrument with “open strings” played on with beating rods (mashāriq) which is called the ṣanīr ṣīnīr (or ṣanīr ṣīnīr). This is clearly the dulcimer, later to be generally known as the ṣanīr ṣīnīr (also written ṣanīr ṣīnīr and ṣanīr ṣīnīr), a word derived immediately from the Aramaic, but probably finally traceable to the Greek ἱανυρός. Indeed, it is invariably found in the hands of Jews and Greeks. It is of similar structure to the Ḧanūn, but with two of its sides oblique instead of one. The strings, which are mounted dichordally in Egypt, are of metal and are beaten with sticks (mashāriq) instead of plectra as in the Ḧanūn. We find it mentioned by Ibn Khaldūn (d. 1406) and al-Haythami (d. 1563), but its popularity was but slight among the Arabs. In the 18th century it is doubtfully acknowledged by Russell (i. 152) and Niebuhr (Sympson) in Egypt, both Villotane and Lane show that it was only to be found in the hands of Jews, Greeks and other foreign residents, whilst native writers like Musharla and Darwish Muhammad make no mention of it. To-day it is practically unknown in Syria and Egypt. In the Maghrib it is unnoticed by Host, Christianowitsch and Salvador-Daniel, and although it is dealt with by Delphin and Guin, it is scarcely known to-day. In Persia however, it obtained greater recognition. In the 18th century it is mentioned by Chardin, but not by Kaempfer, whilst Advielle in the 18th century gives both a design and a description. In Turkey, whilst the word is registered in the 19th century by Meninski, it is not mentioned by Ḥājjī Kāhilī nor described by Ewliyya Celebi, in their lists of Turkish musical instruments. In the next century however, it is recognised by Toderini, and to-day the ṣanīr is one of the most esteemed instruments in the country, where it may be seen in two forms: the ṣanīr turkı and the ṣanīr transii. The former, exclusively used by the Jews, has 160 strings, grouped in fours, giving thirty-two notes, a two octave chromatic scale. The latter, which is confined to the Turks, was introduced from the West about the middle of the last century by a certain Hilmī Bey. It is mounted with 105 strings, also grouped in fours, which are placed on the sound-cast in the Occidental way.

H. G. Farmer

Al-MIZĀN, the balance, is the nomen instrumenti from wazāna to weigh, which means to weigh in the ordinary sense and also to test the level of, like the Latin libra. Here we shall discuss:

I. The various instruments used for weighing in the ordinary sense; brief notes are added on the ascertainment of specific gravities. 2. Levelling instruments.

I. Balances.

The steelyard (al-ḥarāṣṭa, q.v.) has already been dealt with; the general principles of the balance are also discussed in this article. — The usual balance with two arms of equal length had the same shape among the Muslims as in ancient times and at all periods in the west; this we know from extant specimens and illustrations in various works, notably in al-Khāzinī, in a manuscript of al-Kazzwīnī with reference to the constellation Libra (fig. 1), in a manuscript of Hariri, in the ʿAynī’s Akhbar of Abu l-Fadl (fig. 2). In the beautiful manuscript from which Ch. Schefer published the Siyar Nameh of Naṣīr Khusrūw,
and is contrasted by the ḥawwān al-ṣafīyya to the ḥābhān (steelyard), also tarīs from the Persian torāzī, then mīḥmales for scales for gold and ḥubbā for beam and tongue. Ṣindī means the longs and also the beam. According to J. Ruska, ḥābhān seems to be used for scales (for gold). On the expressions connected with karāfīn, see that article. Al-Ma'mūsī mentions Harrān as a place where balances were made, in his work Aḥsan al-Taḥāṣim fi Murūfat al-Āfālim, p. 141; in this town many very skilful mechanisms were engaged in making astronomical instruments. The accuracy of the balances made in Harrān was proverbial.

The Arabs devoted special attention to the construction of balances used to identify metals and jewels from their specific gravity, to distinguish false from genuine and pure and to ascertain the composition of alloys of two metals by the use of the principle of Archimedes. They called these balances mīṣān al-mawṣī, "water" (hydrostatic) balances. Of makers of these, al-Khāzīnī (c. 1100, q. v.) mentions: Sanad (Ṣind) b. Ṭūfālī (c. 250 = 864), Muḥammad b. Zakayyā al-Kāzī († 320 = 932—933), Ibn al-ʿĀmid († 359 = 969—970), Yūḥannā b. Yūsuf (perhaps al-Kāsī, d. c. 370 = 980—981), Ibn ʿArabī († 1037), Ṣamāʿī al-Ṭūsī (the "measurer", also mentioned by al-Bīrūnī without the "Massāḥ"), Abū Ḥaṣīm Omar al-Khāyaṭī (as the celebrated mathematician is never called Abū Ḥaṣīm, it is doubtful whether he is the individual mentioned by al-Khāzīnī). The balances made by these men are still fairly simple as only two, or at most three, scales were used in them. A contemporary of al-Khāzīnī, namely Abū Ḥakim al-Muẓaffār Ibn Ismāʿīl al-Aṣḥābī (d. before 513 = 1121) added two more scales; these and other improvements made the scales much more convenient to use. Of him al-Bīrūnī says (E. Wiedemann, Beitr., xx., Einige Biographien nach al-Bīrūnī, in S. B. P. M. S. Erł. l., xliii, 1910, p. 17): "He constructed the balance of Archimedes with which one ascertains forgeries. The treasurer of the great sultan feared that his frauds would thus be discovered. He therefore broke the balance and destroyed its parts. Al-Muẓaffār died of grief as a result". Al-Khāzīnī then took up al-Muẓaffār's work and made the balance a

Fig. 1.

Schefer, Publications de l'école des langues orientales vivantes, ii. ser., i., Paris 1881). The common balance is called mīṣān but in the Kurān we also find ḥūṣīrī, which, according to al-Thaʾlabī, is a loanword. Other names are ṣāḥīkīn, which does not only mean the beam and tongue of the balance

Fig. 2.

and is contrasted by the ḥuwān al-ṣafīyya to the ḥābhān (steelyard), also tarīs from the Persian torāzī, then mīḥmales for scales for gold and ḥubbā for beam and tongue. Ṣindī means the longs and also the beam. According to J. Ruska, ḥābhān seems to be used for scales (for gold). On the expressions connected with karāfīn, see that article. Al-Ma'mūsī mentions Harrān as a place where balances were made, in his work Aḥsan al-Taḥāṣim fi Murūfat al-Āfālim, p. 141; in this town many very skilful mechanisms were engaged in making astronomical instruments. The accuracy of the balances made in Harrān was proverbial.

The Arabs devoted special attention to the construction of balances used to identify metals and jewels from their specific gravity, to distinguish false from genuine and pure and to ascertain the composition of alloys of two metals by the use of the principle of Archimedes. They called these balances mīṣān al-mawṣī, "water" (hydrostatic) balances. Of makers of these, al-Khāzīnī (c. 1100, q. v.) mentions: Sanad (Ṣind) b. Ṭūfālī (c. 250 = 864), Muḥammad b. Zakayyā al-Kāzī († 320 = 932—933), Ibn al-ʿĀmid († 359 = 969—970), Yūḥannā b. Yūsuf (perhaps al-Kāsī, d. c. 370 = 980—981), Ibn ʿArabī († 1037), Ṣamāʿī al-Ṭūsī (the "measurer", also mentioned by al-Bīrūnī without the "Massāḥ"), Abū Ḥaṣīm Omar al-Khāyaṭī (as the celebrated mathematician is never called Abū Ḥaṣīm, it is doubtful whether he is the individual mentioned by al-Khāzīnī). The balances made by these men are still fairly simple as only two, or at most three, scales were used in them. A contemporary of al-Khāzīnī, namely Abū Ḥakim al-Muẓaffār Ibn Ismāʿīl al-Aṣḥābī (d. before 513 = 1121) added two more scales; these and other improvements made the scales much more convenient to use. Of him al-Bīrūnī says (E. Wiedemann, Beitr., xx., Einige Biographien nach al-Bīrūnī, in S. B. P. M. S. Erł. l., xliii, 1910, p. 17): "He constructed the balance of Archimedes with which one ascertains forgeries. The treasurer of the great sultan feared that his frauds would thus be discovered. He therefore broke the balance and destroyed its parts. Al-Muẓaffār died of grief as a result". Al-Khāzīnī then took up al-Muẓaffār's work and made the balance a

Fig. 3.
most accurate means of measuring; he called it the universal balance, *al-mizān al-djarnīf*. But, no doubt in memory of his predecessor, he called his book *Kitāb Mīzān al-Ḥikma*.

![Diagram of a balance](image)

Fig. 4.

For special purposes such as the examination of gold and silver and their alloys, many contrivances were made with balances and the movable scales and running weights on the beams, for example in the physical (*taḥāf*) balance of Muḥammad b. Zakariyā al-Rāzi (fig. 3); it goes back to Greek models, e.g. of Archimedes (fig. 4; cf. al-Ḥāzīnī, *op. cit.*).

Fig. 5.

Here we shall describe somewhat more fully the "balance of wisdom" of al-Ḥāzīnī.

Al-Ḥāzīnī gives the beam *A* of the balance (fig. 5) a thickness of six cm. and a length of

---

1) H. Bauerreiss (*Zur Geschichte des spez. Gewichtes im Altertum und Mittelalter*, Dissertation, Erlangen 1913) has reconstructed the "balance of wisdom", as nearly as possible following the data of the original. Reproductions are in Erlangen and the German Museum in Munich. The illustration is taken from a photograph. In the original right and left are reversed.
two m. In the centre it is strengthened by an additional piece $C$, obviously intended to avoid any bending at this point. A cross-piece $H$ (‘arida) is let in here. Corresponding to it is a similar cross-piece $F$ on the lower part of the toogs, in which moves the tongue $D$, itself about 50 cm long. The upper cross-piece $E$ is hung by rings to a rod which is fastened somewhere. Pegs or small holes are placed at exactly opposite places of the cross-pieces $B$ and $F$ to which threads are tied or drawn through. The friction at an axis is thus avoided, which, in view of the great weight of the beam, is quite considerable. The knob visible below the beam under its centre is used to secure the tongue to the beam or to take it out in order to adjust it evenly. The tongue has for this purpose a peg at the foot which goes through a hole in the beam. Al-Khāzīnī also observes that one could also take shorter beams but then all the other dimensions must be proportionately smaller.

The beam is divided not on one side only, as in the illustration, but on both. The scales are hung on very delicate rings of steel (ghurāb "ravens") the points of which fit into little niches on the upper surface of the beam. Five scales are used in ascertaining specific gravities, i.e. in investigating alloys and examining precious stones. Of these the scale $H$ (fig. 5a) is called the cone-shaped or al-hākim, the judge, as it is used to distinguish false from true. It goes into the water and in order to meet with less resistance in sinking is cone-shaped and pointed below. The scale $f$ is called the winged (muqaffāt, fig. 5b and 5c, side and top view). It has indented sides so that it can be brought very close to the adjoining scales. It is also called the movable (muqaffāt). There is also a movable running weight $K$ (al-rumānā al-sayyāra) which serves, if necessary, to adjust the weight of the lighter beam; it is therefore also called the rumānā of the adjustment (al-ta’dil). The other scales are used to hold weights. Al-Khāzīnī attained an extraordinary degree of accuracy with his balance. This was the result of the length of the beam, the peculiar method of suspension, the fact that the centre of gravity and axis of oscillation were very close to each other, and of the obviously very accurate construction of the whole.

Al-Khāzīnī himself says: when the instrument was weighing 1,000 mithkāls, it could show a difference of 1 ḥabba — 1/98 mithkāl, i.e. about 75 centigrammes in 4.5 kilogrammes. We thus have accuracy to $1/98,000$.

Al-Khāzīnī used his scales for the most varied purposes. Firstly for ordinary weighing, then for all purposes connected with the taking of specific gravities, distinguishing of genuine (zamīn) and false metals, examining the composition of alloys, changing of dirhams to dinārs and countless other business transactions. In all these processes the scales are moved about until equilibrium is obtained and the desired magnitudes in many cases at once be read on the divisions on the beam.

False balances. That as early as the time of Muhammad balances showing false weights were used for fraudulent purposes is shown by various passages in the Kūrān (Sūra xxvi. 182; vii. 13; xvii. 37). We read for example: "Weigh with the just (or upright, mustaḵfīm) balance". Al-Djawbātī (middle of the xiiith century; cf. E. Wiedemann, Beiträge, iv., Über Wagen bei den Arabern, in S. B. P. M. S. Erk., vol xxxvii., 1905, p. 388) describes two such arrangements. In the one the beam of the balance consisted of a hollow reed closed at the ends in which there was some quicksilver; by a slight inclination of the beam this could be made to flow as desired to the side of the weights or of the scale pan and thus make the one or other appear heavier. A balance like this was used in Cairo in the time of E. W. Lane by a dishonest police inspector (muḥtasīb). In the second pair of scales the tongue was of iron and the merchant had a ring with a magnetic stone. By bringing the ring close to it the balance went down to right or left.

The balance or the principles applying to it were used for many purposes besides weighing. Contrivances turning on an axis in which sometimes one and sometimes the other side becomes lighter or heavier, especially by the admission or release of water, were used to produce automatic movements; they are often called mizān (cf. e.g. the writings of the Banū Mūsa and of al-Djazarī; e.g. in F. Hauser, Über das Kitāb al-Ḥiyāl. Das Werk über die sinnsinnreichen Anordnungen der Banū Mūsa, Abb. 2, Gesch. der Naturwissenschaften und Med., Heft 11, 1922; E. Wiedemann and F. Hauser, Uber die Übren im Bereich der islamischen Kultur, in Nova Acta der Kais. Leop.-Carol. Akademie, vol. c., 1915, No. 5 and other passages). In the hour balance used to measure time, a container filled with sand or water is hung at one end of a lever poised with arms equal and has a hole in the bottom. The equilibrium disturbed by the gradual loss of sand or water is compensated for by weights which move along the other arm. From their weight and position one can calculate the time that has passed (E. Wiedemann, Beiträge, xxxvii.: Über die Stundenwage, in S. B. P. M. S. Erk., xlvi., 1914, p. 27; a full description is given by Prof. F. Hauser in E. von Bassermann-Jordan, Die Geschichte der Zeitmessung und der Übren, 1919).

Most artisans also describe as "scales" al-misfāra, i.e. rulers, al-baraku, the compasses, al-khiniyya, set square and level, as they serve to show lapses from the straight etc. — Miḥāl, ell, chāhīn, kubbān are "scales" with which one measures whether things are correct or over measure in business transactions (Ras'īl Ḳibrūm al-Safā, Bombay 1305, 1/ii. 128).

For a few further meanings of al-mizān see Dozy, Supplément, s. v. wasana. — In mathematics the balance is used to elucidate certain mathematical processes. The steelyard is used to illustrate the inverse relation: the weights are in inverse proportion to the length of the arms (cf. e.g. Th. Ibel, Die Wage im Altertum und Mittelalter, in Programm Forchheim, 1905—1906, p. 93; Ras'īl
with the water displaced weighed \( P_3 \), so that from 
\[ P_3 - P_2 \] 
we get the volume of water corresponding to the mass \( P_1 \), which is then calculated by al-Biruni for a weight of 100 mukhlafs. As almost always,

in ascertaining the specific gravity the Arabs rely on the ancient, particularly on the work of Menelaus "on the artifice by which one ascertains the quantity of each of a number of mixed bodies". Finding all the weights of the materials, the aim is often called Ibn al-mizân, the science of the balance, or of accurate measurement, as in the preparation of the elixir etc. the choice of the right proportion of the ingredients is an important matter.

Among other uses of the word mizân may be mentioned that a tree on a boundary near Bamiyan at the source of the Jordan was called "tree of the balance" (mizân). We may also note that on the day of judgment a balance with a very long beam will be erected (on its cf. e.g. M. Wolff, Muhammediache Exkateleutia, Leipzig 1872, text, p. 81, transl., p. 148 and al-Ghazâlî, al-Durr al-fikhr fî Kitâb "Ulûm al-âkhâra, ed. L. Gautier, Leipzig 1878, text, p. 67, transl., p. 79).

Specific Gravity. We have already mentioned that the "balance of wisdom" and other scales were used to test the purity of metals etc. and to ascertain the composition of alloys: we shall now briefly discuss the work of the Arabs on this subject. Two magnitudes have to be considered. The weights of equal volumes are compared, which corresponds to an investigation of the specific gravities. Al-Biruni, for example, takes hemispheres of the different metals or rods of equal size and compares their weights, or the volumes of equal weights are compared by finding those of any weights and then comparing the specific volumes (i.e. the volumes of the unit of weight). For these measurements one used either methods based on the principle of Archimedes, according to which a body loses in a liquid as much weight as the volume of the fluid displaced by it, or one measures the fluid displaced by the body itself. For this purpose al-Biruni constructed a cone-shaped vessel (al-alât al-mukhâfûsa) [fig. 6]. This vessel is filled with water until it begins to run out by a pipe at the side: then a definite mass, as large as possible, of the substance (weight \( P_1 \)) is weighed, as is the scale \( P_2 \) placed under the outlet pipe. The substance is then put in the vessel and the pan

1) it is to be noted that expressions like specific gravity and specific volume, which refer to the unit of weight and the unit of volume are not found among the Arabs. Al-Biruni, for example, gives the amount of water displaced by 100 mukhlafs of various substances corresponding to their volume and the weights of the metals which have the same volume as 100 mukhlafs of gold and in the case of other substances the same volume as 100 mukhlafs of blue yâkût.
other substances, in order to ascertain the unknown amounts of the separate constituents: *Mībar fi Mitākh al-Dījam al-muḥtafīla* li 'ṭikhrājīd Mīd-dār madjǎlītha by Samīl b. Yaḥṣī b. 'Abālās al-Maghrībī al-Andulī (d. 1174-1175 C, Maghārm; s. Ibn al-Kīfīṣ, p. 200; Suter, N° 302).

The statements on specific gravities refer to: A. *Metals*: gold, mercury, bronze (*jisr*), copper, brass (*šīkh*), iron, tin (*rāzj*), lead (*usruf* and *usrub*). B. *Precious stones*: blue *yāḥūt*, red *yāḥūt*, ruby, emerald, lapis lazuli, pearl, coral, cornelian, onyx and rock crystal. C. *Other substances*: Pharaonic glass, clay from Siminān, pure salt, salt earth (*ṣāḥab*), sandarach, enamel (*mīna*), amber, pitch, wax, ivory, bakkan wood, willow wood.

The weights of equal volumes of liquids and the volumes of equal weights of liquid are sometimes found directly, sometimes ascertained with the areaometer of Pappus. The former magnitude plays an important part in the liquids used in every day life like oil and wine. The second was of more scientific interest. It is especially interesting that the Arabs found that hot water and hot urine had a larger volume than equal weights cold. They also knew that ice had a larger volume than the same weight of water.

The facts ascertained with the areaometer of Pappus for fluids refer to cold fresh water, hot water, ice (does not properly belong to this connection), sea water, wine, grape wine, saffron, olive oil, cow’s milk, hen’s egg, blood of a healthy man, warm and cold urine.

Fig. 7 shows the areaometer reconstructed by H. Bauerreiss from al-Khāzīnī. X is a massive cone used to make the instrument heavy. There are inscriptions corresponding to the Roman numerals. For details the reader may be referred to H. Bauerreiss’s article. — The principle that floating bodies of the same weight sink in water to the same depth finds application in a juristic trick cited in the *Kitāb al-Hījal fi ‘l-Fīkh* of Abū Hātim al-Kāzīnī. The weight of a camel is ascertained by putting it in a boat and noting how deep the boat sank. The camel is then replaced by iron weights until the boat sinks to the same level (cf. J. Schacht in G. Bergstrasser, *Beitr. zur semiti schen Philologie und Linguistik*).

In medical works and treatises on weights and measures, figures are given for the weights of equal volumes of wine, oil and honey (cf. Bauerreiss, op. cit.). So far as it is a question of particular bodies, the values as ascertained by the Arabs agree very well with those obtained by modern science and even surpass in accuracy those obtained by it up till the beginning of the last century.

**Bibliography:** This is given in the article AL-KĀRĄTȘUN.

2. **LEVELLING (waṣṣa, to weigh, corresponding to the Latin librae).**

The Arabs certainly adopted a large number of methods of levelling and testing levels from other peoples, either the Byzantines or the Persians. The statements in Ibn Waḥṣiyya (see below) about the making of canals etc. agree with those of Vitruvius, who in turn drew on Greek sources. The Arabs learned partly from Greek works; for example, we are told that according to Philoön (according to M. Steinschneider: Philon), the incline in canals must be at least 5:1,000; but they also utilized data gained from the practical experience of land owners, canal builders etc. Whether the Arabs were acquainted with the standard works of Hero on this subject, the *Metrica* and the “On the Dioptra” (Hero, *Opera omnia*, ed. H. Schöne, iii., Leipzig 1903), is not known, for no corresponding title is found in the biographical or bibliographical works. But the writing mentioned in the *Fīhrīs* “On the use of the astrolabe” may have dealt with geometric problems. Many problems in the Arabic sources are very similar to those dealt with in the work “On the Dioptra”; only the Arabs use the astrolabe or quadrant instead of the dioptra. Whether one or other of the methods described below was discovered independently by the Arabs and by whom, cannot be established from the authors on the subject, who were mainly practical men. They are described in the most different places.

In levelling, one is faced with two problems: firstly to make a surface exactly level and horizontal or to place a rod or a surface exactly perpendicular, and secondly to ascertain the point on the same level as a given one, or to ascertain the difference in height between two points.

1. A surface is made level and horizontal in the following way:

   A ruler with a straight edge is moved over the surface and one sees whether it touches it everywhere so perfectly that light penetrates nowhere between ruler and surface; in this case the surface is perfectly smooth (al-Shirāzī, see below).

   That the ruler itself is straight is ascertained by seeing if a thread stretched along it and fastened to it at one end can be lifted the same height from the ruler along its whole length. Whether three rulers are straight is tested by putting them side by side and exchanging their sides (Ibn Yūnūs, in K. Schöy, see below).

   To examine if a surface was perfectly horizontal, the following tests were adopted:

   1. Water is poured over the surface and it is observed whether this flows equally in all directions; this is one of the most usual methods. The same plan is given by Proclus in his *Hyapotaxis* (ed. K. Manitius, Leipzig 1909, p. 50, 51). According to him, one pushes supports in under a level surface on all sides till it shows no slope anywhere; this is the case when water poured on it remains standing without running to one side.

   2. An object which can roll is placed on one side; if it does not roll off but only oscillates, the surface is horizontal (al-Shirāzī, see below).

   3. Water is poured into a plate or dish (*djīfma*, fig 8) with an edge which is parallel to the surface and of the same height all the way round, and it is observed whether the water comes exactly up to the edges on all sides (Ibn Luyūn, see
Al-Urdi also used the same method in order to see that the outlets for water in a distribution system at Damascus were all of the same level. In the centre of the reservoir he put a gutter like this and deepened or raised the bottoms of the channels running out of it until the water from the gutter spread equally over the channels which revealed any inequalities (fig. 11). Cf. H. J. Seemann, in S. B. P. M. S. Erlg., lx., 1928, p. 49, 81 and J. Frank, in Zeitschr. f. Instrumentenkunde, xlviii., 1929.

4. A plumb-line (ṣ̄̄kaš̄̄l, buṣ̄̄l, balad [from ṣ̄̄kaš̄̄], ṣ̄̄kaš̄̄la) is dropped from the apex (fig. 12) of a isosceles triangle, made for example of wood, with its perpendicular marked; a piece is sometimes left open in the centre of the under side for the weight of the plumb-line. If the plumb-line coincides with the perpendicular, the surface is horizontal (the figures go back to al-Shirazī and al-Khalkhālī). Such drawings have led to the erroneous idea that Muslim students were already acquainted with the pendulum (cf. E. Wiedemann, in Verhdl. d. d. phys. Ges., 1919, p. 663; the apparatus is called al-fāḍīn [e. g. in al-Shirazī, al-Urdī, see below], Dozy, op. cit., also al-kāsin).
In the architect's balance (fig. 13), according to Ibn Luyūn or al-Tīghnārī (see below), a quadrangular piece of wood is placed on the beam \( ab \) to be examined; in the middle of it, a perpendicular line \( ba \) is drawn before which a plumb-line is hung; according to the original figure, it seems to be two parallel lines between which the plumb-line hangs.

Al-Marrākushi (see below) has described a more perfect form (fig. 14). In the figure \( ab, ac \) and \( de \) are rods, and \( ab = ac \) and \( de \) is an equilateral triangle; \( de \) is pierced in the centre. A plumb-line is hung from \( a \) through the hole. If the surface on which \( b \) and \( c \) are put is horizontal, the thread of the plumb-line goes through the centre of the hole.

Whether the levels and other similar instruments are themselves correct, whether for example the plumb-line from the apex to the base is perpendicular, is tested in this way: After the plumb-line comes to rest in one position of the level, the latter is put in various positions on some horizontal surface, particularly in one perpendicular to the first, and in one in which left and right have places exchanged. If the plumb-line always comes to rest the level is correct but if it only does so in the former case the error can be corrected by adjusting the position of the surface and that of the level.

The level here described is usually called kiniya (γυνία); the word, however, is also used for the wooden set square, as used by carpenters (s. Miftakh al-ʿīlam, ed. v. Vloten, p. 255) and land surveyors like Abu 'l-Wafā (s. Abhandlungen zur Geschichte der Naturwissenschaften und Medicin, Heft iv., 1922, p. 98). A synonym is according to al-Shirāzī (Nihāyat al-ḥaṭāṭ fi Darāyat al-ʿĀfāk, Mak. 2, chap. 13): ʿafadān. From the same root we have in Ibn Wahshiyah (Cod. Leidensis, No. 1729, p. 527) ʿafadān, in Doxy (Supplement, ii., p. 246) ʿafān and ʿafīn. Connected with this is ʿafadān, dual of ʿafād.
4. The gnomon is moved backwards and forwards (turned about on its foot: *mukbîl wa-mudhir*); its shadow must only move so far on the level surface, on which it stands, as is in keeping with the movement of the sun during the turning (Ibn Yûnus, see below).

5. A circle is described at the foot of the rod and a pair of compasses used to test whether the distance of the top of the gnomon is the same from all points of the circle.

6. Ibn Sinâ drills a small hole through the gnomon parallel to its base, puts it in a vessel with a horizontal bottom which is filled with muddy water and examines whether the surface exactly coincides with the level of the hole.

7. In order to examine whether a level surface is standing exactly perpendicular, two exactly equal parallelepipedal blocks of wood (fig. 16) are placed on it, \( L_1 \) and \( L_2 \), one above the other. From the upper edge of \( L_1 \) a plumb-line is hung; one watches whether its thread exactly touches \( L_2 \); the best plan is to place a very thin ruler between \( L_1 \) and the plummet and test the position of the thread with respect to \( L_2 \) (al-Marrâkûshî, see below).

II. In order to ascertain the difference in height between two points \( x_1 \) and \( x_2 \) which are at a distance \( a \) from one another, as is necessary in making a canal for example, one looks horizontally from \( x_1 \) with an apparatus which is at a height \( h \) from the ground to a vertical rod at \( x_2 \) and ascertains the height \( h_1 \) at which the point observed is above the ground. A mark can be made on it (in modern mensuration, the rod at \( x_2 \) has divisions marked on it). The difference in height is \( h_1 - h \). According to fig. 19, the Arabs, like Hero, seem to have used something similar. Ibn al-`Awâmî (see below) uses a square board on which are marked a number of circles touching one another, which are distinguished by different colours or have different centres. In order to place the rods absolutely perpendicular, plumb-lines are hung beside them (fig. 17).

The horizontal line of vision is obtained in various ways:

1. A rod (e.g. an ell long) with square sides is put up in such a way that the upper surface appears horizontal to the eye and one looks along this surface.

2. The rod (*khuṭṭâl*) is put on the above mentioned dish or plate (fig. 8) and one looks along it.

3. At the end of the rod nails are fastened at the same height and their heads are pierced and one looks through the holes.

4. For a rough examination, one can put, at the two places, two tube-shaped bricks which, for convenience may be made each out of two half-pipes (Ibn al-`Awâmî, see below).

5. An astrolabe is put in a horizontal place such as the edge of a well or on its cover and one looks through the eyepiece.

Other methods of ascertaining differences of level are as follows:

1. An assistant is sent from the higher position to the lower holding a rod of a known length / vertically until one sees just the end of it; if \( h \) then is the level of the eye, \( t - h \) is the difference in height. If the distance is too great for the top of the rod to be distinguished, a light is put on it, for example a lighted candle and the observation is made by night.

2. If it is a question of ascertaining whether a place outside a well is lower than the level of water in the well, the distance of the latter from the surface of the ground or from the edge is ascertained by letting a rod and thread down with a shining heavy object at the end and used in calculation. Two apparatuses, closely connected with each other, are the following:

a. To a rod (fig. 17) the triangle with the plumb-line is attached. To its two ends two threads with weights at the ends are attached, \( a \) and \( b \).

b. Two posts \( 1 \) and \( 2 \) are erected at the points, the difference in level of which is to be ascertained. The one thread is fastened to the end of the lower post \( 1 \) and the other hung along and over the post \( 2 \) until its weight comes to rest. The amount of shifting of the thread measures the difference in height (al-Khâzînî, see below).

4. The *murdjîkal* (the bat, fig. 18) consists of an equilateral triangle with a plumb-line which hangs from the middle of one side. The triangle is suspended by this side. Two rods, an ell in length, are erected to ells apart; a rope is passed from the top of one to the top of the other and by two threads \( a \) a the *murdjîkal* is suspended in its centre. If the plumb-line goes through the apex of the triangle, both places are on the same level, if not, one is raised by putting stones below it for example; but the end of the rope can, as in 3, be moved along (Ibn Lûyûn, see below).

5. In the Paris manuscript No. 2468, an unknown author describes 3 apparatuses for levelling (fig. 19a–c). In the first (*al-mudhrîr*), the known rod of wood an ell in length is bored through its entire length and tongue with a tongue suspended from its centre (fig. 19a). Through the hole a rope some 15 ells long is drawn which is fastened to the two vertical rods already mentioned. The second apparatus (fig. 19b: *al-shabthâ*) the similar) corresponds to the *murdjîkal*: only the two threads \( a \) \( a \)
and Bahāʻ al-Din but not described; it probably corresponds to our canal-level, a communicating pipe filled with water, such as is very fully described by Hero (Dioptra, p. 197 and loc. cit.) but he gives it no particular name, probably because it is associated with a dioptra. On the plumb-line of the figure is written ṭahkāla (cf. E. Wiedemann, Beitr., xxxv., see below).

Tiğhārī mentions another instrument called ḥisān al-kalāf, Ibn Wahshīya (see below) one of brass called kafār or kākar. Neither are described however. Arab authors who give full descriptions of Arab instruments are the following:

1. Ibn Wahshīya (or Abū Tālib al-Zayyāt, † 870) in Kitāb al-Falāḥa al-Nabatīya, in "the Book of Nabatean Agriculture" (cf. H. Schmeller, in Abhandlungen zur Gesch. der Naturwissensch. und Medizin, Erlangen 1913, Heft VI, p. 36). His data are supplemented by those of numerous commentators.

3. Ibn al-Awāmī (c. 1350) in Kitāb al-Falāḥa (cf. E. Wiedemann, Beiträge, x., see below).

4. Abū ʻOthmān b. Lūyūn (c. 1348) in Kitāb al-Lūyūn, deals with levelling ground etc., and gives notes on al-Tihānī and others (cf. E. Wiedemann, Beiträge, x. 317 and Dozy, Supplement, ii. 302 and 579).

5. Bahāʻ al-Din al-ʻAmīlī, Essenz der Rechenkunst, ed. F. Nesselmann (1547–1622, s. E. Wiedemann, Beiträge, x. 319).

Full details of levelling are given in the astronomical books in discussing the ascertainment of the meridian, e.g. in Kubṭ al-Dīn al-Shirrānī (d. 1311; cf. E. Wiedemann, in Zeitschr. f. Physik, vol. xii., 1922, p. 267, al-Khalīkhī etc. Many books on the astrolabe give information on the subject in discussing surveying problems, e.g. al-Bīrūnī (cf. E. Wiedemann, Beiträge, xvii. 59 sqq.).

I give once again the names of the levelling instruments:

mīzān, mīzān al-hāmidīn, mīzān al-kāf, mīzān al-iwzār, kūfāz, ṭāwī, ʿaḍān, ʿaḍāūn, ṭafṣān, mārjābāl, kākar.

I know of no comprehensive treatise on levelling in connection with canal building etc. in the early Muslim period. For the literature see my Beiträge, iii. 229; xviii. 26 and H. Schmeller, loc. cit., p. 41. — For knowledge of these matters in ancient times see C. Mikel, Die Ingenieur- technik im Altertum und H. Diels, Antike Technik, Leipzig 1920.

MIZMĀR means literally "an instrument of piping". In the generic sense it refers to any instrument of the "wood-wind" family, i.e. a reed-pipe or a flute. In the specific sense it refers to a reed-pipe (i.e. a pipe played with a reed) as distinct from a flute, as we know from Ibn Sinā (d. a. v. 1037) who describes the mīzām — a reed-pipe — as an instrument "which you blow into from its end which you swallow", as distinct from an instrument like the yārū — a flute — "which you blow into from a hole". Ibn Zaila (d. 1048) writes similarly but substitutes the Persian word ńay for the Arabic word mīzām. In Ibn Sinā's Arabic treatise al-Naḏāʿūt we read of the mīzām, but in the identical passage in his Persian Dānīshnāma the word is ńay. Further, the Mafṣūth al-ʻUmūm says, the mīzām is the ńay" (p. 236). For the present purpose, "woodwind" instruments (māṣūmāt) may be divided into:

1. Reed-blown types; and 2. Pipe-blown types. Among the former we have single reed-pipes of the clarionet, oboe, and saxophone types, as well as double reed-pipes, the bagpipe, and the eλγ̌. Among the latter we have the flute and recorder, as well as the panpipes.

a. Reed-blown types. — Single reed-pipes occur in ancient Semitic art and literary remains (Lavignac, i. 35 sqq.). Hoary gossip attributes the "invention" to the Persians (al-Maṣūmī, Murūdī, viii. 90), whilst Ḥaḍīšī himself is claimed to have been the actual "inventor" (Ewliyā Ṣefī, i. 641). With Islamic peoples, reed-pipes are found with a conical or cylindrical tube (undūs) pierced with finger-holes (ṭūḥūb), and played with a single or double beating reed (kaša, kāshā). Among the Arabs of the 9th century, the mīzār finds a place at convivial
parties (Mufaddat'yat, xvii), and in the viith century it is one of the martial instruments of the Jewish tribes of Al-Hidādz (Aghānī, ii. 172). When Islam came, an anathema was placed on reed-pipe music, it would seem, on account of the female reed-pipe player (sammār) who, as was common in the East, was looked upon as a courtesan, and, indeed, the terms sammāra and zānīya became almost synonymous. It is improbable that the Prophet Muhammad could have referred to a reed-pipe (mizmār) in the well-known hadith in praise of the chanting (ī'ra'a) of Abū Mūsā al-ʾAjbarī. The reference was rather to a mizmār (Hebr. mizmār “psalm”) from the māzāmīr of the House of David” (cf. my Hist. of Arabian music, p. 33). In early days, what the Arabs called the mizmār, the Persians called the nāy, and the latter distinguished the flute by the name nāy narm (soft nāy). Later they called the reed-pipe the nāy sāyḥ (black nāy) and the flute the nāy safīd (white nāy) because of the colour of the instrument. About the beginning of the ixth century, a musician at the Abbasid court, named Zubān invented a reed-pipe which was named after him the nāy zānāmi or zānmī (Tūḏā al-ʾArūṣ). What the invention was we can only conjecture. It may have been the cylinder used for altering the pitch of the instrument, or perhaps it was the introduction of a conical tube (see my Studies, p. 79, 82). At this period we have no information whether the various reed-pipes had cylindrical or conical tubes or whether they were played with single or double beating reeds. The word zānmī was accorded little favour in the East, whatever favour the invention itself found. In the West, where the name eventually became vulgarized into sulūmī, it became the most important reed-pipe not only in Spain as we know from al-Shakundī (d. 1221; al-Makḵari, Moh. Dyn., i. 59), but also in the Maghīb. (Ibn Khaldūn, ii. 353). It became the xelāmi of the Spaniards (see also Schiaparelli, s. v.).

The mizmār (= mizmār wahhād) is described and delineated by al-Fārābī (d. 950). It had eight holes for fingering, giving a complete octave. He also describes a smaller reed-pipe called the sur-yānai (Kosegarten, p. 95; Land, p. 122; D'Erlanger, p. 262). One special feature of this instrument was called the shahrā. In the Masāfīt al-ʾĀlām (p. 237) we read: “The shahrā of the mizmār is its head, and it is that by which it is made narrow and wide [in compass]”. It was actually the cylinder inserted into the head of the instrument which lowered the pitch when required (see my Studies, p. 82), a device called later the tanī (Amer al-Tuḥaf) or faṣī (Villoteau). It was called the shahrā perhaps on account of the button at the top of the cylinder which was turned round. The word sūrānai came to be modified into sūrnāt and then surnā. Popular etymology opined that the word was derived from sīr “fête” and nāy “reed”, but this form only appears in the lexicons (Wurzeln- und Formenwerke). Some modern even write sūrūnā. The sūrnāt found its way into martial music as early as the beginning of the ixth century (Aghānī, xvi. 139: the text has sūrnā). In the ixth century, Ibn Zaila shows how, by devices in the fingering and embouchure, other notes were obtained on the reed-pipe (Pers. nāy). In the Persian Kans al-Tuḥaf (ixth cent.) the mizmār, also called the nāy sīyāt, is both described and delineated. More valuable is the explanation of the actual making of the beating reed with which the instrument was played, from which we learn that it was a double reed. In the next century a Turkish author Ahmad Ughī Shukrullah copied extensively from this work (Lavignac, i. 3012). Ibn Qalībī (d. 1435) says that all the notes could be obtained on the zāmī sīyāt nāy by accomodating the fingering and the embouchure. The smaller instrument, the surnāt, was defective in the upper octave he says. A similar type of reed-pipe to the latter called the batalān is also mentioned by him. Ewliyā Čelebi says that it came from Shirāz. In the Muhammad b. Murād Treatise (xvth cent.) we learn that the nāy awzd (= nāy sīyāt = mizmār) was 27 cm. long.

With the Turks, the Persian word surnāt had been altered to sūrnā and the term had become common to both the zāmī (= mizmār) and sūrnā in the East. Ewliyā Čelebi (xvth century) mentions among the Turkish reed-pipes of his day the kūbā sūrnā or sūrnāt, the kūbāt šamī, the ūdī sūrnāt, and the gāzūrfī sūrnāt (a Mocclean reed-pipe). He also speaks of the būrnātta which, he says, was an English invention (i. 642). If this is the same as the surnātta, it was the clarionet, an instrument which Denner is said to have “invented” about 1600, which is after its mention by Ewliyā Čelebi. The Persians still continued to call their reed-pipe the sūrnāt, and a xvth century design of the instrument is given by Kaempfer. Both Russell in Syria (i. 155) and Villoteau in Egypt (i. 356 sq.) refer to several kinds of reed-pipes in use in the xvth century.

The latter delineates these and describes them fully. They are three, the kūbā sūrnā or zam al-kūbā, the zam or sūrnā, and the gūrūr or zam al-sūrghāyir, the first being 58.3 cm. and the last 31.2 cm. in length. The modern instrument is also delineated by Lavignac, p. 2793; Sachs, p. 428. For specimens see Brussel, Nos. 122, 355, 357; New York, N° 133.

In the West also we find a new name, or instrument, the ghaita or ghāyta (q. v.). It is said to have been introduced by the Turks (Delphin and Guin, p. 48) but the name is mentioned by Ibn Batūta (d. 1377) who likens the Mesopotamian surnāt to the Maghībīan ghaita (ii. 126). There are, however, two kinds of ghaita, one — a cylindrical tube blown with a single reed, and another — a conical tube blown with a double reed. This may explain why ghaita does not always equate with sūrnāt and mizmār in the West (Tadikirat al-Nisāyr, p. 93; Muhammad al-Saḥīr, p. 34). The cylindrical tube instrument is known in Egypt as the ghāta. For details see Bī Ḍai, p. 103; Delphin and Guin, p. 47. For specimens and designs see Host, p. 641, tab. xxx.; Brussels, No. 351; New York, Nrs. 402, 2824; Lavignac, p. 2921.

A reed-pipe that became quite famous in Western Europe was the bāk played with a reed. The original bāk [q. v.] was a horn or clarion, and was made of horn or metal. Pierced with holes for fingering, and played with a reed, a new type of instrument, somewhat similar to the modern saxophone, was evolved. In the xth century, this bāk was “improved” by the Andalusian Caliph al-Hakam II (Bibli. de autores Expt., ii. 410). Ibn Khaldūn, who describes it, says that it was the best instrument of the zamr family (ii. 353). Ibn Qalībī,
in his holograph MS. in the Bodleian Library, writes ḍāk, but adds, “also called ḍāk”, but the latter remark has been deleted. It appears to be delineated in the Cantigas de Santa Maria (Kianho, fig. 41, b.).

Another interesting instrument is the 'Irāṣḵiya or 'Īrāḵiya, which may have been the forerunner of the European rACKET. It has a cylindrical pipe and is played with a double reed. It is probably the descendant of the Nay al-'Irāḵi that al-Chażzāl (d. 1111 A.D.) speaks of. It is delineated and fully described by Villoteau (i. 643 sq.). Examples are given at Brussels, N°. 124; New York, N°. 2861.

With Islamic peoples, reed-pipes belong to outdoor music. Just as we see them in the Aṣf Lāla sou-Lāla as being essential to folk, ceremonial, processional, and martial music, so they are today, and probably have always been.

Double reed-pipes. Ibn Khuradadbih says that the Persians “invented” the double reed-pipe called the diyānāi (al-Mas'ūdī, Murūdī, viii. 90), the earliest instrument of this type that we know by name in Arabic literature, although it appears in the eighth century frescoes at ʿUṣur ʿAmrā (Musil, pl. xxiv.). It has been suggested that the word should be diimī, but diyānāi is also given by al-Fārābī (see my Studies, p. 57), who describes and delineates the instrument which, he says, was also called the miṣmūr al-Muγhānnī or muṣrūwāfī. The two pipes were of equal length and each was pierced by five finger-holes, which gave an octave between them. Probably the instrument known in the Middle Ages as the summārā (vulg. summārā) was actually the old diyānāi, although it merely equates with ʾishūla in the Glossary Latin-Arabicum (xth century) and the Vocabulista (xth century). As early as the xith century we read of the maγwūfī in Egypt (al-Maḵrīzī, If. 136). The name itself means “joined” (see my Studies, p. 78), and it was doubtless a double reed-pipe. Since the xith century at least, summārā has been the name for this instrument in the East (cf. Niebuhr, I. 145), and Lane (p. 367) describes and delineates it. It has cylindrical tubes and is played with single beating reeds. It is to be found with a varying number of finger-holes and is named accordingly (Sachs, p. 433). In the Maghrib it is called the maγrūn and maγrānā (Lavignac, p. 2793: R.A., 1866), whilst in Syria it is given a vulgarized or metathetical form of the old muγwādī (cf. Sachs, p. 257; Dalman, Pal. Divan). For specimens and descriptions see Brussels, N°s. 115-118; New York, N°s. 2167, 2633; and Z.D.P.V., 1927, p. 19. Specimens in my collection range from 18 to 43 cm. in length.

Another type of double reed-pipe has only one pipe pierced with finger-holes, whilst the other serves as a drone. This also carries the name of summārā when the two pipes are of equal length (cf. Niebuhr, I. 145). When the drone pipe is longer than the chanter pipe it is known as the argūḥī (argūḥūn, Maṣḥārka, p. 29; argūḥūn, Lavignac, p. 2812) in modern times (cf. Freytag-Cheest. Arab., 1831, p. 34) in Egypt and Syria. Villoteau (i. 962) gives a detailed description with scales and designs of three sizes, 107, 82.6 and 38.6 cm. in length. (In South Kensington Museum there is one 144 cm. long.) Like the preceding instrument it is played with single beating reeds. The drone pipe is furnished with additional tubes (ṣīyāḏī) which are affixed to lower the pitch.

In Syria the smaller type of argūḥī is named the maṣḥār, a most significant name, in spite of it being ignored in the lexicons. Lane (p. 367) figures a six finger-holed instrument which, he says, was used at ʿdhrās, and by Nile boatmen. For specimens see Brussels, N°s. 342-346; Z.D. P.V., 1927, pl. 2.

Bagpipe. An ancient instrument in the Orient. Just prior to Islam we have it figured on Sasanian sculptures (Ker Porter, Travels, ii., pl. 64). We do not know its ancient Semitic name, but Ibn Sinā and Ibn Zaila mention it as the miṣmūr al-arīrub, describing it as being played by “an artificial contrivance”. Although Niebuhr (i. 146) calls it the summārāt al-kerba, and Lane, p. 356 names it the summārā bīrān, the more general term used in Arabic speaking countries is sukrā, although we find miṣmaw used in Tunisia (Von Hornbostel, p. 4). The word sukrā is given variations by some European writers as in the sukkara of Villoteau (i. 970) and the sukhara of Rouanet (Lavignac, p. 2812). In Persia, the bagpipe has long been known as the nāy anḏūn and nāy maγh or maγhāk (Burhān-i ʿalī) from whence the Hindūstānī name maγh or maγhūk (Tagore, p. 24; Day, p. 151). In Turkey, the older word was ṭilīm, ṭilīm or ṭilīm (Meninski, Sachs; cf. Ewliyā Čelebi, i. 642; ṭilīm dādāk), but ʿalqād would appear to be equally popular, and this name is to be found throughout the Balkan countries (cf. Arab. ḏula; Span. gaita; Engl. bagpipe).

The bagpipe used by Islamic peoples is generally equipped with a chanter pipe (with five or six finger-holes) and mouthpiece, but rarely with a drone pipe. The chanter, terminating in a horn bell (Schallstuck), is often double, a feature which was probably the original reason for the term summārā being used with the bagpipe. The woodwork is sometimes inlaid with metal, whilst another feature is the adornment of the instrument with tassels, beads, shells, and other frippery.

Designs may be found in Niebuhr (tab. xxvi.) and Sachs (p. 434), and actual specimens in Brussels, N°. 372.

Instrument of free reeds. The Chinese ʾē skilled is such an instrument. Probably it was not used by Islamic peoples although known to them. The ching is described in the Maṣfāh al-Ulīm as follows: “The ʾustūq is a musical instrument of the Chinese. It is made of compound tubes (anādıb), and its name in Persian is biša nuγhūta” (p. 237). We get a little more information from Ibn Ghābī who informs us that the ʿulībre or miṣfār-i khatav was made of tubes of reed joined together. It was blown through a tube and the notes were obtained by finger-holes. For description and designs see Van Aalst, Chinese Music, p. 80.

b. Pipe-blown types. — The flutes of the Arabs, Persians and Turks, unlike those of Western Europe, are played vertically, a current of air being blown across the orifice (maγhāk) at its head. Ewliyā Čelebi (i. 623, 636, 642 read ʿa)nābī ) is not sure whether it was Pythagoras or Moses who “invented” the first instrument of this type, the shepherd’s flute, called the ʿa)bāl (cf. knawī). Ibn Khuradadbih says that it originated with the Kurs (al-Masʿūdī, viii. 90). and Ibn Ghābī (Ṣahr ʿal-luʿwār) says that this instrument was the nāy abyād (white nāy). We know from Ibn al-ʿAṣrābī (d. 846) that the Arabs called
this flute or reed-pipe the ṣhiyya. A characteristic of the Arab flute was its length, hence the ancient Greek proverb which likened a talkative person to an Arabian flute (Menandri Pregm.).

In the early days of Islam, the Arabs called their flute the ḵuṣḏaba (later modified into ḵuṣaba) and this is the name used by the poets al-ʾAṣḥāb (d. 629) and Rukha b. ʾAl-ʾAdudjān (viii th century). These terms fell into desuetude in the East when Persian musical influences were at their height. The Persians called their flute the nay norm (soft nay) so as to distinguish it from the nay proper and the surnay, which were reed-pipes, and so the Arabs of the East called their flute the nay, although in the West the old word ḵuṣaba or ḵuṣaba was retained. Another term for the flute in early days, perhaps a different kind, was yarā (Masfīth al-ʿUlamī, p. 236), and in the xth century Glossarium Latino-Arabicum it equates with calamaula. In the xi th century it was still a common name with ʾSaʾf al-Din Ābd al-Muʾmin (p. 9) in the East, and with al-ʾShākundī in the West (al-Makki, i. 59; read yara not barda). In the contemporary Vocabulary in Arabic it (yarā) agrees with ḵitu. The words kaʾira and kaʾira (al-Juwahārī, al-Firūzābādī) would appear to be vulgar forms of yara.

Whilst the diminutive ḵāṭiba (ḫuṣāṭiba) sometimes occurs in reference to a small flute, ḵuṣāba and ṣhibā (V ḵuṣaba “to grow up”) were the more general terms used in ʿIrāk (khwān al-Ṣafā, i. 97), ʿIrāq (al-Makātib, i. 136), Spain (al-Shāhī, Voc. in Arab.), and the Maghrib (Ibn Khalūdīn, ii. 352). It became the saxophone of Western Europe. Another name for a small flute was ḫiwaṭlā, and this word also found a place with the Latins as the joč (Du Cange). In Persia, the small flute was called the ḩuška (Kanz al-Tulāf), hence the Balkan pisaka and pīnaka.

We read of the nay in the Azhānī (ix. 71) but we cannot be sure whether it was a flute or a reed-pipe. Arābī (Kossegharten, p. 45) ignores the flute (nay) and says that it was inferior (nūṣūr) to the mızmār (reed-pipe), but it soon gained wide recognition in chamber music probably by reason of ʾuṣfi apreisement and the ḥikār of the darwešt. ʾSaʾf al-Din Ābd al-Muʾmin (d. 1294) describes the nay with eight holes for fingering, the thumb-hole at the back being called the diwašt (“vehement”), its name revealing its function. In the Persian Kanz al-Tukāf (xvith cent.) we find two very small flutes mentioned, but in the ʾAlwār (xvith cent.) we find that the nay ayyād was normally 63 cm. long. Five larger sizes are given, the longest being 99 cm., with two smaller sizes, the limit being 31.5 cm. Ibn Qāhibī also registers several varieties including the nay hamm of 67.5 cm. approximating in pitch to the bāmm of the flute, and the nay ʿir of 33.75 cm., approximating to the ʿir string. Ewliyā Celebī (xvith cent.) gives the names of a number of Turkish flutes (i. 623) including the ṣhab manaṭ, the diwašt, and the halak. Vallois (i. 954) describes and delineates the Egyptian instruments of the late xvith century. The largest, 77 cm. long, was the nay ʾshāḥ (= ṣhab nār), and the smallest, 48.8 cm. long, was the nay ʾdīrāf, the kiwft of modern Syria (Musḥarka, p. 29). Other flutes named by him are the nay kuṭb, the nay ʿuṣṣur ṣuḥūd (the ʿuṣṣur), the nay ẓuṭb, and the nay ʿuṣṭān. In Turkey the ʿuṣṣur ṣuḥūd is the smallest flute used in chamber music (Lavignac, p. 3019). Turkish and Egyptian flutes are usually well made, with a head to support the lips. In Palestine and the Maghrib they still retain, more or less, a primitive appearance, and although the seven holed flute is common (Christianowitsch, pl. 2), the five and six holed instrument has acceptance (Delphin et Guin, p. 45; E. D. P. V., 1927, pl. 1). In the Maghrib the flutes in the orchestras still retain the name of ḵuṣaba (vulg. ḵuṣaba), and they are generally about 40 cm. long, whilst the ʾuṣḳīr or ḵuṣbāba (ḥuṣbāba) is smaller. In the interior, longer flutes like the gūlūb and sūṭūd may be found. Delphin and Guin give an account of these.

The recorders, or flute à bec, also found favour in the East. This is the Arabic nay labāk (mouth nay), the Persian sūt, the Turkish ʾuṣḳīr, and the Hindustāni alqā바. As early as the ikhwān al-Ṣafā and the Masfīth al-ʿUlim (xth cent.) we read of the ʾuṣḳīr, which was doubtless a flute à bec (see my Studios, p. 8). Villoteau (i. 951) says that it was an instrument of this type in his day in Egypt. The Ṿīduk or Ṿīdāk is mentioned by Ewliyā Celebī in nine different species (i. 642), and is also mentioned by Ḥaḍīḍī Khālīfī (i. 400). The ʾuṣḳīr would appear to have been a small three-holed recorder such as was common with pipe and tabor players in Mediaeval Western Europe. It was played with the fingers of one hand, the other hand being used for beating the ṣafī or drum, hence the phrase in al-Ghazālī: “the ʾuṣḳīr of the drummer (ṭabḥūr)”.

Pan pipes are also common to the folk. Both Pythagoras and Moses are credited by Ewliyā Celebī (i. 624, 635) with the invention of the mızmār or panpipes. Although the wood stands for a composer of melodies in the Masfīth al-ʿUlim (see also Meninski), it referred to a musical instrument in the xvith century (N. E., xiv. 312). A contemporary writer, Ibn Qāhibī, says that the mızmār is one of the [wind instruments] with free pipes. Its notes are determined by size [of pipes]. The longest have the lowest notes, and the shortest the high notes. We find the instrument called mızmār (Farhang-i ʾShārī) whilst Ḥaḍīḍī Khālīfī (i. 400) has mızṭāl, and Toderni (i. 327) mezzal, which probably gave birth to the Roumanian mustal. The term mızṭāl survived up to modern times (Villoteau, i. 963), but the more general word used today (Musḥarka, p. 29) is jānāk. (Pedro de Alcala [1503] mentions a harp by this name, but perhaps he confused the name with ḵaṭl). Russell (The Natural History of Aleppo, i. 156) writing in Syria in the xvith century says that panpipes were to be found with from three to twenty-three pipes. Kamers, p. 743, delineates a xvith century Persian instrument.

The names of instruments in the maʿzmār group in Arabic are legion. Many of those not mentioned in this article are regional and are of folk origin, their source being often discernable, such as in the sawmār and sawmārā, to name only two. More interesting however, are the older words like kunbāuka, naṭib and zaṅākā. The first two occur in al-Firūzābādī (d. 1414), and naṭib, which equates with mızmār, reminds us of the much debated passage in Ezekiel, xxviii. 13. Zaṅākā occurs in al-ʾAhārī (d. 981) and even earlier (cf. Lane). The Greek σαῦμακων and the Latin sambucus were stringed instruments, and Isidore of Seville’s sambucus as a “wood-wind” instrument has long been
at this time to be often confused with those of ḥāṣṣ and musāhis [q.v.]. In the time of the Muḥammad b. Ṭāfṣil b. Mutḥaddis [q.v.], al-Mansūr, each of the twenty-one Almohad tribes had two mizzārs "one for the first rank of the hierarchy, i.e. the earliest recruits of the Almohads, and another for those who had joined them later (zhārī)".

At the present day, mizzār is in constant use in Fās for the nāṣib [q.v.] of the principal Sharīfī groups who live in this capital.

(E. Lévy-Provençal)

MĪZĀR, a Persian word which passed into Arabic in the form میزارد or میزانید; we also find in Arabic the Persian plural, mizzārān, but usually combined with mizzār in the expression mizzārān mūbedh, which means "chief of the mizzārs", "grand mizzār". It is also found alone (mīzārān) standing for mizzārān mūbedh. The Arabic plural is mūzā'ib. The word is derived from the Persian magzapat, which means "chief of the magzā" and therefore indicates a priestly office; according to al-Ḥarīdī, Kitāb al-Tanbih wa l-Ighrāf, R. G. A., v. 127, the word would mean ḥāṣṣ al-dīn and be derived from mu = "religion" and ṣad = "protector", and according to al-Ya'qūbi (Ṭārīkh, i. 207) ʿalīm al-ʿulāmāʾ. In Armenian texts the word is rendered by mzaqet in the Greek acts of martyrs by Muqāṭa Muqāṭa muqāṭa muqāṭa; in Syriac and especially in the acts of the Persian martyrs not only by ممکن, but also by ممکن, in one passage (Hoffmann, Auzüge, p. 88, cf. below), the word ممکن is used immediately before ممکن.

The Syriac has also ṭaṣṣ muqāṭa or ṭaṣṣ ḍunqāṭa corresponding to the Greek ἄξως άργων των ἵππων. We have no satisfactory information regarding the functions of the mūbedhān, or mūbedhān mūbedh. The information given below relates to the Sāsānian period, a period in which the clergy were reorganised and which is reflected in the Arabic and Persian Muslim sources.

In the later Avesta we find references to the sacerdotal organisation but the names do not agree with those of the Sāsānian period; for example the principal office, that given in the Sāsānian period to the mūbedhān mūbedh, is called zaraštstraotena, and had judicial functions like the chief of the mūbedhān. The term magzapat is only found in the Pehlevi commentaries on the Avesta. The sources from which we can extract information about the mūbedhān, and the mūbedhān mūbedh or chief of the mūbedhān, are of course Pehlevi or go back to Pehlevi texts. Among the former which have come down to us is the Bundakhtān which among other things contains a list of mūbedhān mūbedh; the Ardā Wirāf Nāmag; the Kārmān-kār Arshābkhīr-i Pāpakān (transl. by Noldke in the Benzey-Festschrift = Beiträge zur Kunde der indogermanischen Sprachen, iv. 1878, and by Pagliaro in L'Epica e il Romano nel Medio Eto persiano, Florentiae 1927; a part of the text 1–3 is reprinted in the Hilfsbuch für das Pehlevi by Nyberg); the Māsān-kā-hār Dāte-
and the education of the people. These mōbeda and their chief (cf. below) were like all priests the repositories of learning, profane as well as sacred (cf. Tantib, p. 97, where there is an allusion to the unbounded knowledge of the mōbeda and herbeda) and the Arab writers must also have obtained information from mōbeda (cf. Inostreznov, Études sassanides, p. 10). The mōbeda had also judicial functions (cf. below); in the Acts of the martyrs they appear vested with executive power; but since courts of inquiry were composed of lay officers and priests, it is probable that this power was exercised by the whole college or by delegation. It is also certain that the title of mōbeda is not applied exclusively to these heads of administrative divisions or dioceses (of whom it is nevertheless characteristic) because at the court of the king, according to the sources, especially the Šāhānšāh, there were many high priests called mōbeda or herbeda who formed a kind of council around the grand mōbeda (cf. below) or who had other special offices. Gradually the same mōbeda must have come to mean, as at the present day, a priest fully qualified to do everything in connection with worship. The other terms for Persian priests seem to refer rather, either to their dignity (e.g. dāstār) or to functions occasionally performed by them (cf. zoroastrianism). Rat and maguyat are sometimes put on the same level. The relation of the mōbeda to the other degrees of the hierarchy like the herbeda, another office (perhaps teacher) having supervision over a body of priests, is not clear. Al-Mas‘ūdī says in the Ta‘ībih, p. 103, that herbeda were lower in rank than mōbeda.

At the head of the hierarchy of priests were the hūrbeda or chief of the herbeda and the mōbedān mōbeda or chief of the mōbeda. Tansar, the writer of the famous letter, is called by the Denkār: hūrbeda hūrbeda, according to Darmesteter “chief of the religion”; while al-Mas‘ūdī (Tantib, p. 99) calls him better the mōbeda of Ardashir. Indeed it is quite certain from our sources that the supreme head of the ecclesiastical hierarchy was the chief of the mōbeda (mōbeda mōbeda) or his representative, the chief of the court; all the power of the Zoroastrian clergy which constituted a state within the state was concentrated in this pontiff. Al-Mas‘ūdī in the Ta‘ībih, p. 103, says of his rank that it was almost equal to that of a prophet.

In accounts of the ceremonial of the Sāsānids, he is always given first place and he frequently appears surrounded by a council of high priests, herbeda or mōbeda. Besides all the functions which he exercised as head of the clergy, i.e. the supervision of the whole religious life of the country, the settlement of theological questions, of problems of ecclesiastical policy, the appointment and dismissal of ecclesiastical officials, he had others which we must outline. Christensen thinks he can deduce from several sources (letter of Tansar, al-Mas‘ūdī, Tantib, p. 103–104; Yavā‘īkī, Historia, p. 1–202), that four or five high officials formed with the king a kind of ministry, the composition and number of members of which perhaps changed from time to time but which always included the mōbedān mōbeda (cf. e.g. the Šāhānšāh, ed. Mohl, vi. 223 where the mōbeda is called the king’s vizier). But he was also supreme judge as head of the mōbeda of the administrative divisions, as the latter were the
judges of higher degree in their respective areas. It is evident from the studies of Bartholomae on Iranian legal texts (and especially on the آئینی انسانی), that in the different districts there were judges of first instance and of two degrees (just lower, mas higher), above whom was the مبعد (religious judge). The supreme judge was ultimately the مبعد in the Persian Empire. The judge of the district. The supreme judge was ultimately the مبعد whose final sentence could not be disputed. For the judicial functions of the مبعد it is interesting to consult the acts of the Persian martyrs in Syriac and Greek (cf. Hoffmann, "Auszage aus syrischen und persischen Martyrern, Leipzig 1886; the texts of Bedjan, etc., in "Patriologia Orient., etc."). The Arab writers also give us a pretty clear idea, especially as regards the مبعد; for example in Tabari, i. 952; Noldeke, Geschichte der Perser und Araber, p. 230. The مبعد in advising the king in the matter of the son of دحی Yazan, lays particular stress on the young man's right to have his prayer granted; al-Mas'udi, ماردان (ii. 156) and Tabari, p. 103, calls him مسیح السیجی; in the ماردان also (i. 211) we are told in connection with the abuses of Hormuz son of Khusraw that, having abolished the jurisdiction of the مبعد, he has given authority to the king in the matter of the son of دحی Yazan, lays particular stress on the young man's right to have his prayer granted; al-Mas'udi, ماردان (ii. 156) and Tabari, p. 103, calls him مسیح السیجی; in the ماردان also (i. 211) we are told in connection with the abuses of Hormuz son of Khusraw that, having abolished the jurisdiction of the مبعد, the good old tradition and the ancient laws were thus disused. In al-Tha'alibi, Hist. Pers., p. 506-7, we find two answers which are interesting in this connection; they were given by the مبعد to the king, who had consulted him with regard to the sentence of death to be pronounced against his chief wife and her cook; in the Kitāb al-Taṣdeeq, p. 28, it is related that king خورُمیل full of admiration for a subtle answer given by the مبعد exclaimed: "It is with justice that kings have given you the first place and that they have entrusted you with the control of jurisdiction!"

Some Arabic sources also allude to the court of justice which was held on the occasion of the great festivals of the Aryan and the مهران (e.g. Kitāb al-Taṣdeeq, p. 159-63; al-Mahdī wa l-Adīd, p. 359-65; al-Birūnī, al-Adhar al-Bahrīyya, ed. Sachau, p. 215-219, 222-223; Sīrāt-Ālāmīn, ed. Schefer, p. 38-40, etc.). According to these stories, the people on the days had the right to bring any complaint against the king before a commission of which the grand مبعد was the most important member; the first complaint was judged by the grand مبعد who thus had the right to condemn the king, the latter having pronounced a formula of submission, knuckling before him. The complaints that followed were judged by the king. According to al-Nawairi, the مبعد also offered to the king on these ceremonial occasions a basket of fruits over which he had uttered a prayer. Tansir's letter (J. A., 1904, p. 544-545) informs us that in the procedure laid down by Ardashīr for designating the heir to the throne the grand مبعد played the most important part, that is to say he proclaimed the new heir chosen by divine inspiration so that it happen that the other dignitaries summoned to deliberate with him were not in agreement. The position of the grand مبعد as intimate councillor and mentor of the king who placed complete confidence in him (he is often called "councillor of the king") is very clear in the شیخنوس as well as in the Arabic and Persian sources (cf. al-Tha'alibi, p. 504-505; al-Mas'udi, ماردان, ii. 171 where Bahram son of Bahram, son of Hormuz, addresses the grand مبعد: "Thou, support of religion, councillor of the king and the man who directs his attention to affairs of state neglected by him"). According to al-Mas'udi, تاهب, p. 230, the مبعد and a few other high officials of state possessed a copy of the شیخنوس or register of officers, a very large book, forming part of the آئینی (an آئینی was translated by Ibn al-Muqaffa' with the title Kitāb al-Rawān).

Among the details which are preserved in the sources about the grand مبعد, we are told that he was one of the three who shared the king's table in time of war when the royal meals were very frugal; and that when a victory was won, he along with other dignitaries pronounced a discourse (Kitāb al-Taṣdeeq, p. 173-174). A very marked feature in the sources is the wisdom of the grand مبعد and indeed of all the مبعدs (cf. below).

In the شیخنوس (we pick out only a few of the more interesting epistles) the Byzantine ambassador who was, the grand مبعد tells Khusraw, of the school of Plato, put seven questions to the مبعد which he answers (Mohl, vi. 3 sqq.) and thus excites the admiration of the king. In this story, as usual, the grand مبعد appears surrounded by other priests called مبعدs or معدیدs as the case may be, and he is also given the title معدید. Cf. also the questions put by the grand مبعد to Khusraw آشغران (Mohl, vi. 394 sqq.) and the assembly of the مبعدs under the presidency of the grand مبعد to put questions to Hormuz son of Anusharwan (ibid., p. 424-430). Another passage (Mohl, vi. 442 sqq.) describes the heroic act of the grand مبعد who consules a high official, a victim of king Hormuz, and is poisoned by the latter. The grand مبعد is also represented as interpreting the language of birds (cf. also al-Mas'udi, ماردان, ii. 169-170: the dialogue of the owls denouncing the cruelty of king Bahram son of Bathn son of Hormuz [276-293 A. D.]), and in al-Tabari (i. 905; Noldeke, p. 250) he explains the invasion of jacksals in the reign of Khusraw as a punishment for the impurity of the land.

The story is very well known among the Arabs of the dream of the grand مبعد in the night of the birth of the Prophet and his interpretation of other marvellous happenings of the same night (al-Tabari, i. 982 sqq.; Noldeke, p. 253: "Auszage der Islam", i. 150); Hamza al-Isfahāni (ed. Gottwaldt, p. 27) quotes a list of ساسانی kings drawn up by the مبعد Bahram son of Mardan (Noldeke, p. 401). In religious discussions the steps to be taken against heretics, in the persecutions and inquisitions against the Christians, the مبعدs and the grand مبعد are always most prominent (Hoffmann, "Auszage aus Persia", Patrologia Orient., etc.). Cf. also the articles مذبوح, إسحاق.

A list of grand مبعدs of the Sassanian period and of مبعدs contemporary with the last editors of the book is found in the کتاب‌شناسی, ch. 33 (Christensen, Empyre des Sassanides, p. 35). The first grand مبعد appointed by Ardashīr was, according to Tabari (Noldeke, p. 9), a man named Pālār(?). The مبعد Mabdān Mabdān Zartashīn lived, according to the Pelevi sources, 150 years and was grand مبعد for 90. Elisee (Langlois, ii. 230) mentions a grand مبعد, who had the honorific title of Hamakān ("he who knows all religion") on account of his vast theological learning; this title seems to have been often given to the...
mōbedh. A number of names of grand mōbedhs are given in various sources, among them the Acts of the Martyrs in Syriac, Greek and Armenian; some are also preserved on the seals published by Herzfeld in his work on the monument of Paikuli. Māzāk was according to some texts mōbedh or even grand mōbedh. In Ibn al-Fakīh, p. 216, we have a description in verse of pictures representing with other dignitaries "their mōbedh and their hāridh" who judges ignorantly and iniquitously. On the za'amah cf. the article Zoroastrianism and Goldhinter, Muhammedische Studien, i. 179 and al-Dājī, Bāyān, ed. Sandallū, Cairo 1927, ii. 7, on the Shūdāwī. It is known that the Zoroastrian clergy played an important part in the Shūdāwīya movement (Insostranez, Études sassanistes, St. Petersburg 1909, p. 10–15). After the Muhammedan conquest the importance of the grand mōbedh and of the mōbedhs diminished in proportion as Islam spread; our sources of course contribute to mention them and Arab writers give information obtained directly from mōbedhs (al-Tabarī, i. 2874, year 31 A.H., mentions the mōbedh who advised the governor Māhāwīhī not to kill king Yazdgerd; al-Masūdī, Kitāb al-Tanbīh, p. 104 gives the name of the mōbedh of all Persia in 345 A.H. etc.).

The organisation of the Parsa at the present day is different; mōbedh means a priest qualified to perform all the offices of worship. This, however, is beyond the scope of this article.

MODON, a town in the Morea on the south-west point of Messenia, about 20 miles N.W. of Cape Akritas, opposite the island of Sapinza at the foot of Mount Teneus. Modon is frequently mentioned in ancient times under the names Μαίλων and Μεσαίων; from the latter comes the Italian name of the town, Modon, under which it has been known since the middle ages in Europe. In the middle ages it was of much greater importance than in antiquity. The good harbour of the town, sheltered by cliffs of varying heights, has long been a haven of refuge and of supply for ships going from the west to the Levant. Hence pilgrims frequently mention the town and their accounts of their travels even contain maps.

The Arab Idrisi, in his geographical work finished in 548 (1153) for Roger II of Sicily, enumerates many seaports and towns on the mainland of Greece. Among these is Modon of which he records that it is a fortified town and has a citadel which commands the sea (Geographie d'Edrisi, ed. A. Jaubert, Paris 1846, p. 305). By the treaty of 1199 with the Byzantine emperor Alexius III, Venice was allowed to trade freely in Modon. The town had suffered severely at the hands of the Venetians in 1105 and of the Normans in 1146 but was recovering again slowly. After the taking of Constantinople by the Crusaders (1204) and the division of the lands which had previously formed the Byzantine empire, Modon fell to the Venetians, under whose rule it remained for nearly three centuries. It is this period that marks the golden age of the town, which, carefully administered by her merchant princes, developed a new prosperity and became an important and secure centre for trading with Egypt and Syria, while previously it had often been a nest of pirates. In the xvth century the population of Modon was a mixed one of Greeks, Jews, Albanians, Turks, Gipsies and Western Europeans. The Turks of the neighbourhood reared swine which they sold to the townspeople. According to some sources, at the end of the xvth century five thousand swine were exported annually from Modon to Venice. About the same time a settlement of gipsies in Modon is mentioned, who came from Gypsea, a district about forty miles from Modon, from which they said they had fled— for the sake of the Christian faith — and were seeking refuge in all lands with a letter of recommendation from the Pope (cf. Die Pilgerfahrt des Ritters Arnold von Habsburg, ed. E. v. Groote, Cologne 1860, pp. xxvii, 67 sqq.: Z.D.P. T., xvii., 1894, p. 144). The fact is, however, that the gipsies of Modon after 1500 went over en masse to Islam, about the end of the xvth century were again mainly Christians, outwardly at least, after 1715 again became Muslims and finally after 1821 became Christians again. During the second half of the xvth century the population of Modon increased considerably for many Christians and Jews of the Peloponnese, seeking to escape the Turkish yoke, took refuge here. While the town itself was immune, the country round, which was flat, suffered a great deal from the Turks. Thus for example about 1480, the Turks raided this plain and destroyed by fire the olive-trees there. In the last decades of the xvth century, the Venetian republic had much anxiety about Modon and her other possessions in the East, which the Turks had long coveted. In 1499 the Admiral Antonio Grimaiz was ordered by his government to see the defence of Modon against the Turks. In July of this year the Turks came to the vicinity of Modon and soon afterwards several naval encounters with the Venetian fleet took place. In a naval battle fought on Aug. 8, 1499, outside Modon, the heroic Venetian Andrea Loredano, governor of Corfu, was taken by the Turks and put to death. Another Venetian admiral, Melchior Trevisano, was now entrusted by the Venetian republic with the defence of Modon and her other possessions in the East. At the same time the republic endeavoured to make peace with Turkey, but the negotiations broke down in face of the impossible conditions laid down by Bayazid II. Among other things he insisted on the surrender of Modon. In the meanwhile on March 23, 1500, the Turks had occupied Merona, a little town near Modon. Marcus Gabbriel, the commander of Modon, had previously, on February 18, 1500, reported to the Venetian government the great straits of the town. According to his report, the garrison was not sufficient to defend the town against the Turks, and for a successful defence it would require four thousand trained men, in addition to artillery, arms, munitions and gunpowder, which the town lacked. In spite of her difficult financial
In 1531 the Knights of St. John endeavoured to take Modon from the Turks and to establish themselves there. To do this they equipped a small fleet under the command of the Abbé Fra Bernardo Sulpicius, a nephew of Pope Clement VII. Two Greeks employed in the harbour of Modon and Johannes Skandalis, a Greek from Zante, whose father was a customs officer in Modon, were to assist the enterprise. The fleet, led by Sulpicius with two merchant ships, which also concealed soldiers, sailed for Sapienza. The warships were hidden in the vicinity of this island, while the two merchant ships under the guidance of Johannes Skandalis, made for the harbour of Modon. Permission to land was given without trouble to the crews of the two ships, who gave themselves out to be some merchants and some janissaries, and were allowed to spend the night in the tower at the harbour. Johannes Skandalis and his little body of followers then succeeded in overpowering the Turkish garrison at the tower and taking nearly the whole town. The rest of the Turkish garrison shut themselves in the palace which had once housed the Venetian governors of the town, and offered a stubborn resistance. In order to overcome the Turkish garrison on the warships hidden at Sapienza were necessary. These now came up, although very late, and bombarded the town with their guns Scarcely had they begun when a strong Turkish fleet appeared. The Knights and John Skandalis therefore abandoned Modon but not without carrying off some sixteen hundred prisoners.

The years 1532—1534, during which a Spanish force in the service of Charles V occupied the adjoining Coroni, were a critical period for the Turks in Modon. But after this, it was left in peace for a considerable period. The Travels of Eutyches Celebi who visited the Morea in 1667 to 1668 contain valuable notes on Modon and its vicinity, while Hadji Khalifa (d. 1658) contains nothing essential.

During the war which broke out in 1682 between Turks and Venetians in which Germans, Poles and Russians also shared as allies, Modon with the whole of the Morea was restored to the Venetians General Francesco Morosini in 1686 broke the resistance of the Turkish garrison with the help of Greek and German troops and secured it for the Adriatic republic. The chief mosque of the city, i.e. the old cathedral, was once more dedicated to Christian worship. Only in 1699 after the peace of Carlowitz, did the Turks recognise the Venetian claim to Modon. Venice now did her utmost to restore the city which, with its commerce, had much declined during the Turkish occupation. Of the seven administrative divisions (camera) into which the Venetians had divided the Morea, the third was that of Modon. This district was again divided into four areas (Fanari, Arcadia, Navarino and Modon) From a Venetian record of 9 September 1699, giving the results of a census by the Venetian officials, we see that the district of Modon had been depopulated to an incredible degree. The 218 villages detailed in this list were inhabited by only 11,202 souls. Modon itself, including the citadel, had only 236 inhabitants of whom some must have been Muhammadans. A large number of villages which at the turn of the xviiith—xviiiith centuries belonged to the district of Modon, have
Turkish names, some of which survive to this day. These villages were originally fields granted to Turks whose names in time passed to the village (cf. S. P. Lambros, in Delton, publication of the Historical and Ethnological Society of Greece, vol. ii., 1855, p. 686—710. pl. vii.; thereon Τοιχοβιοείες Μοντσικές, Athens 1887, p. 114 sqq.; Pier' Antonio Pacifico, Directa descrittione coro-grafica del Peloponneso o' Morca, Venice 1704, p. 125 sqq.).

After the conquest by Morosini whose services to Modon are commemorated in inscriptions still in existence, the town remained for some nineteen years under Venetian rule. In 1715 the grand vizier ʿAli Kumurtzi with the help of a number of Greeks took not only Modon but almost the whole of the Morca from the Venetians in a very short time. The Venetian garrisons of Navarino and Coroni as well as the inhabitants abandoned them when the Turkish army approached in the summer of 1715, in order to take refuge in Modon, which was much more strongly fortified. Soon afterwards the Turkish fleet and army began the siege of the town. After a brief resistance Modon surrendered voluntarily. After the capture of the town the grand vizier ordered a general slaughter of the Christians. Many in the district thereupon adopted Islam in order to save life and property in this way. The Turks who had formerly owned property in Modon or the neighbourhood were allowed by imperial edict to resume possession of it. The peace of Pessarowitz (1718) finally ceded Modon to Turkey. The town recovered from the catastrophe of 1715. From 1725 onwards a busy trade developed between Modon and the lands of North Africa, especially Algeria and Tunis; this trade had existed previously but not to the same extent. Modon played a certain part during the war between Turkey and Russia in 1768—1774. The Russian vice-general Georg Vladimir Dolgoruki in 1769 with 500 Russians, 150 Montenegrins and 100 Greeks (mainly Maimotes) besieged Modon. The Turkish garrison of Modon consisted of 800 janissaries and a large number of Turks of the town and vicinity able to bear arms. The walls of the citadel were in good condition, and the supply of food and munitions ample. The siege lasted a long time; the fighting was conducted mainly by the artillery on both sides. The Russians had also two warships co-operating on the sea. At the end of May 1769, Turks and Albanians from the interior of the Morea came to the help of the besieged who undertook a valiant sortie, when they learned of the approach of help. In the battle that now developed the Russians suffered heavily. They were forced to abandon most of their artillery and to escape to Navarino, from which they sailed with the rest of the Russian army and a few Greek notables. A few years later, the Turks in Modon were still displaying the guns which they had taken from the Russians in 1769. According to reliable sources, the Turkish population of Modon about 1820 was four to five hundred fighting men. About the same time ʿAli Agha was prominent among the Turks of the town for his wealth and in other respects also. The vicinity of Modon was almost exclusively inhabited by Greeks who cultivated the land, which mainly belonged to the Turks, and were despised by them as contemptible menials. During the Greek War of Independence of 1821—1827, all the attempts of the Greeks to take the town failed. At the end of March 1821, a Peloponnesian force led by the orthodox patriarch of Methone, named Gregory, and other notables, besieged Modon and the adjoining towns of Koroni and Neokastron. The besiegers were joined in the spring by Greeks from the Ioman islands and later by Philhellenes from Europe. On May 18, 1821, Greek ships, under the captains of the Spezios, Nikolaos Mpat- tasi and Anastasios Koladrusos blockaded Modon. But neither the Turkish garrison nor the armed Turkish civilians in the town were the least dismayed. On the contrary, they undertook raids in all directions and did their best to impede the progress of Greek emancipation. Many fierce encounters took place between the Turks of Modon and their besiegers. In July 1821, Turkish ships re-provisioned Modon but they were not successful in their attempt to repurpose Neokastron, the garrison of which was in dire straits from want of food and even water. On August 8, 1821, the Turks of Modon decided to attempt the relief of their compatriots in Neokastron, who had in the meanwhile been forced to capitulate to their Greek besiegers. On the road between Modon and Neokastron a battle was fought on August 8, 1821, in which the valiant chief Constantine Pierrakos Mavromichalis, a member of a notable Maimote family, fell. On the same day, the Greeks took Neokastron; but they gradually abandoned the siege of Modon. The town was able to continue to hold out, only, however, with the frequent help of the Turkish fleet.

When Ibrahim Pascha, the adopted son of Mejemed ʿAli, undertook to suppress the Greek rising and to pacify the Morea, Modon and its neighbourhhood formed his main base. There he landed troops on February 24, 1825, and dug entrenchments. Modon became an important base for Ibrahim Pascha's operations. On October 8, 1825 the town was taken from him by the French General Magon. Before 1833 the French left Modon and has since then belonged to the Greeks.

Mogador, a town in Morocco on the Atlantic coast. The Bay of Mogador, protected against the north winds by the rocky promontory on which the town is built, against those from the west by an island about 1,000 yards in length, forms a natural harbour which, although not large and inaccessible for ships of large tonnage, has however the merit of being accessible at all seasons, an advantage which secures it a favourable place among the anchorages of the Atlantic coast of Morocco which, generally speaking, inhospitable. This favoured situation was taken advantage of at a very early period. In spite of the lack of precision in the sources, it is probable that we should seek at Mogador the site of one of the Phoenician colonies founded by Hanno (5th century B.C.). The island seems to have been known as the island of Hera or of Juno. Herodotus records that at the end of the first century B.C. the king Juba II founded purple dye-works on the Forpuraria insulae, islands in the Ocean, "opposite the Autoleos," a Getulic people who lived in the north of the High Atlas. Getulic purple, which was celebrated at Rome, was supplied by the molluscs abundant on this coast. It is only at Mogador that we find an island and islets which can be identified as the Forpuraria insulae, but an archaeological discovery has yet been made to confirm the deductions made from the ancient geographers.

In the 19th century of the Christian era, according to al-Hakī (who finished his book in 1665), Amugdul, a very safe anchorage, was the port for all the province of Sās. We see in the name of that of a local saint, Sidi Mogulī, still venerated in this region, whose tomb is on the bank near the mouth of the Wādi 'I-Ḳubh. It is however possible that the saint of whom we know nothing, gets his name from an old Berber place-name. Mogador is only a Spanish or Portuguese transcription of Mogulī, though the forms Mogadul, Mogador, which we sometimes find in the texts. The harbour and the island bear the name Mogador or Mungdror on a series of portolans of the 14th and 15th century (publ. by Ch. de la Roncière, La Découverte de l'Afrique au Moyen Âge, 1925) but there was not a town here, when in Sept. 1506, the king of Portugal Dom Manuel I commanded a gentleman of his court, Diogo d'Alambuja, to build a fortress here which was called Castello Real of Mogador. Built with great difficulty in face of the hostility of the natives, the Portuguese stronghold did not last 1683. While at Safi and Santa Cruz of Cape Gueu (Agadir), the state of anarchy in which the tribes lived favoured the rapid progress of the Portuguese, it seems that at Mogador they came up against resistance probably organised by the old Berber marabout body of the Nağığa. The garrison had to remain blockaded in Castello Real, revictualled with difficulty from Portugal and Madeira, until in October or November 1510, the tribes were strong enough to seize the fortress in circumstances which we do not know.

A sketch of the 16th century and plans of the 18th leave no doubt as to the site of Castello Real. It was situated, not at the mouth of the Wādi 'I-Ḳubh, where is now shown an alleged Portuguese fort which however only dates from the end of the 16th century, but on the shore of the northern passage opposite the island, on the rocky point which supports the mole west of the present harbour. Sometimes abandoned, sometimes more or less restored by the rulers of Morocco, who from time to time kept a small garrison there, the old Portuguese castle survived till 1764 or 1765 and was only destroyed when the town was built.

In spite of the lack of success of the Portuguese attempt, this privileged situation continued to attract the envy of European nations. At the beginning of the 16th century, Spain, fearing that Moroccan, Algerian or even European corsairs would establish themselves at Mogador, thought of seizing it herself to protect the route to the Indies. At the same time, English agents were thinking of making Mogador a base against Spain. The Sultan Mawlây Zādīn in 1611—1612 and his son 'Abd al-Malik in 1628 drew up a scheme to fortify the place to prevent foreigners from establishing themselves there. This was the time when in France Richelieu and Pére Jœph were drawing up schemes for a colonial policy. The Chevalier de Razilly in 1626 suggested to them the occupation of Mogador and the organisation of a factory and fisheries there. He had it reconnoitred in 1629 but found it impossible to take it by surprise.

In spite of so many projects and attempts against it, the island and the shores remained practically deserted. Ships however frequented the roadstead. It was through Mogador that in the first quarter of the 17th century, the greater part of the trade between Marrākūsh and Holland took place. Later, in the time of Mawlāy Ismā'll, the harbour was mainly used as a refuge for corsairs who came there to rest and repair their vessels.

In 1751, Sidi Muhammad b. 'Abd Allāth, then ẖālīf of his father for the district of Marrākūsh, desiring to develop commercial relations between his subjects and Europe, ceded the island of Mogador to a Danish company, which however preferred to establish a centre at Agadir and was not successful there. A few years later, in变成 sūlah and having made Marrākūsh his capital, Sidi Muhammad declared himself to found a town at Mogador and to conduct all the commerce of
the south of his kingdom through it, to the greater benefit of the royal treasury, which would obtain not only the customs from this increased trade but also profit by the rents of the buildings, most of which had been built by the sovereign and were his private property. The harbour also served as a base for corsairs who, through the menace they offered to the fleets of Europe, forced the Christian nations to conclude treaties with the sultan by which he received valuable presents and even sums of money. In order to populate the town and start business in it, he demanded that European consuls and merchants should settle there and have houses built at their own expense.

By 1760 he had begun work but it is from the autumn of 1764 that the foundation of the town really dates; it was given the name al-Suwaïra (Sousa), the little fortress, by which it is known to the natives; the name Mogador is only used by Europeans. We also find a Herbeinse form (Tasutiri). The sultan went in person to choose and distribute the sites for the buildings. He had asked the English to send him an architect. They sent him a French "engineer", a native of Avignon, called Nicolas Cournut, who had made the plans for the fortifications of some places in Roussillon.

He was an adventurer who, after working in France as a contractor, had entered the English service during the Seven Years' War. He was living at Gibraltar where he entered Sidi Muhammad's service. The sultan did not gain much by his services and sent him back to France at the beginning of 1767. None of the present buildings in Mogador can be attributed with certainty to Cournut, for after him a number of European architects and masters worked for the sultan, notably a Genoese architect who built the battery called the "Skala" situated on the western rampart facing the sea. Mogador owed to its builders the narrow streets, massive gateways and bastions of European type, the like of which cannot be found in other Moroccan towns and which give it quite a specific character.

Sidi Muhammad, also built outside the town, a country palace which still stands, but which, after his death, was buried in sand opposite the little village of Diyabat.

The dreams of the sultan were only imperfectly realised. The merchants, attracted to Mogador by the promise of a reduction in the export duties on goods, were soon undeceived when they saw that the sovereign did not keep his promise, but constantly imposed new burdens on trade. The prosperity of Mogador remained insignificant under Sidi Muhammad and declined under his successors.

The situation of the town, a long way from great cities and main roads, made it frequently used in the sixteenth century as a political prison and compulsory place of residence for high officials in disgrace. Mogador remained however the starting place for the caravans to Sûs, Mauritania and the Sûdan and has retained from this position a certain commercial importance, to which the opening of the port of Agadir to commerce will now do considerable harm.

On August 15, 1844, after the battle of Ily, a French squadron commanded by the Prince de Joinville, who had just bombarded Tangier, came and bombarded Mogador. It was intended to make an impression on Sûtan Moulay 'Alîd al-Rahmân by striking at a town which belonged to him personally and from which he drew considerable revenues. A three hours' bombardment silenced the batteries; the French army then disembarked on the island, the garrison of which, entrenched in the mosque, made a vigorous defence until the next morning. On August 16, a detachment of 600 men went to spike the guns, threw the gunpowder into the sea and destroy the last defences of Mogador. The town, which had suffered very little from the French shot, but had been evacuated by the inhabitants, was burned and plundered by the tribes of the country round (Shirâdima and Hája).

Mogador is now the headquarters of a contrôle côte. It had 18,401 inhabitants at the census of 1926. The Jewish element is particularly large, numbering 7,720.

The extremely temperate climate is remarkably equable; but it is spoiled by the wind which blows almost incessantly, laden with the sand from the neighbouring dunes.

Moghul stands for MUGHAL.

Mogur, an Indian gold coin. The name is the Persian mohur, which is a loanword from the Sanskrit mûtra, seal or die. The earliest occurrence of the word on coins is on the forced currency of Muhammad b. Tughlak where it has the literal meaning of "sealed" or "stamped". By the xvith century it had come to be used as a popular rather than precise name for gold coins in general.

Very little gold had been issued in India for two centuries before the reign of Akbar. One of his reforms was the issue of an extensive coinage in gold. In addition to many pieces which had only a brief circulation, he revived the old gold tanka [q.v.] of the Sultans of Delhi on a standard of 170 grains (112) grammes to which he gave the name mohur. That the name at first could be applied to any gold coin is shown by Djalângâr, in his Memoirs (transl. A. Rogers, O.T.F., vol. viii., p. 10) to mohurs of 100, 50, 20, 10, 5 and 1 dinar. After the numismatic experiments of Akbar and Djalângâr, only one gold piece was struck, occasionally with subdivisions so that the general name acquired a particular meaning, especially among the English merchants in India. Mogurs continued to be struck to the end of the Mughal Empire and by the states into which it broke up in the xvinth and xixth centuries. Akbar and Djalângâr issued
square as well as round pieces and the former also struck a few mohur pieces, so called from their shape. Of the numerous large denominations recorded by Abu 'l-Fadl and Dāhillīr, only 5 ten pieces of Akhan and of Dāhillīr are known to exist. The silver rule was the standard unit of India; the value of the mohur fluctuated with the price of gold. In the latter half of the xvith and early sixteenth centuries, the East India Company endeavoured to make gold the standard of India and issued mohurs (called gold rupees in Bombay) with the legends of the Mogul Emperor. None of their attempts to keep gold and silver in currency at a fixed rate were successful. When in 1653 a uniform currency was introduced for British India a gold mohur or 15 rupee piece with English types was struck in name of William IV but never trained general circulation; this was the last attempt to restore the mohur to circulation. The mohur occasionally seen of Victoria of 1861, 1862 and other dates are patterns.

MOKHĀ, a small seaport on the Arabian coast of the Red Sea in 15° 19' 50" N. Lat. and 45° 12' 10" East Long. (Greenwich). The once imposing town lies on a small bay between two promontories with forts on each about one and a half miles apart. The wall which surrounds the town in a semicircle is pierced by four gates. In the north the Bāb al-Ḥamīyli leads to the citadel of the town and to a tongue of land which runs out into the sea; in the east roughly in the centre of the wall is the Bāb al-Ṣāhidī through which the front of al-Būṭān is reached and to the east the road to al-Tāizz from it, while the road to al-Hudaydah runs north via Bāt al-Fakih. In the south the Bāb al Sundallāh admits to the fort of al-Bahr and the road to A'dan: in the west through the Bāb al-Bahr the harbour is reached; its stone breakwater is now much decayed. This also holds of the wall which connects the city-gates. Seen from the sea the town, which covers an area of about half a square mile, still looks very fine: the white mass of houses stands brightly out from the dark blue waters of the Red Sea. But as one approaches, the damage which wars, dilapidation and turbulent times have done to the often sore tried town, is apparent; the houses, for the most part deserted, while the inhabitants, consisting of Arabs, Sāmilis, Danakils, few Persians, have settled in huts outside the town. East of the Bāb al-Ṣāhidī, for example, there is a large group of huts inhabited by Arabs, south of this another group belonging to Sāmilis, while farther south and on the other side of the Wadi 11-Kelīr is the Jewish quarter (Ka'ah al-Yahūd). In the north lies the great cemetery and a white-

The island, about 3 miles in length from north to south and nearly the same distance from east to west, is remarkably compact in shape and so placed in the deep inlet formed by the converging of several creeks as to be almost entirely surrounded by the mainland, only presenting its south-eastern angle

by a conduit from the Mawzā' twenty-four miles to the north. The population has varied considerably in the last hundred years. In 1821 it was 20,000, in 1875-1876: 5,—8,000, in 1882 it was put at 1,500 inside the town and in 1901 it had sunk to about 400.}

al-Mokhā is briefly mentioned by al-Hamdānī in connection with al-Mandāb as lying in the land of the Banū Madjīd; al-Mas'ūdī also refers to it briefly in his geographical work. The Portuguese gave the town the name by which it has become known in Europe: Moca. P. Manoel d'Almeida calls it Moguda in his Historia geral de Ethipia a shee te B leeser Telle (Coimbra 1660).

About 500 years ago Mokhā was an insignificant village, but rapidly grew in importance when Shaikh Sa'idhī discovered the peculiar qualities of the coffee bean and introduced the habit of drinking coffee. In 1513 Alfonso Albuquerque found Mokhā still a modest place but by 1610 it had become the most important port for trade with Abyssinia, and England was endeavouring to trade with it while the Dutch had a factory here. Coffee was the chief article of export along with other specialties of the Yemen. And received its name from the town. As late as 1763 Nieuhof found the town very prosperous; but the capture of A'dan by the English put an end to its prosperity. A'dan and al-Hudaydah attracted all the trade of Southern Yemen. Under Turkish rule Mokhā was a kadār in the sandjak of Ta'izz but its trade was insignificant. In 1916 for example, only about £ 10,000 worth of coffee was sent to A'dan. There is a minimum of industrial activity and that only to supply local needs. Indigo dyeing and the manufacture of spirits may be mentioned: the latter is in the hand of Jews. Mokhā is connected by telegraph with Sa'īdīn (via Ta'izz), al-Hudaydah (via Zābīd), Shaikh Sa'id and Petrin. Mokhā has acquired a new importance by the creation of the imamate of al-Yemen and is now beginning to share the trade with al-Hudaydah.

MOLĀ. [See Mova.]

MOLĀ KHUDRAW. [See Muḥammad R. Faramarz.]

MOMBASA (ムバサ, anciently Mvita), an island and town on the east coast of Africa, in lat. 4° S., Long. 39° E. The island, about 3 miles in length from north to south and nearly the same distance from east to west, is remarkably compact in shape and so placed in the deep inlet formed by the converging of several creeks as to be almost entirely surrounded by the mainland, only presenting its south-eastern angle
to the Indian Ocean. This peculiarity of its situation suggested to the late W. E. Taylor the derivation of the name Mvita (the "Curtained Headland") from *wa*ta "point". The more usual derivation from *vita* "war" seems inadmissible on phonetic grounds: another explanation connects it with *wa*ta "hidden", either from its hidden position, or from the inhabitants, as it is said, having hidden themselves in the bush during a raid from Pate. The town of Mvita is situated at the eastern end of the island and, being the terminus of the Uganda railway and the only port of the colony, is of considerable commercial importance.

The population, according to the latest information available, is something over 44,000, of whom 26,906 are classed as "Africans" (i.e. the permanent residents, mostly Swahili, and a floating contingent of labourers belonging to other tribes). The remainder includes 7,523 Arabs, 7,556 Indians, 1,000 Europeans, and a proportion of "other races". The Arabs, Swahili and many of the Indians are Moderns; the two former chiefly Sunni of the Şafī'i sect, though a few of the older men belong to the older schools. There are several mosques, very plain buildings, as a rule, and devoid of minarets; the *mu'allaq* stands on the flat roof to give the call to prayer. The largest and most imposing of these structures is that belonging to the Khódjas.

The origin of Mombasa is involved in some obscurity. It is certain that Arab trading stations existed on the East African coast at the beginning of the Christian era, and we learn from the *Périplu of the Erythraean Sea* that the traders frequently married native women. This indicates a fairly early origin for the Swahili race. The first permanent settlements, however, seem to have been post-Islamic: *69* (689) is given as the date for the settlement of Pate; and, as Lamu is said by native tradition to have been founded by colonists sent out by Abd al-Malik b. Marwān (A. D. 682-705), these two towns were no doubt contemporary.

There is no mention of Mombasa in the traditions of Lamu or Pate, at this period, except for a statement made to the late Captain Stigand (Laud of Zinj, p. 28), that "Abd al-Malik sent out Syrians, who built the cities of Pate, Malindi, Zanzibar, Mombasa, Lamu and Kilwa". Other authorities place the founding of Kilwa much later, viz. 365 (760). The *Chronicle of Kilwa* states that 'Ali b. Ḥasan of Ṣafīr, the founder and first *Ṣalāḥ*, installed one of his sons as ruler of Mombasa, no doubt the first of the "Ṣhirāz Shāhīhs", the last of whom was deposed by the Portuguese. It would appear that Mombasa was for some time under the suzerainty of Kilwa; but how far the "King of the Zanj" described by Idrisi and, later, by Ibn Ṣa'id as residing at Mombasa, was independent is not clear. The names of the twelve tribes (called indifferently *kabila* or *fā'il*ī) said by native authorities to make up the Swahili population indicate a composite origin and possibly a late one, as the bulk of the people came from settlements already founded. It is possible that the Wachangwane (who either take their name from the city or give theirs to it) go back to the alleged foundation under 'Abd al-Malik; but against this is the assertion, repeatedly made, that the Wachangwane, Wakiilinduni and Watangana are the *taifa* taking the "three" — i.e. the three aboriginal "tribes". Some native authorities give these three as "Kilindini", separate from Mombasa. Changamwe is a village on the mainland, a mile or two from the crossing at Makupa; Kilindini (now important as the principal harbour for steamers from Europe) is at the western end of the island. Tradition says that Kilindini was a city before Mombasa existed, and, in fact, the jungle near the present port contains numerous ruins of uncertain date, which, so far as I know, have not yet been competently examined. Tanganyika is on the island of Mombasa, now included in the town. The remaining tribes are those of Kilifi! (a town to the north of Mombasa; its inhabitants are said to have come from "Ṣhirāz", either Shiraz in Persia or a town of the same name in Tanganyika Territory, a colony from the original Shiraz, Pate, Paza (or Faza, in the island of Pate), Shaka (a Persian settlement near the mouth of the Tana), Mtswapa (between Mombasa and Takaungu), Omvia (on the creek known as Port Tudor), the Wagunya (the people on the mainland north of the Lamu archipelago) and the Wakatawa (the Somali). Another account omits this last name and substitutes that of the Wamalindi. Krapf (Dictionary, p. 246) mentions a tradition that the town was built (not on the present site but at the ancient Port) by one Shebe Mvita, whose tomb was pointed out to him; but it seems probable that this eponymus was invented to account for the name. When that of Mombasa was introduced we have no information, but it was used by the Arab geographers as far back as the sixteenth century. It is mentioned, as already stated, by Idrisi. Ibn Ṣa'id speaks of "a great estuary" to the west of Mombasa, by which must be meant the creek now known as Port Tudor", and says it is distant about one degree from Malindi. Ibn Batūta, who spent one night there, on his way to Kilwa, describes it as "a large island, two days' journey by sea from the Sawahil country. It possesses no territory on the mainland. They have fruit-trees on the island, but no cereals, which have to be brought to them from the Sawahil. Their food consists chiefly of bananas and fish. The inhabitants are pious, honourable and upright, and they have well-built wooden mosques". This would imply that the coast opposite Mombasa was not reckoned as part of the Sawahil. Present-day Swahilis restrict the term "Sawahil" to the strip of coast between Malindi and Lamu, which they look upon as the cradle of their race and this might be taken as intended by Ibn Batūta, but for his reference to cereals being brought from "Sawahil", which would place it in the south, since the drought laden with millet come up from that quarter with the S. W. monsoon (cf. Taylor, Aparisits, p. 128).

The first European to reach Mombasa was Vasco da Gama, who touched there, April 7, 1498, but did not land, owing to the real or suspected treachery of the Arab pilot sent by the Shaikh. He went on to the rival state of Malindi and established friendly relations with its ruler, who hoped to find in him an ally against Mombasa. Mombasa — after the city had been repeatedly destroyed, in whole or in part, by Almeida in 1505, by Nuno da Cunha in 1528 and by Continho in 1589 — was rendered tributary to the Portuguese in or about 1590, after the adventurer Mir 'Ali Bey had induced the Shaikh to tender his allegiance to the Turkish Sultan and had been

---
1) In these names of places, I omit the *wa* which is the prefix indicating plurality of persons.
driven off by Continho’s fleet. At the same time occurred the invasion of the Zimbans, an unidentified tribe who had spread desolation on their march north-eastward, “probably from some locality on or near the West coast” (cf. Thel., l. 352). From Mombasa they passed on to Malindi, where the Portuguese garrison, with the help of native allies, effectually resisted them, and, if not exterminated, they ceased to exist as a tribe. The fort, still in existence, was erected between 1593 and 1595, and Mombasa was held by the Portuguese for some sixty years. The last Shīratā Shaikh, Shaho Mshaham b. Hisham, was deposed and the Shaikh of Malindi, Ahmad, installed in his stead with the title of Sultan. Immigration from Portugal was encouraged, but in 1615 the settlers, apart from the garrison, only numbered 50 (cf. Strandes, p. 175). In 1605, a convent of Augustinian monks was founded, which, with other ecclesiastical establishments, was under the jurisdiction of the Archbishop of Goa till 1612. In that year a separate diocese of Mozambique was created. Shaikh Ahmad died in 1609 and was succeeded by his son Hasan, whose treatment by the Portuguese authorities ranks among the scandals of Colonial history. He was finally murdered, at the instigation of the governor, De Mello Pereira (1615). His son, Yusuf, aged seven, was sent to Goa to be educated and there baptised by the name of Geronimo Chingulula. After an inquiry held at Lisbon in 1618, the highest ecclesiastical tribunal in Portugal pronounced Hasan innocent and decreed that Yusuf should be restored to his inheritance. In 1630 he was sent home and installed as Sultan, continued for a time to profess Christianity, but, being accused of apostasy because he had been seen praying at his father’s tomb and apprehensive of being sent to Goa (the seat of the Inquisition), revolted, openly declared himself a Moslem and massacred all the Portuguese in Mombasa (cf. Faria y Sousa, vol. iii., iv., p. 391). His example was followed by Tanga, Mtangata and some other towns (1651). Mombasa was besieged for three months by F. de Mowra, with a fleet from Goa, but without success. Yusuf, however, probably seeing that he would be unable to hold out permanently, retreated to Arabia after dispersing the fort and de-straying the town. The new governor, Seixas de Cabreira, subdued the revolted towns and repaired the fort, as recorded in the inscription still legible above the gateway. The Portuguese rule becoming more and more oppressive, the Coast Arabs appealed in or about 1660 to Sultan b. Seif al-Yarabbi, Imam of Omnân, who had already expelled the Portuguese from Maskat. He took Mombasa after a long siege and various operations: and though it was retaken shortly afterwards, the power of Portugal was already on the wane, and Seif b. Sultan again captured Mombasa in 1668 and in-talled Nasyr b. ‘Abd Allâh al-Mazrù as governor. Internal quarrels and a revolt against this governor laid the town open to a last Portuguese attack in 1728, when Luis de Mello Sampayo, sent to Zanzibar with the help of Bwana Tum Tum (Abu Râki b. Muhammad), Sultan of Pate. This occupation lasted but a short time and was terminated by another massacre, probably that commemorated in the tradition recorded by Taylor (Alphonius, § 401).

A period of anarchy ensued, which became so intolerable that not only the “Twelve Tribes” of Mombasa but the chiefs of the pagan Wanyika on the mainland, appealed to Seif b. Sultan for help. He sent three ships and appointed a governor.

In 1739 this office was held by Muhammad b. Othman al-Mazrù, the first of a line who became practically independent rulers of Mombasa. When the Ya’arabbi Imams were ousted by the Al Bit Saldi, the Mazrù refused to recognise the new dynasty. They were left undisturbed for a considerable time, but the more energetic policy pursued by Seif b. Sultan (1801—1846) induced them to seek British protection in 1823. This was provisionally granted by Captain Owen, but withdrawn three years later, as the Home government refused to sanction it. Saldi finally gained possession of Mombasa in 1837, when the leading Mazrù were captured by treachery and deported to Bander ‘Abbad. From that time till the establishment of the British protectorate in 1890, Mombasa remained subject to the Saliyid (now called Sultan) of Zanzibar, who indeed retains a certain jurisdiction over the ten-mile strip of coast leased from him by the British East Africa Company in 1887. The principal event in its history since that date is the rising of the Mazrù in 1895, coincident with, but not caused by the proclamation of the British protectorate over the mainland territory, which was taken over from the Company by the Imperial Government. Since then the completion of the Uganda Railway and the harbour works al-Kilindini have noticeably changed the character of Mombasa, which is now a flourishing seaport, much frequented by European shipping.

The dialect of Swahili spoken at Mombasa was considered by the late W. E. Taylor “the truly central” language, “the best fitted for accurate statement and grave discussion”; though that of Zanzibar has now attained a wider currency. The art of poetry was, till recently, much cultivated there: the best known of the native poets being Muyaka b. Mwinyi Haji Muulama Skeina (died 1891), and Hemedi b Muhammad b. Ahmad al-Mombassì, who was still living during the last decade of the 19th century (since deceased), Muhammad b. Ahmad, ‘Abd Allah Borashidi, Mwinyi Mugwama.

MONASTIR (pronounced Monstir, Mastir; ethnic Moustul), a town in the Sëhel, the eastern coast of Tunisia, on the site of the ancient Ruspina at the end of a cape which runs out to the south-east of Sësa. The Arabic name raises a problem which is not yet solved. The name clearly conceals the Greek word monastirion which suggests that there was an important Christian monastery here at one time. This is however a pure hypothesis, supported by no text, although Tissot (Geographie compare de la province d’Afrique, ii. 165—166) seems to take it for granted. It is on the other hand also possible that the Arab Monastir from the end of the eighth century was a great Muslim monastery and probably the first to be founded in the west, it is tempting to accept the explanation (suggested by St. Hasan ‘Abd al-Wahhâb) that the name was given to the Muslim foundation by the Greeks of the country or Berbers speaking Greek, still Christians or recently converted to Islam.

It was in 180 (796) that Harîshama b. A’ïya, who ruled the province of Irfîqîya in the name of the Abbasid caliph Hârûn al-Rashîd, founded the ribât of Monastir. This fortified monastery obtained considerable importance in Western Islam. A century after its foundation, ka’dîs were quoted which proclaimed its great importance and promised the highest rewards to those who came there to fight the infidel or to prepare themselves for the holy war. The Prophet foreseeing the foundation of al-Monastir is said to have said: “On the coast of Irfîqîya, there is one of the gates of Paradise which is called al-Monastir; one enters it by the grace of God’s mercy and leaves it by the effect of his pardon”; or again: “He who keeps watch in the frontier town of al-Monastir for three days has the right to Paradise” (cf Abu l’Arab, Clases des scvants de l’Ifriqya, transl Ben Cheneb, s. 7, 9, 14, 15; Ibn ‘Idhâr, Bayân, transl. Fagoun, i. 1). In the 10th century al-Bakri gives a description of Monastir, “the substance of which is taken from al-Warrak” (t. 991), which is not quite clear to us. It is a large fortress (kârâk) he says, which contains a quarter (rabûh) of considerable size. In the middle of this quarter stands a citadel (kâmil) which contains suites of rooms, oratories and castles (kizâb) of several stories. To the south of this citadel is a great court (shem) with kalâbas, called kîshâ sâmil, around which women who wish to devote themselves to religion come to live. It seems that the fortresses was the town itself with its ramparts, still known by the name, common in Tunisia, of bled. Outside the bled is the quarter also encircled by ramparts and turrets in which we have the ribât. This occupies the north-east angle of this “fortress”; its walls and high tower called nîdâm dominate with their proud silhouette the shore and the country round. To the south is a courtyard with tombs; here no doubt we have to locate the abodes of the pious women mentioned by al-Warrak. The interior of the ribât shows traces of frequent attention and repairs which makes its plan singularly complicated. We can however perhaps recognise the general arrangements of which the ribât of Sësa, founded twenty-five years later, gives us a clearer scheme on a smaller scale: a central rectangular court surrounded by two storeys of cells. On the first floor on the south side, the cells are replaced by a hall for prayer of no great height, very simple with cradle vaulting. It is probably the same as is mentioned by al-Bakri: “On the first storey is a mosque where there is always a shibîb of great virtue and merit, who has the direction of the community.” The signal tower, circular in plan, occupies almost the same position as that which dominates the ribât of Sësa. In addition to the dwellings of the marabouts there are reservoirs, baths and “Persian mills” in the monastery. Every year a great fair was held at Monastir on the Ashura day when the pious began their temporary withdrawals from the world. Some however, shut themselves up for life and devoted themselves entirely to prayer and the defence of the lands of Islam. The people of Kairawan supplied them with provisions, in itself a pious work.

The ninth century was undoubtedly the golden age of the ribât of Monastir. Its importance however must have diminished somewhat as a result of the foundation in 821 of the ribât of Sësa, which was the starting point for the expedition to Sicily. Al-Bakri would regard the ribât of Monastir as a dependency on that of Sësa. It was nevertheless, as well as the land around it, an auspicious place. We can date to about 1000 A.D. the building of the Great Mosque, close to the ribât, and that of the little mosque of the Sâyida, both of which have preserved mîhrâbs of a very curious transitional style. It is probable that the Lady’s tomb has given its name to the central mosque. The Sâyida was a princess of the family of the Zirids of Kairawan. Monastir was, especially after the Hildâ invasion (middle of the 12th century), the St. Denis of the Sanhâda rulers. According to al-Idrisî (13th century), the dead were brought there by boat (the roads were by no means safe at this time) from the town of Mahdiya. The tombs of this period are numerous in the cemetery in which the patron saint of Monastir, Stûl al-Mûzârî, is buried.

Although Monastir did not play a great part in history after this period, the town and the ribât continued to be an object of care to various Tunisian dynasties. From the Hâfîsî al-Mustanîr (1260) date the two gates of the bled: Bâb al-Darb and Bâb al-Sûr. As to the ribât, one of the gates was rebuilt by the Hâfîsî Abu Fâris in 828 (1424); another dates from 1058 (1648) and is the work of the Turks.

Monastir is at the present day a town of some 7,000 inhabitants. Three little islands, one of which contains a number of puzzling artificial caves, shelter the roadstead outside, which is frequented by a considerable number of ships at the tunny and sardine fishing season.

II. Montenegro

Turk. Kara Dagh, Serbo-Croat. Crna Gora) is in its heart a steep rocky citadel, the interior of which is difficult of passage and much cut up orographically and hydrographically; it has only a gateway in the south from Lake Scutari and in the north from the Herzegovina; these two gateways are connected by a corridor, the valley of the Zeta. This route, which, as the main line of communication, has been the scene of fierce fighting between the natives and invaders, and is also the dividing line between western and eastern Montenegro or Crna Gora in the narrow sense, the oldest part of the modern state on the one hand and the eastern districts called Brda on the other, is formed by the undulating plain of Zeta on the lower course of the Morača, which flows into Lake Scutari, by its right tributary the Zeta, the large but little fertile basin of the Niskiç and the depression of the Đupa passes. Crna Gora and an adjoining strip of the Brda running north and south belong to the most desolate and poorest parts of the Dinaric or Illyrian limestone region which runs along the Adriatic, the forests of which, still existing down to modern times, have been sacrificed to get pasture land, lime, charcoal and tar, etc. Patsch, *Historische Wanderungen im Kärnten und an der Adria* (1, Vienna 1922, p. 28) and others, with a poor water supply, have only a little arable land in little hollows and cups on their cold rocky hillside. We also have the few little villages and towns of which Cetinje at the eastern foot of the Lovčen (7,570 feet) with 5,473 inhabitants is the largest. It is not till we come east of the Brda to the valleys of the Piva and Tara with their deep ravines, which join to form the Drina on the northern frontier, and on the Lim, around the massif of the Durmitor (7,200 feet) and Kom (8,000 feet), where the soil is of gravel, that we have favourable conditions for a regular water supply. Extensive forests of pine and other woods, rich meadows which enable cattle to be reared in large numbers; in many places in this region bread is dearer than meat. A very small fruit-growing region is the alluvial plain of Crnica, the "garden of Montenegro" which lies among the karstic uplands of Lake Scutari, which is full of fish, with a Mediterranean climate and vegetation, which is also found in the narrow strip of land along the Krst river Crnovečka Rijeka, to the north.

1. The oldest known inhabitants of the country were the Illyrian tribes of the Dréatos and Labiastes, of whom the former lived in the wilds of Montenegro and the latter in the Mediterranean area around Lake Scutari down to the coast. After the destruction by the Illyrian kingdom of the Ardiae whose last capital was Scutari, to which they, along with the Herzegovina, Southern Dalmatia and Northern Albania, had belonged, they came under the rule of the Romans and later formed part of the province of Dalmatia. In the first century B.C. we find the two tribal areas replaced each by a town organised on Roman lines, with the old tribal territories attached to them, but still defined: Dolecia, at the corner formed by the junction of the Morača and Zeta, and Scodra, now Scutari, which later, in the division of Dalmatia under Diocletian, became the capital of the *provincia Preradotiana* or *Preratiana* and has maintained a dominating position almost down to the present time [cf Scutari]. Dolecia, on the other hand, is representative for Montenegro of the economic and cultural decline of south-west Europe since ancient times. In spite of the step-motherly nature of the country, we know from the ruins of public and private buildings bleaching in the miserable desert of the Karst and from epigraphic evidence that it was once a prosperous city with considerable trade with the interior across Lake Scutari and along the Boyana which flows out of it (Patsch, in Pauly-Wissowa, Realencyklopädie der Klass. Altertumswissenschaft, v. 1881, p. 399). It suffered severely in 395 when the Balkans suffered so much at the hand of the Teutons at the time of the migration of the Visigoths, but in spite of the plundering of the Adriatic territory which followed at other hands also, it was still the see of a bishop in 602, in the period when the towns of the peninsula were finally destroyed as a result of the raids of the Avars and Slavs and the permanent settlement of the latter, who having no understanding of town life, retained in their new homes their traditional poor and primitive mode of life, for the most part in family groups settled on the land and mainly engaged in cattle-rearing.

II. Its situation and tradition. Many place-names, remnants of the old population and the city walls, now much decayed, preserved, for the ruined town of Dolecia which hitherto had held the position later occupied by Montenegro, its old ecclesiastical position — there is a record of a bishopric of Dolecia subordinate to the Greek metropolis of Durazzo — and seem also to have given it a military and political preponderance, since the little Slav state which later grew up here bore after it the name of Dolecia, Slav Dobrička down to the 16th century. This originally comprised only southern Montenegro and the stretch of territory called Kravina along the west bank of the Lake Scutari. The Bitorif, itself wholly Cattaro-Budima, Antivari and Dulcigno) and Northern Albania, with many Roman towns like Skutari and Drivasto, remained Byzantine on the contrary, as part of the theme (province) of Dyrrachion down to the 10th century, while eastern and northern Montenegro belonged to Serbia and the north-west to the principality of Travunia (capital Trebinić).

Of the early obscure pre-history of Dolicia all that we have is a Byzantine seal of a ruler of probably the tenth century: ΠΡΩΤΟΙ ΕΠΙΤΡΟΠΟΙ ΑΛΜΑΤΩΝ [4]; the country was then not only ecclesiastically and culturally but also politically under Greek influence like the other Slav Adriaic states. From 1000 A.D. our information is fuller, if not absolutely reliable.
Prince John Vladimir, a figure much obscured by legend, is inextricably associated with the last efforts of the Western Bulgar state. First a prisoner, then the son-in-law of the Czar Samuel (d. 1014), he was murdered (drowned in Lake Prespa) by the last Czar John Vladaslav (1015-1018) in the Bulgar capital. Remembered in Montenegro as a saint by Christians and Muslims alike, he now rests in the monastery of Shen Jon near Elbassan in Central Albania.

In the years that followed, Byzantium, after the Bulgars, its opponents for centuries, had been finally disposed of by the Emperor Basil II (1025)-1085), the Bulgars being again in possession of the greater part of the Balkan Peninsula, enforced its suzerainty to the northwest also. Dioclia under three able rulers not only survived this danger but attained an importance never reached by Montenegro itself in its best days. Prince Stephan Vuyislav — it is not known in what relationship he stood to John Vladimir — in spite of great opposition from the Byzantines (1036-1042) obtained Travunia (see above), Zachlumia adjoining it (on the central and lower Narenta), almost the whole Adriatic coast between the Narenta and Boyana along with Cattaro and Antivari as well as Northern Albania with Skutari and established the still existing Latin bishopric in Antivari, out of political hostility to Byzantium. His son Michael was the first to take the title of king; the choice of his son Constantine Bodin as Bulgar Czar by rebels in Macedonia (1072) ended however in a — temporary — humiliation of Dioclia. Michael and Bodin, who succeeded his father presumably in 1082, made an alliance with the Normans in Italy and supported Robert Guiscard in his fighting in the west of the Balkan peninsula (1081-1085) with Alexius I Comnenus. Bodin succeeded at the same time in extending his rule over Bosnia also (then practically only the territory on the lower course of the Bosna, the Vrhas and the Narenta) and Serbia or Rassia (in the modern north and eastern Montenegro, the sangjak of Novi Pazar, S. W. Serbia and S. E. Bosnia). The kingdom of Bodin had attained its greatest extent with the conquests of Stephan Vuyislav — but only for a brief period. Bodin's good fortune faded away. After the restoration of Byzantine rule on the Adriatic, reprisals were begun (1085-1094) under the personal direction of the emperor Alexius. The king was defeated; the links that bound the various parts of his kingdom together were loosened and quarrels broke out within the royal family itself. In 1096 Bodin could still receive Crusaders in his capital Skutari: Provencals under Raymond of Toulouse, who had marched through Dalmatia and probably through the Zeta valley (cf. above) and were making for Durazzo in order to reach Constantinople from there by the old Via Egnatia. After this we have no certain information about him and his successors. All that is certain is that Dioclia was driven from the coast and out of Northern Albania by the Byzantines and became tributary to them, while Serbia, which had hitherto been politically insignificant in comparison, began to expand at the expense of Dioclia under the Grand Župan Vilkan, Bodin's governor, and his successors, especially after the Byzantine empire fell steadily into decline from 1180 onwards. The Grand Župan Stephan Nemanya, a native of Dioclia, deprived it of the former possessions of Dioclia in Northern Albania and on the coast from the eastern shore of Lake Skutari to Cattaro, disposed of the last Dociolan prince Michael in 1189, and united his territory with Serbia. From the xiii century the old name of the country was replaced by that of the river Zeta (Latin: Zenta, Genta).

III. Under Nemanya's dynasty Zeta (with Northern Albania and the coast) remained for 170 years under Serbia and was frequently governed by princes, repeatedly by heirs to the throne. Widows of kings also had estates on this sunny strip of coast. A benefactress of the land as a builder was Helena (d. 1314), the French wife of Stephan Loj II (1304-1371), who had the town of Lake Skutari restored, which had suffered severely from the Mongol storm which in 1242 had swept southwards along the Adriatic, and built and repaired numerous churches and monasteries in the predominantly Roman Catholic territory around the Lake and on the coast which was under the bishops of Anti- vari and numerous suffragan bishops, including also the great Benedictine Abbey of S. Sergioius and Bacchus on the Boyana (now the ruins of Kisha e Shiritji), at which there was an important trading centre with much visited animal markets. St. Sava (d. 1236) created an Eastern Greek bishopric for the Zeta on the island of Prvekla on the Gulf of Cattaro; the land also had many well-endowed monasteries of this creed on the islands in the Lake Skutari (like Vranjina), and what fertile soil existed elsewhere belonged for the most part to monasteries in Serbia, on Athos and in Jerusalem, granted by the, in this respect, extravagant Serbian ruler. The population received a considerable admixture, now completely absorbed, by the immigration of Wallachians and Albanians.

A grave danger to Serbia was the power of the nobles, which had increased out of all proportion as a result of the constant feuds in the royal family. When after the death of the Czar Stephan Dušan (d. 1355) a general collapse of the great but only loosely knit state began, the centrifugal forces led in Zeta also (1360) to the formation once more of an independent principality by the brothers Štefan, George and Balsa, sons of Balsa, a nobleman of Wallachian origin, to whom the government of the country was entrusted.

IV. The break-up of Serbia took place just at the time when the Ottomans were vigorously extending their power in the Balkan peninsula. Their victories at Crim on the Marica (1371) and at Kosovo ("field of the blackbird", 1389) destroyed the independence of the petty Serbian states in Macedonia and reduced Serbia itself to the district of the Morava, where it however not only maintained itself till 1459 but, as a result of the Turkish defeat at the hands of the Mongols at Angora (1402), was able for a time to rise to considerable power again. In spite of the danger which threatened Zeta also, George and Balsa exhausted their strength in continual feuds with their neighbours over pieces of land, and in the reign of George II the turbulent nobles, among whom the most prominent were the Crnovjević and Gyurašević between Budna, Cattaro and the lower Morava, broke the kingdom up into little baronies. The result was that when the Ottomans under Khai al-Din entered Albania from Macedonia, Balsa in 1385 lost a battle and his life north of Valona, and George II after fighting with varying
fortune, realising his own weakness, handed over his Albanian possessions in the south and east of Lake Skutari as far as Tuzi (S. E. of Podgorica) for an annual pension of 1,000 ducats (1396) to Venice, who thus became till 1479 the southern defender of Zeta against the Ottomans. George retained Duleigno, Antivari and Budna for himself as well as the lands west and north of Lake Skutari.

Balsa

Stracimir George I (d. 1378) Balsa I (d. 1385)

George II (d. 1403)

Balsa II (d. 1421)

But even this reduced territory found no peace. Under Balsa II, the last of his warlike but unimportant house, two long and trying wars with Venice were fought: during the second, the prince died (1421) and left his lands to the despot (Duke) of Serbia, Stephan Lazarević, who lost Duleigno to the republic.

V. The second period of Serbian rule very soon alienated the sympathy with which it was at first received and had to fight increasing difficulties caused by the influential Crnojević (see above). In addition there was an invasion by the Turks in 1430 and the demands of Venice. The latter took Antivari and Budna and appointed the warlord Stephan Crnojević its salaried governor in the little mountain country now quite cut off from the coast; he (1455) induced the people to take the oath of fealty to the republic in the island monastery of Vranjina (cf. above). The end of Serbia (1459) seemed to secure Venice complete possession of the lands round Lake Skutari, but soon afterwards the Ottomans surrounded this land on all sides, for the conquest of Bosnia (1463) was followed (1466) by the annexation of the Herzegovina and of the present Northern Montenegro as far as Nikšić, which then belonged to it.

Like Stephan Crnojević (d. 1465) his son Ivan (1465-1490) who called himself Gospodar Zetki (lord of Zeta), was also a vassal of Venice, who gave him so little support in the wars with Muhammad II over Upper Albania that, after the evacuation of Skutari (1479), he had to fly to Italy, and Zeta was occupied by the Turks, which was the beginning of their long rule here. The contest for the throne after the Sultan's death (1481) induced Ivan to return and renew the struggle, which however ended in 1482 with the recognition of Turkish suzerainty. His youngest son Stanislav, a hostage in Constantinople, adopted Islam in 1485, and took the name Skender Beg. Ivan, also called Ivan Beg — his country was also known as Ivanbegovina — resided in Cetinje where he built a small monastery in 1484—1485, to which the Eastern Greek bishop of Zeta (see above) moved. The state suffered from the great independence of the tribes, who bad strong separatist tendencies, like the Nyegusi, Bilejice, Ozmice, and Ceklević; each formed a political entity with a well-defined territory, its own chief chosen for life courts, tribal and family feuds, blood-revenge, etc., institutions which survived in Montenegro down to the sixteenth century and existed in the north Albanian highlands until quite recently.

Not even the greatest submissiveness earned for Ivan's elder sons, at constant enmity with one another, the goodwill of the Turks. George (1490—1496) who introduced the printing-press into Cetinje and in 1493-95 printed beautiful Cyrillic ecclesiastical works, died in Ansa Minor in exile. Stephan (1496—1499) was interned in Skutari, where he is said to have ended his days as a monk. On the other hand in 1514, a separate sandjak with capital Zabljak (to the north of Lake Skutari), was created for the Muslim Stanislav Skender Beg Crnojević out of Zeta, which had been incorporated in the sandjak of Skutari. The latter did not deny his descent; he was also tolerant in matters of religion, used his Slav mother-tongue in his correspondence and was in regular communication with Venice, although their relations were occasionally overclouded; in Venice Božidar Vuković of Podgorica (d. 1540) and others from 1519 printed Cyrillic ecclesiastical works. Skender Beg's title Sandžak Crnogradski naturalized the name Crna Gora for the country, which we find as early as 1435 and as Montenegro in 1496 for the highlands above Cattaro. In 1528 all notices of this remarkable Montenegrin-Turkish ruler cease. Crne Gora again becomes a kâdîlik of the sandjak of Skutari.

Montenegro under Turkey, under the unassuming ecclesiastical suzerainty of the bishop or Vladika of Cetinje chosen by the tribal chiefs, formed five mahāiyas or districts in the shape of a small triangle between Cattaro, Podgorica and the N.W. end of Lake Skutari, which in 1614 contained 90 villages with 3,524 houses and 8,027 men capable of bearing arms, of whom however only 1,000 had guns. The poll-tax was readily paid and they shared in the wars of the Porte against Venice and in suppressing rebellions in the adjoining lands, such as the closely related Brda, which had much more desire for independence. This long stereotyped monotonous did not change till 1688 when the Montenegrins with the Vladika Vizarić placed themselves under the protection of Venice, whose lands marched with those of the Turks, and who since the failure of the siege of Venice had been fighting with the Turks from 1684 to the peace of Carlowitz (1699). After the failure of his first attacks Sulimânm Pasha, Sandjak of Skutari, as a punishment destroyed Cetinje in 1692 with the support of a number of Montenegrin tribes.

VI. The process of liberation thus begun found vigorous support in the warlike Vladika Danilo Petrović Nyeguti (1697—1755) 1) after whom the dignity of bishop became hereditary in the family, and his holder gradually increased his importance at the expense of the tribal chiefs. In 1711 an embassy from Peter the Great introduced relations with Russia, which however were only occasional of benefit to the land. Even in the great war on the Porte which immediately followed, Montenegro was left in the lurch at the peace of the Pruth (1711). The protection which fugitive Montenegrins found in Dalmatia was used in 1714 as a pretext by Turkey for declaring war on Venice. In the same year Sulimânm Pasha Koprušić laid waste Montenegro entirely, Cetinje which had been rebuilt in 1704 being once more destroyed. As a result of the peace of Passarowitz (1718) more peaceful conditions

1) The story that all Muhammadans in Montenegro who would not be baptized or leave the country were put to death as partisans of Turkey on Christmas Eve 1707 is however a patriotic fable.
began to prevail except for the almost daily guerilla fighting on the frontiers. Danilo took advantage of the peace to build up the country again after the overthrow of the Turkish administration, with the help of Venetian subsidies, so far as the poverty and the intractable nature of the people permitted. In 1724 Cetinje was rebuilt.

Under his incapable successor Sava Petrović Nyegits (1735—1782), there was a complete relapse into the previous barbarism: no authority, clan and blood feuds, murders. No one dared to leave his house unarmed. The whole people lived by murder and robbery. In addition there were several conspiracies with the Turks against their own countrymen, abject appeals to Venice and journeys of appeal to St. Petersburg, notably that of the able but powerless episcopal coadjutor Vasilije (d. 1766).

In the general distress the Vladika only thought of enriching himself. Some relief was afforded Montenegro in 1767 by the south Slav Štefan Mali (Little Stephen), the Lažni (false) Czar, who was accepted as the Czar Peter III murdered in 1762, and received such general recognition, out of respect for Russia, that in spite of his unmasking by the mission of prince Yuri Vojodinovsic Dolgorukiy (1769), he was tolerated by Russia also until he was murdered by a servant in 1773.

Able, unselfish, strict and just, he restored for a time unwonted order and security.

There was no considerable war with Turkey for a long period. All the more serious then were the relations with the suzerain in the reign of Peter I the Saint (1782–1830). The hereditary waizar of Skutari, Kara Mahmud Pasha Bushati, taking advantage of tribal feuds, laid waste the whole country in 1785, forced it to pay the poll-tax again and burned down Cetinje. During the Austro-Russian-Turkish war of 1787–1792, there were only trifling encounters, for which in 1795 Kara Mahmud Pasha again threatened serious reprisals. He was however at Slatina and later killed in the great battle of Kruše; his head was long preserved as a trophy in Cetinje, in keeping with the Montenegrin head-hunting custom which had become a regular practice in war. The consequence was that the tribes of Biyelopavlići and Pupeti, in the Bria east of the Zeta valley, joined Montenegro.

A welcome and more profitable change were the wars of 1806—1808 and 1813—1814 in alliance first with the inhabitants of the Bocce di Cattaro and the Russians, later with the English against the French, who had occupied Dalmatia under General Marmont after the peace of Pressburg (1805). Numerous ruins stretching as far as Ragusa still testify to the horror of the Montenegrins for destruction and plunder even on Christian soil.

Peter I, a cultured ecclesiastic educated in Russia, full of good intentions, endeavoured throughout his life by legislation (1798 and 1803) and personal effort to unite his people, raise their moral tone and avert distress by introducing the potato, but in spite of great patience he met with bitter hostility, contributed to also by Russia which, only after being appealed to for a long time, in 1799 granted 1,000 ducats a year for public purposes but did not pay it regularly.

The first ruler over the Montenegrins, Gospodar Crnogorski i Brdasi, was Peter II (1830—51), a highly gifted man of the world, bishop only in name, one of the greatest of Serbian poets and also of unbending vigour which did not hesitate at severe punishments and death sentences. The Radonjić family which claimed secular (governor) power for itself had to leave the country. Supported by Russia from 1837 by a grant of 9,000 ducats yearly and occasional gifts of grain, and on this account more highly esteemed by his coveted countrymen, he concentrated the government in his own hands. The powers of the tribal chiefs were restricted. A senate of 12 regularly paid members under the presidency of the Vladika henceforth formed the supreme governing body and court of justice: its authority was enforced by well-paid troops stationed throughout the country, the Guardia, in addition to whom the head of the state had a bodyguard, Peryanici. The building of the first public school and a small state printing-press in the capital, the purchase of two cannons and the building of a powder mill, show the small scale of the state but mark the desire for progress. The innovations, and still more poverty and a great increase of population, as in earlier times led to the emigration of numerous families to Serbia and Russia.

Foreign politics were mainly characterised by troubles on the Austrian frontier, continual fighting, celebrated in song, with the neighbouring Muhammadans, especially in the Herzegovina, which was then ruled by Ali Pacha Kozanbegovic (d. 1851) as a practically independent sovereign, under whom Smail Aga Čengić (d. 1840) distinguished himself in the fighting.

VII. Centralisation and reforms generally formed the programme of the next two reigns, which was firmly and successfully carried through in spite of much opposition. Under Danilo II (1852—60) the clan system was dealt a shattering blow, when the chiefs were replaced by captains of princely birth and legislation regulated by the code of 1855. His accession however marks the close of a period as much as its beginning as a hereditary secular power now replaced a theocracy. Danilo renounced his spiritual rank and with the approval of Russia and Austria had himself proclaimed Kuyaz i Gospodar Crne Gore i Brdasi. The attempt of the Porte to obtain by force under Serdar Ekrem 'Omar Pasha in 1852—1853 recognition of her suzerainty thus threatened was vigorously opposed by Austria after giving ample assistance in 1853 through Feldmarschallleutnant Count Leiningen's mission to Constantinople. During the Crimean War (1853—1856) Danilo remained neutral. On the other hand, he became involved in a war in 1858 because he supported the rebels in the Herzegovina; this ended in the defeat of the Turks in the valley of Grahovo (north of Risano) and in an enlargement of Montenegrin territory in 1859. In 1860 the ruler, who had previously had to put down conspiracies, some led by relatives, was murdered in Cattaro by a Montenegrin emigrant.

His able nephew Nicola I (1860—1918, d. March 1, 1921) who had been educated in Trieste and in France, son of the doughty Woiwo Mirkos (d. 1867), completed the building of the state. By long steady work, first as an absolute and from 1905 as a constitutional ruler, and by very skilfully managing foreign relations, he created out of the ill-famed, unfertile, rocky little country a kingdom which was enlarged by the addition
of fertile valleys with its own sea coast, good communications and post routes, a busy economic life, modest prosperity increased by emigration to America, more law abiding and secure since the institution of the civil code of 1888, with a good system of education and a well organised soldiery with modern equipment to be reckoned with in Balkan questions. Relationship by marriage, notably with the Austrians, gave increased glory to the pretty little capital of Cetinje which had also become a centre of culture; 1910 crowned the work by raising Montenegro to a kingdom.

While interested great powers, notably Russia, gave grants of money, arms, munitions, etc., which were readily accepted and also requested, this development was conducted mainly at the expense of Turkey, with whom three wars were waged at longer intervals in addition to minor friction in 1869-1870, 1872, 1874-1875, 1895, 1896, 1911, 1912. The first (1862), a combined attack by Derwish Pasha from the north and Serdar Ekrem Omar Pasha from the south in the Zeta valley as a reprisal for the support given to the rising led by Luka Vukalov in the eastern Herzegovina, forced Nikola by the threat to Cetinje to conclude an unsuccessful peace in Skutari. The second war was declared in 1876 by Montenegro in alliance with Serbia because of the refusal of the newly recognised Kingdom of the Serbs, Croats and Slovaks to recognize the Montenegrin independence. The Treaty of Sarajevo (July 13, 1876, Articles 26-33) recognised the independence of Montenegro and granted it, after cutting down very much the terms of the preliminary peace of San Stefano, a broad ring of land around the original land of Montenegro with Antivi, Nikola, Banyani, Piva, Kolasina, Spuz, Podgorica, Zabljak and the district of Gusine. The latter, as a result of the opposition of the Albanians, was exchanged for Dulecino in 1880. The area was increased from 4,366 to 9,050 square kilometres with over 200,000 inhabitants, including 12,500 Catholic Albanians; there was on the other hand a considerable emigration of Muslims from the new territories.

The third war with Turkey was the first Balkan War, which Montenegro began on Oct. 8, 1912, before its allies, Serbia, Bulgaria and Greece; but while the sandjak of Novi Pazar and Upper Albania were easily occupied, Skutari, the main objective, was only taken after a long siege and with the help of treachery on April 23, 1913. After the allies had quarrelled among themselves, Montenegro also took part in the second Balkan War against Bulgaria. By the peace of Bucharest (Aug. 10, 1913) it received the south-western half of the sandjak of Novi Pazar (with Pijevica, Bijela Polje and Brane), the greater part of the Metohia plain (with Peć and (Jakovica), the valley of Gusine and lands round Lake Skutari, increasing its area by 5,937 square kilometres to 15,017 square kilometres, with 437,000 inhabitants.

In the Great War, king Nikola reluctantly declared war on Austria-Hungary on Aug. 5, 1914. After the capture of the Lovćen (see above) the Montenegrins laid down their arms unconditionally on Jan. 16, 1916 and the country, which had gone back a great deal since 1912, was administered by an Austrian military general-government. The king went first to Italy, then to France, never to return again, for after the War he was deposed along with his sons on Nov. 29, 1918 by an assembly in Podgorica on the charge of treachery.

(C. PATSCH)

The name Moors has also been given to the Arab or Berber peoples, pure or mixed with negro blood, who live to the north in the Senegal in the province to which the French now give the name Mauritanie (see below), and to the offspring of the marriages of Arabs from South Arabia and Cingalese who form an important Moslem colony in Ceylon (c. 200,000).

(E. LEVY-PROVENCAL)

The land of the Moors is Mauritania or Mauretania. This name which has been derived either from a Phoenician word MAHARIM “the western”, or with more probability from the name of a tribe living before the Christian era in North Africa, was applied in ancient times to northern Morocco (Mauretania Tingitana) and to the north-west of Algeria (Caesarea Mauretania). At a later date, by bending the application, Europeans have given the general name of Moors to the Arabo-Berber peoples of Mediterranean and Saharan Africa. Then gradually they came to distinguish out of this mass the groups with which they came more frequently into contact (Tripolitans, Tunisians, Algerians, Moroccans), so that the name Moors came to be limited to the people of Spanish (Moslem), Jewish or Turkish origin of North Africa and particularly to the nomads of the western Sahara, who traverse what Ahmad al-Shinkiti (in al-Wasit, Cairo 1329 A.H.) calls the “Land of Shinkiti”, from the name of its chief villages, this country is bounded, says the author, by the Atlantic Ocean, the valley of the Sankat al-Hamet, the plain of Ibn Háiba (plain of the Bráka) on the right bank of the Senegal and by the two towns of Walata and Na’ma (Nema); if, like him, we take into account all inhabited areas, we ought to extend it to the east as far as the meridian of Timbuktu.

Mauritania, which now forms one of the eight colonies of French West Africa, is only a part of this vast area. It lies to the north of the Senegal between this river, the Atlantic Ocean and the margin of Karakoro; to the north and east, a frontier settled by agreements separates it from the Spanish Sahara (June 27, 1906; Oct. 3, 1904; Nov. 27, 1912) and from the territories of the south of Algeria (agreement of June 7, 1905) and was annexed to the French Sudan (Decree of 23d April, 1913). It has an area of 835,000 square kilometres, 289,000 inhabitants, the density of population being 0.34.

Except for the banks of the Senegal, the country is steppe or desert, and only suitable for stock rearing. To be brief, it is a military frontier district defending on the north the more favoured lands of the Senegal rather than a country suitable for development by colonisation.

I. GEOGRAPHY.

A semi-circular range of hills of no great height, worn by erosion but often difficult of access, starts as it were, out of the ocean to the south of the Rio de Oro and reaches the middle course of the Senegal after running round the contours of an ancient gulf of the quaternary period. The Adrar Tamir and the Tagant separated by the depression of the Khat form as it were the cornerstones of this system and are continued to the north-west in the “petrified sea” (a plain scattered over with rocky islets) of the Tiris and by the arêtes of the Adrar Suuf, to the south by the Rigaiba and Asaba.

The interior of this gulf consists almost entirely of sands, brought from the desert by the predominating north-east winds. The dunes in the south are all fixed and are called “dead”; in the north they are “alive” and constantly changing. Like the other dunes of the western Sahara, they run in the direction of the wind, N.E.—S.W., and are separated from one another by contours of firmer soil along which traffic can go.

The Shamamah is a plain, formed of lands of alluvial origin, along the lower Senegal and as such particularly suitable for cultivation; as we go up the river it is known as Litama and then as Gidinaka. Other plains, those of the Brâka and the Gorgol, are more remote from the river; they contain permanent pools of water to which their girdles of high trees gave a characteristic appearance (sâmar). To the north of the Shamamah and the land of the Brâka stretches a series of dunes among which may be mentioned those of Amatilgh. The couloir of the Inshiri continued by that of the Amsaiga separates the latter from the similar ranges, the Akshar and the Azefâl, which stretch to the Tiris; they are difficult to cross, but between them the Tijirah supplies an easy route. Beyond to the north-west, the Tasiast and the Swihel al-Abyad are great plains of denudation.

On their convex face, the Adrôr and Tâgant are prolonged to the north in the massif of the Kudiat Ijjel and by that of the Zemmur, separated by the Tizel-kaf, towards the north-east by the cliffs of the Dhar Adrôr and the Hank and by the plateau of the Eglab, which stretches to the
great sand-dunes of the Igdí, to the east by the Dhar Téburt which runs to Walata. Between these lines of rock, great ridges of moving dunes make passage difficult but provide good pastureage for the rocks; these are from north to south, the Erg almamamp, the Maktér, the Waran, the Aïsfar and the Aukar. Lastly, to the north of all these masses of sand, the Îlléllamam, a mass of sand, is between the north and the Erg al-hammar, which run as far as the Jama'âm of the Dta.

The coast consists of dunes and plateaus with numerous sabkhas or salt lakes. There is usually a large sand-bar; nevertheless, the sea, which is very rich in fish, gives a livelihood to a population of fishermen.

The Sahara in the proper sense of the word hardly extends beyond a line marked by Cape Timatou, Mejriya (Moudjeria), the northern bank of the Téburt (recession of Khat), the southern margin of the Aïsfar and Walata. It is especially dry on both sides of the Aïsfar: to the west in the region of Port Eternence and in the dunes bordering on the Téburt, and especially to the east where to the north of Walata, the Mraya, Lqgit and the western part of the Erg Shesh, still almost unknown, form a waterless no man's-land; this district is visited only by antelopes, gazelles and ostriches, and by the Shii hunters who can manage to go for days without water and live like their game on green stuffs.

To the south of the line above given, the Sophie gradually changes to forest as we near the river. The climate is very hot: the influence of the sea is not felt beyond a score of miles inland. Subtropical rains fall as far as the north of the Aïsfar.

II. POPULATION.

At the earliest period to which the chronicles and native traditions go back, Mauritania seems to have been peopled by negroes. Later, in the course of centuries, it received various immigrations of Berbers, especially Saḥhāja and Zanata, Arabs and probably also of Jews. The Saḥhāja came first, certainly before the Ilhaj; later the development of Trans-Saharan commerce brought to the few towns that had been built, merchants of varied origin (Arabs, Berbers, Zanata, Naṣānas, Lwata, Naṭawa, etc.); at different periods also Jews came there to seek refuge from persecutions, the last of which drove them out of the Iltat at the end of the eighth century; lastly the Arabs belonging to the Maškil group in turn invaded the country from the eighth century onwards, bringing with them more Zanata or driving them in front of them.

The Jews have been completely absorbed into the Berbers (they form, it is believed, the foundation of the caste of smiths, mat'ayyim or into the Fula, so that it is not possible to estimate their numbers at the present day. The negroes, who have been gradually driven towards the river, are now represented by approximately 20,000 Tuaregs (Iktar), 21,600 Sarakole 13,000 Wolof, Fula and Lambara. The Arabo-Berber Moors number about 210,000.

III. HISTORY.

a. PREHISTORY. Such researches as have been made in Mauritania, notably in the Aïsfar and in the Aukar, have revealed there, as throughout the Sahara, the existence of important prehistoric sites; if it is not possible to date them, they are at least evidence of a very early population whose utensils seem to connect them with the negroes. These conclusions are further confirmed by the native chronicles and traditions, and perhaps we ought to connect with these remote inhabitants of the country the Sâju, to whom the Moors attribute the creation of the palm-groves of the Aïsfar and who are said to have built a town, the "city of the dogs", on the site of the present Aouaga, ten miles N. W. of Aïsfar. What seems probable in any case is that these black Mauritanius were more or less subjects of the first kingdoms known to the southwest of the desert: that of Lakkur, which ruled Senegalese Futa, that of Tijana, the capital of which was on the site of the modern Kendi, 100 miles S.W. of Walata and that of Duna which succeeded them and ruled the whole of the western Sudan. To the north, the lands of the negroes no doubt marched with the lands in which the Saḥhāja and Zanata Berbers led a nomadic life in the south of Morocco.

b. THE SÂHHAJA INVASION. We do not know at what date the Saḥhāja invaded Mauri- tania; but it was certainly a very early one. It is possible that expeditions by the Arab emirs to al-Maghrib al-Aṣṣi, beginning in the latter years of the seventh century, which marked the first contact of the Saḥhāja with Islam, may have driven them to the south but their first incursions into the Téburt, into the Aïsfar and to the Téburt were probably much earlier. Their conquest of the country, it is true, seems to have been fairly slow and it was not, it appears, till the eighth century that they succeeded in reaching the banks of the Senegal for the first time.

c. THE FIRST SAḤḤĀJA KINGDOM. At the beginning of the ninth century, a certain number of Saḥhāja tribes among them the Lemtoua, the Ghudhâ and the Beni Warej occupied the Aïsfar, with them advanced posts in the Téburt, and made raids into the Hajri (Hodj) against the negro Soninke empire of Ghana. The Lemtoua supplied them with chiefs at this time, and one of them, Timtan (d. in 850 or 857), succeeded in imposing his authority on all the Berbers and making twenty negro kings pay tribute to him. The chiefs of his dominion were Aouclas and especially Aouddhâ, forty miles N.E. of the site of the modern Kifâh (Kufa). Aouddhâ seems to have been formed in the seventh century by the Soninke and its fame as a centre of trans-Saharan trade brought it a large foreign population, already in part converted to Islam. Berbers of different branches and Arabs.

In spite of this brilliant start, this Lemtouan dynasty lasted only a short time and disappeared in 919. Each tribe then led an independent existence and the emperors of Ghana were able to extend then power towards the Togu and to take Aouddhâ at the end of the tenth century.

d. THE SECOND SAḤḤĀJA KINGDOM. Towards 1020, the chiefs of the various Saḥhāja tribes agreed to combine again as in the time of Timtan and thus to resist the encroachments of the Soninke. The power was placed in the hands of a Lemtoua called Tarass, who seems to have been the first really Muslim Zâbî ruler. He went to Mecca and his enthusiasm as a new convert led him to a holy war on the negroes, in which he lost his life (1023). His son-in-law Yalây b.
Ibrahim of the tribe of the Guddala succeeded him, according to the custom which made the supreme command go to the two tribes alternately. Like Tassina, he was a zealot and on returning from the pilgrimage, he brought from Morocco a holy man, Abd Allah b. Yasim, to whom he entrusted the task of educating his brothers, who were still ignorant of the principles of Islam. The saint was at first well received by the Sanhaja and he made them build the town of Aretzenna near the site of the modern Tifhit. But soon his commands appeared too difficult for the nomads, who rebelled against him. He sought refuge with his disciples in a rifat or fortified monastery on an island in the ocean (sometimes identified with Tidra) and they were henceforth known as the al-Murabitun (the men of the rifat), a word which has been corrupted in Europe to Almoravids under which name they have become famous.

5. The Almoravids. Their reputation for sanctity spread very rapidly and attracted many disciples to them. When Abd Allah had gathered around him a sufficiently large body of men, he led them against their rebellious brethren and against the negroes. In a few years they subdued the whole of the western Sahara, from Tafilelt and the Dra to the Senegal. In 1050, Yahiya b. Ibrahim died, and Yahiya b. Umar, chief of the Lemtuna, became the political head of the confederation, "Abd Allah b. Yasim remaining the religious chief. While the first recaptured and plundered Audaghist, the second attacked the conquest of the Maghrib. But soon they were both slain, Yahiya in a rising in the Adrar in which the negroes of the Takrir tried in vain to help him, and "Abd Allah in fighting the Bargha-wa heretics of the plains of Morocco. Abu Bakr, brother of Yahiya, was then for some time supreme chief of the Almoravids, then to gratify his ambitious nephew Yusufl, Tajjiltu he handed over to him his conquests in North Africa, keeping only to himself the sovereignty of the south. He devoted himself to a holy war against the negroes and to their conversion to Islam. He succeeded in bringing them back towards the river and in taking Ghana in 1076 and the capital of the Takrir in 1080, extending his teaching, the tradition says, as far as the lands of a Mandingo prince of the Upper Niger. He was slain in the Tagnet in 1087 and his death marked the break up of the Sanhaja confederation in Mauritania; each tribe regained its independence.

6. The Tashumsha and the negro reaction. Between this date and the end of the xiiith century we know very little of the history of Mauritania. We only suspect that the influence of the negro kingdom of Mali must have extended up to the Adrar and Tagnet and that a new Marabout Berber element formed by the Tashumsha of Nub came and settled in the country.

The Tashumsha seem to have at first taken upon the mantle of the Almoravids and to have made themselves the champions of the djihad against the negroes. But after a few successes, they were driven back from the region of the river and fell back upon the Tiris and Adrar, where they gave up fighting and devoted themselves to study and religious devotions. The successes of the negroes then became serious: Wolofs, Soninkes and Tuculors recaptured a whole part of Mauritania and might perhaps have succeeded in subjecting the Berbers, who were exhausted by their campaigns of conquest in the Mediterranean region, if the coming of the Maqil Arabs had not checked them.

8. The Maqil invasion. It is not possible to date this new invasion exactly; it is, however, certain that it was not a single effort. It went on almost down to the sixteenth century with bands of negroes groups filtering into the Sanhaja enclaves and at length submerging them.

Setting out from Egypt, the Maqil passed along the northern border of the desert and reached the Ocean to the south of Morocco in the first half of the xiiith century. They then entered the service of the Marinid rulers of Fas, who used them to keep in subjection the provinces beyond the Atlas and to collect taxes. These undisciplined nomads very soon took advantage of their privileged position. Measures had to be taken against their brigandage and their threats to overrun Morocco, and military expeditions were sent against them. Either as a result of these repulsions, or because they were called in by the Sanhaja to help them against the negroes, or because a year of drought drove them in search of new pasturage, some of them, belonging to the confederation of the Dwi Hasan or Beni Hasan, went down towards Mauritania. But the chronicles do not say why. In any case, having helped to drive the negroes back towards the river, supported by the Zanita Kunta who came from Tuat at the same time as the first of them, they reduced to vassalage the Sanhaja of Upper Mauritania (Ijjel and Zemamr) in the xiiith century, Western Mauritania, Wadan and Tagnet in the xvith and the Adrar and Lower Mauritania in the xvith century. Throughout the long period from the xiiith century to the present day, we find the authority in the hands of a certain number of Udaya tribes: the Ulid Rug, the Mihalla Ulid Mmark, the Brakna, the Tinaga and the Ulid Yahia b. Ummam. Other Beni Hasan also went south, but barely reached Mauritania. The Ulid Dlim have always remained in the desert zone and the Brabigh seem to have passed some years a little to the north of the Senegal before migrating to the region of Timbuktu.

9. The Maqil of the Sultan of Morocco. From their first sojourn in the south of Morocco, these Maqil long retained the character of Makilen tribes; under the Sa'dians and Alawites, many of them supplied contingents to the gilb tribes. This status gave their migration southwards the appearance of a conquest in name of the Sa'dians. This was no doubt the legal justification of the tribute which they exacted from the conquered Beduins; it also explains why the rulers of Fas or Marrakesh sometimes claimed as theirs the territory of Mauritania, why they sent several expeditions there in the xivith and xvith centuries, why they granted investiture to certain chiefs and lastly why the author of al-Wanis, after consulting several learned Western Marabout, Wadan and Tagnet in the xivith century, thought that the "land of Shingilt" should be included with the Maghrib and not with the Sudanic.  

1. The Sanhaja reaction. Whatever was the actual success of the Arab conquests in Mauritania, it were not effected without violent reaction on the part of the Sanhaja. The poverty of the Tashumsha. the negro danger and the looseness of links between the various bodies of invaders facilitated the settlement of the early Arab invaders. But the tyranny of the Maqil towards the Berbers
brought them in the xvith century to such desperation that a general rising broke out in the form of an attempted restoration of the Almoravids led by Nasr al-Din, a marabout descendent of the Lamtuna. This individual, who camped in western Mauritania, first preached a holy war there against the negroes, being sure of re-uniting the various contigants against the traditional enemy. Then having given the troops sufficient training in a campaign which brought them across the river to plunder the left bank, he turned openly against the Arabs. This was the celebrated "War of Ebay" in the course of which the Arabs were held in check for thirty years; but in the end the Moors within the Sanhaja ranks destroyed their strength and in 1674 the defeat at Tin Yeblei doomed them to vassalage.

In much the same way in 1745 the idealist Berbers of the Adrar had to bow before the Mañil and at the end of the xvirh century we find them again rising against the Arab amir and assassinating him. Finally in the Tagant, the Sanhaja Idâab well led by their chief Muhammad Shahem regained their independence at the end of the xvith century. They almost succeeded in seizing the Adrar in 192, drove the Zanita Kunta out of the Tagant and extended their power to the Senegal under the able rule of amirs who are still reigning and claim to be true descendants of the Almoravids.

The rule of the amirs. All over, from the xvith century, the political situation of the tribes became stabilised, and regular little nomad states seem to have been formed, usually under Arab chiefs. Thus we now find the dynasty of the Ulid Ahmad b. Damam ruling among the Tuareg with distinguished sovereigns like Ali Shandura (1703-1727) who, supported by some Moors, established over three years a regime of nearly 40 years. Finally the trade of these states became so much more regular that it was considered profitable to extend it to Europe. Among the Brakna also, the Ulid 'Abd Allah amirs played a preponderating role after the war of Baiball and their possessions extended from the Tagant to the Atlantic. Later, and particularly from the xvirh century, their power declined, in spite of the brilliant reign of Ahmad I (1318-1341), and their desperate resistance to the advance of the French caused them to disappear from the political scene. In Adrar the Ulid Yağja b. Ullim also furnished great leaders: Ahmad ibd Muhammad (1871-1891) who was able to keep his turbulent subjects at peace with their neighbours and who tried to develop trans-Saharan commerce, and Ahmad ibd Ull Ahmad (1891-1899) who by his military successes earned the title of amir of war. Lastly in the person of Taka b. Tawal Ahmad, a descendant of Muhammad Shahem, the Tagant produced the greatest Moorish ruler of the xvirh century.

The rule of these amirs was continually beset with great difficulties, produced by their rivals - the lack of discipline, rebellion and mutiny among their subjects, by the warlike raids of the negroes, and particularly by the efforts of Europeans to establish their rule on the Atlantic coast and on the banks of the river.

European rivalries on the coast of Mauritania. It was in the first half of the xvirh century that the Portuguese visited the coast of Mauritania and the north of the Senegal for the first time. At the instigation of the Infante Henry the Navigator, expeditions followed which brought back slaves, gold and guns. After João Fernandez had gone to Wadan in the eastern Adrar, where he spent some months among the Sanhaja in 1449, a permanent settlement was founded in 1445 on the island of Arguin, which afforded excellent conditions of security. From there the Portuguese endeavoured to extend their power into the interior and to command the great caravan routes which led from the Julde to Morocco; to them are attributed the fortresses, now in ruins, near Wadan and at Azezzi. But if it is certain that for a short time they extended their relations as far as the capital of the negro empire of Mali on the Upper Nigar, it seems that they did not own factories for any length of time except on the coast.

The trade of Arguin flourished for two centuries in the hands of the Portuguese, then of the Spaniards and it extended as far as Lower Mauritania through Portendik (corruption of "Port d'Addu" from the name of an emir of Trarza), a not very good roadstead where carpet was carried on. The French at a later date established themselves at the mouth of the Senegal (1929), the Dutch at the war with Spain took Arguin in 1938, which the English took from them in 1665 and a struggle for influence began among these three nations which lasted for a century. Arguin and Portendik continually changed hands, while France developed her trade along the Senegal by building factories. Finally the Treaty of Versailles (Sept. 3, 1793) recognised her exclusive sovereignty over the Atlantic coast from Cape Blaue to the mouth of the Julde. The wars at the beginning of the xvirh century brought the English back there for a time, and it was only in 1817, three years after the treaty of Paris, that France definitely took possession of the country. Arguin and Portendik had in the meantime been almost completely ruined as a result of these vagaries.

The French conquest. Down to 1857 England reserved the right to trade at Portendik, which allowed the Trarza chiefs and in particular Muhammad al-Jalib to play off against one another the two nations who seemed to threaten their independence, and thus to gain a footing on the left bank of the Senegal. The position of the Europeans with regard to the natives was however difficult and trade with them was permitted only on payment of heavy customs duties. It was only in 1854 with the appointment of Fehdeh as governor of Senegal that a more vigorous policy was introduced into Lower Mauritania. In four years he reduced Walo on the left bank to submission and drove the Morcom out of it and forced the emirs of Trarza and Brakna to sign a treaty, which if it did not abolish the customs, at least recognised that France had a right of sovereignty over the peoples living near the river and guaranteed freedom of trade there.

For nearly fifty years, these treaties were respected and the Moorish chiefs, too much occupied in maintaining peace among their subjects and in defending themselves from the intrigues of pre- tenders, no longer thought of coming into conflict with French troops; commercial agreements were made which extended as far as the Idaih of the Tagant and one treaty was even made with the emir of the Adrar. This period also saw a great deal of exploration of the interior. After
Mungo Park (1795—1796), Caillé (1825), Caillé (1843) and Panet (1850), Vincent, Bu al-Mudgal, Bonnet, Aliun Sal, Mage, Fulcrid, Aube, Soleillet, Quiroga and Cervera, Douls, Sollee, Fabert, Donnet, Blanchet, Gravel and Chudeau contributed to our knowledge of this country and prepared the way for its occupation.

In the last years of the xixth century the troubles of which Lower Mauritania was the centre finally had repercussions on the trading centres on the river which became daily more serious. The insecurity hampered commerce and in proportion as the memory of the vigorous policy of Saidherbe became obliterated, marauders ravaged the country down to the left bank of the river, right into the administered country. The conquest of Mauritania had to be planned in order to protect effectively the colony of Senegal and with this object an endeavour was made to use the influence of the marabouts, tired of a perpetual warfare, of which too often they bore the expense. The diplomatic action of M. Coppolani, Commissaire Général of the government since 1902, judiciously supported by police operation, brought about the occupation of the wind country in 1903, the Dakhra country in 1904 and of the Targant in 1905.

This rapid advance, however, was checked before the anti-foreign propaganda of a marabout of the Haou, Mâ al-Amin, son of Muhammad Fâdîl, who after spending a long period in Upper Mauritania, had been settled for some years at Smara near Sagat al-Hasan. His prestige as a magician, supported by the veneration shown him by the Moroccan sultans, was not long in winning him the support of the greater number of the Moors tribes and especially of those of the Aïr, the emir of which had been brought up in his entourage. At his instigation, Coppolani was assassinated and a cousin of the Sultan Mawllî Idris came to lead the jihâd in Mauritania. A success gained by him at Nyamli led to nothing, but on the return of a delegation of Moorish chiefs who had gone to seek help from the sovereign of Morocco, a general offensive was begun against the French troops (1908). To put an end to an agitation which threatened to become dangerous, Colonel Gouraud conquered the Aïr in 1909 and his victory was completed in 1910 by the death of Mâ al-Amin in 1912 by the capture of Tissit and joining up with the troops of the Hasr. The conquest of Mauritania by the French was thus practically completed. The march of el-Held, son of Mâ al-Amin, on Marrakesh in 1912 revived some inclination to rebel among the Moors, but the destruction of Smara in 1915 checked this, and France now only had to secure the protection of her colony from raiders from the Sahara.

IV. SOCIAL AND ECONOMIC LIFE.

The negroes are settled agriculturists who have their villages mainly in the Shasmanah and the Gorgol and in the main they belong rather to Senegal than to Mauritania.

The Moors have a few villages (the principal are Ajar, Shingui, Wadam, Toppia, Tissit) with palm groves and a few farms in the Aïr, the Targant and the Dakh. They are great nomads who live under cone-shaped tents of camel-skin and follow the rainfall with their stocks. Those who wander in the zone of the steppes oscillate between the river and the desert, except the Iârza of western Mauritania, who, on account of the dryness of their country, move over a much greater area and sometimes even reach Tris and Aïr Saguia. The people of the Aïr go down as far as Targant, and on the north at one time were in contact with the Tekna of the south of Morocco around the Sagat al-Hasan. Their supply of meat is very scanty and it is not an exaggeration when Pschari calls them "the most wretched of mankind.

Their groups have been much gradated by the constant influx of Moroccans. Before French rule, the Hasans, pure Arabs, were the noble and warrior class who protected the encampments and lived by cattle-rearing and marauding. The Zaouia or marabouts, generally Sanhàja or Zenàta Berbers, paid an annual sum called ghâfer to the Hasans for their security; they were likewise breeders of cattle, but also included among them merchants and men of letters who were regular travelling universitites: the more or less open practice of sorcery served them as a means of defence against the exactions of the Hasans. The Zâna or tributaries (Zanata), Sanhàja Berbers, were the feudal dues which they paid to the Arabs (gherm) did not always exempt them from periodical payments to the marabouts nor from arbitrary sums levied upon them by one or the other. They were in part agriculturists. Thaârjin, freed slaves, formed tribes of serfs, usually better treated than the preceding. Finally the Hasans and the marabouts owned numerous slaves in which they did a busy trade. On the fringe of all these groups, the Mahfîlm, the ghâfirs and the N mâdi were respectively the workmen, poets and singers and hunters who supplied the encampments of eastern Mauritania with meat.

The barriers between these castes were in theory rigid. A certain number of marabouts, however, and even of Zaugas succeeded in escaping from Atlas tutelage, like the Idaâish of the Targant, and devoted themselves to the adventurous life of the N mâdi hunter (geinir) just as "penitent" Hasans sometimes adopted the pious life of the Zwaya (Tisab).

French administration has left this traditional organisation intact, only suppressing slavery; it has, however, checked the abuses of the Hasan by putting a stop almost everywhere to the payment of the horna and ghafers.

Economic Life. Mauritania has only one port, Port-Étienne, on the peninsula of Cape Blanc; it is, however, only a fishing centre. The course of the Senegal is used as far as Podor in the dry season, as far as Bâkel in the winter months. No road has yet been made, but the important points are linked up by automobile or caravan services. The telephone is in use only in the south, but its place is taken by the wireless, which connects Mauritania with Dakar, Casablanca, Agadir, Bamako and Timbuctoo.

The principal source of wealth of the country is stock-breeding: 51,000 camels, 3,800 horses, 239,000 cattle, 2,000,000 goats and sheep, 66,000 asses. The abundant game (antelope, gazelle, ostriches, guineas fowl and bustards) supplies further food for the inhabitants. Among agricultural products, special mention may be made of the date-palms in the north (3,000 tons of date a year), along the river and in a few favoured valleys of
the plateaus, millet, rice, maize, wheat and barley. In the south gum is a traditional article of export (1,250-2,500 tons a year).

The natural resources of the country have hardly been investigated as yet. We may mention, however, the salt of the Sebkhet Ijeil, which has for long supplied the caravans to the south; along the coast a few salt-pans are worked by the Moors. The annual export is 4,700 tons.

Industry is in a very rudimentary stage and confined almost entirely to the manufacture of leather goods which form the equipment of the camel and the furniture of his tent. Fishing forms the encumbrance near the coasts.

A certain number of caravans transport merchandise from the north to the south along the Adrar and Tàgant to the trading centres on the river and the Stûn. They take with them animals, gums, salt, dates, ostrich feathers, skins and leather, and bring back cloths, arms, powder, candles, sugar, tea, spices and cereals, and supply the markets of Aatar, Shugut, Wadain and Tagji. As a result of the insecurity in the desert there is no longer any regular trans-Saharan trade.

V. POLITICAL LIFE

The negroes are ruled by their village headmen and chiefs of districts. The Moors are grouped in tribes under the authority of a chief assisted by a council of notables or qurppu. Sometimes several tribes are combined in a hereditary amirate, the ruler of which surrounds himself with a regular guard generally recruited from among the Zanga or Hafit. The shikh or amir is practically all-powerful; only the right to judge in civil matters is not completely his; the kâfût exercise it. The amir further reserves to himself a kind of right to supervise their judgments through the intermediary of his private kâfût who forms a court of appeal.

The French administration has been superimposed on this traditional organisation. A Lieutenant-Governor, residing at St. Louis, on the right bank of the river, is the head of the colony and is assisted by a military commandant, an inspector of administrative affairs, a secretary for military and political affairs, a secretary for finance and a department of public works. The local administration is carried out by administrators or officers divided into eight districts (Trarza, Bikanta, Guelde, Gudimaka, Assala, Tâgant, Adrar and Bort, Lévidert) and seventeen sub-divisions or administrative posts. It controls the native administrative and judicial organization.

The Moors pay the Kurânic taxes (zakût and asbar) from which their ruling-camels and gums alone are exempt. The negroes pay a poll-tax and a tax on cattle. Indirect contributions are paid by the merchants, the salt-pans, the carrying of arms, the exploitation of the woods and ferrets. The Budget for Mauritania for 1930 was 14,623,000 francs.

VI. LANGUAGE

The language spoken in Mauritania is Arabic, the nubara or language of the Tarija, the "whites". Some 7,000 Zanga in the south have retained a Berber dialect related to that of the dialects of southern Morocco. At Wadain and Tshut, the language amir (Arat) which is a form of Soninke is now spoken only by a few individuals. Lastly the negroes of the river have retained their own language.

VII. RELIGIOUS AND INTELLECTUAL LIFE

History does not tell us what was the religion of the Sânhûjja before their conversion to Islam; we can only think that they had to some extent been influenced by a monotheistic faith like Judaism or even Christianity. Their first contact with Islam probably dates from Ukba b. Nafi's expedition to the south of Morocco (681), but it is certain that their real conversion was much later and can hardly have been earlier than the energetic proselytising campaign of 'Abd Allâh b. Yâsin.

At the present day all the inhabitants of Mauritania are Muslims of the Malikite rite, but many of them and more particularly the warriors and the Némidi have only a very superficial acquaintance with their religion and take little interest in it; superstitions and sorcery further corrupt their Islam almost everywhere, revealing the primitive state of the people and negro influence. Islam is not really known and practised, except among the tribes of marabouts; among the latter, a mystical tradition and a fairly advanced culture have always made themselves felt and for this reason they play in Moorish society the part of a kind of sacred body such as is found nowhere else in the Muslim world of the west. This is no doubt a remote consequence of the Almoravid movement, revived for a time in the war of Bâbah, and of the peculiar situation of these Muslim nomads, who have here long been the advance-guard of the white race, face to face with the negro fez-bin-hippiss of the Senegal and Sudân. Perhaps, like Renan and Petchari, we ought also to give credit to the influence of rûdrîb'î in the desert. In any case in this, as in assuming a kind of sacred character and surrounding it with a magic prestige, certain Berbers have had a regular revenge of their amour-propre on the pride of race of the Arab invaders and have opposed to their tyranny and brigandage a defensive weapon which has not been without effect.

The principal brotherhoods of Mauritanians are those of the Tjilinjâ, and of the Kâdîria: their influence extends into the lands of the negroes. The first are represented by the Ila u Ali of the Tràza, of the Tàgant and of the Adrar, who claim to be shorfa and say they came from Tabelhala at the end of the sixth century. Since the early years of the sixth century they have been connected with the branch of the Tjilinjâ in Faso. The second are much more numerous and influential; they have several branches: that of the Bokkâya dates from the seventh-eighth centuries and is represented from the head of the Niger to the Tàgant and Adrar by the tribe of the Kunta. About a century ago it received fresh impetus in a new "path" and its autonomy in lower Mauritania was secured by the great prestige of the Sâkhî, called the "Usel Bâli" (1924). We may also mention the branch of the Fàli, founded in the early years of the sixteenth century, which enjoyed particular fame some 20 years ago under the direction of Mî al-'Ajinah and his brother the Sakhî Sa'd Bâ. These two branches have lost their importance since the deaths of these famous individuals. Lastly the Kâdîria are still represented by the 600 members of the
MOORS — MOREA

Ghidfiya brotherhood, whose practices are regarded as heretical by the other Muslims.

Shingiti, benefiting by its situation on the routes of the caravans which came from western Morocco: or Selâkht Eljel down to the Jâdâr or the Senegal was at one period an intellectual centre, the reputation of which extended to all the western Sahara and to the Oudâ. We see this in the fact that it was able to give its name to all the Moorish tribes (Shingiti) and to the territory in which they led their nomadic life and that the tradition of the country makes it one of the "seven holy cities" of Islam. It has now lost its old prestige. In the xvth century the fame of the medersas of Timbuktu must have offered serious competition to it. At the present day Shingiti is seriously threatened by the sands of the Waran and its trade is much reduced. Aatar is assuming an increasing importance; the insecurity and eccentric development of North Africa and the Oudâ have led to the almost complete disappearance of the trans-Saharan trade by which it lived and in particular, as is natural in a land of nomads, it has been rather under tents and particularly in the marabout encampments of western Mauritania that intellectual culture has developed. Universities have been created there where the teaching of the Korân, theology, law, grammar and logic still flourishes. Some of them have known outbursts of glory under famous teachers, who have sometimes created schools of mystic initiation, like those directed by the Shaikh Sidiya, Ma' al-'Ainî or Sa'd Bîrî or that of the Agh Muhammad Sâlem, which is a kind of university in the Tiris which produces almost all the jurists of Mauritania.

A whole original literature has been able to develop, Kuranic matter, Hadîth, law according to Stîl Khâlîc and his commentators, are its essential elements, with the doctrines of the Sâîfis and their mysticism. But historical studies have also had and still have their eager followers, especially among the tribe of the 'U'd Daman (Trâôra). Lastly poetry is held in honour among all the tribes, warrior and marabout alike, and supports a whole caste of troubadours, the griots, who enjoy the favour of the courts of the emirs.

(F. de la Chapelle).

MORADABAD (Muradâbâd), a district in the Rohilkhand division of the United Provinces of India and also the chief town in it. The district has an area of about 2,300 square miles and a population of 1,200,000 of whom over 420,000 are Muhammadans Nothing is known of the early history of the district. In the Muhammadan period it was successively ruled by the Sultâns of Delhi, from whom it was occasionally taken by the Sultâns of Delhi, the Moghuls, the Rohillas, and the Nâwâbs of Oudh until it was ceded to the British in 1801.

Moradâbâd is the principal town in the district; it is situated on the Delhi-Bareilly road and on the main line of the Oudh-Rohilkhand railway. It has a population of 75,000 of whom over half are Muslims. The town is a Moghul foundation of the second quarter of the xvth century. Its founder was Rustam Khân who also built the Djamî Masjîd, as an inscription testifies, in 1632. The town takes its name from Murâd Bâsh, the ill-fated son of Shah Djamîn. It rapidly ousted Sambhal from its place as the chief town of the district. Its industries are flourishing (chiefly textiles and brass-work). It was a mint of the Moghul Emperors and also of Ahammad Shâh Durrânî during his invasion of India in 1760. Sambhal is a very ancient site but has lost much of the importance it possessed in mediaeval times. It has an old mosque, an interesting example of Pathan architecture which has even been claimed as a converted Hindu temple. It is said to have been built by Bâbur but it is undoubtedly earlier. Amrola is the great Muhammadan centre of the district, the majority of its population being Shaikhis and Sanyâvis. The chief saint of the Sahâyids is Sharaf al-Dîn Shâh Wâliyât, a descendant of the tenth Imam, who came here about 1300. His tomb is still shown here. The Djamî Ma'sjîd is a Hindu temple converted into a mosque in the reign of Khalîgâbâd. It is much visited by pilgrims, mainly Hindus who seek relief from mental diseases through the power of Sadr al-Dîn, a former mutâkhallîn of the mosque, whose virtues are still believed to be efficacious. There are over a hundred other mosques in the town.

Bibliography: H. R. Nevill, District Gazetteer of Moradabad, Allahabad 1911. (J. Allan)

MOREA is the usual name in mediaeval and modern times for the peninsula of the Peloponnesus, which was regarded in ancient times as the outfall of Greece. The name Morea is first found in 1111 A.D. in the subscription to fol. 143 and the Greek manuscript Brit. Mus. Add.
with the mulberry-tree. This is evident for example from Joh. Unleuchlinus (Annales Saxonarum Otho-
monidarum a Turciis sua Ensign scripti, 1596, p. 63):

"Nomen ipsum (= Moreas) derivavit Graeci nunc
ah arbore novo quod tota regione sillicet Arbor
hace frequentius ev".

In the mediaeval Muslim writers there is a
confusion between Amureia = Amorion in Phrygia
and Lamureia = Moreas, Peloponnese. But Am-
ureia (or Amurcia, Amorit, Amurca, etc.) in Abu 'Kāsim Firdawsī can only be Amo-
rian, which used to be described as the capital
and eye of the kingdom of the Rūm. In the
geographical tables of the Nast al-funūn (middle
of the xiiiith century) and of Umrān Beg, Amureia
should rather be identified with Amorion than
with Morea = Peloponnese (cf. P. Karolidis, in
Wissenschaftliches Jahrbuch [Periodika] der
Universität Athen, iii. 1909, p. 288—297: A. Hantzis,
in Byzantinisch-Naevirischisches Jahrbuch, i.,
1631, p. 65 sqq.) In the little map by the Arab
Abi, of the year 1192 A.D., Behbûne = Pelo-
ponnese is given (i.e. the old classical name of
the peninsula). On the other hand, we find Morea
= Moreas = Peloponnese (i.e. its mediaeval and
modern name) in the Arabic geographical table
of the Paris MS. 2214, which is supposed to contain
the cosmography of Ibn Sa'd of the year 1276 A.D.
(based for the most part on Idrīsī (1154 A.D.;
cf. K. Müller, Mappae Arabicae, i., Stuttgart 1926).

The Muḥammadan peoples really only became
acquainted with the Morea in the xiiiith century
A.D. Hellenistic culture was long extinct there
and Christianity had become predominant. At
the end of the fourth century (395 A.D.), Alaric
had had almost the whole of the Morea waste
and destroyed many towns and sanctuaries famed in
ancient times. About two centuries later, c. 580 A.D.,
the Avars (a Turkish nomadic people) allied with
Slav tribes are said to have invaded the Morea
and settled permanently. It should be expressly
noted that it is only late and tendentious sources
which tell us this. What scholars of the xiiiith
century put forward as a historical fact, namely
that an independent Avar or Avar-Slav kingdom,
intangible to Byzantine or Greek Christian influ-
ence, existed in the western half of the Morea for
248 years (580—827), must be relegated to the
realms of fable (cf. E. Curtius, Peloponnes, i.,
Gotha 1851, p. 86) It is certain, however, that
considerable ethnological changes took place in
the middle ages in the Morea. In the xiiiith
century in the reign of the Byzantine emperor
Constantine V (741—775), if not earlier, numerous
Slav tribes had pushed their way into the Morea,
which had been much depopulated from 746 by
a terrible pestilence. This epidemic had also
made great gaps in the population of the Const-
tinople, which Constantine V is said to have endeav-
oured to fill with people from the Morea: this imperial
effort must have further contributed to reduce the
Greek element in the peninsula. It may be assumed
that the Slavs who at this time were settling
predominantly in Arcadia and Mesenia, Flik and Laco-
nia, sought and found new homes in the Morea, which
had been favoured by nature with a milder climate,
not only as hostile robbert hordes but also as
peaceful colonists from the north.

According to Schäfli (Slavische Altertumer,
German transl, by Wuttke, vol ii., p. 192), the
spread of the Slavs over the Morea can be fixed
between 746 and 799. Nevertheless there can be no question of a complete slavisation of the country nor of a complete annihilation of the Greek element in it — as Füllmayer and his followers hold. The immigrant Slavs in Greece proper cannot have been very numerous. They were really nomad herdsmen and peasants, who settled here and there in the open country. Their level of culture much have been very low. On the other hand, the Hellenic element in Greece proper and no less in the Morea had always had control of the coasts and of the towns and fortresses in the interior, and it was moreover strong enough as regards culture to assert itself through the centuries and even to leave its mark on the foreign Slavs. The Slav settlers often caused trouble to the Byzantine government, so that the latter found themselves forced to send expeditions against them. For example in 783 A.D. the Athenian empress Irene ordered the Patriarch Staurakios to punish the Slav tribes of the Morea and the rest of the mainland of Greece. He appears to have had numerous troops at his command and was able to carry out his task satisfactorily in a few months. He also forced the Slavs to pay an annual tribute to the imperial treasury. He returned to Constantinople with many prisoners and considerable booty and celebrated a triumph in the Hippodrome there.

After some time, the Slavs again rose in the Morea against Byzantine authority. They became a great danger and even threatened the towns on the coast. Supported by Saracens from Africa, the Slavs in 807 (805 by another reckoning) blockaded Patras from the land. The citizens of this important town defended themselves bravely in spite of a shortage of provisions, water and other supplies. When the help sought from the imperial strategos in Corinth did not come, the citizens of Patras made a vigorous sortie. They put the enemy to flight and drove them far from their town. Greek superstition seems to have ascribed the victory won at Patras over the Slav hordes to St. Andrew, the patron saint of the town. Nothing is recorded of the fate of the Saracen allies of the Slav besiegers of Patras. It is supposed that it was they who ravaged not only Patras but also Rhodes and other islands by the caliph's order in 807 A.D. With the defeat at Patras the strength of the Slavs of the Morea was broken. It is true that they again and again attempted to win their independence of the Byzantines by force of arms but without success. In 859 A.D., the doughty Byzantine general Theoklitos Byzantios subdued all the Slav districts of the Morea as far as the mountains on the Tagetos and Parnon, where two rebel Slav tribes, the Ezerites and Melinges, had settled. These two tribes survived longest, sometimes as vassals of the Byzantines and sometimes as their open enemies. As early as the ninth century A.D. began the conversions of the Slavs to Christianity to which is due also their gradual hellenisation. The intermixture of the Greek Meseotes (Turk. Moralî) with the Slavs undoubtedly contributed considerably to the former process.

The Normans in Sicily in the following period disturbed not only the coasts of the mainland of Greece but also the interior of various Balkan provinces of the Byzantine empire. The Norman king Roger II in his campaign in 1146 against Greece sailed round the Morea and occupied with-
its way into the Morea only after 1204. It had already existed in the country in the time of the Comneni.

The Frankish rulers built new citadels and forts in the plains and on the mountains, most of which survived into the period of Turkish rule. A number of fiefs which were formed by the Franks in 1205 became after the middle of the 14th century hereditary possessions of the Ottomans.

It must also be pointed out that the Venetians after the Fourth Crusade had secured important trading centres and depots on the Morea. The Republic in this way acquired the province of Lacedaemonia, Kalabryta, Modon and Patras, and in the case of the last two ports, some of the surrounding country, including the possessions of a number of distinguished families of the Byzantine aristocracy. During this period, Venice succeeded in extending her territory and commercial influence and privileges further in the Morea and even in taking possession of the whole of it (cf. below).

The fourth prince of Achaia (Morea), William of Villehardouin (1245—1278), the second son of the above-mentioned Godfrey, had vigorously completed the conquest of the country. In 1245 he forced Monembas, which had so far remained independent in alliance with the Greek kings of Nicaea, to capitulate under certain conditions. The same ruler also conquered a number of Morean tribes who had shown themselves hostile to Frankish rule and who played a prominent part in later times when the Turks occupied the country. To keep in check the wild tribes of Zaconia and Laconia, William II of Villehardouin in 1249 built near the ancient Sparta, on a hill jutting out in front of the Taygetos, Mystra (Mystra), the fortress of the same name. A Frankish-Byzantine town soon grew up around this fortress which became a centre of art and classical studies. The town of Mystra was destined to be the capital of the later dependencies of the Morea, and even in the period of Turkish rule it did not completely lose its old importance. Frankish rule in the Morea, which reached its zenith under William II, was destined to suffer a severe reverse within his reign. In October 1259 a fierce battle was fought between Castoria and Monastir (Pelagonia) at Longos Vorilla. In this battle fought, the armies of the Despots of Epirus Michael Angelos and of the king of Nicaea and later Byzantine emperor Michael VIII Palaeologus. As a result of treachery on the part of an illegitimate son of the despot Michael Angelos, the Sela-tokrator Johannes, the troops and allies of the latter suffered a reverse. Even William II of Villehardouin sought safety in flight only to be shortly afterwards induced from his hiding-place and captured. He was released till 1262, after taking the oath of vassalage to the Byzantine emperor and ceding him four important fortresses of the Morea: Mystra, Maima, Geraki and Monembas, as well as a considerable part of Laconia. The Byzantines thus gained important bases in S.E. Morea from which they were able to reconquer the whole peninsula, which was all the more necessary as William II of Villehardouin only kept his pledge of fidelity for a short time.

Relations between the Muslim peoples and the Morea now became closer. At the end of 1262 the Seba-tokrator Constantine, a step-brother of the Emperor Michael VIII Palaeologus, landed in the Morea at the head of a large army which consisted mainly of Macedonians and Turks. This step-brother of the Emperor came to the Morea as administrator of the Byzantine lands there and occupied all the citadels of which William of Villehardouin had been forced to eke in order to secure his release. The Byzantine governor took up his residence in Mystra. Soon afterwards open war broke out between the Franks and Byzantines. To strengthen the latter there landed at Monembas in the spring of 1263 a new Turkish army corps of 5,000 (according to others, 3,000) mercenaries in the service of Michael VIII Palaeologus, led by two men named Malik and Shalik. We have no accurate record of the Turkish chief, who, so far as we know, were the first to appear in the Morea. They must have been either Seljuk or Turks of other descent who had no shame about selling their services to Christian rulers. The Turkish mercenaries under Malik and Shalik contributed greatly to the successes which the Seba-tokrator Constantine gained over the Franks at the beginning of 1263. Along with Greeks, mainly from Zaconia and other provinces of the east, Slavs from the Morea, Dasmuls (of Greek-Frankish descent), the Turkish mercenaries attacked from Laconia and, which was the capital of the Frankish principality. The bands of Malik and Shalik then pressed into the highlands of Skorta. Here they ravaged at will. With the approval of the Seba-tokrator Constantine, they plundered the country, carried off and slaughtered the cattle. In these circumstances the Skortians were forced to pay homage to the Byzantine emperor and to operate with his army against the Franks. Constantine's army, composed of so many different racial stocks, occupied the market-town of Veligosti (near Megalopolis) and burned it, without however being able to take its citadel; they then conquered Kalabryta and burned the famous Latin monastery of Isova. But soon afterwards they suffered a terrible defeat not far from Olympia.

In the spring of the year following (1264), the Seba-tokrator Constantine continued the war on the Franks. He had no success and was quarrelled with his Turkish allies, whose pay was six months in arrears. Malik and Shalik at once left him with their men for this reason and retreated undisturbed to the district of Karytaina. Constantine tried to win them over again but they went to William of Villehardouin who accepted their assistance. Thereupon Malik and Shalik with their followers went over to the camp of the, as they thought, generous Frankish leader in the conviction that the latter would keep their word. By the accession to the Franks of this Turkish force, the title was turned in their favour. The Turkish chiefs who were inspired by an ardent desire to avenge themselves in battle on their false employers, now advised William II of Villehardouin's knights to meet the imperial Byzantine army on the frontiers of Messenien and Arcadia. While the Frankish-Turkish army was going through the pass of Makryplagi (between Megalopolis and Kalamata, i.e. the line of the modern railway), they were attacked by an ambush of the Byzantine army, whose leader was no longer the Seba-tokrator Constantine but the strategos Alexius Phylus, Makrenos and Alexius Kabellarus. Twice the vanguard of the Frankish-Turkish force led by Ansem de Toncey had to give way before the numerous Byzantines who occupied the heights of the pass of Makryplagi. But finally they won the
hotly contested summit of the pass, from which they ousted the enemy. The Turks under Malik and Shalik followed up and completed the victory. The leaders of the army so disastrously defeated sought refuge in the neighbouring caves of Gardiki where they were be-seiged by the Turks. The latter took the caves and led their occupants prisoners to William II of Villehardouin. The latter thereupon ordered the Turks to raid and plunder the districts of Morea previously occupied by the Byzantines, notably the districts of Zacoon, Helos, Vatika and Monembasia.

After the battle in the Makryplagi pass came the news that Skortinians had again taken up arms against the Franks and stormed the fortress of Buchelet (Araklovon) and Karytaina. As the valiant Godfrey Brunieres, Baron of Karytaina, who had always been able to keep the turbulent Skortinians in check, was no longer in the Morea, William II of Villehardouin ordered the Turkish leader Malik and his men to go to Skorta to put down the rising. Terrified by the ravages and cruelties of the Turks, the surviving Skortinians submitted to the Prince of the Morea and begged for mercy which was granted them.

The Chronicle of the Morea, which has survived in four languages (Greek, French, Catalan and Italian), is the only source which tells us of the activities of the Turkish mercenaries in the Morea (1262—1265). The same Chronicle adds that the Turks in 1265 sought permission to leave the Morea and to be allowed to return to their Asiatic home. Malik took his leave in the friendliest fashion from the Prince of the Morea and began his journey home. The Chronicle however specially mentions that individual Turks preferred to settle in the Morea. They were baptised and married morean women. About the first half of the sixteenth century, there were still descendants of Malik's followers there, baptised Turks settled in Elia. It is natural to think that the modern villages in N.W. Morea of Maliki (Demos Vnopration) and Turkoehori (= village of the Turks", Demos Trinitas) owe their names to the Turkish settlers in the time of William II of Villehardouin. This prince gave two of Malik's followers who remained in the Morea the rank of knighthood and even granted them fiefs. According to the Catalan version of the Chronicle of the Morea, Malik himself married a noble Frankish lady, a widow, through the intermediacy of William II of Villehardouin. It is a historical fact that Turkish-Moreote relations date from the second half of the sixteenth century. After the death of William II in 1278 we find a reference to estates which this prince had given to his Turkish vassals and which were occupied about 1280 by the soldiers of Galiero d'Ivry, who acted for a time as governor of the Morea for Charles of Naples and Sicily. Charles I and his immediate successors in rule over the Morea had not infrequently Turkish warriors in their service. From the beginning of the sixteenth century it not infrequently happened that Muhammadan pirates from Asia Minor raided and plundered the coastlands of the Morea. Sometimes they had allies of the Christian faith, notably Catalans.

About the middle of the sixteenth century, an important change took place in the administration of the Byzantine possessions in the Morea. The Emperor Johannes Kantakuzenos in 1349 created an appanage for his second son out of these lands which he called the despotate of Mystra and which lasted till the Ottoman conquest (1349—1380). In this period fell the rule of the first despot of Mystra, Manuel Kantakuzenos, the second son of the Emperor. He assisted the Franks of the Morea to ward off the Turkish attacks which had reduced the once flourishing Corinth and the country round to such misery that the Corinthians in 1358 were forced to send an urgent appeal for assistance to their sovereign, the titular Emperor of Constantinople and prince of Achaia, Robert II. The latter gave a ready ear to their appeal. On April 23, 1358, he gave the Florentine Grand Seneschal Niccolò Acciajoli and his descendants the extensive district of Corinth as a hereditary barony. The princely family of the Acciajoli survived in the Morea and on the mainland of Greece for two centuries, during which they had much to do with Muslim peoples. A series of circumstances, including the irruptions of the Turks as early as the middle of the sixteenth century and the advance of the Ottomans, whose strength was steadily increasing, brought numerous Albanians to Greece. The first despot of Morea, Manuel Kantakuzenos, had, for various reasons, commissioned or even invited them to settle in various desolated regions where they became distinguished as warriors, agriculturists and as hunters. Thus we find them in Arcadia and Lacedonia where they seem to have come in large numbers. Later another 10,000 Albanian families were peacefully settled by another despot of Mystra, namely Theodoros I Palaeologos (1384—1407), son of the Byzantine Emperor John V. According to reliable sources, these 10,000 families left Thesaly and Acazania with their cattle and goods and chattels on account of the Turkish raids and for other reasons and reached the isthmus. There they pitched their camp and sent messengers to Theodore I with the request that they might be allowed to settle in his Morean territory. Theodore I acceded to their request and allowed them to spread over a considerable portion of the Morea. The story of G. Bosso (Dell'istoria della Sacra Religione et illustrissima Militia di S. Gio. Giao- solinitana, vol. ii., Rome 1594, p. 126—129) to the effect that the Turks had occupied Patras by 1378 and conquered the Morea shortly before must be relegated to the realm of fable. About this time, there were again great changes in the Morea. The Company of Navarre, which in 1380 had entered the service of the titular Emperor Jacob de Baux of Constantinople and prince of Achaia and were seeking their fortune on Greek soil, became after the death of the Emperor in Tarso in 1385 absolute masters of a great part of the Morea. In 1386 the Company made Captain Pierre de St. Exupery (Bordo d'F. Superan) their leader. The latter was able to extend his power and influence in the Morea by inciting the Turks and also the Greek archons against Theodore I. During the period 1396—1402 he even bore the title of hereditary prince of Achaia (which was given him instead of money by king Ladislaus of Naples). Sometimes before, a vigorous and enterprising Florentine, Nerio I Acciajoli (Sept. 29, 1394), had been playing an important part on the mainland of Greece. This man, a nephew of the Niccolo I Acciajoli, already mentioned, had acquired considerable territory in the Morea, partly by inheritance and partly by purchase. Shortly before his death he attained the height of his glory when he was appointed by king
Ladislaus of Naples as hereditary Duke of Athens and the lands belonging to it. In 1389 the Venetians occupied the important fortress of Nauplion and set about the conquest of Argos. The despot of Mystra, Theodores I Palaeologos, the son-in-law of Nerio I Acciajoli, at his father-in-law's instigation anticipated the Venetians and occupied Argos. As a result, hostilities broke out among the Christian states, which could end only to the advantage of the Turks. The despot of Mystra replied to the demands of Venice to give up Argos by saying he could only do so with the Sultan's approval. Later the Venetians joined up with the Navarrese. Through treachery Bordo of S. Superan succeeded in taking Nerio I Acciajoli prisoner on Sept. 10, 1389. The latter remained for nearly a year in the hands of the leader of the Navarrese but in the end obtained his freedom.

An epoch-making event was the great battle on the field of the blackbird (June 15, 1389) at Pristina, which decided Turkish rule for centuries in the Balkans. A Turkish army appeared in the Morea at the end of 1392 under Ewrenos Beg in order to aid, at their request, the Navarrese against the despot of Mystra. The Turks thereupon occupied a number of strongholds in the peninsula, Nerio I Acciajoli, who had been appointed governor of the Morea, now pledged himself to pay tribute to Sultan Bayazid and to he his vassal. After the death of Nerio I Acciajoli, a fatal quarrel broke out between his sons-in-law Theodores I of Mystra and Charles Tocco, during which the Turks won important successes on the mainland of Greece. The fear of the danger from the Turks probably induced Charles Tocco and Theodore I to make up their quarrel. After long negotiations with the Greek national party in Athens, who hated the Latins, Turkish forces under the Pasha Timurtash entered Attica from Thessaly. At the end of 1394 or in the first seven weeks of 1395, the Venetians occupied Athens including the Acropolis, after driving back the Turkish besiegers. Theodores prepared to advance against the Turks on the isthmus. The latter, however, defeated on Sept. 28, 1396 at Nicopolis the flower of the chivalry of Hungary, Germany, and France and thus laid the foundations for their dominion over the lands below the Danube. Bayazid thereupon decided to attack the remnants of the Byzantine empire as well as the little principalities of the mainland of Greece. He therefore sent his generals Vačkib, Pasha of Rumelia, and the already mentioned Ewrenos Beg with an army of 50,000 men to cross the isthmus again. Vačkib occupied Argos; Ewrenos Beg at the same time fell upon the Venetian possessions in Messenia. The prince of Achaea, Bordo of S. Superan, and Theodore I of Mystra found themselves forced as a result of the Turkish successes to pay tribute to the Porte. Laden with incalculable booties the armies of Vačkib Pasha and Ewrenos Beg returned across the isthmus and in 1397 even occupied Athens for a brief period. In addition to Greek sources, Turkish writers record that the "city of the wise", as Athens is frequently called in Muslim works, was taken by Sultan Bayazid's men (cf. J. II. Mordtmann, in Byzant.-Vorichr. Tabr., iv. 1103, 346 sqq.). As a result of his troubles, especially the Turkish raids, Theodores I of Mystra became utterly tired of his position. He therefore resolved to sell his towns and castles to the knights of St. John of Rhodes, who after negotiations readily purchased Corinth, Kalabryta and Mystra in the years 1400—1402. But they could not establish themselves permanently in the Morea, for the Greek national party in the country, especially in Mystra, rebelled against the sale, which the Sultan, the suzerain of Theodores of Mystra, also declined to recognise. Theodores therefore cancelled the sale and compensated the knights partly in money and partly by ceding the country of Salona and the barony of Zituni. Theodores I had been able to take these lands from the Ottomans after their defeat at Angora in 1402.

Sulujan Sulaiman I (1403—1411) abandoned any claim to suzerainty over the Morea. At this time the influence and power of the Venetian colonies in the Morea were increasing. In 1407 the Venetians occupied Lepanto. In the following year, they seized Patras and the country round it and from these two strongholds which lay opposite one another, the so-called little Dardanelles, they were able to keep in check the Turkish pirates who made the Gulf of Corinth unsafe. At an earlier date, the Albanian family of Spata had settled in Lepanto and had occasionally made common cause with the Turks. Patras at this time was ruled by the archbishop Stephan Zaccaria in name of the Pope. As he suffered a great deal from the Turks, he pledged the town and the country round it with the Venetians. The latter also occupied the fortress of Astros in Zaconia. They restored the fortifications of Nauplia and other strongholds in their possession. The Republic of St. Mark in 1406 and 1411 concluded treaties with Sulujan Sulaiman I, by virtue of which they secured their colonies in the Morea and the East generally. But in the reign of Murat II (1421—1451) danger again threatened from the Turks. The Venetians were however able to take the necessary measures for the defence of their possessions in the Morea. In the districts of Nauplia and Argos as well as in their flourishing Messenian colonies they settled numerous Albanians who loved fighting. In Corinth and Attica also the Albanians were welcomed by the Acciajoli. The Albanian element was therefore very strongly represented in the Morea in the first half of the 15th century; later they spread to the islands around the Morea. In the wars of the Greeks and Venetians against the Ottomans, the Albanians frequently distinguished themselves; on the other hand, their morals left much to be desired. To this day we still can find descendants of these Albanian colonists in the Morea and in the adjoining territories.

After the battle of Angora, at the time when Frankish power in the Morea was declining, the Byzantines vigorously resumed their efforts to reconquer the whole peninsula. Theodores I of Mystra had previously wanted, with Venetian support, to erect on the isthmus a great bulwark against the Turks which would make access to the Morea impossible for them. Manuel II Palaeologos again took up Theodores' plan and began to put it into execution with vigour. Not far from Corinth on the isthmus, which was usually called "Hexamilion" in the middle ages, he built a wall 24 stadia long from sea to sea with castles at each end and in the middle and no less than 157, strong towers besides deep ditches. The building material was taken from older walls and defences. In the course of 25 days (April 8—May 3, 1415), i.e. at a most rapid rate, the great wall was completed which, like the
isthmus itself, was called "Hexamillion"; the greatest hopes were built upon it, but they soon proved deceitful. The Turks usually called the wall Gez-
meštir. In 1416, Manuel II left the Morea after reimposing his suzerainty upon the prince of Achaea Centurione II Zaccaria and hamstringing several Græco-Albanian barons of whom he carried off with him to Constantinople.

The peaceful relations which had existed between the Byzantines and the Ottomans, under Salaiman I and Bâyazid suddenly ceased when Murâd II ascended the throne. In 1423 he ordered the celebrated Pacha Turâkhan to clear up the small states. With an army of 25,000 men, which was joined by the Duke of Attica Antonio I as the Sultan's vassal, Turâkhan set out from Thessaly to obey his master's orders. The celebrated Hexamillion wall proved an insufficient bulwark against the onslaught of the Janissaries. Turâkhan had the most of it destroyed and advanced into the Morea. The despot Theodoros II of Mystra could scarcely have checked the Ottoman flood which swept into his land, plundering and murdering. Murad's lieutenant Cardilki (on the Makryplagi pass) and other Byzantine and Latin towns fell into Turâkhan's hands. But he suffered one serious reverse. The Moreotes caught a portion of his army in the pass of Lonsari, where they were victorious and took much booty or, to be more accurate, recaptured their own property. In the Arcadian town of Tavia (the modern Dovia, on the road from Tribolitza to Wytilna), the Albanians assembled and chose one of themselves as their leader and decided to attack Turâkhan on his way back from the south. In the battle that followed, the Albanians did not stand their ground but fled. Turâkhan pursued them and slew many besides taking some 600 prisoners. These he put to death and, according to the Turkish practice, built towers of their skulls. Heavily laden with plunder, Turâkhan returned soon afterwards across the isthmus to Thessaly. He had however in 1423 not yet completed Murâd's order to subdue the Christian states of the Morea.

Soon after the withdrawal of the Ottomans, Manuel II Palaeologos besought Murâd II for peace and concluded a treaty with him, by which the despot of Mystra was to pay an annual tribute of 100,000 hyperpyra to the Sultan and further to declare his readiness to give up the Hexamillion wall. Venice, whose colonies in the Morea had suffered much from Turâkhan's raid in 1423 and were continually troubled by Muslim pirates, recommended all the Christian powers interested to form a united front. This appeal for unity, however, fell on deaf ears. The various Christian rulers of the Morea quarrelled among themselves in spite of the critical times and even took up arms against one another. The Albanian inhabitants followed their own inclinations entirely and even began separatist movements of a political nature.

It is remarkable that the Greek political consciousness was strengthened in the Morea in this period of political confusion. Mystra became the centre of a kind of renaissance and a centre of learning and study of classical antiquity. In this period there appeared in the Morea a great scholar who was a philospher of the Platonic school and also a fervent patriot of radical tendencies in social and political reforms. He was Georgios Gemistos or as he called himself "Plethon". His teaching was of a mystical nature. It was directed against Chris-

anitary, indeed against every positive religion. His followers who are said to have been numerous, formed a secret society. Plethon (d. between Feb. 1449 and July 1450) had also lived in Brussia where he had as a teacher a few named Elisios, who rejected Christianity, Judaism and Islam as the positive religions. In the reign of Sultan Bâyazid, he was burned at the stake as a heretic about 1390.

It is supposed that the teaching of Plethon and the secret society thus formed was suggested by a similar school of thought in old Turkey, that of the "akhbus" (cf. Fr. Taeuscher, in Isl., xvii. [1929], 236-243; Islamica, iv. [1929], 1 sqq.; Byzantinisch-

Neuropische Jahrbucher, viii. [1929-1930], 100-113 and Nikos A. Bees, ibid., vii. [1928-

1929], 237). Plethon's works were disseminated not only among the Christians west and Greek east but also among the Turks. The MS. Enderum 1896 in the library of the Top Kapu Serai contains an Arabic translation of a fragment of Plethon's chief work Nomos. This translation is said to have been made by Sultan Mehmed II and is anonymous (for Ahmad Makryplagi, the "Venistas" [Plethos], in Bull, d' l' Inst. d' Egypte).

The son and successor of the Byzantine Emperor Manuel II, Johannes Palaeologos (1425-1448), concluded a treaty with Murâd II. The Turkish danger now threatened the Morea more seriously than ever. Since Nov. 1427 the despot Constantine Palaeologos had been ruling there. Alongside of this vigorous, enterprising and self-sacrificing ruler (afterwards Byzantine emperor), we find at this time also his brothers Thomas and Demetrius as princes in the Morea. They had less ability and strength of character and facilitated the conquest of the peninsula by the Turks. The three brothers, especially Constantine, succeeded in bringing the whole Morea except the Venetian colonies under Greek rule; but there was no unity among them. In 1429-1430 Constantine took Patras, which at this time was held by the archbishop and clerical prince Pandolf Malatesta as a vassal of Murâd II. The Sultan protested but Constantine was able to dispose of the claims of the Sultan and his advisers by a skilful ambassador. This envoy was Georgios Phrantzes, whose chris, an is exceedingly im-

portant source for Greek and Turkish history in the sixteenth century. In 1431 Turâkhan again reached the northern frontier of the Morea to destroy the Hexamillion wall a second time, for it had been restored by the Palaeologos. The first care of Constantine who now ruled over the greater part of the Morea and cherished ambitious plans, had been to restore the defeences of the isthmus. His aim was to unite the Morea with the mainland of Greece and if possible to found a Greek national state. In the west a new league had been formed against the Turks by Pope Eugenius IV, Venice and Hungary. At the same time the ri-ing of the Albanians under Skendarbeg roused a strong feeling against the Turks and encouraged the Christians. Constantine Palaeologos who at the request of the Pope, Venice and Hungary had joined their league against the Ottomans in 1444, crossed the isthmus with a well equipped army to invade the mainland of Greece. He had con-

siderable success. He forced the Duke of Athens Nero II Aeciajoli, who was a vassal of the Sultan, to recognise his suzerainty and to pay an annual tribute. He occupied many towns (including Thbes, Livadia, Zitum and Lidoriki) and encouraged the Christians of the Piadius to take up arms against
the Turks of the Thessalian plain. An Albanian clan settled in Phthiotis, whose autonomy had been recognised by the Sultan, joined the victorious Palaeologoi. The latter also occupied the little town of Witrimitra (on the Gulf of Corinth) which the Turks had ceded to the Venetians. He installed a chief of the Pindus Wallachians who lived in Fanar (at the foot of the Ithome mountains).

The battle of Barna (Nov. 10, 1444) brought a change in the Balkans which was fateful also for the Morea. The Turks reinforced once again turned their attention to the south. Nero II Accajoli of Athens found favour with Murad II after most humbly promising to be his vassal and to pay the usual tribute. In order to save their colonies in the Morea, the Venetians also made a treaty of peace with the Turks soon after the battle of Barna. It thus came about that the Palaeologoi were left to face the Turkish onslaught quite isolated, a danger which they apparently did not clearly realise. After Nero II Accajoli had again recognised Turkish suzerainty, Constantine Palaeologus with a large force invaded Attica and besieged Athens. The consequence was that Nero II Accajoli turned for assistance to Murad II. The latter demanded that Constantine should evacuate not only Attica but also all the Turkish territory which Constantine had seized in the course of 1444 on the mainland of Greece and in southern Thessaly. Constantine repulsed to Murad II through his ambassadors that he would keep the lands he had won. Murad II was furious at this manly attitude of Constantine II. Incited by Nero II and Turakhan, the Sultan resolved on a campaign into the Morea. By his command powerful Turkish forces were assembled in 1446 at Serres in Macedonia from Europe and Asia. Constantine Palaeologus and his brother Thomas also raised a very large army for that time which was assembled on the isthmus. In the winter of 1446, Suljan Murad II led his army from Macedonia to the isthmus, without meeting opposition. He encamped at Manglea (the modern Mykrit) and began to get his artillery and other arms ready. On his able picked staff was the experienced old Turakhan who, as already mentioned, had been twice in the Morea and therefore knew the country and the people. According to the historian Chalcokondyles (ed. Darké, ii. 114), Suljan Murad's camp on the isthmus was the best organised that had ever been known. A bloody battle developed for the gateway to the Morea. The Turks with their artillery bombarded the Hexamilion wall for days. A Serbian Janissary succeeded in leaping over the wall under the eyes of the Sultan and others followed him. The defenders so far as they were not killed by the Janissaries took to flight in a panic. The wall was thus in the hands of the Turks, who entered the Morea either through the gates or through the breaches their guns had made. In the Chronicle of Geoglossos Phrantzes the date of the capture of the Hexamilion wall, the "last bulwark of liberty in Greece", is given as Dec. 10, 1446. The Chronicon breve of Ioanninicus Cartanous gives Dec. 14, 1446, a date which has been accepted as correct by most modern historians.

The brothers Constantine and Thomas endeavoured to collect the scattered and flying troops, but in vain. The brothers therefore fled into the interior of the Morea. Sultan Murad II ordered Turakhan to pursue the Palaeologoi with 1,000 men and he himself with his army marched along the south coast of the Gulf of Corinth towards Patras. He burned the lower town, laid waste the country as far as Clarina and then turned eastwards to Corinth. In the meantime Turakhan had returned from his pursuit of the Palaeologoi with much booty and many prisoners. The Palaeologoi now began to negotiate for peace with the Sultan. They declared themselves ready to cede the lands in Greece proper and in Thessaly which they had acquired in 1444 and to pay an annual tribute. On these conditions the Sultan left them in possession of their lands in the Morea. The Emperor John VIII Palaeologus died on Oct. 3, 1448, and on Jan. 6, 1449 his brother Constantine, the despot of the Morea, was solemnly hailed as Byzantine Emperor in the Metropolitan church in Mystra. Of course he ascended the throne with the permission of Murad II, whose tributary he was. An event of importance in the history of the world soon afterwards took place on the Bosphorus. On May 29, 1453, Constantineople was taken by the Turks; the valiant Constantine died defending the city and thus the line of Byzantine emperors came to an end. When his brothers Thomas and Demetrius heard of the fall of Constantinople they sent envoys to Muhammad II asking to be allowed to retain their lands in the Morea, on payment of the usual tribute. After many humiliations, their request was granted them. The remainder of the period of Palaeologoi rule was a brief one and their authority only nominal. In 1455 30,000 Albanians in the Morea rebelled against the Palaeologoi. In July 1454 Venice sent Vettore Capello to the Morea, to settle certain business of the republic and at the same time to make peace between the Palaeologoi and the Albanians. But their effort failed. In the meantime Muhammad II had ordered Turakhan's second son Omar to intervene in the Morea on behalf of the Palaeologoi (end of 1455). He succeeded in putting down the Albanians. The Palaeologoi were now able to enjoy their lands as vassals of the Sultan. For a few years they paid their tribute regularly, then they refused to do so with various excuses. At the same time they endeavoured to form alliances with western rulers against the Turks, a thing to which the Sultan could not but remain indifferent.

The rule of the Palaeologoi was gradually approaching its end. The west scarcely troubled itself about the brothers of the last Byzantine emperors, who were not united and yet had to gather their last forces against the Turks. When a fleet belonging to the Pope Callixtus III appeared in the Aegean, Thomas Palaeologus took courage and announced his refusal of tribute to Muhammad II. Already the latter had received no tribute from the Palaeologoi for the past three years in spite of repeated warnings. He therefore thought it was time to settle matters himself in the Morea and to teach his rebellious vassals a lesson. In the middle of May 1458, Muhammad II came to the Morea with a large army, laid siege to Tarsus, a village in two parts N. W. of Nemea and N. E. of the Lake of Pheneos, and forced it to capitulate. The citadel of Rupeli in Arcadia, to which many Greeks had fled with their women and children, surrendered after two days' stubborn defence. Muhammad II turned from Arcadia to N. W. Morea. Patras, the headquarters of Thomas Palaeologus, was abandoned
by its citizens. The garrison left in its citadel did not dare to offer resistance. The Sultān treated the town of Patras very generously. By July 1458 Muḥammad II had reached Corinth after taking Basitza (Neaon) on the way. On Aug. 6, 1458, its commanders left the citadel to negotiate its surrender with the Sultān. The loss of Corinth to the Turks seriously alarmed the Palaeologoi. The nego-

by itself with 109 ziamets and 342 timar. Down to about 1570, the residence of the governor was by turns in Corinth, Loundar or Mystra, then in Nauplion and in 1780–1821 in Tropothra (cf. below). The division of the country under Turkish rule, usual from the middle of the xvith century, into 22 or 25 provinces or beyliks is partly suggested by nature and partly a survival of the older Byzantine organisation.

There is no doubt that the Turks introduced their own feudal system after their occupation of the Morea. The Turkish-Muslim element in the country was thus able to expand. Even during the first period of Turkish rule (1458–1687), other factors contributed to this, like the immigration into the Morea of Muslims from other parts of the Ottoman empire, the conversion of Christian Moreotes to Islam, the carrying off of Christian women into Turkish harems, etc. While in the north of the Balkan Peninsula and in Asia Minor, countless Christians had adopted Islam either voluntarily or under compulsion, the Christian element in the Morea at the time of the Turkish conquest was morally strong enough to remain intact and was faithful to the Christian religion. comparatively few Moreotes became Muslims. These were either Albanians, who always adopted Islam more readily (cf. thereon: C. Jirele, Studies sur Geschichte und Geographie Albaniens im Mittelalter, Budapest 1916). As in Asia Minor, Bosnia, Crete etc., so in the Morea also members of the nobility and middle classes, especially those of Frankish origin, had adopted Islam in order to retain possession of their estates. There were also in the Morea crypto-Christians, as well as people whose Islam was very superficial. These were usually called murādat (impure) in the Morea. These superficial Muslims, who continued to retain much that related to Christian worship, lived mainly in what is now the province of Olympia and were almost all exterminated during the Greek War of Liberation (cf. the articles by Phivos Chrysanthopoulos-Photakos in the Athens periodical Epistēmē, vol. ii, 1886, p. i). The Barduniots were also for the most part superficially Muslims. As to the survival of the Greek Moreote element, there are theories current in modern literature which can hardly be right. It is said for example that Sultān Muḥammad II’s ordinance regulating the relations of the Christian subjects to the Ottoman empire benefited also the Christian Moreotes. But it is wrong to credit Muḥammad II with any such ordinance (cf. Fr. Giese, in Isl., xix., 1931, p. 264 sqq.). It is however a historical fact that the Greek Orthodox Church contributed a great deal to maintain the Christian element in the Morea as in the East generally. The Christian clergy of the Morea were frequently able to maintain a privileged attitude towards the Turkish officials and thus to further the interests of their co-religionists. The Christian Moreotes were also often cleverly able to avoid paying the taxes their children taken by the Turks for the Janissaries. The Christians of the Morea held this, the “blood tax”, to be the greatest degradation they suffered under the Turkish yoke and a dreadful disgrace to their race. After the death of Sultān Sulaimān the Magnificent (1566), the lot of the Christian Moreotes gradually became worse. Ownerless lands were confiscated by the Sultān and given to his soldiers or allotted to the mosques as wa’fs or given to private individuals as gifts. During the
long period of Turkish rule in the Morea, the largest and best part of the land was in Turkish hands. As a rule, Christians were not allowed to own large estates. The peasants had to pay over annually the fifth of the produce of the land and pay all kinds of annual taxes, were never sure of their property, nor even of their wives and children, and suffered unspeakably in every way from arbitrary Turkish rule.

In view of the abuses of the Turkish authorities, the Christian Moreote preferred to abandon the fertile regions and retire to barren lands and into the mountains, where he could breathe more freely and more easily escape the despotism of his rulers and shape his course of life a little more pleasantly. We thus find that within the period 1560-1821 the mountains of the Morea were predominantly inhabited by Christians. Of the factors which contributed to the survival of Greek culture in the Morea during Turkish rule special stress must be laid on the political concessions which were made to them by the Ottomans. These lay mainly in the freedom to govern their own communities. Greek local government, as we find it during Turkish rule, is said to have been a continuation of old Greek institutions. In the period from 1715 to 1821, if not earlier, the freedom of the Greek community was not infrequently limited by the Turkish authorities. They interfered indirectly in the appointment of local officials and made propaganda for their favourites. It even happened that the Kojjabaghis, through the influence of the Turks, were not only appointed for a number of years, but also able to hand down their offices to children and grand-children. Undoubtedly, those Moreotes who were better off who lived in townships and villages which were allotted to the several places of Islam or to members of the Ottoman imperial family. The town of Dimitsana in Gortynia for example was originally a wall of Mecca under the protection of the Sultan's mother.

The peace between their Turkish rulers and Christians could only be external. In the Morea also there were the so-called "Klefs" who would not submit to the existing government and took up arms against it. Against them the Turks used the Armatoll force, a gendarmerie of Christians organised on military lines. In the period from 1715 to 1821 the Turks for the security of the country built watchhouses (deribent) in which a garrison was stationed to watch those who passed, especially at the passes. The Derbeneka (kiaruk deribent) between Corinth and Argos and the Derbenka of Lontari, the passes between Arcadia and Messenia (Makriplagi, cf. above) were all very important. The Mainotes in their wild mountains felt little of the Turkish yoke which weighed heavily on the rest of the Morea. The Mainote tribes who were distinguished for their valour, were from 1460 to 1821 in constant rebellion against every foreign power. The Porto found itself forced to recognise officially the independence of Maima, in return for which the Mainotes were to pay tribute, but did not always do so. Although the Christians in the Morea were exempt from military service, the warlike spirit which they had so often displayed in the Frankish period continued to survive. An eloquent testimony to their love of freedom was the fact that they continually took up arms against their Turkish oppressors, sometimes alone, sometimes with allies.

For a long period after the year 1460, when Sultan Muhammad II had made the greater part of the Morea a province of his empire, this land became the scene of desperate fighting between Turks and Venetians, in which the latter had the majority of the Christian population on their side. The great champion of the Christians, Skanderbeg [q.v.], the leader of the Venetian mercenaries, died in 1468. Two years later, Turkish rule over Euboia was firmly established and they could record further successes in the Morea.

In the spring of 1499 a new war between Venice and Turkey broke out. On Aug. 29-30, 1499, Lepanto had to surrender to the Turks. In 1500 Sultan Bayazid II ordered Yağhiş Paşâ to blockade Modon with his fleet, while he himself set out by land from Constantinople with a well-equipped army for the Morea. On Aug. 9, 1500 (according to Hâdivî Khalifa: on 14th Muḥarram 916), Modon [q.v.] fell after a long siege in the presence of the Sultan. Bayazid II turned the cathedrals at Modon and Koron into mosques and offered up thanks in them and gave these towns to Mecca as ważfs. He then paid attention to the defences of the newly acquired towns and to the repopulation of Modon. In 1502-1503 Venice concluded a treaty of peace with Turkey in which she surrendered her Messenian colonies and also Maina, which had in the meanwhile been taken by a son of Krokondios Kladas in name of the Republic. In 1532 the Morea became the scene of notable battles. The emperor Charles V had decided to intervene in the Morea. A considerable fleet assembled in Messina in June 1532. The Pope and the Knights of St. John, the Genoese and the Sicilians also showed a readiness to join in the expedition, the leader of which was the Genoese Andrea Doria (Andreusius).

After repeated and costly attacks, the allies succeeded in taking a considerable part of the lower town of Koron. The Turks who had retired into the citadel of Koron were forced to capitulate. From Koron Andrea Doria turned his attention to Patras, which also capitulated. He then returned with rich booty. Sulaimân I, who was now on the throne, gave the sanâḳ of the Morea to Muḥammad Beg, a son of Yağhiş Paşâ and commissioned him to reconquer the fortresses taken by Andrea Doria. Sulaimân I declared war on Venice in 1537. Kâsim Paşâ, the sanâḳ-beg of the Morea, was commissioned to conquer the Venetian colonies in the Morea. Nur al-Dîn Barbarossa had inflicted several defeats on Venice in her colonies, and she had besides every reason to complain of the Venetian tendency to populate once more their new possessions in the Morea. About 1550, there were about 42,000 Christian families in the whole Morea. We know nothing definite of the Muslim population at this time. It may be assumed however that, then as later, Muslims were in a minority. Even when Ottoman power was at its height, the oppressed Moreotes, always desirous of liberty, rose against their oppressors. In the xviii century the lot of the Christians in the Morea is to be found unbearable. Two Turkish sources of the xvi-xvii century are of considerable importance for the history of the Morea. These are the "Survey of
the World" (Qizhân-name) of Hādji Khalīfa (d. Oct. 1657) and the Travels (Siyyâhat-name) of Ewliya Celebi, who visited the Morea in 1668 and 1670. There is no fuller work on the Morea than the latter among Muslim sources. Ewliya Celebi's narrative was based on personal observation and is distinguished by a vividness of description and to some extent by a tendency to exaggerate. In the treatment of the Morea, given in his vol. viii., it is hardly possible to trace his literary sources. What he tells us about Muslim buildings and religious orders is of importance, and his account of the Christians is also of value. He naturally takes the Ottoman point of view (cf. Ewliya Celebi, Siyyâhat-name, vol. viii., Stambul 1928; Fr. Labinger, G. O. W., p. 219 sqq.; Fr. Taeschner, in H., vol. xviii., 1928, p. 299 sqq.).

When Ewliya Celebi visited the Morea, various Muslim orders and corporations had settled there. They included jāzirā, brotherhoods, dervish orders, some of which were anti-Islamic, and Şîxi Bekâşıyane. The existence of such brotherhoods, which were widely disseminated in the Greek east from the xvi century, can be proved for the Morea as late as 1828 (cf. F. W. Hasluck, Christianity and Islam under the Sultans, vol. i.—ii., Oxford 1929).

At the end of 1683 another coalition against the Morea was formed by Venice, Poland, Germany, Russia and the Pope. Francesco Morosini was appointed by his government to begin operations against the Turks as speedily as possible. He was given command of the allied naval forces. After 42 days of fighting by land and sea, Koron was stormed by Morosini. In the period from the late summer of 1683 to July 1686 Morosini, Count Otto Wilhelm von Königsmarck and Haanbal von Degenfeld took from the Turks Old and New Navarino, Kalamata, Modon, Zernata, Passava, Celefa and Viitlo as well as other fortified places in southern Morea. The Serasker Isma'il Pasha was defeated in several battles and had to retire to the interior of the Morea. Hasan Pasha, who was in Maina, negotiated with Morosini and surrendered voluntarily. The Turkish garrisons of many towns, on the other hand, offered a desperate resistance. It cost the Venetians and their allies much time and heavy sacrifices to take Nauplion. The capture of the latter contributed a great deal to increase their confidence. By the end of 1687 Morea up to Monemvasia was Venetian. Continued Turkish raids, however, continued to disturb the security of the peninsula. By the peace of Connaught (Jan. 26, 1699), the Porte had to cede the Morea to Venice. The seas of the Morea and of the mainland of Greece were now open to Turkey as well as to Venice. For the last period of Venetian rule in the Morea (1699—1715 or 1718), the reader may be referred to L. Ranke, Zur venetianischen Geschichte, Leipzig 1878, p. 277—361. The services of Venice to the peninsula in the period 1688—1714 must not be underestimated, especially as she had found it at a very low level.

The occupation of the Morea by the Venetians now attracted the attention of western scholars to the celebrated peninsula. The Turkish empire, which had been able to profit a good deal by the troubles in Europe at the beginning of the xvii century, resolved at the end of 1714 to reconquer the Morea. Many Greeks felt that the Venetians had not respected their rights in religious and family matters, were hostile to their own government and even wanted the Turks back again (cf. De la Montray, Voyage, vol. i., p. 462). Except for a few larger towns which offered a resistance, the land was easily taken by the Turks and so the Morea once again became Turkish. The history of this conquest was written by several contemporary writers.

The peace of Passarowitz (June 10, 1718) ceded Morea finally to the Turks. We are most fully informed about their rule from 1718 to 1821. The extant sources, especially in Greek, enable us to study the period to the smallest detail. After 1715 many Christians again adopted Islam. A census taken in 1720 gave 60,000 male Christians of 11 years of age and over. The Muhammadan inhabitants are said to have been in the minority at this time. On the other hand, the Turkish element increased in the period 1709—1780 while the number of Christians diminished considerably, as did the total number of the population. From 1715 to ca. 1750 the Morea was governed by a Pašha, the Morowales, who had three muqtaš and the title of Pasha. He was usually assisted by two other Pašhas, who were under him and were granted two muqtaš. A change was made in 1780. From this date to 1821 the government of the Morea was no longer given to a particular Pašha but to a simple muqtaš of the Porte, who was however given the title of Pasha. The higher offices were held by a muqtabeledi, a defterkachya and a Christian dragoman. Under the official system of administrative divisions, the Morea was divided into 22 districts. In this period Christian local autonomy gained more strength. After the many disappointments they had suffered from the western powers, the Moreotes now looked to Russia to liberate them from the Turkish yoke. From the time of Peter the Great the bonds between Greeks and Russians had been growing stronger. In the middle of the xviii century, Russian propaganda increased very much among the Orthodox of the Balkans. Under Catherine II, the Russians easily succeeded, with the help of Greek agents, in stirring up Greek notables and clergy in the Morea to rebel against the Turks. Among these the most distinguished was the influential and wealthy Panayotis Mpenakis of Kalamata. This secret propaganda did not escape the Turks. By 1767—1768 the Christians were preparing for rebellion. On Oct. 15, 1768, Turkey declared war on Russia. Russian fleets, whose equipment left much to be desired, appeared in the Mediterranean. On Feb. 17, 1779, Theodoros Orloff landed at Vitylo and received a warm welcome from the Mpanites; but as the ships had neither sufficient men, guns or munitions, the first enthusiasm of the Greeks soon died down. On July 21, 1774, a treaty of peace was concluded at Kucuk Kainardji between Russia and Turkey. Full religious liberty and other concessions were granted to the Christian subjects of the Turks. About three months later, the Porte granted a general amnesty to the Christians of the Morea and resolved to clear the land of Albanian bandits. After 1770 the Porte had confiscated a number of Christian estates in the Morea and granted them to mosques and imaretars. By the treaties of Kucuk Kainardji and Kaimalı Kavak (10th March 1779), the Turks now promised to return these or to compensate their owners, but the promises were not kept. Nevertheless, the Moreote

BOOK OF ECCLESIASTES
EDITED BY
SAMUEL A. B. MERCER,
M.A., Ph.D., D.D.
Professor of Semitic Languages and Editor in Trinity College,
University of Toronto, Laureat de Faculté, Fellow of the
Royal Asiatic Society, Rector of the School of Oriental Research.

With Four Plates. 8vo, cloth, pp. xi, 11, 93. Price 8s. 6d.
(ORIENTAL RESEARCH SERIES, 6.)

THE DAMASCUS CHRONICLE
OF THE CRUSADES
Part 1 - From 1097 to 1132. Part 2 - 1132 to 1160.
Extracted and translated from the Chronicle of Ibn al-Qalanisi.

BY H. A. R. GIBB.

8vo. cloth. Price 15s.

MEKKA
in the latter part of the 19th Century
Daily life, customs and learning of the Moslims of the East-Indian Archipelago

BY C. SNOUCK HURGRONJE, Litt.D.
Professor of the Leyden University.

TRANSLATED BY
J. H. MONAHAN,
formerly H. M. B. Consul at Jeddah.

With twenty Plates and two Maps. 8vo, cloth, pp. vi, 309. Price 20s.

THE BUDDHA'S GOLDEN PATH
A manual of practical Buddhism, based on the teachings and practices of
the Zen Sect, but interpreted and adapted to meet modern conditions,

BY DWIGHT GODDARD.

With three plates and a frontispiece. 12mo, cloth, pp. x, 214. Price 4s.

LATEST CATALOGUE ISSUED. BIBLIOTHECA ORIENTALIS XXXIII
Catalogue of New and Second-hand books on the Languages, Literature,
People, History, and Geography of the Far East. (Gratis on application.)

LUZAC & Co. 46 GREAT RUSSELL STREET, LONDON, W.C. 1.
(OPPOSITE THE BRITISH MUSEUM)
Additions and Corrections

P. 432b, l. 11 ab infra, add.: According to Ibn al-Athsir (ed. Tornberg, i. 314, 375, cf. Yakut, iv. 294) Kusmîn deposed al-Mundhir b. Ms' Saltama because of his refusal to accept Mardakism and appointed in his place the Kindite al-Hārith b. 'Amir, who had embraced the new faith. Whatever may be the truth, the relations between the king of Persia and the Arabs have been influenced by Mardakism.

P. 496b, line 11, 12 ab infra, read: Tanur who stayed in Balat (Milet) on his return from Smyrne in the winter after the battle of Angora (1402) (Oxen, p. 96, cf. Bosan, various readings).

P. 504b, l. 19: instead of Nukai, read Nukat.

Christians benefited considerably by the treaties between Russia and Turkey; this was not however the case with the treaties later concluded (June 10, 1783 and Dec. 29, 1791). The day the Christians of the Morea to trade under the Russian flag contributed to their economic expansion in the period 1775–1821. Intellectual relations between western Europe and the Greeks of the Morea became closer and closer after 1790. A new generation grew up among the Greeks of the Morea and other provinces. Since the peace of Paris of 1815, the Moreotes and other Greeks had become convinced that only their own liberation could save them of the Turkish yoke. Careful preparations were made in anticipation of the right moment. In the spring of 1821 open rebellion broke out among the Greeks of the Morea, when the Turkish governor Khurhad Pāshā was besieging the rebel 'Ali Pāshā at Yanina. Soon after the beginning of the rising, in which a prominent part was played by Theodoros Kolokotronis of a famous Klef family, the Moreotes were masters of the lowlands and even occupied several towns and fortresses. In July, the Porte commissioned Ibrahim Pāshā, the adopted son of Mehmed 'Ali of Egypt, to put down the Greek rising. Ibrahim Pāshā landed his forces in Messenia. He was able to restore Turkish rule over most of the Morea, but he failed to put down the Greek rebellion. In the meanwhile, philhellenism had made progress in Europe and America, and it thus came about that the cabinets of Europe began to take an interest in the question of Greek freedom. On July 6, 1827, England, France and Russia concluded a treaty in London, by which the Morea and other parts of the Greek mainland were to form an independent principality but to pay tribute to the Porte. The Turks insisted on their point of view and declined the interception of the great powers as regards the rebel Greeks. On Oct. 20, 1827, the combined fleets of the above mentioned powers destroyed the Turko-Egyptian fleet at Nava-rin. On Jan. 18, 1828, Johannes Kapolistias came to Nauplion, having been elected President of the Greek Free State by the National Assembly at Troizenoe. On Aug. 6, 1828, England concluded a treaty with Mehmed 'Ali of Egypt for the evacuation of the Morea by the Egyptian troops. French troops, led by General N. J. Maizoi, soon afterwards landed in Messenia by order of Charles X to drive the Turk-Egyptian troops out of the Morea. In the autumn of 1828 Ibrahim Pāshā withdrew to Egypt after turning the Morea into a heap of ruins during his 3½ years in the Peninsula. After long diplomatic negotiations, much quarrelling among the great powers and disagreement between the Moreotes and the other Greeks, Prince Otto, the second son of the philhellenic Ludwig of Bavaria, landed at Naupilon on Feb. 6, 1832 as the first king of Greece. Henceforth the Morea formed a part of the kingdom of Greece. During the rise of 1821–1827 and later, many Moreote Muslims adopted Christianity. To this day, many buildings and inscriptions and especially place-names recall the days when the Morea was under the Crescent.  

(NIKOS A. BEES) [BnE]  

MORISCOS, (MORISCOS), the name given in the country after the capture of Granada by the Catholic Kings, Ferdinand and Isabella, on Jan. 2, 1492 and the dethronement of the last ruler of the Nasrid dynasty.  

It is mainly from Spanish sources that we learn the history of the Moriscos down to their final expulsion from Spain. Arabic texts relating to them are very rare: the only record at all detailed is that of the Maghrībi al-Maṣṭar, a contemporary of the exodus of the Moriscos, in his Nafīṣ al-Thīb.  

In proportion as the Spanish "reconquest" proceeded, groups of Muslims gradually increasing in

THE ENCYCLOPAEDIA OF ISLĀM, III.
From the beginning of the xvi century, Islam was definitely uprooted from Iberian soil. According to the Arab authors, the great exodus at the beginning of the xvirh century was a most cruel hardship for the Moors. A large number died on their enforced journey. Many went to France, from which they tried to reach Muslim lands. A few colonies of Muslims from Spain settled in Egypt and Constantinople. But the majority went direct from Spanish ports to North Africa, their nearest refuge, where they were known as Andalusis and where they were not always welcomed, at least in Morocco, with open arms. The principal settlements were those at Sfax and Rabat on the one hand and Tetwân on the other, where their descendants still form the most prosperous and most industrious section of the population. The Andalusis of the seaports of the Atlantic coast of Morocco soon began to devote themselves to piracy: the celebrated Moroccan corsairs were almost all Moors, who had retained the use of the Spanish language. On the other hand, the Moroccan Sultans organised corps of picked troops from the Andalusis and they played a prominent part under the Saûdians, especially in the conquest of the Sûdân. There was also very soon a large colony of the Sierra Nevada Moors, who settled in the towns of Temucen, Oran and Algiers. At Tunis they were well received by the Dey Uûmân: they settled together in two quarters which took their name (cf. TUNIS, iv., p. 886). Those who had not been town-dwellers settled in little villages which soon became prosperous and still have a characteristic Spanish look. Such are the villages of Solmân, Grombalía, Dèjedia, Zaghwân, Teburbba, Testur and Gafét el-Andilés (Kâât al-Andalûs).

(E. Lévi-Provençal)
MOROCCO, a country and Muslim state of Northern Africa. The name (Spanish Marruecos, French Maroc) is a corruption of Marrakesh, the largest town in southern Morocco [see the article Marrakesh].

1. Geography.

Morocco occupies the western part of Barbary; it corresponds to the Maghrib-al-Alkā of the Arab geographers [see the article MAHRIB]. Lying between 5° and 15° W. longitude (Greenwich) on the one hand and between 26° and 28° N. latitude on the other, it covers approximately an area of between 500,000 and 550,000 square kilometres. On the North it is bounded by the Mediterranean, on the West by the Atlantic and on the South by the Sahara. On the eastern side it stretches to the Tell and to the plateau of Oran. The boundary which separates it from Algeria is quite conventional and fixed definitely only on the northern side, for a length of 80 miles, from the mouth of the Wādī Kīs to Thenyet-al-Sūt.

Although Morocco forms one with the northern part of Africa it is chiefly oriented to the West. It is, one might say, the Atlantic slope of Barbary; it is nevertheless a continental country. The coast does not lend itself to a maritime population; the Mediterranean coast is steep and inhospitable, the Atlantic coastline straight and lacking in natural shelters. The estuaries of the rivers are of very little value because of the sandbars which obstruct their entrances. The geological structure is somewhat complicated. Below the folds of the primary age, of which there still exist much eroded evidence covered by secondary deposits, have risen strata contemporary with the Alps. The actual relief which has resulted from these movements of the earth's surface and from these successive modifications consists of folded mountain chains, plateaux and plains. The chains are two in number, the Rif and the Atlas. The Rif is the continuation of the Anti-Atlas from the other side of the Strait of Gibraltar of the Baetican Cordillera [cf. Rif]. The Atlas chain forms the backbone of Morocco. It breaks into the High Atlas oriented West-North-East, linked by the volcanic massif of Sīrāw to the Anti-Atlas which lies more to the South, and also to the Middle Atlas running in a diagonal line from the South-West to the North-East, as far as the country of the outer foothills of the Rif, from which it is separated by the corridor of Tārā [see the article ATLAS]. From these different chains stretch plateaux. Those of the East connect the High Atlas to the Saharan Atlas of Algeria; those of the West gradually descend towards the Atlantic. Amongst the latter some are only the vestiges of the primary layer raised and eroded; others are composed of sedimentary deposits of varying origins. In consequence of the oblique orientation of the middle Atlas, which gradually draws away from the coast, the plains, which occupy in Morocco a more important place than in the rest of Barbary, lie mainly on the Atlantic side. They are composed of two series, the one stretching diagonally from the mouth of the Wādī Temsīf to that of the Muluya (the sub-Atlantic plains, the plain of Sebūl, the corridor of Tāzā, the plain of the lower Muluya). The other stretches to the foot of the High Atlas (Hawz of Marrakesh) and disappears in the heart of the middle Atlas.

Climate. The climate of Morocco has been defined as "an Atlantic variety of the Mediterranean climate" (Gentil). This however must not be taken to apply to the whole of the country; the different regions differ as much in regard to temperature as in the distribution of rain. On the Atlantic coast the climate is relatively mild in winter and cool in summer; only small differences are recorded between the coldest month and the warmest (5°7 at Mogador and 10° at Rabat). In the interior on the other hand, the seasonal variations and even the daily ones increase the farther one goes inland. They become excessive under the influence of convection currents. The climate of Morocco where the climate is distinctly continental. The rainfall is equally lacking in uniformity. Brought by the West and S.-W. winds, the rains are abundant in the autumn, the winter and the beginning of spring but they are very rare during the summer. The Atlantic coast has everywhere a copious rainfall although the quantity which falls decreases as one goes from North to South (Tangier: 32 inches, Casablanca: 16 inches). It also enjoys the benefit of an atmosphere which is saturated with moisture even in summer. The interior is not so well served. The rains diminish in quantity from West to East. The mountain masses always form an exception. They condense the moisture in the form of rain and even snow which, although it is by no means perpetual, nevertheless covers the high summits of the Atlas mountains until the beginning of the summer. Eastern Morocco on the other hand, isolated by the barrier of the Middle Atlas, is not subject to oceanic influences and only receives, except in the immediate neighbourhood of the Mediterranean, rare and irregular downfalls of rain.

The flora reveals a striking fashion these variations of climate. Forests of evergreen oak, of oak and of cedar clothe the peaks of the High and the Middle Atlas and of the Rif. The cork tree is found in extensive forests in the massifs of Za'īr and Zayān and as far as the region of the Atlantic (forest of the Ma'mūra). The thuya and the arganier (a tree peculiar to the S.-W. of Morocco) are already more disseminated. Poplars, willows, elms and tamarisks form a fringe of verdure along the wādīs. The olive tree is met almost everywhere in its wild state. But, as the rain-fall decreases, the forest gives place to scrub where the jujube tree and the mastic abound, then to prairie and steppes. The prairie, which hardly goes beyond the limits of the maritime plain, is the home of plants which are used for fodder and of bulbous plants. The steppes is the home of shrubs and bushes (amarak, drin, alfa) which are almost adapted to a dry soil and to extreme variations in temperature. The steppes cover a part of the interior plains of Western Morocco and practically the whole of Eastern Morocco, where they extend to the neighbourhood of the Mediterranean. As regards the desert, it is devoid of vegetation in the ḥammāda [see AFAKH], although the oases form spots of verdure in the midst of the general desolation.

Hydrography. The structure of the country and the relative abundance of rainfall affect the hydrography. Morocco is much richer in running streams and in submerged water than any other country in Northern Africa. Wādīs (wells) are more numerous; their courses are longer and their volume larger. A number of them even deserve the name of rivers. The waters flow in three different
directions: towards the Atlantic, towards the Mediterranean and towards the basin of the Sahara. The Atlantic rivers are in all respects the most important. They can be divided into three groups: those of the North (Lükkos and Sebû), those of the centre (Bû Ragrag and Umm al-Kabîr), and those of the South (Tensift and Sûs). The Lükkos drains the district of the Gharb; the Sebû, those of the Middle Atlas, of the Zarhûn, and the southerm slope of the Rif. On emerging from the mountains it takes numerous turns and windings across the alluvial plains and reaches the ocean after a course of 300 miles. The full extent of the drainage system is not traceable in volume, according to the season, it never dries up completely. It is even navigable in its lower course. The Bû Ragrag and the Um al-Kabîr run for a part of their course through the Central Plateau, the Moroccan “Meseta”. The irregularity of their courses makes them useless for navigation. The Tensift, to the North of the High Atlas, the Wâd Sûs to the South, which are much less in volume approach more nearly to the classic type of wâd of Northern Africa. The watercourses of the Sahara (Wâd Mir, Wâd Zir, Wâd Darâra) diminish in volume as they go farther away from the mountains and end by disappearing in the sand. The Darâra alone reaches the Atlantic, but it only contains running water in its lower course [see the article Darâra]. As for the Mediterranean rivers, they are only torrents with violent and rapid floods. The Muluya alone forms an exception. It collects water from the slopes of the Middle Atlas but only reaches the sea in multi-diminished volume on account of the loss it suffers in crossing the steppes.

Although the common characteristics of all the countries of Barbary are found in Morocco, the greater or less differences in relief, the differences in climate, the peculiarities of vegetation bring in their train a diversity more marked than in Algeria or Tunisia. The combination of these different elements determines the existence of regions which differ one from the other in their configuration, their resources, the density and manner of existence of their population. We may distinguish six such regions: Northern Morocco, the basin of the Sebû, Central Morocco, the country of the Atlas, Eastern Morocco, and Moroccan Sahara.

Northern Morocco. Northern Morocco comprises a mountainous zone (the mountains of the Rif properly so-called which are to the North-West continued in the “domes” of the Djebala as far as the Strait of Gibraltar) and regions less rugged in character which to the South-East and the West form the transition into the adjoining countries. The mountains split into deep ravines by the courses of the wâdis, for the most part only leave between their last escarpment and the sea-shore a narrow strip, or a few bays enclosed between the rocky promontories. A few cuttings which run across the ranges afford communication between the two watersheds. The Rif, therefore, must seem to be a world very little accessible to influences from without. Arab influence has scarcely grazed it. The population has always vigorously opposed the political measures of the sultans as well as the attempts of Europeans to settle themselves there. Crowded into a limited territory, since the highest parts of the mountains are useless, the Rifans find their chief means of subsistence in the cultivation of vegetables and fruits. A number of them gain from temporary emigration an addition to their resources. They are not nomadic but inhabit villages perched on the slopes. Towns are represented only by Shafsâwân and Wazzân, religious and commercial centres, situated the one on the northern side and the other on the southern side of the Djebala. Towards the South-East, plains interspersed with mountain masses extend as far as the Muluya. The lack of rain gives to these plains (Salwân, Gâret) the aspect of steppes more fitted to a pastoral life than to agriculture and a settled life. Towards the West the lowlying coastal, still a very narrow border at the strait of Gibraltar, increases from the North to the South between the Atlantic coast and the last slopes of the Djebala. This district commonly called the Gharb is a corridor. It still keeps in this respect its historical significance, but its economic value is diminished by the stagnation of its waters in the hollows in the flat bottoms of the valleys, and by the insecurity resulting from the proximity of the warlike tribes of the high mountains. A few townships have however succeeded in establishing themselves, either at the crossing of roads such as al-Ḳâṣr al-Kabîr [q. v.] or in proximity to the coast like Ceuta, Tangier and Larache [see the articles Iṭṭeṣwân, Ālifta, Tângier, al-Ḳabîr]. The Wâd al-Râbi, the valley into which the Sebû falls, lies between the Rif, the Middle Atlas, Moroccan Meseta and the Atlantic. The situation of the region, the abundance and variety of its natural resources makes it of exceptional value. The Sebû links up the whole of it. Through its tributary the Innâwân, the valley of which leads to the pass of Tâzit, it makes communication with the rest of Barbary easy. The mountain masses there (Zerhûn, Zâlûghû, mountains of Gerwan) offer no insuperable obstacles to communication. The high plains of Sâšîs and Meknes are contrasted with the lower plains of the Shârda and the alluvial plains of the lower course of the Sebû. The influence of the Atlantic is felt far into the interior and combines with the numerous streams that flow into the Sebû and its tributaries and the subterranean waters to promote the development of all forms of vegetation. Forests cover the higher slopes of the mountains; fruit-trees flourish on the sunny slopes and cereals on the high plains; the meryâa, temporary marshes produced by the Sebû, in its lower course are used for grazing until they are sufficiently dry to be of use to agriculture. This combination of circumstances, so auspicious for human habitation, has made the valley of the Sebû a centre of intensive settlement. The most diverse ethnic elements have settled together and mixed there. All types of habitation are found in all degrees of mixture, to descend from a nomadic to settled town life. Human activities are displayed in the most varied forms (grazing, agriculture, arboriculture, commerce, industry). The country villages, douars of “nuwâlas” in the plains, villages of houses of clay in the mountains, are numerous, the towns are flourishing. Mawâli Idris is the sacred city of Morocco, Sebû on the borders of the plain of Sâshîs and the high limestone plateau lives by trading with the people of the mountains and the industry of its weavers and makers of slippers, Fas and Meknes are among the great cities of Morocco.

The first of these towns has remained to this day the political, religious, intellectual and economic centre of Morocco. It has resisted all the usual
causes of decline. From all time the ownership of the high plains of the Sebû has been bitterly contested. Their possession has been the condition for the establishment and survival of the dynasties which have succeeded one another in Morocco. Their political significance and role in history correspond very closely to their geographical position and economic value.

Central Morocco. Between the valley of the Sebû, the ranges of the Atlas and the Atlantic, covering about a quarter of habitable Morocco, lies the region called by the geologists the Moroccan Meseta. It includes districts of very different character, the only feature uniting them being the possession of a common substratum, the Hercynian paenoplain covered almost everywhere by sedimentary horizontal formations. Differences of structure and of climate distinguish clearly the various parts: the Atlantic plain, the plateaux of the centre, and the interior plain of the Haiz. The maritime plain lies along the Ocean from Rabiat to Mogador. Very narrow at its northern and southern ends, it broadens near the centre (Dukkala, Shâwiya) to a width of 50 miles. To the rains and the constant moisture from the vicinity of the Atlantic, the abundance of running streams and subterranean waters, the natural fertility of the soil further adds to the conditions for prosperity. The Atlas or black lands which run in an unbroken line behind the coast from the Bû Ragrag to Tensift are admirably suited for the growth of cereals. Their rural population, almost everywhere settled, is therefore considerable. The land of the Dukkala has 40 people to the square kilometre, a density very much greater than that of the other districts of Morocco. The towns of the coast, Salé, Rabat, Casablanca, Mazagan, Azemmûr, Safi, Mogador [q. v.], benefit by the richness of the hinterland. The exportation of agricultural produce has at all times been a branch of commerce, and has been much developed since the settlement of Europeans there. While facility for communications and the continental relations with the valley of the Sebû opened the plain to Arab influences, the ports of the coast maintained contact with abroad and permitted the infiltration of European influences.

The Interior is much more broken. The ground rises gradually to a height of 2,000-2,500 feet. The predominant formation is plateaux terminating on the north in the very old masses of the Zaîtir and Zayân, which are really mountains in character, in the south in the equally old but less elevated massif of the Rahdûna. These plateaux deeply cut into by the course of the Umm Rabût overlook on the west side the lowlying coastalands from the top of cliffs, and slope gently on the S. E. to the plain of Tâdilâ. This is a depression, over 120 miles in length, running to the north into the heart of the Middle Atlas where it terminates in a cul de sac, while it broadens greatly in its southern part. A low pass enables communication to be made between the Tâdilâ and the Haiz of Marrakush, a basin shut in by the High Atlas in the south, the Middle Atlas in the east, the Ujjilût in the north and the hills of the Shiyyûna in the west. The economic value of this inner region is very unequal. On the mountains of the north the rains and streams support forests and the natives devote themselves to cattle-rearing. The plateaux of the centre covered with a surface of limestone have great stretches of bare rock and cultivation is barely possible. The Tâdilâ is no better favoured except in the zone adjoining the Atlas, watered by torrents descending from the mountains. The plain of the Haiz would also suffer disastrously from drought, had human industry not averted this danger. An ingenious system of irrigation has transformed the country round Marrakush into a vast palmgrove and resulted in a particularly dense population (100 to the square kilometre). Comparatively large towns (Amâsîr, Demnît, Tânasûtâh) and especially Marrakush [q. v.] have been enabled to rise and prosper. Between this region, already half Saharan, and the high lying plains of the Sebû, the plateaux of the centre and the mountains of the north which come down to within a short distance of the shore, interpose a barrier which the attitude of its inhabitants makes still more difficult to cross. The Zayân, the Zaîtir, the Zemmûr, over whom the authority of the Maghribien has never been very securely exercised, have more than once cut direct communication between Fas and Marrakush. These two cities have been at different periods the capitals of distinct and even hostile kingdoms.

The region of the Atlas. In spite of the marked differences between the different elements of the Atlas, the whole region nevertheless has general characteristics of its own. Between Atlantic Morocco on the one hand and Saharan Morocco on the other, the Atlas lies as an almost continuous barrier. Only the few transverse fractures in the Middle Atlas permit passage between the basin of the Sebû and the Saharan zones, while in the High Atlas valleys running right into the heart of the massif give access to passes opening on the valleys of Sûä and the Wâdi Darû. Moister and colder, the Middle Atlas is covered with forests which are denser and more extensive than those of the High Atlas. Both however are great water-heds. From the Middle Atlas come the great rivers of the Atlantic slope (Sebû, Gighû, Umû Rabû, Wâdi T-fâhûdi), from the High Atlas the Tûnût and the Tensift. The lands of the Atlas are nevertheless poor. The high mountains offer little to support mankind. Human activities are confined mainly to the zones of contact between the mountains and the plains (dârs) of the Middle Atlas and in some specially favoured valley-of-the High Atlas. Except in the Middle Atlas, where the nomadic mode of life results in the exodus in the bad season of the inhabitants who lead a pastoral life, and on the plateaux of the High Atlas on the Atlantic side (Hûhâ, Shiyyûna) the inhabitants of which are mainly engaged in cattle-rearing, the natives are settled. They live in villages perched on the slopes and terraces between wads or scattered along the valleys. There is nothing approaching a town in size. These regions, defended by the nature of the country, have almost completely escaped outside influence, they are still almost exclusively the domain of Berber tribes (Berâberîî in the Middle Atlas and Shûtûh in the High Atlas). The customs and institutions peculiar to this people [cf. Bersiers] have survived to a greater extent here than in any other region of North Africa. In particular their political organisation is still most rudimentary: municipal republics administered by a qamûlî in the Middle Atlas, feudal lordships ruled in patriarchal and despotic fashion by a few powerful families in the High Atlas. The people of these regions also have always opposed vigorously the
central power; the authority of the Mekhzen over the Berbers of the High Atlas has never been exerted except through the local chiefs. As to the tribes of the Middle Atlas they have retained to the present day almost complete independence. Even the most vigorous sultans have never succeeded in forcing them into obedience for any length of time.

Eastern Morocco. Eastern Morocco may be described as the continuation of the Central Maghribi of which it has the distinctive characteristics. In it, as in Orania, we have a tell zone and a zone rising by successive stages up to 6,000 feet. The upper valley of the Muluya separates them from the Middle Atlas. The monotony of these vast spaces is only broken by the outcrops of gîr, flat beds of rocks cut up by erosion and by the depressions of the shufi [q.v.]. Beaten by the winds, exposed to the rigours of an extreme climate, these lands are only fit for the pastoral life led by the nomads who raise sheep. The valley of the Muluya is no better favoured, except in the vicinity of the Atlas, where villages surrounded by vineyards with a settled population are found along the tributaries of the river. As to the Tell, hills of no very great height (the most important being that of the Beni Snassen which does not exceed 3,500 feet) divide it up into compartments occupied by plains (plains of the Aulfiḍ Maṣṣūr, on the coast, of the Triṭa, of the Angād which in the south reaches the cliffs in which the high plateaux end). The dryness of the climate frequently gives these plains a steppe-like character; only the western part of the plain of the Angād has a fertile and well watered soil largely devoted to the cultivation of wheat to procure grain. But this region owes its importance less to its natural resources than to its situation on the natural route between Atlantic Morocco and the rest of Barbary. Uṣada [q.v.] which commands the passage, has thus been enabled to escape various causes of decay that have threatened it. A border district, eastern Morocco has always been a disputed region, a march for which the lords of Tiemcen and Fès have contended. The authority of the latter was never solidly enough established here to impose itself on the settled inhabitants of the mountains and on the nomads of the plateaux and plains. The Down to the French occupation the country was left to anarchy and disorder.

The Moroccan Sahara. The Moroccan Sahara is the N.W. corner of the Sahara. There we find the general characteristics of this desert region [cf. Sahara]. Only the parts adjoining the Atlantic and the threshold of the mountains offer favourable conditions for man. In the plain of Sus [q.v.] shut in between the Atlas and the Anti-Atlas, the rivers and the irrigation canals enable shrubs to grow. The Darā, Ziz and Gīr are in their upper courses fringed by a thin border of cultivated land, pastureage, vineyards, and in their middle course assure the growth of palmgroves of which the best known, if not the most prosperous, is that of Tafṣīlīt [q.v.]. The richness of the region is relatively one, it is true — of these cases is in contrast with the desolation of the rocky plateaux (hammāda) which form the greater part of the Moroccan Sahara. These natural conditions determine the mode of life of the inhabitants. Some lead a nomadic life and drive their flocks up and down the plateaux; others are permanently settled on the Sus, in the high valleys and in the oases. Sus contains numerous villages and even towns (Agādir, Tiznit, Tarudant); the oases have a settled population in the ḫūr. Those of Tafṣīlīt, Tamgrūt, Bū Darb and Yigig carry on a certain amount of commerce between Atlantic Morocco and the Sahara. But this very circumstance has prevented them escaping as completely as the lands of the Atlas from the political and intellectual influence of Western Morocco, especially Tafṣīlīt where considerable groups of Arab ṣharīf have been long established in the midst of Berber populations. But, although the present dynasty actually came from Tafṣīlīt, the people of this region have frequently escaped Shārīfian authority.

Begun in the last years of the sixteenth century, methodically pursued since the French occupation, the scientific exploration of Morocco is not yet completed. From the results so far attained one thing is clear: the lack of uniformity in the country. Thus its geography may explain to some extent the historical development of the country.

II. HISTORY.

Morocco before Islam. Morocco, like the other parts of North Africa, has probably been inhabited from a very remote period. We know, however, nothing definite about its earliest inhabitants. The traces which they have left, weapons and tools of chipped flint, pottery, rock-paintings, some of which represent animals of the quaternary period, now extinct, megalithic monuments identical with those found all round the Mediterranean basin, give us no information in this respect. At most, we may suppose that the primitive population consisted of emigrants from southern Europe, the Sahara and perhaps from Egypt. The fusion of these diverse elements gave birth to a race, the members of which, frequently different in type and physical features, were united by a community of language. The ancient writers called them Libyans and Moors. They were the ancestors of the present Berbers [q. v.].

The first historical fact known, and that only imperfectly, is the appearance in the 12th century B.C. of the Phoenicians on the Moroccan coast. The sailors of Tyre and Sidon built factories there, where they exchanged goods of eastern origin for local products (cattle, wool, hides) and slaves. But Phoenician influence was exercised mainly through the intermediary of Carthage when it in turn had become the metropolis of a great maritime empire. The Carthaginians rebuilt the ruined factories and added new ones. In the middle of the fifth century, Hanno in the course of his celebrated "periplus" established on the Atlantic coast seven colonies of which one was at the mouth of the Sebti, Rusaddir (Melilla), Septem (Ceuta), Tingis (Tangier), Likus (Larache), Sala (Sale) were the principal Carthaginian establishments. It does not seem, however, that Carthage sought to extend her power into the interior. She was content to conclude treaties with the native chiefs and to recruit mercenaries from that country. Morocco remained independent, but the tribes who inhabited it were not organised into states, except perhaps in the east, where ancient writers mention in the period of the Punic Wars the existence of a kingdom of Mauretania or Marua, extending along both banks of the Muluya.

The destruction of the Carthaginian empire hardly altered this state of affairs. For two centuries Rome administered only the "Province of Africa," directly and left the other regions of Morocco in the hands of native chiefs under a more or less severe protectorate. Northern Morocco shared the fate of Mauretania down to the annexation of this kingdom in 42 A.D. The region to the east of the Muluya formed part of Ceaurean Mauretania. The lands stretching from the Muluya to the ocean formed Mauretania Tingitana, an imperial province governed by a procurator. When the empire was re-organised by DIOCLETIAN, IT was attached to Spain.

Roman Morocco never covered more than a small portion of the modern Morocco. On the Atlantic coast, it barely extended beyond the mouth of the Bu Rrag, and in the interior to the massif of the Zerihoun. The plateaux and sub-Atlantic plains and the mountains of the Rif, Middle and High Atlas escarpments, the authority of Rome. It was the same with the Sahara. The expedition of Suetonius Paulinus, who in 42 A.D. advanced as far as the wadi Ghr, remained an isolated incident.

To defend herself against the rebellions of her own subjects and to protect the country from Berber inroads, Rome had to keep in Tingitana an army of ten thousand men, to build strategic roads and to establish fortified posts on the sides of the triangle: Sala, Zerihoun, Tingis. With the exception of Volubilis, the importance of which has been revealed by its ruins, methodically excavated in recent years, and which was undoubtedly a centre of influence of Roman culture on the people of the interior as well as a military base, the towns were all on the coast. They were Likus and Tingis raised to the rank of "colonies," and Celsea. They owed their prosperity mainly to trade with Spain to which were exported oil and wheat, the two main products of the country. On the whole, however, Rome's influence on Morocco was superficial and has left little trace.

Without any really firm hold on the country, weakened by native risings and by the quarrels between the donatists and the orthodox, Roman rule was to collapse suddenly at the beginning of the fifth century. Germanic invaders, the Vandals, came from Spain and in 429 A.D. conquered without opposition Tingitana which they gave back a few years later to the Romans. Soon afterwards the western empire disappeared and the natives seized the opportunity to become independent. The Byzantines, who in the sixth century destroyed the Vandal kingdom, were content to re-occupy the two strongholds of Cessa and Tangier. The rest of Morocco was in the hands of the Berbers. The latter were divided into a large number of tribes, of whom the principal were the Ghomara on the Mediterranean coast, the Barghawat and the Omeyyades on the Atlantic coast between the Strait of Gibraltar and the mouth of the Sebti, the Munkassa, in the central district, the Mamrida, on the western slope of the High Atlas and on the coast from the Sebti to the Safs; the Hasraka between the Safs and the Darra; the Lamjua and Lamitina on the left bank of the Darra. These Berbers were all of Sanhidja stock; some preferred Chri-riani or Judaim but the majority still followed the old nature worship. The Arab conquest brought them a new religion: Islam.

The Introduction of Islam. The Arabs appeared in the extreme Maghrib at the end of the 7th century A.D. Tradition relates that Sidi Othman, the founder of Tàrâwan, in 684-685 undertook an expedition which carried him as far as the shores of the Atlantic Ocean. This raid, however, if it ever took place, was too transitory to have any permanent results. But at the beginning of the following century, Musâ b. Nuṣair [q. v.] who had just completed the conquest of Ifrikiya, took Tangier, installed a governor there and set himself to conquer and convert the natives. He succeeded without much trouble. Attracted by the hopes of gain, the Berbers adopted Islam and enrolled themselves in the armies which were invading Spain. They were not long, however, in
rising against the Arabs. Dissatisfied with the share allotted them of lands taken from the Christians in the Peninsula, and exasperated by the exactions of the governors of Tangier, they took up arms in 740 on the call of the porter Maísara [q. v.]. The rebellion was both religious and political in character. With the same readiness with which they had adopted Islam, the Berbers adopted Ktâb Túthif doctrines from the east, teachings which also appealed to their egalitarian tendencies and to their spirit of independence. The army sent from Syria to establish order was destroyed on the banks of the Sebâ (742) and the extreme Maghrib was lost at one stroke to the caliph and to orthodoxy. Berber principalities were organised in the Rif [see SIDIHMÉSA]; in the west, the Barghawâta [q. v.] recognised the authority of a certain Sîhu, founder of a rival religion to Islâm, who had composed a Kur'an, that is a sacred book, in Berber. None of these little states was strong enough to impose its authority on the others and to collect all the Berber tribes under one rule. A longer time was required for the establishment of the Idrisid dynasty [q. v.] to play this rôle. Idris I and his immediate successor Idris II, actually enforced their authority over the greater part of the tribes of northern Morocco and successful expeditions extended their kingdom from the shores of the Mediterranean to the High Atlas and from the Atlantic to beyond Tlemcen. Ardent champions of Islâm, they imposed their religion on those peoples who did not yet practise it or who had abandoned it after once adopting it. The conversion of the extreme Maghrib to Islâm is their work much more than that of the Arab conquerors, zealous defenders of orthodoxy, in spite of their ʿAlid origin, they fought the Ktâb Túthif with the same vigour but did not, however, succeed in completely extirpating the heresy. It is not without good reason that legend has transformed these rude warriors into saints, the one Idris I, patron saint of Morocco, the other Idris II, the patron saint of the city of Fès [q. v.] which he had founded. The building of this city had enduring results. It gave northern Morocco a religious, political and economic centre which it had lacked since the disappearance of Roman rule. Favoured by its position, Fès prospered rapidly. It survived all causes of decline, even the collapse of the Idrisid power.

The Idrisids indeed rapidly declined. The various groups which had recognised the authority of the founders of the dynasty were not long in casting it off and fighting with one another. These rivalries were taken advantage of by the Fâtims of Ifríkiya and the Umayyads of Spain, who during the tenth century A. D. disputed the possession of the extreme Maghrib. With the assistance of the Mikhâs, the Umayyads in the end remained masters of the country. They were in their turn ousted by the Maghrâwa [q. v.], whose chief Zir b. ʿAtiya, abandoning the cause of the Umayyads, seized Fès where his descendants ruled for three quarters of a century.

The Almoravids and the Almohads. The extreme Maghrib seemed to be condemned to anarchy and to be broken up among small factions when the Almoravid invasion came [see ALMORAVIDES]. After having first of all subjected all the lands south of the High Atlas, they established themselves solidly on the northern slopes, at the foot of which Yusuf b. Tâshfin founded Marrâkush [q. v.] in 1062, these Saharan hordes turned to the centre, east and north of Morocco, sweeping everything before them: Fès, Tangier, the Rif, Oran and Ténès fell before them. The Berber principalities of the Maghrâwa, the Barghawâta and Bânû Idris disappeared. In less than twenty years, Yusuf b. Tâshfin became sole master of the extreme Maghrib as far as the Gulf of Cadiz. The Almoravids were soon to be added half of Spain. Summoned by the Muslim emirs who were threatened by the king of Castille, Yusuf b. Tâshfin checked the Christian advance at Zallâkâ (1086), then possessed the petty Muslim rulers to his own advantage. Morocco was thus extended across the Straits of Gibraltar as far as the Ebro and to the Balearic Islands. The fortunes of the Almoravids were, it is true, as ephemeral as they were brilliant. In contact with Andalusian civilization, the Saharan rapidly became decadent. The rigid orthodoxy, which had been their strength, relaxed; they in their turn were regarded as infidels, “anthropomorphists” (muqjâṣâmîn), whom it was lawful and even meritorious to fight. It was in the name of orthodoxy that Al-Muâth, viceroy of Tashfin, and Al-Ḥâfiz of the High Atlas under the leadership of Ibn Tûmart and ʿAbd al-Mùʾmin entered into the struggle against the Almoravids.

This struggle ended in the displacement of the Almoravids by the Almohads [see ALMOHADS and ʿABD AL-MUʿMIN]. In seven years (1139—1146 A. D.) ʿAbd al-Mùʾmin conquered all Morocco; Sidîlmâsa, Oran, Tlemcen, and Ceuta fell one after the other into his hands. Next came the turn of the Salè, Fès, and finally of Marrâkush, the gates of which were opened to him by the treachery of the Christian mercenaries. Muslim Spain was also conquered with the exception of the Balearic Islands. Even in Africa, the Ḥâmâmadî kingdom of Bougie was conquered in 545—546 (1151—1152). A few years later (554—555 = 1159—1160) a new expedition led ʿAbd al-Mùʾmin into Ifríkiya and secured him possession of the interior and of the coast, which he took from the Normans of Sicily who had occupied it some time before. Morocco in the strict sense of the word was now merely a province in the vast Berber empire. The unification of these territories under one ruler had important consequences for the Maghrib. It facilitated the diffusion in North Africa of the Hispano-Moorish civilization, which was to be perpetuated in Morocco after it had disappeared from the Peninsula itself. Further it brought into the extreme Maghrib a new ethnic element: the Arab, ʿAbd al-Mùʾmin, as well as his successors, on several occasions deported ʿAlîthi tribes from the Central Maghrib and Ifríkiya, where they continually created unrest, to the sub-Atlantic plains where other groups of Arabs joined them of their own free will.

The Almohad empire was too vast, it comprised regions of too different a nature, peoples too foreign to one another to last long united. The Almohad caliphs were powerless to restrain the separatist tendencies which revealed themselves on all sides. In the first half of the xiiith century A. D., the Almohad empire broke up. Ifríkiya and the Central Maghrib recovered their independence; local dynasties set up in Tunis (Ifâṣids) and Tlemcen (ʿAbd al-Wâlidîs). The Almoravid Maghrib ended by slipping away from the descendants of ʿAbd al-Mùʾmin who were replaced by the Merîndas [q. v.].
The Merinids. Berbers of Zanata stock, driven by the Ifilâli Arabs on to the plateau of Oran and into the central valley of the Muluya, the Banû Merin had at first entered the service of the Almohads, then turned against them, when the power of the dynasty began to decline. By repeated razzias they made themselves masters of almost all northern Morocco. After the death of the caliph al-Safid, who had been able to arrest their progress for a time, their leader Abû Yahyâ (1243-1258) seized Fâs, Meknes, Rabat and Siûmlââs. The capture of Marrâkush (1269) by Abû Yusuf, successor of Yahyâ, marked the final triumph of the Merinids. Heirs of the Almohads, the first Merinids endeavoured to reconstitute the empire of their predecessors. In Spain, they enforced their authority on the Muslims of Andalusia. In Africa, they endeavoured to take the central Maghrib from the ʿAbd al-Wâdids. They were successful when Tlemsen, besieged seven times in sixty years, finally fell into the hands of Sultan Abû ʿl-Ḥasan (1337-1347). Ten years later, the same ruler took Bougie, Constantine and Tunis, but this was only temporary. At the end of barely a year, Abû ʿl-Ḥasan, defeated by the Arabs, found himself forced to abandon Ifriqiya, the Ḥafsids returned to Tunis and the ʿAbd al-Wâdids to Tlemsen, while the sultan’s own son Abû ʿInan rose against him in Morocco. Attaining to power, Abû ʿInan renewed his father’s efforts. He recaptured Tlemsen and Tunis, it is true, but could not retain them (1560 A.D.). The Ḥafsids and ʿAbd al-Wâdids recovered their kingdoms almost at once.

Separat tendencies thus triumphed and on this occasion in a most definite fashion. The extreme Maghrib, the history of which had hitherto been so often that of Barbary, began to live its own life. The Merinid kingdom, while its boundaries in the east were still vague and changing, already corresponded roughly to modern Morocco and the Merinids may be regarded as the first strictly Moroccan rulers. Lacking the religious prestige of their predecessors, they endeavoured to secure the moral authority which they lacked by taking as their patent saints the apostles of Islam in the Maghrib. The cult of Mawlâ Idrîs in the xivth and particularly the xvth century assumed an importance which it has retained to the present day. No less characteristic is the development of intellectual life and the arts. The Ifispano-Moorish civilisation never flourished more brilliantly in Morocco than in the Merinid period. The rulers attracted to their court the poets, men of letters and lawyers of the Iberian Peninsula and of the Maghrib. The university of al-Karawiyin attracted students from all the lands of the western Muslim world. Fâs, which the Merinids, abandoning Marrâkush and Rabat, the capitals of their predecessors, chose as their royal residence, was given splendid buildings by them, palaces, mosques and madrasas. It was at the same time a commercial city in which African and Spanish merchants mixed with Christian traders.

This brilliant exterior, however, was quite deceptive. Merinid Morocco was never able to organise itself on a solid basis. The central power was very weak and did not succeed in imposing its authority everywhere. The accession of each sultan was an occasion for outbreaks. The pretenders who arose always found supporters readily, either among the Arabs or the Berbers. Powerless in the interior, the sultans were no more fortunate in their enterprises against their neighbours of the Central Maghrib or against the kings of Granada. Their prestige and their authority could not survive these checks. The Merinids in the strict sense disappeared from the scene in 1492, after the assassination of the sultan by an Idrisid shârif. The Banû Wattés, descended from a collateral branch, the chief of whom seized the power in 1470, had themselves a wretched existence. Their kingdom broke up into a large number of independent little groups, principalities at Fâs and Marrâkush, Berber republics in the Atlas, Marabout seats in the Rif, the Gharb and in Darâ and Sûs. The sultans were quite powerless to prevent this decomposition.

The Christian offensive and the revival of Islam. Of all the causes which combined to enfeebles and discredit these rulers, the principal was undoubtedly their impotence against the offensive of the Christians against the Maghrib. In 1415 the Portuguese took Ceuta, in 1465 al-Kasr al-Saghîr, in 1471 Tangiers. They were contented with the occupation of the north while by the occupation of Azâlî and Anfa (Casablanca; q. v.) they secured a footing on the Atlantic coast. In the early years of the xvth century, they built fortified posts at Santa Cruz (Aqâdir) and Mazagan (q. v.) and took by force of arms Sâfî and Azemmûr (q. v.). Holding all places of importance except Larache [see Al-Arbiyyâ] they brought under their protectorate all the lands near the coast (Shawiya, Ḥifâ, Dukkanâ), forced the natives to pay them tribute and to hand over to them strategic points up to the environs of Marrâkush. Their expeditions had no other aim than plunder, no other result than to exasperate the inhabitants who saw their towns destroyed, their donars burned, their women and children massacred or sold as slaves.

Menaced in the west by the Portuguese, Morocco was threatened in the east by the Spaniards also. The latter completed the reconquista by the taking of Granada (1492). Thus free to go farther afield, and still fired with the religious enthusiasm of Ximenes, they too went over to fight the Muslims on African soil. The occupation of al-Marsâr al-Kabîr (1507) and of Oran (1509) and the establishment of a Spanish protectorate over the kingdom of Tlemsen constituted a serious danger to the Muslims of Morocco. The threat from the Christians produced an awakening of religious sentiment. This renewal of Islam in the xivth and xvth centuries, the results of which are still to be felt at the present day, is beyond question the great event in the history of Morocco since the Idrisid period. The way for it had, moreover, been prepared by the Sufi teachings imported from the east and by the development of the brotherhoods in which the adepts of these doctrines were organized. It also found a favourite soil owing to the persistence of maraboutism among the Berbers. The khâlîf or the charlatan, who had always been an object of public consideration, became readily identified with the shârif, the possessor of the khâlîf. Cooperating with one another, these pious individuals became the religious leaders of the people of Morocco. They strengthened orthodoxy, excited the zeal of the faithful, preached the holy war, and led the defenders of the faith into battle. The ascendency
which they exercised, the wealth they accumulated in their zawiyas, made them independent of the sultan. They thus became temporal leaders also, all the more readily as the sovereigns could not fulfill their office of defenders of Islam owing to lack of energy and also of means. The activity of these religious leaders was always of a local nature; it was only effectively exercised within a limited area and did not extend over the country generally. The religious solidarity thus established, the kind of common conscience thus created, did not put a check to the political decline until the time when the Sa’dians took direction of the movement and exploited it for their own benefit.

The Sharifian dynasties.  

a. The Sa’dians [q.v.]. The Sa’dian shorfa benefited by the prestige which the religious awakening had restored to the descendants, real or presumed, of Fatima, the daughter of the Prophet. Coming from Arabia at the end of the sixteenth century and settling in the valley of the wadi Daf’a, while another branch of the family settled at Tafallalt (Hasan or ‘Abid shorfa), they were not long in acquiring a considerable inﬂuence over the tribes of the south. Thus they were naturally led to support the people of the south, who were exposed to the attacks of the Portuguese of Santa Cruz. In 1511, the gharif of Tagmedt, requested by the Muslims to put himself at their head against the Christians, agreed to do so. Supported by the marabouts who gave him valuable assistance, he began hostilities against the Portuguese. The holy war regularly waged secured to his sons, Ahmad al-Aradj and Muhammad al-Mahdi, the possession of the whole of southern Morocco up to the Umm al-Rabif. The intervention of the Merind sultan in the quarrels which broke out between the two brothers only resulted in his own downfall being hastened. Muhammad al-Mahdi took Fas in 1550; the foiling of an attempt to restore the Merindids in 1554, with the help of the Turks of Algiers, secured the definite triumph of the Sa’dians.

The coming of the Sa’dians meant a regular reconstitution of Morocco. Muhammad al-Mahdi and his successors imposed their authority on the whole country, protected it against foreign foes and increased the extent of their territory by distant conquests. They finally triumphed over the difﬁculties caused by the Turks of Algiers, and at the battle of al-Kar al-Kabir in 1578 arrested a counter-offensive of the Portuguese. Ahmad al-Mansur (1578–1601) occupied Timbuktu [q.v.] and destroyed the Asira empire of Gao. For half a century the Moroccans were masters of the Western Sudan, from the banks of the Senegal as far as Born; the plunder taken on this campaign of conquest enabled the sultan to keep a splendid court, the hierarchy of which was modelled on the Ottoman court, and to adorn his capital Marrakesh with magnificent monuments.

To the same period also belongs the organisation of the makhten [q.v.]. The early Sa’dians had relied for support on the Arab tribes of the south. To these al-Mansur added the Arab tribes of the region of Tlemcen and Udja driven into Morocco by the Turkish conquest. These shrigga, as they were called, received lands around Fas in return for the military service they were forced to give. Reinforced by a regular army formed of renegades, Spanish Moors and negroes, trained by Turkish deserters, the makhten provided the sultan with the means of preserving order and levying taxes; it was thus the essential instrument of the sharifian government and tended to become the government itself.

This instrument proved sufﬁcient in the hands of an energetic ruler but was insufﬁcient in weaker hands and in moments of crisis. The Sa’dians very soon found this out. The tendencies to disruption which had been strong were accentuated by the energy of al-Mansur broke out again on his death. The dispute for the throne set his sons against one another. One of them, Zaidan, ended by triumphing over his rivals but could not prevent the break-up of the empire. Larache was occupied by the Spaniards; Fas cast off sharifian authority. The Andalus of Rabat and Salé [q.v.], enriched by their piracy, formed an independent republic. Finally the Sa’dians, although they had owed their elevation to the religious movement, now found the marabouts rising against them. Delivered from the restraints which the distrust of al-Mahdi and his successors had placed upon them, the latter began to gain more and more hold over the people and contributed to the ruin of the sharifian authority. Sis was in the control of one of them, Sidi ‘Ali; Tafallalt was under the Hasan shorfa, the Gharb under al-Aiyashi, leader of the “volunteers of the faith”. In the centre, the power of the marabout of Dil (a zawiya on the upper course of the Wadi ‘Abd) increased. Muhammad al-Hadji, their leader, victorious over the Sa’dians and over al-Aiyashi, lord of Salé and Fas, seemed on the point of founding a new Berber empire from the Atlantic to the Muluya. Incapable, in spite of the support given them by the English and Dutch, of disposing of their adversaries, the Sa’dians now held only Marrakesh and its immediate environs. The last representative of the dynasty died in 1660, assassinated by the shaikh of the tribe of Shabbanat.

b. The Hasan Shorfa. The disintegration of Morocco was arrested by the coming of the Hasan Shorfa. The latter had taken advantage of the disorder to assert their authority in Taffilalt, then by expeditions, which par took of the nature of brigandage as much as of warfare, they had conquered eastern Morocco. One of them, Mawlí Muhammad, had even tried, without success, it is true, to take Fas from the Dil’s. His successor Mawlí al-Rashid (1660–1672) was more successful. He took Fas, disposed of Ghailan, an adventurer who had established himself securely in the Gharb, destroyed the zawiya of Dil, reconquered Marrakesh, thus rebuilding as it were piece by piece the sharifian empire. Installed by force of arms, the new dynasty recognised the necessity of securing the moral prestige which their origin could not give them. They therefore sought to attract to their side the sharifian families. They heaped favours on the shorfa of Wazzan, whose patronage was a guarantee even for the rulers.

The work begun by Mawlí al-Rashid was continued and brought to a successful conclusion by his successor Isma’il (1672–1729). During the first fifteen years of his reign, he did not cease to wage war on the rivals who disputed the districts of Marrakesh and Sis with him. While fighting his enemies, he was engaged in building up an army which would work marvels on his will. To the meagre wealth endowed on by the Shrigga and Udaya he added a body of black slaves, the ‘Abid al-Bukhāri (Blākher), the property
of the sultan; their children were specially trained for military service. The number of effective in this corps by the end of the reign numbered one hundred and fifty thousand men. The sultan was thus able to reduce to obedience the Berbers of the Atlas and the upper Muluya. Defeated and disarmed, the latter were kept in control by garrisons placed in kasbas built at the exits to the valleys or commanding the lines of communication. The notable whom the sultan had taken into his service or united to himself by matrimonial alliances forced their tribesmen to live in peace. The bitild al-makhzen, i.e. the country where tribute was regularly paid, extended over almost the whole of the extreme Maghrib. The pacification of the interior did not cause Mawlawi Isma'il to forget the obligations imposed on every Muslim ruler to fight the infidels. He therefore continued the holy war against the Christians of the coast. He recaptured al-Mahdiya, Larache, Asilah, and Tangier, evacuated by the English in 1684, but could not take Ceuta from Spain, and so in spite of a siege or rather uninterrupted blockade for seventeen years. He was no more successful in his enterprise against the Turks of Algiers, who disputed with the Moroccans the possession of the plains of eastern Morocco and the 65ir of southern Oman. The expeditions which he directed against the Algerians ended in failure, and the lower course of the Muluya continued to be the boundary of the sharifian empire. In spite of his lack of success here, Mawlawi Isma'il is nevertheless the great figure of the Hasani dynasty, the model the Moroccan sultans have set themselves to the present day. Morocco, however, remained what it was before, i.e. an aggregation of different groups, the cohesion of which depended on the personal energy of the sovereign. The processes of administration were in no way altered: the sharif enforced obedience by drastic executions; he squeezed his subjects to the utmost to get the money necessary for the building of his capital, Meknes [q.v.], the palaces of which were built by the forced labour of the natives and of Christian slaves.

On the death of Mawlawi Isma'il, a reaction set in. For thirty years his sons fought with one another. The real masters of the situation were the 'Abd who made and unmade sultans as they pleased. One of them, Mawlawi 'Abd Allah, was proclaimed and deposed six times. He succeeded, however, in triumphing over his competitors by playing the Berbers off against the 'Abd, the importance of whom gradually diminished with the wars. The remedy, however, was not much better than the disease. This period was for Morocco one of misery and ruin. The authority of the sharifs emerged much weakened from it.

Mawlawi Muhyiyyad (1577—1592) succeeded, however, in restoring it. Inheriting the energy and vigour of his grandfather Isma'il, he brought the rebel Berbers back to their allegiance, and by the taking of Mazagan in 1696 destroyed the last trace of Portuguese power on the Atlantic coast. Convinced, on the other hand, that the weakness of the central power was mainly due to a lack of financial resources, he endeavoured to procure money by encouraging the development of foreign trade. He inaugurated a mercantile policy, concluded treaties of commerce with Denmark, Sweden, England, and France and endeavoured to attract foreign merchants to his kingdom by founding for them the town of Mogador [q.v.] in 1764. Heavy taxes, however, severely impeded the progress of this policy. Morocco remained a poor country and did not open itself as had been hoped, to European penetration. It also remained a perpetual theatre of war. Mawlawi Vaziid (1792—1794) the country was once more handed over to anarchy. Mawlawi Sliman (Salaiman) (1794—1822). after at first being able to restore order, had to spend the last ten years of his reign in putting down the continual risings of the Berbers of the middle Atlas; in the course of one of these expeditions he actually fell into the hands of the rebels. This rebelliousness caused the sultan much misgiving; he also wanted to prevent the infiltration of foreign and anti-Muslim influences which he believed would aggravate it. He forbade his subjects to leave the country and restricted to a minimum their intercourse with Christians. The diplomatic and consular agents were relegated to Tangier, and access to the interior was made almost impossible for Europeans. His successors followed his example. Down to the end of the sixteenth century, Morocco was more rigorously closed than it had been in the time of the Merinids and Sa'dians and even in the early days of the Hasani sharifs. In spite of this systematic isolation, the sultans had nevertheless to face the same difficulties as Mawlawi Sliman and had no more success than he in overcoming them.

For half a century the domestic history of Morocco was a series of rebellions which the sovereigns had great difficulty in suppressing. The regions remote from the centre, Rif, Tafilalt, Figkeit, eastern Morocco, escaped the authority of the makhzen. In the very heart of the country, the Berber inhabitants, communications between Fas and Marrakesh, forcing the sultans when they wanted to move from one capital to the other to make a great detour by Rabat. The empire broke up more and more. Mawlawi al-Hasan (1873—1894) postponed for a few years the inevitable collapse. His reign resembled that of Mawlawi Isma'il. At the head of his army, the artillery of which had been reorganised by a French military mission, he was continually in the field raiding the rebels and tearing down kasbas. He re-established order in the region of Udja, forced the people of Sūs to recognise his kāids, reduced to obedience the Za'īr and Zayān, endeavoured to extend the makhzen country by expeditions against the independent Berbers, endeavoured to develop his influence in the Saharan regions and to restore his authority in Tuat. But he died before completing his task and all had to be begun again.

Morocco and the Christian powers. The situation was the more critical that the fate of Morocco could no longer be a matter of indifference to the European powers. It increased the cupidity of some and aroused the cupidity of others. In spite of their desire for isoliation, the sultans had not been able to break every link with Europe. They had also to take account of the proximity of Spain, established for three centuries in the *presidio* of the Mediterranean coast, and of the French who had replaced the Turks in Algeria [q.v.] The conquest of the old Regency, destroying all the sharifs' hopes of extension eastwards, had caused great irritation in Morocco. 'Abd al-Kadir [q.v.] found followers among the peoples of this country and supported hardly disguised on the part of the makhzen. This hostile
attitude resulted in the Franco-Moroccan war of 1891. The sharifian army was beaten at the battle of Ily, the ports of Tangier and Mogador bombarded. The moderation of France alone enabled the makhzen to come fairly well out of this unfortunate escapade. Henceforth the relations between France and Morocco remained peaceful, although the impotence of the sharifian government to guarantee security on its borders forced France to military demonstrations like the B. Snassen campaign (1859) and the wādī Ghar expedition (1870). Spain in turn being unable to obtain satisfaction from the attacks directed against her garrisons decided also to resort to arms. The campaign of 1859—1860, ended by the victory of O'Donnell, revealed the military weakness of Morocco. The treaty of Tetwan (1860) granted to Spain, along with some trilling territorial aggrandisement, an indemnity of 100,000,000 reals. To pay this debt, the sharifian government had to raise a loan in London on the security of the Moroccan customs and to accept the control of European commissioners. For the first time foreigners intervened in the domestic administration of the empire. The breach thus made was continually enlarged. The exercise of the right of protection, the erection of a lighthouse on Cape Spartel, served as a pretext for diplomatic negotiations and for the extension of international control. European ambitions were not dissimulated. In order to protect itself against them, the makhzen tried to play one off against the other and confined itself to granting, as it did at the conference of Madrid (1880), concessions devoid of all practical significance. Mawlālī al-Hasan excelled in this difficult game and even the vizier Bū Ahmad, who directed affairs during the early years of the reign of ʿAbd al-ʿAzīz, Mawālī al-Hasan's successor, displayed no less skill. Morocco was thus the object of a very keen struggle for influence. England wanted to maintain her economic preponderance along with the control of the Strait; France wanted to ensure the security of her Algerian possessions and of the roads leading to the Saharan oases occupied in 1901—1902; Spain appealed to her "historic rights"; Germany lastly was preparing to seize the opportunity to acquire openings for her commerce and emigrants.

The Moroccan crisis and the establishment of the French protectorate. Such a position could not last. The imprudences of Sultan ʿAbd al-ʿAzīz precipitated the crisis. The whims of the sovereign and his immoderate desire for European innovations displeased the strictest Muslims. The modifications in the fiscal policy, made by the dīrāṣa disturbed the people already taxed to the utmost. Rebellion broke out everywhere. A pretender, the rūqāl Bū Ḥamārā, rose in the region of Tāzā and routed an army sent against him. It was in vain that France by the agreements of 1901 and 1902 endeavoured to organise the activities of the makhzen against the rebels and to postpone the inevitable catastrophe. On the failure of this effort, France decided to arrange with England and Spain to settle the Moroccan question and prevent the dismemberment of the empire. In return for recognition of the protectorate de facto exercised by England in Egypt and the granting to Spain of a sphere of influence in northern Morocco, these two powers recognised the right of France to act as her interests hest demanded. France hastened to propose to the sultan a plan for reforming the sharifian administration. The intervention of Germany prevented its realisation. On March 31, 1905, William II landed at Tangier and in a sensational speech posed as the defender of the independence of the sultan. On the advice of the German representative, ʿAbd al-ʿAzīz appealed for the constitution of an international conference to study the reforms to be introduced into the Maghrib. The conference met at Algeciras (Jan. 15—April 7, 1906) and affirmed the three principles of the sovereignty of the sultan, the territorial integrity and economic freedom of Morocco. It did not, however, settle the Moroccan question. The two international bodies which it decided to set up, the police for the ports and the state bank, both capable of being of great service, could not take the place of the general reforms necessary for the salvation of the empire. Disorders continued, acts of hostility against Europeans in Morocco itself and acts of brigandage on the frontiers increased in number. Not being able to obtain satisfaction for outrages on its subjects, the French government ordered the occupation of Udja and Casablanca in 1907. The country was then pacified around these two centres and order restored in eastern Morocco and in the Shawaya to the great benefit of the natives themselves. The Spaniards in their turn for similar reasons intervened in 1908 in the adjoining region of Melilla and after a severe campaign in 1909 occupied Salwān and a number of strategic points.

During this period war broke out between ʿAbd al-ʿAzīz and his brother Mawlālī ʿAbd al-Haffīz, proclaimed sultan at Marrākūsh and then at Fās. Supported by the anti-French party, the pretender was victorious. All the powers, including France and Spain, recognised him, after he had promised to respect the agreement of Algeciras, the international treaties and all the engagements entered into by his predecessors. France and Spain announced their intention of not prolonging their occupation of sharifian territory. The Franco-Moroccan agreements of March 4, 1910, and the Hispano-Moroccan of Nov. 19 of the same year, stipulated that the occupation should cease as soon as the makhzen should have a force sufficient to guarantee the security of life and property and peace within its frontiers. This settlement seemed all the more desirable as there had been occasional friction between France and Germany which had only been smoothed over with great difficulty, the most serious being the affair of the deserters from Casablanca in Sept. 1908. A disquieting state of tension remained between these two powers, although France had endeavoured to give satisfaction to Germany in signifying, by the agreement of Feb. 8, 1909, her willingness not to impede the economic freedom nor hinder the development of German interests.

The aggravation of the situation in the interior hastened the dénouement. The sultan's rule was no more effective than that of his predecessors; the exactions of the sharifian agents in the spring of 1911 provoked a rising of the Arab and Berber tribes in the region of Fās. Besieged in his capital and on the point of succumbing, the sultan appealed to the French. They decided to send an expeditionary force to the help of the sultan but ordered its commander to avoid any injury to the independence of the sultan and any occupation of new territory. Vigorously commanded by General
Moinier, the military operations had the desired effect. Fās was relieved on May 21, and after certain political operations necessary to secure the peace of the district, the expeditionary force returned to the coast. But, while the danger was thus banished from the interior, unexpected complications with Spain, taking advantage of the occasion to take possession of the sphere of influence reserved for her by the agreement of 1904, established herself in Larache and al-Kaṣī. Germany, feeling the moment was decisive, claimed compensation in her turn and sent a warship to Agḍīr. This demonstration provoked the greatest alarm in France and in Europe generally. In the end, however, a peaceful settlement was reached. After four months of difficult negotiations, the agreement of Nov. 4, 1911 put an end to the dispute. Germany abandoned all political claims to Morocco and admitted with certain reservations, chiefly of an economic nature, the principle of the French protectorate. There was no longer any obstacle to the establishment of this régime, which the sūlān accepted by the treaty of March 30, 1912. This diplomatic document stipulated the maintenance of the sovereignty of the sūlān, the representation of and protection by French diplomatic and consular agents of Moroccan subjects and interests abroad, the carrying out, with the collaboration of and under the direction of France, of a number of administrative reforms, judicial, financial and military, intended to “give the shi‘īfīn empire a new régime, while safeguarding the traditional prestige and honour of the sūlān, the practice of the Muslim faith and the institutions of religion”.

The French protectorate now extends over the whole of Morocco, but the Spanish sphere of influence enjoys by the agreement of Nov. 27, 1912 complete autonomy from the administrative and military point of view, while Tangier and its environs form an international zone, the status of which is not yet definitely regulated.

The establishment of the protectorate was to have had as its first result the restoration of the authority of the sharīf, whose support was essential for the carrying out of the reforms. This could only be attained by a considerable effort. The central power was weaker than it had ever been at the time when the conclusion of the protectorate treaty put an end to the crisis. The ḥlād al-makhzen was almost non-existent. France had to conquer Morocco for the sūlān. The name of Marechal Lyauty, appointed High Commissioner and Resident General, will remain inseparable from the history of the pacification of Morocco, like that of Bugueaud in the history of the conquest of Algeria. Very difficult in itself, for it brought the French into contact with warlike tribes, some of whom had never recognised the authority of the makhzen, the task was further complicated by events abroad. Order had hardly been restored around the chief towns, Fās, Meknes, Marrākush and communication restored between eastern and western Morocco, when the War of 1914 broke out. For a moment it was feared that the French were going to abandon the interior and fall back on the coast, but the progress of the pacification of the country was only slowed down and not interrupted. All the conquered positions were retained and the rebels held on all fronts. The counter-offensives of the rebels in the Tārāḥ corridor, along the Middle Atlas and in Sūs were crushed. The War finished, the offensive was resumed to reduce the districts still unsubdued (Middle Atlas, south of the High Atlas, upper valley of the Muluya). Three years of difficult fighting (1921—1924) ended in the occupation of “all Morocco of value”, i.e. those regions of economic, political or military importance. The Rifian offensive in 1925, however, threatened to compromise all the success achieved. A Rifian chief, Abūd al-Karīm, had gathered around him the greater part of the tribes of northern Morocco and inflicted serious reverses on the Spaniards and forced them to abandon a portion of the territory which they had occupied. Crossing the Spanish zone, he invaded the valley of the Wargha and threatened Fās. The resistance of the posts echeloned along the frontier gave reinforcements time to reach the scene of hostilities. Checked in the autumn, the Rifian advance was definitely crushed in the spring of 1926 thanks to the combined action of France and Spain. At the moment of writing, the conquest may be regarded as completed; only a few tribes of the Central Atlas and of the oases of the Sahara have not yet been reached by the French, but their reduction is only a matter of time.

The administrative reorganisation has kept pace with the pacification. The old machinery has been retained but submitted to a control which guarantees the natives against abuse of their power and excesses by the agents of the makhzen. Technical services have been created to give the country the works necessary for its economic life. The remarkable results obtained in all fields have been facilitated by the influx of European immigrants and capital. Morocco seemed condemned to vegetation. Now it is being completely transformed. A new epoch is beginning, very different from any that have preceded it.

(G. YER.)

III. Population.

a. Total population and density. It is difficult to fix with any precision the total population of Morocco. The attempts made at a census in recent years in the parts subject to the sharifian makhzen enable, it is true, comparatively accurate estimates to be made for the greater part of the country and corroboration for most districts the estimates made by European travellers before the establishment of the French protectorate. But the part of the sharifian empire still outside the authority of the makhzen and those whose southern boundaries are not exactly known have not been seriously investigated from this point of view, and until they have been scientifically studied it will not be possible to estimate the total population of Morocco to within a few hundred thousands.

The total usually given is 5,000,000, of whom a tenth, 500,000, are in the zone of the Spanish protectorate. This population is very unevenly distributed and its density varies with geographical conditions. The most thickly populated part is that of the plains of western Morocco between the massif of the Djebala in the north and the Great Atlas in the south: Gharb, Shâwiyâ, Tâdât, Dukkâla and 'Abdâ. The density of the population also varies with the fertility of the soil. The population of this region is estimated at two fifths of the total. The mountainous regions, Djebala, Rif, and Middle Atlas are not thickly populated, as we might have expected from the comparatively dense population of Kabylia, in another mountainous region of North Africa. As to the Saharan zone, outside the belts of oases in the Wâdî Gir, the Wâdî Ziz (Tâffûtât) and the Wâdî Darâ (Dra), it is very sparsely inhabited.

b. Elements of the population. The population of Morocco consists for the most part of Berbers and Arabs, the former being the older element and the latter invaders. As to the Berbers, who do not seem to be a homogeneous race and whose origin is obscure, see the separate article on them. As to the Arabs, they are in a minority, but it is often difficult to attribute an exact ethnic origin to certain tribes or confederations, so much have the Arabs and Berbers become mixed since the Muslim conquest, and intermingled either by peaceful or warlike methods. It will be more prudent and will give a more accurate result if we distinguish in Morocco between those who speak Arabic and those who speak Berber (see below VII. Languages). The former live entirely in the plains, while with the exception of the massif of the Djebala, the inhabitants of the mountains speak Berber.

1. Berbers. Three main groups may be distinguished among the Berbers of Morocco: in the north the ifâns and the Beni Znásen; in the centre the Zinaqa (Sanhadja) and the harîb (Harîbî), who form the population of the Middle Atlas; the third group is that of the Djâbi [cf. the article gjûtût] who occupy the western part of the High Atlas and the Anti-Atlas, as well as the plain of Sûs. In addition to these main groups, we may mention the Djebala, arabised Berbers, to the N.W. of Fès, and the Haratîn (plur. of the Arabic harîb), who seem to be regarded as an intermixture of Berbers and Sudânese and form the basis of the settled population of the zone of the Saharan oases.

2. Arabs. The early invasions at the time of the Muslim conquest do not seem to have appreciably modified the ethnology of the country. Down to the xiiith century A.D., the country districts of Morocco were almost completely Berber; it was the great AImohad ruler 'Abd al-Mu'mîn [q.v.] who was the first to introduce into Morocco Hilâlî Arab tribes hitherto settled in the Central Maghrib or in Ifriqiya; these imports, continued by the successors of this prince and by the Merind dynasty, soon drove the Berber element into the mountains or absorbed and arabised it. Evidence of such assimilation is still found in the fact that tribes with clearly Arab names contain sections whose names show their Berber origin.

These Arab tribes, who are all settled in the
plain, may be divided into two main ethnic groups: the Banū Hilāl [q.v.] and the Mašūl. The latter occupies almost exclusively the valley of the Upper Muluya as well as the lands south of the Atlas. The Banū Hilāl occupy the sub-Atlantic plains and the steppes of Eastern Morocco.

3. Jews. There are about 150,000 Jews in Morocco, mainly living in the towns. There are also a considerable number among the tribes of the Great Atlas. They also form the principal element in the population of the two little towns of Debdū and Demnāt [q.v.]. The origin of the earliest elements in this Jewish population is obscure: it is difficult to ascertain whether they were Jews who had migrated from Palestine or were judaiscised Berbers. The modern element is made up of Jews who fled from Spain to Morocco in the xvith century. The father called themselves philistin (Palestinians) and are called forasteros (foreigners) by the Spanish immigrants, who are practically all settled in the towns of the coast and are rapidly becoming Europeanised.

In Morocco, there are also negroes. The negroes, of whom there are considerable numbers in Morocco, do not however form a distinct group there. In the north we find many, who are almost all slave origin. The predilection of the townsmen of Morocco for black concubines, noted for their domestic virtues, has brought into the population, especially in bourgeois circles, a very considerable amount of negro blood. To the south of the Atlas in the oases, the intermarriage of negroes and Berbers has produced the Harāṭīn. Finally the negroes of the Sudān, since the Middle Ages, have always been esteemed as mercenaries to form the imperial guards, especially since the taking of Timbuktu by the armies of the Sudānīn Sulṭān Ahmad al-Manṣūr [q.v.].

Large numbers of Muslims from Spain, whether of Arab origin or descendants of Christian inhabitants of the Peninsula, have contributed to form the population of the towns at various times: Cordovans banished by al-Ḥakam I at the beginning of the third century A.H. after the "revolt of the suburb" and Muslims expelled from Spain at the "Reconquista".

We must not omit the influence that may have been exercised on the population of Morocco by Europeans (renegades, who had adopted Islām, mercenaries recruited outside Morocco and settled in the country), and finally we may note that frequently the sulṭāns have purchased women for their harems in Constantinople.

IV. Social and Economic Life.

a. Country. The population of Morocco, although for the most part rural, nevertheless has a larger proportion of town-dwellers than Central Barbary and, like the rest of North Africa, might be divided into nomadic and settled; this division does not at all coincide with that into Arabs and Berbers; there are still nomadic Berbers, while certain Arab tribes are becoming settled on the lands which they cultivate.

It has been shown that the nomadic or settled life of the country-people in North Africa does not depend, as was long thought, on ethnic factors, but is entirely conditioned by geographical considerations. It is the rule for dwellers in the mountains to be settled while the people of the desert steppes, forced to move about in search of pasture for their flocks, are nomads. There are however means between these two extremes and especially in Morocco, where we find many semi-nomads, who move only short distances, principally on the borders of the various mountains of the centre and south. But generally nomadism is the outcome of pastoral migration and its geographical area is in direct relation to the rainfall and therefore to the nature of the vegetation.

It is in eastern Morocco, in the steppes which lie to the east of the Muluya, and to the south of the Great Atlas, towards the Sahara, that we find the principal groups of nomads in Morocco. In eastern Morocco, we may mention among the large tribes which lead a nomadic life the confederation of the Benī Gil, between Bergent and Filg; on the other side of the Atlas, the Aḥ Sādhiḥ, the Aḥ Dhālāl, the Iḍā-ū-Hilāl, the Aḥtū-Mirīb; lastly to the south of the Darʿa (Dra) country, the ṭubā, the Shkārnī and the Awhād Dim. As to the semi-nomads, we find them, outside the Middle Atlas, in the great plains of the Sahāra and of the Shāhīlīn in the south, where a pastoral life has not yet completely disappeared before a more settled state of society.

Nevertheless Morocco is, of the three countries of Barbary, that which has in its rural population the largest proportion of settled people, of fixed habitat and living not only in tents but also in houses. The latter are rarely found isolated in the country, but on the contrary are grouped into villages of more or less importance and more or less near one another, according to the density of the population.

The type of dwelling varies with the district. In the mountains we find houses built of unbaked bricks or stone with a gabled thatch or a flat roof. In the plains, the tent predominates, more or less fixed to the spot, and with it we find more and more the hut of branches with a conical roof called ṭawwāda. In the Saharan oases, the population collects within a walled area or ḫāt (sg. ḫāt, from the class. batt); these conglomerations sometimes possess the elements of town-life. The villages are called duar (dauwā) in the plains, and ḫag in the mountains. In some hill regions we find survivals of cave-dwelling.

b. Town. Among the towns of his country, the Moroccan distinguishes a certain number that he definitely regards as cities (kaṭārīya). These are Fāṣ, Rabat-Salé and Temīn, which have been more than others subjected to the influence of Spanish culture. It must however be noted that in the majority of the other towns we can still find traces of the existence of colonies formed by Muslims from Spain, especially from the xvith century onwards. The population of the non-kaṭārīya towns is found to be composed of rustic elements but little urbanised. This is the case with Udīya and Mazagan (country Beduins) and also with Tangier (countrymen from the hills). Marrākush and Meknes owe their special urban character to the fact that as capitals they have contained the courts of two Sharīfīna dynasties, both of Beduin origin; they are makhzānīya towns in which the standard of civilisation does not reach the refinement of the kaṭārīya Spanish towns. The ports Tangier, Larache, Mazagan, Safi and Mogador were for long the only points of contact between Morocco and European influences, politically as well as commercially. Lastly in the mountains,
little towns like Sefzáwen, Wazzán, Sefrú, Debúdú, Demnát owe their existence to political reasons. The two first were founded as bulwarks against the Portuguese advance in northern Morocco in the xvıth century. Demnát and Debúdú are mainly Jewish towns. As to Sefrú, it seems probable that it is a survival of an old Berber town. We may also mention as towns of secondary importance, on the Mediterranean coast, Ceta, completely Europeanised for several centuries, on the Atlantic coast Azúla (Asalá), Casablanca, which owes its origin to the little port of Anfa, Azemmúr, Agádir. In the interior, al-Kar, al-Kabir, el-Ksar, Spanish spelling : Alcazarrquivir, Táza, Táridánt. Several ancient towns have now disappeared, e.g. Naktr and Béda in the Mediterranean, Tít to the south of Mazagan, the two Aghmat and Tínnallal to the south of Marrákch and several others, descriptions of which have been given by the geographers like al-Bakrî, al-Idráï and Leo Africanus.

As a rule, the Moroccan town is grouped round a citadel or kasba (pop. kásba) which is the seat of authority. Under the protection of the citadel lies the mellah or Jewish quarter. All around spreads the town proper or médina with its great mosque, markets and baruras [q.v.]. It is surrounded by a rampart (dir), beyond which there are usually the suburbs more or less rural in character. The town itself is divided into quarters (kauna) with streets (zanka), alleys (darb) and squares (rakhba).

c. Economic Life. The country people, whether settled or nomadic, who form at least four fifths of the population of Morocco, live on the land, either by agriculture or stock-raising, mostly combining the two. Those in the highlands grow cereals (wheat, barley), certain leguminosae (broad beans, chick-peas, vetches) and fruit-trees. They also exploit their forests in a very primitive fashion (thuyas, cedars). The people of the plains devote themselves mainly to cereals and the rearing of cattle, sheep, camels, horses and asses. In the oases of the south, the population cultivates the date-palm and understands the art of irrigating the land.

The rural industries are very primitive. They are limited to supplying the necessary implements of agriculture, and weaving wool into the material for garments, tents and carpets. The Berbers of Sús show a certain aptitude at metal-working (arms and jewels). Sús no longer exports the cane-sugar and copper, which formed considerable articles of trade under the Saadians. Each tribe has a certain number of markets (sık), which are held in the open country and bear the name of the day on which they are held. It is in the sık that the peasant sells his produce and buys the manufactured articles that are brought by the merchants from the towns. Cereals are preserved in siloes (matmura); in the Great Atlas and to the south of it we find fortified storehouses, which belong to the community and are called agádir.

It is in the towns that we find industrial activity concentrated. Each trade, which originally formed a guild (kanta), is grouped in one street which bears its name. In it the articles are made and sold. The stocks are kept in the fondús (Ar. fondús) which correspond to the khán and wahhāleh of the east. Some products, like grain, oil, coal, wool, are sold in special places called rahba.

The monopolies of exporting (ṣāku) corn and hules established by the sultans at the end of the xıxth century have now been abolished. Several European products have become of the first necessity in Morocco and form the subjects of an important traffic: cotton goods, tea and sugar and candles. For the history of the towns, measures and coins in use in Morocco before the establishment of the protectorate see the works by Massignan and Michaux-Bollaire quoted in the Bibliography. The very vivid picture drawn by Leo Africanus of the commercial and industrial activity of Fás in the Middle Ages is still very valuable.

The Jews, who devote themselves specially to certain trades that flourish in larger centres (gold-smiths, embroiderers), also play an important part as brokers. The citizens of Fás, who have a large number of converted Jews among their number, had almost a monopoly of the import trade of Morocco, especially from England, and for this reason had little colonies in the sea-posts.

The Berbers of Sús like to settle in the towns as grocers (baššāl) and having made their fortunes return to the country. Since the war of 1914—1918 a large number of them have migrated to France as labourers and they settle in groups, according to their original tribes, in the suburbs of certain large industrial towns.

V. Political Organisation.

It is only at rare intervals and for short periods that Morocco has been entirely under the authority of the sultán; whence the distinction between the territory subjected to the government (bílad al-makhzen) and the territory unsubjected (bílad al-saibá). As a rule, the makhzen territory included the towns, valleys and plains. The mountains, on the other hand, remained more or less independent, according to the degree of power possessed by the sovereign. For further details cf. the article MAHKZEN.

Outside the towns the population is grouped into tribes (khabīla). Several are sometimes grouped together under a common name, without however being a confederation in the strict sense of the word; this is the case with the Ghumāra in the north, the Hāba, the Dukkāla, the Shāwīya in the south. The tribe is subdivided into sections (rub', khams, jidhab), which are subdivided into sub-sections comprising a certain number of villages of tents or houses.

The tribes who own the sultán’s sway are governed by a bašl appointed by the makhzen. His duty is to allot and levy the taxes, to raise contingents of soldiers and keep good order. He has under his command a shākh for each section under whom are the makhkadam of the sub-sections.

For the distinction between makhzen, ṣaikh (vulg. sheikh) and nāba tribes see the article MAHKZEN.

In the tribes not subject to the makhzen, political activity is confined to the ḍāmā’a, i.e. an assembly of men able to bear arms. The ḍāmā’a deals with all the business of the tribe, civil, criminal, financial and political. It administers justice following local custom (Arabic ‘urf, Berber izzíf). It elects a ṣaikh (Berber amghar) who is only an agent to carry out its decisions. Alongside of the ḍāmā’a of the tribe, there are ḍāmā’as of the sections and sub-sections but their powers are limited.

All the tribes of the bílad al-saibá are divided into opposing factions or lāff. When a tribe of
Morocco

593

a certain laff is attacked, those neighbouring tribes who belong to the same faction take up arms and come to its assistance.

In the towns, the mahkzen is represented by a governor whose official title is kaid but in certain large towns he is often called baju. The title of amil has been sometimes given to the governor of Ujda. The kaid of the town, generally speaking, has the same powers as the kaid of the tribe. He acts as judge in case of any violation of the law. He has an assistant or khalifa. Alongside of him, the mu'tasib supervises the corporations, fixes their average prices and looks after public morals.

The kaid has under his orders the muhaddal of his quarter and his police (mekhazia) carrying out his instructions. Among the officials sent by the mahkzen to each town may also be mentioned the nazir or inspector of endowments (hubis), the trustee of vacant inheritances (wakil al-gharaba), popularly known as wakil al-loqafa, the collector of local taxes and market-dues (amin al-masafat).

Lastly in the harbour and frontier towns, the customs are collected by officials called amoons (sg. amin).

Justice is administered by the kaid or by the baju, as the case may be. The latter deals with questions of personal law; official reports on the cases are drawn up by the nazir. In technical cases he appeals to experts: master-masons, agriculturists, veterinary surgeons (muwallid en-naqar, arbaa et-turbi, fallah, ba'itir). The legal opinions (fatwa) given by eminent jurists on the same subject are often contradictory, the Sharifian government has recently created a court of appeal (muwallid al-alim) at Rabat.

A landed property takes a number of different forms. In the first place, there are the state domains; they are either managed directly by the mahkzen (crown-lands) or they are allotted to ghiti-tribes in return for the military service for which they are liable; others of these lands may be granted in temporary or definite ownership to private individuals by imperial edict (zahir or tanbihat).

The hubis lands may be urban or rural. In the towns, they not infrequently cover half the area. They are let out under special conditions which give the tenants special privileges, mafidh and gazi (class. Ar. gazi). In the country, the hubis lands consist mainly of fields and orchards. In all cases, the revenue from these lands is set aside for the maintenance of buildings of a religious character or of public utility (mosques, colleges, schools, fountains) and for the payment of the officials attached to these establishments.

In Morocco, there are vast tracts of land which are not the property of any one individual, either as a result of the insecurity prevailing or of the sparsity of the population. These lands belong undivided to the whole tribe; they are called common lands (blad al-qama). Lastly, lands which have come to belong to private individuals (muflk) by inheritance or purchase, their character confirmed by a certificate of ownership (muwallid).

The old Muslim imposts (zakat and 'udar) have recently been merged into a single tax, the terit. In addition to this tax, from which the state draws the essential part of its revenues, we may mention the duties levied at the gates of towns and in the markets (maka), unpopular with the people and not countenanced by religion, and the urban tax on buildings (dariba). In addition to these, the main taxes, there is the hadiya or present offered to the sultan on the occasion of the three great Muslim festivals. The qiyza or poll-tax paid by non-Muslims and the ni'ba or payment for exemption from military service by certain Arab tribes have been abolished.

VI. Religious life.

A. The Berbers before Islam. For lack of documents it is difficult to get any accurate idea of the religious beliefs and practices of the Berbers of Morocco, before their conversion to Islam and it is only from the survival of animistic cults which can still be observed in the country, that we can guess what the primitive religion was. The figures on two carved stones found in Morocco seem to evidence the existence of a solar worship. On animistic practices surviving in modern Islam in Morocco see below d. Islam in Modern Morocco.

b. Conversion to Islam. At the time of their invasion, the Arabs found a number of tribes around the towns the people were more or less under the influence of Jewish and Christian teachings; but there is little doubt that they did not practice these religions in their true form. It will be more correct to think of them as professing Judaism or Christianity rather than as real Jews or Christians. It seems evident that these influences had prepared the Berber population around the mountains to adopt the new monotheistic religion, which the invaders imposed upon them. The two earliest invasions, that of Uqba b. Nafi'i in 640 and that of Mas'ud b. Nuyair in 711, could result only in a very partial and superficial Islamisation, for very few Arab elements remained in the country. Islam, a town religion, was for long confined to larger centres. The Berbers generally became converted in the hope of escaping the excisions of the conquerors: but when the latter wanted to treat them simply as tributaries, they did not hesitate to apostasise, on seven different occasions, if we may believe the Arab historians. One thing is certain, that while remaining Muslims, they were not long in trying to cast off the authority of the caliphs of Baghdad by adopting the heterodox doctrines of the Kharijis (q. v. and the article al-sufiyya). The Berbers of Morocco went even further when the new local religions arose among them more or less based on Islam, with their own prophets and Kufans. After the attempt at rebellion by the Berber of Tangiers, Maisara [q. v.], which was quickly suppressed, the Barghawata recognised as their prophet one of their number, Suli b. Tarif, who gave them a religion and a Kufan in the Berber language. This religion, the progress of which was opposed by the early Moroccan dynasties, seems only to have been finally exterminated by the Almohad rulers of the 11th century. This Barghawata movement was the most lasting; we also note that which was created by Hafia Min [d. 313 A.H.] among the Qamata, near Tetouan.

In spite of these reactions, Islam, having become the official religion of increasingly powerful dynasties, gradually gained ground and penetrated slowly into the Berber mountains, but it is only from the death of Abd al-Munin, who destroyed the religion of the Barghawata and put an end to the rule of the "anthropomorphist" (muqassimun) Almo-

The Encyclopaedia of Islam, III.

38
ravids, that we can date the complete unification of Islam in Morocco. Till then, Islam had had in Morocco champions who were soldiers rather than theologians, and who after forcing the people to adopt Islam at the point of the sword, were little fitted to instruct them in it. It required a Berber of the Great Atlas, Ibn Tumarti [q.v.], a theologian who had been educated in the east, to come back to his country and to secure the devoted support of a mass of followers in order to found the movement, which was political as well as religious, of the Almohads [q.v.] or “preachers of the Faith” [q.v.]

If the Almohad reformation was only temporary in Morocco, it was nevertheless strong enough while it lasted to obliterate in the country all trace of schism or heresy and to establish thoroughly in it the school of Malik b. Anas [q.v.] which it still follows.

3. Evolution of Moroccan Islam. From the time of the fall of the Almohad dynasty, Moroccan Islam rapidly acquired features of its own. Islam, defeated in Spain, was gradually driven out of it, then attacked in Morocco itself by the Christians of the Peninsula. The western frontier of the Dar al-Islam was brought back to its own territory and then thrust farther back. Islam, in Morocco, attacked by Christianity and forced to djihād, became an active principle. It required all the moral forces of the country, even those of which the orthodoxy seemed doubtful; in order to utilise them, it did not hesitate to absorb them by covering them with a more or less superficial veneer of orthodoxy. It was at this period that the cult of dead and living saints, and to a certain point Shari’a, which had hitherto only existed alongside of Islam in Morocco, were adopted into it and received a kind of official recognition from the maghāzen.

Before the Marinids, Islam had required the constant assistance of the temporal power to maintain itself and advance. From the time of this dynasty, sprung from a Berber nomad tribe, the roles are inverted; it is now the sovereigns who utilise Islam to increase their own power, and try to monopolise it by creating official colleges for religious instruction (madrasas); the first of these (Madrasat al-Safīn) was founded in 679 (1280) by the Sultan Abū Yūsuf at Fas, the capital of the dynasty, which made it the great centre of Muslim culture in Western Barbary [cf. Fas]. The immediate successors of the Marinids, the Banū Wayṣ, established in the same town the cult of their founder Idrīs II. The mausoleum in which he is said to be buried was henceforth an object of great veneration. He is the earliest in date and the most important of the innumerable canonised Muslims who are the objects of a regular cult in Morocco, even on the part of the religious leaders and the aristocracy. When the cult of Idrīs was established, his descendants — more or less authentic — claimed the title of shorfa and soon played a preponderating part in Moroccan society, as a political and moral influence. The power of the Idrīsī shorfa was soon reinforced by that of other shorfas descended from ‘Ali through al-Hasan and this is the origin of the two great groups of shorfas in Morocco, the Idrīsī and the ‘Abd. To the latter belong the two Sharīfī dynasties, the Sa’dīn and the Fāṭīmī, the latter still in power. From the moment of their accession to the throne, the influence of the shorfa on the destinies of the country became more and more preponderant.

The phenomenon of shari’a is closely connected on the other hand with the development of religious brotherhoods [cf. the article Ṭarīqa]. Although we find evidence of their existence at the end of the Almohad dynasty (Hudjajjād, Mughirīyān, Amgāhīyān), it is only as a result of al-Ijābi’s [q.v., d. 1645 A.D.] campaign in favour of a djihād against the Portuguese, that we find the principles of the brotherhoods, as we know them today, first coming into existence.

4. Islam in Modern Morocco. Here we will only give a survey of the principal points of detail in which the people of Morocco differ from the rest of the Muslim community as regards the practice of their religion. With the exception of a few isolated groups, still little studied, who are credited with heterodox or heretical practices (Zkārī, in the neighbourhood of the Bni Znāen, in eastern Morocco, Biddawī, in the Gharb, not far from al-Ḳṣar al-Kabīr), all the Muslims of Morocco are Sunnis and since the Almoravid period have followed the Masīka rite, which prevailed in the west over that of al-Awzā’ī. It is in the towns that the population observes most strictly the duties of the religion. The plains and the Berbers of the mountains are rather lukewarm Muslims. The Dḍāla, however, between Fas and Tangier, are very devoted to Islam, show great piety, and Kur’ānic studies are very much in favour with them; it is from them that they are recruited a great number of schoolmasters who practice their calling in the plains [cf. Shāqīs]. It is also practically only among the hillmen of the north and south that we find a mosque in every village. In spite of the great distance they have to traverse, theMoroccans like to accomplish the canonical pilgrimage. A considerable number settle in the east (there are Moroccan colonies in Alexandria and Cairo); the importance of these colonies had even induced the Sultan Abī al-ʿAzīz to appoint a Moroccan consul, amīn al-Makārība, for Egypt.

In addition to the two canonical festivals of Islam (ʿĪd al-Kabīr and ʿĪd al-ṣaḥīr), the Moroccans celebrate the festival of the birth of the Prophet (mīlād, class. mawlid) and that of ʿAbd Allāh (10th Muḥarram). The mīlād, established in Morocco by the Marinids, has become a kind of national festival, since the accession to power of sovereigns claiming descent from the Prophet; this festival in Morocco almost surpasses in importance the two canonical feasts.

The peculiarities just mentioned would not be sufficient to give Moroccan Islam a special character, nor would its religious brotherhoods, if the latter were confined to the practices of religion or to the exaltation of the faith and to satisfying the need for an elevated mysticism among their adepts. These religious brotherhoods are fairly numerous: Talda, Darkawa, Taʿīlīya-Tubāma, Kattāmīn [q.v.] etc. But alongside of these brotherhoods, whose members are almost exclusively recruited from the literate or well-to-do classes of the towns and country, there are popular brotherhoods in considerable numbers, in which preoccupation with religion gives place to charlatanism practices and sangunary displays. Such are the Dḍāla, the Ṭaswa, the Ḥmadāga, the Dḥūghiyā. Some of these brotherhoods recruit their members ex-
exclusively from a particular class of society; thus the *râbi‘* (class, *râmilâ*) is a brotherhood of marksmen, and the *Gnawa*, a negro brotherhood. All these brotherhoods have this feature in common that their founder has become a famous saint (*wâlî*).

The cult of saints is highly developed in Morocco and undoubtedly was so before the introduction of Islam, which found itself obliged to tolerate it. There are however very different categories of saints, from the venerated patron saint of a capital or of a district to the local holy man whose name is forgotten, between whom comes the *sâyi‘id* whose tomb is marked by a *jâmih* (chapel) supported by a dome, more or less elaborate. The more humble saints are recognised by the circular wall (*haqiq*), which surrounds their tombs.

These venerated individuals, male and female, have attained sanctity by very different ways, in some of their lifetime, by their learning, devotion, asceticism, miraculous powers (*baraka*), sometimes even by more or less mystic mania (*maqâ‘âlî‘*); the others, after their deaths, have been distinguished by miracles, apparitions etc. The warrior in the holy war (*ârikî*; *râhîf*), slain fighting against the infidel is frequently beatified — hence his name of *murâblî‘* (pop. *morâblî‘* — French and English "marabout"). But the early significance of this term was frequently lost sight of and the term *murâblî‘* came to be generally applied to saints, who never took part in a *djâhâl* in their lifetime. *Murâblî‘* thus came into general use as a synonym of the other words used for saint in Morocco: *wâlî*, *sâyi‘id*, *gailî*. But it is the only one applied to the descendants of a saint, who possess the *baraka* of their ancestor. Among the Berbers, the saint is called *agurâm*. The names of great saints have *mawâlî‘* prefixed, the others the title *shî‘î*, while women saints of Berber origin are called *tâlîa*.

The saint to whom sanctuaries are most frequently dedicated — modest though they are (the *mâkîm*, *khalka*; *khâlî‘*) — was not a native of the country but the famous patron saint of Baghdâd, *Abd al-Kâdîr al-Gilânî, popularly called al-Djâlî‘*, who undoubtedly never visited Morocco. But the saint whose cult is surrounded with the greatest splendour is the famous Mawlâ Idrîs, founder and patron saint of Fâs. Among the other great Moroccan saints may be mentioned: Mawlâ *Abû al-Salâm ibn Masjîsh*, patron of the *djâhâl*, buried on the *Djâhâl al-‘Alâm*: Mawlâ *Alî Sulâm*, in the *Gharb*; Mawlâ *Abû 1-Shî‘î* al-Khanâmâr (Mawlâ *Buqîshîa*), in the north of Fâs; *Sâlî Muhammad ibn ‘Isâ*, patron of Meknès and founder of the brotherhood of the ‘Ishâ‘. Mawlâ *Abî Shu‘âb ibn Yûsûf*, at Azemnîr; Mawlâ *Abû Ya‘âsa* (Bu‘azzîa), in the *Tâdâl*; Sidi *Abû 1-‘Abbâs* al-Sabî (Sidi ‘Abd ‘Abd ‘Abîb), born at Céuta and patron of Marrâkûsh. All these and other less famous are the subjects of a hagiographical literature which will be dealt with later.

Devotion to individuals canonised in their lifetime or after their death is in Morocco not confined to Muslims. The Jews have also their saints, relatively as numerous as the Muslim saints. Some of the Jewish saints have acquired a reputation so eminent that even Muslims revere their tombs: e.g. those of the Rabbi ‘Amian in Aujen, near Wassân and of Rabbi Ben Zmuco at Safi. On the other hand, the Jews of Morocco show a special reverence for certain of the great Muslim saints of the country.

The area, surrounding the tomb of each of the principal saints is sacred (*hûrûm*) and hence regarded as an inviolable asylum; among the best known are the *hûrûm* of Mawlâ Idrîs in Fâs and that of Mawlâ ‘Abd al-Salâm b. Mâshîh in the mountains of the northwest. These pieces of ground are the exclusive property of the families who are descended or claim to be descended from the saint. They are exempt from state taxes: more than that, the descendants of the saints have the right to levy for their own benefit certain special dues, by a privilege officially recognised by the sultan. The levying of these dues is not the only way by which the saint's chapel benefits his descendants. The principal source of revenue is the offerings of pilgrims when visiting the tomb; this is the *ziyâra*. In general once a year, there is a kind of patronal festival at the tomb of the saint which is called *mâkîm* (class. *Ar. mawzû‘*); a vast crowd, some of them from a considerable distance, gather there to pay their devotion to the *sâyi‘id* and to see the display of fireworks given in his honour. On this occasion the offerings flow in and are shared among themselves or any important donation by the saint's descendants.

In these circumstances, it is usual for every sanctuary of importance to be regularly organised. The chapel which contains the tomb and the buildings attached to it, an oratory and guest-house, is called the *ziyârîa*. It is superintended by a *maâkîlâm* who collects and distributes the revenues. These do not come entirely from the *ziyâra*. The *ziyârîa* often own lands, sometimes extensive, which are let out and the profits shared with the tenants. They are called *âshî* and the tenants are called *âzâzî*. These farms, sometimes acquired by purchase, often come from bequests or donations (*hâlî‘* from pious private individuals.

We can thus see how certain famous and wealthy *ziyârîas* may exert a moral and political influence in the country round them, independent of their religious influence. The latter is however also very important. The great Moroccan *ziyârîas* are centres of orthodoxy and give life and vigour to Islam in the country. Some are centres of mysticism and they are always centres of religious instruction. This explains the enviable position occupied in Moroccan society by any group of descendants of a famous saint, or of marabouts. If their ancestor had, in addition to the virtues for which he was canonised, the honour to be a descendant of the Prophet, they are at the same time shofâ, which further increases their material privileges. The descendants of a saint who was not a shofâ try to claim this origin for him by inventing more or less fictitious genealogies. The marabouts who have in this way "infiltrated" into the social category of the shofâ are very numerous in Morocco. A Moroccan *ziyârîa* is not only a centre of hagiolatry; it is also in the majority of cases a body of shofâ and the centre of a religious brotherhood or of a branch of one, or of a secondary order affiliated to a brotherhood. The *ziyârîa* itself may have offshoots. Many of the establishments of this name are daughters of a mother *ziyârîa* and are sometimes at a considerable distance from it.

Hagiolatry, religious brotherhoods and sharifism thus form three special aspects of Islam in Morocco, which are profoundly intermingled, and it is dif-
cult to study them separately. For a detailed account of the principal families of šofrā in Morocco of genuine šarīf origin or simply marabout see the article SHOFRA. Here we shall only mention the principal ones whose origin is considered authentic by the Moroccan genealogists. They are descended from al-Ḥasan and ʿAbd Allāh al-Kāmil through the latter's three sons, ʾĪdrīs, Muḥammad al-Nafī al-Zaykiya and Muḥa ila al-Ḥajwa. The descendants of ʾĪdrīs or ʾĪdrīsids are subdivided into Dājjān (Shaḥibiyūn, Idrānāyūn, Tālībīyūn, Qāghūyūn, Dabbaḍāghūyūn, Kattānīyūn, ʿAlāʿīyūn (descendants of the Mawlā ʿAbd al-Salām ʿAṭ-Maḥfīz, brother to the Dājjān al-Ḥajwa), whose names and others are themselves divided into Shāfshāwānīyūn, Kasānīyūn, Khamāna (Lūḥānīyūn). The descendants of Muḥammad al-Nafī al-Zaykiya are the šofrā of Suṣīlīmīs or Fīshā (Fīlāhūyūn; niṣa from Taftālī) i.e. those of the reigning ʾIrābīan dynasty; lastly, the descendants of Muḥa ila al-Ḥajwa are the šofrā of Kādīrīyūn, who take their name from the great saint of Iṣlām ʿAbd al-Kādir al-Gīlānī. We also find in Morocco. but in small numbers, Ḥusainīd šofrā, also descended from ʿĀlī Ḥusain, the brother of al-Ḥajwa; these are the šofrā called Šiḥṣīyūn and Irākīyūn, who came from Ṣanā. The great marabout families are that of the Nāṣiriya from Tāmānṣ in Dārā, the Ṣaḥāṣwa [q. v.] in Tādāl, the Dar-kawa and Wāzānīyūn to the northwest of Fās. The šofrā Wāzānīyūn (şahrīs of Wezrān), whose chief is also head of the great brotherhood of the Taṭiyyūn-Tūḥāmī (cf. above), have for long played a considerable part in politics and have been the object of particular attention from the makhlūṣ. Even more than the other representatives of the great marabout families, they have in fact rendered great services to the central power by using for its benefit the great moral and political influence which they possess among that part of the population, which is lukewarm or hostile to the makhlūṣ. They have mediated in the most successful fashion between the sulṭān and the unsympathetic body of the people.

The šofrā are thus at the head of Moroccan society. Some have assumed the power, others are the auxiliaries of the ruler, who in return shows them great deference. We shall see that they have occupied a very high place in the intellectual life of Morocco since the end of the middle ages. Lastly ʾIrābīanism, an important social factor, has been able still further to strengthen itself by the support which maraboutism has brought it, by incorporating itself in it, and the religious brotherhoods which very frequently spring directly from it.

e. Survivals of Berber cults. The cult of saints, accepted and even recognised, as we have seen above, by Iṣlām, is in Morocco much earlier than the introduction of this religion. Indeed, alongside of saints of note, there are others who are essentially popular, in the country as well as in the towns. In the large cities like Fās, the great sāyiya=venerated by all classes of society rub shoulders with humble marabouts whose names show clearly their popular origin; these are Sīdī ʾl-Mukhīṣ (Rev. the Hidden One), Sīdī Amina ʾl-Khāṣr (Rev. Good Evening) or Sīdī Kāhā Ḥāǧa (the reverend gentleman who procures what is wanted) and notices are given of them by hagio-

...
particularly by women. The djinns are regarded as supernatural powers, who have to be conciliated to avert their evil influence or fought when one is attacked by them. The rites which deal with them are either propitiatory or intended to overcome harm done. In spite of the many sacred formulae of Islam, which are found in the celebration of these two kinds of rites, one gets a strong impression of paganism from them; they ordinarily remain practically what they were before the introduction of Islam into Morocco.

VII Linguistic Survey

Two languages are spoken in Morocco: Berber and dialects of Arabic. Berber is the oldest language attested in Morocco and we have no evidence of an earlier language being used; as to Arabic, it was introduced by the Muslim conquest of the viith and viith centuries. But until the arrival in Morocco of the Banu Hilal and of the Sulaimani (XIIth century), it seems that Arabic, the language of an essentially urban culture, was spoken only in the towns while the country people continued to talk Berber; it was only after the occupation of the plains by the Arab tribes that their languages spread there. With the exception of the region of the Jbala to be mentioned later, the highlands of Morocco alone have remained faithful to the Berber language, while the towns and lowlands are at the present day almost completely Arabic speaking.

In his Annuaire du Monde Musulman (p. 162) L. Massigou gives a proportion of 60% of Berber speakers (3,200,000 to 2,200,000). A. Bernard
thinks this exaggerated and reduces it to 40% (cf. Arabophones et Berbârophones au Maroc, 1924, p. 279).

A. Berber.

1. Berber dialects. According to the works of E. Destaing, the Berber dialects of Morocco can be divided into two main groups.

The first is the northern group which includes the dialects of Rif, those of the Bui Znassen and of the Berber speaking tribes of the neighbourhood and those of the Ait Seghârâhshen, Marâmûa, Ait Warain etc. to the north of the Middle Atlas. These dialects are characterised phonetically by their strong tendency to spurantisation of the dentals and palatals. In comparing these dialects with those which in Algeria the natives call Zmâyra. E. Destaing has been led to describe the group as the group of Zanâta dialects.

The second or southern group includes, according to the same author, the remainder of the Berber dialects of Morocco; he distinguishes two sub-groups:

a. that of the Tamasghit, the dialect spoken by the Brîber of the Central Atlas, from the vicinity of Meknes to the edge of the Great Atlas; the dialects of the north are also distinguished from those of the south. It is with this sub-group that we should connect the dialect of the Sanhdâja d-es-Srât, an important highland confederation to the northeast of Fas, and perhaps also the language of the sections of the Ghumâra who still speak Berber.

b. Sub-group of the Tashelhit, the dialect once spoken by the Masmûda of the Great Atlas and by the Belbè (usual French orthography: Chlûhû) of Sûs and the Anti-Atlas.

The three groups of Moroccan Berber dialects seem to correspond very exactly to the three main ethnic divisions of the Berbers of the country: Zanâta in the N. E., Sanhdâja-Zanaga in the centre and Masmûda in the south. Going back to the old division of the Berbers given by Ibn Khalûdûn, E. Destaing proposes to make the first group correspond to the Butr tribes and the two others to the Barânis tribes.

For the bibliography of Berber studies see the list of works given by E. Lavoût at the beginning of his Mots et Choses Berbères, Paris 1920, p. xvii.; since that date see the Moroccan bibliography annually published by Hespèris. A map showing the division of Morocco between Arabic and Berber is given in the articles by A. Bernard and P. Mousnard, Arabophones et Berbârophones au Maroc (in Annales Soc. Géogr., vol. 33, Paris 1924). For the north, there is a more accurate map by R. Montagne and Pennès published at the end of the Manuel de berbère marocain (dialecte rifjain) by Justnard (Paris 1926).

There is no evidence of the existence of another language before Berber in Morocco. Very few of those “Libyan” inscriptions have been found which, although they are not yet read, are admitted to be in old Berber; one was found in the Roman ruins of Tamuda, a few miles S. W. of Tetwân, and is preserved in the museum of the latter town. Other Libyan inscriptions have been found in the region of Pettijean.

The earliest evidence of the use of Berber in Morocco is given by the Geography of al-Bakrî (9th century) who says that the prophet Há-Mim, killed in 927 A. D., had given the Berbers a Qur’ân written “in their own language”. This can only refer to their Berber speech; the same author tells us that the Baraghwâta had also a Berber Qur’ân from their prophet Ġîlî (d. in 750). For the beginning of the Almohad period, a passage in Documents inédits d’histoire almohade, p. 67, says that at this time Berber was spoken on the Umm Rabî. It is in the same work that we find the earliest recorded phrases in Moroccan Berber (Tashelhit dialect) transcribed in Arabic characters (cf. p. 26, 30, 36, 35, 39, 67, 117).

Ibn Khalûdûn seems to have been the first to interest himself in the creation of a scientific system of trans-literation of Berber into Arabic characters. Using certain graphic methods used by specialists in romance, he invented compound characters to render sounds peculiar to Berber (g, x [emphatic] and ẓ). Unfortunately Ibn Khalûdûn, who in his Mukhtârima gives interesting chapters on the urban and Beduin Arabic dialects, does not seem to have devoted any attention to the Berber language; one of the few passages to be noted in his book, as far as Morocco is concerned, is his reference to the existence of Berber speaking peoples among the Sanhdâja tribes settled in the valley of the Wargha and around the fortress of Amargf (cf. Histoire des Berbères, ed. de Slane, text, i., p. 273, l. 11). For the beginning of the xvith century, Leo Africanus (p. 28) gives us more detailed information. The five Berber ethnic groups (Sanhdâja, Masmûda, Zanâta, Hawwâra and Ghumâra) have a special language which they call aqel amariq (= anîl amasqâ), i.e. “noble language” (cf. the present name of the Tamasghit dialect) (ed. Schefter, p. 273). Berber was still the language of a part of the Ghumâra, for, he says, Arabic is used by almost all the people (op. cit., i. 29). It even looks as if the Shâwiya (“Soava”) of the Tamasaû still spoke Berber (“African language”) like all the other Shâwiya of North Africa with the exception of some who lived to the south of Tunis (op. cit., i., p. 83).

We have to come down to the Danish Consul G. Host, in the xvith century, to find the first Moroccan Berber vocabulary collected from a flock of “Tamenar”, a place probably in the region of Agadir (cf. Etretningar om Maróskos og Fen, Copenhagen 1779, p. 128—133).

2. Berber literature of Morocco. Although Berber was the language of the Moroccan dynasties who followed between the Idrîsîs and the Sa’dîs, it does not seem that, contrary to what was done in Egypt for the Turkish of the Mamlûks, Berber was made the subject of grammatical studies in Morocco, nor that it was used for the purpose of literary expression. A passage in the Kifrâs recalls the fact that the khanîyas were pronounced in Berber in the great mosque of Fas but the text of them has not been preserved. The celebrated Almohad reformer Ibn Tîmîrat is said to have composed in Berber theological and legal treatises which have now disappeared. The Berber Qur’âns of the Ghumâra and Baraghwâta have also disappeared although al-Bakri has fortunately preserved some extracts in an Arabic translation. The only texts which we now have are translations of or commentaries on religious works of the type of the Risâla of al-Kairawânî or of the Mubâkhârât of Khalîf; all these Berber texts come without exception from Sûs, whether because this region
had a more advanced culture or its dialect with a more accossionate consoante system and cleaner vowed system was better suited than others for transcription in the Arabic alphabet. The Moroccan Berbers have a large stock of fables, legends, songs of love, war and work etc., many of which have already been collected by French and German students of Barber (on Barber literature, written and oral cf. Henri Basset, *Essai sur la littérature des Berbères*, Algiers 1920).

Among Arab authors the Barber language is Ṣaqānyā, the non-Arab language; nahrbarī, Barber; ṣafir, "jargon"; in the Documents indiges d’histoire almohade we several times come across the expression al-ašān al-ghārī, "the Moorish language". In Moroccan Arabic, Barber is usually called ʿāghāriyya.  

b. Arabic  
The Arabic dialects. The Arabic language was introduced into Morocco in at least two stages:  

1. in the eighth century at the time of the first Muslim conquest, then in the xith at the coming of the Banī Ḥīlāl and the Samma. Down to the coming of the latter, who were brought to Morocco by the Almohad ruler Yaḥyā b. ʿAlī, Arabic seems to have been spoken almost exclusively in the large towns of the north, where it was used by a considerable Arab population who enjoyed a double prestige, religious and political. It was the language of religion and law. From the towns Arabic spread among the people of the surrounding country, and al-ʿIrīs (Description de l’Afrique de l’Espagne, text p. 79, transl. p. 90) already notes that in the xith century the Barber tribes of the southern hinterland of Fāṣ (Bani Ḫūṣuf, Fandalawā, Bahnīl, Zawāwī, Maggāsī, Ghiyāṣīya and Sélimīya) spoke Arabic.  

It is this linguistic influence exerted by the country on the around them that explains the arabization of the mountainous country of the Ḥibāla (plur. of ḥibīla, "highlander") while the rest of the Moroccan highlands remained Barber speaking. The land of the Ḥibāla, in the wide sense, stretches in the form of a crescent from Tangier to Taza. It was surrounded by a cordon of towns: Nafīl, Ḫabātis, Tigūs, Tétwān, Cēta, al-Kabīr, Šaghūr, Tanger, Ḫarīsha, al-Ḳāṣir al-Kabīr, ʿArbaṣ, Azdīn, Bani Ṭawwād, Wāllī, Fāṣ, and Taza, which were the only ports or markets available for the tribes of the region; besides, the mass itself was traversed by the most important commercial routes of Northern Morocco: the roads from Fāṣ to Tangier, to Cēta, to Ḫabātis, to Nakūṭ and to Ghassāka; it was therefore natural that being subject to the direct and indirect influences of the towns, the highlands of Ḥibāla should be the first region of Morocco to be arabised. The process was further favoured by several other factors: 1. the existence in the mountains of numerous large villages, almost towns, which became secondary centres of ʿurūfā public; 2. the settlement almost everywhere in the xith century among the Ḥibāla of Ḫirādi sharifs who, driven from Fāṣ by Mūṣī b. Abī l-ʿAbīya b. Miḥkān, founded independent principalities in the mountains, which became centres of Muslim urban culture: 3. the tribes of the Ḥibāla furnished a considerable part of the contingents which went to wage the holy war in Spain and returned home after being more or less arabised by contact with the great Muslim towns of Andalusia; 4. lastly the rebellions and civil wars which so frequently disturbed Muslim Spain, the emigrations or expulsions caused by the progress of the Christian reconquest, brought to Africa, from the rising at Cordova (in 814) down to the xvii century, an important element which settled in the region of the Ḥibāla either in the towns around the mountains or in the villages of the highlands (resettlement of Ḥibāla, foundation of Shafshāwā) bringing there along with the Arabic language, the prestige of their cultural, intellectual and material superiority.

This rapid sketch of the spread of the Arabic language in Morocco explains why, after studying the question, three categories of Arabic dialects have been distinguished.

1. Urban dialects; 2. Highland dialects; 3. Beduin dialects; and we may add: 4. the Jewish dialects.

a. Urban dialects. In Morocco not all the town dialects are "urban dialects". There are towns like Casablanca, Mazagan, Safi and Mogador (and to a certain degree Mukānas and Marrākush) the population of which is entirely or for the most part of rural origin and where the absence of an old nucleus of town-dwellers has not enabled them to become urbanised. The Moroccans however distinguish quite clearly such places from towns with a really urban culture, more or less influenced by Andalusian culture. The principal towns with urban dialects are Fāṣ, Kabīl-Salāl, Tétwān, Taza, al-Ḳāṣir al-Kabīr; Tangier, Wazzān and Shafshāwā have urban dialects but these are much contaminated by the surrounding highland dialects. Mukānas and Marrākush have been influenced by the Beduin elements introduced by the maghārīn groups into the dialects of these two old capitals. It is interesting to note the case of Azemmūr where the old town (Azemmūr al-ṣāhr) has an urban dialect, while the new town, which has in recent years grown up beside it around the sanctuary of Mawlay Abī Ṣulāṭ (ṣulāṭ Bā Ṣulāṭ), uses a Barber dialect. The urban dialects of Morocco form one group with those of the western part of the Central Maghrib, notably with those of Tlemcen, Nedroma and Algiers. Their phonetic characteristics are the loss of the initialents of the Classical language, the affricative pronunciation of ṣa, the frequent attenuation of kāf to ha:wā. In Fāṣ, b, m, g and ḥalm assimilate the tām of the article and are treated as ṣolaris: the simple ḥalm is pronounced like the French j (Persian j), but when it is geminated, it gives j in Fāṣ and d in Tangier. The ḥalm is often pronounced very close to the French uvular r.  

As peculiarities of the dialect of Fāṣ, we may note the formation ḥatī/tī "he has written it" for khitī → khitī and the u-c of an invariable relative ḥatī representing the old dialectal ḥānī. Tangier and Tétwān have a preposition ṣal, "to" which is used before nouns (mokatā wá to the house) but not before prefixed pronouns To translate "of" Marrākush uses ṣal; the dialect of this town uses certain Berber adverbs: ḥakā "because"; ḥellī "only".

All the urban dialects use the characteristic prefix of the present indicative: ka in the north, kas in the south. Fāṣ uses one almost as much as the other.

b. Highland dialects. These are at least as well known as those of the towns. In 1920 I published notes on that of the Tālil and the
Bréa in the north of Taza; in 1922, E. Lévi-
Provençal published texts, prefaced by a grammatical
sketch, of the dialects of the middle valley of
the Wargha; since then I have had an opportunity
of studying those of the Bni Hòsmur (near Tétwàn),
of the Mes'asa (near Brèa) and of the Ghazwa
(near Shafshawan).

The highland dialects are of course more dif-
ferentiated than the urban dialects. The tribes
which use them belong to two political clans
probably originally of different racial origin: the
Ghumàra, the old inhabitants, and the Sa'nàja,
the invaders. In the present state of our knowledge
it does not seem possible to make the dialects
coincide with political or racial boundaries; but we
can nevertheless recognise two main groups of
highland dialects:

1. The northern dialects, extending from the
Strait of Gibraltar to the south of Shafshawan
and embracing in the east the confederation of the
Ghumàra; 2. the southern dialects, from
Wazaà to Taza, used by two great classes of
tribes: first, the Sa'nàja tribes of the valley of the
Wargha; Sa'nàja of the Central Wargha,
Sa'nàja of the Sun and of the Shade, of Mo-bâth
and of Ghèddor; secondly, the Butr tribes, more or
less closely related to the Zànta and occupying
the lands south of the region of Taza: Mermsa,
Brèa, Tsül, Maghèta and Mekànsa. It seems to
be a historical fact that these Zànàta and Sa'nàja
peoples only settled in their present habitats long
after the first Arab conquest; the Sa'nàja of the
Central Wargha certainly now occupy lands
which before the Almoravid period were peopled
by the Ghumàra. We should therefore regard these
southern highland dialects as younger than those
of the northern group. The slight differences noted
between the two groups may then be due to two
main causes: 1. an evolution of the neigh-
bouring urban dialects which would have taken
place during the period between the arabisation
of the Ghumàra and that of the Sa'nàja-Zànta; 2.
the influence of the Berber substrata.

To the two main groups: Ghumàra and Sa'nàja-
Zànta, we may perhaps add two 'little islands' in
the south: the highlanders of the region of
Shèfri to the south of Fès (Bhâuli, Bni Vâzga
etc.), and the Ghìyyata to the south of Taza; they
probably constitute the last vestiges of a contin-
uous Arabic-speaking bloc which stretched to the
south of the Fès-Taza corridor, the existence of
which in the xiiith century we know from al-Mârîf.

Phonetically, the Moroccan highland dialects
are characterised by the profound changes under-
gone by the Arabic consonantal system as a result
of the spirantisation of the dental and post-palatal
occlusives. We find the interdental âl and âl, which do not repre-
ent the classical interdentals: âl-'ala and âl-'alâl have given in these dialects,
âl and âl respectively, which remain occlusive only
at the beginning of the word or after a consonant
or gemination, but after a vowel we have âl and
âl: bunt 'daughter'; plur. buntâl: after a vowel also kaf is pronounced as a spirant like the z of
modern Greek. The representative of the group
ku- of the classical language is usually l, some-
times hardened to t; but among the Ghumàra we have
âl (as emphatic glal). The sound âl is
fairly common. The short vowels are commoner
than in the towns; many of the short vowels i
and u of the classical language are preserved:
this is how we find a considerable number of im-
perfects iR 1 R 2 uR 3 and a few iR 1 R 2 iR 3.

As to morphology, the fem. personal suffixes
-a (<-hâ) and pl. -em (<-hum) are characteristic:
they are the complement of the series begun by the
masc. -e, -e (<-hu). Among the northern Jbîla
we find the use of a suffix -tâ marking the plural:
which seems really to be a borrowing from Latin.
The dual, reserved for names of parts of the body
which occur in pairs and for names of various
measurements (of weight, length, volume and time)
is in -zen: ghâleen 'two months', gištâ-'his
hands'. The relative, pronoun and adjective, is l.
The classical construct state (lidâla) is very rare
and is only found in a few stereotyped phrases:
neither replaced by analytical constructions
in which the preposition l "of" is used, expressing
possession as well as the material of a thing.

Almost everywhere the prefixes of the 2nd pers.
com. and of the 3rd pers. fem. of the aorist are
d (and not te); dikeb 'thou writest, she
writes'. The passive participle of hollow verbs
is often of the type mef'âl: mebâs 'sold',
mebâse 'filled up'. Finally we may note a few
traces of a passive of the form f'al of: iâl
'to be taken'. As evidence of conservatism, we
may mention that in these dialects we have the
word 5a 'mouth' which seems to have dis-
ppeared since old Arabic.

Just as the urban dialects of Morocco may
be linked with a number of urban dialects of Algeria.
so have the highland dialects of Morocco cor-
respondents in the latter country. W. Marçais,
who is the first to have isolated and described
this group of Maghrîb dialects and prefers to
use the name of "parlers villageois" for them,
classes along with the dialects of the Moroccan
Jbîla two other similar groups, also characterised
by the detachment of the Arabic consonant system
(Roundation, affrication, spirantisation), by the use
of turns of syntax and structural forms taken from
Berber and by the juxtaposition in the vocabulary of
Arabic elements sometimes strangely archaic
and very abundant Berber elements. These are
firstly the oran group of the Tiara in the
country which extends from Lalla Maghlaya to the
sea, a mountainous country traversed by the
roads connecting Tlemcen, the capital of the Banû
Abd al-Wal, with the ports of Hmam and
Arshgîln. It is with the dialects of the Tiara
that the dialects of these Moroccan Jbîla show
most agreement.

The second group, which differs more, is that
of the highland dialects of Eastern Kabylia, a
mountainous region of the department of Con-
stantine, traversed by the roads connecting Con-
stantine with the ports of Hôdjet el-Collo; this
was also the old habitat of the Katam, whom
their support of the Fatimids movement must have
caused to be rapidly arabised. Alongside of these
three groups of highland dialects (Jbîla, Tiara,
Eastern Kabylia), W. Marçais classifies a fourth
in the villages of the Tunisian Sâbîl, which lie in the
coast zone traversed by the roads which connect
Kairâwân with the ports of Sîs, Mahliya and
Monastir. These Tunisian dialects, of which that
of Takrûna, studied by W. Marçais, is a specimen,
are however much arabised and hardly seem to
have been subjected in their phonetics, mor-
phology, syntax and vocabulary to the profound
Berber influences which characterise the first three groups.

In spite of their divergencies, which are due mainly to pronunciation and to the local use of words and phrases corresponding to two very distinct forms of culture, the urban dialects and the highland dialects cannot be either historically or linguistically separated. The fundamental disparity is that which exists between the urban and highland group and the Beduin group. It is the townsmen who have taught the highlanders to speak Arabic, but the urban dialects, used by individuals whose intellectual activity is greater, have evolved more rapidly. They are also more sensitive to external influence, literary and political. These facts added to the predominance of Berber blood in the highlands suffice to explain why the dialects of the Jbala still seem coarse and quaint to the townsmen. On the other hand, the towns have been frequently repopulated, wholly or in part by people from the neighbouring hills. All this explains the family resemblance which the linguist finds between the dialects of the towns and those of the hills; perhaps the latter, being more conservative, are also the more interesting for the history of the language. W. Marçais regards them as valuable representatives of the Arabic spoken in the country district of the Maghrib before the coming of the Banū Hilal and the Sulaim (cf. W. Marçais, Textes arabes de Tabrouna, vol. i, preface, p. xxviii.).

The principal features which are common to the urban-highland group and which distinguish it from the Beduin group are the following:

- loss of the classical interdental;
- pronunciation of kaf as k or hamsa (and not g as among the Beduins);
- tendency to the syllabic grouping Ra Ra is Ra, when Ra is not a laryngal nor a consonant;
- rarity of the construct state;
- suffix of the 3rd pers. masc. sing. in -u, -a (and not -e, as among the Beduins);
- relative rarity of the addition of personal suffixes, but regular use of the analytical phrase with ad-: ad-dar ad-dali, "my house";
- diminutive of Ra Ra e Ra becomes Ra Ra iy Ra: kīyyuq, "little dog";
- diminutive of adjectives of the types Ra Ra e Ra (class: afal) and Ra Ra e Ra becomes Ra Ra i Ra e Ra: kūmār, "a little red"; kūtār, "a little large";
- plural of the adjectives Ra Ra e Ra (class. afal) becomes Ra a Ra, Ra: kūhāl, "black" (plur.);
- reductions of the plurals C1 C2 C3 C4 to C1 C2 C3 C4: mīyālah, "keys";
- use of a verbal prefix to mark the indicative present: ka- or pū- in the towns and la-, ka- a- in the hills;
- in the singular of the perfect, the feminine person is in general used for the masculine: e.g. kēbtā, "thou hast written" (m.), whence we find in Rabat for the plural, an analogous form kēbtān, "you have written";
- in the vocabulary, ġhāl, "how much?"; dāba, "now"; ḫa (ṛḥa, ḫa), "to do", are characteristic;
- in the imperfect of the defective verbs, the plural is formed on analogy of the singular: yēḥ sân, "they remain"; yēḥ wīn, "they sleep".

**c. Beduin dialects.** These are in Morocco the dialects of the plains: the Atlantic plain from Arzila to Mogador and with its continuations into the interior, the valley of the Muluya, the plateaus of eastern Morocco and the region of the Moroccan Sahara (Wād Gḥir, Wād Zīz etc.); they are still little known; only that of the Hawwārāt of Sūs has been studied, but only in Europe and from authorities who had already travelled a good deal elsewhere. That of the Dukkala of the north (Jebel Batūn, Ulād Frejī), I have myself examined it corresponds in almost all its details to the dialect of the Ulād Brähīm of Sādā (Oranía) on which W. Marçais has written a monograph. There is no doubt that on examination one can divide the Beduin dialects into groups characterised by more or less conservatism; should those of the Mašīl perhaps be separated from those of the Banū Hilal? Perhaps a distinction should also be made between the dialects of the purely Arab tribes and those of the Atlantic regions where powerful Berber tribes (Jbala, Ragāğa, Dukkala, Baragbātā) have been arabised and more or less submerged by the Beduin. In spite of the historical period the latter have been infinitely less stable than the tribes of Berber origin (speaking Arabic or Berber): whether because they were taken to form the ġallah, which guards each large town (environs of Fās, Meknes, Rabat-Sale and Marrākush) or because they were transported far from their original homes as a measure of oppression (case of the Ḡhārdā), the Arab tribes of the Atlantic plains have become much broken up and mixed. The Beduin dialects which have most of having pre-erced their original character are those of the tribe of the Saharan steppes who have retained relatively stable and intact: Bai Gill, Mālah, Ḍāhir, Nāhī, Ulād Djihr etc. In any case, the following are the main characteristics of these dialects: firstly the kaf is pronounced as g (kaf mūkḥāda), and it is already this pronunciation which for Ibn Ḥaladīn characterises the Beduin dialect of his time. The ġl, ġhāl and ġfāt-ṯāl are retained with their interdental value. The short vowels are indistinct: the sound i is almost completely absent and many short unaccented vowels sound practically like a labial e. Characteristic are the appearance of an extremely short transitional vowel of ū character, which is developed after ā, ā, ā and ṯū placed before a consonant or an ū; e.g., kuṭār, "green" (plur.), ḥūd, "the sits down", ḏaḥa, "aile", Ḥaḥa, "gazelle", ḡaḥa, "saddle-bag", ṣaḥa, "indian" (plur.): a similar sound is found after ṣa, ṣa and ṣa, e.g. ṣoḥā, "the crows", ṣuyṣ, "a blow", ṣamān, "pomegranate", ṣubkāt, "sugar", ṣuḥa, "piece of (cloth)", ṣukkāb, "sound"; by analogy the combinations mū and fū when the ṣo corresponds to a normal ṣain, are reduced to mm and fū, e.g. ṣamēnum, "the (little) place", ṣaḥa, "the entails".

The retention of the accent on the first syllable causes "projected" syllabic forms. ṣīkāb, "he writes", plur. ṣīkābūn: meghābīlī, "Moroccan", mūkha, "musket", ḡeritu, "my cow".

The personal suffix of the 3rd pers. masc. is -ūb. The dialectal preposition translating "of" is ṣā or ṣ, from the classical matāṣ; according as the word before it is feminine or plural, this preposition becomes nīāt (ṣāt) or nīā (ṯā).
It does not seem that the Beduin dialects know the use of the verbal prefix indicating the indicative present. In the plural personal forms of the defective verb, there is a refection of the diphthong: śākā, from the verb śākī, "to fry"; ṣāw-pūtna, from the verb na-s "to forget".

We may al-o note the use of a preposition li, "to": ḥāl-līman, "he told us".

From the point of view of vocabulary, some words are character-tic of Beduin dialects: ḍārītī, "to make, do," ḥāšī, "to wish", yemata, "when", yām-n, "yesterday", ḍayāt, ḍābūk, ḍūm, "now", from the classical  נהנ-י. We may add the particle wāk used to indicate interrogation: ḍayī khān, "have you seen so and so?" and the phrase ma lān, "he no longer comes".

1. Jewish dialects. The Jews who emigrated from Spain have as a rule retained the use of an archaic Spanish; many have also learned Arabic for business reasons. Alongside of the Spanish Jews, we have in the Berber highlands, and also in the towns of the interior, Moroccon Jews of unknown origin whom the former called .foresters (Span "foreigners"); according to the district, they speak Berber or Arabic, but in the towns their dialects have not yet been studied. They have a literature in an Arabic dialect written in Hebrew characters (and called, certainly wrongly:  ידנ-א איקסב-א: ḥayyut, songs at family festivals (cf. Tadjouri, in Hastfūris, iii., 1923. p. 408-420), satirical songs and songs dealing with real happenings; some of these texts have been printed at Fās and Constantine; a newspaper written in an Arabic dialect and printed in Hebrew characters called  ידנ-א איקסב-א "The Liberty" has been published and sold for a number of years.

2. Relations of the linguistic groups of Morocco to one another. Morocco appears to the philologist a wonderful field for the study of the influence of the substratum on an imported language, since the language of the substratum, i.e. Berber, is still alive alongside of the Arabic and quite well known. The results of the examination are very meagre: the phenomena actually ascribable to the action of the substratum alone are infinitesimal; this may, however, be due to the fact that Arabic, a Semitic language, and Berber, a proto-Semitic language, are not sufficiently differentiated.

From the phonetic point of view, there is hardly any sound change found in the highland dialects of the arabised Berbers, for which a corresponding change cannot be found in the dialectal phenomena of old Arabic; only, perhaps, the tendency to spirantisation should be connected with the identical tendency observed in the northern Berber dialects found in the confines of the Jīdī country.

If we consider the morphology, we see that in the highland dialects the verb has lost feminine forms of the plural of the old Arabic, which still survive in some Beduin dialects and are still found in Berber. A Berber origin has been sought for the use of the verbal prefix indicating the present of the indicative; but similar prefixes are found in Egyptian and in Syria where there are very different substrata.

(Definitely Berber is the scheme to-... which forms nouns indicating ạs (a-benmāl, "trade of a mason") and names of abstract qualities (a-frām-it, "roguey"); it is however curious to note that in modern Berber, this scheme has not this significance and is only used to form the feminine and secondarily the diminutive.

In the syntax of the highland dialects, we find indi-putable traces of Berber influence: plural treatment of singulars applied to liquids (water, urine), phrases translated or stereotyped, e.g. alus in Kaddār, "Kaddār's brother", with retention of the Berber particle indicating belonging to, -nu.

But it is in the vocabulary that the Berber substratum makes its influence most felt. Whether surviving in the highland dialects or borrowed in the Beduin dialects, many of the terms relating to country life are Berber (names of plants, animals, rocks, agricultural implements and tools); they have often been taken in Arabic the Berber pseudo-article a-, which, still felt to have its original value, makes them unfit to take the Arabic article also; alongside of the singular in a-, we usually have a Berber plural in a—an also retained. It is curious by the way but intelligible to find in the highland dialects words of Arabic origin with the Berber article: these must be Arabic words borrowed and berberised at a time when the Jīdī still spoke Berber and which have been retained just as they were in their Arabic dialect after being arabised, e.g. a-hāf, "ditich", plur. a-hāfrān; in Tangier the nace of the mosque is called a-hāf; at Rabat two words imported from Europe have a Berber form: a-hāf, "the sulphur's boat" and a-lāy, "tea".

Some Berber words have survived in the administrative language of the Māhzen: a-frāg, "a wall of cloth surrounding the sulphur's camp"; a-gādī, "a pasture reserved for the sulphur's animals"; a-saf, "lash to punish the guilty"; merzal, "synedic (nakhli) of the sheriffs'"

The Beduin dialects naturally contain much fewer Berber elements than the urban dialects and still less than the highland dialects; their rustic vocabulary nevertheless made numerous borrowings from the technical vocabulary of the previous Berber tillers of the plains.

Within the Arabic area, the highland and urban dialects have borrowed a certain number of terms relating to the rural activities of the Beduins; they are as a rule revealed by the pronunciation of ḍāf as g. The Beduin dialects in their turn borrow from the towns their words relating to a more advanced culture; but, for economic, political and, to a certain extent, aesthetic reasons, they give more than they borrow.

Some words, which are used in the urban and highland dialects, as well as by the Beduin dialects but are unknown to the Spanish and Maltese dialects, are perhaps of "Hilāl" origin; the principal seem to be ānd, "horse", ḍāhlīf, "boar" and ḍāf-idāf, "to sec".

In addition to the Berber and Arabic elements, the Moroccan vocabulary contains a fairly important number of European loanwords. They come from the vocabulary of a higher culture and relate to the flora (in cultivation or its products), to agriculture, to foods and dress, to furniture and housing, sometimes even to parts of the body. There are Greek or Latin borrowings of the oldest period, Romance or Spanish for later periods; but neither their meaning nor their phonetic treatment enables us always to be able to date accurately the time of their introduction and their origin.

These "European" loanwords are naturally found in larger numbers in Northern Morocco, which
has been more subject to Mediterranean influences, which, through refugees from Spain, have been felt as far as the northern parts of the Middle Atlas. The Beduin dialects have escaped these influences (cf. 1. Simonet, Glossaire de voces berbères y latinas usadas entre los Morocabes. Madrid 1888; 2. Schuchardt, Die romanischen Lautspuren im Berberischen, Vienna 1918; 3. G. S. Colin, Ethnologie maghrébines, in Hespéris [1926 and 1927]; 4. A. Fischer, Zur Lautlehre der Marokkanisch-arabischen [chap. ii., iii. and Ex. urs.], Leipzig 1917).

Between the two extremes marked by the most-conservative Beduin dialects and the most characteristic highland dialects lies a whole gamut of intermediate varieties, which are in the transitional stages; they include the highland dialects whose characteristic features have been reduced through contact with the plains of the southern periphery of the massif of the Jbal, as well as certain dialects of Beduin type used in the Atlantic plains, notably in the non-ḥaḍyīya towns. "But however extensive and deep may have been the interpenetration of the types, it has not abolished their fundamental unlikeness" (W. Marçais).

In spite of the profound differences which separate them, the highland and Beduin dialects of Morocco (and of the Maghrib) agree in one essential and characteristic morphological feature: the sons. sing. n—, plur. n—a in the first persons of the noun; in fact this is attested in the 13th century for Almoravid Spain and Norman Sicily, i.e., in languages from which the Moroccan influence is clearly excluded; it is also found in Maltese; it must then be admitted that the two groups of dialects have independently brought about this innovation, which seems to have remained exceptional in the dialects of the east. The two groups agree also in the loss of short vowels in open syllables; this phonetic peculiarity is also found in many eastern dialects; but it is curious: that it has become general in the Maghrib while the dialects of Spain and Egypt do not have it.

It is in the Documents inédits d'histoire almohade that we find the first information about Moroccan Arabic [use of bīḏ, "in order that", wātā, "of", first persons of the arist in n—— (sing.), n—— n (plur.)]; but we have to wait until D. de Toreto find a few phrases transcribed (cf. French transl., Paris 1919, pp. 241, 373, 379). Mouette, who was captured at sea by the Moors in 1670 and was for a long time a prisoner, has left us a Dictionnaire arabesque in French and Moroccan, in transcription (cf. Relation de la Capitale..., Paris 1653, pp. 330—362). The first grammatical notes were collected by Host (cf. Études moraves..., 1779, ch. 8, p. 202—210), who has also given us a Berber-Danish-Moroccan Arabic vocabulary (cf. ibid., p. 128—133). It is to Fr. de Domby that we owe the first monograph on Moroccan dialects, which is also the first serious contribution to the study of Arabic dialects; the dialect which he deals with is that of Tangier (Grammatik der tunesisch-marokkanischen Dialekte, Vindolanae 1809). Since then, there have been a number of studies; for works before 1911 see the bibliography given by W. Marçais in his Textes arabes de Tanger, p. 207—213; for later works see the bibliography in Textes arabes de Rabat by L. Bruneau (now in the press).

2. Literature of the Arabic dialects. Like all popular literatures, the literature of the Arabic dialects of Morocco is essentially poetical. The only texts in prose are those which have been collected recently by European students of dialects. In the Arabic poetry of Morocco two periods must be distinguished: the first extending down to the beginning of the Sa’dian dynasty, the first known texts are those which Ibn Khaldūn gives at the end of his Muqaddimah among the specimens of the poetry of the towns. To these we may add a mass of poems composed in honour of the Prophet (Marhāl-iṣī’ī) of which numerous collections exist in manuscript. Ieco Africanus (ed. Schefer, ii., p. 150) says that under the Marinids, poets used to compose verses in "vulgar African" on the Mawlid and also on erotic subjects. These poems were recited in the presence of the sultan, who gave prizes to the winners of the competition, this group cannot be separated from the poems which accompany classical Moroccan music, "Andalusian" music, much of which must have been composed in Morocco; these were collected and classified by al-Hāfik, a musician of Spanish origin who had settled in Tetwān. All these poems belonging to this first period are written in the Spanish Arabic dialect, which after the great success of the Cordovan Ibn Kunāz (13th century) became the classical language of the new poetical genre called yūdil, which had this in common with the muraqqād, that, while employing like it new metres, its prosody was based like the classical metre on the quantity long or short of the syllables, but the ragāl differed from the muraqqād in that it was written in the Spanish dialect and not in the classical language.

The main characteristics of the poetry of the Moroccan dialects of the first period are attention to the quantity of each syllable as in Latin and the use of the Spanish dialect.

The second period, on the other hand, is distinguished by a system of prosody founded exclusively on the number of syllables in each verse (as in French) and by the use of a special language called melḥūn, a kind of xānī adapted to literary purposes, based on the Moroccan dialect but influenced partially by the Beduin dialects; it seems, moreover, that this poetry is of Berber origin and was under the bedouin dialects of the Sa’dians and Alawīs that it arose and flourished.

The first known author of a poesy written in melḥūn appears in the 16th century: he was Abū Fāris ‘Abd al-ʿAzīz al-Maghrawī, who was one of the poets of the Sa’dian Sulṭān al-Muḥammad al-Dhahabī (1578—1602). His fame is still great and is preserved in the proverb: Kull ḫalī ḫalī, ʾāhib an-nasab al-ṭarīq gūrūwa "Nothing that is long is of interest except the palm-tree and al-Maghrawī". Other poets followed him. It was at this time that the saint ‘Abd al-Khāṣṣīm al-Maghrawī al-Dākhīlī (d. in 1566) wrote his mystic ʿalifrat, in which the verses now attributed to him are apocryphal. After these we have the poets from Tlemsen, an important centre of melḥūn poetry; first ‘Abd Allāh b. ‘Abd Allāh al-Miṣrī al-Tlīmhī, author of the celebrated ʿAbīlī, who left his native town to live at the court of the first ‘Abū al-Muḥammad Muḥammad b. al-Sharīf (d. 1664) and al-Kalīfī (d. 1672); a pupil of al-Miṣrī, Abū ʿAbdāl islāh b. al-Tuniṣi, banished from Tlemsen in 1672 by the Turks, also came to settle in Morocco among the Bni Zānān. But we have to come down to the XVIII and especially the XIX century for the coming of a whole school of poets writing in melḥūn. The three principal centres of literary activity were Fāṣ, Meknes and
Marrakush. The subjects treated are most varied: love poems, mystic, erotic and satirical (discussion between a white woman and a negro, between a townsman and a Beduin woman etc.), political (on the occasion of the French conquest and the establishment of the protectorate), didactic (manufacture of powder, target-shooting, falconry) poems or burlesques (parodies of ḥuḥbas decried by the students at their fêtes).

Among the numerous authors we may mention: Si Muhammad b. Sulaimān, Si al-Thāhāmī al-Madaghrī, al-Gandūr, al-Hangh; we owe humorous ḱāṣidas to Si al-Madani al-Tarkumānī of Marrakush; Si Kaddār al-ʿAlami buried at Mekeis specialised in mystical and religious poetry. The Darṣāwī Muhammad al-Ḥasnāk of Tetwān (d. 1845) also wrote mystical ḱāṣidas in melāḥān which are collected at the end of the lithographed edition of his Dīwān (Tunis 1331; Fās, n.d.). At the beginning of the xvi century, al-Saddāmī of Fās was composing political ḱāṣidas.

Melāḥān poetry has completely replaced poetry in the Spanish dialect; it constitutes a very vigorous branch of literature, much in favour with all classes of society; we frequently find almost illiterate authors, and people say that their talent is a poetical gift given by God (waḥiḥū); on the other hand, even the rulers have not disdained this popular poetry and one of the last Ḥalwādī Sāḥūn, Mawlay Ṭāb al-Hafīz, wrote numerous ḱāṣidas in melāḥān which have been collected in a Dīwān lithographed at Fās.

Alongside of this men's poetry, there are the songs of the women (songs of women working at the mill, songs of gleaners, songs of family fêtes, lullabies), the children's songs which are often strangely conservative, epigrams and proverbs [cf. A. Fischer, Das Liederbuch eines marokkanischen Sängers, Leipzig 1918; C. Sonneck, Chants arabes du Maghreb. Paris 1902 (Nrs. 5, 6, 11, 12, 13, 14, 74, 84, 85, 88, 89, 94-97, 111 and 116 are Moroccan); L. Évy-Prevonge, Un chant populaire religieux du Dyébal Morocan, in Revue Africaine, 1918; H. de Caixeries, Les gnomes de Sidi Abd al-Rahman al-Majdoub, Paris 1906; on the poetry melāḥān in general, cf. Ābā Ṭāb al-Ghwāthī, Kāṭīb al-Kiwaṭī an Ābā al-Sīnān, Algiers 1904, p. 49-93; S. Barnay, Notes d'ethnographie et de linguistique nord-africaines, Paris 1924 (songs of women and children); L. Brunot, Proverbes et dictons arabes de Kabat, in Hespéris, 1926 (with Moroccan bibliography of the subject).

III. Other Languages. A sketch of the languages of Morocco which only took account of Berber and Arabic dialects would be incomplete; for three other elements of secondary importance have to be considered: a. Classical Arabic, the official language is used only in writing; for sermons, lectures and conferences: it is never the language of conversation. But as religious studies are considerably developed in the towns (especially Fās) and also among the ḫlāla (Kurānic studies and especially ḥisāb), many words of classical Arabic have been introduced into the popular dialect by the educated classes. The phonetic peculiarity to notice in borrowed classical words is the retention of the short vowels of the classical language, as a result of the process of elongation; e.g. classical ǧābir, plur. ǧābir, “deuce of the sulphur”, borrowed by the popular dialect in the form ǧābir, whence a dialect plural ǧābir. Several Kurānic expressions or phrases of exegesis hence passed into everyday language as adverbs: bālātī “guilty” (taken from Kurān vi. 153), bātīlātī “slowly”, lit. “in commenting on”, waḥiḥā “perhaps”. Morocco, as a whole being little arabised, seems incapable of borrowing a part of the classical vocabulary and adapting it to its own dialect. Its borrowings from classical Arabic almost always look like borrowings from a foreign language.

b. Spanish was the only language spoken by many of the Muslims of Spain, who in the xv century and especially in the xvi took refuge in Morocco, mainly at Tetwān and Rabat-Sale. Mouette, who was taken a prisoner to Morocco in 1670, says that Spanish was as common there as Arabic; his remark is probably true only of the towns already mentioned. The descendents of these emigrants from Spain later learned Arabic and forgot Spanish, under the influence of Islamic culture. Not having been subject to the latter influence, the Jews of Spanish origin still speak an archaic Spanish, sprinkled with Arabic terms moulded to the flexions of Latin morphology.

c. At the present day, in the palace of the sultaṅ, many servants of both sexes still speak Sūdānīse dialects, but these seem to have had no influence on the Arabic dialects of Morocco. No trace has so far been found of the existence in Morocco of secret languages; one could hardly put in this category the argots of certain guilds (butchers) nor those of the students, the originality of which consist simply in transposing certain letters of each word of the ordinary language and in the addition of certain prearranged syllables. (GEORGES S. COLIN)

VIII. INTELLECTUAL LIFE.

More especially since the end of the middle ages, Morocco has occupied a place by itself, often important, in the history of Muslim civilisation. From the point of view of intellectual life, it was for long under the tutelage, more or less marked, of neighbouring countries, and it was only from the time it became an independent state with well-defined frontiers that it began to show independence. In this respect also it has been a constant aim of the centre of learning in Arab Spain down to the end of the xvi century had undoubtedly an influence in Morocco, but it was after the return of the Iberian Peninsula to Christianity, that, owing to the migration of refugees from Spain to Morocco, where there happened to be ruling princes anxious to further Islamic studies, it was able to preserve the last and only centres of study in the Muslim west. In any case, in spite of the relatively large number of scholars which it has produced in various branches of ʿilm, this country is far from having inherited in the eyes of the rest of Islam the reputation and intellectual prestige, which Spain enjoyed when it was a Muslim country. However, it may be said that the towns of Morocco have always held in recent centuries a large proportion of men of letters, much attached to their traditional culture. Lastly, it may be noted that this culture, the greatness of which at least, never allowed the slightest place for modern sciences, the study of which, if it has gradually become more or less established in the Muslim east, has never interested the west.

The characteristic feature of this culture, which
in school Córdoba, Arabic teaching. the few A theology of these on Mariakush the did the is Bencheneb's the it is more numerous, e.g. the zawiya of al-Dila in the Middle Atlas, the zawiya of Tánger in the land of Dára and the zawiya of Wazzán in the north. The most famous scholars were frequently either heads of brotherhoods or shaykhs, who taught in the mother-house of their order.

We do not intend here to give a detailed sketch of the Arabic literature of Morocco, but will be content with a few general indication- and names distinguishing where possible, between Islamic and profane sciences.

It was not till the Muslim west adopted the Málikite rite that Morocco began to produce work in the domain of šī'ism in close accord, a-already mentioned, with the school of Spain. In this period of intellectual independence, the relations between the two countries were continued and the Maghrīb student, down to the ninth century considered a sojourn in Córdova, Murena or Valencia necessary to finish his course. The east did not yet seem to exert the attraction that it did later. Besides, the Islamisation and Arabisation of the Berber masses was still too recent. Only a few names may be mentioned for this early period, Darrāb b. Ismā'īl, of whom much that is recorded is legendary; the famous reformer Ibn Tūmārt [q.v.], creator of the Almohad movement and author of several riḍâ or taṣbih on his teaching, the kādī Iyād [q.v.], born at Ceuta in 476 (1083), d. at Marrākush in 544 (1149), author of numerous works on Muslim learning of which the most famous are the Kifāt al-shifā, and the Mağārib al-anwar with a collection of biographies of learned Mālikis, entitled al-Mādārī.

During the modern period, on the other hand, the number of learned Moroccans becomes more and more considerable. The best known are for zārāt: Ibn Barri (eighth century A.H.); Ibn Fakhkhar (ninth century); the scholar of Meknès Ibn Qaddi († 1019); 'Abd al-Rahmān b. Idrīs al-Qāsimi († 1082); 'Abd al-Rahmān b. Idris Mandlāra († 1179); Muhammad b. 'Abd al-Sālih al-Fāsi († 1214); for hadith: Vahīr al-Sa'rāīrī († 808); Nakran al-Asimī († 956); Ridwān al-Djāzuli († 991); Muhammad b. Kasim al-Kāzārī († 1012); Idris al-Turāqī († 1228); for fikr: Abu 'l-Haṣan al-Sughāyīrī, commentator of the Manvawīya; al-Djāzuli [q.v.] and Aḥmad Zaṭīf (ninth century) commentators of the Kullat of Ibn Abī Zaid al-Kaṣrāwī; al-Wanshari († 995): al-Mandjūr († 995); Ibn 'Aṣhir († 1040); Mūsā al-Ṣufi († 1072); for philosophy: al-Mawkūḥī († 807); Ibn Zakrī († 899). Their works have for the most part been recorded and will be found detailed either in Brockelmann, G. A. L. or in Benchekroun's work on the individuals mentioned in the igitur of 'Abd al-Khir al-Fāsi. Only a small number have found a place in eastern libraries; but on the other hand, they all form the foundations of the collections of manuscripts formed and preserved in the imperial palaces and mosques of Morocco.

Some Moroccan scholars have written works on adab or collections of poems, in addition to books of a strictly Muslim character. None of
them can claim any great originality and purely literary dwaints are rare. Poetry, as a rule — when it is not didactic (urgjud) —, is religious or mystic. At the courts, there were always a few literary men maintained by the princes, who were the panegyrists, very often lured, of their patrons.

It is at the courts also, especially from the xivth century, that we find the few historians who have given us original chronicles or compilations. Their works, planned on a singularly curious conception of history, have nevertheless the merit of giving us the only detailed information about the political history of the country in the period of the author or immediately preceding it. Those which date from the Middle Ages are however much the best. The kind of work not only did not improve later, but became simply dry chronicles in which events are related in a brief and colourless fashion.

The early historians of Morocco — if we except the Berber genealogists about whom we do not know very much — are contemporaries of the Almoravid dynasty. A little later, the Almohads find a historian in the person of a companion of the Mahdi Ibn Tumart, Abū Bakr al-Ba'dhī al-Ashtarī, author of the first of whose memoirs survives, strikingly, with many later historians. Alongside of the works of al-Ba'dhī may be placed the chronicles of Ibn al-Ka'rītī and of 'Abd al-Wāhid al-Marrākūshī as of high value. But it was in the Marinid period that the historian found most favour in Morocco. Leaving out Ibn Khaldūn, whom Morocco is not the only one to claim, we may mention Ibn al-Dhārī, a scholar of Marrākush, to whom we owe a history of North Africa and Spain, the Bayān al-Mughārī: that of Ibn Abī Zār, author of a history of Fās and the Moroccan dynasties, Rauwāt al-Kurāf; Ibn Marrākūsh, author of the Munād, a monograph on the sūkhun Abū l-'Enān, Ibn al-Ma'nī, of the family of the kings of Granada, author of the Rauwāt al-Nisīn. Under the Sa'dīans, the principal historians were al-Fihṭī, al-Ifrānī, author of the Nakīq al-Jābi; finally under the Alawīids, al-Zayyān and Akenīsī.

Geography is represented in modern Moroccan literature only in the form of riḥās or accounts of the travels of pilgrims, in which the description of the country passed through only occupies an insignificant place. Nevertheless, the geographer al-Idrīsī [q.v.] and the great traveller Ibn Bāṭītā were of Moroccan origin.

The biographical literature of Morocco is considerable. The collections of marāfīkh [q.v.] of saints, memoirs dealing with families of ṣafārī or religious brotherhoods, are abundant, especially in the modern period. There are also collections by town or century, some of which are of a certain interest, even from the point of view of history. All these biographies have been surveyed in E. Lévi-Provençal, Les Historiens du Chorfa. The most notable biographers down to the middle of the xivth century are Ibn 'Askār, author of the Dāsīq al-'Askārī; Ibn al-Kādī, author of the Durrat al-Kādī and the Lājjurīrat al-Dīdārī; the historian al-Ifrānī, author of the Sīra in Man intāshīr; and al-Kādī, author of the Naṣir al-Makhtūnī and the Biṭār al-Wādi. 

As to medicine and natural science, Morocco down to the xivth century was closely dependent on Spain. The physicians of the Almoravid and Almohad princes were from Spain, like Ibn Bāḍā (Avenpace), Ibn Tufail and the celebrated Ibn Rushd (Averroes) and Ibn Zuhr (Avenzon). In the modern period, we find at the courts of the sultans several physicians of Moroccan origin who have left works. The chief were, in the Sā'dīan period: Abū Muḥammad al-'Ālidī al-Wazīr al-Ghassānī, in the ʻAlawī period: Ibn S̩uṭrīn, Abū al-Waḥīb ad-Darāsī, Abū al-'Aṣṣāb al-Marrākūshī, Abū Ṣālim al-Sanhaḏī and Abū al-Sālim al-Ṣaḥīfī, in the Marinid period: Abū al-Muḥammad ibn Ḍa‘īfī, author of a treatise on astronomical instruments, part of which has been translated by Sādīlot, and Abū al-Munād al-Ḥanīfī, to whom we owe several works on arithmetic, geometry, algebra, astronomy, astrology and alchemy.

At the end of the xivth century, the reign of Mawūlī al-Ḥasan was marked by a kind of renaissance in Muslim studies in Morocco, particularly characterised by the need which writers felt of getting their works printed to make them more widely known. The lithographic presses of Fās acquired a certain importance at this time and began to publish texts which had long circulated only in manuscripts. A little later, there appeared at Fās the three volumes of the Salūsdt al-ʻAnfās of Abū Ḍa‘īfī al-Kattānī [q.v.], an excellent biographical dictionary of the celebrities of the northern capital. At the same time, there was published in Cairo the great Moroccan history of Abū Ḍa‘īfī al-Nāṣirī al-Salātī [q.v.] entitled Kitāb al-Jābi ʻl-Ma‘ṣārī al-Muḥārīb al-ʻAshīb.

The establishment of the French protectorate in Morocco and the remarkable spread of French civilisation in the large towns have already profoundly modified the intellectual ideals of the younger generation in Morocco. It is however still too early to foretell the orientation that Arabic literature will take in this country in the years to come.

MORÓN, Arab. Mawzār, a little town in the south of Spain, on the right bank of the Guadaira and at the foot of the Sierra de Morón to the S.W. of Cordova and S.E. of Seville. It was in the Muslim period the capital of a širā
or district and an agricultural centre with numerous olive-groves. At the beginning of the tenth century, it was one of the centres of resistance of the famous rebel 'Umar b. Ḥṣafān; its citadel was taken by the troops of ʿAbd al-Rahmān III in 311 (923). In the next century during the period of the petty kingdoms of the reyāt tājān, Morón was the capital of a little Berber dynasty, the Banū Dammar, Abādīs from the region of Gabes in Tunisia. The first member of the dynasty to declare his independence in 433 (1041) was Muḥammad b. Nūh; his father Nūh b. Abī Ṭāhir had lived at Morón from 1013 without actually recognising the government of Cordova. Muḥammad b. Nāḥi soon excited the jealousy of the ʿAbbādīs of Seville al-Muʿtaḍīd who made an attempt on his life. He died in 449 (1057). His son Mānīf ʿImād al-Dawla, who succeeded him, was soon besieged in Morón by al-Muʿtaḍīd and in return for his life and liberty surrendered the town in 458 (1066). Morón and its territory were annexed to the kingdom of Seville and henceforth shared the fate of the capital.

MOROS. [See MOORS.]

MOSTAGANEM (MUSTAGHAXIM), a coast town in Algeria, eight miles E. of the mouth of the Shelf (sʿE. Long. [Greenwich]) does not occupy the site of any known ancient town. There is no natural harbour here; two capes, not particularly well marked (Kharuba and Salamander), leave vessels without protection against winds from the north and west. It is therefore not as a port that al-Bakri (9th century) mentions Mostaganem for the first time. He describes it as a town situated "not far from the sea" (it is less than a mile away) living on the produce of its rich territory, notably the cotton plantations. From this time onwards it was surrounded by a wall which strengthened its natural defences. The old town occupies a triangular area formed by the sharp bend of the Aïn Sefra and the wall runs along the top of the ravine. On the point of this natural stronghold, the Almoravid ʿUṣuf b. Tashfīn is said to have built in 1082 a fortress which was later called Burdj al-Mahjūl, from the name of one of the tribes of the neighbourhood, and is now a prison. Like the other towns of the coast, Nedroma or Algiers, Mostaganem was probably given a small Almoravid garrison. Thus strengthened, the town would serve as a place of refuge against an attack from the sea and one could keep at a distance the Berber tribes of the hinterland, who belonged for the most part to the Maghribi confederation. It must thus have developed to some extent. In the middle of the 11th century, ʿIdrisī tells us that it had bazaars and baths; he emphasises the abundance of the water which irrigated the gardens and orchards and drove mills.

The name of Mostaganem does not figure in history throughout all this period when the Almohads in theory held the central Maghrib. The decline of the Almohads enabled the Maghrībī to become completely masters of the country. In 1267 and 1271 the Zayānids sulṭān of Tlemcen Yaghmorāsān reduced these turbulent tribes and incorporated their lands in the empire which he had founded. In 1338 (1338) he entrusted the government of Mostaganem to one of his cousins, al-Zā'im b. Yaḥyā, a descendant of one of the collateral branches of the family of the Banū Zayān, in spite of the lack of confidence he had in those relatives whom he had deprived of the throne. These fears proved well founded. Al-Zā'im, having roused the Maghribi to rebel, declared himself independent. Yaghmorāsān had to march on Mostaganem; he blockaded the town strictly and the rebel surrendered after obtaining permission to cross to Spain.

Like all the coast region, Mostaganem in 735 or 736 (1335-1336) passed to the Merīmī Abū Ḳarīf, who was engaged in the siege of Tlemcen. In 742 (1340) the victorious sulṭān built a mosque in Mostaganem. We have an inscription attesting this foundation of the interregnum of the Morcocco princes. Regained by the Zayānī of Tlemcen, the town suffered disastrously from their weakness. The Sūrāwī Arabs of the great Zoghba confederation became undisputed masters of the whole district. Mostaganem led a precarious existence. Leo Afrīcanus at the beginning of the 14th century says that it occupied only a third of its former area. He credits it with 1,500 hearths, however, tells us of the weavers and the roadstead to which ships from Europe came. He says the river runs "through the city", which shows that in addition to the old stronghold on the left bank there were now quarters on the right bank. In the Turkish period we know of two suburbs: Tīdīt (the New) and Matmora (the Silva). In 1515 Khar al-Dīn [q.v.] considerably strengthened its defences. Shaw at the beginning of the 16th century speaks of the citadel (the Fort of the East?) which, built on a height, commanded the town and vicinity. In 1530 the garrison consisted of some hundreds of Turks and Kalgūlīs. The French took them into their service and put them under the command of the Kādūr ibn Ḳābir. Disturbing the loyalty of the latter and thinking he had an agreement with the Modghīr, an unsubdued tribe of the neighbourhood, General Desmichels occupied the town in 1533. The troops whom he stationed there were attacked by Abī Ḳādir. The vexatious results of the treaty signed by Desmichels with the Emir forced Clauzel to retake Mostaganem (1835). Under Bugeaud, Mostaganem became the point of disembarkation and the centre of operations against Ḥār al-Ḳādir. It was there that in 1847 the first battalion of Algerian Tirailleurs (Turcos) was raised, and the town has since been an important centre for recruiting native troops.

Mostaganem has developed considerably since the early days of the French occupation; it has now over 27,000 inhabitants. Its harbour, which owes nothing to nature, has been improved by two jetties which still afford only a rather mediocre shelter to shipping.

Paris, 1924: On the dialect of the native fishermen cf. L. Brunet, La Mer dans les traditions et les industries à Rabat et Salé, Paris 1920. (Georges Marcât)

Mostar, the capital of the Herzegovina in the kingdom of Jugoslavia, one hundred miles S.W. of Sarayevo, on the Sarayevo-Mostar railway. By the new (Oct. 3, 1929) division of Jugoslavia into nine banats, Mostar passed to the coast banat, the capital of which is Split (Spalato). The picturesque town lies two hundred feet above sea-level on both banks of the Neretva (Narenta) between the slopes of the Podveli Hills and the Hum. The old quarters of the town are of Konak, Carabija, etc., are on the east, the new in the west. In 1929, the number of inhabitants was 18,938 (in 1921 a little more: 18,767). Mostar covers an area of 16 square kilometres, has 2,916 houses, 33 mosques, 2 Serlian Orthodox and one Roman Catholic church. Mostar has a district mutfi and a şarri at judge (şâhi). Its trade is considerable as is its production of fruit, wine and tobacco. The climate is warm and windy.

In the time of the Roman empire, there was a colony in the plain of Mostar, which was destroyed during the period of migrations. In the centuries following, the immigrant Slavs conquered the Zahumije district with its capital Blagay (near Mostar). According to the Dalmatian writers Orbini and Lucarelli (both at the beginning of the xviiith century), the new town of Mostari was founded in 1440 by Radivoy Got, a vassal of Stefan Vukčić Kosača, afterwards Duke of St. Sava. In historical documents the earliest mention is in 1452 of the two forts on the Neretva bridge (de castelli al ponte de Neretva); the name of the town itself is not found till 1499.

It was only after the Turkish conquest of the Herzegovina (1453; cf. v. Hammer, G. O. F., 1, 628), which resulted in the decline of Blagay that the new settlement began to develop rapidly, first as an important strategic point in the Neretva valley, then as a prosperous commercial town in addition. Since it grew up around a wooden bridge, it was called simply Most (bridge), Mostić or Mostar, properly Mostari (plur., "the bridges"). This "place of the bridge" was by 1522 the residence of the Turkish sandajbeg of the Herzegovina, who had previously lived in Foča. According to Hâdjiđi Khalîfa, the crossing of the Neretva was exceedingly dangerous: the wooden bridge, being on chains, had no piers and swung so that "one only crossed it in fear of death". The inhabitants therefore petitioned Sultan Sulamân to have a stone one built in its place. The architect sent by the Sultan, the celebrated Simân (q.v.), is said to have declared it impossible to build a bridge at this spot, whereupon a local architect built the fine bridge which crosses the river into a single bold arch, thirty yards in length and sixty feet high. This is said to have been done in 1564 (1566—1567). The two Turkish chronograms given by Elyiyâ Čelebi and Fârûd Aqrâb actually give this date. This bridge not only gave Mostar its name but formed its chief sight, as it still is. The French traveller A. Pouillet in 1658 says that its "fabric is plus hard, sans comparaison, & des plus d'écanche que n'est celle de Râta à Venise, que qu'elle y soit estimée une merveille". Katorčevski describes it as follows: (G. e. m.), xx. (1908), 49.

A modern traveller regards the old bridge at Mostar as the finest in the whole world (R. Michel, Fahrten in den Reichsländern, Bilder und Skizzen aus B. und der H. [Vienna and Leipzig, 1912], p. 31). In his earlier book on Mostar he describes this bridge as a "crescent in stone". The building of the bridge was often ascribed to the Romans and indeed its foundations perhaps date from them but the modern bridge undoubtedly dates from the Turkish period and "is the work of Dalmatian—Italian architects" (J. de Asboth, An official tour through Bosnia and Herzegovina, London 1896, p. 257).

Elyiyâ Čelebi visited Mostar in 1575 (1663—1665) and gives in his diary a number of details about the town, e.g. that it has fifty-three mahallahs, three thousand and forty solidly built houses of stone, three hundred and fifty shops and forty-five mosques. Of the latter he mentions eight by name: 1. Old mosque in the Carabija, built in 878 (1473); 2. Hâdjiđi Mehmedbeg mosque, built in 965 (1557); 3. Mustafa Hüdji alişâhi in the Carabija, built in 1016 (1607); 4. Deftandarpasha mosque, built in 1017 (1608); 5. Köşkül (Mehmedpaşâ) mosque, built in 1027 (1617); 6. İbrâhimâğa, built in 1044 (1634); 7. Rûznâmedji İbrâhim—Efendi—mosque and 8. Hâdjiđi alişâhi mosque. For the two latter mosques neither the chronogram nor the year of building is given. The finest and largest of all is the mosque of Hâdjiđi Mehmed Bey, which is usually called Karagyo/begova džamiya. This monograph, quoted below, by Pezz gives the names of twenty-seven mosques and twenty-six vakufs (vakf) and in each case he mentions whether their foundation records are preserved or not.

It was the course of the xvith and xviiith century Mostar was several times threatened by Venetian troops (1562, 1693, 1717). At a late date (1763), the Herzegovina was incorporated in the vilayet of Bosnia and Mostar was only the residence of the muselim. This lasted till 1832, when the land was again made a vilayet and Mostar became the headquarters of the newly appointed Herzegovinian wazir Ali Paşa Rizvanbegovic.

During the Turkish period Mostar produced a number of men of note in Turkish and Muslim literature and learning. Of poets we may note: 1. Dîya'i (d. 972 = 1564); 2. Derwish Paşa (Bayezidagic, 1599 and in 1601 governor of Bosnia); 3. his son Ahmedbeg Sabûhi and 4. Ahmed Rûşdî (born 1047 = 1637). The following learned men were natives of Mostar: 1. Ali Dede b. Muṣṭafâ (d. 1007 = 1598); 2. Muṣṭafâ Aiyyûbî, called Shelyuyo (d. 1119 = 1707), Mufti of Mostar, commentator of various works; 3. Ahmed Efendi Mostarî (Mostarîc, d. 1190 = 1775), whose fetwâs (Fetwâs of Ahmed) were very popular in Bosnia, and 4. Muṣṭafâ Şîqî (Karakeg), Mufti of Mostar (murdered...
in 1878), whose comprehensive Ḥādiyya . . . 'atīn Mi‘rā’t al-Uṯūl was printed in Sarajevo (1316).

A few days after the murder of the last-named, Mostar was taken without resistance by the Austrian troops (Aug. 5, 1879) and on Oct. 5, 1908, annexed to the Danubian monarchy, in which it remained till 1918. During these forty years (1878—1918) Mostar was frequently the centre of Muslim (and of Serbian Orthodox) opposition to the government. In Mostar originated also the Muslim agitation for autonomy in religious affairs (cf. i., p. 760), which went on for ten years (1899—1909). The leader of the movement, 'All Fehmi Džabic, the then mufti of Mostar, had to escape to Constanti-

nople at the end of January 1902, where he was appointed professor of Arabic literature in the University, in which capacity he published among other things his book Huṣna al-Sahaba fi Sarb Aḏḏar al-Sahaba (Constantinople 1324).

In connection with the struggle for religious autonomy, there was published from 1906 the Muslim political paper Maṣān̄at (in spite of its Arabic title written in the Serbo-Croat language). Shortly before the World War, a Muslim family paper Biser ("Pearl") (from 1920), was started in Mostar and a Muṣal̄imanska biblioteka (Muslim Library) which attained thirty volumes.

Since the dissolution of the Austro-Hungarian Monarchy in 1918, Mostar has belonged to Jugoslawia.

**MOSUL (AL-MAWIṢIL), the capital of Diyar-Ramla [q.v.] on the west bank of the Tigris, opposite the ancient Nineveh.**

Whether the town already existed in antiquity is unknown. E. Herzfeld (Archaeol. Reise, i. 207, 259) has suggested that Xenophon's Mērōnā reproduces its old name and that we should read **Mēsīlā** (= Mawsiliy), but against this view we have the simple fact that this town lay on the east bank of the Tigris (F. H. Weissbach in Pauly-Wissowa, R. E., xv, col. 1164).

The Muslims placed the foundation of the town in mythical antiquity and ascribed it to Kēwān b. Bēwarās Jatdash. According to another tradition, its earlier name was Khusṣaṭ. The Persian satrap of Mōsul bore the title Bēlāsh-Ardashir, so that the official name of the town was Bēlāsh-

As the metropolis of the diocese of Aṯīr, Mōsul took the place of Niniveh whither Christianity had penetrated by the beginning of the second century A. D. Kabban Isha‘-yiḥiḥ called Bar Kūsra about 570 A. D. founded on the west bank of the Tigris opposite Niniveh a monastery (still called Mār Īṣṭa‘y) around which Kusraw II built many buildings. This settlement is probably the fortress mentioned in the Syriac chronicles (edited by Guidi and Herzfeld) (according to Herzfeld, "citadel on the opposite bank") (Noldeke, S. B. Ak. Wien, xxviij., fasc. ii., 1893, p. 29; Sachau, Chronik von Arbelas, chap. iv., p. 48; Herzfeld, op. cit., p. 208) which later was developed into a town by the Arabs (Chronicle of Sĉerî, at the end).

After the taking of Niniveh by 'Utb b. Fārikād (20—641) in the reign of 'Omar b. al-Khaṭīb, the Arabs crossed the Tigris whereupon the garrison of the fortress on the west bank surrendered on promising to pay the poll-tax and obtained permission to go where they pleased. Under the same caliph, 'Utb was dismissed from his post as commander of Mōsul and Harqama b. 'Arafja al-Bārīk succeeded him. The latter settled Arabs in houses of their own, then allotted them lands and made Mōsul a camp city (muṣāf) in which he also built a Friday Mosque (al-Balādūrī, de Goeje, p. 322). According to al-Wāṣīkī, 'Abd al-Malik (65—86) appointed his son Sa‘d as governor of al-Mawsil while he put his brother Muhammad over Armiyina and al-Diẓāra. According to al-Muṣāfī b. Ta‘īs on the other hand, Muhammad was also governor of Aḏẖardīḏān and al-Mawsil, and his chief of police Ibn Talîd paved the town and built a wall round it (al-Balādūrī, op. cit.). His son Marwān II is also described as a builder and extender of the town; he is said to have organized its administration and built roads, walls and a bridge of boats over the Tigris (Ibn Fakhī, ed. de Goeje, p. 128; Yāḥya, Mu‘āṣim, ed. Wustenfeld, iv. 682—684). The foundation of a Friday Mosque was also ascribed to him. Mōsul became under him the capital of the province of al-Diẓāra.

After Mutawakkil's death the Khārūdīja Musāwir seized a part of the territory of Mōsul and made al-Hadiṣa his headquarters. The then governor of Mōsul, the Khūṣayn 'Akwah b. Muhammad, was deposed by the Taǧhībi Ayyūb b. Ahmad who put his own son Hasan in his place. Soon afterwards the 'Ardi 'Abd Allāḥ b. Sulaimān became the governor of al-Mawsil. The Khārūdīja took the town from him and Musāwir entered into possession of it. Mu‘tamid appointed the Turkish general Aṣṭaḡān governor of the town, but in Dījmādī I 259 the latter sent his son Aṣḵūṭān there as his
deputy. The latter was soon driven out by the citizens of the town who chose Yahya b. Sulaiman as their ruler.

Haitham b. 'Abd Allah whom As'ad bin then sent to Mosul had to return after achieving nothing. The Taghlibi Is'hak b. Ayub whom As'ad bin sent with 20,000 men against Mosul, among whom was Hamdan b. Hamdun, entered Mosul after winning a battle, but was soon driven out again.

In 261 the Taghlibi Khijar b. Ahamad and in 267 Is'hak b. Kundafl was appointed governor of Mosul by Mu-tamid. A year after Is'hak's death, his son Muhammad sent Harun b. Sulaiman to Mosul; when he was once again driven out by the inhabitants, he asked the Banu Shamal for assistance and they besieged the town with him. The inhabitants led by Harun b. 'Abd Allah and Hamdan b. Hamdun after an initial victory were surprised and defeated by the Shamalis; shortly afterwards Muhammad b. Is'hak was deposed by the Kud b. Dawa.'

When Mu'tadid became caliph in 279, Hamdan (the grandfather of Saif al-Dawla) managed to make himself very popular with him at first, but in 282 he rebelled in Mosul. When an army was sent by the caliph against him under Wa'if and Nasr, he escaped while his son Husain surrendered. The caliphate of Mosul was stormed and destroyed and Hamdan soon afterwards was captured and thrown into prison. Nasr was then ordered to collect tribute in Mosul and thus came into conflict with the followers of the Kharijite Harun; Harun was defeated and fled into the desert. In place of Takcirn, who was imprisoned, the Caliph appointed Hasan b. 'Ali governor of Mosul and sent against Harun, the main cause of the strife, the Hamdanid Husain who took him prisoner in 283. The family thus regained the caliph's favour.

When after the subjection of the Kharijites, raiding Kurds began to disturb the country round Mosul, Muktafi again gave a Hamdanid, namely Husain's brother Abu 'I-Hasan b. 'Abd Allah, the task of bringing them to book, as the latter could rely on the assistance of the Taghlibis settled around Mosul, to whom the Hamdanids belonged. Abu 'I-Hadid came to Mosul in the beginning of Muharram 293 and in the following year subdued the Kurds whose leader Muhammad b. Baha submitted and came to live in Mosul.

From this time the Hamdanids [q. v.] ruled Mosul, first as governors for the caliph, then from 317 (Nadir al-Dawla Hasan) as sovereign rulers.

The Khirulis who followed them (386-459) belonged to the tribe of the Banu Khu. Their kingly rule, founded by Husain al-Dawla al-Mukhaidir, with which independence was recognised by the Buyids, extended as far as Tu'aq (Ishkuq), al-Madain and Kufa. In 489 (1095-1096) Mosul passed to the Saljuqs.

The town developed considerably under the Atabeg Imad al-Din Zangi who put an end to Saljuq rule in 521 (1127-1128). Mosul, which was for the most part in ruins was given splendid buildings by him; the fortifications were restored and flourishing gardens surrounded the town. Under one of his successors, 'Izz al-Din Mas'ud I, Mosul was twice unsuccessfully besieged by Saladin (1182 and 1185 A.D.); after the conclusion of peace 'Izz al-Din Mas'ud II however found himself forced to recognise Saladin as his suzerain.

The town was at this time defended by a strong citadel and a double wall, the towers of which were washed on the east side by the Tigris. To the south lay a great suburb, laid out by the vizier Mudjaffor al-Din Kattamiz (d. 595). From 607 his son Baibar al-Din Lui' [q. v.] ruled over Mosul first as vizier of the last Zangids and from 631 as an independent ruler. In 642 he submitted to Hulagu and accompanied him on his campaigns, so that Mosul was spared the usual sacking. When however his son Malik Salih Ismail joined Baibars against the Mongols the town was plundered in 660 (1261-1262); the ruler himself fell in battle (van Berchem, Festschrift f. Th. Noldeke, 1906, p. 107 f.).

The Mongol dynasty of the Djalr succeeded the Ilkhan in Baghdad and Sultan Shahk Uways in 766 (1364-1365) incorporated Mosul in his kingdom. The world conqueror Timur not only spared Mosul but gave rich endowments to the tombs of Nabi Yunes and Nabi Djirjis, to which he made a pilgrimage, and restored the bridge of boats between Mosul and these holy places.

The Turkoman dynasty of the Aq Koyunlu whose founder Baba al-Din Kurru 'Othman had been appointed governor of Djirar by Timur, was followed about 920 (1514-1515) by the Persian Safawids. After long fighting the Ottomans in 1047 (1637-1638) finally took the town from them. In 1077 (1667) it was visited by the great earthquake, in 1156 (1743) besieged by Nadir Shah Afshar and heroically defended by Christians and Muslims. It was then under a Pasha of the local family of the 'Abd al-Djalil who had ruled the town for a long period, fairly independent of the Porte. In the sixteenth century Mosul was an unimportant provincial town of the Turkish empire. After the World War the wilayet of Mosul after long negotiations was placed in the mandated territory of Iraq. The town has now about 70,000 inhabitants.

The Arab geographers compare its plan to a headcloth (tallabuq), i.e. to an elongated rectangle. Ibn Hawkal who visited Mosul in 668-669, describes it as a beautiful town with fertile surroundings. The population in his time consisted mainly of Kurds. According to al-Ma'muni (c. 375 = 985-986), the town was very beautifully built. Its plan was in the form of a semi-circle. The citadel was called al-Murabbaba and stood where the Nahr Zubaida canal joined the Tigris (now Yasha or Bash Tibeia; cf. Herzfeld, Op. cit., p. 209). Within its walls were a Wednesday market (Shuk al-Arkaq) after which it was sometimes called. The Friday Mosque built by Marwan stood on an eminence not far from the Tigris to which steps led up. The streets in the market were for the most part roofed over. Al-Ma'muni (Op. cit., p. 136) gives the eight main streets of the town (discussed in Herzfeld, Op. cit., p. 209). The castle of the caliph (Kajir al-Khulfa) stood on the east bank, half a mile from the town and commanded Nineveh; in the time of al-Ma'muni it was already in ruins, through which the Nahr al-Khwasa flowed.

Ibn Lujbir visited Mosul on 22nd-26th Safar 580 (June 4-8, 1181). Shortly before, Nuri al-Din had built a new Friday Mosque on the marketplace. At the highest point in the town was the citadel (now: Bash Tibeia); it was known as al-Habib "the hunch-backed" and perhaps as the synonymous al-Daffal (G. Hoffmann, Anzeige aus
MOZARABS, the name given in the middle ages to those Christians who lived in districts under Muslim rule and bore the stamp of Spanish Moorish culture. The word comes from the Arabic muta'abb, the meaning of which is exactly that of the Spanish mohárab; the Arabic form itself is found in documents in the archives of mediaeval Spain.

We know that in principle at the time of conquest the new subjects of the Muslim conquerors could either adopt Islam or continue to profess their own faith, in the latter case falling into the category of tributaries (dhimmī; q.v.). The early Arab rulers of Spain showed considerable tolerance in this connection and the treaties of capitulation were definite on this point, at least if we may judge by one of them of which the text has been preserved and which was concluded between the Visigoth Theodemir, lord of the district of Murcia [q.v.], and 'Abd al-'Azīz b. Muḥāb b. Naṣr. This attitude of Spanish Islam to the Christians hardly altered in the centuries following until the coming of the Almoravids and Almohads. It is true there were occasional anti-Christian reactions under the first Umayyads which found vent in persecution. But these persecutions seem to have been dictated by political considerations rather than by the fanaticism of individual rulers. The Christian communities of the large towns were the most active nurseries of the nationalist movements which broke out in Spain mainly in the ninth century. Among the most important we may mention that led by the Mozarab 'Omar b. Ḥafṣūn [q.v.], which passed far beyond the limits of a purely religious movement. At Cordova in particular a few illuminati had to be sent to the scaffold because they insulted the religion of the Prophet. The Muslim judges seem to have sentenced them to the supreme penalty with considerable reluctance and the central authorities took the initiative in summoning a council, so that the church itself put a stop to the demonstrations of certain mystics like Iulogio and Alvaro.

In any case in the tenth century the Mozarabss of the caliphate were living in harmony with all classes of Muslim society and were themselves considerably influenced by Arab culture. They spoke Arabic, just as the Muslims spoke the Romance language, and were acquainted with Islamic literature. The reciprocal influences were therefore considerable and were to continue so till the end of the middle ages.

As regards administration, the Christian communities of Muslim Spain under the Umayyads were under the direct authority of officials chosen by themselves from their own number and appointed with the approval of the Muslim authorities. Their head, who is sometimes given the Latin title of defensor or protector, was most frequently called Count (Comes, Sp. Comte, Ar. قاض). The taxes which the Christians had to pay were collected by an agent called exceptor. To settle their differences they had a special judge (Ar. كيش, لٖع، or كيش, c. cemur) who administered the Visigoth code (Eiber Judicium, later the Fuero Juzgo).

The Christian communities of Cordova and Seville were among the most important, but were less important than that of Toledo, which was during the caliphate the residence of the metropolitan (metrītan) of Spain. The clergy were under bishops (usūf). Public worship was celebrated.
in the churches: there were monasteries (dair) with monks (sikhs) in the neighbourhood of the larger towns: for example that of Aminil (Quadr- 
mellato) near Cordova.

The history of the Mozarabs of Spain is of course closely connected with the political history of Islam in Spain and with the "reconquista". But its development is mainly interesting as showing light on the peculiar culture of Moorish Spain which remained alive even after the fall of Muslim power. The recent publication of a considerable number of documents from the archives of the cathedral of Toledo mainly of the xith and xith centuries enables us to estimate how great was the arabicisation of all classes in reconquered Spain, which we find influencing civil, military and economic institutions and even ecclesiastical ritual (Mozarab rite). It is similarly to the Mozarab communities and their representatives who went to the north of the Peninsula that we must attribute the origin of a special art. Mozarab art, directly derived from Cordovan art and characterized by almost regular use of the horse-shoe arch and the vault.

MSHATTÁ, a ruined palace in Transjordania.

Description of the building. The ruins of al-Mshatta (the winter camp) lie east of the Jordan about 130 miles south of Damascu and 25 east of the northern shore of the Dead Sea, near the Darb al-Hadjil, the pilgrims' road from Damascu to Medina and Mecca. It consists of a rectangular outer wall, defended by towers at the corners, each side being 157 yards long. The entrance gateway is in the centre of the south side and is flanked by two pentagonal half-towers rising out of an octagonal base, across which runs as far as the next round tower the long frieze 16 feet high of the 45 yards long, which has for the most part been taken to Berlin and which made Mshatta a world-famous monument of early Muslim architecture and decorative art and a much discussed centre of interest in Oriental archaeology. The building of the whole area within the wall was planned in three sections of which however only the central one was carried through, at least in part. The plan by B. Schulz (cf. Jahrbuch d. preuss. Kunstdenkmulungen, vol. xxv., 1904) shows a gateway and an entrance half, both of which were intended to be vaulted, and a series of surrounding rooms, of which the oblong room to the right of the entrance has been said by Herzfeld and others to be a mosque because it has a niche in it which is taken to be a mihrab. Only the foundations of the walls of this part however are still standing. In the large quadrangular court on the western side is a water-basin built of brick and traces of a second one mentioned by Tristram on the opposite side, so that Schulz thought there were originally intended to be four for the sake of symmetry. The palace consists of a great hall with three aisles, a domed chamber and the living rooms at the sides. The walls are about five feet high, of blocks of limestone and above that of brick (21 × 21 and 27 × 27, 65 cm. thick). The rooms at the sides to the left and right of the great hall with its three aisles, are barrel-vaulted, the smaller vaultings still exist and, like the relieving arches of the doors, are remarkable for their pointed arches. Schulz was able with certainty to reconstruct the façade which had fallen and was still lying on the ground. It consisted of three round arches on pillars corresponding to the three aisles. The hall was divided into three sections by pillars of which a few shafts and a Corinthian capital with painting and remains of gilding have been found. Holes and gutters at the bases and on the shafts suggested to Schulz that the columns had originally been taken from another building and used again here. The horizontal termination of the façade also shows that this hall was intended to have a flat, and not a basilical roof, or actually had one. To give it its height the two supporting rows of pillars had a second story of pillars placed upon them, an arrangement usual in Syrian architecture also. The quadrangular hall of audience and ceremonial, entered from the oblong hall by a second door, was covered by a dome and three half domes of brick, all of which have collapsed. Dovetailing on the inside of the surrounding wall shows that it was intended to build on to the sides of the palace dwellings for soldiers and other retainers. On the evidence of these projections from the wall, Schulz has prepared his reconstruction of the plan of these wings. The two quadrangular surrounding walls with the round towers had barely been half built when the half-finished work was stopped. The principal motive of the great frieze at the part of the wall containing the main gateway is a zigzag pattern in high relief which forms 44 half triangles. These triangular areas are, wherever the frieze was finished, thickly covered with tendrils in low relief. In the centres of the pairs of interlocking perpendicular and suspended triangles, bosses are set in high relief decorated with acanthus rosettes. The socket of the frieze is in the form of a modified Attic base consisting of a plinth and two toruses. The border which frames the frieze at the sides and above consists of a leaf kyma at the foot and a second larger crowning it. According to Schulz's photograph, before the frieze was removed, the half left of the door up to the main border was finished but the right half only up to half height of the frieze.

The patterns of foliage in the fields of the triangles show great variety. Here we follow the scheme of the official publication in the Jahrb.
The triangles A and B have within circles vines with birds picking grapes; in the apex of triangle A there is also a Chinese fabulous animal with a human head such as was very popular in Chinese sepulchral plastic art. In C the circles are interlaced and lotus flowers appear in addition to the vine-tendrils. In D—1 the vines which are here more realistic grow out of vines which are flanked by lions and winged griffins; buffaloes, panthers, lynxes and gazelles also relieve the foliage. In triangle F the tendrils grow straight out of the ground; this area also has the remarkable addition of men picking the grapes. Triangle L is the first right of the door and is the last to contain animals. The areas of the triangles of the right half show a quite different style. M—T have, it is true, still vines but of the greatest, lace-like delicacy and closeness of pattern which varies from triangle to triangle. U and V lastly are filled with palm-leaves and cone-shaped figures instead of vines and crowned with spirals.

Form and purpose of the building. The plan is that of a hira, i.e. the Arab type of camp, reproduced in building materials, and so called after the Lakhmid capital, with the prince's tent or house on the central axis just as is described by Mas'udit in his account of Sūmarrā (cf. E. Herzfeld, Erster vorläufiger Bericht über die Ausgrabungen von Samarra, Berlin 1912, p. 39 sq.). Mshatta, Qasrul and Sāmarra are descendants of this eastern type of palace. Just as the form could only be recognised as typical after the examination of Qasrul in the Iraq, and by the excavation of Sāmarra, so it was the investigations of H. Lammens that first elucidated the purpose of these buildings (La Bâbîla et La Hîra sous les Omeyyades, in M.F.O.B., iv.). Following Lammens, Herrfeld explained Mshatta as a bâlîya [q.v.], i.e. a country palace which was built in the form of a hira for an Umayyad as an occasional residence.

History of exploration, bibliography and date. After its first discovery by H. B. Tristram in 1872, Mshatta was explained by his archaeological adviser J. Ferguson as a Sājānian palace, built by Khusraw II after his conquest of Syria in 614 A.D. It found a place in literature with this description in Tristram's The Land of Moab (London 1873). It was not till about the end of the century that Mshatta became a subject of archaeological study and discussion when it was visited in 1898 by A. Musil and soon afterwards examined by R. E. Brannow and A. V. Domasewski and published in their Provincia Arabia (1904—1909). In the meanwhile the French expedition sent to take it down under B. Schulz had already been there and the Berlin publication by Schulz and Strzygowski appeared in the Jahrb. d. preuss. Kunst., 1904. To Professor Strzygowski is due the credit of having urged W. Bode to bring the façade to Berlin. Thanks to the interest displayed by the Emperor William II in the plan and his friendly relations with Salūn 'Abd al-Hamīd, the latter, with the traditional generosity of an Oriental despot, gave the German Emperor a present of this ornament of the desert. As a result of his study of the architecture and decoration, Strzygowski dated Mshatta between 500 and 600 A.D. M. v. Berchem with Clermont-Ganneau and Dussaud decided on historical grounds for the Lakhmid dating, i.e. that it was built as early as the fourth century A.D. (Aux pays de Moab et d'Edom, iv., J.S., 1909, p. 401—428) while Brannow and Musil assumed a Chassànids origin. On the other hand in his review of Strzygowski (Z. A., xix., 1905—1906, p. 419 sqq. and Islamstudi en, p. 276 sqq.), C. H. Becker championed the Umayyad dating, which E. Herzfeld in his Genius der islam. Kunst und das Mshatta problem (Ist., i., 1910, p. 27—63 and 105—144) supported with evidence from the history of art, and was strengthened by the appearance at the same time in M. F. O. B., iv., 1910, p. 91—112 of H. Lammens' study Râdia et Hîra. This Umayyad dating Herzfeld tried to make more convincing in his Mshatta, Hîra und Badîya (Jb. d. preuss. Aka., 1921) and finally crowned his work with the discovery of an inscription drawn up by Walid II himself recording repairs done by him; Walid II was murdered after a year's reign (126 = 743—744) and work on the building was not completed. This attribution found further support in a story quoted by H. Lammens in (J. A., 1915) from Ibn al-Muṣaffa, according to which Walid II was murdered by a man named Ibrahīm while building a "town" in the desert, which was to bear his name. Lammens identifies this town with Mshatta. Recently the Syrian desert palaces were again thoroughly investigated by the two fathers and teachers of the École Biblique St. Étienne in Jerusalem, Jaussen and Savignac (Mission Arch. en Arabie III, Les châteaux Arabes de Qezer Amra, Haran, et Taba, 2 vols., Paris 1922). As regards Taba and Mshatta the two students came to the same conclusion as earlier scholars, namely that they belong to the same period. As it seemed to them impossible to attribute them to the Umayyad period, they attributed them to the pre-Islamic period; as both buildings were left unfinished, they must have been built towards the end of a dynasty or kingdom. The discovery of idols at Mshatta also, they said, prevented its being attributed to the Umayyad period (cf. Dier, Die Kunstd. islamischen Volkes, 11th ed., 1926, p. 153).

Establishment of the Umayyad date of Mshatta. The archaeological material at Strzygowski's disposal when he wrote on Mshatta in 1904 was still insufficient for the proper appreciation of the historical position. It was not yet possible to have a complete conception of Umayyad art. Herzfeld who knew the lands in question by long residence and frequent travels was able six years later to approach the problem from much more solid premises. The most important monument from which deductions could be drawn was the Miḥrāb of the Dājmi al-Khāṣṣaki, discovered by Sarre and Herzfeld in the meanwhile in Baghīlând, which must be either pre- or early 'Abbasid, and the decoration of which formed a parallel to that of Mshatta (Ist., i. 33 sq. and plate 1.). The explanation of the niche in the chamber right of the gateway as a miḥrāb had to be decisively rejected and indeed less emphasis had been laid on it by Herzfeld than by superficial writers on the question for whom the "miḥrāb" meant an easy proof of their point. Schulz had previously ascertained on the spot that this niche is not a miḥrāb, and a study of the plan and Schulz's measurements shows a piece of masonry jutting 65 cm. out of the wall, containing a niche 1.62 m. broad and 1.48 deep. The fact that the miḥrāb is never in a projection from the wall (an exception
would prove nothing) as well as the brevity of the niche which would be exceptional, even in very large mosques of late date (such a depth is hardly ever found anywhere), prove that this can only be a tribunal niche or something of the kind. Ka'ir al-Tuba has in its south wall four similar semi-circular apse-like niches about 10 feet broad, which surely no Muslim archaeologist would claim as mi'rasb. Mshtatta, however, does not require such illusive evidence to prove its Umajjad date. These carved proofs are found in the variety of material used and architecture styles in the application of the principles of the minor arts to the decoration of buildings, already noticed but not correctly interpreted by Strzygowski, and the variety of styles in the areas of the trangles which fall into four groups.

The combination of 'Irak brickwork with Syrian stonework in the royal residence proves the cooperation of different groups of workmen working on the system of con-cippion which was revived by the 'Umayyads. The construction of the brick arches is also 'Irakian in form and, besides, they are pointed arches which were unknown before the beginning of the seventh century, so that it is impossible to put the date before 600 A.D. It was only in the early Muslim period that these were spread. We find Syrian torus profiles on the basilical building and North Mesopotamian profiles on the friese. The pillars in the basilical hall are taken from older buildings as was the custom wherever possible in the early Muslim period. In the pre-Muhammadan period neither wooden brances in the arches nor material from older buildings were used (Herzfeld).

On the signification of the decorative façade we may add a little to Strzygowski's and Herzfeld's observations. Two points were hardly touched on in the previous discussion: that the façade is to be considered and understood only as the basis of a great façade which was planned but was never finished, and the origin of this system of decoration from Persian textile art, which alone could supply the foundation for it and explain the sudden appearance of this completely new world hitherto unknown in architectural ornamentation. The façade proper planned above this architectural border would have contained a pattern on a much larger scale just as we see on carpets. The th-manifold oppo-ed groups of animals still to be found on Russian carpets and textiles influence from Persia and the Caucasus of the xlvth-sxth centuries and the rug-yag frizes filled with tendrils, each with a cypress (in place of a rose-tte) in the centre show the popularity and wide distribution and permanence of this motive. From it was taken over for architectural decoration, the popular texture form, however, were translated into the traditional forms of the art of the land and time. This explains the different stylistic execution of the same plan by the stone-masons.

This historic breach with tradition, this surprising control over a differently oriented artistic tendency pre-posses a radical change and re-organisation of society and outlook. An artistic creed to perfect and complete in itself cannot possibly be explained by the ambition of some upstart of a desert sheikh but it presupposes in addition to enormous wealth and far-reaching power a highly trained artistic sense, which was only possible at the time of the 'Umayyad Court and actually existed there, as we know from many sources. Only a passionate builder and lover of architecture could visualise such a work and only at a court filled with scholars, poets and artists from all countries could the plans for it be drawn up. This illuminating emancipation from the Hellenistic façade with its pillared niches is only to be explained as the expression of a new outlook rooted in religion and proudly conscious of its quite different ideals, as was the case with young Islam. For the first time, the new teaching of the Koran and the new religious expression, in a design on a figured ground, which was to develop into the frieze of inscriptions on the Ibnu in Khargid in the xth century (cf. Diez, Chusansche Baukunst, Pl. 15/2).

MU'ADHDHIN. [See Masudi, I, II, 4 and Abyan]

AL-MU'AIYAD. [See Hisam II.]

AL-MALIK AL-MU'AIYAD SAIF AL-DIN, Shaikh al-Mamluki (so-called after his first owner) al-Husayn (member of the bodyguard), a Cussanian by birth, was brought as a slave to Cairo and purchased by the Atabeg Brikiz. When the latter became Sultan in 801 (1402) he gave him his freedom, put him in the corps of pages (iqran, q.v.), moved him to the corps of cup-bearers (sabit, q.v.) and later appointed him to the bodyguard (al-Mustatir, whence his nickname). Brikiz's son, Nasir Faraj (q.v.), on his accession in 801 (1359) appointed him emir of a thousand and in the following year governor of Tripoli. He served as a troop commander in the battle of Damascus against Timur, was taken prisoner, soon after his release again became governor of Tripoli and later of Damascus. The reign of Sultan Faraj was a period of uninterrupted fighting between the Sultan and his governors and Shaikh was always in the midst of intrigues; often he was on the Sultan's side, more often in rebellion against him. His relations with his rival, the powerful governor Nezir, were similar. Finally the Sultan succumbed to the emirs, was deposed and put to death: the caliph Abbas b. Muhammad al-Musta'in succeeded him in 815 (1412). The governor Shaikh who was in Cairo at the time, was appointed first minister (ni'sm al-malik) and retained power by filling all available offices with his followers. A rebellion of the Egyptian Bedouns gave a pretext for deposing the Sultan al-Musta'in. The emirs demanded that a man of vigour should occupy the throne and in Shalil of the same year chose Shaikh al-Sultan. While he encountered no difficulties in Egypt, the governors of the Syrian provinces refused to recognise him. He had himself to go to Syria to bring them to reason. He gradually succeeded in taking one after the other prisoner, and after he had executed his chief enemy Nezir his throne was secure. The last rebellion in 818 (1415) he put down with comparative ease.

The defeat of the Ottoman Sultan Bayazid in 804 (1402) by Timur and the civil strife in the Mamluk kingdom had been utilised by the neighbouring rulers in the buffer-states between Egypt and the Ottoman empire to capture a number of towns and fortresses in southern Asia Minor up to a line Laredo-Abulustain-Darende, which had previously been under Mamluk rule. Sultan Shaikh regarded it as his duty to recapture these fortresses and again force these former vassals to recognise
his suzerainty in order to give his kingdom the necessary strength to resist its enemy, the Ottoman Sultan, and to protect the northern frontiers against the plundering raids of the Turkomans. The first campaign took place in 820 (1418) because, in spite of repeated demands, the prince Muhammad b. 'Ali of the house of Karaman would not surrender the town of Tarzi', which he had taken, although he was ready to recognize the Sultan's suzerainty on the coins and in the khatla. The Sultan set out from Cairo, receiving in Syria envoys from the families of Dhu 'l-Ghādir, Karaman and Ramadhān, who brought the submission of their chiefs. Malaiya, Abūlujun, Darenda and Tarzi were successively occupied, then Behesmah, Kahtā and Karkār west of the Euphrates; the cities of the two last-named were besieged, but the siege was raised when the commanders recognised the suzerainty of the Sultan. In the following year, a dangerous enemy of the Sultan, Kārā Yūsuf, chief of the Black Sheik, invaded Northern Syria in pursuit of Kārā Yelik, chief of the White Sheik (both called after their banners), plundered the towns in the N. E. of the Shammar empire but the return was cut short by a severe storm. The Sultan's successes were rendered useless by his return to Egypt, as the Syrian governor did not succeed in retaking the cities. The Sultan therefore sent his son Ibrahim with a strong army to Asia Minor. The latter reached Kaisaria, appointed friendly chiefs as governors, while several hostile chiefs were taken prisoners and put to death and others slain in their flight. Ibrahim himself returned to Cairo in triumph but died there in 825 (1421) to the great grief of his father (the story that the latter poisoned him out of jealousy of his fame is absurd). Kahtā Yusuf was threatening the eastern frontier, but he had to turn his attention to his enemies, a rebellious son and Timur's grandson Shāh Rukh, and at the end of the year he was poisoned. The Sultan himself had suffered for years from an affection of the foot; his illness (probably inflammation) became so serious that he could scarcely leave his bed. He had installed his eighteen months' old son as his successor and three of his emirs formed a kind of regency. His death took place on the 8th Muḥarram 826 (Jan. 14, 1427). His kingdom was secure, the frontiers consolidated, but at home there was a lack of order. Bedouins were plundering the country and Alexandria was not infrequently exposed to attacks from the sea by Frankish pirates. Offices were freely sold and the people suffered much from the extortion of the officials. From time to time the Sultan deprived high officials of the profits of their extortions or imposed severe punishments on them. Taxes oppressed the country. The Sultan himself was brave and to the end of his life fulfilled his duties as a ruler in spite of his painful affliction — he had frequently to be carried. Although he led a life of pomp and gave popular entertainments, fireworks and feasts with great splendour, he was outwardly a pious and humble Muslim, who in times of famine and pestilence took part in prayers in the penitential garb of the Sufis on the bare ground and like a pious Muslim observed a three days' fast in times of drought. He was harsh on Jews and Christians, dismissed them from government offices where they had clerical and administrative posts, and punished them in addition. The old strict regulations about dress were again enforced and all kinds of humiliations heaped on the "unbelievers".

(M. SODERHEIM)

AL-MU'A'IYAD FI 'L-DĪN –[Welsh?], Abu Nūsār Ḥaṣan Allāh b. Ḥaʾī Ḫaṭīr al-Tars, a Fāṭimīd dāʾī of high rank, d. 470 (1077). At the beginning of his mission al-Mu'ayyad propagated the Fāṭimīd doctrine in the East, especially in Shiraz. He succeeded in converting the Buwayhid amir Abū Kālidjār [q. v.], but on account of opposition at home he went to Baghchād and Mawṣil, and thence to Cairo, where he was received after some time at the court of al-Mustansīr il-Īlāh [q. v.]. He now became chief dāʾī and hīb of the Inām, and was probably in relations with the other great dāʾīs of Mīrūr. Khushnaw [q. v.]. Al-Mu'ayyad was sent in command of an army to help al-Baṣīt [q. v.], against the Turkomans. With his assistance a severe defeat on the Turkomans at Sinūrā, took Baghchād, and read the khatla in the name of the Fāṭimīd Caliph. Al-Mu'ayyad was also in direct communication with the leaders of the Fāṭimid da'wa in Yemen. In addition to his capacities as a general he was possessed of great literary ability and a poet of no mean talent. His dirān, which consists of panegyrics on the Fāṭimīd Inām al-Mustansīr-ir and al-Ẓāhir, deals partly with philosophical subjects. Another important work, al-Maĥālī, contains 300 "assemblies", dealing with different theological and philosophical questions, including his correspondence with the poet-philosopher Abū l-'Alā al-Maṣrī [q. v.] on the subject of vegetarianism (see D. S. Margoliouth, in J. R. S. 1902, 289 sqq.). His autobiographical work, al-Sīra, gives a detailed account of his mission in Shiraz and his admission to the court of al-Mustansīr, and is carried down to 451 (1059). Besides being one of the few autobiographies in Arabic literature, it is of considerable interest for the history of the Buwayhids and their relations with the Fāṭimids. The MSS. of these works are preserved in some collection of Ismāʿīlī works in Yaman and India.

MU'A'IYAD-ZADE, 'ABD AL-RĀHMĀN ČELEBI, an important Ottoman theologian and jurist. Born in 860 (1456) in Amasia of the family of Mu'ayyad-Zade (his father 'Ali was one of the three sons of Dūrūkī-zade Shams al-Dīn Mu'ayyad Čelebi [d. 851 = 1447]. Shāhī of the Yaquṭ Pāsha Zāwiyes Amasiya), he became, as a young student of theology, acquainted with prince Bāyazid, the younger son of Sultan Mehmed al-Fāṭih and afterwards Sūlīn, who had been appointed wāli of Amasia as a seven year old boy, and became a member of his circle. It is to this period that his relations with the famous poetess Mīhri Khávan [q. v.] belong. The relations between the gifted youth and the prince who was about 9 years older than he (born 854 = 1447), became so intimate that Mu'ayyad soon became the in-
separable comrade of Bayazid. When Sultan Mehmed heard from various sources, especially from a complaint in verse by Hafiz Lu'uf Allah, Kadi of Siwads, who had been gravely insulted by the entourage of the prince, of alleged abuses at the prince's court, especially the orgies of drug-taking (mar'jafta: bori, ajrān, murباك), he sent a commission of enquiry which arrived in Amasia when the prince was with Mu'ayyad on a pleasure-trip to Ladik. The result of the enquiry was the issue of an order for the execution of the two chief culprits, one of whom was Mu'ayyad (this hukm-i sharif is given in Feirdun, Melûk-i Muhammed, Constantinople 17274, ii. 270-271). From a note by Mu'ayyad in a book bought by him during his stay in Ladik in Kâbi1 1852 (June 1477) (the Ziyâ of Shems al-Din) the date is exactly fixed (the date in Feriðûn should therefore be altered from 884 to 883; cf. Hujjûd al-Din, Anwaûr Tâhirî, Istanbul 1927, iii. 230 note 1). Mu'ayyad, receiving timely warning of the fate threatening him, escaped from Amasia, provided with everything necessary by Bayazid, and after a short stay in Halah went to Shiráz, where he completed his theological studies under the celebrated Ḥâfiz al-Din al-Dawârînâni.

When Mu'ayyad returned home, on hearing of Bayazid's accession, he received an iqâba (teacher's diploma) from Daywarî. In 887 (1482) he reached Amasia where his father had died three months earlier. After staying six weeks here he went to Constantinople where his extensive learning soon gained him a reputation among the theologians. Bayazid appointed him muhâdarî at the Kalender-khâné-medrese in Constantinople. In 891 (1486) Mu'ayyad married the daughter of the famous jurist Mu-lî al-Din Kaštellâni (Mawliâna Kestelli) who was the last Kâfi'-asker-general of the Turkish empire and after the reforms by which this office was divided became Kâfi'-asker of Rumelia. Mu'ayyad had a brilliant career: in 899 (1494) he became Kâfi of Adrianople; in 907 (1501) Kâfi-asker of Rumelia; in 910-1 (1504-5) Kâfi'-asker of Rumelia and head of all the al-dâms. In 917 (1511) the Janissaries who had taken part of the prince Selim plundered his house because his sympathies were with Alâmî, the favourite son of Bayazid. He himself was dismissed by the now senile Sultan under pressure from the Janissaries, Selim I soon after his accession recalled however him to his old office as he saw in him the right man to carry through the important duties of a Kâfi'-asker. Selim took him with him on his campaign to Persia against Shah Lâmî. But on the way back Mu'ayyad was deprived of his office in Constantinople as symptoms of a mental breakdown had begun to show themselves (920 = 1514). He died in 922 (1516) in Constantinople and was buried in Eiyûb.

Mu'ayyad wrote a number of treatises on law and theology especially on Kurânic exegesis. Brockelmann, G. A. L. 1 227 and Brusalf Mehmmed Tahir, 'Oğluncü Muellîferî, Istanbul 1333, i. 355, gives a list of his works that survive in MS. Under the nom-de-plume of Khâtemî, Mu'ayyad also wrote poetry in Arabic, Persian and Turkish. His great service to Turkish literature lies however less in his own original work than in the magnifi-

AL-MU'AKHKHIR. [See ALLAH, I.] AL-MU'AMMA, an anagram, sometimes charade, a kind of enigma propounded in verse and rarely in prose; its meaning is made "blind" or obscure with the object of misleading the wits and the eye. It is formed by designating one or more words by various allusions to the letters forming it or them or by allusions relating to the pronunciation: the alphabetic value, the numeral value of the letters, misinterpretation or inversion (yath). Very frequently no notice is taken of the vowels or of letters only connected with the spelling. Good taste is the rule.

There are several varieties of mu'amma which will be found enumerated in the works given in the Bibliography.

The invention of the mu'amma is attributed to Kâhil b. Alâmî, the inventor of prosody, while the Persians of course attribute it to Abî b. Abî Tâlib. The following is an example of a mu'amma on the name Alâmî: Aeswâladulâ al-lâllân tuflûhâḍ, zu-râbî 'l-tûflûhâḍ al-lâlîhî. Weâawulâ al-'âlîkû lâllânâ, zu-zâhûm awârâdâ lî-bâkhîhî, *Its first is of the [word] tûflûh (apple) = A; and the fourth of the [word] tûflûh (apples) is its second = H; and the first of the [word] musk (musk) is its third = M; and the last of the [word] word (loses) is the remainder of it = V." Here is a Persian example on the word wâshk: Nâm-i betun in mîh trâyî, haft aêtâlîstî a-zâtû, "The name of my idol, this [woman] fact as the moon, is seen in Persian and Arabic." The word wâshk divided into six gives sat or sit which in Arabic means "six" and i or yek which in Persian means "one", whence we have 6-1 = 7. Bibliography: Kušâ al-Din al-Navârâhî, al-Kân al-'Alâmî fi Fann al-Mu'amma (Brockelmann, G. A. L. ii. 383); 'Abî al-Munîm b. Ahmad al-Bakka, 'al-TÂrâ al-'Alâmî al-îlâ Kân al-Mu'amma (Brockelmann, G. A. L. i. 285, 381); anonymous, Dîvân al-Dawârî ú 'l-Mu'amma-yât wa-l-'Aqzhâz wa-l-'Adâbî, Barûtî 1882; Tahir b. Muhammâd al-Tâbâri, Cîvâna al-Mu'âmîl.
MUĀWIYA, the first 'Umayyad caliph, son of Abu Sufyān [q. v.] and Hind [q. v.], was born in Mecca in the first decade of the seventh century A.D. Under the training of his father, the most influential personage in, if not the actual leader of the merchant republic of Mecca, he had an opportunity to be initiated into the principles of government as the Meccans understood it. Converted to Islam in the year of the fast or surrender of Mecca, he made himself useful to the Prophet in the capacity of secretary. Here he gained an insight into the workings of the new regime and learned to know the men with whom he was later to work or struggle: the autocrat 'Omar, the presumptuous 'Ali, a whole crowd of ambitious people, like Talḥa, Zubair and 'Aṣiba, sometimes redoubtable for their talents and capacity for intrigue, like 'Amr b. al-Āṣ [q. v.] and Mughira b. Shu'āb [q. v.]. This dual training early matured the young Mu‘awiya who was remarkably gifted, and prepared him from the first for his high destiny.

In the caliphate of Abū Bakr he was sent to the conquest of Syria as second in command to his brother Yazid; in this new field he displayed an astonishing activity and distinguished himself by military successes, like the taking of Caesarea and other cities of the Phoenician coast. On the premature death of Yazid, he took his place as governor of Damascus. In 'Omar's reign, with the advance of Arab arms, he added to this office the governorships of the other provinces of Syria. 'Othman, who was related to him, confirmed him in these offices and still further increased his authority. Mu‘awiya gained the attachment of those under him and established in Syria during the twenty years of his governorship a model province, the best organized, and with the best disciplined troops of the young empire. Not having been able to prevent the assassination of 'Othman, he was able cleverly to take upon himself the task of avenging him. This was to lead him to the caliphate and bring him into open conflict with 'Ali. Delaying his attack, he let his rival use up his forces and lose his prestige in civil strife and in intertribal conflicts with the dissenters ('Uqaba, q. v.) and other tribes, who accused him of impunity in the murder of his predecessor. The indecisive battle of 'Siffin [q. v.] resulted in the arbitration of 'Abd al-Malik [q. v.]. In pronouncing that 'Ali should lose the caliphate, the verdict restored to Mu‘awiya liberty of movement. He had won over 'Amr b. al-Āṣ to his side and at once used this valuable supporter for the conquest of Egypt. Encouraged by his military and diplomatic successes, he allowed his troops to proclaim him caliph and continuously harassed the provinces that still recognised 'Ali. Ibn Muljam's crime removed the last obstacle separating him from the throne. Mu'āwiya profited by it to inaugurate his reign in Jerusalem. To him the title of caliph merely meant official recognition of a fait accompli; the result of twenty years of labour and devotion to those under his governorship in Syria. To law-abiding men, he alone seemed capable of putting an end to the anarchy in which the empire had been struggling for more than ten years. In the course of a rapid campaign in the Ḥishāq in 661, he acquired from Ḥasan b. 'Ali a definite renunciation of his family's claims. The submission of the provinces to the east of the Tigris restored the unity of the caliphate. This
year is known as the year of reunion (al-jum‘a‘a). One man continued to sustain in Persia the flag of the ‘Abids, Ziyād b. Abīhi [q. v.]. Mu‘awiya won him over by wifilah, a procedure by which he recognised him as his half-brother, son of Abū Sufyān. This bold stroke secured him the support of the ablest governor of the caliphate, a worthy rival of ‘Amr b. al-‘Āq and Mughīra b. Shu‘ba, already supporters of the caliph. Against the combination of these four brains all the plots hatched by the anti-Umayyad opposition were to come to nothing. On the death of Mughīra, Ziyād added the governorship of Kūfa to his own of Basra and for eight years ruled the whole of the eastern provinces. By his ability and loyalty, Ziyād showed himself most worthy of the confidence placed in him. Freed from anxiety about this half of the empire, Mu‘awiya devoted his energies to the pacification and development of the prosperity of other parts of his vast empire and to removing the traces of the long struggle from which it had emerged. He organised the Arab navy while his lieutenants actively pursued the work of foreign conquest. He took Cyprus and Rhodes and on two occasions his son Yazid closely blockaded Constantinople. His great work was the creation of the Syrian army of tribute (al-a‘lām), a band of cavalry devoted to their sovereign. It formed the great military reserve of the empire for his successors, an inexhaustible nursery of soldiers and leaders. He was able to keep it in training by annual invasions of Byzantine territory: razzias on a large scale rather than campaigns with a definite plan of conquest. By thus keeping the enemy engaged at home, he managed to defend his own frontiers very efficaciously. Taken at a disadvantage during his tense struggle with ‘Ali by an invasion of the Mardaites [q. v.], he did not hesitate to purchase the withdrawal of these adventurers from the emperor. If after his elevation to the caliphate he rarely left Damascus — henceforth the official capital — to lead his armies in person, he nevertheless was still the "real organiser of victory". He saw to the comfort and equipment of the troops, doubled their pay and saw that they were paid with a regularity hitherto unknown. His rival ‘Ali said that on the call of Mu‘awiya the Syrian army "would take the field without demanding pay, not two or three times a year only, wherever it pleased its leaders to take them". His intuition everywhere chose the ablest administrators, the best leaders among the Kūraish and other tribes. To the names already mentioned we may add those of Dahrung b. Kais, Abū ‘l-A‘war al-Sulami, Muslim b. ‘Ukba, Basr b. Abī Arjāt, Ἀσλομ b. Mashama [q. v.]. By the help of enormous subsidies and by his magnanimity he was able to keep the members of the Prophet’s family, the ‘Abids and the Hāshimīs, quiet: Ibn ‘Abīs and Ibn Dā‘far, ‘Akil, the brother, and "the two Huṣain", al-fā’ālim, the sons of ‘Ali. He used the business experience of the Sārdjūnīs to organise the financial administration. This fiscal reform gave him the resources required to maintain his armies, carry out desirable public works and pay the subsidies necessary to secure the success of his plans. He continuously interested himself in agriculture. He paid special attention to the development of the province least favoured by nature, the Hādhrā‘. His example, which was copied by his relations and most influential contemporaries, brought this region a century of prosperity under the Umayyads such as it was never to see again. In the lands of Medina and Mecca and Ta‘if, Mu‘awiya carried out great irrigation schemes, sank wells and built dams.

In Syria he strengthened his authority by a close alliance with the fellow-tribemen of his Kalbi wife Ma‘ṣūn [q. v.] and through them with the other tribes of Kūfah and those from the Yemen; these groups formed the bulk of the Arab population of Syria. It was on these foundations that the hegemony exercised by Syria throughout the Umayyad period was built and consolidated. His policy towards Christians was a tolerant one. Lastly, he endeavoured to train his son Yazid to be an heir capable of continuing his traditions of government, by checking certain tendencies of his well-endowed but impetuous nature with its fondness for pleasure. Seeing his end approaching, he skillfully succeeded in getting Yazid recognised as his successor, first of all in Syria and then in other provinces. These difficult negotiations were the last of his political successes. Mu‘awiya was now entering on the twentieth year of his caliphate, in 60 (Oct. 679) and probably was in the 80th year of a life which had been marked by constant success. By the year 3 or 4 of his reign, contrary to the predictions of the ghulāt, he had succeeded in not merely resisting, but including the rebellions which he must have reckoned manhood, for four years later he was secretary to the Prophet. In the course of the forty years of his public career, no serious check ever interrupted his progress. After the abdication of Hasan b. ‘Ali, he had "reigned without a rival, without losing any of the conquests of Īslām. Neither ‘Abd al-Malik, nor Maṣūr, nor Ḥarūn al-Rashīd earned this praise, unique in the annals of Īslām" (Dhahabī). He died at Damascus in the month of Ra‘āb of the year 60 (April 680) and was buried in the cemetery of Bāb al-ṣaghīr where his tomb still survives. Before his death he entrusted the regency to Dahrā‘ b. Kais and to Muslim b. ‘Ukba until Yazid should return from Anatolia. Companion and secretary of the Prophet, brother of Imām Ḥabībī [q. v.], "the mother of the believers", these claims have not preserved him from the hatred of the Shī‘īs and the official malcontents pronounced by certain ‘Abīl‘āhidī caliphs. More tolerant to his memory than to that of his son Yazid, orthodoxy generally agrees to recognise his right to the respect which is due to the Shāhīds. The Syrians long cherished the memory of his glorious reign and even beyond the bounds of Syria he had partisans among the Hanbalis, called zhālīlī, the enthusiasts for Mu‘awiya.

II. Mu‘awiya’s policy. In the historical and anecdotal literature of the Arabs there are few collections which do not devote a paragraph to Mu‘awiya in the title “wise mildness and complete self-control” (Wellhausen). Qualities which the Arabs include under the term hilm. By this supreme virtue they claim to recognise the true statesman. The Sufyānid sovereign is said to have owed the great success of his career to it. “Mu‘awiya’s hilm” thus became proverbial. A somewhat mixed virtue, essentially opportunist in character, it may be combined with astuteness, or the less scrupulous forms of diplomacy. In our hero this quality has been found even in the most difficult trials inflicted on his amour-propre. His smiling imper- turability was able to disarm the proudest of his adversaries, who were then completely won over by his generosity. With the golden chains of pensions
and rich gifts the ruler was able to hold in leash his most intractable enemies. When his friends expressed surprise at the vastness of certain donations, he would reply "a war costs infinitely more". This was his favourite method of dealing with the Ālids and Ḥāshimids. He has been unjustly accused of having introduced the custom of publicly cursing the name of 'Alī from the pulpit of the mosque. There is no certain evidence of this practice before the time of the Marwānids.

The collateral branches of the Umayyad family supplied him with distinguished assistants. He was careful not to bring the more ambitious of them too much to the front or to leave them too long in one office. He was studious to inculcate into all his relations the feeling that they must stand by one another and that this consisted in the blind execution of his orders. The Umayyads formed his natural supporters. He could not do without them. But the unsettled problem, of the dynastic succession made him distrustful of relatives called upon to share the responsibilities of power. He did not fail to keep a close watch over them. With men like Ibn 'Amir, Sa'd b. al-Ẓāhir, Marwān b. al-Ḥakam [q. v.], of remarkable gifts and considerable influence, who did not conceal their aspirations, he came to a method of action that effectively discouraged them from following the dictates of their ambitions. As to the sons of the Caliph Ṭāhā, they seemed to him too insignificant to cause him any disquiet. On the other hand, Marwān and Sa'd were appointed to succeed one another at about regular intervals in the government of the Hijāz, the cradle of Islam and of the ruling family. Mu'āwiyah was unwilling to give them time to create in such an important centre a position for themselves and connections which might have compromised the future of the dynasty.

Ultimately he decided to replace these two relatives by a nephew of his own, now almost grown up, the Sufyānī Walid b. 'Uthmān, the latter's son 'Uthmān b. ʿUthmān. In the important governorship of the Ṭāriq, which controlled the eastern provinces, Mu'āwiyah showed his preference for the Ṭāriqī officials, Mughira, Ẓiyād and the latter's son 'Uthmān b. ʿUthmān. He appreciated the devotion of these men, who came from the shrewd society in Ṭāriq. suspected by the other Umayyad families, compelled to rely on their sovereign, the author of their fortunes. For a moment, the extraordinary promotion of Ẓiyād and the confidence the Caliph showed in him suggested that he had him in view as his successor. In this attitude to his relatives, the interests of the dynasty surpassed all other considerations. The heir apparent was 'Abd al-Malik. Mu'āwiyah wanted to save his Umayyad cousins from the temptation to set up as rivals of his successor. The first step was to do Ẓiyād rather a bad turn. If, instead of the inexperienced Walid, Mu'āwiyah had retained or restored for another period of office in the government of the Hijāz the energetic Marwān, there is no reason to think that this would not have turned the incensed Ḥanifa from the hopeless exploit of Karbala.'

In the traditional view Mu'āwiyah appears as the perfect type of Arab ruler. When writers, jurists, and historians all and alike have to quote a trait or a saying illustrating kingship, or the conduct of states, they rarely hesitate to credit it to our hero. This unanimity which reflects so much to his credit has been transformed into censure by orthodoxy. Mu'āwiyah is reproached with having transformed the ḥālaf, the viceroy of the Prophet, into muḥk, into a temporal sovereignty, with having, if we may use the term, secularized the supreme power, really a purely lay one, in the heart of Islam. This criticism is an attempt to throw odium on Mu'āwiyah while in reality it calls attention to his great merit. In him the ruler, "the king", i.e. the organizer and administrator, appear very distinctly while they are difficult to find in his predecessors, painfully fighting against the outbursts of Bedouin anarchy. This transformation of the patriarchal power had begun with 'Umar b. al-Khattāb who was the first to realize it, and attempted to realize it. Mu'āwiyah endeavoured to hasten its evolution towards more effective centralization, an extension of the powers and personal authority of the sovereign. To secure for the latter the advantages of external pomp, the prestige given by formalities, he gave more ceremony to the hitherto democratic appearance of the caliph at the Friday services. He appeared in the minbar or pulpit, surrounded by a gherēta or guard — 'Alī had already had one — and remained seated while delivering his address, the ḥālaf. Some have thought to see in this attitude a sign of pride. This is to forget the primary nature of the minbar as the seat of the ruler, the sovereign's throne, before it became of liturgical significance as the pulpit of the mosque, after the latter had become a building for religious worship. This charge of muḥk was also intended to render suspect the sincerity of the faith of the Sufyānī monarch. But austerity characterised his morals and private life. He was a good father and a devoted husband. We find him conscientiously performing his religious duties and dying at length a good Muslim.

The chroniclers unanimously find in the complex character of Mu'āwiyah another trait besides ḥīlaː political finesse, what the Arabs call dihālīya. To be credited with this it was necessary to have in addition to diplomatic skill, a remarkable gift of eloquence, force of decision, a resourceful nature and a conscience broad enough not to shrink from the use of trickery. Mu'āwiyah was reckoned among the five best Karāish orators of his time. He was fond of saying "I have won more success with the tongue than Ẓiyād (b. Abīhi) with the sword". Arab writers prefer to attribute these successes to the Machiavellian nature of the sovereign. He is said never to have shrunk from recourse to violence or the use of poison when he wished to get rid of troublesome adversaries. To support this charge the cases of 'Abd al-Rahmān b. Khālid, Husain b. 'Ali and Ashār b. Mūsik [q. v.] are quoted. But each of the examples is capable of a more natural explanation. We would readily put Mu'āwiyah in the category of those statesmen to whom useless crime is naturally repugnant. It was wise to allow themselves to be tempted by violent solutions but not scrupulous enough to hesitate in such an extremity, if reasons of state seemed to advise it. One of his successors, 'Abd al-Malik, called him the cunning (sulṭānī) caliph". The pleasure-loving son of 'Alī, ruined by his easy life, forgotten and retired to Medina, did not deserve to be feared. The two other individuals above mentioned died by accident or were victims of private vengeance.

The poets, the "journalists" of the period, had an undoubted influence on their contemporaries. This influence the sovereign succeeded in controlling
and subjecting to dynastic interests. Himself very susceptible to the charms of verse, he would have liked to see poetry confine itself to developing patriotism, and renouncing satire which was a source of dissension among the tribes. The restorer of jumâ’ a, national unity, felt more than anyone the necessity for this concord to heal the wounds caused by anarchy. Powerless to prevent the incursions of poetaets into the field of politics he endeavoured to win them over to his side by gifts and the use of tact. To win them over was to have “a good press”; and at the same time gain their tribes to the cause of order, for the tribes usually agreed with the ideas spread by their bards. He exploited his son Yazid’s relations and friendships with the poets to compromise them in favour of the Umayyads and make them less amenable to the advances of the reactionary parties. He paid for their panegyrics: he took them under his protection whenever their lack of discipline brought them into trouble with the local authorities. He did not hesitate to shut his eyes to some of their poetical outbursts, which seem to compromise the reputation of his own hearth; under the ‘Abbasids such audacity would have meant death. He further left it to these indirect auxiliaries to deal with abuses by officials and found in them a useful check on arbitrary exercise of authority by his retainers. It was at the same time a satisfaction of their amour-propre, allowed to the vanity of these rhapsodists, who were courted by all parties and intoxicated by the terror which their wit inspired. In return for this toleration, he was able to get less distinguished services from them. He imposed on them the duty of preparing public opinion in favour of the ba’ta, the recognition, of Yazid as heir-apparent.

To accustom the Arabs to this step so repulsive to their democratic instincts, to give the caliph leisure to calculate its chances of success, there was nothing so useful as the intervention of these heralds with their echoing phrases. It enabled the government to remain discreetly in the background, ready to come out at the opportune moment.

The biased Mas’âdi himself cannot help admitting the plain case of Mu’awiya’s policy, “his great generosity to his subjects and the benefits which he heaped upon them; winning their sympathies and seducing their hearts with such skill that they put him before their kinsmen and natural affections.” Firmness in administration, skill in managing men according to their rank, cordiality, these are some of the qualities credited by this historian, the friend of ‘Ali, to the successful rival of Fâtimâ’s husband.

Let us now deal with the charges brought against him by orthodoxy. With the object of making them more readily accepted, the indictment is carefully put in the mouth of the austere Hasan al-Bayrâ

*Mu’awiya committed four crimes — one of them alone would suffice to cover him with dishonour: —

he abandoned the nation to men of no repute, deprived it without consulting it (by the ba’ta of Yazid) of the control of its destinies and that in the life-time (i.e. to the detriment) of numerous Companions and virtuous individuals. He chose as his successor an incorrigible drunkard, robed in silk and playing the harp. He adopted Ziyad. Lastly he condemned Hudr b. ‘Adi [q.v.] to death.”

The impartial historian will have little difficulty in clearing the sovereign from these charges, which reveal his political skill, his instinct for rulership which raised him high above the prejudices of his contemporaries. The measures for which he is blamed secured the caliphate twenty years of peace and prosperity, the longest period it ever knew.

To sum up, Mu’awiya appears in the series of Muslim rulers as one of the most attractive individuals and one of all round ability. In him the Arabs see the very incarnation of sovereignty. In the opinion of Mas’âdi his successors at best could only try to copy him without being able to equal him. In spite of their little liking for the able Sufyânî, the Marwâns frequently appealed to his traditions and the methods of government inaugurated by him. He was, beyond doubt, the least oriental and the most modern of the rulers of Islam. He did not disdain public opinion. One must be grateful to him for not having believed in the power of force alone in the management of men, for not having sought to reestablish, as the ‘Abbasids were to do, the old Asiatic autocracies, for having preferred that his subjects should become voluntarily attached to him by winning their sympathies, for proclaiming that “the world is more surely led by the tongue than by the sword”. This conviction led him to adopt several institutions of Beduin democracy — such as the wa’d, deputations from the provinces and the principal tribes — to consult the views of such assemblies on as many occasions as possible, to associate them openly with public business by recognising their right of remonstrance. The ardentness of the sovereign knew how to direct these manifestations of the old individualism of the nomads and to bring them to cooperate with his designs. To quote the comparison of the Byzantine historians, he appeared as a πρωτοτύπος in the midst of his σωφρόνες; in the deliberations of his Syrian parliament, he posed as primus inter parcs. He was gradually able to advance the political education of his subjects and to control the signs of lack of discipline. He was never perturbed by their criticisms nor by the satires of the poets. “I do not trouble” he said “about words so long as they do not lead to deeds”. These liberal principles became restricted under the Marwâns and disappeared with the coming of power of the absolute monarchy of the ‘Abbasids.

As is frequently the case with men who have grown old in politics, a long period of power — he exercised it without interruption for 40 years — had made him a sceptic. This benevolent scepticism was revealed in a knowing smile when, with eyes half closed, he used to listen without missing a word to the petitions and recriminations of his visitors and pretended to be taken in by their customary excesses. From his youth, passed in the cosmopolitan city of Mecca, then in Medina in the very mixed society of the Companions, he had been in too close contact with his contemporaries to be under any illusions about their disinterestedness. He had not to invent, but no one managed better than he, that instrument of government, the mawlid, the rallying of the crowds, an ingenious euphemism of the Kurân, meaning the art of purchasing hesitating adherents. Other caliphs surpassed him in courage, in outward austerity, sukhû, in love of knowledge and other qualities that dazzle the eyes of the multitude. No one possessed to such a degree as Mu’awiya the gifts of the founder of an empire: vision,
energy and promptitude in action, breadth of view, logical thinking, absence of antiquated prejudices, skill in adapting the prestige and ceremonial of his position to Arab taste, ability to use men and to deal tactfully with their prejudices so as not to offend them directly. This rare combination of qualities enabled him to extract order out of the chaos of Beduin anarchy. If we endeavour to appreciate fairly Mu‘awiya’s work with its inevitable defects, one must take into account the intractable material on which he had to work and the resistance opposed by the inveterate individualism of the nomads. He succeeded not only in disciplining them but also in transforming them into conquerors, able to rule over peoples of superior culture, heirs to the oldest civilisations.

For achieving this result, the son of Muhammad’s old opponent has deserved well of Islam. In the list of those responsible for this great revolution his name should come after that of the Prophet beside the name of the caliph ‘Omar. Orthodox tradition likes to exalt the latter and present him as the second founder of Islam. There are, however, writers, Sprenger and von Kremer have popularised this view. In it we may recognise the reply of the schools of the Hidayaz to the ‘Irak legend woven round the memory of ‘Ali. To their work we owe the fantastic proportions assumed by the personality of ‘Omar; it absorbs not only Abu Bakr, but even throws its shadow upon the Prophet. ‘Omar is brought into the origin of all religious and administrative institutions, especially of all those that cannot decently be credited to the author of the Kur'an. This exaggerated admiration of the Hidayaz was to provoke the protestations of the Abbâsids. The counterblast of Shâ‘a tradition was to place ‘Ali alongside of ‘Omar to direct him and if necessary to correct him. The indisputable merits of the second caliph lie elsewhere. In the midst of the terrible confusion that resulted from the conquests he was able to maintain the unity and cohesion of the empire, inestimably enlarged, to bring the Arabs into being with success under comparative conditions. Closely watched over by the selfish claims of his Medine senate and its disturbing element formed by the formidable group of the ‘ten nabaghî-chara’ or ‘the chosen’ and the oldest friends of the Master, he succeeded in neutralising their restless activities, their dire passion for intriguing and in exploiting their greed and mutual jealousies. In the provinces the generals and governors showed an obedience scarcely less intermittent. ‘Omar had frequently to resign himself to approving by sanctio in radice in order not to lose touch with such undisciplined auxiliaries and to remind all of the existence of the vicariate of the Prophet. The day on which he thought of a more effective centralization, of a less ideal systematization, assassination brutally delivered him from his error. The same fate was to overtake ‘Othman, when under pressure from the Umayyads, he took up his predecessor’s programme where it had been interrupted. With Ali the caliphate relapsed into chaos and lost a quarter of a century of progress on the way to reorganization. One province alone formed an exception, Syria, which had been governed since its creation by the Umayyads.

But for the intervention of Mu‘awiya and his able lieutenants, the ‘Amirs, Ziyâds and Marwîns, the Muslim empire would have been transformed — like the ‘Irak and Khursân — into an arena to which the Arabs came to settle their petty quarrels. Once on the throne, the Sufyân worked to extend gradually to the rest of the caliphate the methods of government which had secured the prosperity of Syria. Encouraged by the results obtained in this country, he set himself to discipline the other Beduins who, according to the idea ascribed to ‘Omar, formed the ‘substance of Islam’. From this rude indigetique mole, this rebellious mass, gradually broken in by the influence of Syria, fashioned by teachers trained in his school, the first Syrian caliph recruited soldiers, then formed from them the cadres of a regular army; wonderful troops always ready to play their double part, the jîhâd abroad, and at home the maintenance, against any threat from within, of the ‘imâm, the unity of the empire. Mu‘awiya succeeded in impressing on these descendants of caravan-leaders of Arabia, nomads, all obstinate landsmen, the importance of the mastery of the seas, Arab thalassocracy dates from this period. Forced to use primitive institutions, the umma, sanctified by the Prophet, the Medina caliphs, he endeavoured to turn them to the needs of a great empire. He managed at least to suppress the anarchical working of the ‘îrâd by regulating the dynastic succession. He organised the finances; he began by revising and reducing the enormous pensions granted by preceding governments without regard to services rendered to the state. Down to his time the central treasury of the caliphate had been supplied by intermittent and always unwilling contributions extorted from the provinces. Mu‘awiya endeavoured to settle the amount to be paid by each province and to regularise its collection. Under him the treasury ceased to be a relief fund which the conquerors claimed to use as they pleased. His predecessors had had to empty it periodically to secure assistance or neutrality important for the success of their policy. Hitherto ‘mül al-muslimîn, the collective property of the Muslims’, the treasury, became ‘mül ‘Alih, the treasury of the state, intended to cover general expenses, to secure the representation and the defence of the empire. These reforms made Mu‘awiya the first sovereign, malîk, of Islam, the first ruler to enjoy a definite authority, independent, unlike his predecessors, of the anarchic goodwill of his subjects, and no longer at the mercy of an oligarchy interested in the maintenance of old abuses. The Medinese vicariate which developed from the triumvirate, could not long survive this coup d’état, this drastic solution of the problem of the succession to the Prophet. Before Mu‘awiya, the caliphate had only had a nominal existence. For this fragment, the son of Abu Sufyan substituted a reality; he created the Arab state: a creation seen darkly by ‘Omar without having been brought to realisation.

MU‘AWIYÀ B. ‘UBAID AL-LAHI. [See Abu ‘Ubayd Allah.]
al-Mu'awwidhatani, name of sūras cxiii. and cxiv., taken from the opening words, "Say, I am but a human and not a god." The term al-Mu'awwidi occurs also; it denotes these sūras together with sūra cxiii. — The mu'awwidhatani belong to those parts of the Kurān which are frequently recited (after every salāt: Ahmad b. Ḥanbal, Munājat, iv. 155; before going to sleep: Bukhārī, Da'awat, lāb 12; in order to avert the evil eye: Lane, Manners and Customs of the Modern Egyptians, Paisley and London 1899, p. 259, chapter Superstitions).

al-Ma'āẓam. [See Tāransah.]

al-Malik al-Ma'āẓam Sharaf al-Dīn ʿIsā b. Malik al-'Adil al-ʿĀlib was born in 576 (1180). In 597 (1200) he became governor for his father al-Malik al-'Adil b. Qarṣ(w. v.) in Damascus and next year was besieged by Saladin's sons ʿAzīz and ʿAṣiḍal in course of the dispute about the succession between them and ʿAdil. ʿAdil came as far as Nablus with his army but could not relieve Damascus so that its fall was imminent. Then a quartet broke out between the brothers as to who was to get Damascus. The majority of the emirs in the army made peace with ʿAdil and the siege was raised in the course of the year. ʿAdil was recognised as the head of the Ayūbids and ʿIsā continued to govern Damascus and the lands going with it as far as the Egyptian frontier for his father. When ʿAdil died in 615 (1216) he had the inhabitants swear fealty to him but recognised his older brother Kāmil as suzerain in the Friday khūba. He was, like his brothers, on fairly good terms with the Crusaders, but at the decisive moment he joined forces with his brothers against them and it is not least due to him, as the moderns have said, that the Crusaders had to withdraw from Damietta in 618 (1221). His desire to seize central Syria (Ḥimṣ and Hamāṭ) was not fulfilled as Kāmil threatened him with war when he attacked these towns. ʿIsā therefore made an alliance in 623 (1226) with the Khuwārizm-Shāh Dīlāl al-Dīn and mentioned him as suzerain in the Friday prayer instead of his brother. He thus felt strong enough to turn away the Emperor Frederick II's ambassador in this year while Kāmil, who did not feel too secure, negotiated with him. It did not however come to fighting between the two brothers as both feared the intervention of Frederick II. But before the latter set out for the Holy Land, ʿIsā died on 1st Dhu l-Hijjah 624 (Nov. 1227) in Damascus of dysentery. Had he lived longer, Frederick II would probably not have taken Jerusalem. It was ʿIsā's son ʿNāṣir al-Dīn Dāwūd who succeeded in regaining Jerusalem for the Muslims. ʿIsā's rule stretched from south of Ḥimṣ beyond Jerusalem to al-'Arish on the Egyptian frontier. In addition to his military ability, he is celebrated as a friend of poetry and letters and he is also said to have been an author himself. Unlike the other Ayābids, he followed the school of Abū Ḥanīfa.

Mubāiydā. [See al-Muqāmanāt.]

Mubālligh. [See Masābīḥ, I, D, e and H, 4.]

Mubārak Ghāzī. An Indian saint. In all parts of the domain of the Muḥammads woodcutters invoke certain mythical beings to protect them from tigers and crocodiles. In the 24 Parganas it is Mubārak Ghāzī who, in the Eastern parts of the Delta goes by the name of Zindah Ghāzī, the living warrior. Mubārak Ghāzī is said to have been a faqīr ( mendicant) who reclaimed the jungle tracts along the left bank of the river Hoogly. Every village has an altar dedicated to him and no one enters the forest nor does any of the boat's crew, who might sail through the districts, pass without first making offerings at one of these shrines. The faqīrs in these dangerous forests, who claim to be lineally descended from the Ghāzī, indicate with pieces of wood called sang the precise limits within which the forest has to be felled. Mubārak Ghāzī, so the legend goes, came to Bengal when Rāda Mullāt ruled over the Sundarban. The saint happened to have a dispute with the chief, who thought himself to be in the right, upon which the latter agreed to give his only daughter Shūshila in marriage to the former, should his own opinion be proved wrong. This the Ghāzī succeeded in doing and won his bride in consequence. Since no man saw him die, he is believed to reside in the depths of the forest, to ride about on tigers, and to keep them so obedient to his will that they dare not touch a human being without his express desire. Before entering a jungle or sailing through the narrow channels whose shady banks are infested by tigers, boatmen and woodcutters, both Hindus and Muḥammads, raise little mounds of earth and on them make sacrifice. In the period of full moon, and especially at Mubārak Ghāzī, after which they fearlessly cut the brushwood and linge in the most dangerous spots.

This strange myth, there cannot be any doubt, is borrowed from Hindus to suit the taste of the superstitious boatmen and woodcutters.

Mubārak Shāh, Muẓīz al-Dīn, the second king of the Saiyid dynasty of Dihlī, was the son of Khīr Khān, the first king, and succeeded his father on May 22, 1421. The limits of his kingdom were then restricted to a few districts of Hindūvīan proper and Multān, and he was obliged to desist from an attempt to establish his authority in the Pandārī by the necessity for relieving Gwalior, menaced by Hījāng of Mālwā, who raised the siege and met him, but after an indecisive action came to terms and retired to Mālwā. From 1425 to 1427 he was engaged in attempting to restore order in Mewāt, and received the formal submission of the ruler of Gwalior and Candāwār (Fhūzālād), but Muḥammad Khān Aḥwāshī of Bāyānā, whom he had taken prisoner, escaped and took refuge in Mewāt, and the work there was to do again. Muḥammad Aḥwāshī, on being hard pressed in Bāyānā, fled to Ibrahim Shāh of Dājmūn, but as the latter marched against Kālpi, Mubārak marched to meet him. Ibrahim, who had been plundering Mubārak's dominions, avoided a conflict for some time, but on April 2, 1428, the armies met near Čandāwār and Ibrahim, though not decisively defeated, retired
the next day to Djawnpur. Mubarak then collected revenue in the neighbourhood of Gwalior and retired by way of Bayana, which was evacuated by Muhammad Awadh, who had returned thither. For the rest of the year his officers were engaged in restoring order in the Pandjâb, ravaged by Djasraâf the Khokar, and he in a similar task in Mewât, and in collecting revenue by force. In 1430 Fûlãd Turkalâra successfully defended the royal authority in Bhâtînda, and in 1431 a rebellion broke out in Mûtân and had no sooner been suppressed than Djasraâf renewed his activity in the Pandjâb. The chronicle of the rest of the reign is a record of rebellions in the Pandjâb, Mûtân, Sâmânâ, Mewât, Baýâna, Gwalior, Tûfîra and Ítâwa, and a rebel captured Lâhôr and attacked Dípalpûr. Lâhôr was eventually recovered, the whole country remained in a disturbed condition.

War broke out between İbrâhîm of Djawnpur and Hâshân of Mâlwa in connection with Kâlipâ, the successor over whom belonged neither to Mubârak and Makrân, nor to Dîjkistanl, but which turned aside to inspect Mûbarakshâd which he was building, and then, on February 19, 1434, he was assassinated at the instance of Sarwar al-Mulk, whom he had dismissed from the post of minister in the preceding year.

**MUBÂRÂK AL-DÎN.** [Muhammad b. al-Mu'izzî]

AL-MUBÂRÂD, Abu 'L-'Abbas Muhammad b. Yazîd al-Thurîmî al-'Azîz, an Arab philologist, born on the 10th of Dhul-Qa'da 210 (March 25, 826) in Basra, was there taught by Abu 'Umar al-Dârîmî, Abu 'Uthmân al-Mîmî and Abu Hâmîd al-Sîjîstânî, the pupil of Asnâ. In his early works, the Kitâb Mas'ul al-Qulûb, he criticised the Kitâb of Shâwâh, but only a small number of his criticisms were well founded and of these only a minority were original (al-Suyûtî, al-Mushîr, i. 188; 212, 232). Later he went to Baghdâd where he became a very busy teacher, among his pupils were Nhâfizâlî, Ibn Durrustawâlî and Ibn Kâsîm. His rival for favour at court was the Kufan Thâlabâ, to whom he was far superior in ability and style; the rivalry between these two scholars seems to have been the origin of the later tradition of the opposition between the schools of Kufa and Baghdâd. His epitaph al-Mubârâd seems to refer to his skill in disputition, but there are a number of anecdotes explaining it in very different ways (Mushîr, ii. 207; 112 sq.; Baghîya, p. 116—

His chief work al-Kâmî al-'Adab is a typical example of the work of the old philologists as developed from their teaching. Without being tied down to any fixed arrangement or even aiming at cohesion in the separate chapters, it combines traditions of the Prophet, sayings of pious men, proverbs, many poems mostly of the older period, and also historical matters like the important chapter on the Khârijîs (characteristic is the passage on p. 409 in Wright's edition; *In this chapter we shall mention something of everything in order by chance to prevent the reader from being wearied and mix a little jest with the earnest so that heart and soul may be recuperated*); similarly p. 248; exceptions like the chapters on simile p. 447 or on laments for the dead and consolation p. 713 are rare).

The important feature is the full grammatical and lexicographical commentary which he gives to every quotation. The work was given its final form with numerous additions and glosses by Abu 'l-Hasan al-Áshâfî (d. 315 = 927). Al-Bâyalîsî wrote a commentary on it which has not survived (Mushîr, i. 182; 222, 3; 135); there is an anonymous commentary in the possession of Ismâl Efendi in Stambul. It was first printed in Stambul in 1286; editions: *The Kâmî of Al-Mubârâd edited for the German Oriental Society* by W. Wright, part 1–12, Leipzig 1864–1892; reprinted Cairo 1908, 1925, 1924 (with extracts from Dâshî on the margins), 1939; with two modern commentaries: the Kitab al-Shârîh by al-Áshâfî al-Bâyalîsî, Cairo 1341 (1923), 2 vols. and Râghbât al-'Amîn min Kitâb al-Kâmî by Sayyid Ibn 'Ali al-Mas'ûfî (professor at al-Azhar), 8 vols. Cairo 345–346 (1927–1928); *Das Khari- dschitenkaptel aus dem K.*, transl. into German by O. Roscher, Stuttgart 1922. His second collection of material, the Kitab al-Mu'âjâfâb, met with less success, because, it is said, it had been transmitted by the heretic Ibn al-Râwandî; it is preserved with a commentary by Sa'id b. Sa'id al-Fârîkî (d. 391 = 1000; see Yûsûf, Irshad, iv. 240) in the Escurial manuscript p. 111 and in Stambul, Koprulu, No. 1507—1508 (cf. Roscher, *Z. d. M. G.*, iii. 197: photograph in Cairo; Fihrist 2, ii. 123). Of his numerous other works given by his biographers we only have the Kitâb al-Tâ'assûf, Escurial 2, p. 534, n. 1, the Kitâb Nasab Ādâm wa-Ákhfashîn, in Stambul Âfî Efendi. 2003 (M.F.O.B., v. 491) and Al-Dîn, 3178 (M.F.O.B., vii. 108), Escurial, Casiri 1700, fol. 59—68 (s. Levi Della Vida, *Les feux des chevaux*, Leyden 1928, p. xx), his answer to a letter from Ahmad b. Wâlîkî on the question whether poetry is superior to eloquence, in Munich 751 and in a fragment in Berlin, Ahlw. 7177 as well as the Kitâb al-Mu'âjâfâb wa-l-Mu'ânnâsh as transmitted by Abu 'Ali al-Fâisi, in Damascus, Yûsûf, p. 36, No. 113, 2. His other works are only known from quotations, e.g. his Kitâb al-Ikhâyiâr, which he himself quotes (Khâmî, p. 760, 4, the Kitâb Gharî al-Nâdîtî, which Ibn al-Athir mentions among his sources in the preface to the Nihâyâ; the Kitâb ma'atasa Lujûsuh wa'la'adâla Majhûnî (Suyûtî, Sharh al-Mushîr, Cairo 1322, p. 195–200); the Kitâb al-Rîwâq, a collection of poems by contemporary poets beginning with Abu Nuwas, âqâmî, viii. 1, 50, 51; al-Dûrjânî, Kitâb al-Kâmî al-'Amîn, v. 29; Ibn al- Athir, al-Mathal al-sûrî, p. 18, 16; the Kitâb al-Lî'îmân on the causes of the poetical strife between Dijâr and Farâzâlî: 'Abd al-Kâdir al-Baghâdâdi, Khâmînât al-Adab, i. 305, 21; Kitâb al-Shârîh (i.e. Sharh Khâmî al-'Adab). I., e., ii. 193 infra.

al-Mubarak, a fortress on the Persian Gulf, about a mile north of al-Hufuf, surrounded by open villages and date palm-groves. The population of the fortress and of the hamlets that belong to it is given, sometimes at 10,000, sometimes at 30,000.

al-Mubdi: [See Allah, ii.]

al-Mudallin, name of sūra xxvi, which is also called al-najâda or al-djina.

Mudar. [See Ka'b.]

Mudārī, the twelfth metre in Arabic prosody, which is very rarely used. Theoretically each of its hemistichs consists of three feet (masūlīm fa'īlatun masūlīm); in practice the third foot is lacking.

It has one ārāf and one fārāf only: masūlīm fa'īlatun; masūlīm fa'īlatun. Masūlīm however must become masūlī. The first masūlīm may lose its ma; in that case the form is fa'īn (= masūlī) and fa'īn. (M. Benchener)

al-Mudawwana. [See Sahnūs,]

al-Mudaththir, title of sūra lxxiv.

al-Mudhill. [See Allah, ii.]

Mudīr, title of the governors of the Egyptian provinces, called madīrūn. The use of the word madīr in this meaning is no doubt of Turkish origin. The office was created by Muhammad 'All, when, shortly after 1813, he reorganised the administrative division of Egypt, instituting seven madīrūn; this number has been changed several times. At the present day there are 14 madīrūn. The chief task of the madīr is the controlling of the agricultural administration and of the irrigation, as executed by his subordinates, viz. the mu'mir, who administers a marak; and the mu'āzir who directs the qism which is again a subdivision of the marak. Under Sa'id Pasha the office of madīr was temporarily abolished with a view to preventing oppression. Until that time they had been without exception Turks, but under Isma'il Pasha, when the function was instituted again, this high administrative position was opened also to native Egyptians.

al-Muddūlidā, title of sūra lxiii.

al-Muddāhid. [See Rasūlidus,]

Muddassima. [See Taḥṣīb,]

Muddawwāza. [See Turān, v. 890 sq.]

al-Muddīb. [See Allah, i.]

Muddīr al-dīn. [See al-Ólamī.]

Muddīza (A.), part. act. iv. of 〈dh-; lit. "the overwhelming" has become the technical term for miracle. It does not occur in the Kurān, which denies miracles in connection with Muhammad, whereas it emphasizes his 'signs', āyāt, i.e., verses of the Kurān; c. of the Korān. Even in later literature Muhammad's chief miracle is the Kurān (cf. 'Abd Nu'mān, Darāš al-Nubwawān, p. 74). Mu'ḍjīza and āya have become synonyms; they denote the miracles performed by Allāh in order to prove the sincerity of His apostles. The term karāma (q.v.) is used in connection with the saints; it differs from mu'ḍjīza in so far as it denotes nothing but a personal distinction granted by Allāh to a saint.

Miracles of Apostles and Prophets, especially those of Muhammad, occur in the sura and in haddīf. Yet in this literature the term mu'ḍjīza is still lacking, as it is in the oldest forms of the creed. The Fiḥāk Abkar, ii., art. 16, mentions the āyāt of the prophets and the karāmāt of the saints. Mu'ḍjīza occurs in the creed of Abū Ḥāfīẓ 'Umar al-Nasafi (ed. Careton, p. 4; ed. Taftāzānī, p. 165): "And He has fortified them (the apostles) by miracles contradicting the usual course of things".

Taftāzānī explains it in this way: A thing deviating from the usual course of things, appearing at the hands of him who pretends to be a prophet, as a challenge to those who deny this, of such a nature that it makes it impossible for them to produce the like of it. It is Allāh's testimony to the sincerity of His apostles.

A very complete and systematic description occurs in al-Ídji's Mawṣūţ. He gives the following definition of mu'ḍjīza: It is meant to prove the sincerity of him who pretends to be an apostle of Allāh. Further he enumerates the following conditions: 1. It must be an act of Allāh; 2. it must be contrary to the usual course of things; 3. contradiction to it must be impossible; 4. it must happen at the hands of him who pretends to be an apostle, so that it appears as a confirmation of his sincerity; 5. it must be in conformity with the miracle he himself must not be a disavowal of his claim (da'awā); 6. it must follow on his da'wā.

Further, according to al-Ídji, the miracle happens in this way that Allāh produces it at the hands of him whose sincerity He wishes to show, in order to realise His will, viz. the salvation of men through the preaching of His apostle. Finally, as to its effect, it produces, in accordance with Allāh's custom, in those who witness it, the conviction of the apostle's being sincere.

Mudītahid. [See Ḥjjīhād,]

Mudītahthāth, the fourteenth metre in Arabic prosody, has theoretically three feet, consisting of two successive fa'īlatun in every hemistich; in practice there are two feet only.

It has one ārāf, and one fārāf only: muṭṣafūtan fa'īlatun: muṭṣafūtan fa'īlatun. The foot fa'īlatun of the ārāf and also, though seldom, that of the ārāf, may become fa'īlatun, on condition that muṭṣafūtan retains its n; it loses its when muṭṣafūtan loses its s.

Mudītātan loses its s, when the preceding fa'īlatun retains its n; it also loses its n, when fa'īlatun following it, does not become fa'īlatun. (Moh. Benchener)
Al-Mufaddal was a distinguished Twelver scholar of Baghdad. The name of his school was Al-Mufaddal. Al-Mufaddal was a celebrated teacher in the Islamic world. He was born in the city of Kufa, Iraq, and was a pupil of the famous Arab poet, al-Mufaddal. Al-Mufaddal was a prolific writer and is considered to be one of the greatest poets of his time. He was known for his skill in composing poetry and for his ability to express complex ideas in his verses. He was also a renowned scholar and was respected for his knowledge of the Quran and hadith. Al-Mufaddal was a key figure in the development of the Twelver school of thought, and his teachings and writings have greatly influenced the development of this branch of Islam. His works are still studied and celebrated today, and his legacy continues to inspire new generations of scholars and poets. The poems of Al-Mufaddal are considered to be some of the finest examples of Arab poetry, and his works are still studied and admired by scholars and poets alike. 

The Encyclopedia of Islam, III

Ahmed Kamal

AL-MUFADDAL

Al-Mu’azzam b. Muhammad b. Ya’qub b. Amir b. Salim b. al-Kamal b. al-Dabb, an Arabic philologist of the Kufan school. By birth he was a free born Arab; the date of his birth is not known. His father was a recognized authority on the events in the wars of the Arab on the frontiers of Khurasan in 30-60 A.H. (quoted in Tabari, al-Manṣūr). It is possible that his son was born in this war. As a part of the house of ’Ali he took part in the rising against the ’Abbasid caliph al-Manṣūr led by Ibrahim b. ’Abd Allah [q.v.], brother of al-Nafs al-Sakhiyya. The rising was put down and Ibrahim killed; al-Mufaddal was taken prisoner but pardoned by the caliph and appointed tutor to his son, the future caliph al-Mahdi, and in his train he visited Khurasan. He then worked in Kufa as a philologist, and teacher; among his pupils was his stepson al-’Arabi. The date of his death is variously given; the Fihrist does not give it at all while others give 164, 168 or 170.

Al-Mufaddal, like his contemporary Hammad [q.v.], bore the epithet and title of honour Al-Mufaddal, and was frequently appointed as an authority on the poetry of the Jāhiliyya. In contrast to Hammad, he is celebrated for the reliability of his transmission. In the Kitāb al-Aghāni there are several stories illustrating this fact. While Hammad was reproached with having inserted verses which he had himself composed into the work of the prominent poets of the Jāhiliyya, al-Mufaddal is praised for handing down the old poetry pure and un falsified. There was, of course, a great rivalry between the two rāwās which also finds expression in the stories of the Aghāni. Al-Mufaddal is reported to have said that the influence of Hammad on Arabic poetry had been most disastrous, to a degree which could never be made good again. To the question how this was and whether Hammad had made mistakes in the attribution of the poems or linguistic errors, he replied: if that were all, it could be made good, but he had done worse than this. Since he was such an authority on the old poets, he was able himself to write verses in their style and he had inserted such verses of his own composition in genuine old kāṭids so that now only very good critics of the old poetry could recognize them (cf. Aghāni, v. 172 and Yākūt, Ḳiyād, vii. 171). It is also recorded that al-Mufaddal once in the presence of the caliph taught Hammad passing off verses of his own as the work of Zuhair b. Abi Sula. The kāṭida which Hammad was reciting began with dād dāh, and on the caliph asking for the missing nasib he added several nasib verses. Al-Mufaddal however said quite rightly that there had probably been a nasib before the surviving verses, but no one any longer knew it. Hammad was thereupon forced to confess his forgery. It is interesting to learn that, as is recorded in this passage of the Aghāni, Hammad was rewarded for his recitation but the sum given to al-Mufaddal was considerably greater. Al-Mufaddal was given his reward, not only for his knowledge, but also for his fidelity and honesty in transmission (cf. Aghāni, loc. cit. and Yākūt, loc. cit.).

Al-Mufaddal worked in different fields of Arabic philology. He was considered an authority on rare Arabic expressions, celebrated as a grammarian and also an authority on genealogy and the history of the Arab battles (Alaʾīm al-ʿArab). He wrote a number of books: a Kitāb al-Anṭāq (on proverb), a Kitāb al-Arād (on metres), a Kitāb Maʿna ʾl-šur (on the meanings of poems) and a dictionary: Kitāb al-Alfāz. His principal work, however, is a collection of old Arabic Ḳāṭidas called the Muṭafḍaliyya, which he compiled for his pupil, the future caliph al-Mahdi. Al-Mufaddal himself is said to have given another story of the origin of this anthology, which is one of the most valuable Arabic collections. When on one occasion Ibrahim b. ’Abd Allah was in hiding in his house, he brought him some books to read at his request. Ibrahim marked a number of poems and these he collected in one volume because Ibrahim was a good critic of the old poetry. This collection was later called the Ḳiyād al-Muṭafḍaliyya (cf. Flugel, Gramm. Schulen, p. 144, note 1).

The Muṭafḍaliyya contains 126 poems, some complete Ḳāṭidas of many verses, some fragments of small size, while in Abu Tammām's collection, the Ḳamāṣa, only little fragments of poems or separate verses are contained. The latter was compiled some fifty years later; at first it was much more popular than the Muṭafḍaliyya and more frequently annotated. But the Muṭafḍaliyya's anthology is of quite outstanding merit. The great bulk of it is the work of pagan poets and muḥārīb, while only six of the 67 poets represented were born Muslims. Two of the poets whose Ḳāṭidas are contained in the Muṭafḍaliyya, were Christians. The poems, the date of composition of which can frequently be deduced from events mentioned in them, are in some cases very old. The earliest are those attributed to Murādī, his son, which probably belong to the first decade of the sixth century A.D. Al-Mufaddal's anthology offers a rich selection of the old Arabic poetry, the value of which is increased by the great age of the poems preserved in it. The name of its collector, who enjoyed a good reputation among his contemporaries for his reliability, also gives us a certain guarantee that we have in the poems of the Muṭafḍaliyya really genuine specimens of old Arab poetry.

AL-MUFĪD

Abū ʿAbd Allāh Muhammad b. Muhammad b. al-Nṣām al-Ḥirveiḥī, also called Ibn al-Muʿāṣim, a distinguished Twelver scholar of Baghdad under the Buyids, was born at the end of 333 or 338 (945 or 950), and came of an old Kuraishi family which, as his second epithet shows, had a reputation for scholarship; he himself became, as his epithet shows, the teacher from whom all later students have derived advantage. While he took little active part in politics, he was a very prolific author. His correspondence, usually replies to queries, came from Mawsil, Djurjān, Dinawar, Bakka, Khwārizm, Egypt and Tabaristan. His literary connection with other leaders of the Twelvers are seen in the fact that the Dogmatics mentioned third below is a critical commentary on Ibn Būbīya's Risālat al-Fīkhādāt (published in a collected volume, Teheran.
1300) and was in turn commented on by the
Baghdaüi na'ib al-Sharí al-Murtada; the life on
law and tradition given second below was also the
basis upon which his pupil Shaikh Tusi [q. v.]
was as a commentary his Tábi'í al-Akham,
one of the "4 (5) books" of the Twelvers. Mufid
wrote pamphlets against Djühâ'í. Dja'far b. Jarb,
Ibn Kullab, Karabín, the Mu'attalis, Zaidis, the
followers of al-Hallaj, Hambalî, Djühâ and the
Shâmínya (for other collected titles see al-Khayat, 
Nûr ad-Din, al-Insâr. p. 156). The number of his writings
runs to nearly 200. In addition to those preserved
in European libraries, there are many other manu-
scripts in Shî'í libraries, e.g. in Najaf. Among
them are the usual handbooks on jûh, on the
nuqûf e.g. on idnâs, as well as the fârid e.g. on the
kholí and the law of inheritance: also treated
on fundamental philosophical conceptions such as
the predicate, the state of being created etc.; but
it is with specifically Shi'í problems that he mainly
deals. Mufid, as the titles of several of his works
and his influence on later writers show, championed
the enhancement of the dogma of Prophets, dealt
with the question, a painful one for the Shi'is,
whether Abû Tâlîb was a believer, with the imâmâte
of 'Ali and the proof that the Imams are higher
than the angels. He naturally dealt also with the
usual special tenets of the Twelvers, like the
concealment of the Imam and the prohibition of mea-
liturged by the "People of the Book". He also
wrote guides for pilgrims to the peculiarly Shi'í holy
places.

Mufid died on Ramadân 28, 413 (Nov. 26, 1023).
The na'ib al-Sharí al-Murtada conducted the funeral
service; he was buried beside Ibn Bâbîye [q. v.]
at the feet of the ninth imâm Muhammad al-Dja'waad
in al-Kâshamîn.

MUFTI. [See FATWA.]

MUGHAL, the name given to the dynasty
of Emperors of Hindustân founded by Babâr in 932 (1526), in virtue of the claim made
by Timür, the ancestor of the dynasty, to relationship with the family of the Mongol (Mughal) Çingiz
Khân [q. v.]. For the detailed history of the dynasty see the articles IMAR, HUMAYUN, AKBAR,
SHAIKHUDDIN, SHAH-JAHAN, AWANGANZER, and their successors.

I. THE MUGHAL EMPIRE TO THE DEATH OF
AWANGANZER:
A. Military Organization.
B. Economics and Administration.

II. THE DECLINE OF THE MUGHAL EMPIRE.
III. MUGHAL ARCHITECTURE IN INDIA.

A. Military Organization of the
Mughal Empire.

The army which Babur led into India, and
with which he defeated at Fânipat the army of
Ibrâhîm Lodî, 100,000 strong, consisted of about
10,000 combatants, mainly cavalry, but comprising
a corps of artillery and a small proportion of
infantry, chiefly matchlockmen. Babur's son and
successor, Humâyûn, though hampered by the
virtual independence of his brother Kâmith, governor of Kâbul, who annexed the Pandjâb, and
thus cut him off from the best recruiting
resources of the Muslim army in Northern India.
Afghanistân, and Transoxiana, was nevertheless
able to lead into the field at the battle of the
Ganges, near Kanâwâd, where he was defeated by
Shir Şâh, an army of 100,000 men. On his return
to India in 1555 he left Kâbul with an army of
no more than 15,000 men, and it was his son
and successor, AKBAR, who was the creator of the
army of the empire of which he was, in fact,
the founder.

The empire was a military despotism. The
governor of a province was entitled sipahâdîr,
or "commander-in-chief", the governor of a purjana,
or sub-district, furTî' or "commandant", and
practically all courtiers and officials, even those
holding civil and judicial posts, were graded as
commanders of horse. Thus we find Shaikh Abu
l-Fadîl, Akbar's secretary, graded as a commander
of 1,000; Râdji Dir Bar, court wit and Hindi
poet laureate, as a commander of 1,000; Sulîyîd
Muhammad, Mîrî Sall, a judge, as a commander
of 900; and Shaikh Falîd, the poet, as a commander
of 400 horse. A commander of horse was known
as mutâh ("knight" or "dignity"), and its holder
as mutâhâbîr ("officer"). Each of these nominal
commanding from 500 to 2,500 horse was classed
as unur ("noble"), and each of those nominally
commanding more as unur-i kabir ("great noble").
These commands were nominal, conferred merely
for the purpose of regulating the rank of the
official holding them, and were styled mutâhâbî-
dî ("personal rank"). Each of those actually
exercising military authority had, in addition to
his personal rank, saynîr (horseman) rank. Thus,
a commander of 5,000 might be described as
"commander of 5,000, with 4,000 horsemen", that
is to say, one ranking as a commander of 5,000,
but supposed to maintain only 4,000 horsemen
In AKBAR's reign, apart from the rank held by
the royal princes, commands ranged from 10 to
5,000 horsemen, but at the end of the reign
two or three nobles were promoted to commands
of 6,000 and 7,000. In these two high commands
there was no distinction of grade, but each of
the other commands was divided into three classes,
viz. 1. those whose saynîr rank was equal to their
personal rank, 2. those whose saynîr rank was
half, or more, of their personal rank, and 3. those
whose saynîr rank was less than half of their
personal rank. Thus, a commander of 5,000 with
5,000 horsemen would be in the first class of his

1. MUGHAL EMPIRE TO THE DEATH OF
AWANGANZER:

A. Military Organization.

B. Economics and Administration.
rank, a commander of 5,000 with 3,000 horsemen in the second, and a commander of 5,000 with 2,000 horsemen in the third. A purely civil official often had no *sawâr* rank, but the distinction between military and civil officials was less clearly marked than it is today, and all officials were, in theory, *soldiers*. The secretary, Abu I-Fadl, said: 'at least on one occasion, in the field, and Akbar once entrusted military commands in the field to his court wit and to a leading physician, with disastrous results.

The lists of "commanders of horse" given in such works as the *Ain-i Akbari*, the *Tabâṣīr-i Akbari*, and the *Pādukhânuma* are not "army lists", but graded lists of the whole establishment of public servants, civil as well as military. Even where, as in the *Pādukhânuma*, *sawâr* rank is given as well as personal rank, the lists are no guide to the effective strength of the imperial army, for commanders with *sawâr* rank did not maintain, and were not even expected to maintain, the number of horse indicated by that rank. Thus, Shâh-Bahlân issued an edict to the effect that commanders with three were not required to maintain more than one-third, and, in some cases, no more than one-fourth of the number of horse indicated by their *sawâr* rank, and in the Balkh campaign they were not required to muster more than one-fifth of their nominal quota.

The yearly salaries of "commanders of horse" ranged from Rs. 350,000 a year for a commander of 7,000 down to Rs. 4,000 a year for a commander of 100, but in the commands in which there were three classes the salary varied with the class. Thus, in the 5,000 command an officer of the first class received Rs. 250,000; an officer of the second Rs. 242,500; and an officer of the third Rs. 235,000. These salaries were attached to the personal rank, and were intended to enable the official to maintain his position at court or in the provinces, his household, his transport, and the horsemen as he might require for his personal service. For the payment of troops actually maintained separate allowances were made.

The horsemen were styled *tāhūnān* ("followers" or "troops"), and the majority of them provided and maintained their own horses and arans, and, in the field, their own transport. They were divided into three classes: three-horsed and two-horsed men, each of whom received nearly Rs. 25 a month, and one-horsed men, each of whom received rather more than Rs. 16½ a month. At a later date higher rates of pay than these were allowed in the Dakhan. Horsemen who could not supply their own horses were styled *kâpâr*, and were the servants or followers of those who supplied them. The proportion of those classes in every ten troopers was usually three three-horsed, four two-horsed, and three one-horsed troopers, or ten men and twenty horses.

The payment of the contingents maintained by the *munâqâbârs* was at first provided for by the grant of *dâjîgir*, or fiefs, so that the army was maintained on a feudal system, which, however, differed from the feudal system of Europe in that the fiefs were not hereditary, and the *dâjîgirdârs*, or fief-holders, had no proprietary rights in them. A fief-holder might be transferred from one fief to another, or a portion of his fief, or even the whole of it, might be resumed. In 1574 an edict was promulgated by Akbar resuming all fiefs and converting them into crown lands, the payment of the troops being provided for by orders on the treasury for payments in cash. This edict caused much discontent, for the *dâjîgir* system was, for many reasons, far more popular than the *naqâl*, or cash-payment, system. Under the *naqâl* system a muster-parade might at any time be made a condition precedent to the issue of a payment order; and a *dâjîgirdâr* might reap much profit by economising in the administration of his fief, by rack-renting the landholders, and by enroaching, but the *naqâl* system furnished him with no such means of enriching himself. The edict was immediately modified, and though the *naqâl* system was introduced in the settled provinces of the empire, the *dâjîgir* system was retained in the more recently conquered provinces of Bengal, Gudjarât, and Sind, and, after Akbar's death, was restored, in many cases, in other provinces.

Another reform introduced at the same time, the *dâjîgir* *umâhâlî* or branding regulation, was resented even more than the substitution of the *naqâl* for the *dâjîgir* system. It was seldom that *munâqâbârs* maintained their full quota of troopers; "false musters were an evil from which the Mughal army suffered, even in its most palmy days. Nobles would lend each other those men to make up their quota, or needy idlers from the bazaars would be mounted on the first baggage pony that came to hand, and counted in with the others as efficient soldiers". It was to check such fraudulent practices that Akbar introduced the *dâjîgir* *umâhâlî* regulation, which required the preparation of descriptive rolls of men and horses, the latter being branded on being passed as fit for service; and at muster-parades only those who produced branded horses were paid. This system originated apparently, with the Saddâqâs in Transoxiana and Persia, and was introduced into India by 'Alî al-Lâ'în Khâldî in 1512, but was not enforced after his death until it was revived by Shâh Shâh in 1541. After his death it was again abandoned, and Akbar had great difficulty in reviving it, owing to the growing opposition to anything designed to prevent public officials from enriching themselves by defrauding the state. Even he was obliged to exempt commanders of 5,000, or a greater number, of horse from its operation, though these were required to parade their contingents for inspection when ordered. In the later days of the empire, the regulation was not enforced, and when Burhân al-Mulk joined Muḥammad Shâh at Karnâl, to meet Nâdir Shâh, a historian considers it worth while to describe his contingent as *munâqâbâr* na ḋâkhal, that is, 'actually present, not merely on paper': and later, in 1750, an officer in Bengal receiving pay for 1,700 men was said not to have been able to muster more than seventy or eighty.

Besides the contingents of the princes and the *munâqâbârs* there were the sovereign's personal troops. His body-guard was a corps known as the *Wâliâbâhâ*, composed chiefly of men who had been attached to him from his youth, and had served under him as a prince. Manucci refers to these as the emperor's slaves, and says that they numbered 4,000 under Awrangzib. Details of their pay are not given, but they probably received more than the troopers serving in the contingents of the *munâqâbârs*. There was also a corps d'élite first formed by Akbar, and styled the *Akhâl* corps. Abu I-Fadl, in a characteristically foolish passage says that they were so called because they were
fit for a "harmonious unity", whatever that may mean; but they seem to have been called *ahad* because they enlisted singly in the personal service of the emperor, and were not brought into the service in bodies by a *mangabālār*. They stood, in rank, between the lower *mangabālār* and the *tārān*, and received nearly double the pay of the latter. They may be compared to "gentlemen of the life-guard", and many were seconded from the corps in order that they might hold civil appointments. The proportion of three-horsed, two-horsed, and one-horsed troopers was the same in the *ahad* corps as in the contingents of the *mangabālār*.

A commander of horse, whether he held a *dājuqir* or whether he drew the pay of his contingent from the treasury, made his own arrangements for its discharge. He was entitled to retain five percent of the pay of his men for himself, and pay was not always allowed for a whole year; often only for six, five, or four months. Manucci, writing of the army in the reign of Awrangzib, says, "in respect of one year's service they receive six or eight months' pay. Even that is not all in coin; they are always foisted off as respect two months' pay with clothes and old raiment from the household. Over and above this, there is almost always due to them the pay for two or three years' service. The soldiers are obliged to borrow money at interest from the *ṣarvās*, or money-changers. These men lend to them, it is true, but it is hardly ever without a command from the general or officer; and these latter have an understanding with them about the profit from interest, which they share between them. Sometimes the soldiers sell their papers to these money-changers, who for a note of hand for one hundred rupees will give them twenty or twenty-five. It is by these and such-like extortions that these generals ruin the wretched soldier, who, unable to find other means of gaining his bread, is forced to remain on in his service. Speaking generally, it is impossible for them to escape such extortions, for these disorders reign throughout all the princes' establishments. If any one resigns service at his own request, they deduct two months' pay. Nevertheless service in the cavalry was socially an honourable profession; a common trooper was looked upon as being, to some extent, a gentleman, and such were, even when illiterate, often used to the highest positions".

The infantry was, in every respect, an inferior arm. With it were classed doorkeepers, watchmen, runners and spies, gladiators, wrestlers, and palm-leaf bearers, but the combatant branch consisted of musketeers or matchlockmen (hārkanīs), archers, and spearmen. Akbar maintained a corps of 12,000 matchlockmen, the officer in command of which was styled *dājuqir*. A secretary and a treasurer kept the accounts and disbursed the pay of these troops. The non-commissioned officers of the corps were graded in four classes, the first of which received *7 1/4* rupees a month, the second *6 3/4*, and the fourth *6 1/2* rupees a month. The privates were divided into five classes, the pay of which ranged from *4 3/4* down to *2 1/4* rupees a month.

Besides this corps was a number of troops styled *dāhuqār*, of which one-fourth were matchlockmen and three-fourths archers. These were the troops allowed to the *fārmās* in the *parganas* or sub-districts, to assist them in maintaining order and collecting the revenue. The non-commissioned officers of the matchlockmen received *Rs 4* a month, and the privates *Rs 3 1/2* each. The archers were considered more efficient than the matchlockmen, for the matchlock was not an arm of rapid fire or precision, and an archer could shoot many arrows while a matchlockman was loading his matchlock. Neither matchlockmen nor archers could, as a rule, face cavalry in the field, and it was not until the emperors and their vassals were brought face to face with troops armed and drilled after the European fashion that they discovered that infantry was the queen of battles; but belief in the superior efficiency of cavalry died hard.

The artillery was divided into two classes, the heavy and the light. Bābur had an efficient corps of artillery, and used it with great effect, but the Muslims of India were not skilled artillersists, and the heavy artillery was usually officered and partly manned by "ʿUmānī Türk, Portuguese renegades of pure or mixed blood, and occasionally by other Europeans. The light artillery consisted of field-pieces carried on bullock-carts, wall-pieces on animals' backs, and *zambīrāks*, or still lighter service-guns, carried on and fired from the backs of camels. The heavy artillery was drawn by strings of oxen, or, occasionally, by elephants, and, as the army gradually declined in efficiency the heavy guns increased in length and calibre until they became so heavy as hardly to be mobile, so that often they could not be dragged to their destination but were left stranded by their road.

A defeated army could seldom save its heavy and field artillery. All that it could do was to spike the guns and burn them. The ammunition was solid shot, sometimes of stone, sometimes of iron, and field guns and heavy guns in the field were sometimes loaded to the muzzle with the rough copper coin of the time, which took the place of case-shot, and did great execution at close quarters. The artillery also comprised a corps of rocketeers. The whole of the artillery was commanded by an officer entitled *mir-ai Ḿīrūd*, or "lord of fire". The officers were entitled *gūṭās* ("commander of 100") corresponding to a battery commander, and *mūrūdāk* (commander of 10), who had charge of a subdivision, or one gun. The wall-pieces and *zambīrāks*, which were numerous, account for the enormous numbers of "guns" mentioned in accounts of armies in the field.

Akbar used elephants freely in battle, and brought them into the field in great numbers. They usually carried archers or musketeers on their backs. Their use as a fighting force was, however, soon abandoned, and would have been a handicap had it not been for their imposing appearance, for it had long been established that they were more dangerous to their own side than to the enemy. "To the last some elephants protected by armour were brought into the battle-field, but their use was confined almost entirely to carrying the generals or great nobles, and displaying their standards. The baggage elephants were assembled in rear with those bearing the harem, the women remaining mounted on the latter during the battle, and protected by a strong force posted round them".

Under Akbar the elephants ridden by the emperor were called *khāṣā* ("special"), and all others were arranged in groups of ten, twenty, or thirty, called *halāt* ("ring", or "circle"). In later reigns the same classification was employed, but with
a more extended meaning, khasha then including all riding, and kalsa all baggage elephants. Mannabdars from 7,000 down to 500 were required to maintain each one riding elephant, and, in addition, five baggage elephants for each Rs 2,500 of pay. It appears that these elephants belonged to the emperor, and were not even made over to the mansabdars for use, except in the field. In the Ain-i-Akbari, for instance, Agha says that "Akbir put several khalas under the charge of every grandee, and required him to look after them."

The commander-in-chief of the army was the emperor himself, but at the head of the military administration was an officer entitled Bakhshah al-Manzil, whose position may be described as that of adjutant-general and mustem-master-general. He was assisted by three bakhshahs and a number of kithkis, or clerks, and the duties of this department included enlistment, mustering, and passing the pay of both mansabdars and cabiltins, for which purpose they were obliged to see that the branding regulations, so long as they were enforced, were observed by those to whom they applied. Manucci says, "twice a year the bakhshah holds a review of all the cavalry present at court, examines all the horses, and sees whether any of them are old and unfit for service. In the latter case he makes the owners get rid of them and buy others". These officers remained at headquarters, and from some authorities it appears that one of them had charge of the WaliNaqib, or body-guard, but the Ahadi corps, which was commanded by one of the great nobles, had its own diqan, or paymaster and quartermaster, and its own bakhshah, both officers being assisted by kithkis. Certificates granted by the bakhshah were recorded by the waliNaqib, or writer of the official diary, and were by him submitted to the wazir, or minister, who, after passing them, sent them to the office of revision and record, but pay was issued on the minister's order. "In addition to the bakhshah at headquarters there were officers with similar functions attached to the governor of every province", their office being generally combined with that of waliNaqib, or provincial diary-writer; and in imitation of the imperial establishments each great noble had his own bakhshah, who performed for him the same duties as those performed for the emperor by the imperial bakhshah.

It is impossible to estimate accurately the strength of the army in Akbar's reign, for the sowar rank of the mansabdars is not given, either in the Ain-i-Akbari or in the Tabakat-i Akbari. He maintained 12,000 matchlockmen, and Blochmann estimates the whole strength of his army at 25,000, of which 12,000 were cavalry and the rest matchlockmen and artillery, but this seems to be much too low an estimate. Humayun could put 100,000 cavalry into the field, and it is not likely that Akbar, with far wider dominions, would have been content, or could have ruled and extended his empire with a smaller army. It seems probable that Blochmann's estimate included only the emperor's personal, or household, troops, in the latter half of Shah-Dahshin's reign the contingents of the princes and nobles would have numbered 425,000 if each mansabdar had maintained the full quota of his sowar rank, but this they were not even expected to do. Fortunately a fairly exact return of the strength of the army is given in the Padshahnama. There were 8,000 mansabdars of all ranks, 7,000 mounted Akhis and barakandaz, 200,000 cavalry, exclusive of the troops allowed to farsdydars for the maintenance of order and the collection of the revenue, and 40,000 foot matchlockmen, artillery, and rocketeers, of whom 10,000 were at headquarters and 10,000 in the provinces and the forts. It is not quite clear what is meant by the mounted barakandaz classed with the Akhis, for barakandaz is the word used for a matchlockman, and horsemen certainly did not carry the cumbersome matchlock, and carbines and pistols had not been introduced, but it may be that a few men carrying a lighter musket than the ordinary matchlock were attached to the Akhis corps. Of the army in the reign of Awrangzib Manucci writes, "ordinarily the king keeps fifty thousand horse in garrison besides those in movement every day, an almost equal number. He has twenty thousand infantry, all Radjpitits; out of them twelve thousand are in charge of the artillery; the rest are for guarding the royal palace, mounting sentry, and cetera".

The army of the Mughal emperors was not drilled. Muster parades consisted merely in the troopers passing in single file before the bakhshah, and the nearest approach to any manoeuvres was the participation of the army, or part of it, in a royal hunt, when the troops, aided by the people of the country side, acted as beaters, surrounded a large tract of country, and, day by day, closed inwards until in a small area was enclosed an enormous quantity of game, which was then slaughtered wholesale by the emperor and those who were permitted a share in the "sport". Apart from this species of hunting styled shah-i-kamargha, the army was never exercised in any combined movements, or drill; but the individual trooper paid great attention to the training of his body, exercising himself with all his weapons, sabre, spear, mace, battle-axe, buckler, dagger, and bow and arrows. The bow was considered a most effective weapon, as a hor-eman could shoot six times before a musketeer could fire twice. The trooper also went through various exercises for strengthening his limbs and his body, both with and without apparatus, the latter consisting of dumb-bells, magdar, or Indian clubs, and the lizam, a strong bow with a steel chain instead of string, most effective in training these muscles employed by an archer. The horses were also trained in a sort of manege.

B. Economics and Administration

The Mughal Empire lived mainly by agriculture. The only metals available in quantity were iron and copper; both were relatively expensive, and local supplies of the latter were falling in the xvith century. The existence of coal was unknown, and of other minerals only lime, salt, saltpetre, and, locally, building stone were largely produced. The agricultural land was divided into areas known as
During the xvith century all the sea routes were dominated by the Portuguese, who were concerned rather to exploit than to develop; the chief extension of trade due to their efforts was the supply of cloth to Brazil and West Africa, but most of this was drawn from the Comonwealth Coast, which was outside the empire until almost the end of the xvith century. After “factories” (i.e. agencies) had been established at Surat by the English (1611) and the Dutch (1617), an important trade with western Europe grew up in indigo and calico. In the middle of the century the indigo-trade yielded to competition from the West Indies, while the depopulation of Gujrat by the famine of 1630 transferred the bulk of the calico trade to the East Coast; Surat remained, however, an important centre until its suppression by Bombay. In the second quarter of the xvith century the Dutch, followed by the English, established factories on the Hāglī in Bengal, and trade developed in silk, saltpetre, fine calico, and muslin. Towards the close of the century a change of fashions in Europe produced a great demand for muslin and prints. The Dutch were met partly by Bengal, and partly by Madras, by this time technically within the limits of the empire.

The outstanding feature of all trade with India was the need for importing gold and silver. India bought little beyond the industrial metals and luxury goods, but was eager to sell produce for cash; and, since Western Europe could not supply what was most in demand, the operations of the trading Companies were necessarily so organised as to direct streams of gold and silver to India from those countries which would part with them, notably, at this period, gold from China, and silver, and later gold, from Japan. The seaports serving the empire were thus brought into a complex but efficient organisation, which took whatever they had to sell, supplied whatever they wanted to buy, and, so far as was possible, satisfied the demand for gold and silver.

Inland transport was necessarily less efficient. The Indus, the Ganges, the Djamna, and the waterways of Bengal were largely used, but the bulk of the empire depended on what were then called roads, unmetalled tracks, sometimes defined by lines of trees, with halting-places which were generally walled or otherwise defended against robbers, and usually furnished with supplies. Transport was effected by carts and pack-animals, generally ozen but in some places camels. Passengers travelled on horseback, in palanquins, or in carts drawn by fast ozen. There were excellent arrangements for the rapid transit of letters, but these were for official use, and were not ordinarily available for private persons, who hired messengers when required, or in a few cases, clubbed together to send messengers periodically.

Standards of life presented sharp contrasts. The mass of the population, peasants, artisans and labourers, lived in such extreme poverty as to excite the commiseration of European visitors. An almost equally low standard prevailed among the numerically important class of servants in the towns, whether freemen or slaves, who, however, enjoyed a more secure life than the rural population. The middle classes, comparatively smaller in number than now, were thrifty and frugal; and, even when wealthy, were careful to avoid any display which might lead to exactations by officials. The superior
grades of officers employed by the State were exceedingly well paid when allowance is made for the high purchasing power of money, and spent their incomes freely in extravagance and display, increased by the fact that on their death their property reverted to the treasury.

The prosperity of the empire depended mainly on three factors: the character of the rainfall, the degree of internal tranquillity, and the working of the revenue administration. The seasonal rainfall was, as it still is, uncertain, and any serious defect resulted in insufficient food. The difficulty of transport made it impossible to afford adequate relief on the spot, the people abandoned their homes to wander in search of food, and in contemporary narratives we read again and again of the then familiar features of deaths from starvation, cannibalism, and the sale of children into slavery. Recovery from such a calamity was a slow process, and the famine which desolated Gujarán and the Dakhan in 1630–1631 left its mark for at least a generation. Exceptionally favourable harvests might also prove calamitous, though not to the same extent. There was no local market for the surplus produce, prices fell to a ruinous level, and official regulations low prices were treated as a calamity requiring relief on the same footing as drought or hail.

The dominance of the weather was irresistible; the other influences on prosperity were matters of administration. Here a clear distinction must be drawn between the general and the revenue administration, a distinction denoted by the current phrase multi waz-mali. The emperor was of course supreme in both branches, and was assisted at his headquarters by four principal officers, the Wazír or Prime Minister, the Waqil or Revenue Minister, the Badshá (see eel. 639), and the Sa'dr, who was in charge of Islamic law and also administered the department dealing with charitable grants and endowments. The post of Waqil was not always filled, and when it was in abeyance the duties attaching to it devolved on the Wazír. In practice the powers of these Ministers depended on the personality of the Emperor; under Akbar or Sáhá-Dinásh they were definitely subordinate, while Džahángír's Prime Minister was at times practically the ruler of the country.

The system of general administration to which the Mughals succeeded in Northern India was not highly developed. The great bulk of the country was held by officers in assignment (a term explained below); the assignee was responsible for keeping the peace, and in practice had a free hand in the methods employed. Under Akbar a more effective system was established, which was maintained throughout the period. The empire was divided into provinces (siyás), each of which was in charge of a Viceroy (Sipán-dár, Sáháb-dár), who at first was responsible to the Emperor for all branches of administration, but after 1595 was relieved of revenue work. Apart from the Viceroy, officers who may be described as Governors were stationed at selected places, with the duty of keeping the peace and putting down rebellion, a term which covered failure to pay the revenue due. The ordinary designation of these Governors was Fauj-Dár, but in outlying regions which were controlled by fortresses the Governor was the fortress-commander (Khál-dár), while in a few large assignments the assignee exercised the powers of a Governor. Cities were governed by officers designated Kétvál, who combined the functions of magistrate, police-commandant, municipality, and censor of morals. There was no regular police force at the disposal of these officers, who were expected to employ the troops they maintained as a condition of their rank, obtaining help when their own forces were insufficient. The efficiency of this organisation varied with that of the central administration, which depended mainly on the personality of the Emperor; by the close of the xvi^th century it was definitely breaking down, and conditions of anarchy were spreading over the empire.

It is difficult to state in precise terms the relation of this organisation to the extensive portions of the empire where internal jurisdiction remained in the hands of Hindu Chiefs; but apparently the Chief was regarded officially as assignee of his territories, and was expected to maintain order within them. If he failed to do so, the Viceroy or Governor concerned might intervene, but his action would ordinarily be directed against the Chief rather than against the people.

The revenue administration was controlled by the Wazír, sitting in the Revenue Ministry, which was known as Džián, as opposed to faríd, or the Court, whence orders were issued by, or in the name of, the Emperor. Revenue at this period meant practically Land Revenue; the Imperial Treasury had receipts from other sources—Customs, Salt, Mint, Presents, Inheritance, and, under Awaržéh, the Capitation Tax (qizya)—but, taken collectively, they were of little importance compared with the income obtained from the peasants. Under the system traditional in India, and embodied in Hindu law, every person cultivating land was required to pay a share of the produce to the King, who determined, within somewhat elastic limits, the amount of the share, and who also prescribed the methods of assessment and collection. The first Muslim conquerors accepted this "King's share" as the kibrí which to which they were entitled under Islamic law; the question of property in land was not raised, but occupants were ordinarily allowed to retain possession subject to due payment of the revenue.

In the Mughal period agricultural land fell into three classes: Chiefs', Reserved and Assigned. The areas governed by the more important Chiefs were not assessed to revenue (kibrí) by the Wazír; that was the privilege of the Chief, and any payments which he made to the treasury were in the nature of a tribute, determined by negotiation. The treatment of the numerous smaller Chiefs is not on record; but the few facts which have survived are consistent with the view that assessment was made through them, and that they were allowed to retain a portion of the revenue in return for their services. In the regions which were directly administered, certain areas of land, described as kibrí, were reserved to furnish the treasury with cash, and were managed by the staff employed by the Revenue Ministry; at first the local staff was under the provincial Viceroy, but in 1596 a Džián was posted to each province, to manage all revenue business directly under the Minister, and in this way emerged the dichotomy into džiání (revenue business) and faují (general business) which hencsfoward characterised the local administration.

The land not reserved for the treasury was
available for assignment. Every officer appointed to the Emperor's service was entitled to an income defined in cash, which represented both his personal salary and the cost of the troops he was required to maintain. For a short period in Akbar's reign, this income was paid, as well as defined, in cash, but the ordinary practice in the empire was to assign to each officer an area (qādīr, ṭalī, or ḡādī) estimated to yield as revenue the amount of his stated income; and the officer thereupon took charge of the area assigned to him, and assessed and collected the revenue in accordance, at least theoretically, with the general orders in force. If the yield proved insufficient, he could claim the balance from the treasury, while he could be required to account for any excess receipts; but in practice these matters seem usually to have been adjusted by bribery, for which there was also extensive scope in securing profitable assignments, and in getting rid of those which had been squeezed dry. Charges of assignment were ordinarily so frequent that an officer would have been unwise to spend money on fostering agricultural development or do anything by way of improving the income which his assignment could be made to yield. The great bulk of the land was ordinarily assigned, the reserved area being one-sixth or one-seventh of the whole.

The share of the peasants' produce claimed by Akbar was one-third; later, at some uncertain time in the first half of the xvith century, this figure became the minimum, with a maximum of one-half, which inevitably tended to become the standard. Three principal methods of assessment were in vogue: Shāring (qolla baždr), Measurement (paunāṭ bi), and Group-Assessment (naʿād). In Shāring, the produce of each peasant was ordinarily estimated (or occasionally ascertained at harvest), and the prescribed share valued to determine the cash-revenue due for that season. In Measurement, a fixed charge, varying with the crop, was made on each unit of area sown; it might be fixed in either cash or produce and in the latter case it was valued at current prices. Under both these systems payment in cash was the general rule, but payments in kind were permitted in some backward regions where currency was scarce. In Group-Assessment, the official concerned came to terms with the headmen of the village to pay a sum fixed in cash for the year, thus avoiding the necessity of detailed assessments on individuals; this system tended to pass into Farming, when terms were made, not with the headmen, but with an outsider.

Each ruler determined at his pleasure which of these methods should be employed, and in what regions. Group-Assessment was the prevailing system at the time of Babur's conquest, and apparently was accepted by him. After the expulsion of Humāyūn from India, Sher Shah introduced Measurement throughout his kingdom, and his methods were at first adopted by Akbar; the revenue claimed from each unit of area was at this time a stated quantity of produce, calculated to be one-third of the average yield, and, except in the tracts where payment in kind was practised, this amount of produce was commuted to cash at prices fixed officially for each season. Practical difficulties arose however, in regard to commutation; and in 1579-1580 the revenue was put definitely on a cash basis, the charge on each unit of area sown being a fixed number of dām (reckoned at 40 to the rupee) instead of a fixed weight of produce. Schedules of cash-rates adapted to the varying productivity of different regions were now drawn up, which remained in operation during the rest of Akbar's reign. At some uncertain period, probably under Dālamānī, these schedules were discarded, and a return was made to Group-Assessment, which was the standard system in the middle of the xvith century, and survived into the British period; Sharing was now practised only in backward tracts, or in some cases where the headmen refused to pay what the assessor thought a reasonable revenue, in which case he proceeded to detailed assessment on individuals, by Sharing or by Measurement according to circumstances.

Such was the history of assessment in the heart of the empire, but the outlying provinces were not brought into rigid uniformity, local conditions determining the system applied in each; while in the Dakhān provinces a distinct and elaborate system was introduced in the middle of the xvith century in order to promote recovery from the effects of wanting farming.

It would be futile to criticise these varying institutions, for the value of all alike depended on the spirit in which they were worked. In administrative circles there was throughout the Muslim period a definite ideal of agricultural prosperity as the foundation of the State, its elements being extension of cultivation, improvement in the class of crops, and development of irrigation. Against this ideal operated the urgent need for the largest immediate revenue that could be wrung from the peasants. The course of the struggle cannot be traced in detail but the central fact is that by the middle of the xvith century agriculture had ceased to be an attractive career, and the peasants were deserting the land for other occupations; the resulting decline in agricultural production was the chief economic factor in the eventual collapse of the empire.

The remaining branches of the administration require little description. Customs duties were formally low, but their incidence was increased by arbitrary over-valuation and unauthorised payments required to secure prompt clearance of goods. In the towns, civil justice was administered mainly by the khādir; in the country, disputes were apparently decided summarily by the executive officials. Punishments for crime were summary and drastic, and were not always in accordance with Islamic law. By Indian tradition, local officials raised a large revenue for local purposes by a multitude of taxes and exactations of a most oppressive nature; these were prohibited en masse by Akbar, and again by Aurangzēb, but the system survived. Its worst feature was the levy of transit dues on internal trade, which were a cause of constant complaint by Indians as well as foreigners.

Special attention was given to the coinage, as being a recognised appanage of sovereignty. Gold, silver and copper were coined, all the coins circulating at their metallic value, so that the exchange rate between different denominations fluctuated; but gold was not in general circulation. The chief coin of the empire was the silver rupee, containing nearly 180 grains of almost pure silver; the principal copper coin was the dīm, of nearly 324 grains; and there were various smaller coins of both metals.

The unit of weight used in wholesale commerce
was the maund or man, which varied in different parts of the country. In the south of India it ranged round about 25 lb; in Gujrat it was 33 lb, but in 1635 this was raised to 37 lb; in North India, it was 52 lb at Akbar's accession, was raised by Hum to 55 lb, by Dhâhângir to 60 lb, and by Shâh-Jhâhan to 74 lb. In Bengal, it was 64 lb in 1669 the weight of the maund; and these figures are given to the nearest lb. The unit for retail trade varied from place to place, but was ordinarily smaller than those which have been named. Measures of capacity were not used in wholesale commerce. The measure of length in the North was the gaj or yard, which was standardised by Akbar at about 33 inches, and by his successor at about 40 inches, but the smaller unit survived; in the South the hâsta, or cubit, of about 18 inches was used: in Gudjârat the unit was about 24 inches; and in Bengal about 27 inches.

(W. H. Moreland)

**II. The Decline of the Mughal Empire.**

The decline of Mughal authority, already manifest during the reign of Awaŋzâb, rapidly developed under his immediate successors. Bahâdur Shâh [q. v.] (1707—1712) was too amiable, Qâbhândîr Shâh [q. v.] (1712—1713) was too vicious, Farrukh- siyâr [q. v.] (1713—1720) was too feeble, to revive the empire. In seven bloody battles of succession, fought within six years of Awaŋzâb's death, the imperial family attested its inherent lawlessness and declining power. Then it became the sport of rival factions. For a while the two famous Saiyid brothers, 'Abd Allâh and 'Hasân 'Uli of Bâhâra, became the joint mayors of the palace. But they were unable to consolidate the support of the Mughal nobles. In 1720 Aṣ̣ṣaf Shâh Nîzân al-Mulk rose in arms. 'Hasân 'Ali marched against him, but was murdered with the connivance of Muhammad Shâh, the emperor whom he and his brother had set up in 1719. Shortly afterwards, his brother 'Abd Allâh was defeated, and, after lying in prison at Dilli for two years, was poisoned. When they fell, Nirâm al-Mulk strove hard to restore something like the old order of administration. But he was unwilling to force himself upon Muhammad Shâh as the Saiyids had forced themselves upon Farrukh- siyâr. When the emperor whom he had delivered refused his advice, and the favourites of the court made fun of his antiquated dress and ceremonious manners, he preferred to retire and rule the Dakhân in virtual independence. Ironically enough, Mu-
Hamid Shah believed that Niẓām-al-Mulk had been plotting his overthrow. With Niẓām-al-Mulk’s departure from Dihlī the last chances of a revival of the empire vanished. Never did a falling state betray greater incapacity for reform. No phoenix could arise from those shaven-headed ashes. Even while Niẓām-al-Mulk still retained the nominal control of affairs, extraordinary incidents could occur. At Dihlī itself, for example, a Hindu clerk in one of the imperial offices turned Muslim, and, when his wife and daughter refused to follow his change of faith, he laid a complaint against them, alleging that, as his daughter had not attained puberty, she was therefore of her father’s religion. The case offered certain technical difficulties, was at least referred to the qādhī of Dihlī. His treatment of the case displeased the Dihlī mob. Riots arose, the recital of the kḥyāta at the Dihānī-nāmā Masjdī was interrupted, two or three Hindus were seized and circumcised. To pacify the rioters, the girl was imprisoned, and, a few days later, buried with Muslim ceremonial. “To cut a long story,” says Kāmrān Khān who relates the incident, “she was killed; otherwise there would have been many headaches and much vexation”.

Niẓām-al-Mulk’s successors were worthy of the frivolous emperor whom they professed to serve. For twelve years the imperial councils were directed by a man called Shāh ʿAbd al-Qādir. By origin a cotton-weaver of Tatha, he had lived both as ʿṣārī and faṭīr. Claiming magical powers and popularly believed to consort with jinns and devils, he was summoned to interpret the dreams of the emperor’s mother. This led him into the imperial service, and he contrived to accumulate in his own hand a great number of offices, producing a revenue of 5,000 rupees a day, apart from the bribes which he received, paid to amount to as much more. This man was pithily described as never having spent money on a good work, never having conferred a favour, and never having done a kindness. He was a miser, and at his downfall (for even at Dihlī under Muhammad Shāh such qualities at last produced their natural reaction) more than a crore of rupees was found in his private hoards. But the unpopularity which his character and habits naturally bore was enlisted without the detriment with which his son and daughter were regarded. No one in Dihlī was safe who displeased them or denied them anything that they desired.

Amid such confusion and under such rulers the empire rapidly lost its cohesion. The Marāḏāsīs (q. v.), whom even Awrangzēb sought in vain to subdue, soon became the most formidable power in India. On Awrangzēb’s death, his successor, Bahādur Shāh, had released the Marāḏā prince, Shāhī Rāḍā, in the desperate hope of re-establishing him through his form, if not the substance of imperial control. Shāhī Rāḍā met with influential and talented support. In 1708 he took possession of Satara and by the year next was generally recognised as ruler. A Chitpavan Brahman, Bāḷḍī Wishnawāṇī, became his faḵawī or first minister, and began to develop the characteristic Marāḏā policy, which was to play a part in the culmination of the empire. This was to put forward claims to a share (under the title of ʾrāṭ or a quarter part) in the imperial revenues in as many provinces as possible. In 1709 the Mughal governor in the Dakhān admitted this claim, and, although later governors contested it, it was again recognised by the Bāṛha Saḥīyids in 1719. In the next year Bāḷḍī Wishnawāṇī was succeeded by his son, Bāḍī Rāo I, and the process was extended farther afield. Particular provinces were assigned to particular officers, who were to realise the ʾrāṭ either by collecting the amount from the provincial governor, or by plundering the country. Bāḍī Rāo employed Pāḷḍī Gāekwār as his chief leader in raids in Gudjarat; Raghunāṭī Bhōṇḍāl established himself at Nāgpūr; these and other leaders spread the terror of Marāḏā devastations in all directions, and it was no longer possible for the provincial governors to make political arrangements outside the capital. At the same time, seeing that their tenure of office was coming to depend more and more upon their own power and resources, the governors tended to become virtually independent rulers. Aṣaf Dāḫī Niẓām-al-Mulk in the Dakhān continued to profess himself a humble servant of the emperor, but he repelled by force of arms the persons who came with imperial farmanās ordering his supersession, and when he died in 1748 he was succeeded by his son. In Bengal too the succession had become a matter of heredity or war. But the respect which the name of the empire still enjoyed and the degradation into which the empire itself had fallen were exemplified by the large gifts sent by a new ruler for farmanās of investiture and the unhesitating compliance with which they were issued.

The troubles bred by this internal dissolution were enhanced by those of foreign invasion. In 1722 the Ṣafāwīs were overthrown in Persia, and, after a short period of great confusion, the Turkmān Nādir Kullīn established himself as ruler under the title of Nādir Shāh (q. v.). With him difficulties arose over the Kandāhār frontier. He was engaged in reducing the Ghilzais there to submission. Thrice he sent envoys to the court of Dihlī requesting that his enemies should not receive shelter in the Mughal territory. But by this time the Kābul province was falling into a like disorder with the rest. The governor spent his time in prayer and hunting. The money which had been regularly sent from Dihlī to bribe the hill-tribes into quietude and pay the troops ceased to be sent, partly because of the growing imperial penury, partly because it was believed that it never reached the governor but was embezzled by his patron at court. Large bodies of Ghilzais therefore were able without the least difficulty to take shelter from Nādir Shāh’s troops in the Mughal province, while the Mughal court foolishly supposed it was evading its difficulties by neglecting to answer Nādir Shāh’s repeated demands. The ineptitude of the court, therefore, rather than (as used to be supposed) any elaborate intrigue of party against party, made Nādir Shāh resolve to invade India. No effective opposition could be offered in either the Kābul province or the Pāṇḍījāh. In 1738 Kābul was occupied. In the next year Nādir Shāh’s army appeared before Dihlī. The emperor went out, not to strike a blow in his own defence, but to make his humble submission. Conqueror and captive then entered the city. The Dihlī mob, grievously mistaking its strength, attempted to massacre the foreigners. As a punishment Nādir Shāh deliberately let loose his troops for five long hours—from 9 o’clock in the morning till 2 in the afternoon—during which some 20,000 of the inhabitants are believed to
MUGHAL

635
to have perished; and beyond this toll of life a
great ransom was exacted, including 50 stores' worth of those wonderful jewels which earlier Mughal sovereigns had heaped up for their delight. From this time onwards the annals of the Mughal empire contain nothing but dishonour. Nādir Shāh fell; but Akhmed Shāh Durrānī established on the borders of India another empire and repeatedly invaded India between 1748, the year of the ignominious Muhammad Shāh's death, and 1761, the year in which he inflicted the severest defeat in all their history upon the Marāthās at Pānpāt. Until the decay of the Durrānī empire in the early years of the nineteenth century, the provinces of Oudh, the Pūndārīk, and Kashmir, were dependencies of the Afghan kingdom.

Europeans in India—Dutch, French, and English—had observed these events with great concern. Early in the eighteenth century the Dutch had sent a great embassy to Bahādur Shāh, and a little later the English had sent one to Fārūj-şīyar. Both had secured far-reaching fārmāns by profuse expenditure; both had found that their fārmāns were waste paper wherever they ran counter to the interests of local governors. But it was the Frenchman Dupleix who first sought to put into practice the conclusions to be drawn from this situation. Others were convinced that European force could easily establish itself in India; but he began experiments, and, in the hope of keeping the English motionless while he acted, he professed to be acting on behalf and in the name of the Mughal emperor. This fiction became the traditional basis of French policy, and down to the end of the century Frenchmen were elaborating plans (which their failure to control the sea brought to nothing) for establishing themselves in India and expelling their rivals under cover of imperial grants. With equal consistency, the English adopted a political realism which squared far better with the circumstances of the time. They fought and overcame Dupleix in the name of their national interests. When they acquired Bengal, they carefully avoided all obligation to reestablish the imperial authority; and it appears that their acceptance of the disnān of Bengal was dictated, not by any desire to mask the reality of their power (which no one in India doubted), but by the desire to take on behalf of the East India Company something which could not be taken over by the English crown as a territorial sovereignty certainly would have been. Thus it was that Prince 'Ali Gāwār, who proclaimed himself as Shāh 'Alam II, so as to be able to recover his disnān of the province of 'Ālamgīr's murder by his wazir, Ghāzī al-Dīn, first came under the protection of the English. He had for some years been attacking the province of Bihār with the aid of the Nāwāb Wazīr of Oudh. But after the battle of Bākār in 1764 he had given up the struggle, joined the English camp, and in the following year Clive's demand bestowed on the East India Company the disnān of the provinces it held in return for an annual allowance of 26 lakhs of rupees. At the same time the districts of Kora and Allahābād were assigned to him and he proceeded to reside in the latter city. Soon however, he wearied of his position of dependence, and departed to join the Marāthās, who, having recovered from their defeat at Pānpāt, were once more invading northern India. On this, Warren Hastings decided to hand Kora and Allahābād over to the Nāwāb Wazīr and refused to continue the payment of the 26 lakhs. From this time until the close of the century he remained under the control of the Marāthās, except at such times as their internal dissensions led to the recall of their forces from the north. One of their chief leaders at this time, Mahādāyī Sīndhī, gradually built up a strong principality for himself, conquering the provinces of Agra and Dīlī, and becoming the emperor's real custodian. So matters remained till Sīndhī's defeat by the English in 1803 transferred the guardianship of Shāh 'Ālam into the hands of the latter. They carefully refrained from entering into engagements with him, but when they assigned revenues from the imperial family, they permitted all orders issued in the city of Dīlī to run in the emperor's name, though the actual administration was conducted by an English agent, and they attempted no interference within the precincts of the palace. Gradually the traditional observances broke down. The Mughal emperor and the British governor-general met with the ceremonial of equals. The emperor's name was removed from the coinage, and it had been resolved no longer to recognise the imperial title after the death of his holder, Bahādur Shāh II, when the Indian Mutiny, in which several of the imperial princes took an active part although they seem to have had little share in bringing it about, led to the formal trial and deposition of the emperor and the disappearance of the shadow court which for a century had lingered on under the toleration of the real powers of India.

III. MUGHAL ARCHITECTURE IN INDIA.

The Mughal dynasty brought to India strong Central Asian predilections and a keen feeling for natural beauty. But each in succession obeyed his own instincts, education and caprices. Hence they patronised no "schools" of art, but came to employ an almost cosmopolitan body of artists, Persian, Indian, Turk and even European, who one and all had to adapt their own canons to the aesthetic moods of their employers. In general the Mughals forbade any sculpture of the human form, but like the Orthodox Greek Church, were usually less rigid towards paintings of it and even fostered portraiture till it reached a high level. Yet, with relatively few exceptions, the Mughal buildings were all religious, comprising mosques and tombs or shrines. Hence their scope was limited, though within their limits they express the religious feelings and policies of the dynasty. Even the conqueror Bābur found leisure in his brief reign of five years, 1526—1531, to build at Pānpāt the Kābul Shāh mosque, whose name commemorates at once his love of Kabul and his victory at Pānpāt in 1526. His mosque at Sāmsār in Rohilkhand is marked by an ovoid dome. When he required constructive work Bābur summoned persons from the main Albanian, from Constantinople, and avoided Indian, Hindu or indigenous standards, though he must have employed Indian workmen in spite of his dis-
parangement of Indian skill and knowledge in design or architecture.

Humayun's longer but still more chequered reign produced many buildings, of which few remain. His mosque at Fatehabad near Dihl is massive and well-proportioned, recalling the Tughlak or Turkish period, with domes rather than hemispherical. It is decorated with enamelled tiles in the Persian manner, apparently the earliest example of that style now extant. His tomb at Dihl, doubtless begun, as is customary among pious Easterns, during his lifetime, is of red sandstone and also Persian in style, but in it coloured tiles are replaced by white marble, of which the dome is wholly composed, the rest of the masonry being also inlaid with that material. The main dome has a narrow neck, the first of its type to appear in India, the four corner cupolas, also a new feature, support domes of an earlier style.

Akbar (1556–1605) was versatile in his architectures as he was in his religion. In the Fort at Agra he built the palace—a few of the secular buildings of the Mughal period which survive—called the Dajangiri Mahall. His other buildings at Agra were demolished by Shah-Djahân. This palace, built of red sandstone which has weathered badly, bears the impress of Akbar's vigour and originality. Throughout arches are used sparingly, the horizontal style of construction being the rule. Its forms also are as Hindu as its construction, but the ornamentation, carved on all flat surfaces, is of a type used by Akbar but not found in other buildings. During the early part of his reign was erected at Gwalior the tomb of Muhammad Ghuwâl, who died in 1558. Closest resembling that of Sher Shah at Sahsâram, it marks a considerable advance in tomb-building during the brief period that had elapsed between the erection of the two, an advance ascertained by Ferguson to the invigorating touch of Akbar's genius, but doubtless due in great measure to the skill of the Gwalior school of architects and masons who were probably Hindus.

The tomb is a square, 100 ft. each way, exclusive of the hexagonal towers, and its chamber forms a hall, 43 ft. square, with the angles cut off by pointed arches so as to form an octagon on which the dome rests. Around this square building is a wide gallery, enclosed on all sides by a screen of exquisite tracery in pierced stonework with a projecting porch on each face.

At Fatehpur-Sikri, the new capital founded by Akbar where the court resided from 1560 to 1584, the emperor's eclectic phase found its fullest expression. Its architecture is admirably illustrated in W. F. Smith's works 1), but all its significance has not yet been explained. The site was chosen because Akbar's patron saint, the Sufi Salim Chisti, lived in a cave on its summit 2). Akbar's own residence was the "House of Dreams", the Khwâb-gâh, an unpretentious structure standing on the roof of the Mahâll-i Kâhsâ, which contains paintings attributed by Smith to Chinese artists and apparently depicting Buddha as Yamântaka 1). However this may be, the design of his throne in the Divân-i Kâhsâ massive pillar symbolizes that he sat there as a Çakravartin or ruler of the four quarters, as Havell suggests, though it is conceivable that it signified his claim to the supreme headship of his new religion, the Din-Ilahi. But it is rash to dogmatize on the symbolism of a builder who seems to have had no settled design for the plan of his new city. The Mahâll-i Kâhsâ regarded by Ferguson as the original block of building at Fatehpur-Sikri, has two spacious courtyards and is larger than the Red Palace at Agra, but its surrounding structures are inferior in richness of design and ornamentation. From time to time Akbar added courts and pavilions as if to compensate for this inferiority. While the Divân-i Kâhsâ is square, as befits a Hall of Audience, the Darfar-Khâna or Record Office is peristyle like the one erected by Akbar at Allâhabâd. The Panâ' Mahâll, a five-storied open pavilion with richly carved pillars, and long colonnades and walls connecting these buildings one with another, complete this group of structures. The most characteristic and beautiful of his designs here are the three small buildings, the Mahâll or apartment of Bibâl's daughter, the house of Mariam Zamâni, mother of Dajangîr, and the palace of the Râmt Sulâmâ, Ruḵâyra Begam, a cousin of Akbar and his first consort. Akbar's greatness however demanded more grandiose monuments. The Dâmî Masjdâl or cathedral mosque, erected in 1571 (the year in which he proclaimed himself the neginbâd of his age and openly claimed the spiritual headship of Islam) commemorated his victories in the Dakhan (Southern India). It ranks amongst the finest ecclesiastical buildings of India. According to its inscription, it was designed by Shaikh Salim Chisti himself and modelled on the Ka'bâ. Though highly ornate it betrays few or no traces of Indian influence 2). The tomb of the Shaikh, in its courtyard, is built wholly of white marble, with windows of pierced tracery of the most exquisite geometrical patterns, and a deep cornice of marble supported by brackets of a design so elaborate as to be almost fantastic. The other tomb in the courtyard, that of Salim's grandson, Shaikh Islam Khan, is of sober and excellent design but eclipsed by its surroundings. The Buland Darwrâzâ or "lofty gateway", built in 1602, commemorates Akbar's conquest of Khândesh and dwarfs even the Dâmî Masjdâl. It is the grandest gateway in India and one of the loftiest in the world, its height being enhanced by its position on the brow of the hill on which Fatehpur-Sikri stands. Its architect placed its portals at the back of a semi-dome, which thus became its porch or portico, and its dimensions impress themselves as those of the actual portal. It must be added that Akbar intended his new capital to be a school of all the arts and that he allied architecture to painting.

From the fragments of interior mural paintings which survive, it is clear that he employed Persian and Indian artists, who worked independently, and some idea of their technique is doubtless to be gathered from the miniatures of this period, as mural artists were also required to illustrate manuscripts.

1) J. Indian Art, No. 47 (vol. vi., p. 66), 1894.
2) For its wall-paintings see J. Indian Art, No. 66 (vol. viii., p. 55), 1899.
At Allhâhâbâd, the city where Akbar was compelled by administrative duties to reside more than at his new but isolated capital, he built the pavilion of the Ĉâls Sûtan or “Forty Pillars”, of which only the hall survives. Its plan is square, supported by eight rows of columns, eight in each row, making sixty-four in all; and it is surrounded by a deep verandah of double columns, with groups of four at the angles, all surmounted by bracket capitals of the richest design.

But perhaps the most characteristic of Akbar’s buildings, observes Fergusson, is his tomb at Sikandra, begun in his lifetime but completed by his successor. Unfortunately Djiâhângîr, in his Tâzkbî (transl. 1584), asserts that he demolished Akbar’s work and reconstructed the tomb. But, seeing that the plan of the building is unique in India and has no Persian or Saracen parallel, it is more likely that only its exterior is the work of the fastidious orthodox Djiâhângîr. Its original plan was modelled on the Panâ Mahâl, being composed of five square terraces diminishing in size as they ascend. Thus the outline of the structure is pyramidal, not domical. Standing in an extensive garden it is approached by a single gateway and stands on a raised platform. Excluding the angle towers the lowest storey measures 320 ft. each way, and on this terrace stand three more, similar in design but more ornate, each about half the height of the lowest storey or terrace. Within and above the highest storey is a white marble enclosure, 157 ft. square, contrasting with the red sandstone of which the rest of the structure is built. The outer wall of this enclosure is entirely composed of beautiful trellis-work; and inside it is a colonnade or cloister, also of white marble, in the centre of which is placed the tomb of Akbar, resting on a platform of exquisite arabo-Perisan tracery. This doubtless typifies Akbar’s celestial resting-place, for below it lie his remains under a far plainer tombstone in the basement. That Djiâhângîr here departed from the original plan is certain. According to W. Finch, the tomb was to be have been covered with a canopy of “curious white and speckled gold richly inwrought”. What Akbar planned and what he meant to express by his design must remain a matter of conjecture. Fergusson postulates a Buddhist model, and even sees in the pavilions which adorn the upper storeys reminiscences of the cells which stand on the edge of the great rock-cut rath at Mâmalappuram; but these may have been intended for use as a theological college like the rooms and pavilions in the upper storey of Humâyûn’s tomb. He also thought that a domical chamber over the tombstone formed part of the original design, since no such royal tomb remains exposed to the air in any Indian mausoleum — a dangerous generalization. Havell sees in the building an Indian five-storeyed Assembly-Hall, apparently a meeting-house for the royal order, the Din Iliâhî, the four lower pavilions (or terraces) corresponding to the four grades of the order. Even Cambodian influences have been conjectured 1). Yet it is not impossible that a Zoroastrian model was kept in view, as Akbar borrowed from that faith among others.

As compared with Akbar Djiâhângîr contributed little to the architectural magnificence of Mughal India. At Lahore, which he made his capital, he added the Bârâ Khwâb-gâh or greater sleeping apartment to the Fort; and the tomb of Añâr-kâlî was also erected in that city. Near Srinagar in Kashmir he made the Shâhîmâr gardens with their summer-houses; and the fine gateway to the Sarî at Nûr-malâh near Djiân-dhâr is also ascribed to his reign. The quadrangle at Lahore was doubtless executed by Hindu artisans, as the conjoined, which surrounds three sides of its area, is supported by pillars of red sandstone with bracket capitals and carved figures of elephants, peacocks and conventional animals like those found in the Red Palace at Agra. Djiâhângîr’s greatest buildings were however erected at Dâkka, in Eastern Bengal, where he made a new provincial capital in succession of Gâvar; but his structures there were principally built of brick, covered with stucco, only the pillars and brackets being of stone, and they have been almost destroyed by the jungle. In one respect only did Djiâhângîr innovate. In 1600 he built the Mott Makâdîl or “Pearl Mosque” at Lahore, the first of its kind in India. Between Akbar’s style and that of Djiâhângîr little difference exists. The former had used colour ornamentation at Fathpur-Sikri; its later buildings were richly decorated with wall-paintings, and marble mosaic was used in the Dânîr Makâdîl. Djiâhângîr relied still more on masonic decoration, e.g. in Akbar’s tomb at Sikandra, but soon after its completion we find variegated marble mosaic supplemented by ðiţra durâ a. as in I’tîmâd al-Dawlâ’s tomb, and in the Tâdî we still find inlay almost exclusively used. Akbar had continued the use of enamelled tiles at Fathpur-Sikri for roofing and more sparingly for ornamentation; and they were employed by Djiâhângîr at Sikandra and by Wâzîr Khân, his vezîr, on his mosque at Lahore. Indeed this mosque is only noteworthy on account of this decoration. Akbar had also introduced painting on interior walls. Djiâhângîr’s wife Nûr Makâl or Nûr Djiân erected at Agra the tomb of her father, I’tîmâd al-Dawlâ, completed in 1628. Built almost entirely of white marble, enriched with semi-precious ðiţra durâ patterns, it foreshadowed the finest work of Shâh-Djiânâ’s reign. Djiâhângîr’s tomb, at Shâh-darâ near Lahore, has little architectural merit, consisting of a vast platform 209 ft. square, with a minaret at each corner. The façades are decorated with white marble let into the red sandstone and the flat roof with geometrical mosaics. The emperor’s remains are probably buried beneath an opening in the roof so that the rain and dew of heaven might fall on his tomb, as his earliest chronicler says 2). In brief the actual grave was hypaethral 3),

1) This view is contested in Archaeological Survey of India, Annual Report, 1903—1904, p. 19, but it was certainly the usual custom for a Mughal emperor, like any other good Musulman of his time, to build his tomb during his lifetime. The problem is fully discussed in The Tomb of Akbar, by E. W. Smith and W. H. Nicholls, published by the Arch. Survey of India, Allahâbâd 1908.

2) Muhammad Salîh Kâmbî, in his Shâh-Djiânâ-Name (also called the Amâl-i Sâîîk in Elliot and Dowson’s Hist. of India, vii., p. 123) cited in Arch. Survey of India, Annual Rep., 1906—1907, p. 13.

3) A contrary view, that the tomb had a closed
al-MUGHIRA

now afford certain 20, 4 sqql). extract in Medina. said is e brotherhood those Mecca. Muhammad's possible (Fr. derived title which the suppose make dies "they Allah, the Sura a.shu'ba Mecca. fighting left sufferings which the 13, their 4, Ansar made for that reason the Ansar, the emigrants, a name often applied in the Kur'an to those followers of Muhammad who had migrated from Mecca to Medina with him. The word is derived from hijra, which does not mean "flight" but breach, dissolution of an association based on origin, in the place of which a new connection is formed. The term mukhađîr is not applied to the Prophet himself but only to those who migrated with him and later made up a considerable portion of the population of Medina. The followers of the Prophet who were natives of Mecca were given the name Anṣâr [q. v.] to distinguish them from the Muhâjdîrûn, because the immigrants were mainly dependent on their help and active support after they had given up their homes and livelihoods in Mecca. It now became one of Muhammad's main objects to arouse sympathy for them, because in the early days after their migration they were for the most part in very needy circumstances. With the greatest eloquence he describes them as the particular favourites of Allah who will receive a splendid reward for their sacrifices "when those who have adopted the faith, who have migrated and fought for Allah's cause may hope for his grace" (Sûra ii. 215); "the sins of the emigrants and of those driven from home are forgiven" (iii. 191). Those who remained in Mecca and feared to migrate although the earth was large enough to afford them shelter are severely censured. He who emigrates finds a home on the earth and if he lilies Allah will reward him (lit. 107). It was however at first only an indication of a future which had not yet materialised, and in addition to these rosy utterances (cf. xvi. 43; vii. 75; xxii. 57) the Prophet made more practical efforts to help those who were living in difficult circumstances. A portion of the plunder taken in fighting was given to the poor emigrants who had been driven from their possessions in order to aid Allah: "they are the trustworthy" (lix. 8). In order to make the bond between them and the Medine to as tight as possible it is announced in Sûra vii. 73 that the emigrants who had left their homes to fight for the true religion and those who gave them shelter (cf. Ibn Hishâm, p. 321 sqq.) and assistance (the Anṣâr) should enjoy rights of kinship with one another while on the other hand, those, who while adopting Islam had not migrated, should not have any rights of kinship. According to the usual interpretation, this passage refers to the peculiar bond of brotherhood which Muhammad instituted between each emigrant and a Medinese believer, an explanation which is however not quite certain as the passage perhaps only expresses a general principle (cf. Fr. Buhl, Lehren Muhammed, p. 209). Besides, the usual exegesis sees in the regulations for inheritance (Sûra iv. 13, 15) a proof that this special bond was very early abolished again.

The high esteem in which the emigrants were held finds expression in Sûra ix. 20, where we read "those who believed and migrated and expended blood and treasure in fighting for the cause of Allah, occupy a higher position (than other believers); they are a fortunate ones". Muhâjdîr in this way became a title of honour (cf. Sûra xxix. 25 where Lot is so called). Individuals who had migrated not to Medina but to Abyssinia also proudly called themselves mukhađîr (see Fr. Buhl, op. cit., p. 172). But the real "migration" was that to Medina in which the Prophet himself took part. The number of the Muhâjdîrûn gradually grew as the increasing power of Muhammad from time to time induced Meccans to leave their heathen city and go to Medina. It is to them that Sûra viii. 76 refers, where those who adopted Islam later than the first emigrants who migrated and afterwards fought alongside of the older Muhâjdîrûn are acknowledged as belonging to the community ("they are of you"). After the treaty of Hûdâibîya [3. v.] in particular, we hear of Meccan women who left their pagan husbands and went to Medina where in accordance with Muhammad's interpretation of the treaty they were not surrendered if they were otherwise the stock of Meccan women (see Sûra ix. 11 sqq.). Thus the Muhâjdîrûn, later and earlier, formed an increasing element in the population of Medina, whom Muhammad often mentions along with other sections of the community as possessing equal rights with them (e.g. Sûra xxxiii. 6, 49) in which connection it should be noted that Muhâjdîrûn is never, as was the case among the Anṣâr, used in genealogies.

That these emigrants were specially dear to Muhammad is easily intelligible, for they had shared his sufferings in Mecca and made the greatest sacrifices for him and included in their number men who had adopted his teaching out of pure conviction. With the occupation of Mecca, the migration ceased while the Muhâjdîrûn remained as a separate highly honoured body. It is natural to suppose that a certain amount of rivalry might easily arise between them and the other elements of the community, and that there was actually a certain amount of friction between the emigrants and the Medine is evident from the fact that in the troubles after the Prophet's death the Medine endeavoured to set up one of their number, Sa'd b. U'ba'da, as successor to the Prophet. The attempt failed through the energetic action of 'Umar, Abû Bakr and Abû U'ba'da, and the leadership of the community remained in the hands of the Muhâjdîrûn until the descendants of Muhammad's old opponents in Mecca seized power for themselves.

Bibliography: The biography of Muhammad, especially Ibn Hishâm, ed. Wustenfeld, p. 541 sqq. (FR. BUHL)

MUIHÂL [see MÂâTIRK]

AL-MUHALLAB b. ÂSHI:"SUFA, ABU Sa'îd AL-ÂZDI, an ARAb geNerAl. Al-Muhalab is said to have been born two years before the death of Muhammad. In the reign of Mu'awiya he undertook a campaign against India and occupied the country between Kâhil and Mulfân (44 = 664-665). He next distinguished himself in the expeditions of the governors of Khurâsân against Samarkand. Then however, he left the Umâyядs and joined the anti-Caliph 'Abd Allah b. al-Zubair who gave him the governorship of Khurâsân. When he was just about to start for there, he was appointed commander-in-chief in the war against the Azrâkis.
following the precedent set by Bābur. The sarcophagus is of white marble, inlaid with *pιστρα δουρα*, and it stands in an octagonal chamber 21 ft. high and 20½ ft. in diameter. This chamber is enclosed in nearly solid walls of masonry. 56 ft. thick on all sides, and access to it is afforded by two oblong apartments, one on each side, but it does not open into any of the forty other rooms behind the arches which surround the structure, each façade having a central arch with five smaller arches on each side.

Under Shāh-Djāhān (1627—1658) Mughal architecture attained its zenith. One of his earliest buildings was the incomparable Tādž Mahāll [q. v.], begun the year after the death of the empress, Anuḍjān, and finished by Mumtāz Mahāll, or the “Chosen One of the Palace”. For himself Shāh Džahān planned a corresponding tomb of equal magnificence on the opposite bank of the river Džamnā, but avarice did not carry out the scheme, probably because it savoured of paganism. Considerable controversy has raged over the question of its architect. Shāh-Djāhān’s style was essentially Persian, with an indefinable difference of expression, and it was sharply distinguished from those of Iṣpahan and Constantinople. With the constant use of white marble, sumptuously decorated with *pιστρα δουρα*. Coloured tiles had by now become rare. Spacious grandeur was combined with feminine elegance, to which inimitable open-work tracery contributed. In the mosques colour was eschewed, and the finest art is found in the Pearl Mosques at Asgra and Dihlī. The former was built in 1646—1653. Meanwhile Shāh-Djāhān had founded Shāh-Djāhān’s, the great palace near modern Dihlī, recently restored to something like its pristine beauty. A Persian engineer, All Mandal Khān, had tapped the Džamnā 6 miles above Dihlī, and his canal fed the new capital with many streams. The most favoured of them was the Nahr-i Bihisht of “Stream of Paradise”, which was so named by Shāh-Djāhān himself. It fell in a cascade down a marble chute in a pavilion—the Shāh Burj—a kind of terraced garden which bordered the Hayāt-i-Bahāsh (“life-giving”) garden, it traversed the chain of stately edifices that lined the eastern wall of the Palace—the Ḥammām, Divwān-i Khāss and Khwāh-gāh—silently gliding beneath the Mian-i Inṣāf (“Balance of Justice”) across a sun-bathed court into the cool of the Intiyyāz Mahāll or “Palace of Distinction”, styled later the Rang Mahāll Kālān or “Greater Colour Palace”, from its elaborate painted decoration and gliding. Set on a marble terrace which formerly swept from end to end of the court, it overlooks the Džamnā whose course then flowed along the base of the red sandstone walls. On the West an orchard separated it from the Divwān-i-ʿAmm. Thence, still southward, it passed through the Lesser Rang Mahāll, the Mumtāz Mahāll and other buildings of the imperial zanāna. Thus Dihlī combined the Mughal love of open gardens, walled by running channels, with their passion for architectural beauty. It preserved Bābur’s love of nature, and perhaps added to it a sense of landscape which also found expression in the Mughal gardens of Kashmir.

With Awrangzēb (1659—1707) set the period of decline, due to doubt largely to that emperor’s orthodox prejudice against art, but partly also to his conscientious parsimony. He declined to complete Shāh-Djāhān’s tomb, ostensibly on the ground of expense, but also perhaps because he regarded the scheme as savouring of paganism. Yet he constructed at Benares the great mosque with its lofty graceful minarets, built a copy of the Dihlī mosque at Lahore, and at Awrangzēb’s imitation, though on a small scale, of the Tādž in the tomb of his favourite wife. Awrangzēb’s own tomb, at Khuldābād, a hamlet just above the caves of Elīn, is mean and insignificant. But some of his buildings, in spite of their incipient decadence, are the last great examples of the Mughal style. His Džāmī or Bāzāshīhi mosque at Lahore is pleasing in form, though the marble ornamentation of its great central and front façade is very inferior in detail to its prototype at Dihlī. Its three domes of white marble and the imposing gateway of red sandstone and marble leading to it from the Hazāri Bāgh are its finest features.

Near Dihlī the tomb (1756) of Nawwāb Saqīdar Djang, Ważīr of Oudh, is a passable copy of a Hamāyūn’s mausoleum, but its interior is marred by indifferent plaster decoration.

At Lucknow, the capital of the Nawwāb Ważīr of Oudh, the buildings erected by that dynasty and its nobles hardly deserve to be classed as Mughal. The one exception is the vast Imāmābār, built by the fourth Nawwāb, Asāf al-Dawla, in 1784. Conceived on a grand scale for the celebration of the Muharram according to the Shi’ite rite, its details will not bear close examination, though its solidarity is impressive. The buildings of the Muhāmmedān dynasty of Mysore (1760—1777) have still less claim to be regarded as Mughal.

To conclude, the architecture of the Mughals was, like all their arts, a resultant of many forces.
But its essential distinction over Hindu art lay in its balanced use of purely Indian and imported technique: while it recognised the value of symbolism in its structures, it never made its arts merely a vehicle for symbols, as Hindu sculpture tended to do.

A comprehensive and critical bibliography of the Muhammadan Architecture of India by K. A. C. Creswell appeared in *The Indian Antiquary*, vol. XI. (1922).

**MUGHAMAS**. It is usually supposed that the Karuqu, a valley near Mecca on the borders of the sacred area. According to tradition, Abrah a[q.v.] ordered his army to encamp here when he was going to attack Mecca, but was prevented from doing so as birds slew his soldiers by dropping stones on them. In Mughamas is shown the tomb of the Ta'if Abú Righal who died here after acting as guide to Abra hae. He was so hated by the Meccans for this that the custom grew up of casting stones on his grave [cf. *AL-DJAMARA*]. Whether this explanation is true or not is unknown, but in any case a verse of Hassan b. Thabiti (ed. Hirschfeld, *LXII.*) shows that in the time of the Prophet the mention of his name was sufficient to insult the Ta'ifs. The antiquity of the custom of stoning his tomb is shown by a verse of Džarir: "When al-Farazdak dies, stone him as you stone the grave of Abú Righal!"

**AL-MUGHIRA B. SHUBA**, of the sept of the Abâf, a subdivision of the Thâf, further a member of the clan of the Banû Mu'attib — guardsian of the sanctuary of al-Lát — and nephew of 'Urwa b. Mas'mid [q.v.], companion and martyr. For having attacked and plundered some travelling companions during their sleep, he was forced to leave Ta'if, his native town, and came to Medina to offer his services to Muhammad. The latter used him to attract the Thâkif to Islam and after the submission of Ta'if, sent him to this town to superintend the destruction of the national sanctuary and the liquidation of the treasure of al-Lát. As the caliphate of Abd Bakr, although he never succeeded in attaining to one of the great posts which were reserved for the Karâsh, Mughira was able to keep a position in governing circles.

Omar, while under no illusions about his morals, appointed him governor of Basra. A scandalous incident temporarily interrupted his administrative career. He was accused of adultery. The evidence was overwhelming: instead of having him stoned, 'Omar only dismissed him. Mughira holds in tradition the record for marriages and divorces: the figures of 300, 700 and 1,000 are given. In the year 21 (642), recalled to public life, he was appointed to the important governorship of Kufa. His slave Abû Lulu'â, who lived in Medina, assassinated the Caliph 'Omar. Under 'Othmân, Mughira retired to private life. In the reign of 'Ali, he withdrew to Ta'if to watch the course of events. He went without having been invited to the conference of Adhrûṣ [q.v.]. In 40 (660), taking advantage of the general confusion that followed the assassination of 'Ali, he produced an alleged certificate of appointment from Mu'âwiya and took over the control of the annual pilgrimage.

The great Sufyân was able to appreciate at their true value auxiliaries of the stamp of Mughira, one of the chief dikîya of his time, the man "who could get himself out of the most hopeless difficulty": "It (was said) he were shut behind seven doors, his cunning would have found a way to burst all the locks". Of shocking morals, free from any attachment to the 'A'id party, equally free from any claims to the caliphate, free from enmity to his neighbours as well as the narrow-mindedness of the An'sî clans, a member of the intelligent and enterprising tribe of Thâkif, everything attracted Mu'âwiya's attention to him. In the year 41 (661), this Caliph appointed him governor of Kufa, a region disturbed by the intrigues of the Shâ'a and the continual risings of the Khâridj. Mughira succeeded in non-compromising himself with the former: he was content to advise them to avoid any too striking outburst. Now nearly sixty, the able Thâkif felt the unusual ambition of remaining where he was and of finishing his troubled career in peace and honour.

This opportunist, who had come over to the Sufyâns after cool calculation, felt little desire to sacrifice his own peace and leisure for the consolidation of the Omayyad dynasty; he was solely concerned with keeping on the right side of the sanguine Mu'âwiya. The sudden rising of the Khâridj leader Mustawrid failed to disturb his tranquillity. With remarkable cleverness he was able to let loose against these rebels their born enemies, "the fine flower of the Shâ'a". Whichever was victorious, it could not fail to lighten his responsibilities. By setting them against one another he rendered harmless the most dangerous elements of disorder in his province. The crushing of the Khâridj enabled him to breathe freely.

Thanks to this combination of mildness and astuteness, and by knowing when to shut his eyes, Mughira succeeded in avoiding desperate measures against the people of the Irâk, who were a continual source of trouble, and succeeded in retaining his position. He was even regretted by his former subjects after he was gone. Not quite satisfied, Mu'âwiya thought of breaking this lieutenant of his, who was playing a double game. Mughira was always able at the opportune moment to provoke troubles which required the continuation of his services. In this way he prepared the return to favour of Ziyâd b. Abihî [q.v.], destined to be his successor. He is also said to have disarmed the Caliph's suspicions by suggesting the plan of proclaiming Yazid heir-apparent. As the general situation had considerably improved in the Irâk and order prevailed, on the surface at least, the Caliph left him in office till his death, the date of which is uncertain but which must be placed between 48 and 51 (665—671). Mughira died of the plague at the age of about 70.

Baghdad. 

Al-Muhallab, the vizier of Mu'izz al-Dawla. He belonged to Basra and was born in Muhamrām 291 (= Dec. 953). In 334 (945) when Mu'izz al-Dawla was marching to pollen, he sent him in advance to negotiate with the Caliph and on Ilmād I, 27, 339 (= Nov. 950) al-Muhallab was appointed vizier. He was given the supreme command in the war with Irān b. Shāhīn (= Mu'izz al-Dawla) and had brought him into a very precarious position when he himself fell into an ambush and could only save himself with difficulty, whereupon Mu'izz al-Dawla had to conclude peace with Irān in 341 (952–953) the ruler of Ommān, Yusuf b. Wadīhī undertook a campaign against Basra; al-Muhallab, however, anticipated him, occupied the town and defeated Yusuf. In the same year, he fell into disgrace but was able to retain his office and the good relations between Mu'izz al-Dawla and his vizier were restored. A few years later, Mu'izz al-Dawla equipped an expedition against Ommān and put al-Muhallab in command. The latter set out in Ilmād II, 352 (= June/July 955), but soon fell ill and decided to return to Baghdād. He died on the way on 26th Shabān of the same year (= 19th Sept. 955) and was buried in Baghdād. On his death Mu'izz al-Dawla conferred all his property, a measure which aroused general indignation.

The Encyclopedia of Islam, III.
Muslim historians make him usually 40, sometimes 43 years old at the time of his call, which, taken with the already mentioned data, would put the date of his birth at about 570 A.D. When however tradition puts the date of his birth in the "year of the Elephant" (see Qur'an and Sūra cxxv.), this is a result of an unhistorical combination, for Abrahah's attack on Mecca must have taken place considerably before 570. But Lammer has cast various, not unfounded doubts on the whole chronological calculation itself; in particular the fact that Muhammad's migration to Medina and his resultant activities there do not give the impression that he was then a man already in the fifties. In reality 580 or one of the years immediately following would suit very well as the date of the Prophet's birth, so that the Qur'ānic expression *ummar* would mean about 30 years.

The name "Muhammad" occurred previously among the Arabs (e.g. Ibn Daud, ed. Wustenfeld, p. 6 sq.; Ibn Sa'd, ii. 111 sq.) and therefore need not be regarded as an epithet only adopted later in life by the Prophet. As to Muhammad's descent, several old poems (e.g. Hassān b. Ḥālitī, ed. Hirschfeld, Nos. 23, 77; Abū in Ibn Ḥishām, p. 256, 1; cf. also on Ibn Kathīr, H. i. 21, Al-wāli b. Mūlik in Ibn Ḥisham, p. 500; on Ḥanābī: Ibn Ibrahīm, p. 130; on Abū Lahab: Hassān b. Ḥālitī, No. 217, 3) confirm the statement of tradition that he belonged to the family of Ḥāshim; and that he was recognised by them as one of themselves is evident from the fact that only the protection of a fairly powerful family could have made it possible for him to stay so long in Mecca in face of the hostility of his fellow-citizens (cf. the words put in the mouth of the enemies of Shu'āiba [Sūra xi. 93]: "Had we not had consideration for thy family, we would have stoned thee"). The Ḥāshim family related to the Banū Muttalib (Ibn Ḥishām, p. 536, 4) was apparently one of the better class families of Mecca (cf. Ibn Ḥishām, p. 821 and the words of the poetess, Sima, p. 81, 9, which however might be interpreted merely as a polite formula; cf. Song of Solomon, viii. 2; Dalman, Palästinische Divan, p. 190, 255 sq.; E. Littmann, Neurahritische Volkspoesie, p. 141). On the other hand, the Meccan enemies of the Prophet say in Sūra aab. 30 that they would believe in him more readily if he had been one of the prominent men of the two cities (Mecca and Taif). The Ḥāshim family in any case could not compare with the most prominent families like the Makhzūm and Cmāya: and what is recorded of the needy circumstances of Muhammad and some of his relatives suggests that the Ḥāshim family must have been exceedingly poverty-stricken at this time. On his mother's side he had connections, which are not clear to us, with Medina (cf. Sima and Ḥāshim); according to Māsā b. 'Ukṭa the Medinaite called Al Ḥāsib their "father's son" (cf. Ibn Sa'd, i. 18, Sid. 12). We know nothing more that is definite about his once-try, for most of what is related is legend. His father, who is said to have died before his birth, is quite a colourless figure, whose name 'Abd Allah is perhaps only a later improvement on a heathen name. His grandfather is called Sa'dib or 'Abd al-Muttalib; the connection between these two names is however as obscure as that between 'Abd al-Muttalib and the oft mentioned family of Mutallib (Hassān b. Ḥālitī, No. 184, 4; Ibn Ḥishām, p. 230, 13; 536, 14) or the Banū Shaibā (Ibn Sa'd, i. 94, 6; ii. 124, 92).

The only thing certain from the Qur'ān is that Muhammad grew up as an orphan in very miserable circumstances (Sūra, xcxvii. 6 sq.). The first tangible historical figures among his relatives are his uncles: 'AbdṬalib, with whom tradition records that he found a kindly reception, 'Abdā bn Ḥamza [q. v.] and 'Abd al-Uzza [cf. Abū Lahab]. On theidylic little story of the boy's stay with the latter, see the article AL-'UZZA. The story of the cleansing of his breast (a similar story is related of Umāya b. Abī 'l-Sālih; cf. Goldziher, Abk. i. Arab. Phil., i. 213) is a materialisation of Sūra xcxv. 1.

In Sūra xxiii. already quoted, we are told that Allāh made the poor orphan prosperous. Corresponding to this in tradition is the marriage of Muḥammad with a rich merchant's widow, in whose service he had been [cf. Khadija]. She bore him four daughters, who play a part in later history, and several sons all of whom died in infancy: one of them at least must be historical as his pagan name 'Abd Manāf (Sprenger, i. 199 sq.; Caetani, i. 173) could not be invented by later writers; such a fiction in any case, as posthumous comfort to alleviate the disgrace of the lack of male heirs (Lammens), would be very inadequate, if it had to make the sons die against the will of their father. The interest in business matters apparent in the Qur'ān (Sūra lii. 194; liii. 9 sq.) as well as his fondness for business expressions (cf. however similar expressions in the Wisdom of Solomon, iv. 20; Pirke Abot, iii. 16; iv. 22; Horn, Gesch. d. Pers. Lit., p. 10) are very natural if Muhammad took part in business transactions as Khadija's assistant and husband. On the other hand, it would be wiser to set aside the alleged trading journeys into neighbouring lands, which he is said to have made even as a child with Abū Ṭalib and later in Khadija's service: in the form in which they are given, they have distinctly apologetic tendencies [cf. Bahira] and are quite unnecessary to explain his later religious development. Sūra xxxvii. 137 sq. in any case is the noblest piece of the history passed by Liri's dwellings on a journey. Nor did Khadija equip trading caravans independently. Equally little confidence is to be placed in the story, which is given in the usual mārāch style, of the part played by Muhammad in rebuilding the Ka'ba.

While the questions already raised are really of no great importance, the problems which concern Muhammad's début as a religious reformer are of the utmost importance but offer the greatest difficulties to the student in view of the insufficient material available in the sources. The main question is: whence did Muhammad, who everywhere betrays a great receptivity for foreign matter, get his ideas? That he originally shared the religious conceptions of his milieu is in every way the most natural supposition — his uncle Abū Lahab was an ardent defender of paganism and Abū Ṭalib, who was like a father to him, died without adopting Islam and is confirmed not only by the name of his son already mentioned but also by Sūra xxii. 3. "God said to him, "Write what thou hast and guide thee" (cf. also lxxii. 52: "Thou didst not know what book or belief was") and the statement of Ibn al-Kalbi that he once brought a sheep as a sacrifice to al-'Uzza.

Distinct traces of his early beliefs survived in his later life. He shared the belief of his fellow-countrymen in ḥijāma and ḥawāf, in evil omens etc. Mecca with its sanctuary was a sanctified place in his eyes (Sūra xxvii. 93; xxviii. 57; xix.
07: ev. i sqq.; evii. i sqq.), he admitted the disciples offered them into the true worship (evii. 2) and allowed his followers to take part in the pilgrimage (vii. 29 sq.) so that it was all the easier for him later to accept it as one of the main features of his religion (see below). We shall later discuss a relapse into paganism, which however was speedily brought back by the fact that he was only gradually led to attack on principle the gods of Mecca. He was also influenced by the manes of the old Arab inspired soothsayers (cf. on the modern Khaled: Musli, Die Kultur, 1910. p. 10) to the extent that he adopted their peculiar form of speech with mysterious oaths and rhymed prose (zafid); cf. Gollner, Abhandlungen i. arab. Philol., i. 59 sqq.; Mas'udi, Mafid, iii. 381 sqq.) when he began to announce his revelations. All his earlier conceptions were however driven out except for such trifling residua as these, when a new world of ideas began to fill him to an ever increasing extent, until he was finally compelled with irresistible force to come forth and proclaim them. These new ideas were the conditions in these passing away "of a scripture"— Judaism and Christianity—and he was conscious of this, in as much as he repeatedly emphasises the agreement between his teaching and these older religions of revelation as irrefutable evidence of its truth (cf. the significant passage: "If thou art in doubt about what We have revealed, ask them who read the scripture before thee", Sura x. 94). The only question is, in what way did he become possessed of these new ideas. This much only is certain that he did not get them from his own reading of the holy scriptures of the Jews and Christians. The word ummati (q.v.) applied to him (Sura vii. 156) signifies, without committing us to anything about his ability in reading or writing—as a merchant he must have had a certain knowledge of these arts—that he was an illiterate layman, who was not able to read the Hebrew or Greek Bible, and that this was actually the case, the Kur'an shows on every page. For this explanation of the term Wensinck, Acta orient., ii. 191 and (citing the Hebrew ummat ha-'elüm) Horovitz, Keramische Untersuchungen, p. 52 would put "pagan", Hanân, but, although this might fit some passages, it could hardly suit Sura ii. 73 where there is a reference to a difference between the "possessors of a scripture" and the ummiyyûn, among the Jews. The usual explanation suits well enough, as it is certain and it is confirmed by the Kur'an everywhere that, while Muhammad had some notion of the books of the Bible, the Hebrew and Greek Bibles were closed books to him. Utterances like the saying that Jesus "received" the Gospels (iii. 44; v. 50; livi. 27) and that it should be "observed" like the law (v. 70, 72) clearly show that he did not know its real contents. Sura xvi. 105 contains a quotation from the Psalms, but this is quite an isolated instance and he knew nothing of the Psalms as a part of the Old Testament (vii. 57). The parable of the camel and the eye of a needle (vii. 38) proves of course no literary dependence and the alleged description of Muhammed and his followers in the Gospels (xvi. 29) shows what he could build up on a vague and collection of something he had heard. On the other hand the story of Joseph (Sura xii.), show that he was indirectly dependent on the Bible and not only on the Old but also on the New Testament (cf. what he relates of Mary, Joseph, Zacharia and John); the story of the Seven Sleepers (cf. Asâb Al-Kahf and M. Huber, Die Wanderungen von den Siebenschlafenden, 1910) also presupposes Christian authorities. One therefore cannot blame his enemies when they said that he had foreign teachers (xvi. 105; xxv. 5 sq.; xlv. 13), which is certainly not refuted by the reply in xvi. 105. Further it is clear from the Kur'an that he endeavored to get hold in this indirect way with the books of the Bible in their simple form, but that his authorities had drawn on Midrashic and Apocryphal works, which is easily explained by the varied and luxuriant character of the religious tendencies in Arabia. In particular what he tells of the birth and childhood of Jesus (xxii. 22 sqq.; iii. 41; v. 109 sqq.) comes from Apocryphal sources, and his account of the death of Jesus (v. 156) has parallels among the Manichaean and Buddhists.

To state exactly what religion exercised particular influence on Muhammad's ideas is hardly possible in view of the scanty information available about these new ideas; in particular the original sources which indicate that he was influenced from various sides, primarily by Christian sects, but later also by the Jews. There was ample opportunity to become acquainted with both these religions from caravans passing through to Syria or the lands of the Euphrates, from communication by sea with Abyssinia, and from foreign merchants visiting the great markets: and not only in the more advanced districts of South Arabia, but also among several Bedouin tribes (e.g. Bakr, Taghilib, Hamâa, Ta'yî), Christianity had established itself, while Jewish colonies had settled in Medina and the oases north of it. But a citizen of Mecca in particular had repeated opportunities of coming in contact with Christians and Jews. The great festivals attracted people from all districts and it is expressly recorded that Christians also took part in the pilgrimage (Sinoek Hurgronje, III Meckanische Feest, p. 28, 128, 159); in addition there were Christians captured in war and immigrants (ghassâlûn living in Mecca (Asâkî, ed. Wustenfeld, p. 97; 458; 456; cf. the Christian slave in Tâ'fî: Ibn Ilišâm, p. 250 sqq.). In the Kur'an alongside of expressions coming from the Aramaic, several Ethiopic loanwords are evidence of religious influence from Abyssinia (cf. Noldeke, Neue Beiträge zur semitischen Sprachwissenschaft, p. 47). Recently scholars have been found of seeking a main source of Muhammad's ideas and their formulation in the religious development which is alleged to have taken place in South Arabia. This is certainly a possibility to be reckoned with, but so long as we know so little of South Arabian religious history and in particular so long as no intermediate South Arabian forms are found for the Abyssinian loanwords in the Kur'an we are better to set it aside. It should also be noted that Muhammad in his stories of the prophets frequently mentions the Arab tribes of 'Ad and Qimâniyy (q.v.) but only rarely touches on the older history of South Arabia (Sura xxvii. 29 sqq.; xxxvii. 21 sqq.; xlvii. 26; xlviii. 13 on the other hand hardly lxxvii. 1 sqq.; cf. M. Hartmann, Die arabischen Früge, p. 474); in the utterance ascribed to the Prophet (Bukhari, ed. Kcherl, iii. 56): "Belief and wisdom are Yemeni", Yemeni, as the context shows, only means "of Yemeni fashion", i.e. cultivated, human, in contrast to Bedouin uncoarseness. The main objection however, is that the hypothesis would only mean
an unnecessarily circuitous route, for Muhammad always appeals directly to his agreement with Christianity, without suggesting any remodelling of these religions through a South Arabian medium. And the stronger one endeavours to make Yemenite influence in religious matter in M.-cc., the more unhistorical is the supposed opposition of the Meccans to Muhammad. Much greater weight should be given to Tor Andre's treatment of the question of Muhammad's dependence on Christianity. After calling attention to the wide dissemination and dominating position of Ne’torianism in the Persian province, which is of importance as it must have been much more accessible to Muhammad than Monophysitism, he points out the close relationship between Muhammad's ideas and the ecclesiastical writings of the Syrians, the contempt for worldly possessions, the strong condemnation of the arrogance and sinfulness of the unbelievers, the warnings, against laughing, joking and careless speech, the emphasis on the significance of abstaining as an atonement for sin, the descriptions of Paradise (we even find the hours in Ephraim), and the like. Alongside of these very intricate similarities, there is however one point to be remembered in which the relationship is somewhat modified, namely, Muhammad's Christology. It is, in any case, remarkable in several respects; for it is distinguished from his other accounts of prophets and approximates to the teaching of the Church in its orthodox fashion, e.g. in the account of the birth of Jesus and his miraculous gifts and in the undeniable echoes of the doctrine of the Logos (Surah iii. 34; iv. 169). But already in the Meccan period (e.g. Alii. 57 sqq.) Muhammad vigorously rejects the idea of Christ being the son of God and definitely denies that he had ever aspired to anything of the kind for himself. Here it is not sufficient to point to the Ne’torian since they did not deny that Christ was the son of God. When Muhammad from the first insists on the complete agreement of his teaching with the old revealed religions, i.e. with Christianity also, he seems to have been influenced by a form of Christianity where this dogma occupied a very unimportant position.

What one can deduce in this way from the Koran about Muhammad's development is supplemented in an important way by tradition, according to which he was not alone in his search for a purer religion. Various individuals are named who, dissatisfied with old Arab religion, were seeking for a more intellectual faith, in particular a cousin of Khadija, Wajshu b. Nafis. Even if these traditions cannot be wholly in the form in which we have them, as they have been influenced by later Muslim ideas, yet they certainly have a historical basis, because they are not taken from the Koran and are not intended to show Muhammad in a more favourable light. In addition there are the Imanfi. [q. v.] of whom the traditions of the Arabs have preserved only a very hazy picture, and Unayzah b. Abi Ta’talk [q. v.] whose poems often have points of contact with the Koran, which would be of great importance if they could even in part be regarded as genuine [cf. also the talk of Zachari].

While Muhammad was in a state of great spiritual excitement as a result of contact with the religious ideas that had penetrated into Arabia, something happened which suddenly transformed his whole consciousness and filled him with a spiritual strength which decided the whole course of his life; he felt himself called to proclaim to his countrymen as a prophet the revelations which were communicated to him in a mysterious way. When Caclani wishes to see in this the result of a long development and common reflection, this is certainly not incorrect. We have much rather every reason to treat the tradition which tell of a sudden outburst of conviction that he was called to proclaim the word of God. For this view we have the analogy of prophets in general, from the Old Testament prophets down to Joseph Smith; and no long drawn reflections but only an overwhelming spiritual happening could give him the unshakable conviction of his call. This is also confirmed by several passages in the Koran, which point to a deciding moment, definite in time (xlv. 2 sq.; xvii. i; ii. 181), in which connection it is of minor importance whether it is possible to identify the revelation of the call itself among the Suras of the Koran (according to a common opinion. xvi. 1 sqq.; according to some, on the other hand, lxiv. 1 sqq.), especially if one must the Koran. The very earliest revelations were not written down. If this was really the case, however, the reason certainly was not that they were deliberately suppressed, since a revolution by change of his world of ideas into its diametrical opposite while retaining the earlier apparatus of inspiration would be quite an untenable hypothesis.

The Koran gives only a few hints about the manner of these inspirations; a veil lay over them which the Prophet either could not or would not raise completely. Perhaps the wrapping up (lxiv. 1; lxiv. 1) refers to a preparation for the reception of the revelations in the manner of the old Arab deities; but we are taken farther in an indirect way by the oft recurring accusation of his enemies that Muhammad was possessed (madrân), a soul-seeker (kâhu), a magician (âfarî), for they show that in his moments of inspiration he made an impression similar to those figures well known in ancient Arabia. In addition there are several traditions which describe his condition in such moments more fully and may undoubtedly be regarded as genuine, since they are the last thing later Muhammadanism might be expected to invent, while these mysterious seizures afforded to those around him the most valid evidence for the superhuman origin of his inspirations. In Byzantine authors we find it stated that the Prophet was an epileptic (e.g. Theophanes, Chronographia, ed. de Boor, i. 354); and modern psychol., recognise the correctness of these descriptions of his attacks and we must of course have it to them to define the exact nature of his condition. From the scientific point of view the fact is that the voice heard by him only uttered what he had from time to time heard from others and which now cropped up out of his subconscious. The scientific student therefore does not see in Muhammad a discoverer but fully agrees with the impression of sincerity and truthfulness which his utterances in the older revelations make [e.g. Sura x. 16, 20, 113; xviii. 85 sq.; lxiv. 44: lxav. 16 sq.; cf. vii. 202; xvi. 100; the cognate imperatives lxav. 2; xvi. 1; the self-denunciation lxav. 1 sqq. etc.] along with the fact that he unconditionally endured years of hostility and humiliation in Mecca in the unshakable conviction of his lofty task. It is more difficult with the later Medine revelations, in which it is often too easy to
detect the human associations, to avoid the supposition that his paroxysms (e. g. at the battle of Tabuk: Ibn Hishâm, p. 444: in the slandering of Nâ'imah, p. 375, 2) could not be artificially brought on, and there is even a tradition which makes 'Abd Allah say to the Prophet: "Thy Lord seems to have been very quick in fulfilling thy prayers". It must not be forgotten however that nature like this, without actually being conscious of it, are able to provoke the same states of excitation, which earlier arose without their assistance; and so probably not only were his followers in Medina (cf. Ka'b b. Malik in Ibn Hishâm, p. 614, 9) but even he himself convinced, that the spirit was continually hoversing about him to communicate the revelations to him. By this we do not of course mean that in his ecstatic condition he received the divine communication as extases, as we now have them in the Qur'an: only the foundations were given him, which he afterwards developed into discourses of greater length. Since in doing this he used the external forms of the old Arab soothsayers it is natural that the Meccans took him for one, but it does not follow that he was spiritually akin from the first to those soothsayers who were inspired by djinn. The indignation with which he objects to being associated with them is not a proof of such a relationship of which he wished to rid himself. Simply because he was conscious of the similarity, but a natural result of the fact that the enlightened Meccans saw in persons of this kind ludicrous fanatics of the lowest kind, while he was firmly convinced that he was filled with quite a different spirit, one quite unfamiliar to his enemies.

While it is in this way possible with the help of the Qur'an and Tradition, to get an on the whole anti-factory picture of Muhammad's development and his condition when prophesying, he himself gives in the Qur'an quite a different interpretation of the revelations that came to him, which is based on a peculiar theory which he apparently did not invent himself but adopted from others. The fundamental idea in it is the conception of a divine book existing in heaven, al-Kitâb, a well guarded book, which only the pure may touch (xii. 56 sqq.), a well guarded tablet (lxxv. 21 sq.), the mother of the book (xlii. 2 sq.), on in audible leaves, exalted and pure, by the hands of noble and pious seraphs (lxxv. 13 sqq.). He himself did not read this book, as E. Meyer erroneously thinks, but it was communicated to him orally piece by piece, not in its original form but in an Arabic version intelligible to him and his countrymen (cf. xlii. 1; xiii. 37; xii. 112; xvi. 192 sq.; xlii. 2; xlv. 58 and especially xlii. 44: "if we had made it a Qur'an in a foreign tongue, they would say: Why are its aylâh ("signs", from the small sections of the text) not expounded intelligibly, a foreign text and an Arab reader "). In addition there is the fact that Muhammad was aware that the complete contents of the book were not communicated to him, as he expressly states e. g. in the stories of the prophets, not all of which were related to him (cf. 178 sq. iv. 162) he received the communications orally, Allah reassuring him to the substance of the separate sections (lxxv. 16 sqq. etc.), while in several passages it is stated more precisely that the revelations were communicated through the Spirit (xvi. 192 sq.; xvi. 104; xlii. 52) or the Angel (xvi. 2; xv. 8; cf. iii. 5 sqq.; lxxxi. 23 sqq.); a late passage of the Medina period (lvi. 91) is even more precise in saying that they were communicated by Gabriel. References to visions are rare (e. g. the encouraging apparitions in Sûn viii. 45; xliii. 27: the night journey must also have been a vision) and even in such cases the main thing is not what he heard (lxxi. 10; lxxxi. 16). These communications were the great miracle that was granted him, while he expressly and repeatedly says that the ability to perform miracles in the usual sense was denied to him (unlike Jesus).

From this book in heaven, the all-comprising contents of which are not by any means exhausted in the extracts forming the Qur'an, also came the older religions of revelation of the possessors of a scripture, whose religions, therefore in his view coincide with his, and as he often says, were confirmed by it (cf. Hâsan b. Thabit, No. 134, 9). This again is connected with a theory expounded by him of a line of prophets which began with Adam and of which he was the last and representative. His source for this idea was not Judaism, for he does not know of the great prophets who wrote books of the Old Testament; instead of them he mentions individuals, whom the Jews do not count as prophets, e. g. Lot, Joseph, Solomon, Job, etc.: on the other hand the fact that Jesus and John the Baptist are the last links in the chain of prophets clearly suggests a Christian origin, and certain parallels in more or less haphazardly gathered early Christian literature can be demonstrated. Of the prophets Muhammad relates a number of stories, which do not begin to appear in any number until the middle Meccan period when the Meccans were beginning sharply to reject his mission.

The ideas in the oldest, passionately excited inspiration, developed under a byzantine power of imagination rarely reached later, are very simple. They are based not on the dogmatic conception of monotheism but on the strong general religions and moral impressions which contact with older religions had made upon him, which was bound finally to lead to a breach with polytheism. In particular he was filled with the idea of the moral responsibility of man created by Allah and with the idea of the judgment to take place on the day of resurrection, which again points undeniably more to Christian than Jewish influence (cf. especially the introductory sounding of trumpets, not found among the Jews). To this are added vivid descriptions of the tortures of the damned and seductive pictures of the joys of Paradise, which are further of interest because they reveal Muhammad's strongly sensual temperament. Gradually monotheism was emphasized as an overruling basic idea and at the same time he attained a somewhat wider conception of the Deity. With all the vigour of an essential religious nature, he points to the wonders of everyday life, especially to the marvellous phenomena of man (in this connection cf. the poem of the Jew Samawal, cf. Jâmi' al-Tâhâ, ed. Ahlwardt, No. 20, 5). The religious duties which he imposes on him and others are simple and few in number, one should believe in God, appeal to Him for forgiveness of sins (xviii. 11), offer prayers frequently on the model of the Jews and Christians, in the night also (xii. 116; lxxix. 20: cf. lxxv. 25 sq.). He is also to observe the annual fast of the Jews (cf. x. 187 sq.), to give alms especially to those who are in need, free oneself from the love of delusive wealth and - what
is significant for the commercial life of Mecca — from all forms of cheating (xxvi. 182 sq.; lv. 8 sq.), lead a chaste life and not expose newborn girls, as the barbarous custom of the time was (according to Ṣūrah vi. 152, xvii. 53 from poverty; cf. al-Mubarrad, Ḳūfī, ed. Wright, p. 277: original passage perhaps a list of magic songs, when only girls had been born. Cf. Musil, Ḳūfī, loc. cit.). This is the ideal of the truly pious man who is called by the name of muṣūd (lxviii. 45; xxi. 108 etc.) or Ḳūfī (x. 105; xxx. 29; xviii. 4; cf. vi. 79 and the article). Cf. in this connection the list of Muhammad's precepts in Ḳūfī's poem (Ibn Ḥishām, p. 255: Ḳur'ānische Forschungen, p. 25 sq.).

From all this, it is quite evident that Muhammad had at this time no thought of founding a new religion. His task was only to be a "warner" (li. 59; xlv. 2; lxix. 45; lxxi. 11; lxix. 21 sqq.), in view of the approach of the ṯawras, to fulfill the divine judgment, to his countrymen, to whom his prophet had yet been sent (xi. 157; lxviii. 46; xxii. 3; xxxvii. 45; xxxvi. 51; no notice is taken here of Ḥūd and Sāliḥ) and as a result of the revelations granted him to give them, in the form of a lucid Arabic Qur'ān (see above), what the "possessors of a scripture" had in their scriptures, which were not accessible to the Arabs and thereby to save them from the divine wrath. The Jews and Christians also must therefore testify to the truth of his preaching (x. 94; lxvi. 45; xxvi. 197; xxvii. 52 etc.).

On account of the insufficiency of the sources, it is very difficult to ascertain in detail how Muhammad's relations with the Meccans developed. The Qur'ān contains only vague hints, which permit no chronological arrangement, while the traditions are very full but little reliable. Only one report, which Ṭawrā composed for the caliph ʿAbd al-Malik (Ṭabarî, i. 1150 sq., 1224 sq.), the value of which has already been indicated by Spenger, gives a brief but apparently trustworthy glimpse of the main events (cf. also al-Zuhîr in Ibl Sidî, i/1, 133). At first Muhammad met with no serious opposition and in not a few cases his preaching fell on fruitful soil; indeed in the words addressed to Sāliḥl (xi. 64) we may find a hint that he had at first aroused considerable expectations among the Meccans. All traditions agree that Khadija was the first believer, while they differ as to who was his first male adherent. In any case ʿAbî Bakr, the manumitted slave Zu'd b. Ḥârans, Zubair b. al-ʿAwwâm, Ṭalah b. ʿUbayd Allâh, ʿAbd al-Rahmān b. ʿAwf, Saʿd b. ʿAbî Waḳqâs, and Muhammad's cousin 'Ali [q. v.] were among his earliest followers. The majority of those who were won over by his preaching were however young and of no great social standing, while the well-to-do and influential held back (xix. 74; xxxiv. 30 sqq.; xxviii. 62 sq.; lxxi. 11; lxx. 1 sqq.; cf. the veiled references in vii 73; xi. 29; xvii. 17; xxvi. 111). This became still more the case when the full consequences of his ideas became clear to him and he openly attacked the religion of his native town; for the Meccans, to the majority of whom such devotional meetings had been a matter of complete indifference, now discovered that a religious revolution might be dangerous to their fairs and their trade. That this was the salient feature of their resistance to Muhammad is evident from the fact that he frequently endeavours to calm the fears of the Kūraish on this point: the Meccan sanctuary, he said, belonged to his god Allâh, whom the Meccans also recognised as the highest god (xxvi. 24; xxxix. 39; cf. Kâis b. al-Khaṣîm, ed. Kowalski, v. 14; xi. 12 where Allâh is the lord of the Ka'bah) and he will protect and bless his sanctuary, if they submit to him (xxviii. 93; xxviii. 57; xxix. 67; cvi. 1 sqq.). In addition there was the conservative attitude of these merchants in the field of religion and their animosity to new and fantastic ideas, particularly to that of the resurrection of the dead.

Traditions record at great length the persecution and ill treatment which Muhammad and his followers suffered at the hands of the Meccans. These descriptions are undoubtedly much exaggerated, for the object was to glorify the self-sacrifice of the believers and no doubt also to put the old patrician families of Mecca in an unfavourable light. But it is equally certain that there is some foundation for these stories, and most of the persecutions (jâhiz) which twice forced the believers to migrate, and in the Kūrān there is mention of "trials" which their opponents inflicted upon the believers, men and women (lxxxi. 10), and it is expressly mentioned that the influential wished to prevent Muhammad from praying (xxvi. 9 sq.; cf. the veiled account vii. 84), while on the other hand, the complaints about what they would have liked to do should not be taken at their face value without more ado (viii. 26; xxxvi. 17; xvii. 78; cf. xi. 93). The peculiar feature, repeatedly found in stories of the prophets, that their opponents threaten them and their followers with stoning (Ṣūrah xi. 93 and frequently) might suggest the hypothesis that Muhammad was actually threatened in this way by the Meccans, but this would probably only have been in a momentary outburst of passion and in any case the quarrel was mainly conducted in endless wordy disputation in which the spiritual advantage lay with Muhammad. His strength lay in the consciousness that he lived in a higher intellectual world which was closed to the Meccans and that he proclaimed ideas, "the equal of which neither men nor djinn with combined efforts could produce" (xvii. 90). Very pertinently he often points to the lack of logic in his enemies, when they recognise Allâh as the real true God but will not draw the logical deductions from this. But even his most crushing arguments rebounded from the impregnable wall of their prejudices which were based on their material interests. This circumstance now began to influence the matter of his preaching in a very special way. When his opponents mocked him because the divine judgment threatened by them did not come (xxxviii. 15; lxx. 5) he began to describe in an increasing degree in his stories how the contemporaries of earlier prophets had met them with incredulity and had therefore brought on their heads dreadful punishments. That he did not use such means at the very beginning of his mission is evident from the fact that his preaching, according to the already mentioned credible tradition, at first gave no offence, and indeed this feature is lacking in the sūras which are certainly the oldest. It was the harshness of heart of his countrymen which made him take to this weapon in order to stir them. At first it proved by no means ineffective, as the Arabs knew of old trading peoples like the
Several episodes stand out in the Meccan period which are unfortunately more or less obscure and may be interpreted in various equally uncertain ways. It is certain, in spite of the silence maintained about it in the Qur'an (even xvi. 43 sq. does not refer to it), that Muhammad's community was at one time in so great distress that a considerable section of them migrated to Abyssinia. The later view was that participation in this flight became a patent of nobility similar to that conferred by the great Hijra to Medina, which was actually granted as a titular distinction (Wellhausen, S.S.-Z. iv. 113); but the Prophet gave the advice to seek protection among the Abyssian Christian only to those of his followers, of whom he was told that they had not sufficient strength to maintain their faith under the difficult conditions in Mecca (cf. the significant story of the cool reception which some of the exiles later received on their return to Medina; Bukhari, ed. Kreidl, ii. 128). M. Hartmann's view that the emigrants were to conduct political propaganda in Abyssinia is not capable of proof. According to 'Uway, these emigrants (i.e. probably the greater number of them) returned to their native town, when Islam had become strengthened by the accession to its ranks of a number of individuals of position. At the same time there is a different story of their return, which is more difficult to reconcile with the story of 'Uway's story if we assume that they gradually drifted back. We are told that Muhammad proclaimed in one of his sermons that the favourite deities of the Meccans, al-Lāţ, al-'Uzza and Manat [see these articles], might be regarded as divine beings whose intercession was effectual with Allāh. This led to a general reconciliation, news of which reached Abyssinia and induced a number of the Muslims there to return home. Here however they learned to their horror that the agreement had been of short duration, as the Prophet had very soon recognised these words as interpolations of Sādiq and had substituted for them the words which we now have in Sura lii. 19–23. The credibility of this story has been doubted, certainly wrongly; for in view of the absolute impossibility of such a story being a later invention, any possible objections to the reliability of the authorities cited (Tahari, i. 1102, 1105; Ibn Sa'd, i., 1 i. 137 sq.) hardly deserve consideration and passages like vi. 56, 57: xxvi. 75 sq. (cf. iv. 113) amply show that the incident was quite possible from the psychological point of view.

It is much more difficult to elucidate another episode of the Meccan period, the story of the boycott of the Hashimids. That Muhammad's whole position during his struggle with the Meccans was only made possible by the support given him by his own family has already been indicated. All members of the family of Hashim on Muhammad's side were not only not denounced in the Qur'an along with his wife, chivalrously fulfilled their duty in this respect, although only a few of them believed in his call. It would therefore be not unnatural in itself for the Meccans in the end to attempt to make the whole family innocent without making on themselves the guilt of bloodshed by an open attack. The story, however, which tells how they forced the Hashimids to withdraw into their own part of the town and pledged themselves to refrain from intermarriage or commerce with them, is confirmed neither by the Qur'an nor by 'Uway, but sounds in itself somewhat suspicious and is probably much exaggerated. That the effort finally failed is conceded by the story itself. On the other hand, it is quite possible that Khaḍīja's fortune may have suffered considerably from Muhammad's obligations to his necessary followers and from the enmity of the influential merchant princes.

To the last portion of the Meccan period most probably belongs Muhammad's nocturnal journey, later so celebrated, to the "remote place of prayer", to which vii. 1 (perhaps also verse 62) briefly refers, no doubt a vision, which however was an impression of reality. According to the prevailing opinion, the terminus of this journey was the temple in Jerusalem, and conclusions are drawn from this about the great significance which this city had for him. Schrieke (Ib., vi 1 sqq.) and H-ravicz (Ibis. ix. 159 sqq.) have however shown that μεταφετησαλλη στη ορθή refers to the place of prayer of the angels in heaven (cf. vii. 205: xxxiv. 75); for which view several cogent arguments can be produced, notably that the nocturnal journey is associated with the journey to heaven as early as in the tradition given by Ibn I-hāk and that it in the Qur'an there is several times a reference to an ascent to heaven (vi. 35: xxvii. 92 sqq.; xxv. 14 sq.)

Of other details we may further recall that Muhammad, who, as already remarked, was firmly convinced that his preaching agreed with the religion of the "parasites of a scripture", nevertheless had already begun in Mecca to select the christological dogmas of the church. This is certain from the conversation with his pagan opponents (XIII. 57 sqq.) which can only have taken place in Mecca. This however does not affect his idea of the fundamental identity of his with the older revelations but only the false doctrine later adopted in the church, for he makes Jesus vigorously reject the doctrine of his divinity; but this limitation of his theory was not without importance and was able to serve him as a model in his later criticism of Judaism.

The sources are somewhat fuller for the close of the Meccan period, although late tendentious historiography has coloured everything in the traditions. According to 'Uway's account, Muhammad did, it is true, succeed in winning a few notables in Mecca (including probably 'Umar) for his teaching, after the emigration of a number of his followers to Abyssinia. But on the whole his attempt at a religious reformation could be regarded as having failed; and when Khaḍīja and Abī
Talh died, his position gradually became more and more hopeless. An attempt to establish himself in Taif brought him into considerable danger, according to the narrative, although the approval of his preaching expressed by some djinn (cf. xlii. 1) certainly raised his drooping spirits. It was probably at this period that Mu'ayjim b. 'Adi took him under his protection, which is corroborated by Hāsan b. Thalāt (No. 1xviii. 89.). He could now have consolated himself with the reflection that he had done his duty as a "warner" and could regard it as the will of Allah that his opponents were not to be saved (cf. x. 99: xłów. 89.). But the consciousness of being a chosen instrument of Allah had gradually become so powerful within him that he was no longer able to sink back into an ignominious existence with his object unachieved. His astonishing gift of being able to exert a powerful religious suggestion even on men who were intellectually superior to him insensibly demanded a wider sphere of activity than a small number of adherents, mostly without influence. In addition, there was a factor of which he himself was certainly unconscious but which is apparent on every page of the Meccan sōras, namely his mental exhaustion. All this brought him to the idea of looking for a new sphere of activity outside Mecca, however difficult it must have been for an Arab to break the links that bound him to his tribe and family. The congress of people from all parts of the pilgrimage gave him good opportunities to attempt to find one. After several unsuccessful negotiations, he found a favourable soil for his scheme with some men from Medina. Unfortunately we know very little about conditions at this time in this town (q.v.) but we may safely assume that the large number of Jews in it had contributed to make the peasant population of Medina somewhat familiar with religious ideas (cf. Ibn Hīṣām, p. 178.).

There is however no question that the Medinees did not so much want to attract an inspired preacher to themselves as to get a political leader, who would readjust their political relations, which had been shattered in the tribal conflicts culminating in the battle of Bu'aith [q. v.]. With this we are faced with one of the most difficult problems in the biography of Muhammad, namely how he presented himself to us. The inspired religious enthusiast, who, in spirit, mainly centred around the coming last judgment, who had borne all insults and attacks, who only timidly touched on the possibility of active resistance (xvi. 127) and preferred to leave everything to Allah's intervention, with the migration to Medina enties upon a secular stage and at one stroke shows himself a brilliant political genius. That Muhammad's eye in Mecca took in the wider political situation is evident from the prophecy in Sūra xxx. 1 sq.; but the passage is quite isolated there and in any case M. Hartmann's efforts (Die arabischen Jezidi, p. 53.), to make him play the part of a fathering diplomat in international politics is based on fanciful arguments with no basis in the sources. Nevertheless in the despatch of a section of his followers to Abyssinia and in the attempt to reach a compromise with the polytheists in Mecca, we have hints which to some extent bridge over the gulf between the two figures. The decisive point however is that the Medinees would certainly not have thought of seeking in him a saviour from their social and political difficulties, if they had not been much impressed by his abilities in this direction.

After Muhammad had entered into relations with some Medinees who had come as pilgrims to Mecca, the latter began to spread Islam in their native town along with men whom he had sent there and thus he was able after a preliminary conference in al-Akaba (q.v.) to conclude at the pilgrimage next year (622) at the same place a formal agreement with a considerable number of Medinees, in which they pledged themselves in the name of their fellow-citizens, to take him into their community and to protect him as one of their own citizens, which, as the further history shows, was also to hold for his Meccan followers if they moved to Medina. Tradition, and no doubt rightly, here mentions only the promise of the Medinees to take Muhammad under their protection and not any further obligations. On the other hand according to Ibn Hīṣām, p. 287., at the first conference at 'Akaba Muhammad is said to have imposed a series of commands upon them; but this so-called "women's homage" is, as the very same shows, taken from the later Sūra lx. 12 and is clearly adapted to Meccan conditions (cf. especially the vow not to kill children). These negotiations, which could not remain unknown to the Meccans, produced great bitterness, and a second jīna, as Urwā says, began for the believers, which must have still more confirmed them in their resolution to migrate to Medina. They slipped away in larger or smaller bodies, so that finally only Muhammad with Abī Bakr and, according to the story, 'Ali, was left. That the Prophet did not go with the others was certainly due to the fact that the Meccans otherwise would have prevented the whole emigration. They knew him well enough to see the danger if he were to ally himself with another tribe and there is therefore no reason to doubt Tradition when it relates, although with much legendary embellishment (cf. on David's flight: Tabari, i. 556.), how he had to be the last to flee from the town. Tradition is also confirmed by Sūra ix. 49 where there is mention of Muhammad and his companion (Abī Bakr) stopping in the cave.

The migration of the Prophet, the Hijra (q.v.), had been, with justice taken by the Muslims as the starting-point of their chronology, for it forms the first stage in a movement which in a short time became of significance in the history of the world. According to the usual calculation, he arrived in Kūfah, a suburb of Medina, on the 12th Rabī' i of the first year, i.e. Sept. 24. 622 and shortly after went into his new home. The tasks which awaited him placed the greatest strain on his diplomatic and organizing abilities. He could only rely with absolute certainty on those who had migrated with him (the Muhájirūn, q.v.) for their whole future existence depended entirely on him and of course only those who had migrated who were to go with the others was certainly due to his mission. In addition, there were those Medinees who had already adopted Islam or did so soon after his arrival, the so-called Ansār (q.v.) or "helpers", who however formed only a portion of the inhabitants of Medina. He only found direct opposition in a few families, like the 'Awṣ Allāh; but at the same time there were a number who while they did not exactly oppose him only reluctantly accepted the new relations, the so-called mūnaṣṣifīn (q.v.), who were to cause
him much anxiety. Fortunately for him, they were led by a man, the Khazrajī 'Abd Allah b. Ubayy, who possessed the munāziq quality of misresolution to such an extent that he regularly let slip every occasion on which he might have offered successful opposition. A further danger lay in the fact that the old and bitter feud between the two chief parties, the Jews and the Khazrajī, had by no means died down, but might easily break out again on any occasion. Finally there were the Jews (in the first place al-Kāmilīn, i.e. the Nadrī and the Khazrajī, as Kāsāsī b. al-Khaṭīb, ed. Kowalski, xxi. Hāsan b. Thābit, N, 216, l.; Ibn Hishām, p. 660 and Ibn Sa'd, viii. 86, 91) and the jādīdīst tribes in Medina, who played an important part because of their wealth and the support they had in the Jewish colonies in Khizar etc. For Muḥammad they were on the whole a plus factor in his calculations for, according to his theory already mentioned, he ought to expect that they would champion the truth of his preaching. His relations with the Christians in Medina (cf. Hāsan b. Thābit, N, 133, l.) were no longer absolutely estranged, since he had begun in Mecca to reject the orthodox ecclesiastical Christology; but they were unimportant and could be ignored. He also had a much greater sympathy with them than with the Jews (v. 85; vii. 27).

Muḥammad had to form a united community out of these heterogeneous elements. The first problem to be tackled was how to procure the necessary means of subsistence for the emigrants, who were for the most part without means or work, which could for the time being only be done through the self-sacrifice of the Ansār and certainly very inadequately. To strengthen their claims for protection, he ordered the relationship of brotherhood to be created between each emigrant and a man of Medina. This arrangement, to which was added brotherhood between every two emigrants, was abolished after the battle of Badr by Sāra x-xvi. 6 (the only few traces (see Ibn Sa'd, iii. xxxvi.). On the other hand, as was seen for a somewhat later period, when relations between Muḥammad and the Jews had begun to be strained, a very valuable document in Muḥammad's constitution of the community which was preserved by Ibn Isḥāq. It reveals his great diplomatic gifts, for it allows the ideal which he cherished of an umma definitely religious in outlook to sink temporarily into the background and is shaped essentially by practical considerations. It is true that the highest authority is with Allah and Muḥammad, before whom all matters of importance are to be laid; but the umma included also Jews and pagans, so that the legal forms of the old Arab tribes were still substantially preserved. This scheme had however no considerable practical importance: it is nowhere mentioned in the Kurān (hardly even in vii. 58), because it was soon rendered obsolete by the rapidly changing conditions.

It is a proof of the Prophet's political wisdom that he endeavoured to attach the Jews to himself by taking over several features of their worship. Thus he made the 10th Muḥarram a fast-day, obviously in imitation of the Jewish fast on the 10th Tisri, the day of atonement, which is particularly obvious in its name, taken from the Aramaic 'šālāt' (N. 239). On Jewish practice are probably also based the introduction of the midday salāt, which was now (N. 239) added to the morning and evening salāts and the easier rule about purification before the salāt (iv. 46: v. 97). On the other hand, Friday as the day of the common salāt, which probably goes back to the Jewish day of preparation (cf. Becker's correction to Ibn Sa'd, iii. 83, in Id., iii. 519), is said to have been already introduced before the Hilārī by the Muʾāwīya b. Umar (according to others, Asād b. Zūrā') Whether the choice of Jerusalem as the kibla [q. v.] was one of the concessions made to the Meṣhrīn Jews is uncertain as the statements about his attitude in Mecca on this point differ. But it is improbable that he should have turned towards the Ka'bah there, otherwise it is difficult to understand how the different stories could have arisen. But whether he then used Jerusalem as the kibla, which need not necessarily mean a borrowing from the Jews, as this direction of prayer was elsewhere found in the east, e.g. among the Ebanites and Elkanites, whether he turned to the east like many Christians, or whether he had a kibla at all (the Kurān is silent on the point) is uncertain, but in any case the balance of probability is in favour of the Jerusalem kibla having been one of the alterations made to gratify the Meṣhrīn Jews. If some writers have seen in the immediate erection of a place of prayer (Ibn Hishām, p. 356) a copying of the Jewish synagogues, Crezini has with weighty reason argued that this was not a building definitely assigned to the worship of God, since the alleged masjid was also used for all kinds of secular purposes, because in reality it was simply the court-yard (sā'ūn) occupied by Muḥammad and his family, while the assemblies for regular worship were held on the masjid (cf. Maxim.). But nevertheless the "mosque of opposition" so called by the Prophet with horror (Sūrah ix. 108; see below) seems to have been an actual building recalling the Jewish synagogues. In spite of these concessions to the Jews, it soon became obvious that he had seriously misjudged with regard to them. Although they undoubtedly felt the weighty expectations of the coming of the Messiaš (Ibn Hishām, p. 286, 373 etc.) they could not possibly recognise an Arab as the expected Messiaš and he had soon reason to lament that only a few among them believed in him (iii. 106). In particular, the misunderstandings in his reproduction of the Old Testament stories and laws aroused the notorious Jewish hate of ridicule and thus brought him into an unfortunate position. His conviction of the divine origin of his mission and his position among the believers would not allow him to confer that he had made a mistake and on the other hand he had too often himself appealed to the re-translation of the older religions of revelation to be able to ignore this criticism. He rescued himself from this dilemma by asserting that the Jews had only received a portion of the revelation (iv. 47; cf. iii. 115) and even this included a number of special laws adapted to a particular age (i. 158; vi. 147; vii. 119) but they had also cancelled all sorts of things in their holy scriptures (ii. 30. 141. 154. 169; iii. 64 etc.) and indeed had even falsified their scriptures (i. 56: iv, 48: v. 16. 45: vii. 162; cf. Hāsan b. Thābit, N, 96, 2; and the article 'alāmah, in short they obtained hardly more benefit from their scriptures than an ass from the books which he is carrying on his back (v. 25). The Jews were not able to refute these assertions, for although he challenged them to produce these scriptures
(iii. 87) neither he nor his followers could read a word of them. He therefore now poured forth the rails of his wrath upon the Jews in many speeches and awaited the time when he would be able to refute their criticism and malicious witicism and tergiversation, in convincing fashion (e.g. iii. 177 sq.; iv. 48). As he had now already begun to regard the church doctrine of the Christians as a corruption of the true teaching of Jesus, he felt himself called upon to reform the degenerate religious of revelation, each of which asserted it was the only true one (ii. 107) As a result he now claimed a special place among the prophets: he is seal of the prophets (xxxvii. 40; a metaphorical expression which Mani among others applied to himself and which indicates the conclusion of the series), he is the last prophet, to whom Jesus himself had pointed under the name Ahmad (lx. 6; cf. iii. 75). Still he is not thinking any more than before of introducing a new religion but only of restoring the religion proclaimed by the prophets from the beginning; But nevertheless the early years after the migration were the period when Muhammadanism was born as an independent religion and parallel with his criticism of the religions of revelation and in particular opposition to Judaism ran a positive shaping of Islam, through which he was emancipating himself in important points from his previous models. He gave his religion a pronounced national character by taking over various elements from the worship of the old Arabs and associating them with his religious ideas. In the second year of the Hijra (July 622—June 624) after hesitation, he ordered that Jerusalem should no longer he the kibla at prayer but the ancient sanctuary of the Black Stone at Mecca (ii. 136—145) for it is a gathering-place and a safe retreat for men” (ii. 119). His native town was thus made the centre of the true religion. As a substitute for the pilgrimage which he now adopted into his religion as one of the main rites, but from which he and his followers were temporarily cut off, he had an animal sacrificed in this year on the 10th Dhu 'l-Hijja on the musalla in Medina (Tabari, i. 1362; according to Ibn Sa'd, t.vii. 9 he continued this after the occupation of Mecca) and in the following year he calls the hadj one of the obligations of believers towards Allah (ii. 90 sq.). Friday retained its significance but was not to be a day of rest like the Jewish Sabbath (lixiii. 9 sq.) which is connected with his rejection of the Old Testament idea of God resting after the creation (i. 37). In place of the fasting on ‘Ashura’, he substituted quite a new particular rite, according to which his followers were to fast throughout Ramadan, the month, in which he had received the fundamental revelation (ii. 281), as long as the sun was visible in the heavens. The Manichaean had a similar custom; but whether he took the new revelation from them or from another sect cannot be ascertained. [cf. KAMALAN.]

This nationalization of Islam, which was to have so many results, gave Muhammad a final legitimation, which brought it into harmony with his earlier appeal to the religions of revelation, as he came forward as the restorer of the religion of Abraham (sulhren Hashim) which had been corrupted by the Jews and Christians. Abraham, whom Jews and Christians alike regarded as the great type of faith and whom he had himself emphatically indicated as the true hujjat (e.g. vi. 79), now becomes the great hujjat, not only in contrast to the heathen but also to the possessors of a scripture (whether polytheist, nor Jew nor Christian [ii. 129; iii. 60, 89] wherefore, as Snouck Hurgronje has shown, vi. 162 and xvi. 123 must also be Medinese). He and his son Ishmael, the ancestor of the Arabs, founded the Meccan sanctuary and the rescelasticated here, now corrupted by the heathen, which Muhammad is to restore (ii. 118 sq.; xii. 27 sq.). Whether this bold idea, which according to Sura iii. 58 met with opposition from the possessors of a scripture, was an original one and in this case a really brilliant invention of Muhammad’s or whether it was already in existence, for example among arabesiced Jews, cannot be decided. The only thing certain is that he cannot have been acquainted with it in Mecca for we meet it nowhere in connection with mentions of the Ka'ba and it is actually excluded by the passages mentioned above (p. 726a).

While his religion was being transformed in this way, Muhammad’s personal position was being gradually changed by the altered conditions. Among the dominant religion of the community, all important matters were to be laid before Allah and himself. It now became a fundamental duty of the believers to be obedient to Allah and to himself (iii. 3, 29, 126, 166; iv. 17 sq. 62 [where it is added: “and to those among you who have to exercise authority”]; v. 93; xxiv. 51. 62; cf. also lx. 12, the “women’s hommage” which is inserted in the account of the second conference at ‘Aksa, Ibn Hisham, p. 289) and those who are disobedient are threatened with the tortures of hell (lx. 64). Alongside of the belief in Allah now appears belief in the Prophet (xlviii. 9; xiv. 8 etc.). Allah is his protector, as is Gabriel, and the angels are at his disposal (lxvii. 4). He claims certain privileges, which suggest a worldly mortal rather than a spiritual leader (xxiv. 62; xlix. 2 sqg.; xxiv. 63; liii. 13 sq.; xxxvii. 53) but which however must be described as quite moderate demands.

The elevation of Mecca to be the centre of his religion imposed on Muhammad new tasks, which were soon to lead to unexpected results. If visiting the holy places in and around Mecca was a duty of the Muslims, who were excluded from the town (xvii. 25 sq.), the result was the inevitable necessity of forcing admission to them. In addition the Prophet had an account to settle with the Meccans, for by his expulsion they had triumphed over him in the eyes of the world and the punishment repeatedly threatened them had not materialized, unlike the stereotyped punishments of the godless in the stories of the prophets. This led to a new command, that of the holy war (“war on the path of Allah”, al-djihadi, q. v.) and to set such a war in motion now became the object of his endeavour, which he tenaciously pursued. There were however considerable difficulties in the way of achieving this object. The Medine-e had only pledged themselves to defend him like one of their number if he were attacked, and the anything but warlike merchants of Mecca were not inclined to oblige him by beginning. The emigrants were, it is true, not bound in this way, but it went nevertheless very much against their feelings as Arabs openly to fight members of their tribe and blood relations. How much their resistance vexed him is shown by the vigorous reproaches which he makes to his
fellers in this connection (ii. 212; xxii. 39 sqq.) He succeeded however in finding a way out of the difficulty, which might be able to pave the way for military enterprises without injuring these feelings too much. After he had sent different men with small armed forces who did not succeed in encountering the enemy, in Radjād, one of the sacred meadows in which allighting was forbidden, he sent some of his followers to Nakhlā, where a caravan was expected and gave their leader sealed orders in which he left it to their judgment what they should do. They did not disappoint him for they fell upon the caravan which felt secure until the end of the month and one of the Meccans was killed. The rich plunder was sent to Medina, where in the meanwhile a storm of indignation had broken out. Muhammad however gave the people time to recover and finally calmed them by the revelation ii. 214. The success of the coup had had such an effect in Medina that not only enmigrants but also a number of Ansār offered their services, when he appealed for followers in Ramādān 2 A.H. in a new raid, which, however, he would lead. On this occasion chance came to light an unexpected favorite. He had learned that a rich caravan was on its way from Syria and he decided to ambush it at Badr [q.v.]. The very cautious Abī Sufyān [q.v.] who was leading the caravan got wind of his plan however and sent messengers express to Mecca for help. But when by a diversion to the coast he had reached safety, he soon afterwards sent other messengers to Mecca to cancel the first message. The enraged Meccans had however already collected an army which was three times the size of Muhammad's little handful of men and were unwilling to let the opportunity escape of properly chastising their troublesome enemy. They went to Badr where soon afterwards Muhammad arrived with his men, expecting to meet Abī Sufyān's helpless caravan. When they discovered their mistake they were filled with terror (viii. 5 sqq.; cf. the continuation of Īrāwa's story: Tabārī, i. 128 sqq.) but the Prophet saw in the encounter the wonderful dispensation of Allah, who wished to force them to a battle and his remarkable power of suggestion was able so to inspire his men that they completely routed the far superior enemy. A number of the Meccans, including the leader of the aristocrats Abī Dāhī, were slain and several, including Muhammad's uncle 'Abdāb, were brought prisoners to Medina, where Muhammad had two of them, al-Naṣr and 'Ukhā b. Abī Mu'āṣir, put to death, while the others were held to ransom. This in our case a very insignificant fracas, which however must be judged in light of the observation by Doughty who knew the country (Travels, ii. 38), because it was the utmost significance for the history of Islam, for Muhammad saw in the victory a powerful confirmation of his belief in the superiority of Allah (vii. 17; 66; iii. 119; cf. Kahā b. Malik, in Ibn Hīshām, p. 520 sqq.) and in his own call, and besides the commercial city of Mecca enjoyed such great prestige in Arabia that its conqueror was bound to attract all eyes to himself. He therefore displayed even greater energy and was able to utilise the advantages he had won. After he had drawn up the programme given in Sūra vii. 57 sqq., he began to besiege the Jewish tribe of Khurāsān in their forts. The Mundhirākā did not dare to oppose him seriously and the other Jews left their co-religionists in the lurch in shameless fashion (cf. lxx. 14) so that the latter were forced to migrate to Transjordania.

In order to protect himself while fighting from attacks from another foe, Muhammad at this time adopted a plan which is a further proof of his outstanding political ability. He concluded, as a number of letters that have been preserved show (cf. J. Sperer, Medizinische dichtung im Semiar fur Orient, Spalton, 1916), as lord of Medina, alliances with a number of Beduin tribes in which the two parties pledged themselves to assist one another.

In the year 3 A.H. (June 624—June 625) Muhammed continued his attacks on the Meccan caravans so that the Kurāsh finally saw the necessity of taking more vigorous measures and revenging themselves for Badr. An army of 3,000 men was equipped and set out with much display for Medina under the leadership of Abī Sufyān, who was little suited for the task. Although several of his followers advised Muhammad to make his defence within the town, he decided to go out with his forces, which, had been much reduced by the departure of the Anasārā, and took up a position at the foot of the hill of Uhud [q.v.]. In spite of the numerical superiority of the Meccans, the fighting at first went in favour of the Muslims, until a number of archers who had been placed to defend his flank joined against Muhammad's express orders in the battle, which promised to yield rich booty and this at once enabled Kahā b. al-Walīd to fall upon Muhammad's flank. The tables were now turned and many of the Muslims began to flee, especially when the rumour spread that the Prophet had fallen (cf. iii. 158). In reality he was only wounded and escaped with a few faithful followers through a ravine on to the south side of the hill. Fortunately for him, the Meccans were quite incompetent to follow up their victory and as they thought that Muhammad had been punished and as their honour saved, they turned quietly back to Mecca. The Prophet was thus saved from the worst, but he had to lament many fallen friends including Ḥamza [q.v.] and his newly acquired prestige naturally also suffered. With all the eloquence in his power he endeavoured to raise the morale of his followers by exhortation and censure alike (ii. 114 sqq., 133—154, 159—200) but the consequences of his reverse did not fail to materialise. The Jews who had taken no part in the fighting (according to Ibn Hīshām, they were observing the Sabbāth), made no secret of their delight at his misfortune and several Beduin tribes next year (4 A.H. = June 625—beginning of June 626; the eclipse of the moon which took place in Djamāl II of this year was that visible in Medina in the night of Nov. 19—20, 625; cf. Rahdonakists, in H. Z. K. c. v. 105; Caetani, i. 598 sqq.) showed how much his prestige with them had sunk (cf. n. 185 moux) It was therefore all the more necessary to make an example and another Jewish tribe in Medina, the Naṣrī, seemed a suitable object after Kahā b. Ashāt's (q.v. and cf. Ḥassān b. Thābit's, N°. 67 murder had served as a prelude. It was made a charge against them in Sūra iv. 4 that they defied Allah and his messenger, on which account Tradition imputes all sorts of crimes to them. After a siege of several weeks (Tabārī, i. 1850; cf. Fattah, Taʾṣī, ii. 111) they were forced to emigrate to Khathāb or Syria. They left behind them their weapons and their gold and silver as a rich booty, the distribution
of which on this occasion Muhammad reserved for himself (lxix. 6 sq.)

To this period most probably belongs the prohibition of the drinking of wine which is characteristic of Islam (v. 92 sq.); of the inductive gradation in xxxiii. 25: xvi. 69; iv. 46: ii. 216, where the word "great" is to be deleted as Schwell proposes. It has been connected with a number of features of life in the old Semitic east but the main reason should rather be sought in the connection with the masic games [6, v.]. Drinking-bouts with feasting on a specially slain camel and games of chance, which were in the eyes of the old Arabs the bright spots in their hard struggle for existence, and in which they endeavoured to display their nobility and hospitality, brought the Muslims into suspicious relations with pagans and with Christian and Jewish wine-sellers, which might easily lead to their faltering in their new religion (cf. Wākidī transl. Wellhausen, p. 100; Baūhi, ed. Kreil, ii. 270 sq.); and this might explain why he forbade both at the same time, which of course does not exclude the possibility that forms of abstention for other reasons may have been known to him (Musailima’s prohibition of wine was obviously intended as a section of the Mu‘ahhidīs). While Muhammad was endeavouring to restore his weakened authority, a new and threatening storm came upon him and Medina from Mecca. The Kurāish, whose caravans were being continually harassed by him (cf. Ḥassān b. Thabit, N°. 16, 1 sq.) and who were urged on by the Jews of Ḥālib, recognised that the victory at Ḥudh had only been a blow in the air and realised the necessity of occupying Medina, which they had then neglected to do. Conscious of their slight military skill, they negotiated vigorously with various Beduin tribes and thus raised a large army — said to have been 10,000 men — with which they set out against Medina in the year 5 (June 626—May 627). The various accounts of the season of the year (sometimes a month after the bailey harvest, sometimes cold winter storms, the latter in agreement with Sūra xxxviii. 9; cf. Ḥassān b. Thabit, N°. 14, 2) may be reconciled by the possibility that the siege lasted a considerable time (cf. Doughty’s description, Travels, ii. 429 sqq. of the siege of Ḥanīza, which in general illustrates this war excellently). The advance of this imposing army produced great consternation in Medina, which was still further increased by the vacillating attitude of the Mūnāfīn and by the discovery or perhaps only the suspicion that the Jews were conspireing with the enemy (xxxii. 10 sqq., 26) Muhammad in order to strengthen the defence had a ditch (kāfūrūm, a Persian word) dug in front of the unprotected part of the town. According to several stories, he did this on the advice of a Persian named Salmān but J. Horovitz (cf. Isf. xii. 178—183) would reject this as a later accretion. Modest as the defence were — about 150 years later Ṯāb b. Mūsā bridged the ditch which had been restored by Muhammad b. ‘Abd Allāh, by throwing a few doors across it — they seem to have imposed upon the enemy who had little experience in the art of war and the siege gradually dragged on. The able lord of Medina used the time for secret negotiations with the Ghāfit and cleverly stirred up distrust of one another among his opponents and when at the same time the weather conditions became unfavourable the besiegers lost heart and gradually began to retire so that the last effort of the Kurāish to destroy their sinister foe came to nothing. For one section of the participants however, the comedy of the “War of the Ditch” was to become a bloody tragedy. Hardly had the besiegers retired than the Prophet declared war on the last Jewish tribe of any size, the Kūrājin, and began to besiege their quarter of the town. The Jews no doubt hoped to escape in the same easy fashion as the Nadrī had, especially as their allies, the Sāwī, were very actively trying to induce Muhammad to eleumency; but this time he was inexorable and carried out seriously a threat that he had previously made (lix. 3). Tradition has however endeavoured to put the responsibility for the massacre of the Kūrājinn on Sa‘d b. Mu‘ād (cf. Ḥassān b. Thabit, N°. 183, cloxii., who asserts Sa‘d’s innocence). But there are various indications that it was the Prophet himself who made the decision and perhaps induced the Jews to surrender. On this occasion the Jews showed a strength of character and nobility of spirit which throws a redeeming light on their otherwise so ignoble history.

By these amputations, which however did not remove all the Jews from Medina (cf. Ibn Ḥishām, vi. 85; cf. M. Weidner, S. 264, 300, 393: Ḥassān b. Thabit, N°. 133, 17), the Prophet had come nearer his goal, the organisation of an umma on a purely religious basis, which hitherto had to keep somewhat in the background for political reasons. For the present he continued his attacks on the Meccan caravans far into the year 6 (May 627—May 628) and his raids, usually punitive expeditions, on Beduin tribes; of these expeditions, which have no particular interest, mention may be made of that against the Banū Muṣṭalīt which must have taken place about this time, as it gave rise to a serious conflict between the Mu‘ahhidīn and the Aṣṣir and involved Ḥā‘ib b. Ḥa‘ib [g. v.] in the celebrated adventure which nearly cost her position as the wife of the Prophet, until finally a revelation saved her (xxiv. 4 sq., 10—20).

Towards the end of the year 6 Muhammad thought that his position in Medina was so firmly established that he could risk a step, which would bring him nearer the desired goal. He and the emigrants were still excluded from Mecca and its holy places, but through secret confidential agents, among whom we may certainly include his carefully calculating uncle ‘Aḥībān, he knew that feeling in the town had been gradually coming round (cf. xlvii. 15; Is. 7). An increasing number had become tired of the hopeless wars and thought it would be much more advantageous for the commerce of Mecca to make peace with their independent anyad, which had adopted into his programme the pilgrimages to their fairs, the source of the city’s wealth. Trusting to this revulsion of feeling he gave his followers in Dhu ‘l-Ka‘da of the year 6, i.e. March 628 (the news of the death of the Persian king Khusrav Parwēz on the 29 of this year reached him on the way) orders to provide themselves with sacrificial victims and undertake an ʿumra [g. v.] with him to Mecca, as Allah in a vision had promised him a successful fulfilment of the visit (xlvii. 27). He probably chose an ʿumra deliberately (Ibn Ḥishām, p. 740: Waqīlī-Wellhausen, p. 240 sq., 2531: cf. Sīra, xx. 39, 34) instead of the great pilgrimage which was soon due, as the consequences of an encounter with all manner of tribes, with whom he might
possibly have been waging war, were too inextricable for him: but perhaps he cherished also the hope that, if all went well, he might remain there in the following month also (cf. ii. 192 which perhaps belongs to this connection). The step was nevertheless a risky one, so that he asked several Beduin tribes to accompany him in case they met with resistance. To his disappointment however, they refused (xxvii. 11 sq.) so that he decided to abandon the military character of the march and make his followers go as harmless pilgrims. In Meccan many were inclined to meet his wishes but the belligerent party was still strong enough to get a body of armed men sent to meet him to prevent him entering the town. He therefore encamped at al-Hudaybiya (q.v.) where he began to negotiate with the Meccans, and when this led to no result he sent to Yilman, who was protected by his family connection, into the town as his representative. But when the latter showed no signs of returning and finally a rumour got about that he had been murdered, the situation became critical and Muhammad dropped all negotiations, collected his followers under a tree, probably one long held sacred, and made them swear to fight for him to the last, which they did with enthusiasm (xxvi. 10, 13). But soon afterwards a number of Meccans arrived and offered a compromise, which is very characteristic of the aimless Meccan policy, by which he was to retire this time but to be allowed to perform an 'umra next year. He agreed to the proposal, concluded a ten years' truce with the Quraysh and further promised to surrender all Meccans of dependent status who came to him. His followers, whom he had worked up into a state of great excitement by his promises and the taking of the oath, heard these conditions with scarcely concealed anger; but Muhammad calmly ordered the sacrificial animals brought with them to be slain, which was to have been done at an 'umra in the town (see Lane, Lexicon, s.v. muzzil). and had his hair cut and by his authority forced his gloomful followers to do the same. Only later did they discover that he had made a brilliant stroke of policy for he had induced the Meccans to recognise the despoiled fugitive as an opponent of equal rank and had concluded a peace with them which promised well for the future.

He and the participants received ample compensation for the apparently frustrated 'umra at the beginning of the year 7 (May 628-April 629) by the capture of the fertile oasis of Khaybar (q.v.) which was inhabited by Jews. It was the first actual conquest by the Prophet and he instituted on this occasion a practice which became regular afterwards, when Jews or Christians capitulated: he did not put the people to death or banish them but let them remain as tenants, as it were, who had to pay dues every year. This expedition which also brought the Jewish colonies of Wadi 'Il-Kufr into power, made the Muslims rich (xxvii. 18-21).

In this period, although the exact date is variously given, tradition puts the dispatch of letters from the Prophet to Mu'awiyah, governor of Alexandria, the ruler of Byzantium, the Byzantine emperor, the Persian king etc., in which he demanded that they should adopt Islam. The alleged original manuscript of the first of these has however proved not to be genuine (see T. M., 1854, p. 482 sqq.; Sandall, in Hibah, 1904, p. 103 sqq.; Becker, Papias; Smith-Rhindt, i. 3). But even what is related about these epistles hardly deserves the faith most people have put in it. Even if we disregard the many apocryphal details, we must surely consider it very unlikely that so sober a politician as Muhammad, who had at this time a very definite object, the conquest of Mecca, before his eyes, should have thought of indulging so fantastic an idea as the conversion of Heraclius or the Persian king, to whom the "Inad Arabic Kur'an" was no less unintelligible than the Bible to the Prophet and his countrymen, and whom he could neither compel by force nor entice with promised advantages. It is very doubtful if Muhammad even thought at all of his religion as a universal religion of the world, as for example Noldeke, in W. Z. K. M., xxi. 307, Goldziher, Vorlesungen über den Islam, p. 25, and T. W. Arnold, The Preaching of Islam, p. 23 sqq. hold (against them, see Snouck Hurgronje, Mohammedanism, p. 48 sqq.; H. Lammens, Enquéte sur le vœu du calife Mohamet, i. 422). The passage in the Meccan sūras which can be quoted in favour of this theory (vi. 90; xii. 104; xxi. 157; xxiv. 3; xxxiv. 27; xxxvii. 70; xxxviii. 87; lixiv. 52; lixiv. 27: cf. from the later period: li. 90; xii. 25) are limited by their context or by unanimous parallels (cf. xii. 92; xxxiv. 7 [the mother of the city, i.e. Mecca]; cf. xxvi. 214). Besides, in the Medina period, the place of persuasion and proof ("no compulsion in religion"); li. 257; cf. xvi. 126), was taken by the spread of Islam by force of arms, which, although based on the supremacy of Islam over other religions (lii. 79: cf. lxi. 4), was confined to the lands inhabited by Arabs.

If after the conquest of Mecca he also declared war on the possessors of a scripture (see below) the campaign undertaken by him prove that he was only thinking of Arabs under Byzantine or Persian rule, and it cannot be proved that he ever went beyond this in his schemes (the gift of Hebron, Baladhuri, ed. de Goeje, p. 129 may be confidently asserted to be a forgery: cf. the article in T. M.). The decisive consideration however is that Muhammad at the height of his power never demanded from Jews or Christians that they should adopt Islam but was content with a political subjection and the payment of tribute. The correct conclusion is therefore to reject those stories and to look for the real historical basis in negotiations of a purely political nature, e.g. with the friendly Muqakwik (q.v. and cf. Butler, The Arab Conquest of Egypt, 1902) and to assume that the idea of a great missionary enterprise arose later under the influence of Christian traditions, notably the miracle of Pentecost.

On the other hand, the character of the genuine letters of the Prophet to the Arab tribes changes at this time, for he was no longer content with a purely political agreement but, relying on his now consolidated power, also demanded that they should adhere to his religion, which involved performing the 'salat and paying 'alms'; he even gave the Dhu'lahim on the Syrian coast a re-prise (jum'ah) of two months after which they were to declare (see Speeher, cf. cit., p. 14 sqq.).

In March 629, Muhammad performed the 'umra stipulated for him by the peace of Hudaybiya (the 'umra of the "contract" or "recovery"). For him who had been driven out of his native city it was undoubtedly a great satisfaction to be able to visit Mecca as the acknowledged lord of Medina;
but otherwise the significance of the occasion was more symbolic and the efforts of the practised diplomat to prolong his stay by his marriage with a sister-in-law of his secret ally 'Abbâs [see Mâmu'â] were politely but firmly resisted by the Meccans. On the other hand, it was of great significance that some of the most important Meccans, like 'Amr b. al-'Asi and the military genius Khalid b. al-Walid, who saw he was the coming man, openly joined him, while his uncle 'Abbâs and the very patriotic (Ibn Hähâm, p. 275) but cautious Abu Sufîyan endeavoured in secret negotiations to prepare in the most favourable way for the inevitable result. In the meanwhile he continued his military expeditions. His forces suffered a serious reverse in the first considerable effort to extend his authority over the Arabs on Byzantine soil, at Mu'ta (q.v.) in Transjordania; this is also recorded by Theophanes (Chronographia, ed. de Boor, i. 335). But several Beduin tribes now began to see what advantages they would procure not only for the next but also for this world by joining him, and large groups like the Sûlâm voluntarily adopted Islam and placed themselves under his flag.

That it was Muhammad's intention to break the truce with the Kurâsh at the first opportunity may be taken as certain; for it must have been intolerable for him that the heathen should still have Allâh's sanctuary in their control (ix. 17 sq.); cf. ii. 3). The tacitness of the Meccans now gave him his opportunity. Very much against the advice of Abu Sufîyan, the belligerent party in Mecca had supported the Bâqer against the Kurâsh, who were Muhammad's allies, and thus given a plausible casus belli (cf. perhaps ix. 12 sq.). In Ramdân of the year 8 (May 629—April 630) he set out at the head of an army of Muhâjîrîn, Ansâr, and Beduins. The news produced considerable anxiety in Mecca where the number of those who wanted to fight shrank daily so that the more prudent now could take control. Abu Sufîyan, who was sent out with several others (including the Kurâsh Bâdâl b. Warqâ who was a friend of the Prophet's) met Muhammad not far from the town, paid homage to him and obtained an amnesty for all the Kurâsh who abandoned armed resistance (cf. 'Uwâ', Tabârî, i. 1654 sq.). Except for a few irreconcilables (cf. Divan der Hudâlît, N. 183; Muhârîd, al-Kâmîl, ed. Wright, p. 365) they acquiesced and thus the Prophet was able to enter his native city practically without a struggle and almost all its inhabitants adopted Islam. He acted with great generosity and endeavoured to win all hearts by rich gifts (tâlîf al-kâfûbî, a new use of the alms—cf. iv. 60). Only he demanded ruthless destruction of the adib of in and around Mecca. Only Sûra ex. seems to preserve an echo of the exaltation with which this victory filled him; here as in the unusually touching passage xviii. 1 sq., he sees in the success of his plans a sign that Allâh has forgiven him all his sins.

Muhammad did not rest long upon his laurels for not only was Tâ'if, which was closely associated with Mecca, still unsubdued but the Hâwazîn tribes in Central Arabia were preparing for a decisive fight. A battle was fought with these Beduins at Hunain on the road to Tâ'if (q.v.) which at first threatened to be a fatal disaster to the Prophet, mainly because of the unreliability of a number of the new converts, until some of his followers succeeded in recalling the fugitives and routing the enemy (ix. 25 sq.). On the other hand, his inexperienced troops were unable to take Tâ'if with its defences (cf. the description of impregnable fortresses in Diez der Hudâlît, N. 66, to sq.). The people of Tâ'if however afterwards fell in with the spirit of the time and adopted Islam. When Muhammad, after raising the siege, was distributing the booty of Hunain, the Ansâr who as soon as he entered Mecca had expressed the fear that he would take up his residence again in his native town, became very indignant about the rich gifts that he made to his former opponents in order "to win their hearts", while they themselves went empty-handed (cf. 'Ishân b. Thabit, N. xxxi.) but he spoke so kindly to them that they burst into tears and declared themselves satisfied. His conduct on this occasion reminds us to some extent of that of David towards the Jews and Ephraîmites after Absalom's rebellion.

The characteristic feature of the year 9 (April 630—April 631) in the memory of the Muslims was the many embassies which came from different parts of Arabia to Medina, to submit on behalf of their tribes to the conqueror of Mecca (cf. ex. 3) and the letters which he sent to the tribes, to lay down the conditions of their adoption of Islam. In the autumn of this year, he made up his mind to conduct a campaign against Northern Arabia on a considerable scale, probably because the defeat in Transjordania required to be avenged and because the Ghassânîd king was adopting a hostile attitude (cf. Ibn Hähâm, p. 911; Bukhârî, Magâzî b. 78, 79). But his appeal for followers met with little support. Munâfiqûn as well as Beduins had hardly understood the promise, and there were some who put forward all sorts of objections, out of fear of a campaign so far away in the glowing heat (cf. iv. 45; lxi. 84—91, 98 sqq.). In particular he seems to have had to face at this time a considerable opposition in Medina (ix. 58—73, 125) so that he had to have recourse to his old instrument of intimidation and his words recall in a remarkable way the period of passion in Mecca (ix. 71, 129 sqq.). Matters came to such a pitch that some of the opposition, behind whom is said by one tradition to have been his old inexorable opponent, the ascetic Abu 'Amr, the child of a house of prayer of their own "for division among the faithful and a support for those who had formerly fought against God and his Prophet" (ix. 108 sqq.). Unfortunately the expression in the Kurân and in the tradition are quite insufficient to enable us to get a clear picture of this very remarkable affair. In spite of all opposition however, he carried through his plan; but when after great hardships he had reached Tabîk on the frontier (in the land of the Byzantines: cf. Ibn Idrîs, p. 956), he stayed there some time and then returned to Medina. The campaign was however not without success. His prestige had now become so great that the petty Christian and Jewish states in the north of Arabia submitted to him during his stay in Tabîk, for example the Christian king Yuhannâ in Aila (q.v.), the people of A'diru (q.v.) and the Jews in the port of Makâa Khâlîd also occupied the important centre of Dama al-Djandâl (cf. for a criticism of the account Caetani, i. 261—268; Sperber, cf. ib. p. 44 sqq.; on the alleged letter from Muhammad to the Jews in Makâa, see also Wensmek, in ib. ii. 290).
Unfortunately we do not know how the matters which were rapidly coming to a head in Medina actually developed; but we may safely assume that the death of 'Abd Allah b. Umay, which took place not long after the expedition to Tabuk, must have contributed to slacken the tension. These years showed a marked increase in the prestige of the lord of Medina abroad. Mecca was in his hands, and among the Beduins an inclination was noticeable in several places to submit to the will of the conqueror of this town, to be safe against his attacks and to have a share in his rich booty. This was for example the case with the group of tribes of Ṣamī b. Sa'da, with portions of the great tribe of Tamim and the neighboring Asad and farther north with the Bakr and Taghlib. Even in regions so remote as Balqais and Ḍumān within the Persian sphere of influence and among the chiefs of South Arabia, the new teaching and order of things penetrated and found ardent followers in some places. But we must not allow ourselves to be deceived by the representations of the historians, from which it appears as if all the people in these lands adopted Islam. Caætani and Sperber in particular have shown that these accounts are not in keeping with reality and that it was only little groups that submitted, while there was a not inconsiderable number who rejected the Prophet's demands. As regards open opposition the question was quite simple; when they were heathen, adhered to their paganism and would not abandon their polytheism, they were to be threatened by Muhammad with the "holy war". He had not only to deal with such as those in Arabia, but there were also in addition to the Jews who had already felt his strength, a considerable number of Christians, and some Pārsis in the eastern and southern districts. Muhammad was thus faced with a problem which he had to solve. From his words in Sūra ii. 29 sqq. where he includes the Christians and even the Jews, the people of such strict monotheism, among the polytheists, who give Allah a son and honour men as lords beside him, one would expect that he would have fought them like the heathen, if they did not adopt Islam (cf. also the attack on the Christians, verse 76 sqq.). But in contrast to such utterances we have another (Sūra ii. 85) where he mentions the Christians very sympathetically because they, unlike the Jews, show themselves kindly towards true believers and are not arrogant, which he ascribes to the fact that they have priests and monks (cf. his judgment on monasticism: Sūra liv. 21). These remarkable contradictions may be explained, as pointed out by Tor Andræe, by the difference between the Monotheists and the Nestorians. The former answered his unqualified displeasure by their Christology, while the latter, who were then predominant in the Persian empire, attracted him much more, and this attitude was shared by his followers after his death, as the letter of the Catholocos Išo'yah, quoted by Tor Andræe, shows. On the other hand, his remarks about the Jews are always very severe. It is, therefore, all the more remarkable that the distinction between Jews and Christians completely disappears when their position is finally settled. They were included together as "peoples of a scripture" and they were allowed to retain their religion if they recognized the political sovereignty of the Prophet by paying a tax (jizya, q.v.); if they did not they were to be fought without mercy.

The memory of the agreement between Muhammad's teaching and that of the "peoples of a scripture", earlier so much emphasised, must have contributed to this rather illogical settlement and in addition there was the fact that treating the Jews as tax-paying tenants, and allowing them to practise their religion, had been already done at Khaibar, was much more practical for the Muslims than fighting them till they gave in. A further compromise with the "peoples of a scripture" was that believers were allowed to marry the daughters of the "peoples of a scripture" and to eat food prepared by them (v. 7). It is noteworthy that the Pārsis (Māqūi, A.M. 17) were included among the "peoples of a scripture" which made a difficulty for later better informed generations (Tabari, t. 1995, 19; Badūh, p. 79); probably Muḥammad did not dare for political reasons to demand that they should give up their religion. This extended application of the term "peoples of a scripture" is found not in the Kurān but in a letter of Muhammad's to the Pārsis in Hijjār (Ibn Sa'd, l. 19) but with the limitation that the Muslims are forbidden to marry their women and to eat meat killed by them.

With these exceptions, the Prophet had approached nearer the object which was always before him, although it hitherto eluded him, the formation of an umma on a definitely religious basis, for the inhabitants of a number of parts of Arabia were now actually bound together by religion. The old differences between the tribes with their endless feuds, their blood-vengeance and their lampions which continually stirred up new quarrels, were to disappear at the will of Muhammad and all believers were to feel themselves brethren (lxii. 11; xlix. 10 sq.). There was to be no distinction among believers except in their degree of pious (lxii. 13).

The Prophet certainly had an ideal before him, but it was realised only in a very incomplete way. The very rapid extension of Islam had been accompanied by a considerable diminution in its religious content. Alongside of the older adherents, who were really carried away by his preaching, and whose faith had been tried by privations and dangers, there were now the many new converts who had been gained mainly by fear (cf. the well-known poem of Ka'b b. Zuhair; the poem of the Hidutha Laid a b Ahi Iyas in Kosegarten, Geminna Hidutha, NO. 127) or by the prospect of material advantages.

In spite of the teachers sent out to them there could be no question of any deep-seated conversion among these Arabs and how the old Arab spirit continued to flourish among them, weakened as shown for example by the boasting and abuse in the poems in Ibn Ithiṣām, p. 934 sqq., which are in no way inferior to the old poems. The Prophet himself in Sūra xlix. 14 has recorded very definitely how far the Beduins were from the true faith; they cannot say that they believe but only that they have adopted Islam, Commandments relating to religion and worship, which had considerably occupied Muhammad in the early Medinese period, gave way in striking fashion to social and political regulations, a natural result of the fact that the few members were not ripe for the former. Uncertainty on these matters was still great and even the headquarters much seems still to have been in an embryonic state. This is true even of so fundamental a law as the rule for the times of daily prayer, as the five prayers later obligatory are
nowhere laid down in the Kur'an (see above; cf. also the expression "morning and evening" in A'sh'a's poem: *HerzoglLand Festschr., p. 259*). That they were introduced by Muhammad himself at the end of his life is possible, but not very probable in view of the silence on the point in the Kur'an, and in any case it is not certainly proved by the mention of the five times of prayer in a letter of the Prophet. (Ibn Hishâm, p. 902) as we are not justified in expecting absolutely literal accuracy in the transmission of such documents. Only one or two religious institutions are dealt with at all fully in the Kur'an, the great pilgrimage to the sanctuaries at Mecca and the 'umra in the town itself, but the hadj was indeed the crown of his endeavours begun in Mecca and carried through with tenacity. The Prophet, although he was now lord of Mecca, did not yet take part in the pilgrimage in the year 8, which was so inexplicable to later generations that they invented an 'umra unknown to many of his followers (Ibn Hishâm, p. 885; Tâbarî, i. 1670 ["Uwa", 1655]; Wāṣīlī, p. 310; Ibn Sā'd, ii. 1, 123 sq.; iii. 105, 152; cf. ii. 123 sq.; Snouck Hurgrone, *Het Med.
Apart from the revelation with which he was favoured, he is a man like any other and social views refer to the fact that he will die. The episode in Ibn Hishäm, p. 1612 sq.; is not historical but a tendency story directed against the tendency becoming apparent to apostathise the Prophet. This is exactly the field in which later ages have felt dissatisfied, so that they quite early, driven mainly by their disputations with the Christians (see M. Schreiner, in Z. D. M. G., xli. 594), wove around the person and life of the Prophet a network of supernatural features (see for Andrac's work quoted below). Apart from the traditions which are clearly confirmed by the Qur'an, we can only have certainty in the strictest sense of the word in case where the stories place the Prophet in an unfavourable light, not only from our point of view but also from that of the Muslims, e.g. in the story of his temporary recognition of the three Meccan goddesses or of his being cenured by 'Umar for setting off the ihram between the umra and hajj. On the Farewell Pilgrimage, for it is an incredible fact that such features should be later inventions and as a rule in such cases the compromising stories are confirmed by the existence of variant traditions which endeavour to dispose of the offensive features by glossing them over or altering them.

If the biographers of Muhammad must for these reasons impose a very considerable restraint upon themselves, there is nevertheless one essential aspect of his activity, which ought to be very strongly emphasised, particularly as justice is not always done to it in modern treatments of his life. There is a tendency in some recent writers not only to emphasise all that is unfavourable but also to neglect his real religious importance. If he had really only been an oversexed man, anxious for worldly profit and quite unscrupulous in the choice of his means, Islam, which had been created by him and developed after his death, would have been an effect without a cause. It is impossible for the unbiased historian to deny that he aroused the religious instinct of his countrymen, and gave expression to a body of religious and moral conceptions which not only satisfied his fellow-countrymen but supplied the needs of the people of lands which had old civilizations conquered by the Muslims and served them as foundations for a vigorous and far-reaching intellectual activity. Although as a result of his singular theory of inspiration, his direct dependence on the older religious of revelation remained concealed, he was able in his own way to communicate to his countrymen a part of the spiritual wealth of the "peoples of a scripture" and how he touched the soul of the Arabs is best seen by the efforts of the Wahhabis at a reformation. In lands of ancient culture, Islam, it is true, was only able to carry out its task by a sometimes radical remoulding and the intellectual activity already mentioned developed also under the influence of Christianity and mysticism, but yet it was Muhammad who set the whole process in motion and he could not have gained this influence if he had only been what the writers mentioned professed to have found in him.

MUHAMMAD I-III. [See Ummays I]
Muhammad II, with the surname Ali Fatih, or, more popularly, Fatih, was both ruler of the Ottoman Empire in his own right and a key player in its expansion. His reign, from 1451 until his death in 1481, was characterized by his successful campaigns against the Byzantine Empire, the capture of Constantinople, and the establishment of the Ottoman Empire as a major power in the Mediterranean region.

Muhammad II was born in 1432 and was the son of Bayezid II, who had been the last sultan in the line of Bayezid I. Muhammad was elevated to the throne after his father's death, and he immediately set about expanding the Ottoman Empire.

One of his most notable achievements was the capture of Constantinople in 1453, which marked the end of the Byzantine Empire and the beginning of the Ottoman Empire's domination of the Mediterranean. This victory was followed by a series of successful campaigns that brought much of the Balkan Peninsula under Ottoman control.

Muhammad II was known for his military prowess and his ability to negotiate with the Crusaders and other European powers. He was also known for his interest in art and architecture, and he is credited with the construction of many important buildings in Istanbul, including the Sultanahmet Mosque.

His reign ended in 1481, when he died suddenly. However, his legacy lived on, and the Ottoman Empire continued to expand under his successors.
year, the sultan obtained successes against Serbia, while Turkhan [q. v.] intervened in Morea, where the last Palaeologus despots were at war with the Albanian. Immediately after the taking of Constantinople the grand vizier Kajtil Pasha had been deposed and executed by order of the sultan, who had personal and political causes of complaint against him (cf. Taedelmen and Witten, in C.F. with 156 sqq.); he was replaced after nearly a year by Mahmud Pasha [q. v.], who for the next twelve years was to be a less energetic supporter of Muhammad in the achievement of the programme of conquest. The year 1455 saw both of them in Serbia and on the Aegean coast, where the principal conquests were Amoss and the island of Lemnos [q. v.]. In 1456 they were unsuccessful in the siege of Belgrad. During the years 1458 and 1459 Serbia was made a direct Ottoman province (Semendra taken in 1459 by Muhammad), and in the same year and in 1460 the sultan took part in several campaigns in the Morea, the northern part of which was conquered from the Palaeologus. About the same time a temporary understanding was reached with Skanderbeg [q. v.] in Albania. Then came the famous Asiatic campaign of 1461. Amara (Amastria) was taken from the Genoese and Serbs [q. v.], which was the last island on the coast of the western part of the Black Sea. The fall of Trebizond immediately followed (cf. PARABEN), after the beginning of a conflict with Zan Hasan of the Ask-Oyunkul. In the next year the sultan's army drove the famous Wallachian voivod Vlad Dracul from his principality, which was given to his brother Radul, and at the end of the year Muhammad and Mahmud made a secret to the rule of the Genoese dynasty of Lesbos. The years 1463 and 1464 were mainly occupied by the annexation of the kingdom of Bosnia. In 1465 a war with Venice, which was to last seventeen years; the main theatre of hostilities was the Morea, but also in the islands of the Aegean there were continual encounters with Venetian fleets. The death of the Karaman Oghlu [q. v.] Ibrahim in 1454 had first provoked the sultan's intervention and soon nearly all the towns of this once powerful principality were conquered during Muhammad's campaign of 1466 (battle of Larenis). In that same year Muhammad was successful in Albania, where he fortified the town of Illyria (cf. SKANDERBES). Mahmud Pasha had been deposed as grand vizier after the Karaman campaign and replaced by Rüm Mahmud Pasha. But it was Mahmud who as governor of Gallipoli and Kapudan Pasha, helped Muhammad in the conquest from Venice of the Islands of Negroponte (Euboea) in 1470. In the same year began again a series of campaigns under Rüm Mahmud and Gedik Ahmad Pasha against the last towns held by descendants of the Karaman Oghlu, who were supported by Zan Hasan [q. v.] and by Christian fleets on the sea side. When Zan Hasan had even taken the offensive in conquering the town of Tokat, great preparations were made for a new Asiatic campaign of the sultan, and Mahmud was again made grand vizier. The sultan's army went in 1473 the last victory of Ernudjian, which put an end to danger from that side. In this campaign a part was played by prince Mus-tafa, the heir to the throne, who completed in 1474 the conquest of Fë Ilt (Galicja) but died soon afterwards. Mahmud Pasha had been deposed again from the grand vizierate and executed in August 1474; Gedik Ahmad Pasha took his place.

In the following years, until 1480, the sultan's chief attention was given to conquests in Europe. He built in 1471 the fortress of Sabac (Bugardelen) in Srbija, near Belgrad, while his troops in these and the following years made incursions into Hungary and far into Austrian territory; the war with Venice continued and in 1474 the Albanian Skutar (Skukand) was in vain besieged. The year 1475 brought the great success of the conquest of Kutja from the Genoese and, as a result of the establishing of the Ottoman power in the Crimea, the submission of the Tatar Khânate of the Crimeans to Ottoman suzerainty. In 1476 the sultan himself was successful in Moldavia, but in the next years the Turkish armies had less success against the Venetians in Albania and southern Morea; finally in 1478 Muhammad himself went to Albania and took Corfu; Skutar was besieged a long time, but surrendered only on account of the peace negotiations with Venice, which led to a peace treaty (confirmed January 26, 1479) leaving a certain number of towns in Albania and Morea to Venice. The Ionian islands, however, were conquered in 1479 by a fleet under Gedik Ahmad, who at the same time, went so far as to take Otranto in southern Italy. An endeavour to conquer the island of Rhodes in the same year was not successful.

Muhammad's last campaign took place in 1480, when he intervened in the dynastic disputes of the dynasty of Dhi Tekkdr [q. v.], which intervention gave rise to the first difficulties with Egypt. In the next year, 1481, he had already set out for a new military enterprise in Asia, the aim of which was yet unknown, but may have been connected with the same difficulties, when he died, rather suddenly, in the place called Tekfur Ciyri or Khiyuk Ciyri between Skutar and Gebze (May 3, 1481). His body was transported to Constantinople and buried in the vault of the Faithful Mosque. Besides being a great conqueror, Muhammad II was the builder of many important edifices. In the first place of the Faith Mosque in Constantinople and the mosque of Eyyub (Elieieyub at-Dawr), r. 8 sqq.: 243 sqq.) and further the castles on the Dardanelles and other works of naval and military importance. In the army administration he succeeded in restoring discipline among the Janissaries by incorporating in them the corps of the Seghans; further his name is connected with the first Ottoman Kâmil-i-Müslîm (printed as an appendix to T.O.E.M., ii.). He encouraged scientific studies and showed an interest in literature and poetry: he pensioned thirteen Turkish poets, and even for the Renaissance arts in Italy (he summoned Gentile Bellini to Constantinople, who made his portrait, et. alia Thach. Tom allen otzebothen Reich, Tur- bingen 1938, p. 18*).

Bibliography: Among the early sources, the Byzantine historians (Phlanes, Ducaas, Chaconylambos) are by far the more important. The Greek description of Muhammad's life by Cito- bulos was translated into Turkish (appendix to T.O.E.M., i. and ii.). The old Ottoman chronicles (Nezhi and others) often treat the beginning of Muhammad's reign in their last part; the later historical sources (Sad al-Din, Ali Ferdinân) are far from being reliable in this time. Further von Hammer, G. O., K. I., ii. Zinkens (i.) and
MUHAMMAD

MUHAMMAD III, thirteenth ruler of the Ottoman Empire, was born on May 16, 1567, the son of Murad III and the Venetian lady Baffa, and reigned from January 27, 1593 until his death, December 22, 1603. He was the last sultan who, as crown prince, had reigned as governor in Magna-

...
against the Polish king; the Polish war, ending in a peace treaty of 1676, strengthened still further the Empire's position in the north. Köprülu Ahmad Pasha died on Oct. 30, 1676. Though the sultan, who had developed in the meantime a morose and capricious character, never showed him the same deference as to his father, Ahmad had been easily able to maintain himself against enemies in the interior, not least by forming new troops (the "light" and the "gōnluhal"), who were far more reliable than the Janissaries and Sipahis. He had not been able, however, to put an end to the extravagant luxury of the court, which wasted enormous sums. The sultan had an abnormal liking for fox hunts, that were organized at enormous cost in the environment of Adrianople, which town he preferred as a residence to Constantinople.

After Ahmad's death the sultan did not himself like the affairs of state in hand; he appointed Kara Muştafa Pasha [v. v.] as grand vizier. The latter continued in an unnecessary war, the tradition of warfare; in 1677 and 1678 he obtained several victories against the Cossacks, behind whom the Moscovites now began to gain in importance in Turkish affairs. In 1682 war broke out again with the Austrian monarchy and led to the second Turkish siege of Vienna (July 13—Sept. 12, 1683), ending in a Turkish defeat, thanks to the intervention of the Polish king Sobiesky. This disaster cost Kara Muştafa his office and his life and at the same time the influence of the Sıddil became again predominant. The grand viziers following proved unequal to their task and in the years 1685—1687 nearly the whole of Hungary was lost to the Austrian armies (Turkish defeat at Mohács on June 22, 1687). At the same time the hostilities with Venice had been reopened in the Morea and in the Archipelago.

All these disasters caused a revolt of the troops in the field; they marched on the capital in September 1687 under Slaywush Pasha of Aleppo. This time the sultan himself fell a victim to the rebels; he was murdered on November 8, 1687 by the big Köprülu Köprülu Muştafa Pasha and lived in seclusion in Adrianople until his death on December 17, 1692. He was buried next to his mother in the Yeni Džami.

**Bibliography:** Na'ima (iv.) and Hâddî Kâlifa, and until 1660 the Taşıl of Raşid are the most important Turkish historical sources. The Sıddil-name of Ebulîbî Celebi describes many of the military expeditions of this period and is also otherwise a valuable source of information. Among the European sources this period is covered by P. Ricaut, *Histoire des derniers emperors des Turcs depuis 1624 jusqu'à 1677*, Paris 1683. Further, von Hammer, *G. O.R., v., vi. and the works of Zinkeser (iv. and v.) and Jorga (iv.). See also the monographs of Ahmad Refik, *Köprüluahmet*, Constantinople 1831 (1913), *Kadınlar Sultanât*, Constantinople 1914—1924, and *Felaket Sefileri* (1904—1110), Constantinople 1832 (1914).

**MUHAMMAD V RESHÂD, THIRTY-FOURTH OTTOMAN SULTAN, was born on November 2, 1834 as a son of Sultan Abd al-Madjid. During the reign of his brother 'Abd al-Hamid II he lived in seclusion; his very existence inspired 'Abd al-Hamid with such terror that even the mentioning of persons with the name Reshâd had to be avoided in his presence (cf. Snouck Hurgronje, *Verspreide Geschriften*, iii. 329). He was a man of mild character, who owed his accession to the throne (April 27, 1909) only to the victory of the Young Turks; moreover he was the first constitutional ruler of Turkey, but he was unable to give direction to the very disparate political tendencies that manifested themselves within and without the Parliament during the years after the Revolution, and, after the final victory of the Unionist party in January 1913, Muhammad V had to submit, much against his will, to their government.

At the very beginning of his reign, Turkey lost her last vestige of authority over Bosnia and Herzegovina by Austria-Hungary's annexation, and over Bulgaria by the declaration of its independence (Oct. 5, 1909). The cabinets under Hüsein Hilmi Pasha (until January 18, 1910) and 'Isâ'iî Hakki Pasha (q.v., until Sept. 29, 1911) were not able to bring about a peaceful situation in the interior (revolts in Albania). Hakki Pasha had to resign on account of the declaration of war by Italy. Under the grand vizierate of Said Pasha (q.v.) the Italian war led to the loss of Tripoli, confirmed by the peace treaty of Ouchy (Oct. 15, 1912). The peace was signed under the anti-unionist cabinet of Ahmad Muktâr Pasha, but in the same month began the so-called Balkan War against the confederated Balkan States. The reactionary cabinet of Kâmil Pasha soon showed an inclination to conclude a disastrous peace through the intermediation of the European powers (Conference of London); then on January 23, 1913 the Unionist coup d'état brought again a Unionist government under Mahmud Shewket Pasha. The result was a reopening of the hostilities and, after the failure of Bulgaria, the recapture of Adrianople (July 22, 1913). In the meantime Mahmud Shewket had been murdered (June 28) by adherents of the liberal opposition, but this did not bring about a change in the political course; his place was taken by Said Hâlim Pasha, whose government signed the peace-treaties with Bulgaria (Sept. 29, 1913). Greece (Nov. 14) and Serbia (March 14, 1914). From this time, the Committee of Union and Progress, which from the beginning of Muhammad Reşhad's reign had not ceased to work behind the scenes, became all-powerful and its leaders Tafrat Bey and Enver Bey came more and more to the front. Afterwards, when at the beginning of the Great War, the Ottoman Government had decided to remain neutral, it was the unionist sympathies with Germany that brought about a gradual entanglement between Turkey and the Allies (the "Ioehmen" and "Bieslau" incident), culminating in the entrance of Turkey into the war on the side of the Central Powers (the Turkish fleet in the Black sea on October 29 and 30, 1914). Tafrat Pasha himself became grand vizier in February 1917. The Allied manoeuvre to force a way through the Dardanelles was definitely abandoned in January 1916 and in the meantime Turkish troops fought on the Egyptian front, in Iraq and on the Russian and Persian frontiers. Before the end of the war Muhammad V died unexpectedly on July 2, 1918.

(J. H. KRAMERS)
MUHAMMAD VI WAHID AL-DIN, last Sultan of the Ottoman Empire, was born on January 14, 1561, as son of Sultan Abd al-Majid. He was elected to the throne on July 3, 1568, after the death of his brother Muhammad V Rëşad, the former heir to the throne Yusuf Izz al-Din, son of Abd al-Âziz, having died in 1566. When on October 30, 1568, nearly four months after his accession, the amirshah of Mudros was signed, he was the ruler of an empire that seemed to be at the mercy of its former enemies, whose military forces occupied the capital and other hitherto unconquered parts of Turkey. On the other hand, the power of the Committee of Union and Progress was broken, but, since in the beginning of 1569 there began in Anatolia an increasing opposition against the foreign occupation, joined with an aversion to obey the Constantinople government, Muhammad VI seemed to have no other choice than to throw in his lot with the Allies and, together with his grand vizier Dâmid Ferid Pasha, he collaborated with the Allies in the efforts to suppress the nationalist forces (beginning of 1570): this anti-nationalist action was even sanctioned by a fa'âlâh of the Shaikh al-Islam.

As the nationalist movement grew ever stronger, the Sultan's authority could only be upheld in Constantinople by the support of the Allies. His government had to sign the Treaty of Sèves (August 10, 1570) and the Tewfik Pasha cabinet (since October 21, 1570) tried to summon the Parliament for its ratification. But in 1571 things had already gone so far that Tewfik Pasha recognized the powerlessness of his government to represent Turkey. The final success of the nationalists against the Greeks (destruction of Smyrna, September 6, 1571) brought about the armistice of Mudânas (October 11, 1572), to which the Sultan's government was not a party. It was still invited to represent Turkey in Lausanne, together with the Angora government. This was not accepted by the Great National Assembly, which, on November 1, 1572, declared the Ottoman sultanate abolished from March 16, 1570 (occupation of Constantinople); Tewfik Pasha's cabinet resigned accordingly (November 4) and Muhammad VI remained as Khalif in Constantinople, where, on November 10, he appeared at his last Âlâmâ. When, however, the National Assembly decided some days afterwards to try Wahid al-Din on a charge of high treason, this last Sultan left Constantinople as a fugitive on a British ship (November 17, 1572) and the very next day the Angora government declared him dethroned and expelled. Having gone first to Malta, the ex-sultan proceeded to Mecca as the guest of king Husain. From here he launched his proclamation to the Islamic world, in which he maintained that the separation of the caliphate from the sultanate was contrary to the shura (text in Ouverte Modernes, t. 702-705). This appeal found hardly any response in the Islamic world. The last Ottoman Sultan left Mecca again and went to live in San Remo, where he died on May 10, 1576. In 1574 he had even recognized king Husain's claim to the caliphate.

(J. H. Kramers)

MUHAMMAD, Mu'izz al-Din B. Isk, was the fourth of the Shamsâhî princes of Ghur to rule the empire of Ghurri. His name was originally Shamsâh âIâ, but he assumed that of Mu'izz al-Din. His elder brother Ghîyâth al-Din succeeded his cousin Saif al-Din in 1173 and made Muhammad governor of Herât, entitling him also the duty of extending the dominions of the house in India.

Muhammad led his first expedition into India in 1175, expelled the Ismâ'îlî heretics we rukd Multân, placed an orthodox governor in that province, and captured Uch. In 1178 he rashly led an army into Gujûrajâ, was defeated by the rajâs, Bhima the Vâghâra, and returned to Ghirât with no more than the remnant of his army, but in the following year he took Peshâvar, and in 1181 Lâlior, taking prisoner Khusrâv Malik, the lot of the Ghazâwids, and adding the Fândijâ to his brother's dominions. In the winter of 1190-1191 he invaded the Cawhân kingdom of Diîhî and captured Rustâm, but the rajâs, Fâridî Râgâ, marched against him and defeated him at Tarâvîr near Karnál. He was wounded, but escaped, and in 1192 returned to India, defeated and slew Fâridî Râgâ at Tarâvîr. He captured Fânsî, Sâmînâ, Guhîm, and other fortresses, and plundered Adjmer. On returning to Ghirât he left Kûth al-Dîn Abâgh [q. v.] in India as vicere, and at the end of 1192 Abâgh took Dîlhi and made it his capital. In 1197 Abâgh was beheaded in Adjmer and Muhammad sent a relieving force which enabled him to defeat Bhima of Gujarât and to plunder his capital, Anhilvâra.

Muhammad was now employed with his brother in recovering Kharâsân. On the death of Taâkâsh Khân Khâirimshâh [q. v.] in Marw, on July 3, 1200, Muhammad Curbak was sent to Marw, which he captured and occupied for Ghîyâth al-Din, and Ghîyâth al-Din and his brother besieged and took Nâjîpur. Muhammad was then sent in command of an expedition to Kâil but the misbehaviour of his troops earned a rebuke which led to the only quarrel between the brothers.

On the death of Ghîyâth al-Din in 1202 Muhammad succeeded to the great empire which he had helped his brother to build up, but Muhammad Khâirimshâh [q. v.] took Marw from Muhammad Curbak, recovered Nâjîpur, but failed to capture Herât. Mu'izz al-Din Muhammad marched against him but suffered a crushing defeat near Anhilvâra and fled to Tâlağân. He was besieged by the army of Gûr Khân of Kâsh-khârî and purchased a safe retreat only by the surrender of the whole of his baggage and material of war. On his arrival before Ghirât in this plight his younger brother refused to admit him, and he passed over to Multân where the governor likewise refused him admission, but he attacked and defeated him and appointed Nâjîr al-Dîn Khabâ [q. v.] to the government of the province. He returned to Ghirât and established himself there, sparing the life of Isma'îl. By the treaty which he concluded with Muhammad Khârimshâh he was permitted to retain Bâlîr and Herât, but not Nâjîpur and Marw.

On Oct. 20, 1205, he marched from Ghirât for India and, with the help of Kûth al-Dîn Abâgh, defeated the Khokars, but on returning towards Ghirât was assassinated, on March 15, 1206, on the bank of the Indus, either by Ismâ'îlî heretics or by some Khokars. He was succeeded in Ghur
by his nephew Mahmūd, son of Ghiyāṣ al-Dīn, but the viceroy of the provinces, Shīgh in Dihlī, Kubīlī in Multān, Tādī al-Dīn Yūduq in Kānnār, and Dīligīn in Ghaznī, became independent.

Bibliography: Tahākāt-i Nāṣir, and translation by Major H. G. Raverty (Bibl. Ind.); Tahākāt-i Guðrā, by Šāhīn Allāh Muḥtāfī and translation by Professor F. G. Browne (G. M. S.), The Cambridge History of India, vol. iii.

T. W. HARK

MUHAMMAD, TUGHĀL, the second king of the Tughāl dynasty of Dihlī, was the eldest son of Ghiyāṣ al-Dīn Tughālī, its founder. During the short reign of the usurper, Šāh al-Dīn Khurāsān, he was in some peril, but escaped and joined his father, who was marching on Dihlī. He was known at first as Ḥa máxima, but received the title of Ulugh Khān and was sent in 1321 to Warangal, to reduce obedience to the Ḥāṣ, Pratāpa Rādrāleva II. In this distant region he attempted to rebel, but his army refused to believe his story of his father's death at Dihlī and refused to accept him as their king, and he was obliged to return in haste to the capital, where he either persuaded his father of his innocence or gained a pardon, for, though his accomplices suffered cruel deaths, he was again sent in 1323, into Telengānā, and on this occasion compelled the Ḥāṣ to surrender and sent him to Dihlī. In the following year he acted as regent during his father's absence on an expedition into Bengal, but his conduct aroused suspicion, and his father rebuked him in letters sent from Bengal. He received the king, on his return, in a temporary house of wood, so constructed that the dislocation of a beam would bring the whole structure down, and by this device crushed the old man to death, and ascended the throne in February 1328.

The delineation of a character so complex and contradictory as that of Muḥammad Tughālī is no easy task. He was one of the most extraordinary monarchs who ever sat upon a throne. To the most lavish generosity he united revolting and indiscriminate cruelty; to scrupulous observance of the ritual and ceremonial prescribed by the Islamic law an utter disregard of that law in public affairs; to a dehiscing and superstition-veneration for all whose descent or whose pious command respect a feculity which when ruled repected neither the blood of the Prophet nor personal sanctity. Some of his administrative and军事 measures give evidence of abilities of the highest order; others are the acts of a madman.

The chronicle of his reign is largely a record of rebellions punished with gross barbarity. In the second year his cousin Ghunṣār rebelled in the Dakan and was slayed alive. In 1327 he rebuilt Dāwlatābād, made it his capital, and two years later drove the whole population of Dihlī thither. In 1328 Kishlā Khān rebelled in Multān and was defeated and slain, and in 1329 India was invaded by the Khuṭbāl. Ali al-Dīn Tārmābīr, who, however, was driven from the country. In the same year the enhancement of the land-tax on the Gangetic Doāb drove the inhabitants into rebellion, and the measures taken to suppress the rising depopulated the country. At about the same time Muḥammad resided in his famous fictitious currency, decreeing that his brass tokens should be accepted as equivalent to silver tangas. No precautions were taken against counterfeiting, and when the experiment failed and the tokens were recalled the treasury was obliged to purchase mountains of brass at the price of silver.

In 1331 a rebellion in Bengal was crushed by Bahārām Khān, but in 1338 he died, and a second rebellion separated the province from the kingdom of Dihlī, and in 1334 Saiyid Dādāl al-Dīn Aḥsan established his independence in Madūnī. Muḥammād marched to purs-h him, but a pestilence in his army compelled him to retreat, and on his return he established in the Dākāu the piers system of farming out the revenue for extravagant sums, the result of which was to drive both the impoverished cultivator and the defaulting farmer into rebellion. Ḥāṣ-γang of Dāwlatābād, believing a report of the king's death, rebelled, but was captured and pardoned, a rare instance of leniency, but a rebellion in the Pandjāb was crushed with great severity.

An enormous army raised for the conquest of Persiā melted away for want of funds to maintain it. In 1337 a heavy calamity fell on northern India, a famine of unusual severity which lasted for seven years. The king's measures to combat the famine were, on the whole, well-conceived and well-executed. Grain was plentiful in Awadh, which proved that the famine was largely due to artificial causes, and he built a temporary city, Suitā-i-Īlm (Sīntā-i Dowšān, Sans. "the Gate of Paradise"), on the western bank of the Ganges, transferred thither the revenues of Dihlī, and with the assistance of Šāh al-Mulk, governor of Awadh, fed them from the granaries of that province. In the following year he committed one of the greatest of his follies in assembling an army of 100,000 horse for the invasion of Tibet and sending it into the Himalayas, where it perished.

In 1339 a rebellion in the Dakan was crushed and even the faithful Šāh al-Mulk was/goaded into rebellion, but, in consideration of his services, was imprisoned instead of being put to death. Almost immediately afterwards, 1340, the Afghan rebelled in Multān, but fell before the king's wrath into Afghanistan. The famine was now at its height, and the people were eating human flesh. Muḥammad aimed to set him at the head of rebellions which should improve and extend agriculture and oblige future famines. By these means, says the contemporary historian, with conscious or unconscious irony, agriculture would have been so promoted that plenty would have reigned throughout the earth, had they been practicable. They included the extension of the system of farming the revenues, and bred confusion and rebellion, which reacted on the king until he regarded his subjects as his natural enemies and waged war against them with all the weapons of despotic power. The tale of execution is recorded, with sickening details, by executioner, with sickening details, by execution is recorded, with sickening details, by execution was recorded, with sickening details, by execution. and proclaimed an Afghan, Isma'îl Muhk, as their king. The king marched to Daulatbad, captured the city, and besieged the rebels in the citadel, but was recalled to Gujrat by a serious rebellion headed by a man named Taghi. He pursued the rebel in Gujrat and Kãthiawâr for three years, drove him into Sind, and followed him thither, and on March 20, 1551, died within a few miles of Thatha, where the rebel had taken refuge. "The king," as a historian says, "was freed from his people, and they from their king."

His empire, at its greatest extent, included the whole of Indus except the small kingdoms of the Cola and the Pandya, in the neighbourhood of Cape Comorin and the principality of Ghurâr in Kãthiawâr. Before his death he lost Bengal, the Dakan, the Peninsula, and Sind, and left the remnant of his dominions seething with discontent.

MUHAMMAD III, the sixth king of the Tughluk dynasty of Dihlî, was the son of Firûz, at whose death the son of Fath Khân, his eldest son, was raised to the throne on Sept. 20, 1358, as Qâhîyâ-’dîn Tughluk II, but was slain on Feb. 19, 1359, and was succeeded by his cousin Abu Bakr, son of Zafar Khân, the second son of Firûz. Muhammâd, the third son, contested the succession, and, after suffering more than one defeat, occupied Dihlî and ascended the throne on Aug. 31, 1390. Abu Bakr took refuge with Bahâdur Nâhir in M-wât but was pursued and defeated, and imprisoned in Mirâh, where he shortly afterwards died. The old servants of Firûz, men of Eastern Hindûstân, who had been the principal factors in all the troubles of the kingdom, were put to the sword, after being tested by a shibboleth which distinguished them from the natives of Dihlî.

A rebellion in Gujârât was suppressed in the same year by Zafar Khân, who in 1396 became independent in that province, and in 1392 Muhammad launched a serious rebellion in the Dübâb, captured Ispâhân, ravaged the districts of Kanâvâl and Dâlman, and built near Dâlaârs a fort, which he named Muhammadâbâd. In the same year, he put to death his minister, Gilân Khân, who was meditating rebellion, and appointed in his place Khwânda Dîkâân. Another rebellion was crushed in the southern Dübâb, and in August 1393, Muhammâd invaded and plundered Mewât and returned to Dâlaârs, where he fell sick. Bahâdur Nâhir took advantage of his illness to plunder some villages in the neighbourhood of Dihlî and Muhammad marched into Mewât, defeated him, and put him to flight, but on his return to Muhammadâbâd his disorder increased, and on Jan. 26, 1394, just as he had ordered his son Humâyûn Khân to march against the Khârasâns, who had captured Lahor and were ravaging the Pathânis, he died.

MUHAMMAD II, the fifth king of the Bahâni dynasty of the Dâkan, was the eldest son of Hasan, "Allâ”-Dîn Bahman Shah, usually, but incorrectly, styled Hasan Gangi. On succeeding his father, on Feb. 11, 1538, he carefully organized the government of the four provinces of the kingdom and the administration of the army. The pertinacity of the Hindâ bankers and money-changers in melting down the gold coinage which he introduced led to a general massacre of the community and the measure involved him in hostilities with the Hindu states of Wargânâl and Vidiyâmangar. He invaded the dominions of Kânâhâiyâ of Wargânâl three times, but his son Venââyê Deva to death, and compelled him to pay heavy indemnities and to surrender the town and district of Gulkânda. After this success he grossly insulted Bukkâ I of Vidiyâmangar by paying some dancing girls with a draft drawn on him. On Bukka's treasury Bukkâ invaded the Khâr Gâb, captured Mudigal, and massacred its garrison. Muhammad marched against him, attacked him with great impetuosity, defeated him, and recovered Mudigal, where he rested during the rainy season. In 1367 he met Bukkâ at Kasthâl, again defeated him, and carried out an indiscriminate massacre of his subjects. The Hindis were cowed by the slaughter of 400,000 of their race. and Bukkâ was compelled to sue for peace. He honoured the draft and paid an indemnity, and received in return a guarantee that non-combatants should be spared in future wars, and the agreement, though sometimes violated, mitigated to some extent the horrors of the long period of intermittent warfare between the two states. On returning from Vidiyâmangar he completed, in 1367, the great mosque at Gulkânda, and then turned against his cousin Bahârân Khân Mûzâdiarân, who, had for some years been in rebellion at Daulatbâd, defeated his army, and drove its leaders into Gujrat. He died in 1377 and was succeeded by his elder son, Mudiâhid.

Bibliography: Muhammad Kasim Firdusi, Gul酣âm-i Firâkîmî (Bombay 1832); Muntahâb al-Lubâb, vol. ii. (Bibl. Ind. Series of A. S. B.); Burhân-i Mâdâ’ûr (MSS) and translation by Major J. S. King (The History of the Bahâni Dynasty); An Arabic History of Gujratâr, edited by Sir E. Denison Ross (Indian Text Series); The Cambridge History of India, vol. iv.

MUHAMMAD I, the second king of the Bahâni dynasty of the Dâkan, was the son of Mâhmûd Khân, the youngest son of "Allâ”-Dîn Bahman Shah, the founder of the dynasty, and was raised to the throne on May 20, 1378, after the assassination of his uncle, Dâwûd Shah. Firdusi's statement that this king's name was Mahamad has misled all European historians, but is refuted by inscriptions, legends on coins, and other historians.

Muhammad II was a man of peace, devoted to literature and poetry, and his reign was undisturbed by foreign wars. He invited Hâjî to visit his court, and the great poet set out from Shirâz in response to the invitation, but was so struck by a storm in the Persian Gulf that he disembarked and returned to Shirâz, whence he sent to Muhammad his excuses in a well known ode.

Between 1387 and 1395 the Dâkan was visited by a severe famine, and the king's measures of relief included the free importation of grain, the establishment of schools at which children were taught, fed, and lodged at the public expense,
and special allowances to readers of the Qur'an and the blind, but only those of his own faith profited by his benefactions. He died of a fever on April 20, 1397, and was succeeded by his elder brother, Cibyra al-Din.

Biography: See art. MUHAMMAD I; also A. S. B., vol. lxxiii., part i, 1904.

T. W. HAGE

MUHAMMAD III, LASHKARI, the thirteenth king of the Bahmani dynasty of the Deccan, was the younger son of Humayun Shih, and succeeded his elder brother, Nizam Shih, on July 30, 1465, at the age of nine. His minister was the famous Mahmud Gawan, Malik al-Tudjjar, Khadda Djiplan. A campaign against Malwa in 1457 was unsuccessful, but between 1469 and 1471 Mahmud Gawan conquered the southern Konkan. In 1472 Malik Hasan Bahri, Nizam al-Mulk, a Brahman who had been captured in Vellayanagar and educated as a Muslim, led a successful expedition into southern Calisa and was rewarded with the government of Telengana. Fath al-Mulk, another Brahman with a similar history, was made governor of Barar, and Yusuf Adil Khan, a Turk, was appointed to Dawatlahabad. In the same year Muhammad captured the fortresses of Bankapur and Balgaug, and his conduct at the siege of the latter earned him the title of Lashkari, the Soldier. In 1474 the Deccan suffered severely from a famine which lasted for two years, and in 1476 a rebellion in Kondawir led the king into Telengana. He relieved Malik Hasan, who had been besieged in Rajdahmahendri, invaded Calisa and punished the rajah, who had supported the rebels, and on his return, in 1478, captured Kondawir and assumed the title of Gawan. He then set out to invade the eastern Karnatak, but first divided the great province of Telengana into two governments, mortally offending Malik Hasan, the governor. The partition was part of a scheme devised by Mahmud Gawan, to be applied to all the provinces of the kingdom.

Muhammad made Kondapalli, in the Karnatak, his headquarters, and returned thither after carrying out a daring raid to Kandheveram. From Kondapalli he issued an edict dividing the other three provinces of his kingdom, Barar, Dawlatabad, and Gullaqua, each into two governments. The measure was intensely unpopular, but it was only the vindictive Malik Hasan that actively resented it. He regarded Mahmud Gawan as the author of all the unpopular reforms, and by means of a forged letter persuaded the young king that his minister was league with the foreign enemies of the state. Muhammad, when under the influence of drink, summarily and his faithful minister, and on April 5, 1481, without any inquiry into the circumstances of the case, caused his head to be struck off. Mahmud's innocence was established immediately after his death, and from the day of his unjust execution may be dated the collapse of the authority of the Bahmani kings. Of the two parties in the state all the foreigners, led by Yusuf Adil Khan, who established himself in Bidjaipur, and the respectable portion of the Deccan, led by Fath al-Mulk of Barar, avoided intercourse with the king, who was thrown into the arms of the assassins, led by Malik Hasan. The army accompanied Muhammad to Bidar and subsequently on an expedition to Balgawi, but encamped apart from the royal troops, and always saluted the king from a distance, refusing to enter his presence. Muhammad attempted to drown his grief and humiliation in drink, from the effects of which he died at Bidar on March 22, 1482, crying out in his last moments that Mahmud Gawan was slaying him. He was succeeded by his son Mahmud, who was never a king but in name.

Biography: See art. MUHAMMAD I.

T. W. HAGE

MUHAMMAD b. `ABBAS [See KAMBAR.]

MUHAMMAD b. `Abd Allâh, greatest grandson of Hasan, the eldest son of Ali and Fatima, was one of the Alids, who did not spend their time passively awaiting the fulfilment of their aspirations, but endeavoured to realise them by personal effort. He and his brother Ibrahim had, according to Wâlidi, been brought up as future rulers and Muhammad was called al-Mahdi by his father. As early as the reign of the Umayyad caliph Hishâm, the two sectarian al-Mughrîs [q.v.] and Bayân [q.v.] who did not recognise Muhammad b. `Abd Allâh as Caliph, was anxious to make propaganda for him. When signs of the imminent collapse of the Umayyad rule became apparent after `Abd Allâh's death, `Abd Allâh's family by his command paid homage to Muhammad with the exception of al-Mughrî's son Djaflar. Wafer circles also recognised him as the legitimate heir, including the Mu'tazilis, who in those days had a distinctly ascetic character. Alî Djaflar, later the Aflâmîs caliph, was at this time attached to this cloud and it is several times recorded that he was among those who paid homage to Muhammad. This is in itself by no means improbable and well explains his hostile attitude to him, although it remains remarkable that Muhammad later nowhere, even in his polemical letters to him, refers to this important fact. The Umayyad governor Ibn Hubeira also thought of joining him when he was besieged in Wast in 132 (750) but dropped the matter when he received no answer to his letter.

When finally the Aflâmîs Abu l'-Aflâmîs in the same year won the caliphate and ousted the Alids, the two brothers disappeared and showed thereby that they would not recognise him. There now began for them a period full of adventure and danger, especially after Alî Djaflar became caliph in 136 (754). They went secretly from place to place to gain adherents: nowhere could they feel safe from the caliph but the people were on the whole favourably disposed to them and at least would not betray them. In this way they reached not only Bayâra and Kûfa but even went as far as al-Sind via 'Aden; as a rule however, they stayed in Arabia, most securely among the Djihaâna, in whose territory lay the hill of Bajwâ, which so often appears in the history of the Alids. The caliph was very uneasy at the continued lack of success of his search for them; more and more angrily he demanded of his governors in Medina that they should be produced and he dismissed several in rapid succession, when they appeared, perhaps without reason, ineffective and lukewarm in their efforts. He himself took very active steps but with as little result. On his pilgrimage in 140 (758) he had Muhammad and Ibrahim's father thrown into prison because they would not betray their place of concealment, and on a later pilgrimage (144 = 763) the same fate met the sons and grandson of Hasan, 'Abd Allâh's brother. They and 'Abd Allâh were taken to Kûfa, treated most
brutally and thrown into prison, where most of them died. The same thing happened to Habib-ud-Dawla Muhammad b. Abd Allah, a deponent of 'Uthman, whose head the caliph sent to Khurasan with a certificate on oath that it was the head of the 'Abd Allah Muhammad in order to intimidate his followers there. Shortly before (Dec. 701), he finally found a governor after his own heart. 'Uthman b. 'Abd Allah, who conducted the search with the necessary vigour. But he was soon able to save himself the trouble for in Radjab 145 (Nov. 763) Muhammad appeared in Medina and began the revolution while his brother Ibrahim went to Basra to do the same. It is not clear whether they did this because in Muhammad's opinion the time was ripe or whether they were forced by circumstances to hasten their plans. In any case, the enterprise was not sufficiently prepared, for although they had a large number of followers in Kufa, Bagha, Egypt, where however Muhammad's son 'Ali was arrested by the 'Abbasid governor in Khurasan and even in Sindh, to which another son Abd Allah al-Ashtar was sent, there was no question of any organisation, and, as so frequently, the enthusiasm for the 'Ali was like a fire of straw which blazes up quickly but dies down as soon. In Medina where 'Uthman was completely taken by surprise, Muhammad in keeping with his character acted with great mildness, he opened the prison, forbade all bloodshed and was content to arrest 'Uthman. The best elements in the town came over to him after the jurist Mafik b Ama declared invalid his oath taken to the 'Abbasid. Mecca also surrendered to the new ruler. The outbreak of the revolt was really a relief to Abd al-Dafar for he had now, as he said, entered the fox out of his hole. He hurriedly left Baghdad, with the building of which he was busy, and went to Kufa, the point of danger. With keen instinct he saw that the weak point of the rebellion lay in Medina which must be attacked first, for if in this remote spot there was a lack of materials of war and the roads thither could easily be barred. But he first of all offered a complete amnesty to Muhammad, which however only led to a characteristic exchange of letters, in which one reproached the other with the weaknesses of his family. He then sent his relative 'Isa b. Misr against him with 4,000 men, with instructions however to settle the matter peacefully if possible. His arrival had a sobering effect upon the Medinees, of whom a number seized the opportunity to get out of their difficult position. Muhammad however remained undismayed. He rejected the well meant advice of several men to abandon Medina as an insult to the town but left his people free to stay with him or not. He trusted in Allah "from whom victory comes and in whose hand the matter lies", and imitated all that the Prophet had done in his time in romantic fashion. For example he restored the ditch which the Prophet had dug round Medina when it was besieged by the Khurais; he used Muhammad's sword and his battle-cry was the same as that in the battle of Hunain; even the odd single combat before the battle proper was revived. The result in these circumstances was easily foreseen 'Isa, after offering a free pardon in vain for a few days, had a few doors over the ditch, entered the town and began a battle in which Muhammad's supporters became less and less in numbers until their leader finally fell (Monday, 14th Ramadhan 145 = Dec. 6, 762). Muhammad's head was cut off and sent to the caliph. For the further course of the rebellion see the article Ibrahim b. 'Abd Allah.

Muhammad is described as tall and strong with a very dark skin, on which account the caliph sobriqued him al-Mahmud, the Blacksmith. He was rightly called "the pure soul" (Tabari, iii. 260) for he was an ideal character, gentle in spite of his personal bravery, but he lacked those qualities which are required of a pretender in times like his.

MUHAMMAD b. 'ABD ALLAH, a Tahirid, governor of Baghdad. Born in 209 (824—825) Muhammad in 237 (851) was summoned by the Caliph to Baghdad and appointed military governor in order to restore order in the chaos then prevailing. In spite of the great power of the Tahirids, who ruled Khurasan as independent sovereigns in practice, although they nominally recognised the suzerainty of the Caliph, his task was by no means a light one. After al-Mustanir had ascended the throne (248 = 862), he confirmed Muhammad in his office and also gave him the governorship of the 'Iraq along with the two holy cities of Mecca and Medina. In the following year troubles broke out in Baghdad and Samarra. The Arabs were defeated by the Byzantines and the rage of the people was turned against the Caliph. The vizier 'Utmanis however finally succeeded in restoring order with the help of the two Turkish generals Wasif and Bogha the Younger. The 'Alids also gave the government trouble on several occasions. A descendant of 'Ali named Vahya b. 'Omar rebelled in Kufa and drove out the governor of the town. When he had routed an army sent against him by Muhammad, he was attacked by the 'Abbasid general b. Hasain b. Isma'il and was killed when he tried to defend himself. He was finally killed in the battle (Radjab 250 = Aug. 864). Another 'Ali, al-Hasan, b. Zaid, had more success. Two prominent men in Tahiristan, who were dissatisfied with the rule of the Tahirids, appealed to him in 250 and very soon he was acknowledged as lord of the whole of Tahiristan. The Tahirid governors of al-Ray and Kazvin were driven out and replaced by 'Alids; Muhammad b. Tahir, governor of Khurasan, a nephew of the governor of Baghdad, then sent an army against al-Ray. The 'Alid governor was defeated and captured and the town had to surrender, but again fell into the hand of the 'Alids. When the former governor of Tahiristan, Sulaiman b. 'Abd Allah, invaded this province and conquered it completely, al-Hasan b. Zaid had to flee to Bulain where he was defeated by 'Abd Allah b. Tahir (351 = 865-866); after some years (257 = 870—871) however, he inflicted a defeat on the latter's troops in Djordjan and in 259 (872—873) he again became lord of Khurasan, where he founded an 'Alid dynasty which lasted about sixty years. Arabia
also did not escape the 'Ahd plot. A descendant of 'Ali named Isma'il b. Yuhäf raised trouble there in 1902 (895), plundered Mecca and Medina and killed or wounded many pilgrims that he received the epithet of Al-Mutā'ab, "the Blood-Botherer". There was also continual trouble in the capital. In Mecca of the same year (1902, Fed. 265), al-Mutā'ab left Simārak and went to Baghdad. Al-Mutā'ab [q.v.] was then taken by force from his prison in Simārak and proclaimed Caliph; he then appointed his brother Ali Ahmad, later co-regent with the Caliph al-Muhammad, commander-in-chief in the war against al-Mutā'ab and his governor. When all negotiations failed, the latter had to take arms but was several times defeated. Fighting took place in and around Baghdad with varying success during almost the whole year, while anarchy in the provinces increased and when Muhammad finally began negotiations with Abū Ahmad, he was accused of treason, so that the Caliph had to protect him again against the troops who were furious with him. But when Muhammad's friends told him that al-Mustā'ab intended to sacrifice himself, he made peace with Abū Ahmad. The Caliph had reluctantly to confirm the treaty and jabhata in favour of his rival al-Mustā'ab. (Dhu'Al-Hijjah 1251 = Fajr 596) and the latter the same day ascended the throne. Muhammad died in Dhu 'Al-Ka'd: 253 Nov. 867.

MUHAMMAD b. 'ABD ALLĀH ḤASSĀN AL-MUḤDI, the well known Somali Mahdi who became the British "the Mad Mahdi". He was a Somali belonging to the Ogaden tribes and Arabian, his return to Somaliland he first settled in the Dhiibahantah tribe's territory and began a vigorous propaganda on behalf of the Shari'ah and to call Somali Muslims to a more strict rule of life. As he was a learned man and a skilful impromptu composer of poems (the ancient and best way to propagate one's ideas among the Somali Beduins), he was easily able to attain a great popularity among the Dhiibahantah in British Somaliland and his Ogaden countrymen in Abyssinia. His influence brought him to the knowledge of the government of Berbera and British officials had sometimes recourse to him to settle through his mediation disputes among the Beduin groups. In March 1899 however the Mahdi suddenly changed his former attitude and openly hostile and towards the British Government. In August 1899 he assembled his followers in Baren and declared himself to be the Mahdi and proclaimed the holy war against the infidels. A first expedition was sent against him by the Abyssinians to prevent a further exten-

-ion of the rebellion in Ogaden; but Gräich Bānta, the leader of this force, returned to Harar after a violent jollifying razzia led by him against the Kīr ʿAqīb. The Ogaden tribe. In 1901 Colonel Swayne drove back the Mahdi as far as the boundaries of Italian Northern Somaliland and defeated him at Fartūla on July 16, 1901. A second British expedition in 1902 won another victory in the fight at Eregi on October 6, 1902. In 1903 it was decided to send against the Mahdi a Christian expedition in three columns: a British one departing from Hoby according to a British-Italian agreement concluded in the same year that effect, another British column departing from Berbera; and a third, an Abyssinian force departing from Harar. The British forces were placed under the command of General Manning, but the first column fell into an ambush and was defeated by the Mahdi at Guandari on April 17, 1903: the second column suffered heavy losses in a fierce fight at Fartūla on April 22, 1903; the Abyssinian column made only, as usual, a razzia against Ogaden groups in the valley of the Shebelia. In 1904 a fourth British expedition defeated the Mahdi at Dhabla on January 9, 1904 and again, after the landing of a naval force on the shore of the Indian Ocean, at Ilīg in Italian territory on April 21, 1904. In the meantime, Siyyid Muhammad Šīkhī on the invitation of the British and Italian Government had directed a letter to the most influential Muslim learned men in Somaliland, which contained a declaration against the Mahdi, who was said to have violated the rules of the Shari'ah and thus to have become worthy of the curses of the true followers of the Shari'ah. The victories of the British, however, they could not be followed up by a permanent occupation of the interior, had not been sufficient to subdue the rebellion. It was therefore attempted to conclude an Anglo-Italian agreement at with the Mahdi and this was carried through by offering to the Mahdi the concession of the Italian portion of the Nūgal valley with Ilīg as his seat. The Mahdi subjugated to these conditions in Ilīg on March 5, 1905; but added to his signature the clause "'Abd Allāh Šīkhī Šīkhī" (and the Consul knew my condition), which was explained in Europe as meaning a close trust in the Consul, but otherwise in Somaliland, as he (the Mahdi) was a Šīkhī, and therefore by no means obliged to execute any arrangement he might have concluded with infidels on account of temporary political conditions. In January 1906 the Mahdi actually began again to lead raids against British and Italian subjects. No great expedition was however sent against him by the British, who only sent a column from the interior of their colony; a Camel Constabulary Corps was raised as a mobile force to be employed in raids and swift operations against the Mahdi's parties. But after many successful operations against the Mahdi's parties. But after many successful operations against the Mahdi's parties. But after many successful operations against the Mahdi's parties. But after many successful operations against the Mahdi's parties. But after many successful operations against the Mahdi's parties. But after many successful operations against the Mahdi's parties. But after many successful operations against the Mahdi's parties. But after many successful operations against the Mahdi's parties. But after many successful operations against the Mahdi's parties.
Government, and further they organised the Sultan's forces to employ against them the Mullah, thus releasing the defence of the northern frontier of their colony. Thereon began a series of raids led by Somali auxiliaries especially against the Mullah's followers in the northern valley of the Shabelle and towards Nyagal, where Djibouti and Garad were occupied by the Sultan of Hobyo.

These energetic actions which took place even during the Great European war, besides wearing down the Mullah's army, caused him to lose political control of a very large zone where the population concluded peaceful agreements with Italy and forced him to be continually ready to defend his territory from the south also. However, after the end of the Great War, the British Government decided to attack the Mullah from Berbera and to finally overthrow him. In January-March 1920 after violent bombardments of the Mullah's defences by the British airmen, a British force advanced to Talash, the Mullah's last camp: he, rapidly pursued by the Camel Corps and Somali auxiliaries, fled to Ogaden and then into the Karaniah territory, where he died on November 23, 1920.

The Mullah's career is a very typical one for the study of the Somali mind. He had begun his movement as an agent of the Sihiyya far'a, then his increasing popularity tempted him to a more ambitious sphere and, accordingly, after placing his propaganda on a severely religious basis, he tried to become the leader of all the Somali by making the ties of the common faith prevail over the tribal bonds. This is really the only way to lead such a movement in Somaliland where Islam may be regarded as a tie of brotherhood among tribes otherwise deeply divided by their secular history of wars and revenge. Therefore Muhammad b. 'Abd Allah Husain said in a famous poem: "Have I not put my prayer-mat on this sea to join together the Muslims who were not brothers," alluding also to his relations with the Sihiyya in Arabia. He desired for the same reason that his followers should call themselves "Dara-wish," forgetting even the name of their original tribe. Therefore he appeared to become angry when he was referred to in official correspondence as "Muhammad 'Abd Allah, the Ogaden Bah Gen" while he used to add to his signature only the nisba: al-Hadhi'im (alluding to the origin of the Somali from 'Aqil b. Abi Talib) [see the art. SOMALILAND].

Further, instead of the tribal forces he raised special armed corps, often with a new name, like the Haggattu ("the scratchers") recruited among the Habar Gidir, the Dugad recruited among the Miskahil ("Dugad" means "shooter"); the Kaliqay recruited among the Jillahanta. But he did not pursue this policy to the end of the Somali tribe, the greater part of the Isaj tribes, which was a strong appeal to the old rivalry between Isaj and Darasii, Muhammad Sihi's letter, which was undoubtedly a severe blow to him, since he had already provoked the hostility of the Kadiyira and so had to rely entirely on Sihiyya support; the necessity of getting booty for his soldiers who otherwise would have hardly remained with him: all these things and his very nature caused the religious prestige of the Mullah as the Mahdi of Somaliland to decline and he gradually became merely the chief of a tribe; a powerful chief indeed of a large tribe as the Darasii were, formed from various elements and therefore very similar to the federations well known in the Somali customary law. It was obvious that, when he began to regard himself in this light (that is regarding himself as a chief of a Somali tribe rather than the brother born from the same father and the same mother of all the Muslims); it was very difficult for him to restrain himself and his followers from exaggerating those tendencies so familiar to their own national character: and therefore they came back gradually to the ancient Somali custom of guerrilla warfare conducted in the traditional way, even to defying the tribes of the enemy in insulting or scornful poems or designating them with typical ironical nicknames or giving to every razzia a special name ("the razzia smashing the bones") was the name given to the fight at Dalmadoba; cf. the Ahyam al-'Arab.

It may therefore be concluded that the Mullah's attempt to avail himself of Islam to conquer the old rivalries between the tribes and combine the Somalis to drive the Europeans out of the country, failed both on account of the strength of the European and the Arab tribe the forces once, often unconscious, opposed by the Somali on behalf of their ancient tribal organisation and customary law.

(Exerco Cerulli)

MUHAMMAD R. 'ABD ALLAH [See Ibn Al-Dirak, Ibn Al-Khatib, Ibn Malik.]

MUHAMMAD R. 'ABD AL-MALIK, ARC DIAS, called Ibn al-Zaïyât, vizier to several Abbasids. Ibn al-Zaïyât began his career as secretary in the chancery in Bagdad and when the caliph al-Mu'tamin noticed his ability and learning he appointed him his vizier (219-220 = 834-835) He also filled this office in the reign of al-Wathib: but as he treated the latter's brother Dja'al, the future caliph al-Mutawakkil, with a lack of respect he earned his hatred. After the death of al-Wathib in Dhu 'l-Hijja 232 (Aug. 847), Ibn al-Zaïyat wished homage to be paid to his son Muhammad; the latter, however, was thought to be too young by the Turkish general Wazif and in his stead Dja'al was proclaimed caliph under the name al-Mutawakkil. The vizier was at first allowed to remain in office but in Safar of the following year (Sept. 847), he was arrested, deprived of his possessions and subjected to a cruel form of torture which he himself had invented. After enduring the most horrible cruelty he died in Rabi' I 233 (Nov. 847).

MUHAMMAD R. 'ABD AL-MALIK [See Ibn Tufail, Ibn Zahir.]

(K. V. Zietekstein)
MUHAMMAD b. 'ABD AL-RAJHIM [See Ibn al-Fikri.]

MUHAMMAD b. 'ABD AL-WAHHAB [See Wustenfeld.]

MUHAMMAD b. ABI TAMIL [See Al-Mansur.]

MUHAMMAD, a son of Abu Bakr and one of his wives, Amma of the tribe of Khath'am. He was born in the last year of Muhammad's life so that his father could not have exercised any influence on him, while the memories of Abu Bakr's great friend which were kept alive in his family must have had all the more influence on the passionate nature of the boy, which receives important confirmation from the fact that Ibn Khutbah decries him as one of the "pious" (muhaddith) among the Khurashi. When in the reign of Uthman the bitterness at the preference of the Umayyads in combination with a reaction against the strong secularisation of Umar provoked a movement which grew in strength, he took part in it with great vigour and began along with "Chalghim" and foster-son Muhammad b. Abu Hujaj to stir up events for the portion of Egypt against the Caliph. He later went with other revolutionaries to Medina where his equally ardent but much wiser half-brother Alig in vain advised him to go with him to Mecca and leave others to carry through the crime; but he was one of those who bade into the Caliph's room where he ill-treated the helpless old man although it was Kinana b. Bishir who dealt the death-blow. He was one of the few Khurashi who joined Alig and the latter apparently cherished a real affection for the young man, which his enemies of course interpreted as further evidence of his friendship with the murderers of Uthman. Muhammad took part in the battle of the Camel, at the decision of which the chivalrous Alig commissioned him to escort his half-brother to Basra. The sources give somewhat different accounts of the last phase of his life in Egypt. According to Tabari, Abu Muthanna (Tabari, i. 3592 sq.) and Ya'qubi, 'Ali at one time appointed him governor of Egypt. He was unsparingly recalled by Kais b. Sulayd; but as he so soon discovered how foolish it was to appoint a youth inexperienced in war to this difficult post, he sent for his eldest follower al-Ashtar (q.v.) and gave him command in Egypt while he appeased Muhammad's rightly injured feelings by a kind letter. The attempt to make good his failed, however, for al-Ashtar was poisoned on the way in al-Kul'am at the instigation of Mu'awiyah. Al-Zubair's account (Tabari, i. 3342) shows Alig in a somewhat more favourable light. After the recall of Kais he sent al-Ashtar as governor to Egypt and only after he was poisoned did he send Muhammad. Finally there is a third story (Ibn al-Kalbi and Mas'udi) according to which al-Ashtar was sent to Egypt only after the death of Muhammad, but this must be due to some misunderstanding of the first version. In any case, the choice of Muhammad was an unfortunate one. For the inexperienced youth, who had no authority and was besides insufficiently supported by Alig, was not fit to meet experienced opponents like Mu'awiyah and 'Amr b. al-Asyri, as anyone but Alig would have seen. 'Amr b. al-'Asyri came with an army and a battle was fought at al-Muusunah (the dam). When the actual murder of Uthman, Kinana b. Bishir, had fallen after a brave resistance, the Egyptians lost heart and Muhammad, abandoned by all, was captured and killed while trying to escape (38 = 658).

MUHAMMAD b. ABI 'L-KASIM [See Ibn 'Ali Dinar.]

MUHAMMAD b. ABI MUHAMMAD [See Ibn Zatar.]

MUHAMMAD b. ABI 'L-SADJ. Abu 'Ubaid, son of Abu 'l-Sadji, Dhwali, an Eastern Iranian (not Turkish) noble from Ushasana in Marwah al-Nahar (see Alrabad, Zeus, ed. G. S. S. I., p. 169). For his early career see the article Aghlab. After his return to Baghli (276 = 886) and appears to have remained there (cf. Tabari, ii. 2122) until his appointment as governor of Adhharisjan in 279 (882). Though on his arrival he had entertained friendly relations with the Bagrati king of Armenia, Sembat (see 891), after seizing Matghia in 280 (893) he made a first incursion into Armenia, but without success. At the same time he had strengthened his position at Baghli by giving his daughter in marriage to al-Mu'tadid's confidant, the general Balq al-Mu'tadid. Having been rejoined by his 'Abdullah, the general Wasi, who had defeated the Dulad 'Umar b. 'Abd al-Aziz in al-Lihab in 281 (894—895) but did not succeed in annexing his territory, he made a second expedition into Armenia in 282—283 (895—896) and captured Kars, Dwii and Wasparkan. Subsequently he came to terms with Sembat, but his son Dhwali remained a governor of Dwin until Muhammad's death in 284 (897—898) Muhammad declared his independence, but finding himself unable to withstand al-Mu'tadid made prompt submission, was pardoned, and, in the following year officially recognized as governor of Armenia in addition to Adhharisjan. About the same time he appears to have adopted the title of al-Ashir, which appears on his coinage, and which was evidently intended as a claim to descent from the old princely family of Ushasana (see the article Aghlab and Juan, Iran. Nomenclat.. s. v. Fisaha). In 287 (906) he made a further indirect attempt to extend his rule over the territories which were slipping from the grasp of the T'umans by encouraging Wasi to seize Matghia and to apply to the caliph for investiture with the government of Cilicia. Al-Mu'tadid, however, learning that this was only a preliminary step towards the seizure of Dyar Muhar by Wasi and al-Ashir, put an end to their design by a swift and unexpected campaign against Wasi, who was himself captured. Al-Ashir died a few months later (Rabi'i 1, 288 = March 901) at Barjarha.

MUHAMMAD B. ABIFI ZAINAB [See Abu-
I-KHAIIR].

MUHAMMAD B. AGHLAB [See AHGLABIDES].

MUHAMMAD B. AHMAD [See IBN AL-TAKAMI].

MUHAMMAD B. 'ALI, a grandson of Husain the son of 'Ali: his kunya was Abu Qa'far. On account of his learning he was given the Honorable name of al-Bakhir (the investigator, who goes deeply into things). He was a recognised authority on Tradition and a number of pious utterances are also recorded of him; he had at the same time the characteristic fondness of his family for embroidered silk garments and colours. That he did not escape the usual fate of his family of being celebrated by a section of his descendants, is shown by a poem of the 'Ijli Abu Huiala; but he lived contentedly in Medina and apparently played no part in politics although he was treated, for example by 'Umar II, with respect. He was expressly disowned by extreme Shi'is like al-Mughira and Bayzîn. When the party which had hitherto paid homage to his brother Zaid, abandoned the latter, they transferred his privileges to him, or rather, since he was dead, to his son Qa'far [cf. Qa'far b. MUHAMMAD]. The reason of the breach is said to have been that Zaid would not insult the memory of the two first Caliphs as his followers demanded but this does not agree very well with the fact that Muhammad in Ibn Sa'd's obviously much retouched account emphatically declares his fondness for Abu Bakr and 'Umar. The date of his death is variously given as 114, 117 or 118 A.H.

MUHAMMAD B. 'ALI [See IBN AL-DOWAD AL-ISAHANI].

MUHAMMAD B. 'ALI AL-RIDJ, ninth Imam of the Twelver Shi'is, was born in Kâmajan 195 (June 811) in Medina. As, according to Abu 'l-Faradj al-Ishâhani, al-Kâtîf al-Tâlibiyyin (Teheran 1307), p. 193, he was of negroid appearance, it may be true that his mother, a slave-woman of her name, a slave-girl of Dura and Khat-uz-Zam, was a Naha:; to give her an honourable pedigree it was added: "of the family of Mari'a the Capt". When al-Ma'mûn attacked 'Ali al-Ridj to his court, he married the boy to one of his daughters, Cmm al-Fadlî, who was taken to him in 215 (830). Al-Mu'tamîn on his accession summoned him to Bagdad. He arrived there at the beginning of 220, but was dead already by Dhu 'l-Ka'da (Nov. 835). According to the Shi'is and in keeping with their scheme of martydom, he was poisoned at the instigation of al-Mu'tamîn by Cmm al-Fadlî who remained childless; but even the already mentioned Maljâfîn, which record every murder of an 'Ali, know nothing of this. This Muhammad is, generally speaking, only occasionally mentioned outside the Shi'a, along with his father, e.g. in Ibn Wâdi'h al-Ya'qubî, Ziyâ'd, ed. Hormuz (Leiden 1883), ii. 552 and in Tabari, Annals, iii. 1029, 1102; according to al-Ma'mûn: Hârân al-Hasht (Paris 1885), v. iii. 117, Muhammad died in 210 according to vi. 1271 not till the reign of al-Wâdi'hî, i.e. after 227. Even within the Shi'a, his role is quite a passive one. After his father's tragic end, those with Zaidi views who had hoped some day with him as Caliph to put into force their activist 'Ali political programme, went their own ways again, while others who held Imami views, one group, as usual in such a case, became "standfast" Wâdi'hîya and another chose Ahmad, a brother of al-Katdâ, as Imam; for Muhammad was only seven at the time. For those who remained faithful to him, there arose in the Shii' al-Imâmâ the question of the child Imam's knowledge. The case was repeated with the following three Imams. But the authority to teach was in the hands of men whose activity extended through several Imâmîs; with Mâjîsî (s. Bibl.) the third Imam, 125 Imâmî, and Mâljâfîn, al-Mallak al-Mâjilî (Teheran 1306), p. 217; Abi' Amir al-Kašqî, Mârîfât al-Kââfîr al-Râli (Bombay 1317), p. 353 sq., 374 sq.: Tâsi', Fihrist Kitâb al-Shi'â (Bud. Ind., No. 60), No. 124, 150, p. 289, note 1. The gradual development of the dogma in question, which is associated with the child Jesus teaching in Sûra xix. 30 sqq., is not quite clear, as regards its assimilation to the various Imâmîs. Heresiographers including al-Nawâbâñ, Firaq al-Shi'â (Bibl. Ind., No. 4), p. 74 sqq., quote the doctrines anonymously. Besides, there is the confusion of names (which has also entered European indices); for Muhammad b. 'Ali was also the name of one of his grandchild, who died before his father, the 10th Imâm 'Ali al-Nâbi, but left issue; his adherents continued the imamate further than the Twelver through these children, while they deny the existence of the twelfth Imâm Muhammad al-Malî in son of his brother, the eleventh Imâm Ijâsan al-Akbarî. Shi'a works avoid confusion by giving the ninth Imâm the kunya Abî Qa'far al-Tâni: his official title is al-Tâni, "the Gold-bearing"; a common epithet is al-Tâni wâdî, "the liberal"; he is said to have paid his father's debts. As 'Abî 'l-Kâtîf b. Abî al-Ridj before him, Ummânîh b. Sa'id al-Amir, called Sannmûn or Zay'în. Among the usual miracles of the Imâmîs, Abî Qa‘far al-Tâlîfî (290) in Fihrist al-Darâghî (in Mâljîsî, iii. 188) relates that the ninth Imâm carried a vassipasser at night from Syria to the holy sites of Kerbêlia, Kûfa and Medina as well as to Mecca. The fact that his memory has been kept so green to the present day is due to the fact that he was buried beside the tomb of his grandfather, the seventh Imâm, Mâlarına al-Kâmûn (v. v.): this arose the double Meshed al-Kâmûn.

Bibliography: A full account with exact references to the sources is given in Muhammad Bâkî b. Muhammad Ta'jî al-Mâjîsî, Bâkî al-Isârî (Beirut, xii. (Teheran 1302), p. 99—126: of earlier works we may specially mention al-Muflî (v. v.), al-Itrâdî (Teheran n. d. without pagination), arranged in the order of the Imâmîs.

MUHAMMAD B. 'AMMAR [See IBN 'AMMAR].
body of cavalry at once to Mecca and released Muhammad and the other prisoners in the nick of time but by the latter's express orders avoided conflict with Ibn Zubair's troops; the town was not to be desecrated by bloodshed. Muhammad then sought shelter with his family at Mina (cf. Kāmil, p. 554; 597; Kitāb al-ʿĀdām, viii. 33; Kumayt, ed. Hotovitz, i. 78) and later went to Fāṭif. He made no further use of Mukhtar and was therefore not compromised when the revolution failed and his champion fell in 67 (686–687).

In spite of the threats of Ibn Zubair and the demand couched in more friendly language of Abū al-Malik and although a safe place of residence was granted him neither in Ḥijāz nor in Syria, he defined his attitude by paying homage to neither of the two pretenders and adhered to the principle that he would only recognize a ruler around whom the Muslim community were united. He therefore appeared in the noteworthy pilgrimage of the year 688 along with the Zanadis, Umayyah and Khāṭiṣ, as an independent head of a party, although only under an armed neutrality. Only when, after the fall of Ibn Zubair (73 = 692), the unanimatorous qā'īyār which he had demanded, became a reality, did he finally recognise the Marāṣīd as the legitimate rulers and visited him in 78 (697–698) at Dama-scus. He returned however to Medina, where he died in St (700–701). His strict passivity in the political field is always attributed to purely religious motives in the traditions: not human force but Allah's help alone should assist Allah's family to their rights; but there is no doubt that a further reason was his lack of enterprise and self-confidence, a trait common to a number of 'Alids. That, like his whole family, he at the same time liked the good things of this world is evident from the heavy demands which he sent to Abū al-Malik for the payment of his debts and annual pensions for his children, relatives and clients; there is also evidence that he had the family fondness for fine clothes and costumes. It is all the more remarkable then that the more fanciful and extravagant school of Shi'is seized upon him at once after his death and spread the belief that he was not dead but lived in a kind of fairy kingdom on the hill of Khawāf west of Medina, whence he would return as the victorious leader of an army (cf. Kitāb al-ʿĀdām, vii. 4 sq.; 9 sq.; viii. 52). This was the idea of radīya which 'Abd Allah b. Salāh [q. v.] had associated with 'Alī (cf. Friedlander, in Z.A., xxiii. 390 sq.) and which was now transferred to him: and in fact it was now easier to bring him into the forefront than it had been while he maintained an attitude of stubborn passive resistance in his lifetime.

MUHAMMAD B. AL-ḤANAFĪYA — MUHAMMAD B. MAHMUD

**MUHAMMAD B. HĀNI** [See Ibn Hāni'.]

**MUHAMMAD B. AL-ḤASAN** [See Ibn Duraid-

**MUHAMMAD B. AL-HUDHAIL** [See Abu ‘l-Hudhail.]

**MUHAMMAD B. HUSAIN, an Ottoman dignitary and historian**, who at the request of the first Wali of Bagdad, Derwish Mehmed Pasha (Thurzay, *Safīl-i-Būludnī*, i. 33), translated into Turkish the history of ‘Alīb Shihāb Hamadānī, written in 10 bīb in Persia; he added two bīb to it and gave it the title *Turāf al-Madīnān*. The work only exists in manuscript.

*Bibliography*: Brusali Mehmed Tahir, *‘Abd al-Maleqef*, lii. 142; cf. also Ḥādi Ḥafīz, *Kittī al-Dawār*, Bilāl 1747. 4, 401, where Ḥafīz Shihāb is named as the Turkish translator.

The *MUHAMMAD HAFIZ* (*Muhammad Hafiz*), who was a dignitary of the court and flourished under three sultans (*Mutasī IV*, 1032–1049 = 1623–1640, Ibrahim, 1049–1058 = 1640–1648, and Mehmed IV, 1058–1099 = 1648–1687), was not identical with him. He wrote a chronicle of his time entitled *Ta‘rīkh Gilāmān* which covered the years 1060–1075 = 1650–1665. The work which consists of 3 bāb and a *Kātibīn* (of which the second bāb contains two and the third 13 faʿīl) was published by Ḥādir Afraf as supplement II to *To O.E.M.*, parts 78–83, Istanbul 1340 (1924).

A certain Muhammad Khalīfa b. Ḥusain is perhaps the same person; he also was a dignitary of the court of the same three sultans and wrote a history of his time which covered the years 1043–1070 (1635–1659). The only known manuscript is in Vienna.

**MUHAMMAD B. AL-ḤUSAIN** [See Abu ‘l-Ḥasain, Abū Sa‘īd, Ibn Muklā, Al-Shirīf al-Rafī‘.]

**MUHAMMAD B. IBRĀHĪM** [See Abu ‘l-Ḥasain.]

**MUHAMMAD B. IBRĀHĪM ‘ĀDIL SHĀH** (1053–1070 = 1636–1660) succeeded to the throne of Būlāpur after the death of his father. In the years 1044 (1634), the armies of the emperor Shihīb Ḥasīn invaded the Dakān and laid waste the country of Būlāpur. After the subjugation of Dawlatābād and other forts, Muhammad b. Ibrahim ‘Ādīl Shāh agreed to pay a considerable tribute to the emperor of Dehlī. He was the last king of Būlāpur who struck coins in his own name. In the latter part of his reign, his vassal Siwādī, son of Sāhīb Bhusān, by stratagem and treachery obtained great power, and the foundation of the Būlāpur monarchy became weakened. He died in 1070 (1660) and was buried in Būlāpur where his tomb is called *Sat Gumbār* (circular dome).

*Bibliography*: Fuzairi Astarvandī, Fustatīh *‘Ādīl Shāh*, fol. 314v; *Imārat Gazetter of India*, viii. 189.

(See Ibn Ṣa‘īd, Al-Nadim.)

**MUHAMMAD B. AL-KĀSIM** [See Abu ‘l-Ārīwī, Anauke].

**MUHAMMAD B. KĀSIM, a cousin of Walid I (86–96 = 705–715) and son-in-law of al-Hādijādji b. Yūsuf, was the governor of Ra’sā, in 92 (711), he was sent to conquer Sind. Having defeated and killed the Kāדā of the place called Dāhir, he took possession of that country in 93 (712) and finally penetrated as far as Multān about 500 miles from the sea and even reached the foot of the Himālāya. Various accounts are given of the death of this general. The common story is that Muhammad b. Kāsim was falsely accused by the two daughters of the Kādā of Dāhir, whom he had sent to the harem of Sulaimān (96–99 = 715–717), the brother and successor of Walid, of having violated their chastity, and that he was therefore sewn up alive in a raw cow-hide, by order of the enraged caliph. Others say that he quarrelled with other members of his family, was tortured and put to death by Shāh b. ‘Abd al-Raḥmān, governor of ‘Īrān, in revenge for the murder of his brother by Kādijādji.

**MUHAMMAD B. MAHMŪD** [See Abu Shurq, Ghiyath al-Din, b. Sahl b. Sulaiman al-Dīn, a Saljuq Sultan 547–554 (1151–1159), born 522 (1128), like his brother Malikshāh, was educated with the atabeg Buzāba, who set them up as claimants to the throne against their uncle Maṣūd. When Buzāba in 542 (1147–1148) was taken prisoner in a fierce battle and executed, Maṣūd adopted his nephew and married Muhammad to his daughter. He probably intended him to succeed him and not Malikshāh, as Ibn al-Athīr and others say, because after his death (547 = 1158) the latter was actually raised to the throne. Muhammad was away at the time but within three months he was recognized as sultan by the powerful Khaybūg, after he had come to Hamadān, because Malikshāh proved quite incompetent. The new sultan showed his gratitude by treacherously putting Khaybūg to death and sent his head to the emirs of Marāgha and Ardabrādīdīā̄ in the hope that he would win them over. But Khaybūg was disappointed, for although they hated Khaybūg, their horror at the cruel deed made them prefer to pay homage to Muhammad’s uncle Sulaimān, who had escaped from years of imprisonment on Maṣūd’s death. Muhammad therefore fled to Ifshān, but because Sulaimān was an inveterate drunkard, he could not hold out in Hamadān and when he had gone away Muhammad returned and was henceforth recognised as sultan by the emirs. In the meanwhile Sulaimān succeeded in escaping to ‘Ishf and entered into relations with the Caliph al-Muṣṭaṣrīf b-Amar Allāh. The latter was endeavouring not without success to make himself independent of the Saljuqs and let Sulaimān come to Bagdad (550 = 1155) to use
him against Muhammad. He was also able to win Malikshah over and to collect an army, which was however scattered in the following year by the help of Mawdud, lord of al-Mawṣil, and Sulaiman was again made prisoner. Muhammad now thought himself strong enough to attack the Caliph himself and to besiege him in Bagdad. Imād al-Din, who was in the town, gives a full account of the siege (Ruc. Hist. Crois., ii. 246 sqq.). Muhammad hurriedly raised the siege when news reached him that Rūkhīs had occupied the heights with Malikshah and Ardān (552 = 1157). By the time the sultan there arrived, he had retired, but he was at war with them till his death in 554 (1159).

Bibliography: see the article selīḥ ʿīsī.

(M. TH. HOUTSMA)

MUHAMMAD b. MALIKSHĀH

Abū Shuʿībā Ghiyāth al-Dunyā wa-l-Din Kāsīm Amīr al-Muʾminīn, a Sālīḥūk sultan (498 = 1105—1118), was born on the 18th Shabān 474 (Jan. 20, 1082) of a slave, who was also the mother of Sandjar, and was given the Turkish name of Tapar. After his father's death, he stayed at first with Turkan Khaṭṭūn but then joined his brother Barbaryūk who granted him the town of Gandja. Arrived there, he also seized Ardān and allowed himself to be seduced by Muʿāyjad al-Mulk b. Niẓām al-Mulk into dropping his brother's name out of the kāfīfa. The two brothers fought another one with varying success in the following years until finally in 497 (1104) Barbaryūk withdrew from the western provinces of the empire to Isfahān and left Muhammad to enforce recognition as sultan from the governors in these lands. Barbaryūk died soon after, at the end of 1104, Muhammad turned first to Bagdad because he was sure of the homage of the Caliph, who had already received him and his brother a few years before in ceremonial audience (cf. the account in Ibn Khalil, Bālūḳ 1299, ii. 444, had the emir Ayyār, who had at first had the kāfīfa read for Malikshah b. Barbaryūk, treacherously put to death and sent the king of the Arabs Šadāka back to his capital al-Hilla with orders to restore peace in Bāyra and among the Arab tribes of the neighbourhood. He then hurried to Isfahān, where the Bāṭlīnaya had achieved great successes in the troubled reign of Barbaryūk and had established themselves in several hill-fortresses in the neighbourhood. One of their leaders, Ibn Aṭṭāsh, had by a ruse secured possession of the fortress of Du-Kūh or Šāh-Diz built by Malikshah. The Sultan regarded as his first duty to subdue and root out if possible these unbelievers; he sent his troops to besiege the fortress and, when it was taken, razed it to the ground and had the captured Bāṭlīnaya executed in cruel fashion (500 = 1107; cf. the text of the report sent by him to the Caliph's vizier in Ibn al-Kalānīsī, ed. Amedroz, p. 152 ff.). Nor did he hesitate to use his own vizier, Sa'd al-Mulk Abū l-Mahāsin al-Attī, executed at the gate of Isfahān; he was suspected, according to Anusharwaṟān wrongly, (cf. Rec. Hist. Crois., ii. 91) of having had dealings with the Bāṭlīnaya.

While Muhammad was still in Isfahān, the emir Ĉawa b. Ṣaḵawaw, who ruled between Fārs and Kūrūstān, made his submission to him; the sultan had frequently tried in vain to bring him to obedience through the emir Mawdūd. The sultan was so pleased that he granted him the town of al-Mawṣil where Djekermīsh, who had only paid homage to him under compulsion, was in command. The latter was not inclined to submit to the arrangement, but was taken prisoner in an encounter with Čawallā. The latter however was not yet lord of al-Mawṣil, for the followers of Djiķermīsh now supported his son Zangi and appealed for help to Aḵšonḵor al-Būruḵi, the governor of Bagdad, to Šadāka and to Khiẖūd Ārdān, the Bāṭlīnaya of al-Rūm. The last-named alone answered the appeal and came with his troops to al-Mawṣil where he had homage paid to himself as sultan, but soon afterwards, after an unsuccessful encounter, he was drowned in the Khabūr on his retreat. Čawallā now had little difficulty in taking the town and going on to his further task, the war against the Crusaders. It would take us too far here to sketch the course of this war, and the reader may therefore be referred to Weil, Gesch. der Chal., iii. 191 sqq. During his absence he again fell into disgrace with the Caliph, who had in the meanwhile returned to Bagdad and sent his troops to attack Šadāka, with whom he was also dissatisfied. Šadāka fell in battle in 501 (beg. of 1101). The sultan sent Mawdūd to al-Mawṣil and granted him the same dignity as he had previously given Čawallā. The latter after some time made peace with the sultan and was appointed as atabeg to Fārs, where he fought the unruly elements in the population with great energy (cf. Ibn al-Aḏīr, ed. Tornberg, p. 561 sqq.). The Bāṭlīnaya however gave Muhammad no peace, so long as they were able to hold their strong mountain citadel of Alamūt; Abū Naṣr Aḥmād, a son of Niẓām al-Mulk, who after Sa'd al-Mulk acted as the sultan's vizier, was therefore given orders to take this fortress and when he did not succeed, was dismissed in 504 (1109—10). In the meanwhile the sultan was being urged more and more from different sides to prosecute the war with the Crusaders seriously, and he succeeded in persuading the various governors of the western provinces to combine and attack the Christians under the leadership of Mawdūd accompanied by the young prince Mawdūd. After Mawdūd's assassination (507 = 1113) Aḵšonḵor al-Būruḵi took command and, after Būruḵi assumed the supreme command but on account of the strife among the Turkish emirs, the value of the Crusaders and the complicated situation in Syria, decisive successes could not be attained. For the course of the campaign we again refer the reader to Weil, op. cit., p. 194 sqq. and the historians of the Crusaders. In the last years of his life, the sultan sent the emir Anushteḵin Shāfīr against the Bāṭlīnaya in Alamūt, but he died on the 24th Dhu 'l-Ĥidżđa 511 (Apr. 18, 1118) before the fortress was taken. He was only 36 years old and this is why Weil suggests that the Bāṭlīnaya had a hand in his death, but there is nothing to support this hypothesis in the original chronicles. On the contrary, individuals in his immediate entourage, notably the Great Ĥidijī 'Abī Bār, seem to have been not quite innocent, because they, apparently to avert suspicion from themselves, accused the sultāna Ghaus Khaṭṭūn and the famous poet al-Tuğhurī of having caused the sultan's illness by magic arts. The former was blinded and strangled on the day Muhammad died. The reason given by Matthias of Edessa for this (Docum. Arm., i. 120) is wrong. The sultān deserves credit for having, with the assistance of his brother Sandjar who ruled in Kūrūstān and the adjoining lands, restored the fortunes of the Saldiḵān kingdom, which had declined since the death of Malikshah
and for having vigorously fought infidels and sectarians in his zeal for Sunni Islam and the 'Abbāsid caliphate. He was, as Ren. Hist. Cr., ii. 118 has it, the perfect man of the Seldjūqs and their strong he-camal.

Bibliography: given in the article SELJUK.

(M. Th. HOUTSA)

MUHAMMAD, ABB AYHM, DJALA AL-DAYWLA WA-DIJN AL-MILLA, ABB AYHM MUHAMMAD, second son of Sultan Mahmūd of Ghazna, was born about 537 (997). He was married to a daughter of Abd Nasr Muḥammad b. Abu T-Ḥanīf Ahmad b. Muhammad, the Farighūnī ruler of Džun-ḍāna. After the death of Abd Nasr Muḥammad in 491 (1050-1051), Sultan Mahmūd assigned his son Muhammad the government of the province of Džundžanda. In 497, at the instance of Sultan Mahmūd, the 'Abbāsid Caliph al-Kāfir bi-‘līth conferred on him the titles of Djalal al-Dawla wa-Dījma al-Milla. Towards the close of his life, Sultan Mahmūd divided his empire between his sons, giving Ghazna, Khorasan and India to Muḥammad and Rayy, Liǧbit and Isfahan to Maṣ’ūd, and took solemn vows from both to respect this division. When Mahmūd died in Rabi’ II, 421 (April 1030), Muhammad ascended the throne at Ghazna, but Maṣ’ūd, disregarding his vows, marched from Isfahan to take possession of Ghazna. In the meantime, the nobles at Ghazna deposed Muhammad on 3rd Shawwal 421 (October 2, 1050) and read the Īṣa or in the name of Maṣ'ūd. Muhammad was then deprived of his sight by orders of Maṣ’ūd and imprisoned in a fort. His reign had lasted only 6 months.

In 431 Shāhī Muhammad suffered a crushing defeat at the hands of the Seldjūqs and, resolved to settle in India. In the beginning of 432 (September 1030), leaving Ghazna in the hands of his son Maṣ’ūd and his wazar, he marched to India with all his treasures, but on 13th Rabi’ I, 432 (December 24, 1040) his slaves deposed him and raised Muḥammad to the throne. Shortly after this, Maṣ’ūd was put to death. Hearing this, Maṣ’ūd advanced with a large army to avenge his death of his father, defeated Muhammad near Dūmār on 3rd Sha’bān 432 (April 1041), and put him to death. The second reign of Muhammad lasted only 4 months. Muhammad was obedient to his father and was a man of amiable temperament. He resembled his father in appearance.

(MUHAMMAD NĀZĪM)

MUHAMMAD B. MARWAN, an Umayyad governor. In 65 (684–685) he was sent by his father, the caliph Marwan I, to Mesopotamia, and in the battle of ‘Aṭām al-Dārī ‘Abbād b. al-Zahār, he commanded the advanced guard of the Syrian army. In the following year ‘Abbâd al-Mālik gave him the governorship of Mesopotamia and Armenia which carried with it the command in the war with the Byzantines. On account of climatic conditions the Arab expeditions always took place in summer. In 73 (692), the emperor Justinian II was defeated at Sebastopolis in Cilicia. In 75 (694) Muḥammad again took the field against the Byzantines and was successful against them at Marāsh, and in the following year he invaded Armenia. Along with his nephew ‘Abbād Allāh b. ‘Abbâd al-Mālik he was sent to al-Hafidjād in the year 82 (701), to support him against the rebel ‘Abbâd al-Ḵayrān b. Muḥammad b. al-Ḵayrān and, in the negotiations with the ‘Ifrīqī, before the battle at Daur al-Djamādun the caliph was represented by Muḥammad and ‘Abbâd Allāh. In the same year, Muḥammad led an expedition against Armenia, and again in 84 (705) and 85 (704). After the accession of al-Walī (Shawwāl 86 = Oct. 705) Muḥammad fell gradually into the background while Maṣlama, the caliph’s brother, was the actual commander; but the former retained his governorship for some time until in 91 (709–710) he was replaced by Maṣlama here also. Muḥammad died in 101 (710–720).

MUHAMMAD B. SA‘ŪD [See ŠAIKH DYNASTY]

MUHAMMAD B. SA‘ŪD (properly Sa‘ūd) e. Muḥammad of the Muṣīrīn clan of Abī Anas, the founder of the Wāhhabī dynasty of the Al-Sa‘ūd in Najd [see the article ‘SA‘ĒD], succeeded his father as amir of al-Dafyah in 1137 (1724) or 1140 (1727). His association with the reformer Muḥammad b. ‘Abbâd al-Wahlāb [cf. WAHHLAIB] began in 1157 (1744). Thereafter until his death (end of Rabi’ I, 1179 = Sept. 1765) the history of his reign consists of an unceasing and on the whole indecisive struggle against the neighbouring settlements and tribes and his former neighbors, the Damūl Khalīd b. al-Jasār. He took little active part in these operations, and his personality was overshadowed by the figures of the reformer in front of himself and of his own son ‘Abbâd al-Ḵazā. Nevertheless his talents as a diplomatist more than
once saved the Wāḥḥābī state from being crushed by a coalition of its enemies, notably after the disastrous defeat by the forces of Naṣrān at Ḥājirah in 764.

**MUḤAMMAD b. SIRI** [See Ibn Sirin.]

**MUḤAMMAD b. TĀHIR, governor of Kūḥārān.** After the death of his father, Muḥammad received the governorship of Kūḥārān (Rājdāb 245 = Sept. 856). In 250 (864—5) the Abī Ḥasan b. Zaid rebelled, which led to a long and serious struggle [see Muḥammad b. ṬĀḤĪ AL-ṢĀ‘Ī]. When Abū ʿAbd Allāh ibn Ṣadīq rebelled against Ya‘qūb b. al-Mu‘āwiyah, the caliph and Muḥammad, who appointed him governor of al-Ṭabasain and Kūhārān, Ya‘qūb b. al-Mu‘āwiyah sent an embassy to him; but as Ya‘qūb b. al-Mu‘āwiyah had already found a following among discontented Kūḥārānīs, all negotiations were in vain. In Ṣawā‘ilā (Aug. 873), or according to another statement in 258, he entered Nisbin without striking a blow, put an end to the Ẓahīrī dynasty and took Muḥammad prisoner. When he rebelled against the Caliph al-Mu‘ātimid, he was defeated in Rājdāb 262 (April 876) by the latter's brother al-Mu’awāfik and Muḥammad, whom he had with him in chains, escaped. The Caliph restored the latter to his former office in Kūḥārān; the exiled Ẓahīrī however never found an opportunity to exercise his functions. He was further appointed — probably not till 270 (885—6) — by the vizier ʿAbd Allāh b. Makhān as his deputy as military governor of Baghdu. He held this office until the accession of al-Mu‘ātimid (279 = 892). He died in 296 (908—9).

**MUḤAMMAD b. TUGHḌĪ** [See Duff (of Duff)].

**VAṬIKAN b.FORĀN b. FERĪ b. KHĀN, Abu Bakr, known as al-Muḥammadī, from the title granted to him by the Caliph al-Rādi in 327 (939), was the founder of the Egyptian dynasty of the 1khshidīs (q. v.).**

He was born in 268 (882) at Baghdu and must have spent his youth in Syria, as his father, who joined the service of the Ẓalūnids at about the same date, was appointed governor of Damascus and Tabariya c. 276, a post which he held for some fifteen years, and he himself acted for a time as his father's deputy for Tabariya. In consequence of the overthrow of the Ẓalūnids dynasty in 292 (904), he was imprisoned at Baghdu. He was released in 294 (907), attached to the wāṣir al-ʿAbbās b. al-Hādī, and being implicated in murder, had to fly when the conspiracy of Ibn al-Mu‘taṣṣāz (q. v.) failed in 296 (910). He escaped to Syria and found himself reduced to a humble station. Next year he passed on to Egypt, where Tākin, his governor, took him into favour, so that he kept him with himself, both in Egypt and in Syria when he was transferred thither to act as governor at intervals (302—307 and 309—311), and promoted him to appointments of importance.

At this period Muḥammad came into contact with the powerful Ẓalūnī family, and also attended Mu‘nis (q. v.) when he was brought to Egypt by the Fāqūd invasion. He had already attracted some attention at Baghdu by an exploit in 306. In 316 (928), through influence at the capital, he became governor of Ramla, quitting Tākin abruptly. In 319 he obtained a transfer to Damascus where he became powerful, and in consequence of his defeat of Bahṣrā in 321 extended his rule over the whole of Syria. In the same year (March 933) Tākin died, and Muḥammad b. Tughḍī succeeded in obtaining the appointment as governor of Egypt in his place, but only nominally and for one month (Sept. 933). Two years later, by means of a large army and fleet, he entered Fustāt and took possession of the country, overcoming the resistance of al-Mudarrī (Muḥammad b. Ṭāḥī), who by appointment from Baghdu was then in control of Egypt, the governor being under his direction (ṣādīr ad-dābārī). Superior to al-Mudarrī, however, was al-Fadl b. Ḥāfīz b. al-Fārābī (for whom see the article INN AL-FARDĪ), the inspector minister (ṣāzīr kāfi), of Egypt and Syria, who had been specially granted full executive powers. Muḥammad b. Tughḍī had acted with the authorization of al-Fadl and later (324) obtained the confirmation of al-Rādi to the addition of Egypt to the province of Syria already held by him. Probably at the same time he was granted the sovereignty over al-Yaman and the Holy Cities of Mecca and Medina, for in his letter of the following year to the Emperor Romanus he boasts of these places as part of his kingdom. Until the death of al-Fadl in 327 (March 939), he seems to have been subject, at least in theory, to some control by him.

In 324 a decisive victory by the troops of Muḥammad b. Tughḍī near Alexandria (battle of Abuqūk, March 31, 936) crushed the third Fāqūd invasion of Egypt and led to overtures from the Fāqūd, Caliph al-Kāfīr, which in the end came to nothing. Muhammad did indeed decide three years later to recognize the Fāqūd, and had given the order that al-Kāfīr should be proclaimed in Egypt, out of indignation at the ʿAbhābī government at Baghdu, but was induced to reckon with his decision.

Only a month after he had received his title al-Hāshid from al-Rādi (Ramadan 327 = June—July 939), he found himself threatened from Rakka by Ibn Rāʾik (q. v.) and learnt that his provinces had been granted to this rival. Badjkam (q. v.), as amīr al-awārād at Baghdu, gave no answer to his appeal but that the question must be decided by the sword; the powerless Caliph could say nothing. Ibn Rāʾik rapidly possessed himself of Syria, driving back the forces sent to oppose him,
and had soon captured Ramla (Oct. 939). Muhammad b. Tughdjid himself confronted him with an army at Faramah, and with no fighting beyond some skirmishing entered into negotiations, ending in an agreement to cede Syria from Tabariya to the north on condition that Ramla and the rest were restored to him. Ibn Rā'īk soon broke this treaty and again advanced. This time Muhammad b. Tughdjid encountered him at al-‘Arish and routed him (15th Ramadān 542 = June 24, 940), but as he followed him into Syria, met with a reverse to his turn, one of his detachments being surprised and badly defeated at Lajdjin (15th August). Peace was then renewed on the same terms as before, and Muhammad b. Tughdjid undertook to pay an annual subsidy of 140,000 dinārs. He was back in Egypt in October.

The death of Badjkm in 329 (April 941) drew Ibn Rā’īk back to Baghda, and Muhammed b. Tughdjid was soon relieved of him completely, for he was murdered a year later by the Hadmānis. Muhammad lost no time in recovering Syria, marching thither himself (June 942) and remaining in the country about six months before coming back to Egypt. It must have been at about this period that he succeeded in dispensing some minor encroachments for Syria from the direction of Raqqah (which were allowed to without detail), those of Adl (al-Badījami) and Badr al-Kharsani. He had to meet more serious attacks from the Hadmānis. One of them, al-Husain b. Sa’d, took Halab from him in 332 (March 944), and in May he set out to recover it. The Caliph al-Muttaqi, moreover, insecure under the protection of the Hadmānis from Tūrūn, the amir al-unārā, had appealed to him for help. His enemy retired at his approach and having regained the town he proceeded to Raqqah, where he met the Caliph (Sept. 7, 944). At this time he had thoughts of becoming amir al-unārā himself. He urged al-Muttaqi to come with him to Syria and Egypt, and even offered to go with him to Baghda. He succeeded in this, and not to trust himself to Tūrūn, but could not dissuade him. After receiving flattering marks of honour he departed. Before he reached Fustāt he returned the Hadmān Saif al-Dawla [q.v.] had retaken Halab (Oct. 944). The Egyptian army sent to meet this new aggression was severely defeated at Rastān near Hims, and Saif al-Dawla advanced to Damascus and entered it (April-May 945). Muhammad b. Tughdjid, coming from Egypt with his army, obliged him to retreat, pursued him, brought him to battle at Kinnar (May—June 945), and defeated him. Again Muhammad made easy terms when victorious. Saif al-Dawla retained Syria north of Damascus and was also given a subsidy. The treaty was concluded in Rabi’ I. 334 (Oct.-Nov. 945), and Muhammad then went back to Damascus, remaining there until he died a few months later (21st Dhu’l-Hijjah 334 = June 24, 946), just after the arrival of a Byzantine envoy concerning an exchange of prisoners for which he had opened negotiations.

Next to nothing is recorded of the internal events of Egypt during his reign; the country was doubtless quiet. Its revenue, said to have amounted to two million dinārs annually, was no longer accounted for to Baghda, and no regular payments were made from it to the central treasury. But he sent large occasional gifts to the Caliphs, so that al-Kāfi considered him an exemplary vassal.

He left seven million dinārs at his death besides considerable other property. No constructional works of much importance are credited to him. At Fustāt he rebuilt the shipyard on the mainland, and on its site on the island of Rawda made a garden called al-Mukhtar; he enlarged the government house in which he resided, a Fāṭimid building that was situated near the still existing tomb of al-Kāfi Bakkar, and added a madrasa; he also made another garden known later as al-Kāfari, afterwards the site of the western Fāṭimid palace of Cairo. His armies at times seem to have been large. At the battle of Abūlq the Egyptians are said to have had 15,000 horsemen, at that of Kinnarsin 50,000 men. Such numbers should have been reached by means of levies for particular emergencies, which he is known to have raised more than once. On one occasion his personal retainers (al-Mutlu), on whom he more especially depended, numbered 500. The constantly repeated and universally accepted figures of 400,000 for his army, and 8,000 for his bodyguard can be dismissed as ridiculous, notwithstanding that they rest on the early authority of al-Tanūkhī (d. 384), and with them the accompanying myth as to his habit of concealing his sleeping places when on campaign.

The most renowned of his followers was Kāfīr [q.v.], without doubt, the ablest, and his colleagues al-Mutlu, Fālīs, rose to some eminence. Alī b. Muhammad b. Kāfīr was his secretary both at Damascus and in Egypt. Muhammad b. Alī al-Mutlu was his wazir for a few months (328—329), Muhammad b. Alī b. Mukātīl, previously secretary to Ibn Rā’īk, was his wazir at his death. His four brothers were all younger than himself; al-Hasan was in command at the battle of Abūlq, and represented him in Egypt during all his absences. al-Husain was in command at Lajdjin and killed there, ‘Ubayd Allāh acted for him in Syria, Alī disappears early.

Notable Egyptian authors who flourished during his reign were the historians Ibn al-Dīya (d. 334), al-Kindī (d. 350), and ‘Abd Allāh al-Farghānī (d. 362), who came to Egypt in 329 and remained in his confidence at Raqqah in 333. Al-Mas‘ūdī moreover visited Egypt in 330. Al-Mutanabbi, just rising to fame, recited once in his presence in Syria and addressed a verse to him and to his brother ‘Ubayd Allāh (d. 333 at Ramla).

Muhammad b. Tughdjid was strong physically, but subject to occasional fits of melancholia. His character is illustrated by a number of incidents that have every appearance of being authentic. He was strict, but in no way vindictive or cruel. He often brought his officers to account, and then after punishing them by arrest or fine would restore them to favour. Hardly any executions are heard of in his reign. He would not allow torture and the maltreatment of accused persons, so common in his time. His tact and sagacity were conspicuous. He was decent in his life and liked by his men and the people. On the other hand, he was certainly oppressive and unfair in some of his money exactions, and though at times not ungenerous was inclined to be mean and miserly in minor matters. The two great faults attributed to him, even to his face in his lifetime, parsimony and timidity, are not altogether without foundation. As to the latter, his own defence in a particular instance looks valid.

His career was closely parallel to that of Ahmad b. al-Tūlūn [q.v.], even as regards several fortuitous
occurrences. It leaves no doubt of his capacity, and if admitting of occasional overcharge, will not allow of anything like cowardice. He did not make the same mark as his predecessor, but was a mild and perhaps a better ruler.

**Bibliography:** Ibn Sa'id, *Muṣḥib* (ed. Tallqvist, Leyden 1899) contains the text of the principal authorities but including subsidiary authorities, and a full biography in German carefully worked out from both sources. By far the most important authority is the long and detailed biography of Muhammad b. TughdUL which forms part of Ibn Sa'id's work, and appears to consist of the life compiled by Ibn Zālīk between 350 and 355, reproduced almost but not quite verbatim. The other principal authority is the *Kitāb al-Wilāyat* of al-Kindī, ed. Guest, Little, if anything, can be added from books published after *Muṣḥib*.

**MUḤAMMAD B. YĀKIṬ, ABū BAKE**, a chief of police in Baghdaḍ. In 321 (930) Muhammad, whose father was chief chamberlain to the Caliph al-Muktaḍar was appointed chief of police. The maintenance of order in the capital at this time was much neglected and the praetorians conducted a regular reign of terror. In a fracas between infantry and cavalry Muhammad intervened on behalf of the latter; their opponents were cut down, some driven from the city and only a small contingent of negroes, who at once surrendered, remained unscathed (Muḥarrām 318 = Feb. 930). Some months later these mutinied and demanded more pay; but they were driven from the town by Muhammad and then routed by the chief emir Muḥammad b. Ṭawālīsh. Their confusion was increased by the breach between Muḥammad and Muhammad. At the instigation of Muḥammad, Muhammad was dismissed in Dhuʾl-Qaʿa 310 (June—July 931). Muḥammad was nevertheless not satisfied but demanded that his hated rival should be banished. The Caliph at first refused to grant his request; but when Muḥammad threatened with force, he had to yield, whereupon Muhammad went to Siḏjistān (Radjab 319 = July 931). Soon afterwards the Caliph quarrelled with Muḥammad and recalled Muḥammad. In Muḥarrām 320 (Jan. 932) the latter returned to Baghdaḍ; the Caliph then sent him with an army to al-Maṣṭūk in the region of Ṭakrit. But when Muḥammad advanced from Mauṣul, the Caliph's troops under Muḥammad and Saʿd b. Ḥarīmīn returned to Baghdaḍ without striking a blow. After the victory of Muḥammad and the murder of al-Muṣṭūk in Mauṣul in the beginning of the year (Oct. 932) the latter's son Abd al-Walīḥid led with Muḥammad and his other supporters to al-Mada'in and then to Wāṣit where a number of his generals abandoned him. When the forces of the new Caliph al-Kāhir approached under the command of Yalbāq, Abd al-Walīḥid and Muḥammad fled to Tustar. Muḥammad was not popular on account of his arrogance and selfishness, so that one after the other laid down his arms and finally Abd al-Walīḥid surrendered. Muhammad entered into negotiations with Yalbāq and the Caliph pardoned him. He then returned to Baghdaḍ where he gained a great influence over al-Kāhir. On the accession of al-Rāḥil in Dhuʾl-Qaʿa 3 (April 934), Muhammad became the real ruler in a short time; the Caliph appointed him chief chamberlain and also made him his commander-in-chief while the viceroy Ibn Maḥlīk played a more subordinate part. When al-Muṣṭūk's cousin ʿAbd al-Qādir b. Qādirī, whom al-Kāhir had appointed governor of Māḥ al-Kūfah, al-Dinawar and Māḥabbaḏān rebelled, Muhammad was sent with an army against him. In the resulting battle, Muhammad suffered a defeat (Dhuʾl-Qaʿa 322 = May 934); soon afterwards however, ʿAbd al-Qādir fell from his horse and was killed by one of Muhammad's slaves. With the death of their commander the resistance of Ṭabātī's followers collapsed; Muhammad was nevertheless unable long to retain his position of power. On the advice of Ibn Maḥlīk who feared his ever increasing power, al-Rāḥil had him arrested along with his brother al-Muṣaffar and the secretary ʿAbd al-Malik al-Karāẓī on the 5th Dhuʾl-Qaʿa 3, 323 (April 12, 935); Muhammad died in prison in the same year.

**MUḤAMMAD B. YAZĪD** [See IBN MŪṢIJĀ, MUḤARRAD.]

**MUḤAMMAD B. YŪSUF** [See ABU YŪSUF.]

**MUḤAMMAD ʿABD AL-KARĪM ʿALAWT**, better known as ʿAbd al-Karīm Mūṣijā, a Persian historian of the middle of the ninth century. His best known work is the *Taʿrīḥ-i ʿAbd al-Rāḥamīn b. Hādīḍī Muhammad Rasūl al-Funūn*, a history of the founder of the Durrānī dynasty in Afghānīstān, Ahmad Shāh. After ʿAbd al-Karīm had finished a history of Shudjaʿ al-Mulk Durānī and the conquest of Khūsāṣ in 1235 (1820), he decided to write a complete history of the Durrānīs and began his *Taʿrīḥ-i ʿAbd al-Rāḥamīn b. Hādīḍī Muhammad Rasūl al-Funūn*. The work is based on the *Taʿrīḥ-i Ḥusainīyāt* of Firdawṣī al-Din Husainī (Rieu, Cat. Pers. MSS. Brit. Mus., ii. 904) and is really only a paraphrase of it. It begins with the story of Ahmad Shāh which he continued to the year 1212. Then follows a description of the Pandjaḥ and the roads between Kābul, Hārāt, Paghāvar and Kandahār and a chapter on Turkestān under Nāṣir al-Dīn Bāy. The work concludes with the accession of Shudjaʿ al-Mulk. In addition to this book, ʿAbd al-Karīm in 1263 (1847) wrote the *Mūsākāt-i Kūfi ʿAbd al-Karīm al-Tusi*, describing the war with the English down to General Pollock's expedition (Sept.—Oct. 1842). It again is not original but based on the poem Abūrūmāma of Kāsim Ẓāfīn. According to Beate, *Oriental Biographical Dictionary* (London 1894, p. 5), he also wrote a history of the Sikh war entitled *Taʿrīḥ-i Pandjaḥ Tusafān ʿAbd al-Rāḥamīn b. ʿAbd al-Rāḥamīn* but there is no mention of a manuscript or lithograph of any such work in any of the European catalogues. It is possible that there is some confusion with the Pandjaḥ section of the *Taʿrīḥ-i ʿAbd al-Rāḥamīn*. In the Catalogue of the Persian printed Books in the British Museum (London 1922, p. 19), E. Edwards ascribes to the author a dictionary of English and Persian homonyms.
entitled *A Dictionary of Anglo-Persian homogenous words being a... Collection of... Words having nearly the same Sound and the same Meaning*, Bombay 1859; it is however unfortunately not possible to be certain that the author of the book is the same ʻAbd al-Karim Munhū.

**Bibliography**

MUHAMMAD ʻABDUH, a Muslim theologian, founder of the Egyptian modernist school.

Muhammad ʻAbduh belonged to an Egyptian peasant family and was born in 1849 in Lower Egypt. He spent his childhood in the little village of Mahjīlāt Naṣr in the mudirya of Bahāra. When Muhammad ʻAbduh had learned the Korān by heart, he was sent in 1862 to the theological school of Tanṭa but he left this after a year and a half discouraged and was only induced to resume his studies through the influence of a grand uncle who aroused in him an interest in mysticism. In 1865 he returned to Tanṭa but the next year proceeded to Cairo to the Azhar mosque. There at this moment the first movements of a new spirit were becoming apparent in the beginning of a return to the classics and an awakening interest in natural science and history, which agreed with mysticism in a lower estimation of the old traditional studies. In this milieu Muhammad ʻAbduh at once devoted himself entirely to mysticism, practised asceticism and retired from the world. It was again his grand uncle who persuaded him to give this up. About the same time, 1872, Muhammad ʻAbduh came into contact with Saiyid Djamal al-Dīn al-Afghānī [q.v.] who had just arrived in Egypt and was detined to exercise a profound influence upon him. It was he who revealed traditional learning to Muhammad ʻAbduh in a new light, called his attention to European works accessible in translations and attracted his interest finally to Egyptian and Muslim problems of the day. Muhammad ʻAbduh soon became himself the most ardent disciple and in his very first work of a mystic nature (Risāla al-Wardi‘ah, 1290 = 1874) enthusiastically described Saiyid Djamal al-Dīn as his spiritual guide. The influence of Saiyid Djamal al-Dīn is still more marked on the matter of Muhammad ʻAbduh's second work, notes on dogmatics entitled Ḥīfiya al-Dīn al-Dawānu ʻl-ʻĀˈmīr al-Dīn ʻAbduh (1292 = 1876). The influence of Saiyid Djamal al-Dīn and the development of affairs in Egypt towards the end of the reign of the Khedive ʻAmīr caused Muhammad ʻAbduh in 1876 to take to journalism, which he practised henceforth. After concluding his studies at the Azhar mosque and acquiring the certificate of an ʻalim (scholar), he first of all gave private tuition; in 1879 he was appointed as teacher in the Dar al-ʻUmm, which had been founded a few years before to modernise instruction in religious learning. In the same year, shortly after the accession of the Khedive Tawfīk, Muhammad ʻAbduh was dismissed for reasons that have not been clearly explained and sent to his native village. During the reign of Djamal al-Dīn was banished from Egypt; but a liberal ministry very soon recalled Muhammad ʻAbduh (1880) and appointed him chief editor of the official gazette al-Waḥīf al-Miyrājī, which not only contained official announcements but also endeavoured to influence public opinion; under Muhammad ʻAbduh's control it became the mouthpiece of the liberal party. In spite of a common ultimate goal: the liberation of the Muslim peoples and a renaissance of Islam by its own strength, there was an essential difference between Muhammad ʻAbduh's programme and that of Saiyid Djamal al-Dīn: the latter was a revolutionary who aimed at a complete upheaval; Muhammad ʻAbduh, on the other hand, held that only gradual reform could be successful, thought that no political revolution could take the place of an internal transformation of mentality and regarded a reform of education, especially moral and religious, as the first preliminary to progress. His interest gradually became concentrated on Islam and its position in the modern world. ʻArīf Pāṣgārī's rebellion put an end to Muhammad ʻAbduh's activity on these lines. His part in this movement has not yet been sufficiently elucidated; although it is certain that he neither shared the optimism of military circles nor approved their use of force, he put himself on the side of the nationalist opponents of absolutism and endeavoured to exert a moderating influence on its leaders. After the suppression of the rebellion he was condemned to banishment from Egypt at the end of 1882. He first went to Bārsīt and then to Paris, where in the beginning of 1884 he met Saiyid Djamal al-Dīn. The two founded a society called al-ʻIzza al-dāwarīya and published a paper with the same name, which became publication after eight months but exercised a very profound influence on the development of nationalism in the Muslim east. In Tunis Muhammad ʻAbduh continued propaganda for the society, but then cut himself off from it and settled in Bārsīt at the beginning of 1885. The al-ʻIzza expressed the views of Saiyid Djamal al-Dīn entirely. In Bārsīt he taught at a theological school and engaged in Muslim and Arabic studies. In this period he produced his translation from the Persian of the Risāla al-Radd ʻala l-Dhahīrīn, the only considerable work of Saiyid Djamal al-Dīn (1302 = 1886), and two valuable philological treatises (Sāḥib al-Athār al-Muqarrab, 1302 = 1885) and Sharh Maḥfīz ʻAlī al-Zawān al-Hamadhānī (1306 = 1889). When in 1889 he was allowed to return he at once went to Cairo. His wish to resume teaching again was not at once granted; instead he entered the judiciary and was immediately appointed a judge on the Tribunaux Indigènes, two years later Consul at the Cour d'Appel. In 1899 he attained the highest clerical post in Egypt, that of state mafi, an office he held till his death. One result of his work in the courts was the publication of his verdicts in Taḥsīr fi Ḥijāţ al-Muhābīm al-Sa‘īdī (1318 = 1900) which gave the stimulus to important reforms in the admin-
stratation of the 'shari'a, and the foundation of the College for Kādīs goes back primarily to his efforts. In the same year, 1896, he became a member of the Consul Législatif, which marked the first stage in the representation of the Egyptian people. Finally, he was allowed to resume his interest in education: in 1894 he became a member of the governing body of the Azhar which had been constituted at his suggestion, and in this capacity he not only acquired great renown by his reforms in the university but himself took an active part in the teaching. In addition to this many-sided activity in the fifteen years after his return he found time to publish a number of works, including his most important: the Riādāt al-Taswīqī (1315 = 1897), his principal theological work based on his lectures in Bairūt; the publication of a work on logic (Sharḥ Kītāb al-Bayṣūr al-Nāṣīriyya, Taṣnīf 'Alī Zālī al-Dīn [1316 = 1898]): a defence of Islam against Christianity in the field of knowledge and civilization entitled al-Islām wa al-Nāṣīriyya maṣūma (L'Islam et l'Inquisition, 1901: first published in al-Manṣūr). Muhammad 'Abdūh was not to finish his career as a member of the Kurān on which he had great importance and of which he had published portions in al-Manṣūr; it was revised by his disciple and friend 'Abd al-Rahīm Rāshīd Riḍā and published first of all in al-Manṣūr. Of Muhammad 'Abdūh's numerous articles by which, along with his lectures, he most influenced the public opinion, two (of 1900) were published in a French translation entitled L'Église et l'Islam by Muhammad Ta'ālat Harb Bey (1902). The advanced ideas put forward by Muhammad 'Abdūh provoked the most vigorous hostility in orthodox and conservative circles which manifested itself not only in serious refutations but also in attacks on and intrigues against him, as we see from a whole literature of pamphlets. But his teaching met with remarkable support among all seriously minded Muslims. The principal organ of his views was the bi-monthly al-Manṣūr, which had appeared since 1887 under the editorship of Sheikh Muhammad Rashīd Riḍā, who had also produced an extensive literary monument to his master (but his views and the tendencies of his periodical must not be identified offhand with those of Muhammad 'Abdūh). Muhammad 'Abdūh died in 1905: but his teaching has retained its influence steadily to the present day.

Muhammad 'Abdūh's programme according to his own statement was: 1. the reform of the Muslim religion by bringing it back to its original condition, 2. the renovation of the Arabic language, 3. the recognition of the rights of the people in relation to the government. His political activity was dominated by the idea of patriotism, which was the first to champion enthusiastically in Egypt. As an opponent equally of the political control by Europe and of Oriental despotism in Muslim lands he favoured an inner assimilation of western civilization, without abandoning the fundamental Muslim ideas and a synthesis of the two factors. From this programme, which assures Muhammad 'Abdūh an important place among the founders of modern Egypt, must be distinguished his effort to carry it through in the field of theology. Muhammad 'Abdūh is in the first place a theologian; his life was devoted to the attempt to establish and maintain Islam, at least as a religion, against the onslaught of the west, while he abandoned without a struggle those aspects of Muslim-Oriental life in which religion was of less moment. However great a stimulus he may have received from progressive western thought, the actual foundations of his teaching came primarily from the school of Ibn Taimiyā and Ibrāhīm al-Dhawīyā, who favoured reform on conservative lines, and from Mūsā ibn Shāhīnā's ethical conception of religion. Deeply convinced of the superiority of true Islam, unaffected by the vicissitudes of time, Muhammad 'Abdūh wished to get rid of the abuses which falsified the Muslim religion and made it out of keeping with the times, and to adapt Islam to every real advance by going back to its true principles. Muhammad 'Abdūh was thus brought to attack the ma'ālima and khalīfah, to demand freedom for iṣlāfīqah and to new uṣūm, in keeping with modern conditions, based on the Kurān and the true sunna, for the establishment of which he laid down strict criteria; he was also brought to reject the hair-splitting of the 'ufāqīrs, the worship of saints and all kāf, as, and to the endeavour to establish a new religion instead of a mechanical formalism. The antiquated system of Fīqīk, against which Muhammad 'Abdūh claimed full freedom, was to be replaced by new laws capable of development, in which consideration for the common good (maslahah) and the times should, in keeping with the true spirit of Islam, have all necessary preference to the literal text (maṭbah) and the times should, in keeping with the true spirit of Islam, have all necessary preference to the literal text (maṭbah) of revelation, just as in any conflict between reason and tradition in settling what is laid down by religion, the verdict of reason should be followed. Alongside of the belief in the sublimity of revelation there was in Muhammad 'Abdūh the conviction that knowledge and religion, properly understood, could not come into conflict at all, so that reason need not recognize a logical impossibility as a religious truth; religion was given to man as a thread to guide him against the aberrations of reason: reason must therefore, after it has tested the proofs of the truth of religion, which it is qualified to do, accept its dogmas: Muhammad 'Abdūh's object was a cooperation between religion and science. In dogmatism he adopts essentially the most rational conception that could still be reconciled with orthodoxy. At the same time he interiorizes the conception of revelation (to him it is intuitive knowledge caused by God and provided with the consciousness of this origin, but this kind of religious experience is limited to the prophets) and deflects that of religion (to him it is an intuitive feeling for the paths of happiness in this and the next world, which cannot be clearly grasped by the reason). The task of prophecy for him is the moral education of the masses. Religious teaching and commandments are therefore intended for the masses and not for the élite. Muhammad 'Abdūh regards the Kurān as created and endeavours to weaken the rigidly opposed point of view of orthodoxy. The saints he does take into his system but is sceptical regarding belief in miracles. In spite of the denial of causality and laws of nature by orthodoxy, he finds a basis for explaining nature by causal laws but by quite scholastically formal reasoning. As regards the duties of religion, Muhammad 'Abdūh adheres to the four main duties: ritual prayer, the alms-tax, fasting and pilgrimage; only he shifts them as usual in mysticism, from the sphere of worship to that of religion and morals. On the old question of free will Muhammad 'Abdūh
decides for indeterminism; he thereby opens the way to build a moral system for society, which, excluding all fatalism, preaches vigorous activity by every one and, following the ethics of the mystics, mutual support. His view of the substance of Muslim teaching Muhammad 'Abduh defends not only against traditional orthodoxy but against Christianity also by a kind of philosophy of history of religion: the sending of prophets was a gradual process of education of step by step: the last and highest stage, that of absolute religion, is the sending of Muhammad: if the Muslim peoples of the present do not correspond to the Muslim ideal, this is only the result of the fact that they have lost the old purity of the teaching; an improvement is possible by return to it. This primitive Islam of Muhammad 'Abduh is however not the historical Islam but a very much idealised one. The superiority of Islam over Christianity in substance lies, according to Muhammad 'Abduh, in its rationalism and its closeness to reality and its avoidance of unattainable ideals of life.

In this theology, the religious content consists of humility before God, reverence for the Prophet, enthusiasm for the Korân. The basis of this Islam is the recognition of a not too retrogressive system of dogmatics, its object is the observance of an ethical system which is favourable to progress, and both are influenced by a strongly marked rationalism, which is genuinely old Muslim but for Muhammad 'Abduh is no indifferent inheritance but the main weapon of defence of Islam and actually takes the place of a deepening of religion so that his theology has the character of an apologetic compromise.

J. Schacht

MUHAMMAD AHMAD R. 'ABD ALLAH, the Mahdi of the Sudan, was born about 1258 (1843) on the island of Darâr in Dongola among the Argû islands north of el-Orde. A member of the Kunûz family of the Nubian Arab Berâbera, in later life when Mahdi to prove his kinship and mystical relationship with 'Ali and the Prophet, he traced his genealogy on his father's side to Hasan and on the mother's to Hasan and 'Abbas. He was the second son of a ship's carpenter and had an older sister and three brothers. Mystic tendencies early revealed themselves in him; after the usual early education he therefore in 1277 (1861) entered the order of the Sammâniya with Shâïkh Muhammad Sharif; after a seven years' noviciate Muhammad Sharif appointed him a Shâïkh of the order. After a short stay in Kharjum where he married, he went to the island of Abba (in the White Nile, north of Kosti), built a djami and collected pupils around him.

His master Muhammad Sharif, with whom he maintained a close connection, settled near him in 1288 (1872), which seems to have been unwelcome to Muhammad. Shortly after this event there awoke in Muhammad the consciousness that he was the Mahdi al-muttaqar, under the influence of the traditional ideas of the Mahdi, which brought about a breach between him and his master. He now joined the enemy of his former leader, the Shâïkh al-Kurashi, and in 1297 (1880) became his successor. In his wanderings (iyyâda) from Dongola to Sennâr, from the Blue Nile to Kordufân, he convinced himself of the discontent of the people, who were oppressed by the Egyptian government: the turbulent, mixed population of the Sudan, the religious fanaticism, the dissension between Turks and Arabs, the old opposition of the Shà'a to the Turkish ruling official classes, all formed a fruitful soil for his claims to be the Mahdi; the movement begun by Muhammad Ahmad which, as his letters and proclamations show, was based on a religious experience in which he earnestly believed, came from the first mixed up with political and social ideas, which in the east cannot be separated from religion, and in which finally deception and cunning played an evil part. According to the traditional formula, Muhammad Ahmad felt himself called "to purify the world from wantoness and corruption". For this purpose he summoned the people to fight in the first place against the infidel Turks'. He had previously bound a number of chiefs in Kordufân and Dâffûr to him by bâd'a (oaths of fealty, after the model of the Prophet: for the text see Dietrich, in Islam, 1925, p. 39) and had been cleverly able to attach men of action like the unscrupulous 'Abd Allâh al-Tâ'sîshî, later his Khalfî, to him; at the same time he practised a shameless nepotism. He further incited the people by numerous pamphlets and edicts, which contained his visions of the Prophet, who had appointed him Mahdi, of al-Khidr, Gabriel, the afshâ, summons "to purify religion", to "emigrate", to swear fealty, to imitate the Mahdi, to the dînhad etc. The hill of Gadir in Dâr Ñuba became the centre of this secret propaganda; in Sha'bân 1295 (July 1881) he made his first public appearance as Mahdi. Negotiations begun by the government in Kharjum with Muhammad Ahmad proved fruitless. Two companies sent against him under Abu l-Sa'îd were destroyed; this secured further victories for him. The Egyptian government was moreover prevented by the rebellion of Abd al-Fâdhî from taking vigorous action. The expeditions of the governor of Fashûda, Rashîd Pâsha, Yûsuf Pâsha al-Shallûli (at Gadîr, May 1882) and of Hîches Pâsha (at Sha'kân or Kasgîl), all ended unsuccessfully. The Mahdiya thus spread unhindered from Kordufân via Bahr al-Ghazal to the eastern Sudan; there in Sawâkin, 'Othmân Digna, a former slave dealer, soon to be the ablest Mahdist general, entered Muhammad Ahmad's service. Attempts by the Mahdi to extend his power to the west and with this object to conclude alliances with Muhammad al-Sanûsî in Daghëbû and with Morocco came to nothing. At the height of his power the campaign of 1301 (1884) took him to Kharjum, after which a heroic defence by Gordon fell into the Mahdi's hands on Jan. 30, 1895. Gordon was killed. Muhammad Ahmad did not have to survive his victory; he died, probably of typhus, on 9th Ramadân 1302 (June 22, 1885) at Omdurman near Kharjum,
where a khalifa was erected to him by his successor, the Khalifa 'Abd Allâh; it was henceforth the Mahdist capital until Kitchener put an end to 'Abd Allâh's rule and to the Mahdiya in 1898.

The organisation of the Mahdiya under Muhammad Ahmad, which was primarily to follow the sunna of the Prophet, was early developed; it was quite military in character, for the dhikr was considered more important than the hajj. He had four khalfas beside him, of whom al-Tâ'âyyishî was the most intimate and undoubtedly had the most pernicious influence on him. Particular attention was devoted to the distribution of booty to and the administration of the treasury (hadi al-mal).

Muhammad Ahmad's teaching shows some of the features of the extreme popular Sûfism and some of those of an idealised primitive Islam. His asceticism was hostile to progress; the contempt for learning in the Mahdiya and the order to burn all books on sunna and tafseer alienated the educated classes from him. The only things that had validity in addition to the Kur'an were the proclamations of the Mahdi, the Kûtîb (a collection of dhikr exercises) and the Madjîf, a work that contained Muhammad Ahmad's views on sunna as a substitute for the previous one but remained incomplete. In the abolition of the four madhâbbîn we see the shaykhî tendencies frequent among the Sûfîs. Wahhabî influences are very probable in a number of regulations, for example in the prohibition of adornment, music, extravagance at weddings, tobacco and wine; particularly however in the zeal against the worship of saints and sorcery; as a matter of fact Muhammad Ahmad himself became an object of worship among his followers even before his death.

The only really new thing in Muhammad Ahmad is the addition to the shahâda: 1. ...wa-una Ma-"hmadan Ahmad 'bi-n 'Abd Allâh huwa Madhîyya 'Wlîkhu wa-khâfîyatu rasûlîhî. Where the traditions of the Mahdi did not suit him, he did not hesitate to alter them. He laid down the following 6 articles instead of the 5 of the sunna: 1. qülî, on the congregational prayer, the face of which greatest stress was laid; 2. dhikr, in express opposition to the sunna practice and in place of the hajj; 3. obedience to God's commandments; 4. the extended shahâda; 5. recitation of the Kur'an and 6. of the Kûtîb.

A few extremist ideas, like that of equality between rich and poor, come partly from the revolutionary character of the old Shi’a, partly from the political and social conditions of the time; the social ideas were however not their central ones but only incidentally used cunningly to attract the masses. In practice the Mahdiya had an exceedingly unifying and equalising effect: slaves and slave-dealers fought under one banner, the humblest often rose in a short time to the highest offices.

Muhammad Ahmad's eschatology centres round the world domination of the Mahdi. The conquest of the Sudân was to be followed by that of Egypt, Mecca, Syria and Constantinople.

The formation of legends around Muhammad Ahmad's personality began very early, sometimes deliberately encouraged by him and his immediate followers and sometimes actually believed by them. Under pressure from him his court chronicler Ismâ'il 'Abd al-Kâdir composed a highly coloured sirâ entitled Kitâb al-Mustahshâ'î illâ Sirat al-'Imâm al-Mahdi. It covered the years 1298 to 1302 A.H. but was burned in the time of the Khalifa 'Abd Allâh. The Egyptian writer Shukair (see below) claims to have had in his hands a copy that was said to have survived.

Bibliography: Na’âm Shukair Bey, Turîkh al-Sudân, Cairo 1903 (in the third part Shukair, utilizing the edicts of Muhammad Ahmad and the Khalifa 'Abd Allâh, which were collected and printed under the Khalifa, as well as the above mentioned Sirâ and his own experiences in the Anglo-Egyptian army, gives a very full account of the Mahdiya under Muhammad Ahmad and 'Abd Allâh); Dâjîdî Zâdân, Kur'ânîyât al-Muhâmmadîyâ (Cairo 1892).—On two fatawa’s of the Egyptian government against the Mahdiya s. (Dietrich)

MUHAMMAD 'ALI PASHA (In European sources often Mehemet Ali or Mehemet Ali) was the well-known powerful viceroy of Egypt during the years 1805–1849 (which period comprises the entire reign of Sulûn Mahdî II q. v.) and the founder of the khedivial, later royal dynasty of Egypt. Seen in the light of history his life-work fully entitles him to the epithet of 'the Founder of Modern Egypt'.

Muhammad 'Ali was born in 1769, possibly of Albanian extraction, in the town of Kâwîla [q. v.] in Macedonia; he was engaged in the tobacco trade until he joined, as hitâbi in a corps of Albanian troops, a Turkish army that landed in Egypt in 1799 and was beaten by Bonaparte at the Battle of Al Jir (July 25). In 1800 he was one of the two chiefs of the Albanian troops in Turkish service who were left behind in Egypt; this secured him an influential military position when, after the final defeat of the French in 1801, Turkey began to try to recover her authority over Egypt. At the end of 1801 he fought as a general against the Mamlûks, but in the troubled years that followed he was alternatively on the side of the Mamlûk Beys (headed by al-Bardîsî) and of the Turkish governors sent from Constantinople. He intrigued against Khushraw Pasha [q. v.], who had to leave Egypt in May 1803, and was already in the same year, appointed titular governor of Jâlîdah. Under the following governorship of Khurshîd Pasha, Muhammad 'Ali succeeded in winning the favour of the inhabitants of Cairo and their spiritual leaders, and used them with success in his intrigues against Khurshîd, whose Turkish troops — composed of delâs — were a scourge to the population, while his own Albanians were ordered to behave well. The result was that Khurshîd had to withdraw in August 1803, leaving the citadel of Cairo to Muhammad 'Ali. The Turkish government, though sending several emissaries and trying to remove the Albanian troops, failed to keep Egyptian affairs under control and ended by recognizing Muhammad 'Ali's self-assumed
position (November 2, 1803); he was solemnly installed in April 1805.

The internal and external difficulties of the Sublime Porte did not allow her to interfere any further on the moment and the new governor had soon occasion to show himself a loyal vassal when England — Turkey (cf. Selim III) — landed in Alexandria in March 1807. At that time Muhammad 'Ali had already undertaken the struggle against the Mamlûk Bey-
al-Bardisî and al-Ali, the latter of whom was strongly supported by the English. He came back hastily from Upper Egypt, fortified Cairo, and gained a victory over the English army at Rashid (Rosetta) in April. Soon after the departure of the British fleet in September the victor began the execution of his far-reaching administrative and economic measures, which were to restore Egypt's economic strength and consequently to assure for himself a more powerful position than any Turkish governor had had for the last two centuries (cf. Malek). In the meantime the Boys (whose two leaders had died in 1807) continued their opposition (no doubt increased by the viceroy's land policy), which was finally broken by the massacre of about 100 Mamlûks at the citadel of Cairo on March 1, 1811, on the occasion of a festival. The persecution of the Mamlûks was at the same time extended to the other parts of the country. Mu-
hammad 'Ali now could send, without danger to his own position, his Albanian troops in the cam-
paign against the Wahhabis in Arabia, to comply with a request of the Porte. The Wahhabí war began in September 1811 and was conducted, until 1816, by Muhammad 'Ali's son Tusun; after the latter's death the command was taken over by his elder brother Ismâ'il Pasha (q.v.). Muhammad 'Ali himself took part in an expedition to Yaman, but had to return before the end of the war, because his position as governor seemed to be in danger.

The military successes of the Egyptian troops against the Wahhabí power immensely increased Muhammad 'Ali's authority all over Arabia and in a larger sense in the entire Near East; European policy began to look for the first time on Egypt as a factor of political importance. This importance was further increased by the expeditions to the south that followed immediately on the Arabi campaign: Egyptian power was established for the first time in the Sûdän (q.v.), where Muhammad 'Ali's third son Ismâ'il found his death in 1822, the year in which the town of Khaṭîm (q.v.) was founded. At this time Egyptian power was also extended in the direction of the Red Sea, which made an end to the hitherto continuous plague of the incursions of nomadic Arabs into the Nile valley; the ports of Sawàkìm and Massawa (Mayâq) came under the Egyptian sphere of in-
fluence, although the direct authority of the Porte was maintained.

A new phase in the development of Muhammad 'Ali's power began by his participation in the military repression of the Greek revolt by the Turks. Only through Egyptian aid was the submission of the whole of Greece with the exception of Nauplia obtained; first by the conquest of Crete by Ibrahim Pasha (1823) and then by the Egyptian army that landed in 1825 in Morea. When in 1827 England, Russia and France intervened in the Greek question, the combined Turkish-Egyptian fleet was destroyed in the bay of Navarino (October 20, 1827); in the following year the Egyptian troops evacuated the peninsula, after a convention had been concluded between Muhammad 'Ali and the British admiral Codrington (August 6, 1828). Crete remained under Egyptian administration until 1841.

Muhammad 'Ali's power was now such that he could conclude international agreements without the sultan's cognizance; at the same time the two Mediterranean naval powers, France and England, were endeavouring to win him over as an independent political factor. In 1829 France had almost induced Muhammad 'Ali to undertake the conquest of the Barbarese states of Algiers and Tunis; the viceroy, however, was more inclined to seek territorial expansion in the east, the more so as the four governorships of Syria had been promised him by the Porte as reward for his participation in the Greek war, a promise that had never been fulfilled. At the end of 1831 there arose difficulties between Muhammad 'Ali and the Porte on account of the government of 'Akka, which he claimed for himself. The conflict soon brought about the sending of an Egyptian army under Ibrahim Pasha into Syria. On May 27, 1832 'Akka was taken. In the following month the army that was sent by the sultan was repeatedly defeated and finally beaten near Konya (December 21, 1832). The Egyptian army, continuing in the direction of Constantiopole, reached Kutahia. Here at last an armistice was concluded between the Porte and Ibrahim as representative of his father, thanks again to the intervention of the European powers, of whom Russia had already sent military aid to Constantiopole. Muhammad 'Ali was granted the governorship of Syria and Adana by the definite peace of April 6, 1833.

During the following six years the viceroy's power was at its height. While Ibrahim administered Syria, severely but on the whole to the prosperity of the country, Muhammad 'Ali continued his administrative programme in Egypt and in his pan-Arabian policy, the aim of which was to be the union of all Arab-speaking peoples under his leadership. In Arabia his influence was still considerable since the Wahhabí war; he now tried to extend Egyptian influence as far as the 'Irak. This policy, while at the same time constituting a threat to the ambitions of the European powers in the Near East, was to bring him again into conflict with the sultan, who, having succeeded at last in subduing too independent vassals in other parts of his empire, was waiting for an opportunity to crush his most powerful vassal in Egypt. The latter, in 1838, had even made known his intention of declaring himself independent of the Turkish government.

Not long after the outbreak of hostilities the Turkíh army under Hâthi Pasha was completely defeated at Naṣib in North Syria (June 24, 1839); while the Turkish fleet under the Kapudân Pasha sailed to Alexandria and went over to Muhammad 'Ali's side. In this desperate situation the authority of the Porte was saved by the inter-
vention of the five European powers, in defence of the integrity of the Ottoman Empire. The Egyptian question had thus produced an inter-
national political crisis, which was aggravated by the opposition of France, which had long been the best intentioned towards Muhammad 'Ali among the European governments. By the convention of
London (July 5, 1840) England, Russia, Austria and Prussia agreed with the Porte upon the terms to be imposed upon Muhammad `Ali. When the latter did not accept, there followed military demonstrations against the coastal towns in Syria (`Akkî taken on November 4, 1840). Soon afterwards a British fleet appeared in Alexandria, where Admiral Napier on November 27 concluded an agreement with Muhammad `Ali. The viceroy consented to the return of the Turkish fleet and renounced his governorship of Syria, Adana and Crete, while on the other hand he was to keep the hereditary governorship of Egypt as a part of the Turkish Empire. These terms were confirmed by an imperial firman of February 13, 1841, completed by another of May 23, in which the mutual relations of Sulṭan and viceroy were definitely regulated. The chief points were the right of succession according to seniority in Muhammad `Ali’s family, the payment of a tribute and the permission to maintain an Egyptian army of 18,000 men, the higher officers of which were to be appointed by the sulṭan.

Muhammad `Ali’s last years were passed in peace. In 1846 he visited Constantinople and Kâdîa; in 1848 he lost his son İbrahim to whom so many of his military successes were due. On August 21, 1849 he himself died in the citadel of Damascus, to be succeeded by his son Abū Bakr Pasha [q.v.]. He was buried in the new mosque which he had erected in the citadel of Cairo.

Still more amazing than the career of this once obscure Turkish officer are the enormous changes brought about by his work in the condition and the international position of Egypt; they have made him a hero in the history of the Near East. His reign is an era by itself in Egyptian history. Muhammad `Ali’s latest biographer says: “He began by seeking only to raise money. He ended by seeking, however mistakenly, to develop and civilise the country” (Dodwell, p. 220). His work indeed did not at all mean a break with the government traditions prevailing in the Turkish Empire, but the political aim that Muhammad `Ali had set himself, seconded by his persevering energy and the continuous supervision of his autocratic individuality, led at last to a result which, in similar conditions, would otherwise have been difficult to attain, as is shown by the state of things prevailing at the same time in other provinces of the Ottoman Empire.

As the measures taken by Muhammad `Ali in the field of administration, land policy and the industrial and commercial mobilisation of the country have been briefly sketched in the art. Khedive, it is unnecessary to enter here into the same details. It is sufficient to point to the fact that all these measures had as their first object to make the pasha himself the sole proprietor and administrator of the riches of Egypt. He certainly listened to the advice of European and other councillors and valued European institutions as examples to follow to a certain extent. But he followed oriental methods and made as good as no use of Europeans as officials in the home administration.

This was not the case in Muhammad `Ali’s newly erected army. The pasha himself had not been entirely able to keep his mercenary troops under control (mutiny in Cairo in 1816). So he decided to form a new army, moved by the same motives that had led Sulṭan Selim III to create new regular troops (millet-i meşale). From 1819 this enterprise was confined to and brought to a successful end by the French captain Sève, who, after having embraced Islam, served Muhammad `Ali as Sulţanım Pasha. A first attempt to use negro slaves from the Sudan as soldiers having failed, the officers of Egyptian birth were recruited; the officers were mainly taken from among the young Mamluks, besides whom there were not a few Europeans. With this army he won the military successes in Morea and Syria. The recruitment met with exceedingly strong opposition among the people of Egypt and later in Syria, and the methods used to get the required number were sometimes cruel, but the pasha’s energy prevailed. At length this military organisation proved to be a means of education for the people and prepared the growth of national feeling among the generations to come. As has been said already, the final Imperial firman of 1841 limited the Egyptian army to 18,000 men in time of peace.

Muhammad `Ali’s attempts to create an Egyptian fleet go back as far as 1815. At first he had ships built in France and Italy and in Bombay, but soon Alexandria itself got its yards. After the destruction of the Egyptian fleet at Navarino ship-building began again and quite a number of French and Italian officers were employed in the Egyptian navy after 1831. The Egyptian fleet, however, did not long survive its founder.

On the whole, Muhammad `Ali’s rule wore a Turkish character. Most of the responsible posts in the administration and in the army were held by Turks and by de-cendants of the Mamluks. Thus the Ottoman ruling system, with some modifications applied after the European model, was imposed on Egypt most completely at the time when the country itself was politically loosened from the empire. It may be called an exception that the Armenian Boghos Bey, who was for a long time Muhammad `Ali’s minister of finance and of foreign affairs, came to this exalted position, although the use of Christians (Armenians and Copts) in more subordinate offices had always been a government practice in Turkey as well as in Egypt. The viceroy himself is said never to have spoken well any language other than Turkish.

Muhammad `Ali was not a great builder of magnificent architectural monuments. He erected a mosque after the Turkish fashion in the citadel of Cairo, but he never built costly palaces for himself. Most of his works were of public utility, such as the improvement and the enlargement of the irrigation system in the Delta, including the Nile Barrage below Cairo. This last work was undertaken in 1847, but failed.

The judgments on Muhammad `Ali’s personality were very divergent even during his lifetime. Most of his admirers were found amongst the French; in view of the other the whole friendly attitude of the French government this is of course not strange. British opinion was less favourable, but all those who came into contact with the viceroy were impressed by his personal charm. Now that his era belongs to the past, the impression remains of a great man in many respects, possessed of considerable personal courage and trustworthy and loyal in a high degree. His methods were sometimes cruel and in the begi-
ning of his career he often had recourse to intrigues, but in the circumstances it is hard to understand how it could have been otherwise. At years passed by and the prosperity of the country increased, his methods of government grew more lenient, so that, at the end of his reign, he had become decidedly popular with his subjects. An equestrian statue of Muhammad 'Ali now commands the chief square of Alexandria and one of the largest thoroughfares in Cairo is called after him.

ancestor Bairam, at the head of a body of soldiers, took part in the capture of Tunis by Sînîd Fâshî on 25th Dîmâdâ 981 (Sept. 24, 1572) and of which several members had held the office of grand mufti of Tunis, Muhammad Bairam studied at the Dîmini al-Zâitûna and had as teachers al-Fâhir b. Ûd-dîr, al-Shâhîlî b. Sâlih, Aymad Bairam, Muṣṭafâ Bairam, the Shâhîk al-Īslâm Muhammad b. Muṭawwîya and others. At the age of 17, he compiled a Kannûddîn in which he recorded the ordinances, decrees and administrative regulations which the emir Muḥammad Fâshî ordered the authorities to enforce.

On the death of his paternal uncle Bairam IV, he was given charge of the Madrasat al-Qânûkiyâ on 12th Dîmâdâ 981 (Oct. 1, 1285), and on the 9th of the following month (Dec. 13) of that of the Dîmini al-Zâitûna. Soon after this, troubles provoked by the despotic régime began to disturb Tunisia and resulted in the closing of the representative assemblies in which Bairam was interested. He published in the Rûdâd, the official gazette, the two first political articles that ever appeared in Tunisia and in them he condemned the tyranny of the authorities, preached the love of liberty and began the government to be liberal and to grant its subjects representative assemblies.

On Safar 17, 1291 (April 6, 1574) he was appointed to administer the waqfât, which he hastened to reorganise. The hard work ruined his health and forced him to take a journey in Europe to recuperate, this caused him to begin his Sifwat al-Fâhib. He left in Shawwâl 1292 (Oct. 31—Nov. 28, 1875) and visited Paris. In the same year the Shâādîkî College was founded; Bairam shared in the preparation of the regulations and programme of studies, modelled on those of European institutions, and was one of the first of the students to enrol his son so as to encourage his compatriots to take advantage of such innovations.

On 1st Dîmâdâ 11, 1292 (May 7, 1575) he was put in charge of the government printing works which he at once reorganised, and securing eminent assistants like Muhammad al-Sanûsî of Tunis and Ḥamd al-ʿAlîh of Cairo he produced the Rûdâd regularly. It was at this time also that he reorganised the Muktabat al-Shâādîkîya alongside of the Dîmini al-Zâitûna.

In 1293 (1876) he assisted Turkey in the war with Serbia and Montenegro by sending money, horses and camels, political considerations preventing the despatch of help in men.

In the summer of 1295 (1878) he went a second time to Paris, visited the Exhibition and was received with great attention by President MacMahon. He took the opportunity to visit London and England and, on his way back, Algiers. He took a very prominent part in the reorganisation of rather the creation of the Shâādîk Hospital which was opened on Safar 18, 1296 (Feb. 1879). At the same time he was one of the two arbitrators appointed by the Tunisian government in the case of Hensch Siâyîdî Thâbit and the French government. In the middle of the same year, he was appointed by the vizier to go to Paris, to receive medical attention, it was said, but in reality to ask Gambetta to remove the French consul, who was interfering in the domestic affairs of the country even managing them. The consul thwarted the plans of Bairam and the vizier. On his return he told the vizier that France intended to annex Tunisia. Tired of the vexatious pestering of the vizier Muṣṭafâ b. Ismâ'îl he obtained, after many attempts, permission to make the pilgrimage to Mecca and left Tunis under the protectorate on Shawwâl 16, 1296 (Oct. 4, 1879). He went via Malta, Alexandria and Cairo, where he was received by the Khedive Tewfîk Pâshâ, and thence to the Hijaz, visiting Mecca and Medina. He then went via Yambu and the Suez Canal to Bâirût, where he was much honoured by the people and by Midhat Pâshâ, the governor of Syria, and on to Constantinople. He wrote a haddâdî in honour of Sulîn ʿAbî al-Ḥamîd. The Tunisian government at the instigation of the French consul, who feared the establishment of closer relations between Turkey and Tunisia, demanded his return but the Sublime Porte diplomatically did not receive the request.

It was in Constantinople that he began to prepare the Sifwat for publication and finished the first two volumes. The penetration of France into Tunisia was a rude shock to Bairam, who in collaboration with the former vizier of Tunisia, Khair al-Dîn, was appointed by the Sublime Porte to prepare a report on the situation created by France. Despairing of returning to his native town he went to Leghorn and was joined by his family; he then went to Geneva, where he left his son to finish his education, and to Vienna and Bucharest and then settled in Constantinople. The Sulûn, wishing to send some horses as a present to the Emperor Frederick III of Germany, Bairam was appointed to write the letter conveying the gift. During the eighteen months which he spent in the Turkish capital, Bairam drew a pension of £25 per month. It was during this stay that he prepared the third volume of the Sifwat.

His health being undermined by an illness which grew worse daily and being unable to meet his expenses and fear the machinations of his detractors, who saw in him a man to be removed, he left Constantinople on 1st Muḥarram 1302 (Oct. 21, 1884) to go to Egypt, where his letters of recommendation secured him the esteem of the Khedive Tewfîk Pâshâ, who gave him a pension.

On the 25th Rabi I of the same year (Jan. 13, 1885) he produced al-Īlam, a political and scientific journal.

Two years later, he went to London to attend the Jubilee celebrations of Queen Victoria, had medical attention in Paris and returned to Egypt via Berlin and Vienna. He then completed a work which he had begun in Constantinople entitled Taqṣîrd al-Sanîd c. ʾRadd d. al-Khâshi b. Kâbir (Renen), in which he refuted the arguments which Renan had advanced at a conference in the Sorbonne on March 29, 1853 on Islâmîme et la Science (Paris 1853), in which he alleged that religion was an obstacle to the diffusion of science among Muslims. He also published a Rûdâd in which he declared that it was permitted to purchase bonds or shares in a Muslim government loan so that Muslim money should not leave the country, and this had no character of usury. He wrote a report on the compulsory use of the Arabic language in the teaching even of modern sciences. He finished the fourth volume of the Sifwat and had begun the fifth which death prevented him from finishing.

On 12th Dîmâdâ 1. 1306 (Jan. 14, 1889) Bairam was appointed a judge in the Tribunal de 1er Instance in Cairo. Going to Hulwân for a change of air, he took pleurisy and died after 25 days' illness.
He had a vast knowledge of Hadith, law, history, ancient and modern, and historical and political geography.

In addition to the works already mentioned and numerous nizālas which it would take too long to enumerate, we may mention the following: 1. Tadhkirat al-Khāniqā fi Hilāl Sāl Bundūs al-Kāțiṣ, printed at Cairo in 1303 in which he claims that the law regards as permitted the flesh of game killed with fire-arms; 2. a treatise on provoody; 3. a riṣālah in which he says that it is permissible for men to let their hair hang down and that in the air, contrary to the opinion of several fāqīhs; 4. al-Tadhkirat fi Mus'ālat al-Kāțiṣ, a study in which he shows what slavery among Muslims is according to the law, points out the motives of slavery and the rules regulating it, and concludes by saying that slaves who are sold at the present day are free men and that Muslim governments which forbid the sale of slaves are acting in accordance with the law; 5. Subkāt al-A'īdā bi-Mustawadā' al-Amār, published in 6 vols. in 1302—1303, 1303, 1304, 1301, the sixth volume being devoted to the biography of Muhammad Baṭr and edited by his son of the same name; it is perhaps the best treatise yet written in Arabic on political geography.

MUḤAMMAD BAṬR, son of Shaikh Ghulām Muhammad, born in 1307 (1829), was first taught by his father and then by Shaikh 'Abd Allāh, called Mīyān Ḥadīr, and Shaikh Nūr al-Ḥaḍīr b. 'Abd al-Ḥaḍīr Dīhlāwī. After a few years he himself began teaching in his native country. He first became a mu'amīl or disciple of his father, and after the latter's death attached himself to the famous saint, Muḥammad Muṣʿūm Sarhānī. He was pursued by Itīlāhān Khān, Mir Khānsāmān, to come to the court of Awrangzēb and accepted the duties of Baḥshī (pay master) and Wādīhāni (writer of the official diary), but by special favour he enjoyed much leisure, which he devoted to literary work. He died in 1094 (1682) at Sahāranpūr. He is the author of 1. Mirāt al-Dīnān Namā (a general history compiled under Awrangzēb), 2. Rayāl al-Aṣwāfiyya (life of saints), 3. Taḥkīrat al-Shu'ārā' (biographies of the poets).

Bibliography: Bakhītārān Khān, Muṣʿūt al-Ālam, fol. 478b; Eliot-Dowson, History of India, viii. 145—165; Rieu, Cat. Pers. MSS. Br. Mus., iii. 890; Ethe, Cat. of Persian MSS., India Office, p. 49. (M. Hidāyat Ḥosain)

MUḤAMMAD BAKHTĪYĀR KHALIQ was an inhabitant of Ghūr [q. v.]. He was of a very mean appearance and amongst other deformities of his person it is said that when he stood upright the end of his fingers extended considerably below his knees. When he reached the age of manhood he went to Ghazna [q. v.] and offered himself as a volunteer to the officer of Muhammad Ghōrī, but they refused to enrol him. He, therefore, repaired to Dīhlāwī and was appointed by Kaṭb al-Dīn Abīg [q. v.] to command an army destined for the conquest of Buhār about 596 (1199). Here he was very successful. He was next ordered to invade Bengal. In 600—601 (1203—1204) he proceeded to Nadyā, the capital of Bengal, and captured it without any blood-loss. His last attempt was directed towards the invasion of Bihār and Tibet, but he met with reverses which compelled him to retreat. He succeeded in reaching Dīvānī in Bengal where he died, but his body was carried to Buhār and buried there in 602 (1206).

MUḤAMMAD BEY ABŪ DHAḤAHAB. [See 'Abb. Bey.]

MUḤAMMAD BEY 'OTHMĀN AḤDJAL was born in Egypt in 1829, the son of a judge in the Court of Appeal, named Yūsuf al-Hasani. When a boy he learned English, French and Turkish at the school of languages (Madrasa al-Aslu), and when only 16 was given an appointment in the government translation bureau. His patron, the late Old Bey, had him appointed to the Conseil de Médecine. In 1853 he entered the War Ministry and five years later the Ministry of the Interior. In 1879 the Khedive Tewfik Pasha appointed him to his civil cabinet and several times took him to accompany him on journeys. After the death of the Khedive he was appointed a judge in Cairo. In 1895 he was pensioned and he devoted himself to literary work till his death at the end of 1898.

In collaboration with Clot Bey, he published a sketch of the history of Muḥammad 'Ali and an elementary grammar of the Arabic and French languages and also a description in rhyme of his journey with the Khedive Tewfik. He then devoted himself to the translation of poetry: first of the fables of La Fontaine, the novel Paul et Virginie, and of Racine's tragedies Alexandre le Grand, Esther and Phèdre. All these he translated into classical Arabic. But his real importance lies in his endeavours to translate Molière's comedies into the modern Arabic vernacular of Egypt, freely adapting them to Arabic conditions: a. Tangoir under the title al-Bikār Matlash, which Vollers edited under the title Il sikh Matlash (cf. D. M. M., xl. 71 sqq. and thereon Socin, Ibid., xl. 131 sqq.); b. Madrasat al-Aṣwāfi (L'École des Maires), transcribed and translated by M. Sobernheim, Berlin 1896; c. al-Niṣā wa al-Manvāt (Les Femmes Savantes), transcribed and translated by Fr. Krein, Berlin 1898; d. Madrasat al-Nīsā (L'École des Femmes); e. Risiyyat al-Thakrīl (Les Fâchons), 1897. His collections of popular poems were also lithographed: Ḥimāl Zaydūl.

The Egyptians were not much attracted by these comedies translated into the vernacular. The language did not appear cultured enough to the Egyptian public. They were hardly ever produced and the rich vocabulary which the comedies contain has not been noticed or utilized by students of modern Arabic.

L., ii. 176 ff.; the poet's autobiography in al-Mustāf al-Jadida of 'Ali Pasha Mālārak, xvii. 62; al-Abād al-Hashā'īn ibi-Karn al-aṭšār, ii. 91 sqq.; J. E. Sarks, Dictionnaire encyclopédique de bibliographie arabe, ii., col. 1306. (M. Sobernheim)
MUHAMMAD ČELEBI. [See GHAZALI.]

MUHAMMAD DAMAD PASHA, grand vizier, also called ORUZ MUHAMMAD PASHA, was the son of a footman of Constantinople and was educated (rather unusual at that time for a boy from Constantinople) in the imperial palace for a military career. He left the palace as sadık, but we do not know his career until he was appointed, in 1616 (1607–1608), governor of Egypt. Here he was successful in the energetic suppression of a Mamluk revolt and when he returned in 1610 to the capital with two years' tribute, he was appointed Kapudan Pasha, being at the same time married to sultan Ahmadi's seven-year-old daughter Gawhar Khan (married afterwards to Kapudan Pasha). He added to the title of sultan Pasha that of Şüfîli, əımıd, i. 147), which assured him the qualification damad. As Kapudan Pasha he was made responsible for a defeat inflicted in 1613 on a part of his fleet, off the island of Chios, by a small Spanish-Sicilian fleet: this blow prevented the landing of Turkish ships in Syria on an expedition against the Druses. Damad Muhammed was dismissed from the post of Kapudan, became, however, second vizier and, after Nasuh Pasha's execution (October 17, 1614) he was appointed grand vizier. In this office he commanded in 1615 as serasker in a new campaign against Persia, the peace negotiations having ended unsuccessfully a short time before. Nothing was undertaken, however, that year, partly owing to astrological calculations. The grand vizier remained that winter in Aleppo. The next year the Persians were attacked in Armenia, where they had made some progress; Erivan was beleaguered and capitulated beginning of July 1616 after a 25 days' siege. The Turkish fleet had to return home, without having suffered losses occasioned by the rude climate and the insufficient food supplies. Damad Muhammed was dismissed in January 1617 to be succeeded by Khalil Pasha [q.v.]; in the Venetian Relationi Khalil Pasha and Muhammed Pasha are described as the only members of the Imperial Divan that really count. The next year, after the accession of Əthman II, he became Khalil's şef-lene, during that year's Persian campaign and, after Khalil's disgrace, was appointed a second time grand vizier (January 18, 1618). This dignity he held only a year, in which peace was concluded with Persia; the reason of his dismissal was a dispute with the Kapudan Gudzdegli Ali Pasha [q.v.], a favourite of the sultan (January 1620). Damad Muhammed went a governor to Aleppo after having been deprived of all his wealth by the extortions of his successor. He died soon after his arrival in Aleppo and was buried in the türbe of Şafi Ali, where he had a tarîme made for himself.

Bibliography: The principal Turkish sources are Na'ima I, Pečevi and Hâjlîdji Khalifa (Ferhat and Tufat al-Khârî). Further von Hamer, G. O. K., iv. 442, 468, 475 999; 507 999; some contemporary western sources are indicated; Əthman Zade, əzâvet at-Usur, p. 61; Şüfîli əzâvet, i. 147. (J. H. Kramers)

Mirzâ MUHAMMAD DJAFAR KARADŽA-DAGHI, Mûshî of the Kâdi ğir prince Djalâl al-Dîn Mirzâ and translator into Persian of the famous comedies of the Adharlîdañi playwright Mirzâ Fâh əli âkıhâzá dá. After they had been published (1859) Mirzâ Faţح əli sent a copy of his plays to the above-mentioned Kâdi ğir prince in the hope that he would take notice of it. The book lay unheeded for years in the prince's library until Muhammed Əjaîf opened it by chance. The munshi, delighted with the plays, at once decided to translate them into Persian. As no one would help him, he was forced to print the translation at his own expense, which brought him into considerable financial difficulties. The translation appeared in lithograph in Tehran in 1874 under the title Tamâthîf. When the work was finished, Muhammed Əjaîf corresponded with the author and found out that they were related. The Persian translation is of the greatest importance for the history of Persian Pasha, as it gives a great deal of information about the composition of original works. The influence of Aḵûndzâde on the work of Malkam-khan and even on more recent dramatists, such as Muhammed, is quite apparent. From the artistic point of view however, Muhammed's translation cannot be called successful as their language is very clumsy and filled with countless Aḵûndzâdeisms.

It is remarkable that Europeanorientalists first became acquainted with Aḵûndzâde's works in their Persian dress and published a considerable number of these translations (see Bibli) as textbooks for the study of spoken Persian, although, in view of their linguistic defects, the translations cannot by any means be regarded as models of the living Persian language.

MUHAMMAD ES'AD. [See GHÂLîbih DîBÉ.]

MUHAMMAD ES'AD. [See ES'AD Efendi.]

MUHAMMAD GAWLÂNÎ GAWLÂNÎ, an Indian saint. He was a descendant of the famous saint Shaikh Farîd al-Dîn Ətaşir [q.v.], his full name being Abu ɬ-Mu'asîyad Muhammed b. Kâtir al-Dîn b. ɬatîf b. Mu'în al-Dîn Kâtir b. Kâtir al-Dîn b. ɬayyâd b. Fâhîd al-Dîn Ətaşir. Some say that his great-grandfather Mu'în al-Dîn Kâtir came to India and died at ɬjawânpî. One of his brothers, Shaikh Bahîlî, who was attached to the service of Humâyûn, fell in battle and lies buried at the gate of the fort in Bayâna. According to his own statement, Muhammad Gawlânî was born in 906 (1500). He was a pupil of Shaikh ɬâhîr al-Dîn Hâjlîdji, and belonged to the Şat-ţâyva sect of Sûfîs. He and his eight brothers were disciples of Shaikh Hâjlîdji Hamîd, Khalifa of Shah Kâlan, the disciple and Khalifa of Shaikh ɬâhîr ɬâhîr. After leading a solitary life
for more than thirteen years in the mountains of Ćunr, he came to Gudjarat, where he became acquainted with the popular saint and scholar Shaikh Wadjah al-Din Gudjarati. He went to Agra in 1569 (1658) and was treated with high regard by Akbar. Subsequently he returned to Gudjarat, where he died in 1570 (1652). Humayūn is also said to have been a faithful follower of Muhammad (q.v.).

He was the author of several Nafi works, the most popular of which is DauwaKh-i Khamsa, in Arabic, which he completed in 956 (1549), and which he subsequently rendered into Persian with additional improvements. His other works are Kubist Makhzan, Bahar al-Hayat, and Mir al-Din Nama. It is related that his ecstatic sayings in the Mir al-Din Nama were condemned by the ʿulama of Gudjarat, who passed orders for his execution, but that he was saved by the timely intervention of the above-mentioned Shaikh Wadjah al-Din.

MUḤAMMAD GURDJĪ PASHA. Two Turkish grand viziers are known under this name.

1. The one who is also called Khādīm Muḥammad Pasja began his political career after having been a eunuch in the imperial palace; in 1604 he became wāli in Egypt, where he was able to establish some order; after that he was twice kām-นาḵaḏm of the grand vizierate in the capital, in 1611 and in 1655; in the meantime he had held governorships in Erzerum, Bosnia and Belgrad. He was called to the grand vizierate in the days of Sulṭān Muṣṭafā I's second reign, when the Janissaries and the Sipāhs were dictating their will at Constantinople (September 1622). Khādīm Muhammad owed his nomination to the Sipāhs — who had obtained the dismissal of Mir ʿHzain Paşa, the leader of the Janissaries — but also to the confidence of the wāli and to his well-earned reputation of a wise and experienced politician. He succeeded indeed in the abolition of abuses in the army administration by convoking a large council of dignitaries, where the reinforcement of the khanīn was decided. When, however, in several parts of the empire, there arose opposition against the Janissary regime, especially the action of Abāz Paşa [q.v.] in Erzerum, the grand vizier was unable to oppose the Janissaries in Constantinople. Their leader Mir ʿHzain was intriguing again, while at the same time the sultan was crying for revenge for Sulṭān Othman II. As a result of these riots the former grand vizier Dāwūd Paşa was killed in January 1623. On February 5 of the same year the rebellious Janissaries, declaring that a eunuch could not be their grand vizier, obtained his dismissal in favour of Mir ʿHzain. Gurdji Muhammad went into exile, but after the enthronement of Murād IV he came back to the capital as vizier and acted for the third time as kām-namaḵ in May 1624 when the then grand vizier went on an expedition against Abāz. He died on March 26 and was buried in a ṭurbe in Eiyyb. His age is not given in the sources. In the opinion of the English resident Roe, Gurdji Muhammad was one of the few personalities that were able to lead the affairs of the empire.

2. One of the grand viziers of the first period of Muhammad IV's reign, when the state affairs were really governed by the rūṭık Kösem [q.v.] and the Ḵāṭar ʿaḡāṣī Suleimān. This Gurdji Muhammad had already a long career as governor of Syria and other provinces behind him when, at the age of 94 years, he was called to the highest dignity in the beginning of November 1651 as successor of Saywaḵ Paşa, who had shown too much independence towards the court. During his grand vizierate he is said to have shown fully his lack of capacity, taking the alarming revolt in Asia Minor of Abāz Paşa, Ḥājjī Paşa and Kāḏī Oghlu with the greatest equanimity. He was especially anxious to remove from the capital all possible rivals to the grand vizierate, among them Muḥammad Kopruš, who brought him, as Naʿmān says, the nickname of ḥabb al-maṣūm satān (the pill of the sultāns). On June 19, 1652 he was deposed again by the court party. After having been exiled he lived some time at Eiyyb and died in 1664, at the age of 110 years, in Temesvár.

MUḤAMMAD ḤĀSAN KĀHĀN, a Persian man of letters, who died on 19th Shawwal 1313 (April 3, 1896). His honorific titles were Šāh-i Darvāza and later l-i'mād al-Saltana.

Through his mother he was related to the Čādjarā [q.v.] and through his father he claimed descent from the Mongol rulers. His father, Ḥājjī Ṭi Khan of Marāgha, was a faithful servant of Naṣr al-Dīn Shāh (in 1852 he discovered the conspiracy of Sulaimān Kāhān) and the son from his youth upwards was in the service of the court. Muḥammad Ḥāsan Kāhān was one of the first students at the Dār al-Funūn founded in 1268 (1851) and spent 12 years there. Later he went with his father when he was appointed governor of Aρaḵānī. In 1280 (1863) he was appointed second secretary to the Paris Legation and spent three and a half years there. On his return to Teherān he was appointed interpreter to the Shāh and in this capacity accompanied him on his travels. In 1288 (1871) he was appointed head of the dragomanate (dār al-tarjuma) and of the press bureau (dār al-ṭabā’ah) as well as director of the official Ruhānī-yi dawlaḵi. In 1290 he was appointed superintendent of the palaces and assistant to the minister of justice and henceforth continually rose in rank.

E. G. Browne criticises severely the work of
Muhammad Hasan Khan and accuses him of having put his name to books alleged to have been written for him by indigent scholars. On the other hand, Joukovsky speaks with much respect of his works and shows that he inspired a great many literary undertakings (e.g. the printing of the Kur'an with an inter-linear Persian translation, concordance and index; the foundation of a press for printing in Roman characters; the establishment of the Mușhirya school; encouragement of the daily press etc.) although after the appearance at Bombay of a satirical work by Khalîgh Hâshimi Shâbqâd the obsession was still based on the suggestion of Muhammad Hasan Khan.

The fact is that the number of works — often very useful — bearing the name of Muhammad Hasan Khan, is very large. Without the help of "secretaries" some of these books could not have been undertaken. To Muhammad Hasan Khan is in any case due the honour of having suggested them. His principal works deal with the history and geography of Persia and are often in the form of almanacs. They are: Mir'at al-Bulhân, i., two editions (1293, 1294, a dictionary of geography: letters و — و); ii., 1295 (history of the years i.—xv. of the reign of Nâşir al-Dîn and calendar); iii. (years xvi.—xxii. of the reign of Nâşir al-Dîn and calendar); iv., 1296 (geography: letters و — و and history of 1296). In the geographical portions we find quotations from Yâqût and European travellers along with notes specially prepared by the local authorities (an extract from the Mir'at al-Bulhân: Târîkh-i Bubul wa-Yinnow was published at Bombay in 1311); Târîkh-i munqazam-i Nâşirî, 3 parts, 1298—1300 (history of the time of the Hidjâra; vol. iii.: history of the Kâlidâr 1194—1300); Matâ' al-Shâms, 3 vols., 1301—1303 (description of the journey to Muhâjjân with important archaeological data; ii. 165—213 contains the autobiography of Shâh Tâmâs, and iii. 469—500 a list of books in the library of the sanctuary of Mashhad); Khatâb Hâshimi-al-Sadîq fi Hâshimi-al-Sadâd, Tâhirân 1304, Tabriz 1310 (history of the martyrs of Karbâlî; Khâshâm-bûzma [cf. Sûra lx. 70], 3 vols., 1301—1307 (biographies of famous women of the Islâm); Khatâb Nâṣir al-Tâfân fi Târîkh-Dar-i Aqlân, Tâhirân 1310, 3 vols. (history of the Asârsâd); Khatâb al-Mâqâshir wa-il-Jâhîr, 1309 (historical almanac for the 40th anniversary of the reign of Nâṣir al-Dîn Shâh); Khatâb al-Tâfân fi Ahvâl Qâlîb-i Shâhân, 1311 (history and geography of Sawâd-kîh in Mâzândârân).

In the field of literature Muhammad Hasan Khân was only a translator (Swiss Family Robinson, romances of Jules Verne, discovery of America, Târîkh-i Inkâhâghi Yangi Dunyâ, Tâhirân 1288, Memoirs on the Indian Mutiny of 1857). He also wrote a number of text-books on geography and on the French language.

(V. Minorsky)

MUHAMMAD HUSAIN TABRIZI, a famous Persian calligrapher, pupil of the celebrated Mir Saiyid A'mâm Mas'ûd and teacher of the no less famous Mir 'Imad. His remarkable command of the art of calligraphy, so popular in Persia, brought him the title of honour Mir'at Cifâ'î (greatest master). His father Mirzâ Shukrallah was Mustawfi al-Mamâlik to the Safawid Tâhirân I (1521—1576), the master himself, according to the Oriental sources, was vizier to Shâh Ismâ'il I (1576—1578) but left the favour of the sovereign and was forced to fly to India where he remained to his death. Rieu says he died about 950 (1543), but this does not agree with other biographical details and is indeed improbable. That he spent the remainder of his life in India is evident from the fact that most of the manuscripts known to have been written by him were finished in India. The inscriptions on the masons and khâkâhs of Tabriz are said to have been his masterpieces but unfortunately they have been almost entirely destroyed by earthquakes. After completing these inscriptions he made the obligatory pilgrimage to Mecca and on his return devoted himself exclusively to copying the masterpieces of Persian poetry. A Discûn of the Persian poet Amir Shâhî from his pen is in the Cambridge University Library.

MUHAMMAD ISMÂ'IL B. ABD AL-KHANIM AL-SHÂHIDI MA WÂN X was born on the 28th Shawwâl 1196 (1781), of a Dîhil family that traces its origin to the Câlîkh 'Umar. He was a nephew of the famous Mawfûdî Shâh 'Abd al-'Azîz (d. 1239 = 1823). Having lost his father early, he was brought up by his uncle Mawfûdî 'Abd al-Kâdir (d. 1242 = 1826). In childhood he was attentive to his studies and fond of swimming in the Qâma, but thanks to a retentive memory and a keen intellect he later on became a learned man.

Being shocked at the disrespect and immoderate tendencies, then prevailing among Indian Mu'llimûn, he zealously preached the doctrines of Islam. Impressed by the religious sanctity of Saiyid Ahmad al-Mudâjadiî, he became his disciple and his constant companion. In 1326 (1802) they went to Mecca and then to Constantinople, where they were received with marked consideration. Six years later, on their return to Dîhil, they gained many followers. In 1325 (1827) they went to Poštâwar and declared a religious war against the Sákhâs. But owing to some innovations upon the usages of the Sákhâs, their power declined and during a retreat they perished in a skirmish with the Sâkhâs in 1247 (1831).

He is the author of the following works:
1. Râzâl Cifâ'î al-Fîzî, a treatise on the principles of Muhammadan law according to the Hanafî school;
2. Manâbî Imâmât, a Persian treatise on the Imâmat;
3. Ta'wîyišt al-Mimân, an Urdu treatise on theology (printed 1293, translated into English by Mir Shâhâmî 'Ali, cf. J. R. A. S., xiii. 316);
4. 'Abd al-Mustâfîm, a treatise in Persian on the doctrines of Islam.

MUHAMMAD MUHSIN AL-HADIDII, SON OF HALIDJ FADL ALLAH, SON OF AGHA FAID ALLAH, A RICH MERCHANT OF IRAQ WHO CAME TO INDIA IN THE EARLY PART OF THE XVIII CENTURY, WAS BORN AT HUGLI IN 1143 (1730). FOR A TIME THE AGHA RESIDED AT MURSHIDABAD AND CARRIED ON THERE AN EXTENSIVE MANUFACTURING BUSINESS, BUT FINDING THE RISING RISE OF HUGLI A MORE CONVENIENT CENTRE, HE FINALLY SETTLED THERE WITH HIS SON FAID ALLAH.

ALREADY SETTLED AT HUGLI WAS ONE AGHA MUTAHHAR, WHO, COMING ORIGINALLY FROM PERSIA AS AGHA FAID ALLAH, HAD WON HIS WAY AT THE COURT OF ARANGABAD [Q.V.]. THAT MONARCH HAD CONFERRED UPON HIM EXTENSIVE DUGERS IN DJISUR AND OTHER PLACES IN BENGAL, AND AGHA MUTHAHR EAGER TO TAKE POSSESSION, FINALLY HIMSELF SET OUT FROM DILHI FOR THE EASTERN PROVINCE. SO WELL DID HE MANAGE HIS NEWLY ACQUIRED LANDS THAT HE SOON BECAME ONE OF THE WEALTHIEST MERCHANTS IN THE PROVINCE. HE SELECTED HUGLI AS HIS HEADQUARTERS. AGHA MUTHAHR FOR MANY YEARS REMAINED CHILDLESS AND IT WAS ONLY IN VERY OLD AGE THAT A DAUGHTER WAS BORN TO HIM. ROUND THIS ONLY CHILD, NAMED MANNU DZAN KHANAM, ALL HIS AFFECTIONS CENTRED, AND DYING WHEN SHE WAS ONLY SEVEN YEARS OLD HE LEFT HER ALL HIS PROPERTY. THE WIDOW OF AGHA MUTAHHAR WAS DISPLEASED WITH THE CONDUCT OF HER HUSBAND AND SUBSEQUENTLY MARRIED HUGLI FADL ALLAH, THE SON OF AGHA FAID ALLAH, HER LATE HUSBAND'S FRIEND. THE FRUIT OF THIS MARRIAGE WAS HADIDII MUHAMMAD MUHSIN. HE WAS EIGHT YEARS YOUNGER THAN HIS HALF-SISTER, MANNU DZAN KHANAM. MUHAMMAD MUHSIN WAS FIRST BROUGHT UP AT HUGLI, AFTERWARDS HE COMPLETED HIS EDUCATION IN MURSHIDABAD. AFTER FINISHING HIS STUDIES AT MURSHIDABAD, HE RETURNED TO HIS SISTER'S HOUSE AT HUGLI. LATER, HE STARTED ON A LONG JOURNEY AND FOR TWENTY-SEVEN YEARS HE CONTINUED HIS TRAVELS IN INDIA, ARABIA, PERSIA AND CENTRAL ASIA. IT WAS NOT UNTIL HE HAD REACHED HIS SIXTIETH YEAR THAT HE FINALLY DECIDED TO TERMINATE HIS TRAVELS AND RETURN HOME. MAKING HIS WAY SLOWLY ACROSS NORTHERN INDIA HE CAME AT LAST TO LUCKNOW. THERE HE CAME TO MURSHIDABAD IN 1216 (1801), WITH THE INTENTION OF SETTLING THERE. BUT DURING HIS LONG ABSENCE HIS SISTER, MANNU DZAN KHANAM, HAD MARRIED HIS COUSIN, SALAHI AL-DIN MUHAMMAD KHAN, NIEPHEW OF AGHA MUTAHHAR; HIS HUSBAND DIED IN THE PRIME OF LIFE AND SHE WAS ANXIOUSLY WAITING FOR THE

MUHAMMAD KHAN BANGASH, NAWAB STYLED CHESANARJ DING, WAS A KHOLI CHIEF OF THE TRIBE OF BANGASH. THE CITY OF FARRUKHABAD WAS FOUNDED BY HIM IN THE NAME OF HIS PATRON THE EMPEROR FARRUKHAYAR. WHEN MUHAMMAD KHAN BECAME EMPEROR OF DILHI, HE APPOINTED HIM GOVERNOR OF MALLA IN 1143 (1730), BUT AS HE COULD NOT STOP THE REPEATED ATTACKS OF THE MAHRATTAS HE WAS REMOVED IN 1145 (1732) AND APPOINTED GOVERNOR OF ILAHABAD. MUHAMMAD KHAN INTENDED TO REDUCE THE BUNDELAS OF WHOM RADIJ CHATURSL WAS CHIEF. HE CARRIED SEVERAL PLACES BUT AS HE DID NOT KNOW THE ROADS, CHATURSL WITH THE HELP OF PESHA BADJI RITO, SURROUNDED HIM SUDDENLY WITH AN ARMY. THE NAWAB TOOK REFUGE IN THE FORTESS OF DJAITGAR; WHEREUPON HIS SON, KASIM DING, HAVING COLLECTED AN ARMY OF AFGHANS MARCHED TO DJAITGAR AND ESCORTED HIS FATHER IN SAFETY TO ILAHABAD. THE IMPERIAL MINISTERS THEN REMOVED HIM FROM THE GOVERNORSHIP. HE DIED IN 1156 (1743).

(TH. MENZEL)
arrival of her step-brother. At last at the solicitation of his sister, Muhammad Muhsin came to Húlghí, and when she died at the age of eighty-one in 1218 (1803), she left a will bestowing to Muhammad Muhsin the whole of her property.

It was thus not until Hádží Muhammad Muhsin had reached the age of seventy-three that he became possessed of the great wealth which greatly helped his co-religionists in Bengal in the pursuit of education. He had never married and the death of his half-sister left him without near relatives. He was anxious that his great wealth should be put to a good use after his death and consequently on the 26th April 1806 (1221 H.1.) he signed a Deed of Trust setting apart the whole of his income for charitable purposes in perpetuity.

Hádží Muhammad Muhsin lived for six years after making this noble disposition of his property. For his own personal use he had reserved only so much property as would bring him in about one hundred rupees a month. In 1227 (1812) he died at the age of about eighty-two and was buried in the garden adjoining the Imanbārā which he had so splendidly endowed.

MUHAMMAD MURTADA — MUHAMMAD MUHSIN AL-JÁDĐI

MUHAMMAD MURTADA, EM. HUSSAIN AND MUHAMMAD B. 'ABD AL-RAZÁZ ABU L-EFAID AL-HOSSÁNI AL-JÁDĐI, an Arabic scholar, born in 1145 H. (1732) in Biglirn in Kánáš in N. W. India, settled, after travelling for many years in pursuit of knowledge, in Cairo on 9th Safar 1167 (Dec. 7, 1753). There he succeeded in reviving an interest in the study of Tradition by giving lectures to specially invited companies. In Upper Egypt he was always a welcome guest with the Arab Shiikh Humán and in the Egyptian country towns, and his fame spread to the Sudan and even to India. From the year 1191 (1777) he drew a pension from the government. He died in Shabád 1205 (April 1791) in Cairo of the plague.

His principal works are two great commentaries. He wrote: the 'Ábd al-Awán on Fírzhábé's Kámáir, finishing it in 1184 H. (1767) after 14 years' work; although in the preface he quotes over a hundred sources used by him, he takes most of the additions to the Kámáir bodily from the Lájjám al-Árab of Ibn Mánár. It was printed incompletely in 5 vols. in Cairo 1286—1287 and in 10 vols. in Cairo 1307. He wrote a commentary, also very extensive, on Gzázalí's 'Uddán al-Dín, entitled 'Uddán al-Sáda al-muttabín, in which, in addition to explaining words he devotes special attention to establishing traditions quoted by Gzázalí; it was printed at Fás in 1301—1304 in 13 vols. in Cairo in 1311 in 10 vols. He also composed a number of smaller works on lexico-graphy and Tradition and also on the genealogy of the 'Áshíbí:

1. Nájihat al-lítháfi fi 'Uyyán Hází al-Májús wa l-Káfíjé, ed. by Lambreg, Prince's arabes, i. 40—55; 2. al-Ábd al-ma'ālif fi Táhájí Láfj

MUHAMMAD PASÁ, [See MUHAMMAD DÁMÁD PASÁ, MUHAMMAD GURJÁ PASÁ, KÁRÁNÍ, MUHAMMAD PASÁ, ŠANOLÍ]

MUHAMMAD PASÁ, BALTAĐI, grand vizier, was born about 1660 in the town of 'Othmánık và and, after an education in the imperial palace, entered the corps of the baltańís. On account of his beautiful voice he acted for some time as musÈlÈdá, later he became a scribe and rose rapidly in this career. In 1703, at Ahmed III's accession, he became muÈtÈÁr and was made Kapúdan Pasá in November 1704. In December of the same year he obtained the grand vizierate as successor of Khalîl Ahmed Pasá, against whom, although he had been at one time his fellow baltańí, he had used all his power of intrigue, for which he was especially notorious, according to the biographer Râshíd. On May 3, 1706 he was dismissed — on account of his lack of capacity, as Râshíd says — and exiled to Lemnos, but his friends obtained for him the nomination to the governorship of Erzurum. In January 1709 he became governor of Alep and from here he was called, in August 1710, a second time to the grand vizierate, after Koprułu Na'mán Pasha had proved unable to restore stability in the way that had been expected from him. At that time the first great conflict with Russia was drawing near; Charles XII of Sweden, after the battle of Poltawa, remained in Turkey. The beginning of Báltádi Muhammad's second grand vizierate was therefore filled with preparations for the war with Russia, which had been decided upon at a great state council in November 1710, and approved of by a fatwá of the Shaikh al-İslám.

The grand vizier was made commander of this memorable campaign, which quickly was ended by his death near Falcéi (Falcesen, Turk. Falci) on the Pruth (July 21—22, 1711). Peter the Great's army was left in a desperate position, but his generals succeeded in concluding a truce with...
grand vizier, by the terms of which the Russian army was allowed to withdraw, while Azof was restored to the Turks. The general feeling in the Ottoman historical tradition is that Baltağlı Muhammad had been bribed; his enemies at any case intrigued against him in Constantinople so that, even before his return to the capital, he was informed of his dismissal at Adrianople (Nov. 1711).

The conclusion of the armistice of the Pruth was also much against the wishes of Charles XII who, on his remonstrances to the grand vizier, is said to have got the insinuating reply that, in case Peter had been taken prisoner, there would have been nothing left for his government and that, in general, it was not good that sovereigns should leave their country (Voltaire, Histoire de Charles XII et de Pierre I). Baltağlı was exiled to Lesbos and then to Lemnos, where he died in 1712, aged over fifty.

The bad reputation which this grand vizier has in Turkish history, and which is also given him by von Hammer, does not seem to be confirmed by western sources (Jorga, iv. 308).

Bibliography: The chief Turkish authority is Râşîd’s Ta’rikh; the campaign against Russia has been described in a Ta’rikh-i Moskof, contained in the work of Hasan of Crete and in a manuscript (Iabinger, G. O.W., p. 307, 310; Dilâver-Zade, Dilâver to the Hadîbat al-Wusûrâ, p. 7 sqq.; Sigîdî-i-’têmânî, iv. 208 sqq.; von Hammer, G. O. R., vii. 111 sqq., 148 sqq.; Jorga, Gesch. des Osm. Reiches, iv. where other western sources are indicated; Ahmed Refik, Mamûlîk-i-şâmîniyè Darîm Efendi Şâhî, Constantinople 1910; Ahmad Mûhtâr, Ýnsan mûh-fî-hîn-i gost Bâltâçî Mûhad Pashanî Frut sefari, T.O.E.M., vol. 8, p. 160 sqq., 238 sqq. (J. H. Kammers)

MUHAMMAD PASHA, ELMAS, grand vizier, was born about 1660 in a village near Sinîb as son of a ship’s captain. After having been attached to the service of the pasha of Tripolis, he was educated in the kâdisî of the palace and became in 1687 siâhêr; soon afterwards he became nîshânî and obtained the rank of vizier. In Ahmad II’s reign he was pasha in Bosnia, but did not yet play a prominent part; he is said to have been one of that sultan’s favourites. After Mustafa II’s accession he was appointed kâsim-mahfîn of the imperial stiirup and, when a revolt of the Janissaries had cost the grand vizier Surmeli Ali Pasha’s life, he was appointed in his stead (April 1695). He accompanied the new sultan during the campaigns against Austria of the years 1695, 1696 and 1697. On September 11, 1697 the Turkish army was attacked by the Austrians under prince Eugène, while it was passing the Theiss near Zenta in order to march on Szegedin. The sultan had already reached the left bank, but the grand vizier, together with a number of high military chiefs, was killed that day in the battle, which meant a heavy loss for the Turkish troops. Elmas Muhammad had been against this military enterprise, but the other members of the council had persuaded the sultan to the contrary. He is said to have borne the surname Elmas “diamond” to his accomplishments and handsom physique.

MUHAMMAD PASHA KARAMÂN. [See Karamân Mehmed Pasha.]

MUHAMMAD PASHA, LALA, grand vizier under Ahmad I. He was a Bosnian by origin and a relation of Muhammad Sokollı Pasha. The year of his birth is not given. After having had his education in the palace, he was mir-åkîr and became in 1595 aqîa of the Janissaries. Two years later he took part in the Austrian wars as beyehlyê of Rûm-àlî and was commandant of Esztergöm (Grey).

During this period Constantinople, which was captured to the Austrian army in September 1595, was following years Lala Muhammad was several times transferred in Hungary and when, in July 1604, the grand vizier Yavuz ‘Ali had died in Belgrad, on his way to the Hungarian theatre of war, the sultan sent the imperial seal to Lala Muhammad. Although peace negotiations were continually being resumed, the new grand vizier took in that year Waitzen (Turk. Wâc) but besieged in vain Esztergöm. During next year’s campaign Esztergöm was taken by Lala Muhammad (Sept. 29, 1605) and in November he crowned the Hungarian Boskay as king of Hungary (without the regions occupied directly by the Turks) and Transylvania. In that same year the Turkish eastern army under Cîhâghe Pasha was beaten by the Persians, while the troops sent to subdue the revolt in Anatolia were routed at Bulawadin. After his return it was decided that the grand vizier should remain next year in the capital and lead the war on the two fronts and, if possible, bring to a successful end the long-drawn peace negotiations with Austria. The young sultan, however, changed his mind in keeping with the wishes of the Kapudan Pasha Derîvsh, who was intriguing against Lala Muhammad. Accordingly the latter was ordered to take command of the army against Persia. He had already put up his tent in Uskudar, when overcome by sorrow because of the frustration of his plans, he was seized with an apoplexy and died three days afterwards (May 23, 1606). He was buried near the tâbîe of Sokolî Pasha.

MUHAMMAD PASHA, RÜM, vizier and, according to some sources, grand vizier under Sultan Muhammad II. As his surname indicates he was a Greek renegade. After having had an education in the palace he was destined for a military career and became at one time beyehlyê. The dates of his birth and of his military advancements are not recorded. He had taken part in the final campaign of Muhammad II against Karamân in 1466 and was charged by the sultan with the transfer of parts of the population of the conquered region to Constantinople, instead of the grand vizier Mahmûd Pasha. [q. v.] who executed these measures in too lenient a way, as the sources say. On the way back to Constantinople Mahmûd was dispossessed of his dignity in favour of Rûm Mu-hammad. The latter remained grand-vizier until
1470, during which time Muḥammad II went on his campaigns in Albania [cf. Skander Beg] and Negojont. Rūm Muḥammad Pasha does not seem to have taken part in these expeditions, but, as a critical perusal of the sources has shown, he was especially charged with the problem of the repopulation of Constantinople; his commissioners for the transfer of the Ḳaramānīlān population had been connected with the same problem.

As the measures taken to make the new capital again inhabited must have been unpopular in Muslim circles — the Greeks and other Christian elements were granted as favourable conditions as the Muḥammandān to settle in the town — the historical tradition of the early Ottoman chronicles is rather against Muḥammad Pasha. They ascribe to him the reestablishment of the house-rent in Constantinople called nūfāṭa, which was considered as an injustice to the new Muslim settlers. The muṣṭaqfa is said to have been instituted by the sulṭān, then abolished and again instituted by this grand vizier. But, as F. C. Giese has shown by an analysis of the text of Ashk-Pasha-Zade and Tursun Bey (cf. In., xiii., 1931, p. 268 seq.), these measures were part of the policy of the sulṭān himself and were probably made by the temporary grand vizier, who, being a Greek, must have had the special qualifications for the difficult task. This last circumstance, however, makes him the more suspect in the eyes of the historians and for this reason we may perhaps assume that his reported cruelty towards the population of the Kara-mānīlān towns has been exaggerated by the sources, in order to add glory to his predecessor Muḥammad Pasha, whose memory has survived as that of a national hero. It is not even beyond question that Rūm Muḥammad was ever really grand vizier (Siḏjil-i ʿedāmān). The Ḥādīṭat al-Wizāra’ of ʿOthmān-Zade (p. 10) ascribes Muḥammad Pasha’s fall to Rūm Muḥammad’s intrigues, but makes Iṣḥāk Pasha his immediate successor in the grand vizierate. So do other historians.

He was dismissed in 875 (1470) and was afterwards appointed Siḏjil-i ʿedāmān in 879 [1073] to ʿonfūl of Konya with the mission to pacify the newly conquered territory. He was defeated, however, by a Cilician pass; soon afterwards he died, probably killed by order of the sulṭān (according to Ashk-Pasha-Zade, ed. Giese, p. 133). The chronological order of these events is not certain.

Rūm Muḥammad Pasha was buried in a mosque which he had founded in Uskudar.

Biography: Among the old chronicles those of Ṣuḥrī and Ashk-Pasha-Zade, and among the later historians especially ʿAlī; Siḏjīl-i ʿedāmān, iv. 104; von Hammer, G. O. K. 2, i. 498, 499; Ḥāfīz Husain al-Awānsārī, Ḥaḍīṭat al-Qāʾimānī, ii. 195. (J. H. KRAMERS)

MUḤAMMAD PASHA, SOKOLLI [See Sokollu]

MUḤAMMAD PASHA, SULTAN ZADE, grand vizier under Sultan IV, was born about 1600 as son of ʿAlī al-Raḥmān Bey, son of the former grand vizier Ahmed Pasha (under Murad III), and by his mother a grandson of a princess of the imperial harem, whence his surname Sultan Zade. After having been kapık hāṣib in the palace, he adopted a military career, became already in 1630 ḥabib weṣṭrī and was appointed in 1638 governor of Egypt. In 1642 he was made commander of the expedition against Azof [q. v.] which town he rebuilt after it had been burned by the Cossacks before its surrender. On his return he formed with the šahādīr Yūsuf Pasha and the sulṭān’s favourite Dīnjī Khaṇḍāja a triumvirate, supported by the Ṣafvī Kūmī (q. v.); they intrigued against the grand vizier ʿAbd al-Muḥammad Pasha, who sought to remove the danger by sending Sultan Zade Muḥammad in 1643 to Damascus as wālī. After ʿAbd al-Muḥammad had been executed on January 1, 1644, Sultan Zade Muḥammad was made grand vizier. One of his most conspicuous characteristics in this office seems to have been his ability to flatter the sulṭān and to satisfy his very extravagant wishes by obtaining money from all possible sources and by giving sandjaks to many of Ibrāhīm’s favourites. At this time the Empire was at peace with Austria (which sent in August 1644 an extraordinary embassy to confirm the peace) and with Persia, although Rakoczy, the prince of Transylvania, did his best to involve Turkey in a war with Austria. There was, however, a strong desire to go to war with Venice and to conquer Crete. The grand vizier was against this undertaking, but his former confederates drew the sulṭān to their side. Accordingly Yūsuf Pasha was dismissed as serdār in November 1645 and took Canea (August 17). The bad feelings that arose after Yūsuf Pasha’s removal led to Sultan Zade’s dismissal from the post of grand vizier (December 1645). After Yūsuf Pasha in January 1646 had fallen a victim to Sultan Ibrāhīm’s cruel capriciousness, Sultan Zade himself was made serdār against Crete. He departed in April 1646, drove the Venetians from Tenedos, which they had taken by surprise, and died shortly after his arrival in Canea (July 1646). He was buried in the teke of Ḥudūt in Uskudār.

Biography: Na_example is not given in the Siyāḥat-nāme of Evliyâ Celebi, who himself went with the expedition against Azof. Further the Diṭṭī Taṣawwīkhāt al-ʿotmān of Naṣir Pasha Zade (cf. Babinger, G. O. W., p. 211) and an anonymous Naṣirat-nāme (G. O. W., p. 152, note); both are in Zade Tscb. Ḥaḍīṭat al-Qāʾimānī, i. 89 seq.; Siḏjīl-i ʿedāmān, iv. 161; von Hammer, G. O. K. 2, i. 374. (J. H. KRAMERS)

MUḤAMMAD PASHA, TIRYAKI, grand vizier under Muḥammad I, was born about 1680 at Constantinople. His father was a Janissary. He began his career as a scribe and rose to important positions; in 1739 he played a role in the peace negotiations at Belgrad with Austria. He had been khāja of the grand vizierate. viz. minister of the interior, when the sulṭān, under influence of his new feizar aqshâl, the so-called Beshir the Younger, dismissed his predecessor Hasan Pasha and called him to the grand vizierate (August 1746). The twelve months of his period of office were not filled with war but with important diplomatic negotiations, in which he was supported by the new khāja Muḥammad Safī, later grand vizier, and the reis emīn Muṣṭāfa, both of them equally well versed in European diplomacy. During Tirayak Muḥammad’s grand vizierate peace was concluded with Nadir Shah of Persia (September 4, 1746) and the peace treaties with Austria and Russia were renewed. As the reason for his dismissal (August 24, 1747) is given his addiction to the use of drugs.
(hence the surname Tiryaki) and his quarrelsome, vindictive character, by which he had made enemies, especially in the ranks of the ściemi. After his fall he was governor in different eyalets, as İe Ili, Mısır, Bagdad, Diippa, and he died in July 1751 at Rethymo in Crete, where he lived, probably in involuntary retirement. According to the ściemi, he was a capable official before his coming to the grand vizierate; afterwards he was a failure in every office.

Dowlah-i Haidar: The Turkish of İsk: Dilîwar Zade "Omar, Dilîwar Hidâyat al-Wenârâî", p. 73 sqq.; ściemi, iv. 237 (where the dates are wrong); von Hammer, G. O. R., vi., i.

(M. H. KRAMERS)

MUHAMMAD PASHA, YESEN, grand vizier under Mahmut II. He was called Yeşen "the Nephew" because he stood in that relationship to Kel Yusuf Efendi, a high official in the financial administration (ściemi, iv. 659). He also began his career by holding different financial offices, and was also ściemi. By 237 the grand vizier Topal Othman Pasha (1732). In 1737 he became ściemi in Constantinople during the absence of the grand vizier Abd Allah Pasha. The latter was succeeded that year against the Austrians on the Danube frontier (taking of Feth Islâm), but was nevertheless dismissed, after his return, through the influence of ściemi Mehmed Beşhi, Yeşen Muhammad was appointed in his place (December 1737) and had to continue the peace negotiations with Austria and Russia, which were made especially complicated by the rivalry between France (represented by de Villeneuve) and the Sea Powers in offering their good services as mediators. The grand vizier himself was rather in favour of continuing the war and, being of a proud and arrogant character, made the negotiations still more difficult. In June 1737 he went as surdar to the Austrian front and was successful in recapturing Semendra and Orsowa (August). He was back in the capital in November. At the end of the year the Russians retired from Oacak and Kilburnu, which placed Turkey in a favourable position in the never ceasing peace negotiations, in which Poland also had become involved. But not even this grand vizier was to bring the war to an end; the same influence that had disposed of his predecessor obtained his dismissal in March 1739. After that Yeşen Muhammed was governor of Crete, Armenia, Aïdin and Anadolu. When in this last office he was called to the post of surdar on the front of Kars (March 1743) against the Persians. He received large reinforcements from different quarters and thought himself strong enough to attack Nâdir Shâh in his encampment near Erivan. This battle resulted in disaster for the Turks, owing mainly to a mutiny among the irregular levies. Yeşen Muhammed was killed, probably by the mutineers, in August 1745.

MUHAMMAD (MEHMED) RAUF, an important Ottoman author and poet who plays a very prominent part in the development of the Turkish moderns and of the written language.

Born on Aug. 12, 1871 (1875) in Constantinople, the son of an Anatolian, who came from Kutîfî, and a Circassian mother, he received a good education. He attended the Naval School and became a naval officer but he only spent eighteen months in the navy, mainly in Crete. When quite a boy, he displayed an irrepressible love for the theatre and literature and began to write at the age of 10, taking as his models the novels of Ahmed Midhat and the translations of French romances of adventure. This first production was a drama, Deniz-i yolculu Çarkaşanlar ("Baseness of the Corsairs of Gascoigne"). As his knowledge of French, and later of English, increased, he extended the scope of his reading and of his interests, so that at school he received the nick-name Osman obuyan Efendi (the novel-reader) and later Konanji (the novel-writer). His literary activity proper only began in the Naval School where he became acquainted with Georges Ohnet, Octave Feuillet, Alphonse Daudet, Émile Zola, Flaubert, the French realists and naturalists and endeavoured to imitate them. His story Ėkon was the most notable of his efforts at this period.

When he became acquainted with the works of the modernist Câlan Zade Kâhid Ziya [q. v.] he became possessed of his influence, especially after entering into correspondence with him and having his story Dukumat published by him in the periodical Bâbâ. Through Ziya he remained his model and Husen Ðâsh, whose friendship he made soon afterwards, he adopted the career of letters completely and became an author. When Denâb Shâh al-Din had to go to the Ðâsh as medical officer, he left the editorship of his periodical Mezâeb in the hands of Rauf. In 1896 Rauf at the suggestion of Ziya published his novel Ohrâmî-î Sodabi ("Youthful Passion") in İštâm, but it did not meet with any special success. He only began to be famous as an author with his cooperation in the periodical Sâret-i Fünün in 1896, which was of great influence in the development of modern Turkish literature. Here he worked with Ziya and the poet Tefiik Fikret [q. v.], to whom he had become related by his marriage. In 1901 the Sâret-i Fünün came to an end and with it his literary activity till the Revolution of 1908.

His first contributions to the Sâret were Na-bâtâtu ("In Convalescence") and Ùčakân. In the 19th volume was published in serial form his most celebrated novel: Evi ("September") which then appeared in book form like most of his works in the collection, so important for the development of Turkish literature: Eskişâri-î ğidâte Kütî- khânec, vol. vi., 1901. This novel, which was reprinted several times and which remained unique of its kind and represents a height of achievement never again reached by Rauf, had great influence and won general approval. In vivid, moving, although unequal language he describes in impressively realistic fashion the development and tragic end of a noble, innocent love. The exhausting verbosity in which Rauf revels here was aptly compared by Ziya to a gimlet which always turns at the same spot.

Some of his novels we may also mention Ferâd: Şähâr ("The Morning of Passion"), Ödânya-î ğidâte, No. 28; Genci AÎs Kâlî ("A Young Girl's Heart"); Mevlevi ("Violet") and Kâhâ ("Nightmare"). More important are his collections in the pre-
MUHAMMAD RA'UF

MUHAMMAD SHAH

valing fashion of short sketches, tales and long stories. Among these is his second most famous work: Siyâh Infulîr ("Black Pearls"), a collection of poems in prose modelled on Ziya's Mansûr Shâhîr and Beaudelaire's Fleurs du mal (Edebiyat, No. 11, 1317); also the collection of long stories, Ishâq-zâne ("Enamoured") (Edebiyat, No. 16, 1325 = 1910); Iftikâr ("Death Agony") (Edebiyat, No. 12, 1325); Sun Emel ("The Last Hope") (Edebiyat, No. 29, 1329 = 1913) and Bir 'Akhir

In this form a dramatisation of the novel of the same name by Ziya (Edebiyat, No. 17) and Qudsi ("Battle") in 5 acts (Edebiyat, No. 30, 1327 = 1911); also Ibi Kusvet ("Two Powers"); in Samurdon dalıla.

Ra'uf died on Dec. 23, 1931 at Constantinople.

Numerous contributions by him are in the Serreti-Funa; the finely produced women's periodical Meşkîn of which he edited the only volume that appeared. Contributions by him, some of his own work, especially poems (Ra'uf possessed not inconsiderable poetic talent and was regarded as the Turkish Beaudelaire), also essays and criticisms, of which his analyses of the contemporary novel are valuable. They were published in different collections, periodicals and newspapers in vast numbers. His Zandič ("Lily") brought him trouble. It was confiscated on account of its sensuality and the author was imprisoned. He wrote other things in the same style which were not printed.

In his works he appears as a very artistic, rather sentimental nature; even what he writes in prose is pure poetry. His prose is as good as that of Ziya, the leader of the Serret-Funa movement. He is one of the most important personalities in this group of men of letters, although his marked merits in form and style are counter-balanced by equal defects, which became worse as he paid no attention to the cultivation of his style: in him we find a reversed process, from the more perfect to the less. He would have been held in higher repute generally, if he had ceased to write after his first works. — Owing to the identity of the name and the parallel literary activity Muhammad Ra'uf was often taken for M. Ra'uf, the son of Farîq Kaif Pasha, who died on Febr. 23, 1918 and was buried at Hûdar Pasha. M. Ra'uf was editor of the Revîma Kitâb. He was a dramatist and wrote: Poësie; Nizâm-i Zirvânet ("Wonder in sight"); a comedy Atena ile Bitir arasinda ("Between Fire and Powder") and a piece entitled Târinâ written jointly with Kaif Negdet, one of his most intimate friends. The following dramas were never printed: Sâhi al-Din-i Elyâh, Neîmân and a number of adaptions. From the English he translated Saiyid Ameer Ali's The Life and and Teachings of Muhammad or the Spirit of Islam in 2 vols. entitled Muhammadiyya Târikhi-i Islam.

Besides being an author, M. Ra'uf was also a teacher, a task for which his extensive knowledge of languages qualified him (in addition to French and English, he knew Arabic, Persian, German, Italian, Greek and others). He lectured at the University on mythology and Greek and Italian literature, on which he wrote two text-books: Fünan i hadim Târikhi-i Edebiyat and Itâliy;i Târikhi-i Edebiyat. He was also for a time teacher of western literatures, Turkish literature and French at various institutions.

MUHAMMAD SA'TD (Mir Dzmîl), minister of 'Abd Allah Kûb Shah of Haidarâbâd during the xvith century, was originally a diamond merchant, and was famous in the Deccan for his wealth before he became minister. After the defeat of his master 'Abd Allah by Arangâzî, Mir Dzmîl took service under the latter and was made Governor of Bengal from 1701—1705 (1660—1664). He defeated Shah Shâhîd when the latter fought against his brother Arangâzî. Mir Dzmîl was afterwards employed in the conquest of Couch Bîhâr and Assâm in 1702—1703 (1661—1662). He overran both these countries but owing to the rainy season and the spread of disease among his troops, he was compelled to return. Only to die of dysentery contracted during his campaign, shortly after his arrival at Dacca in 1703 (1663).

MUHAMMAD SA'ID. [See Khâil British Záar]

MUHAMMAD SHAH (1131—1161 = 1719—

1748), emperor of Dîhil, surnamed Muhammad Rawshan Akhtar (or, the Brilliant Star), was the son of prince Uthman Shah, one of the three brothers who perished in disputing the crown with their eldest brother, Dzhâhândâr Shah, son of Bahâdur Shah. He was born on Friday the 24th Rabî I 1114 (August 7, 1702), and was crowned by the two Saiyid brothers, Saiyid 'Abd Allah and Saiyid Uthman, after the death of Rabî I al-Dawân on the 25th Dhu 'l-Ka'da 1130 (September 29, 1719). Muhammad Shah reigned for about 30 years and died one month after the battle of Sarhind, which his son fought against Ahmad Shah Abdali [q. v.]. His death took place on Thursday the 27th Rabî II 1161 (April 16, 1748). He was buried in the court before the Mausoleum of
MUHAMMAD SHAH — MUHAMMAD ZA'IM

Nizam al-Din Awliya' at Dihli. This emperor may be called the last of the Timurid line, who reigned in Dihli and enjoyed any power. The few princes of that sovereign's family who were raised to the throne after Muhammad Shah were mere puppets in the hands of the nobles of the court.

(M. Hidayet Hosain)

MUHAMMAD SHAHI, "Ala' al-Din Khaliid (695—715 = 1295—1315), was the nephew and son-in-law of Sultan Jaiilal al-Din Firuz Shah II, Khaliid, whom he murdered by treachery at Karan Manikpur, in the province of Hahabad, in 695 (1295), and ascended the throne of Dihli in the same year. He re-conquered Gujrat (697 = 1297), took Chitor and temporarily subdued the Radjipts (703 = 1303) of his cousin general, Malik Kafur, seized Delhi and Warangal, and founded a Deccan province of the Dihli kingdom. The empire is said to have flourished during his reign. Among contemporary poets Amir Khusrau and Khwaja Hasan held the first rank; Shaikh Nizam al-Din Awliya', one of the greatest saints of India, flourished at the same time. He died in 715 (1315) and was buried in the tomb which he had constructed in his life-time in Old Dihli.

(M. Hidayet Hosain)

MUHAMMAD SHAH BAHMANI. [See Muhammad I—III, above p. 664 sq.]

MUHAMMAD SHARIF AL-NADJAFI was born in the Deccan where he spent the first twenty-five years of his life. He afterwards visited in an official capacity Gudjarat, Malwa, Adimir, Dihli, Agra, the Punjab, Sind and Kashmir. He went to the last country in the train of Djinaging and under the command of Khaim Khan (1031 = 1621). He was the author of Maudhir al-Salatin, a short history of the kings of Dihli and of the Deccan dynasties from the accession of Muhammadan conquest to the accession of Shah Djinaging, completed in 1038 (1628).

Bibliography: Elliot-Dowson, History of India, vii. 134—140; Rieu, Cat Persian MSS. Brit. Mus., p. 907.

(M. Hidayet Hosain)

MUHAMMAD TAHIR AL-FATANI AL-GUDJARATI, was born at Fatna in Gudjarat in 914 (1508); after completing his education in his native land, he proceeded to Mecca, where he studied traditions with eminent scholars such as Ibn Hadjjar al-Haitami al-Makki and others. He acquired much learning from 'Ali b. Husam al-Din al-Muttabki (d. 975 = 1567) and also became his disciple in the Kirdir and Djinaging orders. After his return to his native country he tried his utmost to spread learning and to uproot the doctrines of Muhammad al-Dhawri, who had claimed to be the Mahdi of his time and had a considerable following among the Bohors [q. v.], a community to which Muhammad Tahir himself belonged.

In 980 (1572) Akbar went to conquer Gudjarat. After its conquest he conferred honour on Muhammad Tahir by tying with his own hands a turban on his head, saying that it was incumbent on him (Akbar) to spread the true principles of Islam. Khayr al-Din Aziz Muhammad Kuklatsh was appointed governor of Gudjarat and he helped Muhammad Tahir in uprooting the new doctrines of Mahdism. But when 'Abd al-Rahim Khan Khwaja succeeded him as governor, Muhammad Tahir suffered much at the hands of the followers of the Mahdi, and proceeded to the court of Akbar in Akbarabad for redress. On his way at Uddiyan he was murdered by some followers of the pretented Mahdi in 985 (1578).

Among various his compositions the following may be mentioned:

2. al-Mughart, a dictionary of proper names of Muhammadan traditionsists, lithographed on the margin of Tarkib al-Tadbir by Ibn Hadjar al-'Askashal (Dihli 1290).

3. Tadbirat al-Musafir, a treatise on traditions which have been incorrectly attributed to the Prophet.

(M. Hidayet Hosain)

MUHAMMAD ZA'IM, a Turkish historian. All that we know of his life is gleaned from his works. He was born in 930 (1532) for he tells us that at the accession of Sultan Murad III, i.e. in 982 (1574), he was 43. At the early age of eleven he took part in the campaign of 950 (1543) along with his elder brother Perwane Agha, who at that time was Kapudi Bahri at the Sandjak Beg of Lepanto, Yahya Pasha Oglu Ahmad Beg. When the latter, after the capture of Stuhlweissenburg, was appointed Sandjak Beg there, the brothers seemed to have remained in his service, probably till 952 (1545) when Ahmad Beg was summoned to Stuhlweissenburg. In 961 (1552) when Sultan Sulaiman took the field against Shah Tahmasp of Persia, Muhammad Zaim was a secretary in the service of the governor of Syria, Teke Oglu Mehemed, and a year later he was secretary to the powerful grand vizier Mehemmed Sokollu and in this capacity compiled the official report of the death of Selim II and the accession of Murad III which was sent to the governors of Diyarbakri, Aleppo and Baghda'd. This office, to which he perhaps succeeded on the promotion (978 = 1570) of the famous Feritsun Ahmed Beg [q. v.], he must have filled till the death of Mehemmed Sokollu in 981 (1579); we hear nothing further about it. He held a great fief (izamet; hence his epithet Zaim); he himself says: mukaddem sadecheh-i ahi aminiyel-e Mehemmed ile mustaf-i wecherih. Friends requested him to write a history and it finished within a year. He began the work in Muslim 985 (beg. March 21, 1577) and had completed it in Dhu 'l-Hijja of the same year (beg. Feb. 9, 1578). The date of his death and
the site of his tomb are not known but he is said to have left charitable endowments in Karafes near Salonika.

He called his book Humāi-i Ḥasan al-Tawārīsh and dedicated it to his master Mehmed Nebili. As his sources he mentions eleven historians from Firdawsi and Tahari down to the anonymous ṬＲ-ṢAJIurtles-Allāh Omām and gives as his main source Beqaṭit al-Tawārīsh, from which, as has been proved, he copied out whole pages without a quail. The book, which is not yet printed, is divided into a preface and two large sections (R-ṣam) subdivided into gurin and then again into gurin (ṣam), and concludes with an epitome. Rieu and others have given an account of the contents from the manuscripts. In the fourth gurin of the fifth year he deals with the Ottomans and here alone do we have statements of any value, when the author describes from his own experience events from 1543 onwards. He brought his story down to the time of writing and the last event that he mentions took place in the month in which the book was finished.

The passages in the book relating to Hungary have been dealt with by Thury (Torok territorial., vol. 361-389) who also collected the above data for his life; the earlier from 1530 to 1476 are given in extracts and the later from 1521 to 1566 translated in full. Of the other less valuable parts of the book Diez (Denkmälerkosten von Asien, i. 212 sqq.) has edited a portion of the very early history, dealing with Cain and his descendants, while v. Hammer (Sur les origines russe, i. 120) edited and translated a portion on the tribal divisions of the Turks, where the Rūs appear as the ninth Turkish tribe. Of the later Ottoman historians, Ibrahim Pecevit utilised and quoted from the work of Muhammed Zaftin from the year 1542 onwards.

Bibliography: Babinger, G.O.W., p. 20, 98 sq., 193, where further references are given.

(W. BORKMAN)

MUHAMMADIYA, a name of several heretical schools, notably the Ultra-Shi'ite Muhammadiyas.

As the example of the Kaisniyya [q.v.] shows, at an early date some Shi'is transferred the imāmate to Alids who were not descendants of the Prophet's son-in-law Fāṭima and then to those who were not Alids at all. The Muhammadiyya revered such an one in ʿAbd Manṣūr al-Ḥalîlī, whom Yūsuf b. ʿOmar al-Ḥalīkī, governor of the Ṭarīq, executed in the reign of the Caliph ʿḤishām, i.e. before 125 (743). ʿAlī Manṣūr, rejected by the Imam Djaʿfar al-Sadik for Shī'ī exaggeration, thrust the Alids aside by still further increasing this tendency: Muhammad's family, he said, was heaven, the Shī'ī earth and he himself the "fragment falling from heaven" mentioned in Sūra li. 44, as he had been personally touched and taught by God on a journey to heaven; he is said to have abolished the religious laws. While one group, the Ḥusainiyas, recognised the Imām in his son al-Ḥusayn after the death of ʿAbd Manṣūr, another, the Muhammadiyas, recognised Muḥammad b. ʿAbd Allāh b. al-Ḥasan b. al-Ḥasan b. ʿAlī b. ʿAbd Tālib. He is the pretender celebrated as al-Nafs al-saḍqa ("the pure soul"), who in 145 (762) fell at Madīna against the troops of the ʿAbbasid Caliph al-Manṣūr. ʿAlī quoted as authority for the recognition of an Alid again an alleged testamentary disposition of ʿAbd Manṣūr and compared the following order of succession: testament of the Ḥusaynid Muhammad Baḥr for ʿAbd Manṣūr and of the latter for the Ḥusaynid Muḥammad b. ʿAbd Allāh, with the Jewish line: first Moses, then Joshua, son of Nun, then the sons of Aaron (the later priesthood is meant). This arrangement was chosen in both cases so that conflict might not arise between the two lines of brothers (ḥabībān). — We cannot be certain that the Muhammadiyas formed a definite sect. The name rather records the fact that the rising of al-Nafs al-Zakīya, which was of great extent, attracted all circles of the Shī'īs to its ranks, even those who belonged to the Husaynid camp; and members of the Mughirīyā, the followers of Mūḥtīla b. Ṣafī, killed in the year 119 (737) by Yūsuf b. ʿOmar's predecessor Ḥādist b. ʿAbd Allāh al-Kārī, probably under the leadership of Ḍabīr b. Yazīd al-Djufti, supported al-Nafs al-Zakīya with their good wishes at least.

Quite a different group is the ultra-Islāmī Muḥamaddiyya or Mimiyya. It took its name from the belief in the divinity of the Prophet Muhammad in reply to an ʿAbaynī or Amīna who regarded Allāh as God. Its principal representative al-Faiḍī b. ʿAll was executed between 279 (892) and 289 (902).

The Khāridjī Muḥamaddiyya was a separate party within the strictly Khāridjī sub-group of the Alamārida: it is called after a certain Muḥammad b. Zurāk.

MUHAMMARA, a town and port at the head of the Persian Gulf and in the Persian province of ʿArabīyān. It lies on the right bank of the Ḥaffār channel (formerly called Nahī Baynā) which connects the ʿArabān river with the Shīṭ al-ʿArab. The original village from which the town grew appears to have lain on the left bank of the channel, on the island of Abādīn [q.v.], and Muḥammarā is probably therefore not to be identified with the town of Bayān, though it now lies on the same site. Further, Bayān was included in ʿArābīyān by the geographers, whereas Muḥammarā, lying on ʿAbādīn island, was a part of Persia until the shifting of a channel threw the possession of the town into dispute between that country and Turkey. By the treaty of Erzerum (1847) it was assigned to Persia, but though the government was nominally directed from ʿAshantar, it remained in reality in the hands of the Arab shāikhs of the Ṭarīq (or Kālī) tribe, who were Shī'īs. From the fact that the Arab geographers ignore the town, at any rate under its present name (for references to Bayān see G. Le Strange, below), it may be inferred that the place (Mahrāth) was either of minor importance or of comparatively recent origin. At the present time the port is of some importance for the trade of Persia, its principal article of commerce being dates.
though it is also connected with the oil trade. Bibliography: G. Le Strange, The Lands of the Eastern Caliphate, p. 48; S. H. Longrigg, Four Centuries of Modern Iraq, index; H. G. Raulston, Notes on Modern Iraq and the Caliphate, in P.R.C.S., i. 351 sqq.; Yākūt, Muṣḥaf, iv. 709 (R. Levy).

MUSHĀRĪB, the name of several Arab tribes (Wustenfeld, Register zu den general Tabellen, p. 320 gives five of this name) of which the most important is that of the Musharib b. Khāṣafa b. Kāis 'Aīlān (Wustenfeld, General Tabellen, D. 8). They do not however seem to have been of very great importance either in the Diḥliyya or in Īslām. Ibn al-Kalbi only gives them two pages of his Dāyrakhat al-Anbāb (Brit. Mus. Ms., Add. 23,297, fol. 163b—165b) but these add considerably to the very meagre information in the Tabellen especially as regards the lines of 'Ali b. Dāṣur b. Mushārīb and of Basīţā wādī b. Ḥaṭṭī b. Ṭārīf b. Khulaf b. Mushārīb. A typical early tribe, they lived in the mountainous region of southern Najdji between Medina and al-Yamāma (Wustenfeld, Register, p. 320 following Ibn Kūtaiba, Kitāb al-Mā'ṣirīf, ed. Wustenfeld, p. 41); several places in their territory are recorded in Yākūt's geographical dictionary (cf. the index of tribes, s. v.).

We know very little about their history before Īslām; they were closely connected with other tribes of the great group of the Kāis 'Aīlān, like the Hawāzin, with whom they are said to have shared the worship of the idol Diḥār (Yākūt, Muṣḥaf, ed. Wustenfeld, ii. 167, l. 2—3 = Wellinghausen, Reste 2, p. 65; cf. Tādī al-Ārum, ii. 115, l. 7 from below), and especially the al-Ḥāṭafān (notably their clan al-Talīta b. Sa'd b. Diḥyānān along with whom the clan of the al-定向 b. Ṭarīf b. Khulaf b. Mushārīb (the genealogy of the Tabellen is to be rectified in as much as al-Mālik is the name of al-Khulaf and not that of his father) fought the war known as the yawan al-harask or yawan Ṭarāt Musawwāl alluded to by the poet of the Diḥyānān Husain b. al-Ḥumām in some of his poems (cf. al-Mufaddalīyāt, ed. Lyall, Nis. xii. and xiii. and the commentary of Ibn al-Anbārī, with the passages quoted in the notes).

The Mushārīb at the beginning of Īslām were hostile to Muḥammad; this hostility was perhaps only the continuation of that which prevailed between the nomad tribes of the 'A'lya of al-Najdji and the citizens of Malīna. Thus we find, in the early years of the Ḥijrā, that Muḥammad sent agents among them (and against the Ghāṭafān) a series of expeditions, of the nature of raids and coups d'état rather than regular military enterprises (our sources give 30 or 40 men as the total of the Muslim forces); the details of their fighting are given in Caetani, Annali dell' Islam, i., p. 537—538 (3 A. II. § 6), 596—597 (5 A. II. § 3), 689—690 (6 A. II. § 1), 694 (6 A. II. § 6) with reference to the sources utilised (we may add Ibn Sa'd, ii/l. 23—24, 43—44, 61—62). One part at least of the tribes however have been attracted within the growing sphere of Muslim influence since we find Mushāribīn in the cavalry led by al-Zubair at the taking of Mecca (Caetani, Annali, ii. [§ A. II. § 396]). But it was only in 6 A. II. that the Mushārīb sent their ambassadors to Muḥammad and gave their formal adhesion to Īslām (Ibn Sa'd, iv/l. 43; cf. Caetani, Annali, ii. 344—345); even on this occasion they were conspicuous by their unconcern, quite Bedu in, of which another example is given in the anecdote of the Mushārīb (he is said to have been called Šamū) b. al-Hāṣib or b. Ka'b, who dared to doubt the Prophet's word in connection with the purchase of a horse (cf. Ibn Sa'd, iv, 2, 90—91 etc., and Caetani, Annali, ix. 627—628).

The Mushārīb abandoned Īslām during the Riḍā but were easily brought back to obedience (Annali, ii., p. 594, 596, 11 A. II. §§ 115, 118); they took part in the conquest of the 'Irāk (Ibn Ḥadjar, Ḫābā', Cairo 1325, iv. 20—21: biography of 'Arūd b. Sa'd), who fought at al-Kādisiya and al-Diḥliyya and again, in 36 and 37, at the battle of the Camel and that of Siffin, where he was slain; they were encamped at Kūfah in the same quarter as the Ūṣad and Ghāzinī, not far from that allotted to the Tamīn (Ṭabarî, i. 2490, 2495).

The contribution of the Mushārīb to the politics and literature of Arabia is practically nil; we need only mention the name of Lāhūt b. Bukair b. al-Dirr (d. 190), who belonged to a branch of the Banū 'Ali b. Dāṣur b. Mushārīb, a poet (cf. Tabari, iii. 540, ascetic and historian (Fihrist, p. 94 and Yākūt, Irshād, ed. Margoliouth, vi. 218—220, give a list of his works, relating mainly to literary history).

Of the other tribes bearing the name of Mushārīb the best known is the Meccan tribe of the Mushārīb b. Fihr to which al-Dāḥikā b. Kāis belonged [q. v.]; the Mushārīb lampooned by al-Farāzādān and celebrated by Dirr (Nafāḍid, ed. Bevan, p. 817 l. 4, 1039 l. 2) are difficult to identify; it is not certain, although they are so identified in the index, that they were the Mushārīb b. Khāṣafa.

Bibliography: given in the article.

G. LEVI DELLA VIDA.

MUHARRAM (A.), the first month of the Muḥammādīn year. The name is originally not a proper name but an adjective, as the article shows, qualifying Šafār. In the pre-Muḥammādian period the first two months of the old Meccan year were Šafār [q. v.] I and II, which is reflected in the dual "a potiori" al-Šafārānī for al-Muḥarrām and Šafār; in the old Arab year the first half year consisted of "three months of two months each" (Wellinghausen), as the two Šafārs were followed by two Rābī and two Dūjmadās. The first of the two Šafārs, as the one that belonged to the sacred months, was given the adjectival epithet al-muḥarrām which gradually became the name of the month itself. As Dūj 'I-Hījādja also belonged to the sacred months, three of the four sacred months came together in the first half year.

The month intercalated to equate the year to the solar year was inserted after Dūj 'I-Hījādja and was not sacred. It thus came about that learned Muslims described the intercalation as renaming the Muḥarrām concerned Šafār, i.e. as making Muḥarrām not sacred; they meant that the month after the pilgrimage, which they consider as al-Muḥarrām, following the custom, is not sacred i.e. is "Šafār" and the second month i.e. in their view Šafār, is "al-Muḥarrām". In doing this they of course overlook the fact that Šafār proper now only comes third; but when the intercalary month was abolished in Iṣām, the proper conception of the state of affairs was lost [cf. NASI']

In the early period when an attempt was made
to equate with the solar year by inserting intercalary months, — which was not successful on account of the ignorance of the old Arabs in astronomical matters — al-Muharram introduced the winter half year as the names of the first six months show. The Arab year began, like the Jewish in astronomy. After Muhammad had forbidden the calculation of the intercalary months in Sūra ix. 57, 1st Muharram, the beginning of the year, went through all the seasons as the year, which now consisted of 12 lunar months, had always only 354 or 355 days, as it still has. Whether the first month of the year was originally marked by a festival we do not know. Wellhausen has endeavoured to show that the ḥudayj originally fell in the first month of the year, so that Muharram was ḥudayj in its quality as "Dhu 'l-Hijja". This also suggests that there was originally only one sacred month, but it was observed at different times in different parts of Arabia. Muhammad in the Kūfān always speaks only of the sacred month i. i. (192, 217: v. 2, 97): only in Sūra ix. 36 in laying down the method of reckoning time does he speak of four sacred months, in which he was careful to recognise a later declaration of the equal sanctity of four different sacred months of different districts, which was however illusory, as within Islam the peace of the pilgrimage month, and, according to Sūra ii. 217, the defence of the faith takes preference over the sacred month What the sacred month referred to in the sacred month mentioned in Sūra ii. 2, at any rate, the month of the pilgrimage must be meant, which its wellhausen's theory excellently. The commentators think Ṭabāk or Dhu 'l-Ka'āda is meant. In any rate not al-Muharram.

Al-Muharram has 30 days which, in addition to the 1st as the beginning of the year, the following are specially noted: the 9th as the fast-day of the Shi'ite ascetics; the 10th as the anniversary of Kerbela (60 = 680), on which al-Jussain b. 'Ali b. Abi Tālib [q. v.] fell fighting against the Caliph Yazid b. Mu'awiyah and therefore the great day of mourning of the Shi'a (on the significance of the 10th Muharram for the Sunnis see Al-Muhammad, p. lvii. 39: celebrated by pilgrimages to the sacred places of the Shi'a, especially to Kerbela (see MEHDI), in which the passion play, representing the death of 'Ali in Shi'a [see TAR`IYA], plays the most important part; also the 16th as the day of the selection of Jerusalem as the Kibla [q. v.] and the 17th as the day of the arrival of the "people of the elephant" (sura iv.).

Muhāsibī ABB 'Abd Allāh Ḥāfīẓ b. Aṣad M.-, called Muhāsibī, i.e. "he who examines his conscience," was born in Baṣra; he died in Baghdad in 243 (857). A legist of the Shia school, a theologian who advocated the use of reason (i'ṭilā'), using the dialectic vocabulary of the Mu'tazzī, — which he was the first to turn against them, he finally adopted a life of a-cretic renunciation after a moral conversion long meditated which is described at the beginning of his Wafāyā. Involved with the Mu'tarīhī in a general persecution as a result of Ibn Ḥanbal's attack on the dialectics, he had to give up all teaching in 232 (846) and died in retirement.

His principal works are: Rī'īya al-Hijbā Allah, Wafiyya (more accurately: Nayib), Kitab al-Fuwarībh, Mā'ṣīat al-ʿĀli wa-Mūzā'ah, Kiṣlah al-Aṣmā', Fām al-Salāt; none of them is yet printed. The Parām al-Nawā's, which Spenger attributes to him, is of an earlier date; it was arranged by his chief teacher Ahmad b. Aṣim Anṣāfī.

Muhāsibī is the first Sunni mystic whose works reveal a complete theological education; they combine in a very original way a keen concern for exact philo-sophical definitions, and a fervent reverence for the most naive traditions with the rigorous search for an increasing moral purification.

In his Rī'īya he discards the foundations of that "method" of introspection which 'Abūlī had envisaged; he shows that the correlation between two series of human happenings, the external actions of the members and the intentions of the hearts (against this: "Allāh and the majority of contemporary muttāba'llimān:); he proves in detail that the enclosure of the states of conscience (akhīri) can be guided progressively towards a perfect purity, provided an a-cretic and moral rule of life is observed, the true tāhīmiyya mentioned in Sūra lvii. 27.

His adversaries (muḥaddithīn), especially Hanbalis, attacked him for having differentiated the concepts of ḥab & ʿāli (parable of the "sower"), ṣina and mūṣaf (like Ibn Kairān); admitted the created character of the ḥab (four pronunciation of Cur'anic verses); held that the elect, in Paradise, would be summoned to enjoy directly familiarity with the divine being; chosen his references from authors not by following the formal correctness of their ḥadāth, but on account of their intrinsic significance, from their moral weight (īfira), for the reader.

The Rī'īya is his main work; it forms in 61 chapters, in the shape of advice, given to a pupil, a complete manual of the inner life. Ghazzalī used it before writing his Ḥikā'ī; and in spite of the periodic attacks, its reputation among Arabic-speaking Muslim mystics lasted for a long time and may be compared with that of the Ininitio Jesu Christi among Christian mystics us-ing Latin; the Shāhīliyya brotherhood, with Mursī, Ibn 'Abādā, Rundi and Zarī'āt Burūsī, have always recommended its use; and one of them, Ḥiz al-Bin Malikṣī, has made a summary of it.

The Ashārī theologians also esteem Muhāsibī as a precursor.

MUHIBB AL-DIN. [See Al-Tarabeli.] 

MUHIBBI, a family of scholars in Damascus of the xih—xvth (xvih—xvith) centuries of which three members distinguished themselves in literature:

1. Muhibb al-Din Abu'l-Fadl Muhammad b. Abi Bakr b. Daud b. 'Abd al-Rahim b. 'Abd al-Khalil al-Mubbi al-Din Abu'l-'Abbas al-Halimi. Born in the middle of Madrasah 949 (Dec. 23, 1542) in Hamat, studied there, in Halab and Hims, and after a journey to Constantinople obtained a post as teacher in the Madrasa al-Kudayfa in Damascus. In 978 (1571) he accompanied the Shahih al-Islam and Chief Judge Cedi Zade to Cairo, was for a period a kadi there and after a second journey to Constantinople was appointed kadi in Hims, Ma'arat al-Nu'man and several other towns of northern Syria. In 993 (1585) the post of a chief kadi (al-ma'ihi) was given to him; at the same time he was military judge, judge of the Syrian caravan, taught in several madrasas and gave fatwas at the Sunna's request. He died on the 23rd Shawwal 1016 (Feb. 18, 1608). Of his numerous writings only three have survived: his commentary written in 969 (1561) (according to al-Mubbi, ii. 322, on the other hand, prepared at the age of 16) on Muhammad b. al-Shihna's (d. 815 = 1412) al-Yuq'inah al-Ba'asyilah (Manzana al-Ma'ihi wa-l-Bay'dun) in the Berlin, Alwared, Vez., No. 7256—7257 and Gotha, Pertch, No. 2780 MSS., his Travel, al-Ridha or 'Ashar al-Nujayla ila-l-'Ashar al-Miniyia in the Paris, Cat. de Siane, No. 2293; Cairo, Fhbrex, vii. 646; Stamul, 'Ashif Efendy, No. 2390 (s. Rescher in M.F.O.B., v. 496) MSS., which he wrote when kadi in Ma'arat al-Nu'man, and his commentary written in 1011 (1602) on the authoritative verses in Zakkashekh's Khulafa entitled Tamil al-'Ashar, pr. Bilek 1281, Cairo 1307—1308, and on the margin of Khulafa, ibid. 1318.

2. His grandson Fadi Allah b. Muhibbi Allah b. Muhibbi al-Din was born on the 17th Muharram 1031 (Dec. 2, 1621) in Damascus, at an early age showed great linguistic ability, received in 1048 (1639) from Nadarna al-Din al-Ghazzzi (d. 1061 = 1651), (see Brockelmann, G.A.L., ii. 292) the official post of Kadi, and after failing to secure something in Halab through the Shahih al-Islam Muhammad b. Zakariyya, was given by his father the latter's post at the Porwil-ly. In 1051 (1641) he accompanied Muhammad Jamati to Constantinople, was appointed to the Madrasa Arahi there, but dismissed a year later, when he returned home. In 1059 (1649) he accompanied the kadi Muhammad b. 'Abd al-Halim al-Busawa to Egypt and became his deputy. After a quarrel with him, he resumed his studies in al-Azar and came home next year. In 1073 (1662) he again went to Constantinople and four years later was appointed kadi of Bairut but returned to Damascus in 1079 where he died on the 23rd Djamah 11, 1082 (Oct. 27, 1671). While his own Diniim and his description of his journey to Constantinople have not been preserved, his edition of the poems of his friend Mandiak Pasha (d. 1080 = 1669 in Damascus) are still in existence. He first of all arranged them chronologically, beginning with a poem to Sultan Ibrahim I of the year 1055 (1646) as an addition to the MSS. mentioned in Brockelmann, G.A.L., ii. 277 there are now Kopuru, ii. 1243 and Mousul, Daud, Makhiufat, No. 153, 20, then alphabetically, including poems of a later period down to 1071 (1669); this edition was printed at Damascus in 1501. In 1078 (1667) he edited the bibliographical work of al-Hasan al-Burini (d. 1024 = 1615), Taridjam al-'Arif min Abu'l-'Azam and published it with a supplement; we may add to the MSS. mentioned by Brockelmann, G.A.L., ii. 290: Muhammad Kurd 'Ali, in R.A.A., iii, 1923, p. 193—202.

3. His son Muhammad al-Amim b. Fadi Allah b. Muhibbi Allah b. Muhammad Jamal al-Din al-Dimashqi was born in 1061 (1651) in Damascus, went with his father in 1079 (1668) to Bairut but returned home several times from there. A friend of his father's, Muhammad b. Luft Allah b. Barin al-Izzati, who had been kadi in Damascus in 1065 (1655) and was military judge in Anatolia in 1078 (1668), provided him with funds to study in Brusa. He returned home after a brief stay there on 8th Safar 1086 (May 4, 1675) in company with the mufti Muhammad b. 'Abd al-Halim. Al' Izzati had in the meanwhile been appointed military judge in Adrianople and was able to procure him a post there. But his patron fell ill soon afterwards and had to resign. Muhammad accompanied him to Stambul and looked after him till his death on 10th Shawwal 1092 (Oct. 24, 1681). He then returned to Damascus and began to write. When in 1101 (1690) he had made the pilgrimage to Mecca, he was appointed deputy kadi and then a teacher in the Aminiyah in Damascus. He died there on the 18th Djamah 1111 (Nov. 11, 1699).

His principal work is a collection of 1,289 biographies of scholars, poets etc. of his time and the period immediately preceding it arranged in alphabetical order, entitled Khulafa al-'Arif fi Ayam al-kurn al-khadi 'arif, the first fair copy of which he finished in 1096 (1685) (printed Cairo 1284, 4 vols.). The draft of a number of biographies from the Hidjaz and Yemen, which is preserved in the Bilil-Houtas MS., No. 112 appears to be part of the preliminary work on this collection; the draft of a synopsis is in Berlin (Alwared, No. 9895). A synopsis was prepared by 'Ali b. 'Abd al-Halim al-Ghazzzi al-Amim (d. 1177; Muradi, iii. 215): MS. in Tabhunin (Seybold, No. 9). A second great bibliographical work on personalities of all ages entitled al-Film was to give under each letter al-Fiim wa-l-Fihm wa-l-Fihm wa-l-Fihm wa-l-Fihm wa-l-Fihm wa-l-Fihm separately. In the draft in Leipzig (Vollers, No. 683) giving the letter rim the sources, which from the articles are taken usually word for word, are generally quoted. He also wrote a continuation of al-Khaljat al-Khadijat al-Alih, 'Ali b. Khaiat al-Rahima wa-Rahima wa-Rahima wa-Rahima, which survives, in addition to the MSS. quoted by Brockelmann, G. A.L., ii. 294, in Stambul, Nur-i Othmaniyah, No. 4352 (M.S.O.S., xv. 22) and Mousul, Daud, Makhiufat,
like the crown and throne. It is the same when sovereignty is delegated to governors (vi., v. 1; cf. i., p. 499, v. 163; iii., p. 421, v. 111; viii., p. 459, v. 374; p. 463, v. 418). There is a reference in the same poem to seals of amber (i., p. 545, v. 692) such as actually existed (cf. Reinaud, Mon., i. 129). They were sometimes steeped in Chinese musk (vi., p. 351, v. 2288).

In Turkey the seal was again the emblem of power. The imperial seal (muhr-i hamāyūn) was handed to the grand vizier, hence also called ʿabāl-i muhr (cf. ʿabāl ʿamān), with great solemnity (cf. M. D’Ohsson, vii. 120), and Naʾima (iv. 430) in speaking of ambition to become grand vizier uses the phrase muhr arzu ("desire for the seal").

We may mention here that according to D’Ohsson (ibid.), the sultan had four seals with a tughrā, set in rings; one was square and remained in his possession; he entrusted the others which were round, to the Grand Mistress or Lady Treasurer of the Harem (ḥasanābād) and to the khitāb-ol-baqī, a white enceuh who at one time held the office of first chamberlain.

The seal was changed at each accession of a new monarch (cf. Na’ima, i. 117) as was the tughrā itself. Ewliya Celebi’s statement, which implies the contrary, is therefore rather strange (vii. 300, v. 4 from below). In Persia the seal was retained but the name was changed (cf. Khətān).

The grand vizier produced the imperial seal on the dīnān days for the kāwakāk baʾal to seal the bag (kaw) for the registers of the rūznamā and the archives of the Finance Department or mālīyā ʿabādāt bānās, the Treasury (khānān) and the general Archives (zaráb bānās) (M.T.M., iv. 499). The grand vizier also had, like all the viziers or governors of provinces, two other seals, one, a large one, impressed at the top of buyuwrūtā or "ordinances," and the other, a small and modest one, placed at the bottom of letters from the vizier, including official ones (cf. Ahmad Rūsīn, Oṭbā, Turābī, iii. 1514).

The use of seals in Turkey (we know very little of those of the Saldīlūs; cf. Reinaud, Mon., i. 121 note) was exceedingly widespread. They were used for impressions in wax (muhr mumā) and for stamping in a particular kind of ink to which saliva was added, as in Persia (cf. I. Père Raphael du Mans, p. 129). In more modern times the seal was carried in the purse (cf. a verse by Meṣḥīd ʿĀkīf in his poem Sīr Šahā). It is only recently that under the influence of the west the muhr has been displaced by the signature. It must have received its coup de grâce with the recent adoption of the Roman alphabet and of rubber seals.

The industry of seal-engraving has thus been gradually disappearing. It had at one time reached a high degree of perfection and the artists used to sign their work. These signatures were usually very brief, Mīḥīth, Sāʾī, ʿĀḥmad etc. They were written in characters so minute that they could only be distinguished with a lens and only when very cleanly engraved. Quite a study could be written on these artists.

Ewliya Celebi gives the following information about the seal engravers of Istanbul (i. 575).

1. Engravers on stone. Ḥabībīlūm, 105 workers in 30 shops. They engraved on stones such as
agaye, garnet, turquoise and jasper. Their patron saint for was 'Abdu Allâh Yamani, a disciple of Uways al-'Kurâni who is buried in Taizz.

2. The engravers of muhur: muhurtekâm who worked especially for the viziers. So workmen in 50 shops. Their pri was the Caliph 'Uthmân. In the reign of Murâd IV the most noted were Muhammed Câdeli, Ra'is Câdeli and Ferid Câdeli, who charged from 100 to 500 piastres for their work.

3. The engravers of silver seals and talismans: muhurtekân-1 imn hâye-šâhâl, 40 workmen in 15 shops. Pri: 'Ukkaşga who is buried near Ma'âsh, who, having seen on the Prophet's back the muhur-1 mohurâkhat (cf. above), began to engrave talismanic formulae (two of these are quoted). These workmen 'cannot engrave Yemen agaye'. They were established in the area called Seyrâhânder.

We may still mention the custom of making passarts, whose loyalty one wished to be sure of, to stamp their seals on a Kuran (kurûn mohurtmâk); cf. in the Turkish papers of June 8, 1925, statements by a rebel Kurid.

The word memûr in the old language of the Janissaries meant vouchers for their pay (M. d'Ohsson, vii. 337).

In figurative language Persian and Turkish uses the expression "to break the seal": mohur berdergân, mohur almâk (or bâsmâk, almâk, gottamak) for "to deliver a virgin" (cf. further the art. TAMGHA).

The MUHTÄR (mohurt), Turk. muhurdar [cf. the article KHA'ÌM], keeper of the seals or better "private secretary" (cf. below), was therefore a very important personage. Murîr 'Ali Shîr, Newâli, was the first muhurt of Husain promised before becoming âdâm begi and first minister (cf. Belin, Notice sur Mir... 1861, p. 13; cf. de Sacy, A. E., iv. 282, 261). He was succeeded in these offices by another poet, Merwelsh (ibid.). — On the muhur-1 dar in Persia, cf. Le Père Raphaël du Mans, p. 21.

In Central Asia the title of muhurdar seems to have replaced that of tanâkâri which occurs as early as the Orkhan inscriptions.

In Turkey, each vâzir had his muhurdar (Ahmad Râsim, Olgâm, Tûrîkî, i. 455). Cf. the account of the career of a muhurdar in the Sûlûci-1 othmânî, ii. 31 below (Belohêt Pascha [the same as is mentioned in the Memoirs of Sûlûci Pascha, i. 4]).

The rûmîmâdî also had their own muhurdars (J. Deny, Sommaire des archits turcs du Caire, p. 136). At Kâdi Köy there exists a quarter called Muhurdar. For the work bearing the title Muhurdar Türkî, cf. Babinger, G. O. W., p. 216 sq.

With the viceroys of Egypt the muhurdar was a "private secretary" of the Khedive. The title of muhurdar was abolished in 1884, but the office has remained. His salary was the same as that of the chief of the cabinet (cf. ibid., p. 92 and 476).

Biographical: Cf. the article KHA'ÌM. We may now add: Babinger, Das Archiv des Bosnaker Osman Pacha, Berlin 1931, p. 23 and note 5, where reference is made to a little known article by Riza Efendi Muzedzîrovic. Cf. also von Hammer, Hist. de l'Empire Othoman, xii. 425, 539; vii. 2.

J. DENY

MUHRAN MALLI, son of Shâh Husain Hašâkat, was an inhabitant of Lucknow. In poetry he was the pupil of Khâja Wâzir. He flourished in the latter part of the sixteenth century. He is the author of a Divâna, a collection of lyric poems, and a biography of Urdu poets called Sarâfatu Sâkuha.

Bibliography: Hassanî, Ta'dikwâ, Shâfi'îr (Lucknow 1874), p. 419.

(M. Hidayet Hosain)

AL-MUHTÄDÎ, ABD 'Abdu Allâh Muhammâd, an 'Abbâsîd caliph. After al-Wâlijî's death, a number of officials wished to pay homage to the young Muhammâd, son of the deceased caliph and a Greek slave; instead however, al-Wâlijî's brother was proclaimed his successor and only after the deposition and murder of the unfortunate al-Muhtadî (end of Radjab 255 = July 869) Muhammâd ascended the throne with the name al-Muhtadî. His ideal was the Unayzî 'Umar b. 'Abd al-'Azîz. Like the latter, he was distinguished for the strictness with which he conducted his life; with piety and simplicity however, he combined strength and ability and during his brief reign he did his best to raise the caliphate from its degradation and to restore the power of the Commander of the Faithful. In several provinces there were risings by 'Alîds, real or alleged; but the most dangerous enemy of the caliph was the Turkish general Mûsâ b. Bogha. When the latter, who was fighting against the 'Alîds in Persia, heard of the accession of al-Muhtadî, he returned home. Reaching Sâmarrâ in Muharram 256 (Dec. 869) he forced the caliph to take an oath to bring to justice the Turkish chief Şâlih b. Wâsîf, who had robbed the mother of the caliph al-Muhtadî of all her priceless treasures. When Şâlih concealed himself, the Turkish mercenaries mutinied and were intending to depose al-Muhtadî but were appeased by the resolution of the latter. Al-Muhtadî had a秘密 of the caliph that he would pardon him; but as the latter did not appear, they went to Sâmarrâ and began to pillage it until they were scattered by Mûsâ. Şâlih was soon afterwards discovered and killed by one of Mûsâ's men. When Mûsâ had taken the field against the Khojarî, al-Muhtadî began to incite the people against him and his brother Muhammâd b. Bogha and accused them of embezzlement. Muhammâd was brought to trial and put to death although al-Muhtadî had expressly guaranteed his pardon. The only course left for the caliph was to dispose of Mûsâ if he wished to keep his throne. But his plan was betrayed; Mûsâ advanced with superior forces and the caliph suffered a disastrous defeat. As he declined to abdicate, he was murdered in Radjab 256 (June 870) in horrible fashion.

(K. V. Zettersteen)

MUHTASIB (A.), "censor," an officer appointed by the caliph or his wazir to see that the religious precepts of Islam are obeyed, to detect offences and punish offenders. His office was the hibe, and to it only men of good standing could, in theory, be appointed. Like all
Group of 29 seals accompanying the address to Muhammad 'Ali Pasha by the principal religious authorities in Mecca: the governor at the time, the imāms, khatibs, muftis of the four schools etc. The text dated at the end of the month of Muharram 1326 (Feb. 23 1843) contains congratulations on the occasion of the victory over the Wahhabis and expressions of gratitude for the restoration of freedom of pilgrimage.

Art. MUHR
S eals of various individuals, Ottoman, Algerian and Hijjarian
(beginning of the sixteenth century).

2. Esma Sultan, sister of Mahmûd II. II Ram. 1222 (November 12 1807).
3. Mustafa Paşa, kâimmakâm or grand vizier interim. 8 Shaw. 1222 (December 9, 1807).
8. Mehmed ʿArif Efendi, former ḥekîb-ül-islâm. 9 ʿArif. 1227 (Feb. 21 1812).
9. Mehmed Saʿid Khâlet, Minister of the Interior. 23 ʿArif. 1227 (July 4 1812).
10. Şâkir Ahmed, kâimmakâm. 28 ʿArif. 1227 (July 8 1812).
11. Mehmed Khâsem Paşa, kapudan-paşa (at this date). 15 ʿArif. 1228 (Feb. 17 1813).
15. Khurshîd Ahmad Paşa, grand vizier. 18 ʿArif. 1228 (May 19, 1813).
17. Safi Ahmad, wekil al-kâraman il-ḥarîfâin at Medea. 3 Shaw. 1241 (May 11 1826).
18. Selim Thâbit, as wekil of Algiers at Constantinople. 7 Shaw. 1242 (May 4 1827). Cf. N°. 4: same seal, but on this impression the signature of the engraver ʿOmer appears clearly under the fleuron on the left).
22. Sulaimân İsmâʿîl, qumruk emlî and wekil of Algiers at Durazzo. 7 Ram. 1244 (March 13 1829). To left under the fleuron: signature ʿOmer.
holders of public office, he had to be a Muslim and free. Generally he was a fakih, and in addition to his police functions he performed those of a magistrate. In some respects his duties were parallel with those of the kadji, but the muhtasib’s jurisdiction was limited to matters connected with commercial transactions, defective weights and measures, fraudulent sales and non-payment of debts. Even in these matters he could hear only those cases in which the truth was not in doubt. As soon as evidence had to be sifted and oaths administered the muhtasib’s jurisdiction ceased. As a censor he had power to enforce the law without first requiring complaints from those injured parties. He had to see that in a place where Muslims lived they did not neglect to hold a Friday service in the mosque and that if they numbered forty or more they formed themselves into an organised community. But if the number was large and there were differences of opinion on the question of worshipping together, his authority might be disputed, and it was not within his power to compel the attendance of the individual Muslim at the mosque unless he was a persistent defaulter. Even then the officer could do no more than admonish the delinquent. So far as the mosque was concerned the muhtasib could insist on the ada’ and he could examine the mustad’adin in the subject of the times lawful for the ada’. If a public mosque fell into disrepair, the muhtasib was charged with the duty of calling the attention of the authorities to the matter.

An important part of the muhtasib’s duties was to see that the laws of the shari’a were maintained. Persons breaking the fast of Râmaḍân, widows and divorced women who did not observe the ‘idda [q.v.] before remarriage, and other transgressors, were liable to have to make explanations before him. Public morals, further, came under his jurisdiction. He had to prevent men from consorting with women in public and from indulging openly in wine; also the playing of forbidden musical instruments came under his ban and he had to see that games and toys did not lead to offences against the shari’a. However, he could not act on suspicion alone nor had he the right to go behind closed doors to pursue his investigations. His powers would appear to have been wider where the spiritual welfare of Muslims was concerned. Thus if a fakih propounded views contrary to idjab [q.v.] it was the muhtasib’s duty to admonish him and to report him to the sovereign if he persisted in preaching heretical doctrines. Also, if a person not a fakih suddenly turned to the study of the fakih, the muhtasib had to make investigation in order to discover his motive and to prevent his misleading persons who might apply to him. Schools also had to be visited by the muhtasib, though not so much for the purpose of inspecting the character of the teaching as to ensure that teachers did not beat their pupils too severely (Maqrizi, Kaftâr, i. 494). Other matters which came within his jurisdiction were concerned with public amenities rather than with morals or religious institutions. Thus, in towns where the source of drinking-water was fouled or no provision was made for public wells or rain-waters, he could order the townsmen to rectify matters. He had to ensure that no house overlooked the women’s quarters of another belonging to a Muslim and that no house had projecting rain-sprouts or drains leading on to the street to the inconvenience of wayfarers, and finally that the sâk was kept clean and clear of obstacles to traffic.

**AL-MUḤÂLî [See Allâh, b. 2.]

**MUḤÂY I’l-DIN.**

**MUḤÂY I’l-DIN MUḤÂMÂD (nejmeddîn) b. ʿALû b. Ḍâjûl, a Turkh is a theologian and historian of the time of Selim I (1512-1520) and Sulaimân I (1520-1566). His father was the famous mufti Zâbîhi ʿAlû b. Ḍâjûl, a grandson of Ḍâjûl al-Dîn Mehmêd of Âq Serai (hence the epithet Ḍâjûlî). He received his theological training first from his maternal grandfather, Hisâm-Zâde Efendi, then from his father ʿAlû al-Dîn and later from Muâjz-Âd Zâde Efendi. He worked as muleeris in several medreces, in Constantinople at the Murâd medrese and at the eight schools of the Fâth mosque and in Adrianople where he was also a molla for a period. He died in retirement and was buried at Adrianople in 957 (1559); according to some, however, in 956 (1549).

His main importance lies in the fact that he edited the anonymous Ottoman chronicles, the Tâwarikh Āl-i ʿOthmân, under the title Tâwarikh Āl-i ʿOthmân. These chronicles which run from the beginning of the Ottoman empire were continued by him down to 956 (1549) i.e. till shortly before his death.

Two versions of his Chronicle exist, both of which go back to him: 1. a shorter one to which corresponds the translation of the Book manuscript by Gaudier-Spiegel: Chronica oder Acta der Turckischen Tyrannen herkomen und geführte Kriegen, aus Turckischer Sprachen verdeutsch. Vorhin nie in Druck ausgangen. Frankfurt a/O., 1567; it was also published in Latin and German by Leunclavius: Annales Sultannum Othmanidum a Turci sua lingua scriti, Frankfurt 1588; 2nd edition with index and German transl.: Neue Chronika Turkischer Nation von Turken selbs beschrieben, Frankfurt a/Main 1590; 2. a longer version: the so-called Verantian Chronicle (Codex Verantianus), edited in Latin and German by Leunclavius: Historiarum Mussulmanae Turchorum de monumenti et omnium scriptorum libri XVIII, Frankfurt 1591. There were 18 books instead of the 30 planned. As early as 1590 the first three books were published in German at Frankfurt: Neuuer Musulmanischer Histori, Türkisch Nation, von ihrem Herkommen, Geschichte und Taten; drey Bücher, die ersten unter derselben, followed by the complete German translation of the Annales: Neuuer Musulmanischer Histori, Türkischer Nation, Frankfurt a/M. 1595.

In addition to his chronicle, which exists only in manuscript (MSs. in Vienna, Munich, Berlin, Gotha, London, Constantinople etc.), Muhyi al-Dîn is also credited with poems in Turkish, Arabic and Persian (also extant in a manuscript) and a theological work.

(Th. Menzel)

Muhîî Lâri (d. 933 = 1526—1527), a Persian writer, author of the famous Futûh al-Haramain, a poetical description of the two holy cities, Mecca and Medina, which also contains a full account of all the rites of the obligatory pilgrimage (hajî). This book, written in 911 (1506) and dedicated to Muizzâr b. Muhammed Shâh of Guddarât (917—932 = 1511—1526), was for a long time wrongly attributed to the celebrated poet 'Abd al-Rahmân Lûfû, Muhîî Laïî was a pupil of the great philosopher Muhammad al-Dawâmî (d. 907 = 1501) and made u-e of his extensive philosophical knowledge in a commentary on the great TaRîh of Ibn al-Farûd, which is known as al-TaRîh al-kübûrî. In this work he endeavoured, following in the footsteps of his teacher, to reconcile the principles of orthodox Muhammadan mysticism with the teachings of Aristotle in the form in which they were dissiminated in the east.

(E. Berkhejs)

Mu'in al-Dîn Sulaimân Parwâna, vice-regent of the Saljûq Empire in Asia Minor after the Mongol invasion of that territory. His father Muhammedallah al-Dîn 'Ali al-Dulamî (in some sources, such as the TuRîh-i Gazîh, Mu'in al-Dîn is called „al-Kâshî”, which implies origin from Kâshân) had been a minister during the reign of Kaîfîsraw II and had been able, after the battle of Ko-cê Dagh (1243), to secure for a time the continuation of the Saljûq dynasty in Asia Minor, by his intercession with the Mongol general Bajîdî (Ibn Bîbî, p. 243). His son Mu'in al-Dîn Sulaimân soon rose to hold important offices and had been commander of Ko-tak, and later of Ko-tak and Erezdûm, when, in 1256, he was promoted, by the favour of Bajîdî, to the rank of parwânî. The title parwânî denotes a high administrative office (high chancellor) in the Saljûq empire and is erroneously explained by the Persian dictionaries as a synonym of farwânî (the word is fully discussed in the foot-note on p. 459 of Erdtemir's article in T.O.E.M., vol. viii.; cf. also Haart, Les Saints, etc., i. 80). At the time indicated the three sons of Kaîfîsraw were nominally reigning, but Mu'in al-Dîn was already the real director of affairs. After Hîlûdî had appeared on the scene in 1260, the empire was divided into two parts, of which Rukn al-Dîn Kîlîdî Arslân got the eastern part with Parwâna as vizier at his side. The latter had also a family connection with the dynasty, for he was married to a daughter of Kaîfîsraw II, while one of his own daughters became the wife of the Saljûq Ghiyâtî al-Dîn Mas'ûd. As vizier of Rukn al-Dîn he conducted Sinao (Sînhû) from the Greek emperor of Trebizond; the town was given to himself, and after his death some of his descendants continued to reign there (cf. Sînî and Tewülj, Sînûhû Parwânî-xâdetê, in T.O.E.M., 1st year, p. 203). In February 1265 Parwâna, warned that his sultan wanted to get rid of him, had him imprisoned and afterwards strangled at Ak-Serêy. The two and a half years' old son of Rukn al-Dîn, Ghiyâtî al-Dîn Kaîfîsraw, was set up as a puppet-king. During the following years, when Parwâna was, under the supervision of the Mongols, the real master in Eastern Anatolia, the wretched situation of the country induced many notable Turks to emigrate to Egypt, where they incited Sîlûn Bâibars to a military expedition against the Mongol domination in their country. It is highly probable that Mu'in al-Dîn Parwâna himself was secretly at the head of these negotiations. Bâibars invaded Asia Minor, defeated a Mongol army at Albistan and occupied the town of Kaîfîsraw in April 1277. Here he waited for Parwâna to join him, but the latter had lost his confidence in the enterprise and fled to Ko-tak with the young sultan. Bâibars returned to Asia Minor and soon a Mongol army appeared under the Ilkhan Bâbâqa to inflict drastic punishment on the Muslim population; he is said to have killed over 200,000 people. At the same time suspicion fell on Parwâna. He was accused of having fled with his army at the battle of Albistan, of having not appeared before the Ilkhan after the defeat, and of having neglected to inform the Mongols of Bâibars' approach. At first Bâbâqa was willing to spare him, but on the insistence of the relatives of those killed in the battle of Albistan, he ordered him to be executed at Ala Dagh, together with his retainers, probably on the 1st Rabî' 1 676 (August 2, 1277). Ala Dagh is, according to Khâlîf Edhem, probably the same as Kose Dagh, to the east of Sivas. His burial place is not known. A foundation inscription on a mosque built by Mu'in al-Dîn Parwâna in 663 (1264—1265) is still extant in Marzîfûn. His death inspired several poets to make elegies on him (Munadjâmîn Bâbâqa). From the tradition of the Mâlawî order it appears that Parwâna was on intimate terms with Djalîl al-Dîn Rûnî; the latter's work Fihi mâyû fi dikâhâ is dedicated to him (cf. Kropûlû M. Fu'ûd, Kitâb matgâwanî, p. 258).

MU'IN AL-MISKIN whose full name was MU'IN AL-DIN MUHAMMAD ASIM B. HAJAJ MUHAMMAD HAMARDI, who was born in 901 (1496). He was the son of Haib abu Muhammad, a Buyid governor of al-Hawza, and his father had been killed by the Shahin. He studied Hadith for 31 years and throughout this period preached Friday in the great mosque of Herat. He was for year kadi of Herat but gave up the post by his own request. In 866 (1461-1462) at the request of a friend, he began to write a little book on the life of the Prophet Muhammad. Out of this little book there grew in time the great biographical work, exceedingly popular in the East, called Madarij al-Nubuwaa fi Madaniyit al-Futuwa, which was not finished till 891 (1486) and contains a very full account of the life of the Prophet, consisting of a Mahuddima, four books and a Khutba. Mu'izz also wrote a commentary on the Kuran entitled Bahr al-Durar and a collection of forty hadiths, *Kawafat al-Wazin.* His study of the history of the prophets produced a large history of Moses entitled Mu'izziti Mawazi (also called Turarih-i Mawazi or Kitab-i Mawazi), which was completed in 904 (1498-1499), and the story of Yusuf and Zulalash, *Ahlan al-Kipas.*

AL-MU'IZZ. [See ALIH, II.]

AL-MU'IZZ B. BADIS. [See ZIRIDS.]

MU'IZZ AL-DAWLA, Abu 'l-Husain Ahmad b. Ahmad, a Buyid, was born in 303 (915/916). After the taking of Shiraz by the Buyids he brought Kirmān under his rule in 324 (935-936). When the rebel governor of al-Ahwaz, al-Barid (q.v.), after several unsuccessful encounters with Bedjekm (q.v.), the general of the Abbasid caliph, sought the help of the lāyād Imād al-Dawla, the latter sent his brother Ahmad against al-Ahwaz with an army; Bedjekm was defeated first at Arradjan and then at 'Askar Mubān (326 = 935), whereupon Ahmad took this town; but when he demanded as a reward for the help he had given that al-Barid should help the Buyids Rukn al-Dawla against Wazirgrī, the brother of Mardawājān (q.v.), al-Barid refused and went to Basra. After Ahmad had received reinforcements from Imād al-Dawla, he was able to take al-Ahwaz. In 332 (943-944) he undertook a campaign against Wāṣit while the Amir al-Umarā, the Turkish chief Tuzan, was involved in a war with the Hamādān of al-Mawsil. Tuzun hurriedly made peace and set out against Ahmad, and the two armies met in Dhu l-Ka'da of this year (July 944). The details are variously given; it is certain at least that Ahmad soon afterwards returned to al-Ahwaz. At the end of Rādugh the following year (middle of March 945), he made a further attempt to take the town but had to withdraw the next month on the approach of Tuzun. In 334 (945) he attacked Wāṣit for a third time; its governor had gone over to his side and the town surrendered without a blow being struck; he then marched against Baghādād and in Dhumādād 1334 (December 945) entered the capital where he at once seized the power. The caliph al-Mustakfi appointed him governor of Fārs and gave him the title Mu'izz al-Dawla but was deposed and blinded a few weeks later because he was alleged to be dealing with the enemies of the Buyids. Mu'izz al-Dawla was soon afterwards attacked by the Hamādān Nāṣir al-Dawla of al-Mawsil, who advanced on Baghādād along with Abu Djalār b. Shīraḍ and very quickly occupied the eastern part of the capital. Nāṣir al-Dawla was not driven back till Mahārām of the following year (Aug. 946) when he made peace with the Buyids but without consulting his Turkish allies. The latter were angered at this and turned against him. Nāṣir al-Dawla had in fact given them in bringing the Turks to terms with the help of the Buyids; he then returned to al-Mawsil as a vassal of the Buyids. Abu l-Kāsim, son and successor of al-Barid, was the next to be dealt with. Mu'izz al-Dawla sent an army against him which put his forces to flight and in 336 (947) he took the field in person. Abu l-Kāsim fled to the Karmāţāns of al-Bahram and Mu'izz al-Dawla occupied Bašra. Abu l-Kāsim's governor Ūmir b. Shāhīn however held out in al-Dumāda, the capital of the Euphrates territory between Wāṣit and Basra, and after several years fighting Mu'izz al-Dawla had to confine him in his governorship. In 337 (948-949) Mu'izz al-Dawla undertook a campaign against al-Mawsil because Nāṣir al-Dawla did not send the tribute imposed on him. The latter died to Nāṣīb, but when Rukn al-Dawla, brother of Mu'izz al-Dawla, was attacked by the Sāmānids, Mu'izz al-Dawla had to send him help and concluded peace with the Hamādānīs. In 347 (958-959) Nāṣir al-Dawla rebelled against him but on the approach of Mu'izz al-Dawla he left al-Mawsil and went first of all to Nāṣīb and then to Hīlab to his brother Saif al-Dawla, while Mu'izz al-Dawla advanced on al-Mawsil and took this town and also Nāṣīb. Through the intervention of Saif al-Dawla however peace was made (Mahārām 348 = March-April 959). In the last year of his life Mu'izz al-Dawla had to fight the Karmāţāns and Ūmir b. Shāhīn. The former acknowledged his suzerainty; the war against the latter was interrupted by the death of Mu'izz al-Dawla on 13th or 17th Rabi'i 1135 (March 28 or April 1, 967).

MU'IZZ AL-DAWLA — AL-MU'IZZ LI-DIN ALLAHI

AL-MU'IZZ LI-DIN ALLAH — AL-MU'IZZ LI-DIN ALLAH

Mu'izz al-Dawla (AH 357; AD 970) was the fourth Fatimid caliph (351—357 AH) and the son of al-Rahman III. His administration was marked by a series of reforms, including the suppression of the Karmatian Rebellion and the reinstatement of the Maghribi nobility. He was succeeded by his brother, al-Hasan al-Dawla (AH 357—362, AD 970—975), who continued his policies.

The Fatimid Caliphate was established in Egypt in AD 908 by the Berber chieftain Ibn al-'Arab, who declared himself al-Mu'izz li-Din Allah. The dynasty eventually became the most powerful in the Islamic world, with territories stretching from Spain to Yemen. However, its downfall was hastened by infighting among the Fatimid ruling class and external threats, particularly from the Mongol armies.

During his reign, Mu'izz al-Dawla faced significant challenges, including a rebellion by his brother, al-Ishna al-Baghdadi, and the need to address the growing power of the Mamluk military. Despite these difficulties, he was able to consolidate his rule and establish a stable administration.

Mu'izz al-Dawla is remembered for his patronage of the arts and learning, and for his patronage of the sciences, particularly astronomy, mathematics, and medicine. He was also known for his policy of toleration towards non-Muslims, which was reflected in his efforts to establish a system of religious pluralism within the Fatimid realm.

The Fatimid Caliphate ultimately succumbed to the combined pressures of external aggression and internal strife, leading to its eventual decline and the rise of the Ayyubid state in Egypt. However, the legacy of Mu'izz al-Dawla and his successors remained significant in the history of Islamic civilization, as they played a crucial role in the development of the Middle East and North Africa.
the Ḥamdānid amīr of al-Mawji, and with the aid of subsidies from them and some Ikhwānid contingents, defeated and killed Djiṣfar and recaptured Damascus in Dhu 'l-Qa'da 360 (Aug.–Sept. 971). Having shut up the remaining Egyptian forces in Yafhā, he marched on Cairo, but was defeated by Djawhar in Rabī' I 361 (Dec. 971), and his fleet was destroyed at Tinnīs. The Karmatians returned their hold on Damascus, however, repulsed a strong Maghribī force despatched to Palestine by Djawhar in Ṣaḍrān 361, and with an army of Arab auxiliaries and Ikhwānid (some sources also add Dailamites) made a second descent upon Egypt after the arrival of al-Muʾizz. By bribing the Arabs, the Caliph succeeded in dividing and defeating the Karmatian army outside Cairo in Ṣaḍrān 363 (May–June 964), but not before Karmatian forces had overrun both the Delta and the Ṣaʿūd. On al-Ḥasan’s return to al-ʾAṣwān the Ḍulqār Zāḥm b. Mawḥūb occupied Damascus on behalf of al-Muʾizz, but came into conflict with the Maghribi troops, whose indiscipline and excesses at length led the citizens to appeal to the Turkish general al-Afsakīn, who remained in possession of the city until he was captured by al-ʾArīz [q.v.]. Meanwhile in northern Syria the Fāṭimid troops gained a series of striking successes against the Greeks. Tripoli and Bairūt were captured in 364 (975), and John Zimiskes suffered a crushing defeat both on land and sea at the hands of Raiyān, governor of Tripoli, on his attempt to recover the city.

The empire which al-Muʾizz bequeathed to his successor, though it fell short of his ambitions, was one of imposing extent. The viceroy to whom he had committed them, Bulakki b. Zīrī [q.v.], proved both loyal and capable; when, on the departure of the Caliph, the Zenāta again rose in revolt, he scattered their forces and recaptured Tahārī and Tilīmsān. The holy cities of Mecca and Madīna acknowledged the suzerainty of the Fāṭimids, and they had a powerful following in Sind. Only in Syria had the Karmatians, on whose cooperation al-Muʾizz had confidently relied (though the letter reproduced by al-Maqrīzī, Ḥiṣārī, ed. Bunz, p. 133 sqq. is of doubtful genuineness), brought him to a halt, but by this action they had placed a fatal obstacle in his way. This disappointment preyed on his mind and, worn out by ill-health and by grief at the loss of his eldest son ʿAbd al-Allāh (died 364), he died at Cairo on 11th Rabī' II, 365 (Dec. 10, 975), having nominated as his successor his second son Nizār al-ʿAzīz.

The personal character of al-Muʾizz was singularly noble; frank, accessible, simple in his habits, endowed with brilliant gifts and all the traditional qualities of ḥilm, he was at the same time a capable administrator and just towards his subjects, though the financial exactions of his last years left a bitter memory. No instance of cruelty is recorded of him, except the execution of his Karmatian captives, and he was completely devoid of religious fanaticism.
